

Joy of Knowledge

Fact Index

How to use the Fact Index

The Fact Index is a self-contained alphabetical encyclopedia in its own right, but it also supplements the ten subject sections of Joy of Knowledge, providing a comprehensive index to the whole work. There are some 25,000 entries in the Index, giving you the basic facts on significant people, places and things. It combines readability with genuine 'look-up-ability', presenting a succinct summary on each topic as well as signposting the route to the relevant pages in other sections.

Cross reference system

Cross references to **page numbers** refer you to pages in the main subject sections of Joy of Knowledge. If this is shown in *italics* it indicates a reference to an illustration or its caption on the page in question. Cross references printed in **SMALL CAPITALS** refer to another entry in the Fact Index containing additional information.

A

A, first letter of the Roman alphabet. It evolved from the ancient Egyptian hieroglyph representing the head of an ox through the Hebrew word *aleph*, meaning ox, to the Greek *alpha*. The letter *a* is a vowel.

Am, type of lava with a block-like structure. See also pp.608-609.

Aachen (Aix-la-Chapelle), city in sw Nordrhein-Westfalen, in w West Germany, 69km (40 miles) wsw of Cologne, near the Belgian and Dutch borders. It is noted for its hot sulphur baths and was the site of medieval imperial diets. It was probably the birthplace of CHARLEMAGNE. Industries: railway engineering, machinery, textiles. Pop. (1974) 241,362. See also pp.1638.

Aakjaer, Jeppe (1866-1930), Danish poet and novelist, known for his simple yet subtle poetry in the Jutish dialect; he often paraphrases Robert Burns.

Aalborg. See ALBORG.

Aalsmeer, town in w central Netherlands, 13km (8 miles) sw of Amsterdam. It has one of Europe's largest flower nurseries. Pop. 19,000.

Aalto, Alvar (1898-1976), Finnish architect and furniture designer, famous for his imaginative handling of floor levels and use of natural materials and irregular forms. His work includes the municipal library at Vyborg (1927-35), the sanatorium at Paimio (1929-33), the Baker House at the Massachusetts Institute of Technology (1947-49), the Säynätsalo town hall complex (1950-52) and Finlandia House, Helsinki (1967-71). See also INTERNATIONAL STYLE.

Aaltonen, Wäino (1894-1966), Finnish painter who later became a pioneer in the revival of stone carving. His works in granite, classical and monumental, include important public monuments and he also produced a number of marble busts, notably one of SIBELIUS.

Aardvark, nocturnal, bristly-haired mammal of central and southern Africa; it lives on termites and ants which it scoops up with its sticky 30cm (12in) tongue. Length: up to 1.5m (5ft); weight: up to 70kg (154lb). It is the only representative of the order Tubulidentata. See also pp.87, 94.

Aardwolf, rare nocturnal mammal found in s and e Africa. It has soft, black-striped yellow-grey underfur, with coarse outer fur forming a crest along its back. It eats mainly termites and insect larvae. Overall length: to 1m (3.3ft). Family Hyainidae; species *Proteles cristatus*. See p.99.

Aare, longest river in Switzerland, running 295km (183 miles) from the Bernese Alps to the Rhine, opposite Waldshut. It has more than 40 hydroelectric stations.

Aarestrup, Carl Ludvig Emil (1800-56), Danish poet, known chiefly for his passionate love lyrics; his favourite theme was "eternal womanhood".

Aarhus. See ARHUS.

Aaron, elder brother of MOSES and first Jewish high priest. According to the biblical book of Exodus, he helped to obtain the release of the Israelites from slavery in Egypt. He lapsed into idolatry, made a golden calf for the people to worship, but was later restored to divine favour.

Aasen, Ivar Andreas (1813-96), Norwegian philologist and poet. He used various dialects to found the literary language, Landsmål, or Nynorsk (new Norwegian).

Aba, in se Nigeria, originally an Ibo village, both a market and a manufacturing centre for textiles, plastics, soap and palm oil. Pop. (1975 est.) 177,000.

Abaca. See MANILA HEMP.

Abacus, mathematical tool used in the Middle and Far East for addition and subtraction. One form of abacus (various types have been used for thousands of years) consists of beads strung on wires and arranged in columns. The Chinese abacus dates from about the 12th century. See also 780.

Abadan, city in sw Iran, on Abadan Island at the head of the Persian Gulf. It is an important oil pipeline terminus and refining centre and, until 1951, was the site of the world's largest oil refinery, built in 1913 by the Anglo-Iranian Oil Company. Pop. 312,000.

Abakan, formerly Ust-Abakanskoye, is the capital of the Soviet autonomous oblast Khakass. Situated on the s Siberian railway, its main industries are sawmilling, metal working and textiles. It contains Bronze Age barrows and was founded as a fortress in 1707. Pop. 116,000.

Abalone, seashore gastropod MOLLUSC with a single flattened spiral shell perforated by a row of respiratory holes; it is found on Mediterranean, Atlantic and N Pacific shores and off the coasts of South Africa and Australia. Length: to 30cm (12in). Family Haliotidae; species include *Haliotis rufescens*. See also p.26.

Abascal, José Fernando de (1743-1821), viceroy of Peru (1804-16). He quelled revolts in Upper Peru and Chile during independence uprisings (1808-25) and later became a member of the Spanish War Council. See also p.1562.

Abbadids, Moorish dynasty that ruled Seville, Spain (1023-91). After the collapse of the Córdoba caliphate, the cadi of Seville proclaimed himself king as Abbad I in 1023. His son Abbad II succeeded him in 1042 and made Seville the strongest kingdom in s Spain. His successor Abbad III, who became king in 1069, was a patron of the arts. He was forced into exile in 1091 by the ALMORAVIDES.

Abbado, Claudio (1933-), Italian conductor. In 1971 he was made principal conductor of the Vienna Philharmonic Orchestra and has been permanent conductor at LA SCALA in Milan since 1969.

Abbas I (the Great) (1571-1629), Shah of Persia (1588-1629). He defeated the UZBEKS and seized Ormuz (1622) and Baghdad (1623). He founded the port of Bandar Abbas, erected buildings at Isfahan but left the SAFAVID dynasty without an heir.

Abbas II (1874-1944), last Khedive of Egypt (1892-1914). He ruled under the OTTOMAN EMPIRE but from 1894 was largely controlled by Lord Cromer and KITCHENER. Abbas was later deposed in favour of his uncle, Husain Kamil.

Abbasids, Muslim dynasty that held the caliphate from 750 to 1258. They traced their descent from al-Abbas, the uncle of MOHAMMED, and came to power by defeating the Umayyads. The Abbasids moved the caliphate from Damascus to Baghdad in 862, where it achieved great splendour, particularly under HARUN AR-RASHID and AL-MAMUN. After the family's downfall in 1258, one member was invited by the Mameluke sultan to Cairo, where the dynasty was recognized until the 16th century. See also pp.1282, 1285.

Abbate, or Abati, Niccolò dell' (c.1512-71), Italian Mannerist painter who pioneered French landscape painting. One of his best-known works is *Landscape with Orpheus and Eurydice*.

Abbeville, town in nr France, approx. 40km (25 miles) nw of Amiens. Crudely fashioned stone hand-axes were found nearby in the mid-19th century, hence Abbeville is the name given to the earliest (pre-ACHEULEAN) hand-axe industry of Europe. The town was under English rule from 1272 for about 100 years and flourished until the Protestants had to flee after 1685. Industries: textiles, sugar refining, brewing. Pop. 24,000. See also p.119.

Abbey, complex of buildings that makes up a religious community directed by an abbot or abbess, the centre of which is the abbey church. Since the decline of MONASTICISM, often only the church remains. See also HCl p.134.

Abbey Theatre, founded (1904) in Abbey St, Dublin, by ANNIE HORNDEMAN to house the Irish National Theatre Company, presenting Irish actors in Irish plays. In 1924 the Abbey became the National Theatre of Ireland. Works by W.B. YEATS, Lady GREGORY, J.M. SYNGE and Sean O'CASEY have been introduced there by such actors as Sara Allgood, Arthur Sin-

clair and Barry Fitzgerald. See also NATIONAL THEATRE OF IRELAND.

Abbott, Sir John (1821-93), lawyer, educator, and Prime Minister of Canada (1891-92). He was dean of McGill Law School and a Conservative legislator who was ousted after the PACIFIC SCANDAL of 1873. In 1880 he was re-elected to Parliament and later succeeded JOHN MACDONALD as Prime Minister.

Abbott, Lemuel Francis (c.1760-1803), British painter, famous for his portraits of Lord NELSON and the poet COWPER.

Abbott and Costello, Bud Abbott (1895-1974) and Lou Costello (1906-59), us music hall and film comedy team. Abbott was the straight man and Costello was the chubby fool in many films, including *Rio Rita* (1942) and *The Wisful Widow of Wagon Gap* (1947).

ABC, the Australian Broadcasting Commission, created by the Australian parliament in 1932. It has three radio networks and one television network. Its main production centres are at Sydney and Melbourne.

ABC Mediation, arbitration conducted by Argentina, Brazil and Chile to settle a dispute between Mexico and usa when us troops landed at Vera Cruz in 1914.

Abd al-Aziz IV (1878-1943), Sultan of Morocco (1894-1908), son and successor of Mulai-Hassan. He was responsible for European influence in Morocco, a loan from France (1904), reorganization of the army, and higher taxes. He was later ousted by his brother ABD AL-HAFIZ.

Abd al-Hafiz (1875-1937), Sultan of Morocco (1908-12). He gained the throne after a coup but, faced with a rebellion, agreed to a French protectorate (1912) and abdicated.

Abd al-Malik (646-705), fifth Umayyad caliph (685-705). He united ISLAM by defeating the rival caliph, Abdullah ibn al-Zubayr, and also fought against the Byzantines. He reformed the government and made Arabic the official language. See also pp.1282-1283.

Abd al-Mumim (c.1094-1163), successor of Mohammed ibn Tumark who founded the ALMOHAD dynasty. He conquered the MAGHREB from the ALMORAVIDES, seizing the conquests of ROGER II of Sicily in Africa as far as Tripoli. He also united the BERBERS. He rebuilt RABAT and other towns. See also p.1303.

Abd ar-Rahman III (891-961), Umayyad emir (912-29) and first Caliph of Cordoba (929-61). He seized Ceuta and reclaimed other Spanish provinces, enlarged his navy, and greatly increased Cordoba's power. See also p.1304.

Abd-el-Kader (1808-83), Algerian leader, Emir of Mascara. He displaced the French and Turks from N Algeria and in 1839 began a war against the French. He was defeated at Isly (1844).

Abd el-Krim (1882-1963), Rif leader. He fought against Spanish rule in Morocco, capturing outposts with his Rif tribesmen in 1921-22. In 1925 he attacked French Morocco but was defeated by French and Spanish troops. He surrendered in 1926 but escaped from imprisonment and was granted asylum by Egypt in 1947.

Abd er-Rahman Khan (c.1830-1901), Emir of Afghanistan (1880-1901). He established the border with India and began modernization of Afghanistan.

Abdication, renunciation of the throne by a ruling monarch. There have been two abdications in British history, although the first, that of JAMES II, was so only in name. The birth of a son to James on 10 June 1688 raised the possibility of a Catholic dynasty being established. Whigs and Tories therefore combined to invite WILLIAM III (William of Orange of The Netherlands) to help drive James from the throne. William's arrival in England in November sent James in flight to Sheerness. Parliament declared that by running away he had abdicated. In February 1689 the throne was declared vacant and Parliament made William and Mary joint sovereigns. In January 1936 EDWARD VIII came to the throne. His wish to marry Mrs Wallis SIMPSON, an American divorcee, raised the issue of whether the monarch might so breach the rules of the

Church. The suggestion of a morganatic marriage (in which Mrs Simpson would not have taken any title nor any issue have the claims of an heir) was rejected. Stanley BALDWIN, the Prime Minister, insisted that the king abandon the proposed marriage or abdicate. On 10 December he announced the abdication. The throne passed to Edward's brother, the Duke of York, who became GEORGE VI. See also pp.1246-1247, 1677.

Abdomen, in vertebrates, that portion of the body between the chest and the pelvis containing the abdominal cavity and the abdominal viscera, including most of the digestive organs. In arthropods it is the posterior part of the body, containing the reproductive organs and part of the digestive system. See also pp. 4-5.

Abduction, in law, forcible or fraudulent taking away or detention of a person, particularly of one - a child, for example, or an unmarried girl - who is legally in the custody of a third party.

Abdullah, Sheikh Muhammad (1905-), political leader of Muslims in Kashmir. He served as Prime Minister of Jammu and Kashmir after India's independence (1947-53) but was arrested in 1953 for advocating Kashmiri independence. Until the 1970s he was kept almost continuously in protective custody.

Abdul-Hamid II (1842-1918), Sultan of Turkey (1876-1909). He suspended the constitution and formed an alliance with Germany after the Treaty of SAN STEPHANO (1878) when Russia threatened the continuation of the OTTOMAN EMPIRE. He was deposed in 1909 after a revolt of the YOUNG TURKS. See also p.1644.

Abel, in the Bible (Genesis), primal farmer killed by his brother CAIN, the primal hunter.

Abel, Sir Frederick Augustus (1827-1902), British chemist who devoted his career to the study of explosives. He was chemist to the War Department, invented cordite (with Sir James DREW) and wrote important works on the subject of explosives. See also pp. 582-583.

Abel, Niels Henrik (1802-29), Norwegian mathematician. He studied and worked in Norway and later in France and Germany. He did research into the roots of 5th order equations and advanced the theory of elliptic functions. In 1829 he was appointed professor at Berlin but died before taking the post.

Abélard, Pierre (1079-1142), French philosopher and monk. In his famous work *Sic et Non* (Yes and No) he attempted to reconcile differences between the Fathers of the Church by the use of the Aristotelian method of dialectic. His views were condemned by the Council of Sens (1140). He is perhaps best known for his tragic love for Heloise, which inspired his work *A History of Misfortunes*.

Abekuta, city in sw Nigeria, originally settled by Yoruba refugees from Fulani raiders of the Oyo Empire and from Yoruba civil strife. It was founded in c.1830. Pop. 226,361.

Abercrombie, Sir Leslie Patrick (1879-1957), British architect and town-planner. He was a leading consultant in the design and rebuilding of many British cities, including London, after wwn.

Abercromby, Sir Ralph (1734-1801), British general. As C-in-C in the West Indies, he captured Grenada, St Lucia, St Vincent and Trinidad. Sent to expel the French from Egypt, he defeated them at ABOUKIR (1801) but was killed in action.

Aberdeen, George Hamilton Gordon, 4th Earl of (1784-1860), British politician, Foreign Secretary under the Duke of WELLINGTON and Sir Robert PEEL. He was Prime Minister (1852-55) of the Whig-Peelite coalition that involved Britain in the CRIMEAN WAR. He resigned after Parliament voted to investigate the way the war was being waged.

Aberdeen, cathedral city in NE Scotland. It is an important economic centre and has gained prominence since the development of North Sea oil. Industries include shipbuilding and engineering. Pop. (1974) 179,575.

Aberdeen Angus, breed of beef cattle ori-

ginally developed in Scotland. Small, black and hornless, they yield high-quality meat. See also p.724.

Aberdeenshire, former county in NE Scotland, now part of the Grampian Region. The area is drained by the rivers Ythan, Don and Dee, and its agricultural land is some of the finest arable and beefstock-rearing country in Scotland. Area: 5,104sq km (1,971sq miles).

Aberhart, William (1878-1943), Canadian evangelist and Social Credit premier of Alberta (1935-43). A social reformer, he unsuccessfully attempted to initiate a policy of "social dividends" and to license banks. He instituted labour legislation, tried to improve education and supported provincial autonomy.

Abernathy, Ralph David (1926-), US clergyman and civil rights leader. He succeeded Dr Martin Luther King as the leader of the Southern Christian Leadership Conference after King's assassination in 1968 and continued to promote the non-violent civil rights movement. In 1968 he organized the Poor People's March on Washington.

Abernethy, Treaty of, the homage paid to William I "the Conqueror" by Malcolm III of Scotland in 1072 after William had invaded Scotland to stop border raids.

Aberration, in physics, defect in lens and mirror images arising when the incident light is not at or near the centre of the lens or mirror. Spherical aberration occurs when rays falling on the periphery of a lens or mirror are not brought to the same focus as light at the centre; the image is blurred. Chromatic aberration occurs when the wavelengths of the dispersed light are not brought to the same focus; the image is falsely coloured. In astronomy, aberration is the apparent change of position of a celestial object due to the effect that the Earth's motion has on the direction of the arriving light. In medicine, aberration is a deviation from normal; mental aberration is a term used for a particular, but unspecified, mental disorder. See also p.852.

Aberystwyth, coastal borough in NW Dyfed, mid-Wales. Lying at the mouths of the Ystwyth and Rheidol rivers, it contains one of Wales' four university colleges. Pop. 10,680.

Abidjan, capital city of the Ivory Coast. Situated on the Ebire Lagoon, it is the chief port, administrative and communications centre. It is a popular tourist resort and the site of the Museum of the Ivory Coast. The important industries are chemicals and textiles. Pop. (1975) 650,000.

Abilene, city in central Texas, approx. 240km (150 miles) W of Fort Worth. It expanded rapidly when it became a cattle embarkation point on the Texas Pacific Railway. Pop. (1970) 89,653.

Ablation, in aerospace technology, the wearing away of a material by flaking, chipping, melting or vaporization. Nose-cones and leading edges of re-entry capsules and missiles are fitted with ablating material to remove excess heat. Good ablating materials such as quartz and PTFE have low thermal conductivity, high melting points, high specific heats and high heats of vaporization and fusion. Ablation, in geology, is a measure of glacial loss through melting, evaporation, wind erosion, or calving (formation of icebergs). The term is sometimes used in geomorphology to describe erosion by the wind or by rivers or seas.

Abner, in the Bible (1 and 2 Samuel), Israelite army commander under SAUL. He transferred his loyalty from Ishbosheth, SAUL's son and successor, to DAVID and was murdered by Joab, who envied Abner's close friendship with David.

Abnormal psychology, division of psychology concerned with behavioural disorders, eg psychotic disorders such as SCHIZOPHRENIA, psychoneurotic problems such as PHOBIA, personality disorders and problems caused by brain damage or mental retardation. Unlike CLINICAL PSYCHOLOGY and PSYCHIATRY, abnormal psychology focuses on basic theory rather than on treatment. See also pp.1108-1115.

Abu. See TURKISH.

Abolitionists, people who sought to end slavery. William WILBERFORCE headed the movement that led to the abolition of Britain's role in the slave trade in 1807. Slavery was abolished throughout the British Empire by 1833. In the USA, Abolitionists were particularly active between 1820 and 1860, when they worked against the Fugitive Slave Law and helped slaves escape (through the "Underground Railroad", a series of hiding places). See also 1492, 1504-1505, 1612, 1628.

Abomey, town in Benin, W Africa. A former slave centre and capital of the old Kingdom of DAHOMEY, it now serves as an agricultural market town. Pop. 34,000.

Abominable snowman, or Yeti, legendary ape-like creature of the HIMALAYAS. Expeditions to the area have, however, failed to find definite evidence of its existence. See also p. 109.

Aborigines, original inhabitants of a country. Today the best known are the Australian Aborigines, who probably migrated from SE Asia about 30,000 years ago. At the beginning of European settlement in the 1780s there were about 300,000 Aborigines in Australia; by the mid-1970s there were about 110,000. Originally a semi-nomadic people who lived by hunting and gathering, many Aborigines have today become assimilated into the modern way of life. See also 120-121, 123, 1828-1829, 1833, 1978.

Abortion, loss of a fetus from the womb before the full term of pregnancy, commonly called a miscarriage. Medically an abortion is a miscarriage that takes place within the first 28 weeks of pregnancy. A legal abortion is one sanctioned by law. In Britain, it may be deliberately induced by drugs or surgery if there is a risk to the mother's physical or mental health or if it is likely that the baby would be born with a severe abnormality.

Aboukir (Abu Qir), village in Egypt on a promontory in the River Nile delta. In an adjoining bay Horatio NELSON defeated the French fleet on 1 Aug. 1798. Near the village NAPOLEON I defeated the Turks in 1799, and Sir Ralph ABERCROMBY defeated the French in 1801. See also NILE, BATTLE OF THE.

Abraham, in the Bible, progenitor of the Hebrews and founder of Judaism. Because of his dual role the expression "Abraham's bosom" gained currency among later Jews and is often used by Christians as a synonym for Heaven. He is also held in high esteem by Muslims who regard him as the ancestor, through his son Ishmael, of the Arabs.

Abraham, Plains of, Quebec City, Canada, scene of a decisive battle between the French and English. After the battle in 1759, during which both James WOLFE and Louis-Joseph de MONTCALM, the British and French commanders, were slain, the way was clear for the British to dominate eastern Canada.

Abrahams, Peter (1919-). Coloured South African novelist. Although self-exiled at the age of 20 to England and later to Jamaica, he centred most of his novels around his homeland. *Mine Boy* (1946), *The Path of Thunder* (1948), *Wild Conquest* (1951) and *A Wreath for Udomo* (1956) all deal with particular problems of South Africa.

Abrabives, hard and rough substances used to grind and polish surfaces. Some abrasives are used as fine powders, others in larger fragments with sharp, cutting edges. Most natural abrasives are minerals, eg diamond, garnet, emery, corundum, pumice, flint and quartz. Synthetic abrasives include silicon carbide, aluminium oxide, synthetic diamonds and boron carbide. Silicon carbide (called carborundum), first made in 1891, is produced by heating a mixture of pure silica sand and finely ground coke to about 2,400°C (4,330°F). Aluminium oxide, first made in 1897, is manufactured from rock bauxite (an aluminium ore) heated to over 1,100°C (2,000°F). Boron carbide is made by heating together a mixture of coke and boric acid. The manufacture of synthetic diamonds requires extremely high temperatures and pressures. See also p.409.

Abreaction, as described by Sigmund FREUD, a process of venting one's feelings after strong emotional arousal, eg a traumatic experience. He believed lack of abreaction could lead to a neurotic disorder. See also CATHARSIS.

Abruzzi, region in central Italy stretching from the Apennines to the Adriatic coast. It comprises four provinces; the town of L'Aquila is the capital. Its development has been restricted by its mountainous interior. Area: 10,794sq km (4,168sq miles). Pop. 1,205,100.

Abalom, name of several characters in the Bible. The most notable was the third son of DAVID, who murdered his brother Amnon because he had raped their sister. Plotting to seize the throne that SOLOMON would shortly inherit, he was killed by David's general, Joab.

Abscess, local inflammation of body tissue, caused by bacteria which destroy the body cells and leave a cavity, which then fills with pus.

Abscissa, in mathematics, the distance of a point from the y-axis in a CARTESIAN COORDINATE SYSTEM. See also p.786.

Absinth, toxic, yellowish-green liqueur containing wormwood, anise and other aromatics. Because it can destroy the nerve centres in the brain, its production is now illegal in most Western countries.

Absolute music. See ILLUSTRATIVE MUSIC.

Absolute zero, the temperature at which all parts of a system are at the lowest energy permitted by the laws of quantum mechanics; zero on the KELVIN temperature scale (-273.16°C). At this temperature the entropy of the system is also zero although the total energy may be non-zero. See also pp.842-846.

Absolution, in Christian churches, formal act by a priest announcing to repentant sinners the forgiveness of sins they have confessed. The act is based on the authority given by Christ to his apostles to forgive sins (John 20:23). The Anglican, Roman Catholic and Orthodox Churches believe that this authority is transmitted to the bishops and priests and successors of the apostles (see APOSTOLIC SUCCESSION). The grace of forgiveness, however, flows from God, the clergy acting merely as his instruments. Absolution is pronounced either after a general CONFESSION made by the entire congregation at a public act of worship or after a private confession made by an individual to a priest (see Penance).

Absolution, government with unlimited power vested in one individual or group. The term is primarily used to describe 18th-century European monarchies that claimed divine hereditary right to power. See also DIVINE RIGHT: 1852-1853.

Absorption, the taking in of one substance by another. Solids may absorb gases or liquids; liquids may absorb gases. In radiation the word is used of that part of radiant energy which is neither transmitted nor reflected by the surface which it hits.

Absorption Spectrum. See SPECTRUM.

Abstract art, art form that rejects the assumption that art must represent the external world; it is based on the belief that arrangements of colour and form can be valid in their own right as works of art. Such art may be classified as (1) semi-abstract, ie works based on nature but bearing little resemblance to natural forms; and (2) pure abstract, ie works consisting of shapes and colour wholly invented by the artist. Included in the first group are CUBISM, FUTURISM, VORTICISM, and the work of such artists as Pablo PICASSO, Paul KLEE, Henry MOORE and Alexander ARCHIPENKO. In the second group are included CONSTRUCTIVISM, DE STIJL, ACTION PAINTING, and the work of such artists as Wassily KANDINSKY, Piet MONDRIAN, Juan MIRO and Jackson POLLOCK. By 1870 the developing use of photography was already beginning to replace the need for strictly realistic painting and this, coupled with new ideas about the expressive potential of painting and sculpture, resulted in abstraction. The first paintings to achieve almost total non-representation were probably those by Kandinsky (by 1912), who freely abstracted from images inspired by landscape, myths and religious themes. The

Aberdeen Angus, developed as a breed in the Scottish Highlands, is noted for its fine beef.

Ralph David Abernathy succeeded Martin Luther King in the civil rights movement.

Abidjan, capital of the Ivory Coast, is the chief commercial centre and popular tourist resort.

Abraham, first of the biblical patriarchs, was the traditional founder of the Hebrew people.

Abstract expressionism

Abstract Expressionism; Number 23, an "action painting" by Jackson Pollock.

Abu Dhabi, capital of the largest of the oil-producing United Arab Emirates.

Abu Simbel; temples rescued from the flooding at the Aswan High Dam.

Abyssinian cats have long tapering tails, and are one of the most sensitive breeds.

first totally abstract works were the flat, geometric compositions of the Russian painter Kasimir Malevich and the Dutch painter Piet Mondrian, and the glass, metal and wire constructions of the Russian artist Vladimir Tatlin. See also pp. 1630-1631.

Abstract Expressionism, US art movement combining abstract art and expressionism, most active in 1945-55, when it was acclaimed and emulated internationally. The paintings were generally large and abstract (sometimes with figurative elements), with dramatic colouring. The artists placed great emphasis on the process of painting, some using the technique of action painting. Stressing spontaneity and free expression, they rejected prescribed technical procedures, traditional aesthetic canons and the concept of a finished product. They included Willem de Kooning, Jackson Pollock, Mark Rothko and Robert Motherwell.

Abstract music. See **ILLUSTRATIVE MUSIC**.

Abstract of title, statement prepared for a purchaser or mortgagee of land and buildings summarizing documents, previous owners and other legal facts.

Absurd, **Theatre of the**, form of drama that developed and flourished in the 1950s, written and produced by playwrights such as Samuel Beckett, Eugène Ionesco and Harold Pinter. Such drama attempts to abandon all logical processes and is based on unreal, absurd situations in which the characters are created deliberately out of harmony with their surroundings. Although its practitioners did not regard themselves as a school, they shared the basic belief that man's life is without meaning or purpose in a hostile universe.

Abu, isolated mountain in Rajasthan, NW India, 1,722m (5,650ft) above sea-level. It is famous for its Jain temples.

Abu al-Atahyah (748-c.826), Arabic poet. A favourite at the court of Harun al-Rashid, he wrote sacred and ascetic verse in a simple language.

Abu al-Fida (1273-1331), Arab historian and ruler. He was prince of Hama, Syria, from 1310 and sultan from 1320-21. He is best known for a geography, *Location of the Countries* (1321), and his *Abridgement of the History of Mankind* (1330), an Arabic history to 1329.

Abu Bakr (573-634), first Muslim caliph, successor to Mohammed. He accompanied Mohammed on the HIGRA, and his daughter married the Prophet. After Mohammed's death, he became caliph. He subdued the hostile Arabian tribes, made conquests in Iraq, Iran (Persia) and Syria, and united the Arabian peninsula. He also began the extension of Islam as a major world religion. See also p.1278.

Abu Dhabi (Abu Zaby), largest emirate of the UNITED ARAB EMIRATES; also the name of its capital city (pop. 46,000). Its economy is based almost entirely on the production of crude oil, extensive reserves - both onshore and in the Persian Gulf - having been discovered in the late 1950s. The centre of UAE expansion, Abu Dhabi has a new harbour and an airport. It has been ruled since the 18th century by the Al-Bu-Falah clan of the Bani Yas tribe, and there are long-standing frontier disputes with Saudi Arabia and Oman. Area: 67,340sq km (26,000sq miles). Pop. 235,700. See also p.2158.

Abulcasis, or **Abul Khasim** (died c.1013), Arab physician. His most important work was a textbook of surgery and medicine, *al-Tasrif*, which was divided into sections on cautery, surgery and fractures.

Abu Nuwas (762-c.815), Arab poet who is known especially for love poems and wine songs. He lived mainly in Baghdad, and was a favourite of Harun al-Rashid.

Abu Qir. See **ABOUKIR**.

Abu Simbel, ancient Egyptian village on the W bank of the River Nile, and location of two temples built by RAMESSES II (c.1292-1225 BC). Part of the site became buried in sand and was not discovered until 1813. In the 1960s, with the construction of the new ASWAN High Dam, the temples were cut into giant blocks, raised and reassembled farther inland 60m (200ft) higher up, to prevent them being flooded by the lake behind the dam. See

also pp.1181-1509.

Abu Tammam (804-c.845), Arabic poet who compiled an anthology (*Hamasa*) of Arabic poets, and was himself a court poet in Baghdad.

Abu Zaby. See **ABU DHABI**.

Abydos, (Arabaal Madfuna), ruined ancient city of Egypt, about 80km (50 miles) NW of THEBES and site of a series of temples dating from the 1st to the 25th dynasty (3100-c.664 BC) in which several stone tablets were found that contained information allowing a complete reconstruction of the succession of Egyptian PHARAONS to be made.

Abydos (Chy), site in Phrygia, Asia Minor, opposite ancient Sestos at the narrowest point of the Dardanelles. It is near the site of an Athenian naval victory over the Spartans in 411 BC.

Abyssal fauna, animals living in the deepest ocean depths in conditions of low temperature, darkness and high pressure. They include crustaceans, fish, jellyfish and squids, many of which have adapted to their lightless environment by growing extended fins which detect food and warn of the presence of predators. As colour is no advantage in darkness most animals are either grey or black. Their expandable mouths, gullets and stomachs enable them to eat food as large as themselves, and many survive by scavenging scraps that sink from the upper ocean. See also NW pp.60-61, 61.

Abyssal plain, the ocean floor below a depth of 3,000m (10,000ft) but excluding the deep OCEAN TRENCHES. The abyssal zone is characterized by stability of temperature in the range of -1°C to 5°C (30-41°F), the relative absence of water currents and the total absence of light. The slope of the floor is generally less than 1m per km (3.3ft per 1,000ft) and it is covered by deposits of biogenic oozes and non-biogenic sediments such as red clays. See also pp.238-239, 238.

Abyssinia. Former name for Ethiopia. See p.2035.

Abyssinian cat, exotic, short-haired domestic cat, probably originally from ancient Egypt. It has a wedge-shaped head; green, gold or hazel almond-shaped eyes; broad-based pointed ears; and a long, tapered tail. Its ruddy brown or brick-coloured coat has black-tipped hairs. The red variety lacks black pigment. See also KAFFIR CAT.

Acacia, or **misosa**, evergreen shrubs and trees native to Australia and widely distributed in tropical and subtropical regions. They have small leaves and yellow or white flowers. The blossoms of one species, the WATTLE, form part of Australia's coat-of-arms. Height: 1.2-18m (4-59ft). Family Leguminosae; genus *Acacia*. See also p.296.

Académie Française, official French literary society, now part of the Institut de France. Originating as a private discussion group whose members were persuaded by Cardinal Richelieu to become an official body in 1635, the society is the guardian of the French language and of literary conventions. Its prestige is largely traditional and membership, gained by secret election, is no longer limited only to writers. See also p.1450.

Academy, the name given to the school of philosophy founded by PLATO in c.387 BC and subsequently to institutions of learning throughout the world. Plato met his pupils in a garden outside Athens, said once to have belonged to a Greek hero called Academus. The school was known as the *Academia* and its followers as *Academists*. Plato's foundation was continued by Speusippus, Xenocrates of Chalcedon, Polemon of Athens and Crates.

Academies were formed throughout Europe in the 13th and 14th centuries, the most famous being the Academy of Floral Games, formed by troubadours in 1323, which each year awarded a golden violet to the best work of literature read by its author. In the 15th century the revival of Greek learning in Italy produced a wealth of academies, such as the Platonic Academy in Florence founded by Cosimo de' Medici in c.1400.

Between the 16th and 18th centuries

academies changed from schools supported by private patrons to national institutions. The ACADEMIE FRANÇAISE was founded in Paris in 1635 and the ROYAL SOCIETY in London in 1661. See also pp.1209, 1216, 1436-1437, 1450.

Academy Awards. See **OSCARS**.

Acadia (French, Acadie), historic region in North America. It was settled by the French in the early 17th century and included present-day Nova Scotia, New Brunswick, Prince Edward Island and parts of Quebec and Maine.

Acanthocephala, phylum of spiny-headed parasitic worms once thought to be NEMATODES. They are identified by a retractable spiny proboscis and an elongated, cylindrical body. The young are parasitic in arthropods and the adults are parasitic in vertebrates, attaching themselves to the intestinal lining. Average length: 1-2cm (0.4-0.8in). *Echinorhynchus* is the main genus.

Acanthopterygii (Perciformes), perch-like fishes. The largest order of backboned animals, it contains about 8,000 species, including perches, rockfishes, sea basses, cichlids, mackerel and tunas, sunfishes, sailfishes and marlin. See also p.8.

Acanthus, thistle-like, perennial plant found in Africa, the Mediterranean region, India and Malaya. It has lobed, often spiny leaves and white or coloured flower spikes. *Acanthus spinosus* forms the pattern for the ornamentation on CORINTHIAN columns.

Acapulco, city on the SW coast of Mexico, noted for beautiful scenery, deep-sea fishing and luxurious hotels. Founded in 1550, it was for 250 years an important port on the Manila galleon route linking Spain and the Philippines. Pop. 352,673.

Accad. See **AKKADIA**.

Acceleration, rate of change of velocity. Average acceleration \bar{a} from velocity V_1 to V_2 in time t is $(V_2 - V_1)/t$. Instantaneous acceleration a is the value approached by \bar{a} as time t diminishes towards zero. See also p.826.

Acceleration, in economics, principle by which changes in the level of demand for consumer goods produce proportionately greater changes in the level of capital investment. This is a result of the machines' usually having a greater value than the annual output of the goods they produce, so that every £1 of additional income requires more than £1 in extra investment in replacements and additional machines. See also **MULTIPLIER**.

Accelerator, particle, device in which charged elementary particles, such as ELECTRONS or PROTONS, are accelerated so that they acquire high energies. Accelerators have a vacuum chamber (or ring) in which the particles move; the accelerating force is provided by electric and magnetic fields. Electrostatic accelerators are among the simplest; they have electrodes operating at high potential differences. An electric field produces the acceleration in field accelerators in which the particles are kept in a stable narrow beam by magnetic fields. Accelerators are used in the treatment of cancer, in the production of radioactive isotopes for medicine, research and technology, and in sterilizing food. Large, expensive high-energy accelerators are used in nuclear physics to produce other particles, such as mesons, neutrinos and anti-particles, by directing the accelerated beam at stationary targets or by causing two accelerated beams to collide. Proton synchrotron accelerators produce the highest energies so far attained. See also pp.818, 846.

Accelerometer, device used to measure acceleration. A simple example is a plumb bob suspended from the accelerating object, whose angle with the vertical is proportional to the acceleration. A more sophisticated version, used in ballistic missiles, is an electromechanical device that translates the acceleration into electric current.

Accessory, in law, a person associated with a criminal act. An accessory before the fact consults, encourages or advises the criminal. An accessory after the fact is one who, with knowledge of a crime, receives or assists the criminal.

Accolade, ceremony used in conferment of knighthood. Formerly the sovereign touched the new knight on the neck, the *accolle* (neck-blow) being given with the fist or the flat of a sword. Today the knight is tapped on each shoulder with a sword. See also CHIVALRY.

Accomplice, in law, person associated with another or others in the commission of a crime. Generally, unlike an ACCESSORY, he takes an active part in the crime.

Accordion, musical instrument with organ-like tone produced by air from a bellows that vibrates reeds. The melody is played on a piano-type keyboard with chordal accompaniment controlled by buttons. It was invented in 1822 and is widely used in folk music.

Accountancy, profession whose objective is to complete and be able to produce financial information for and about a company for the benefit of the management and the investing public. See also AUDIT; BOOK-KEEPING.

Accra, capital of Ghana, established around the three fortresses of James Fort (British), Crevecoeur (Dutch) and Christiansborg Castle (Danish). Today it is a major port and economic centre on the Gulf of Guinea. It is the site of the University of Ghana, founded in 1948, and the headquarters of the Defence Commission of the Organization of African Unity. Industries: engineering and chemicals. Pop. 851,600.

Accretion, continually growing or building up; a term frequently used to describe certain modes of geological deposition. See pp.220-221.

Acculturation, process of cultural change that occurs when one society meets another. Free acculturation results from friendly interchange and the acceptance of change by the affected society. Directed acculturation occurs when a society, by domination, forces another to change. See also pp.1830-1831.

Accumulator. See BATTERY.

Acetaldehyde (ethanal), colourless volatile inflammable liquid (CH_3CHO) made by catalytic oxidation of ethanol or catalytic hydration of acetylene. Properties: s.g. 0.788; m.p. -123.5°C (-189.4°F); b.p. 20.8°C (69.4°F). See also ALDEHYDE.

Acetate, salt or ester of acetic (ethanoic) acid; ie a compound containing the ion CH_3COO^- or the group $\text{CH}_3\text{COO}-$. It is used in synthetic acetate fibres, in lacquers and in acetate film. See also pp.588-590.

Acetic Acid (ethanoic acid), colourless corrosive liquid (CH_3COOH) made by the oxidation of ethanol, either by catalysis or by the action of bacteria. It is the active ingredient in vinegar, and has many uses in the organic chemicals industry. Properties: s.g. 1.049; m.p. 16.6°C (61.9°F); b.p. 117.9°C (244.4°F). See also CARBOXYLIC ACID.

Acetone (dimethyl ketone), colourless inflammable liquid (CH_3COCH_3) made by oxidizing isopropyl alcohol. It is a raw material for the manufacture of many organic chemicals and is a widely used solvent. Properties: s.g. 0.79; m.p. -94.8°C (-138.6°F); b.p. 56.2°C (133.2°F). See also KETONE; p.896.

Acetylcholine, chemical compound released by certain nerve cells that serve as a transmitter in the NERVOUS SYSTEM. Upon stimulation of a nerve cell, acetylcholine is released into a small channel (SYNAPSE) between it and the next cell, thus conducting the impulse from one cell to another. See also pp.126-127.

Acetyl coenzyme A (acetyl Co A), derivative formed when PYRUVIC ACID is broken down during the formation of fat from carbohydrates. Co A acts as the carrier of the acetyl group which is the basic building block for the fatty acids. See also pp.908-909.

Acetylene (ethyne), colourless inflammable gas (C_2H_2), made commercially by the action of water on calcium carbide. It is used in oxy-acetylene cutting torches and as a raw material for making some organic chemicals. Properties: s.g. 0.905 (air 1.000); m.p. -80.8°C (-114.7°F). See also p.894.

Acetylsalicylic acid. See ASPIRIN.

Achaean League, two confederations of Greek city states formed in the area of the Peloponnese called Achaia (Akkaia). The first, founded in the 4th century BC, lasted for about 100 years. The second, founded in 280 BC, warred with Sparta, siding with Rome in 198 BC. In 146 BC Rome subjugated and dissolved the league.

Achaemenids, ruling dynasty of the first PERSIAN EMPIRE, which stretched from the River Nile as far as modern Afghanistan. The dynasty was founded by CYRUS THE GREAT (c.559-529 BC) and named after his ancestor, Achaemenes. Its last ruler was DARIUS III (r.336-330 BC). See also pp.1192-1193, 1214.

Acheampong, General Ignatius Kutu (1932-), President of Ghana from 1972. He enlisted in the army in the 1950s, serving in the UN Peace-Keeping Force in the Congo (1962-63). He led a bloodless military coup in 1972, proclaiming himself head of state.

Achebe, Chinua (1930-), Nigerian writer. His novels deal primarily with a search for identity in modern Africa and with the effect of cultural change on people's lives. *Things Fall Apart* (1958) depicts life in an African village before and after the arrival of missionaries. Other outstanding novels are *No Longer at Ease* (1960) and *Arrow of God* (1964). In 1971 he published a book of poems, *Beware Soul Brothers*.

Achernar, or Alpha Eridani, bluish-white main-sequence star in the constellation of Eridanus. Characteristics: apparent mag. 0.47; absolute mag. 1.3; spectral type B5; distance 75 light-years. See also p.978.

Acheron, in Greek mythology, a river of the underworld, one of five rivers within HADES, the realm of Pluto. CHARON carried the souls of the dead across either the Acheron or the Styx.

Acheson, Dean (1893-1971), US Secretary of State (1949-53). He was vigorously anti-Communist, and helped to develop the Marshall Plan, the Truman Doctrine and NATO. He encouraged support for Nationalist China (Taiwan) and UN involvement in Korea. See also p.1686.

Acheson, Frank O. V. (1887-1948), New Zealand novelist, best known for *Plume of the Arawas* (1930), a historical romance of the Arawa tribe.

Acheulean culture, early Palaeolithic culture that derives its name from Saint-Acheul, near Amiens, France. The term is used in Europe for the later stages of the hand-axe tradition, and in Africa for the complete hand-axe series. See also MS p.119.

Achill, island off W coast of County Mayo, Republic of Ireland, connected to the mainland by bridge. It is mostly bog and heather, but is noted for its magnificent cliffs. Area: 145sq km (56sq miles). Pop. approx. 5,500.

Achilles, in Greek mythology, son of PELEUS and THETIS. A formidable warrior, he was the most fearless Greek hero of the TROJAN WAR - and of HOMER'S *Iliad*. Legend held him invulnerable from weapons because he had been dipped by Thetis in the River styx at birth, except for the heel by which he was held. Achilles chose to seek glory by fighting at Troy, but an arrow shot by PARIS struck his heel and killed him.

Achilles tendon, strong elastic band of connective tissue in the back of the heel, also called the hamstring. It connects the gastrocnemius muscle of the calf of the leg to the heel bone. See also p.149.

Achinese, Sumatran tribe numbering some two million people. They were the dominant tribe of N Sumatra before the Dutch conquered the island in the 17th century.

Achondroplasia, hereditary disorder of the skeleton in which defective formation of cartilage (later converted to bone) results in a form of DWARFISM. It is characterized by a protruding forehead, well-developed trunk and short but strong limbs.

Achromatic vision, perception of the world in shades of white, grey and black - not in colours. It is normal in some animals

such as horses, dogs and cats, but in humans it is a defect that affects a small percentage. See also COLOUR BLINDNESS.

Acid, chemical compound containing hydrogen that can be replaced by a metal or other positive ion to form a SALT. Acids dissociate in water to yield hydrogen ions (H^+); the solutions are corrosive, have a sour taste, and give a red colour to litmus indicator. Strong acids are fully dissociated into ions whereas weak acids are only partly dissociated. See also BASE; p.888.

Acidosis, abnormal condition in which the blood becomes too acidic. It may be caused by a kidney complaint, diabetes or other diseases. Symptoms include muscular weakness and general malaise.

Ackermann, Rosemarie (née Witschas) (1952-), East German athlete. A high-jumper who uses the straddle technique, she won the 1975 European Championships and won the 1976 Olympic title.

Ackland, Rodney (1908-), British playwright. His plays include *Improper People* (1929); *Strange Orchestra* (1932); *The Dark River* (1943); *The Pink Room* (1952); and *A Dead Secret* (1957).

Acne, inflammatory disease of the sebaceous (or oil-producing) glands of the skin, probably caused by a hormonal imbalance, and resulting in skin eruptions ranging from mild blackheads and pimples to infected cysts. It is extremely common at PUBERTY, usually disappearing by the age of 20, but sometimes persists or periodically recurs later in life when a related disorder, acne rosacea (characterized by red blotchy lesions), may occur. See also pp.1074, 1134.

Aconcagua, mountain in the Andes range on the border between Argentina and Chile. The highest peak in the Western Hemisphere, 6,959m (22,831ft), it was first climbed in 1897.

Acouline, flowering plant of the genus *Acouline*. Its roots provide the ALKALOID acouline, used in medicine; in ancient times it was used as a poison. It is also called monkshood, friar's cap and wolfsbane. Family Ranunculaceae.

Acorn, the fruit of the OAK tree. The nut has some commercial value, being gathered for use as animal feed in various parts of the world. See also p.304.

Acorn worm. See BALANOGLOSSUS.

Acoustics, the study of the behaviour of sound waves. Architects use it in the design of public rooms such as concert and lecture halls. It assists engineers in the design of sound detectors such as microphones, and sound producers such as loud-speakers and ULTRASONIC devices. Audiologists use it to assess degrees of abnormality in the hearing of their patients. Musical acoustics is used in the design of musical instruments. See also pp.832-834.

Aquaviva, Claudio. See AQUAVIVA, CLAUDIO.

Acre, state in W Brazil, bordering Peru and Bolivia. Formerly a part of Bolivia, it was annexed to Brazil in 1903. The main agricultural products are coffee, rice and sugar. Area: 152,589sq km (58,915sq miles). Pop. 218,000.

Acre, unit of area measurement in English-speaking countries, equal to 4,840sq yd (0.405 hectares).

Acre (Akko), sea-port in N Israel on the Bay of Haifa, 16km (10 miles) N of Haifa. During the Crusades its possession changed hands many times, ultimately becoming the central Christian possession in Palestine. Pop. 33,900. See also pp.1310-1311.

Acridine, organic chemical compound, the molecule of which is a PYRIDINE ring held between two BENZENE rings. It is used in making drugs and dyes.

Acrylics, trademark for an acrylic fibre, chiefly acrylonitrile, made from acetylene and hydrogen cyanide. See also ACRYLIC; p.590.

Acromegaly, condition in which overproduction of PITUITARY growth hormones causes enlarged hands, feet and facial features. See p.1076.

Acrophobia, irrational fear of high places, usually accompanied by obsessive thoughts of falling or jumping. People suf-

Acanthus was the plant that influenced the ornamentation on Corinthian columns.

Acapulco, trading centre and popular winter resort 305km (190 miles) SW of Mexico City.

Accordions achieved great popularity as an accompaniment to folk dancing and singing.

Achilles tendon, often damaged by athletes in "explosive" sprinting and jumping events.

Acropolis

fering from acrophobia often feel dizzy and nauseous (at times nearly paralysed) when they look down from a high place.

Acropolis, fortified high point of ancient Greek cities. The most famous one, at Athens, was walled before the 6th century BC and was used for religious purposes as well as defence. See also **PARTHENON**; p.1205.

Acrostic, piece of prose or poetry in which the initial letters of each word or line spell a particular word or phrase: Aesthetic Conceit, Relying On Studying The Initial Characters.

Acrux, the binary star Alpha Crucis. About 270 light-years from Earth, with apparent magnitudes of 1.6 and 2.1, it is the 13th brightest star. See also **SU** pp.1014, 1020.

Acrylic, type of plastic, one of a group of synthetic, short-chain unsaturated carboxylic acid derivatives. Variation in the reagents and the method of formation yield either hard and transparent, soft and resilient, or liquid products. Their transparency, toughness and dimensional stability make acrylics useful for moulded structural parts, adhesives and paints. See also pp.588-590, 440.

Actaeon, in Greek mythology, huntsman grandson of Cadmus, King of Thebes. Turned into a stag by the goddess Artemis when he surprised her bathing naked, he was torn to pieces by his own hounds.

ACTH (adrenocorticotrophic hormone), protein hormone secreted by the anterior lobe of the PITUITARY GLAND at the base of the brain. It stimulates the cortex of the ADRENAL GLANDS to release steroid hormones. See also pp.154, 1076.

Actin, protein involved in cellular contractile processes. Found mainly in muscle cells, it reacts with myosin to form actomyosin. See also pp.125, 149.

Actinide elements, group of radioactive elements with atomic numbers from 89 to 103; actinium (89), thorium, protactinium, uranium, neptunium, plutonium, americium, curium, berkelium, californium, einsteinium, fermium, mendelevium, nobelium and lawrencium (103). Each element is analogous to the corresponding LANTHANIDE SERIES element. The most important of the group is uranium.

Actinium, radioactive metallic element (symbol Ac) of the actinide group, discovered in 1899 by Andrew Debierne. It is found associated with uranium ores. Ac^{227} , a decay product of U^{235} , emits beta particles. Properties: at.no.89; s.g.10.07 (calc.); m.p.1,050°C (1,922°F); b.p.3,200°C (5,792°F); most stable isotope Ac^{227} (half-life 21.6 yr). See also **ACTINIDE ELEMENTS**.

Actinomyces, infection caused by the fungus *Actinomyces israeli*; it is common in cattle but also affects man. It produces multiple pus-filled abscesses usually in the sinus tracts about the neck and face, creating a swollen-jaw effect. PENICILLIN is the best treatment.

Actinopterygii, ray-finned fishes, one of the two subclasses of bony fishes (OSTICHTHYES). They differ from the other subclass, the Crossopterygii, or tassel-finned fishes, in having fins containing little flesh and skeletal bone. The rayfins constitute 95% of all living fishes. See also pp.56-57.

Actinoptera. See **ANTHOZOA**.

Action painting, dripping and splashing paint on a canvas, on the basic assumption that the subconscious will take over and produce a work of art. The technique became widespread in the late 1940s and the 1950s. The term was first used about the work of the US artist Jackson POLLOCK. Other exponents of this style include Alan DAVIS, Robert Motherwell, Mathieu Erato and Jean-Paul RIOPELLE. See also **ABSTRACT EXPRESSIONISM**; 1686.

Actium, Battle of (31 BC), naval battle in which the fleet of Octavian, commanded by Agrippa, defeated the fleets of MARK ANTONY and CLEOPATRA. After Cleopatra fled, Antony followed and Octavian captured most of his ships. Antony's army surrendered a week later, and Octavian became sole ruler of the Roman Empire. See also p.1232.

Activator, in the life or pure sciences,

agent that accelerates or augments activity, eg an impurity that increases luminescence.

Activists, The, Belgian political faction at the beginning of this century that worked for the creation of an independent Flemish state. During WWI they seemed, for a time, likely to achieve their object with the support of the German occupying forces in Belgium. But the strong hostility of the overwhelming majority of Belgians forced the Germans to abandon the plan.

Act of Congress, in the USA, statute adopted by CONGRESS. It overrides conflicting legislation from any other source, although the SUPREME COURT may rule that an Act of Congress is unconstitutional.

Act of God, in law, accident that arises from an unexpected and unforeseeable event, the result of natural causes, such as a flood or an earthquake.

Act of Parliament, statute (law) created in Britain when a Bill passed by the House of Commons and House of Lords receives Royal Assent. Embodying the supreme force of British law, an Act remains in force until it is repealed by Parliament.

Act of Supremacy, passed by the English Parliament in 1534. It made the monarch the supreme head of the Church of England and so asserted England's sovereign independence of Rome in matters both spiritual and temporal. See also pp.1400-1401, 1404.

Acton, John Emerich Edward Dalberg, 1st Baron (1834-1902), British historian of Europe-wide influence in the late 19th century. He planned the *Cambridge Modern History*, and is known for his saying "power tends to corrupt and absolute power corrupts absolutely".

Actors' Studio, theatre workshop founded by ELIA KAZAN and others in New York in 1947. It became noted for the METHOD approach to acting, particularly under Lee STRASBERG, who joined in 1948 and taught many of the best young American actors. In the early 1960s, the Actors' Studio began also to produce plays on Broadway.

Acts of the Apostles, New Testament book describing the spread of the Gospel and the travels of St Paul, written by the author of St Luke's Gospel.

Acupuncture, form of medical treatment in which long needles are inserted into the body at certain points. Of ancient Chinese origin, it enables surgery to be done with the patient conscious and free of pain. It has so far defied scientific explanation.

ACV. See **AIR CUSHION VEHICLE**.

Adad, or Hadad, in Babylonian mythology, the rain god, bringer of storms, giver of waters and withholder of the harvest. As war god he became the destroyer whose whirlwinds, thunderbolts and droughts brought havoc to the enemy.

Adadnirari, name of three Assyrian kings, the most famous of whom was Adadnirari III (c.810-783 BC), who in c.802 captured Damascus.

Adalbert, Saint (c.936-97), first Bishop of Prague. He was elected bishop in 982 and came into conflict with the rulers of Bohemia over what he considered to be their insincere attitude towards the Church. In 994 he left to become a missionary in Prussia, where he was martyred.

Adam, in the Bible, first man and progenitor of all mankind, created from dust by God in his own image; Adam means "earth". He and his wife Eve were cast out of the Garden of Eden for sinning. Their sons were CAIN, ABEL and Seth. See p.1913.

Adam, Adolphe Charles (1803-56), French composer of more than 60 operas and ballets, notably *Giselle*.

Adam de la Halle (or Hale) (c.1240-c.1288), French trouvère and composer, called "Le Bossu". He wrote the earliest French comedy, *Le Jeu de la Feuillée*, and the light opera *Le Jeu de Robin et Marion*.

Adam, Robert (1728-92), Scottish architect, best known of four brothers, all architects. The greatest British architect of the later 18th century, his refined neo-classical style was widely influential. He was equally brilliant as an interior decorator and furniture designer. The vast Adelphi complex, London, begun in

1768, was his most ambitious project; his interior designs include Kedleston Hall, Derbyshire (1759), Kenwood House, London (1767) and Syon House, Middlesex (1762-69). See also 1473-1475, 1547.

Adamnan, Saint (c.628-704), Irish monk who wrote the life of St Columba. He joined the Columbian brotherhood of Iona and became the ninth abbot there (679-704). He accepted Roman rules concerning Easter and the tonsure, but failed to implement them on Iona.

Adamov, Arthur (1908-70), Russian-born French dramatist. He pioneered the Theatre of the Absurd, but abandoned it for Brechtian epic theatre.

Adams, Henry Brooks (1838-1918), US writer. A direct descendant of John and John Quincy ADAMS, his best-known work was *The Education of Henry Adams* (privately printed 1906, published 1918), an ironic analysis of a technological society.

Adams, James Truslow (1878-1949), US historian. He began his career on the New York Stock Exchange (1900-12), but later turned to writing. His *The Founding of New England* (1921) won the Pulitzer Prize for history.

Adams, John (1735-1826), second President of the USA (1797-1801). Stimulated by his radical cousin Samuel ADAMS, he became involved in anti-British agitation in the 1770s and helped to draft the Declaration of AMERICAN INDEPENDENCE. He served as Vice-President after 1789, and in office took a moderate Federalist position. See also p.1540.

Adams, John Quincy (1767-1848), sixth president of the USA, son of John ADAMS. He was Secretary of State (1817-24), and helped the evolution of the MONROE DOCTRINE. He narrowly won the presidential election of 1824, but was defeated by Andrew JACKSON four years later.

Adams, Léonie (Fuller) (1899-), American metaphysical poet. Her works, which are marked with great sensitivity and a mystical view of nature, include *Those Not Elect* (1925) and *Poems* (1954).

Adams, Robert (b.1809), English gun-maker who patented his solid-frame, self-cocking, percussion revolving pistol in 1851. It was the English rival of the Colt. See also **REVOLVER**.

Adams, Samuel (1722-1803), American revolutionary patriot and signatory of the Declaration of AMERICAN INDEPENDENCE. As a member and clerk of the Massachusetts legislature (1765-74) he was the chief radical spokesman for revolution. He helped form several radical organizations and led the Stamp Act (1765) protest and helped to plan the BOSTON TEA PARTY of 1773. He was a delegate to the CONTINENTAL CONGRESS until 1781. See also p.1540.

Adams, Walter Sydney (1876-1956), American astronomer, b. Antioch, Syria. Director of Mt Wilson Observatory from 1923, he devised a method of using the spectra of stars to measure their distances. See also p.981.

Adams, William (1564-1620), English navigator and first Englishman to reach Japan (1600). In 1613 he helped to establish an English trading factory for the East India Company. Adams remained in Japan with his Japanese wife and family, and continued his naval career with the trading company.

Adam's apple, protuberance at the front of the neck, where the LARYNX is encased in a protective surrounding of cartilage. It is more prominent in men than in women. According to fable it is part of the forbidden fruit which stuck in Adam's throat.

Adamson, Robert (1821-48), Scottish pioneer photographer. Working (1843-48) with David Octavius Hill, he made celebrated calotypes of many prominent Scots and of Edinburgh and rural scenes. See also pp.628-629.

Adana, city in s Turkey, on the Seyhan River, 48 km (30 miles) from the Mediterranean coast. Capital of Adana province, it was the scene of the Armenian massacre of 1909 and site of the Anglo-Turkish conference, led by Churchill, in 1943. Industries: tobacco, textiles, explosives. Pop. (1973) 383,046.

Adapazarı, town in nw Turkey, capital of Sakarya province. It is the trading centre for the surrounding agricultural area. Pop. (1970) 101,590.

Adaptation, adjustment to the surroundings by people and other living creatures, including plants. The process is essential for survival and may be both biological and social. Some animals and plants have adapted to difficult environments by variations in structure, propagation or organization within communities. Of all mammals, man has adapted most successfully to environmental changes. As the most highly evolved of all forms of life on earth he is able to live in widely different environments and has made technological advances that have enabled him to alter his physical surroundings and exploit them to the full. Social adaptation in humans involves learning to live in interdependence with other people. See also **ADAPTIVE RADIATION**; **EVOLUTION**; 1828-1831, 1840-1841.

Adapter, device used in chemical or electrical apparatus. In chemistry it is a glass tube with ground-glass sockets for joining glassware. In electricity it is an attachment for connecting an appliance to a socket having a different type of terminal.

Adaptive radiation, in biology, divergent ADAPTATION, a simultaneous divergence of several populations of one parent type into different forms, each suited to a different environment. If a species in time becomes distributed over several types of surroundings, the populations of each area may develop specialized features suited to the new environment. See also **EVOLUTION**; NW p.196.

Adda, Italian river, 312 km (194 miles) long, which rises in the Alps and flows through Lake Como and then se across the Lombardy Plain to join the River Po about 11 km (7 miles) w of Cremona.

Addams, Jane (1860-1935), American social reformer. In 1889 she founded Hull-House, Chicago, an early social settlement house, and she pioneered labour, housing, health and legal reforms, as well as campaigning for female suffrage, pacifism and the rights of immigrants. She shared the 1931 Nobel Peace Prize with Nicholas Murray BUTLER.

Addax, type of antelope found in the deserts of N Africa and Arabia. Noted for its long, twisting horns, the addax usually runs in herds of 5-20 animals, led by an old male. Heavily built and comparatively slow, it is becoming increasingly rare because of overhunting. Species *Addax nasomaculatus*. See also p.316.

Adder, any of several snakes in various parts of the world, some poisonous and others harmless. The European viper (*Vipera berus*) is called an adder in Britain. The puff adder (*Bitis arietans*) is a large African viper, and the death adder (*Acanthophis antarcticus*) a dangerous Australian elapid. See also pp.296, 300.

Adderley, Cannonball (1928-75), US jazz alto saxophonist, b. Julian Edwin Adderley. He came to prominence with the Miles Davis sextet in the late 1950s and then formed his own jazz group with his brother Nat, playing a popular form of jazz called "funk".

Addiction, use of a habit-forming substance, such as a drug, resulting in psychological or physiological dependence (or both). Characteristics of addiction include a tendency to increase the dosage and an overwhelming urge to continue taking the drug, without which withdrawal symptoms usually occur. One of the most common forms of addiction is ALCOHOLISM, in which someone becomes dependent on alcoholic drinks. Treatment may include group therapy (perhaps through an organization such as ALCOHOLICS ANONYMOUS) and aversion therapy with drugs such as ANTABUSE. Drug addiction is generally associated with hard drugs such as AMPHETAMINES and HEROIN; but soft drugs, such as barbiturates and tranquilizers, can also be addictive. See also **MARIJUANA**; pp.1080-1081.

Addington, Henry, Viscount Sidmouth (1757-1844), the first British Prime Minister (1801-04) not of a noble family. He later served as Home Secretary

(1812-22) and became widely unpopular because of his treatment of militant working-class agitators and others pressing for parliamentary reform. The PETERLOO MASSACRE occurred during his term of office. **Addinsell, Richard Stewart** (1904-), British composer noted for his film scores and incidental music, eg *Warsaw Concerto*.

Addis Ababa, capital and largest city in Ethiopia. The city, originally called Finfinne, was chosen as the capital of the Shoa Kingdom in 1886 and became the capital of Ethiopia in 1889; its name means "new flower" in Amharic. Situated in the centre of the country, it is an important communications centre and the terminus of Ethiopia's major rail link to the sea through the Republic of Djibouti. It is the headquarters of the Organization of African Unity and has a university (1961) noted for its museum of art and ethnology. Industries: tanning, textiles and tobacco. Pop. (1975 est.) 1,167,267. See also p.2035.

Addison, Christopher, 1st Viscount (1869-1951), British politician. He entered Parliament as a Liberal in 1910, but after differences with Lloyd George (1921) joined the Labour Party. An able administrator, he headed various ministries, was created a baron (1937), and was leader of the House of Lords (1945-51). **Addison, John** (1920-), British composer known particularly for his theatre and film scores, as well as orchestral and chamber music. His works include the overture *Heron* (1951).

Addison, Joseph (1672-1719), English poet, essayist and politician. His outstanding essays were published in the periodicals *Tatler* (1709-11) and the *Spectator* (1711-12 and 1714) and cover the fields of literature, philosophy, politics and morals. He worked closely in collaboration with his schoolfriend Richard Steele. His poetry includes the verse tragedy *Cato* (1713). A Member of Parliament after 1708, he was appointed secretary of state in 1717 by the Whig government.

Addison, Thomas (1793-1860), British physician who identified the adrenal hormone deficiency known as Addison's disease (1855) and Addison's anaemia. After 1837 he worked at Guy's Hospital, London, and was the joint author of *Elements of the Practice of Medicine* (1839). See also ADRENAL GLANDS.

Addition, mathematical operation signified by + (plus sign), interpreted for the natural numbers, as the number of members of a set produced by combining other sets. See also p.778.

Addled Parliament, 5 April to 7 June 1614, called by JAMES I to vote finances to pay his debts. The Commons' demand that extra-parliamentary taxation, or impositions, be stopped and that the clergy deprived of their livings in 1604 be reinstated were refused and the Parliament was dissolved without any act being passed or supplies voted. See also pp.1420-1421.

Adelaide (1792-1849), Queen of Great Britain, wife of WILLIAM IV and daughter of George, Duke of Saxe-Coburg Meiningen. She married William, then Duke of Clarence, in 1818.

Adelaide, capital of the State of SOUTH AUSTRALIA. Founded in 1836, it is situated at the mouth of the Torrens River on the Gulf of St Vincent. It is especially noted for its churches and fine cathedrals. The city's natural history museum dates from 1895 and it has two universities, Adelaide (1874) and Flinders (1966). It provides port facilities for an extensive hinterland and exports wool, fruit, wine and wheat. The principal industries are engineering, electronics, chemicals and textiles. Pop. 868,000.

Adelard of Bath (fl. 12th century), English scholastic philosopher with great knowledge of Arabic learning, whose important work dealt with NOMINALISM and REALISM.

Aden, seaport city on the Gulf of Aden, 160km (100 miles) s of the Red Sea and capital of the People's Democratic Republic of Yemen, the former Aden

Protectorate (1936-67). A Roman trading port, its importance diminished with the discovery of the cape route around Africa to India in the 15th century. It was held by the Ottoman Turks from 1538 until c.1802 when it was taken by Britain and governed by it as part of India until 1937. On becoming a free port in 1850, and with the opening of the Suez Canal in 1869, its importance greatly increased. It was made a crown colony in 1937 and the surrounding territory became the Aden Protectorate. On joining the British sponsored Federation of South Arabia in 1963, the National Liberation Front (NLF) forced the demise of the federal government and the independent republic of Southern Yemen was established (1967), known since 1970 as PDRYemen. Industries include cigarette manufacturing, oil and salt refining. Pop. 250,000. See also p.2172.

Aden, Gulf of, western arm of the Indian Ocean between Yemen and Somalia. On the west it is linked with the Red Sea by the strait known as Bab el Mandeb and is part of the trade route between the Mediterranean Sea and the Indian Ocean.

Adenauer, Konrad (1876-1967), politician, Chancellor of West Germany (1949-63). He was Lord High Mayor of Cologne from 1917 to 1933 and was later twice imprisoned by the Nazis. He helped to create the Christian Democratic Union, the dominant post-war party of West Germany, and was its leader (1946-66). In 1949 he was elected the first chancellor of the Federal Republic of Germany. As Chancellor he promoted German reconstruction, led Germany to membership of NATO (1955), and campaigned for European unity and the establishment of the COMMON MARKET (EEC). See also pp.1686, 1742.

Adenine, nitrogen-containing organic base of the PURINE group found combined in the nucleic acids. See also SU p.154.

Adenoids, mass of lymphoid tissue in the upper part of the THROAT behind the nose. When infected, they swell, interfering with breathing; they may then be surgically removed, often with the TONSILS. See also p.1064.

Adenoma, type of tumour (often benign) with a gland-like structure occurring in glands such as the thyroid or pituitary.

Adenosine triphosphate (ATP), nucleotide consisting of adenine, D-ribose, and three phosphate groups. Hydrolysis of ATP to give ADP (adenosine diphosphate) or AMP (adenosine monophosphate) and phosphate is accompanied by a large change in free energy. This hydrolysis is coupled to a phosphorylation reaction in biological systems to provide energy. ATP is synthesized from ADP by photosynthesis using energy from sunlight. See also pp.26, 908.

Adedatus II, Saint (d. 676), Roman Benedictine monk, Pope from 672 to 676. He devoted much of his life to the restoration of derelict church buildings.

Ader, Clément (1841-1926), French pioneer of flight. A self-taught engineer and inventor, he was the first man to demonstrate that a heavier-than-air machine could become airborne.

Adhesion, the attraction of the molecules of one substance for the molecules of another when both substances are in contact. An adhesive is used to join substances whose molecules would not otherwise attract, although a strong joint can sometimes be made by pressing together two clean, carefully ground and matched surfaces. See also COHESION.

Adhesion, in medicine, fibrous band of new tissue that may bind together internal parts of the body or interfere with normal functioning by looping round and constricting the blood supply. Most adhesions result from inflammation or, more rarely, surgical operations.

Adiabatic process, thermodynamic change without any gain or loss of heat or mass into or out of a system during expansion or compression of the gas or fluid composing the system. Truly adiabatic changes must take place in short time intervals so that the heat content of the system remains unchanged, or else the

system must be perfectly insulated (a practical impossibility). See also THERMOCHEMISTRY p.836.

Adige (Etsch), second longest river in Italy. It rises in the Tyrolean Alps, N Italy, and enters the Adriatic Sea s of Chioggia. A dam supplies hydroelectric power and irrigation. Length: 410km (255 miles).

Adi Granth, or Granth Sahib, sacred book of SIKHISM. It serves as the centre of devotion and worship. The book is a collection of the writings of Sikh, Hindu and Muslim religious leaders. Its compilation was begun in 1604 and it was declared holy in the 18th century.

Adipose tissue, also known as fatty tissue, connective tissue of body cells which are distended by the storage of large globules of fat.

Adirondack Mountains, circular mountain group located in NE New York State, reaching from Mohawk valley in the south to the St Lawrence River in the north. There are many scenic lakes, gorges and waterfalls. Much of the area has been set aside as the Adirondack Forest Preserve. It is noted for its resorts including Lake Placid and Lake George. Highest point: Mount Marcy, 1,629m (5,344ft).

Aditi, in Hindu mythology, the mother of the world and of the gods, sustainer of earth and sky. Her name means "free from bonds" and she is seen as the personification of the infinite.

Adjutant stork, large scavenging bird found in Africa, India and SE Asia, named for its military gait. It has white, black and grey plumage and throat pouches; it feeds on carrion. Length: up to 152cm (60in). Species *Leptopilos crumeniferus*.

Adler, Alfred (1870-1937), Austrian psychiatrist. After working with Sigmund FREUD (1902-11), Adler broke away to found his own school of "individual psychology". Adler postulated that striving for social success and power was fundamental in human motivation. According to his theory, individuals develop problems and maladjustments when they cannot surmount feelings of inferiority acquired in childhood. Adler's concept of the "creative self" stressed the positive role that the individual plays in realizing his own goals. See also p.1121.

Adler, Larry (1914-), US harmonica player. He played with harmonica groups in the 1930s, then appeared in solo concerts and Hollywood films. He has performed in many concerts, displaying unequalled virtuosity, and has commissioned new works by classical composers, including VAUGHAN WILLIAMS.

Admiral, naval officer equivalent in rank to an army general. There are several grades of admiral, eg rear-admiral and vice-admiral.

Admiral's Cup, international yacht-racing competition held since 1957 every two years at Cowes, Isle of Wight. Teams of three yachts from each participating country compete in four events, two offshore (Channel and Fastnet races) and two inshore during Cowes Week.

Admiralty, cabinet-level department in charge of the ROYAL NAVY until 1964. Set up by HENRY VIII, it was directed by a board of five lords commissioners. The Admiralty became the Navy Department within the Ministry of Defence.

Admiralty Islands, volcanic island group in the Bismarck Archipelago, part of Papua New Guinea. Manus is the largest island in the group. They were discovered in 1616. Area: 2,072sq km (800sq miles). Pop. (1971) 23,000.

Adobe brick, building brick formed from a clay of the same name, found in SW USA. The clay is mixed with water and straw, moulded into blocks and dried in the sun. The bricks are an excellent construction material; some have lasted for thousands of years in arid climates.

Adolescence, time of life - between PUBERTY and maturity. See pp.1134-1136.

Adonis, in Phoenician and Greek myth, a youth of remarkable beauty. He was the favourite of APHRODITE and PERSEPHONE. ZEUS decided that Adonis should spend half of the year with Persephone, queen of the underworld, and half with Aphrodite.

Adoption, act of a person taking as his child one who is not his own by fact or law. Often in ancient times an adult male was adopted in order to continue a family line. Today's laws require that the adopting parents satisfy the authorities that they are suitable, and that the child (when over a specified age) consents to being adopted. **Adoration of the Lamb**, painting by Jan van Eyck. See p.1384.

Adoration of the Shepherds, painting by CORREGGIO. See p.1391.

Adour, river in SW France, rising in the Pyrenees and flowing in a wide arc NW for 335km (208 miles) until it empties into the Bay of Biscay.

Adova. See ADUWA.

ADP. See ADENOSINE TRIPHOSPHATE.

Adrenal glands, pair of small endocrine glands situated above the KIDNEYS. Each consists of a cortex, or outer layer, and medulla, or inner part. Essential to human life, the cortex produces many STEROIDS (including CORTISONS) that regulate the blood's salt and water balance and are concerned with carbohydrate metabolism. The medulla produces two hormones: ADRENALINE (epinephrine) during emergency or stress, which increases the immediate energy supply, blood pressure and heart rate; and noradrenalin (norepinephrine), which mediates nerve impulses. See also 154-155, 1076.

Adrenaline, or epinephrine, chief hormone secreted by the medulla of the ADRENAL GLANDS. It stimulates the nervous system, raises metabolism, increases pulse rate and increases blood pressure when released naturally or injected intravenously. It is often administered to treat anaphylactic shock. See also HORMONE; pp.154-155.

Adrenocorticotrophic hormone. See ACTH.

Adrian, name of six popes. One of the most notable was Adrian I (r.772-95). Threats to the papal authority from the Lombards led him to seek help from CHARLEMAGNE, who confirmed PEPIN's donation of lands to the papacy and expanded its estates. Adrian IV (r.1154-59), born as Nicholas Breakspear (c.1100-59), was the only English pope. In 1152 he went to Scandinavia where he organized the Church. He crowned FREDERICK I (Barbarossa) Holy Roman Emperor in 1155, but their relationship was not always amicable. Adrian acknowledged the authority of William of Sicily, against the wishes of the Emperor. He was said to have given Ireland as a fief to HENRY II of England. Adrian VI (r.1522-23), born as Adrian Florensz Boeyens, a Dutchman, was the last non-Italian pope. He tried to restrain the extravagance of the papal court, but died before he could make lasting reforms. See also p.1320.

Adria, Edgar Douglas Adrian, Baron (1889-1977), British electro-physiologist, professor of physiology at Cambridge (1937-51). His important discoveries concerning the function of nerve cells, including the "all-or-none" law, earned him a share with C. S. SHERRINGTON of the 1932 Nobel Prize in physiology and medicine. He wrote *The Mechanism of Nervous Action* in 1932.

Adrianople. See EDIRNE.

Adriatic Sea, shallow arm of the Mediterranean Sea between Italy and Yugoslavia. It has a comparatively high salinity and only slow-moving currents. Control of effluents is poor in the surrounding countries, particularly in Italy (the most industrially developed), and as a result the Adriatic is the most polluted part of the Mediterranean Sea. Lobsters and sardines are the chief catches of local fisheries. Length: approx. 805km (500 miles); max. depth: 1,230m (4,035ft).

Absorption, attraction to the surface of a solid or liquid of a gas or liquid, unlike absorption which implies incorporation. The amounts adsorbed and the rate of adsorption depend on the structure exposed, the chemical identities and concentrations of the substances involved, and the temperature.

Adula massif, mountain group in the Lepontine Alps, Switzerland, rising to 3,400m (11,155ft) above sea-level.

Aduwa (Adowa), town in Ethiopia, about

Advent

Aeneas, a mythological hero, was favoured by the gods and survived the fall of Troy.

Aerials or antennas pick up TV and radio signals and relay them to the receiver.

Aerofoils take a variety of forms, but all enable an aeroplane to obtain lift.

Aeroplane design is determined primarily by type - commercial, military or private.

126km (78 miles) s of Asmara. Scene of an important Italian defeat by the Ethiopians (1896), it was captured by the Italians in 1935 and restored to Ethiopia by the British in 1941. Pop. (1970 est.) 15,712.

Advent, liturgical season preceding Christmas. In the West it begins on the Sunday nearest 30 Nov. and is a time of preparation for Christmas.

Adventists, Christian sect whose distinctive belief concerns the imminent Second Coming of Christ, who will thereupon destroy evil in the world. William Miller (1782-1849) formed the first organized movement in the USA in 1831. His followers were called Millerites or Adventists. Controversies over dates of the second coming caused splits in the movement; the largest group being the SEVENTH-DAY ADVENTISTS.

Advocate, lawyer employed by a party to a civil or criminal case to represent him at a trial in court; generally called a barrister in England. The advocate's duty is to put his client's case as skillfully as the client himself would have done had he possessed the advocate's knowledge and experience of legal procedure. In a criminal case, it is not part of the advocate's function to decide whether his client is innocent or guilty; but it is considered unethical for an advocate positively to proclaim the innocence of a client who has privately admitted guilt.

A.E. (1867-1935), pseudonym of the Irish poet, artist and man of letters George Wilson Russell. A leader of the Irish literary revival, he edited the *Irish Homestead* (1905-23); his works include *The Candle of Vision* (1918) and mystical poetry. See also p.1766.

AE Aurigae, O-type star that is moving at a high velocity (about 130km - 80 miles per second). See p.984

Aegean Sea, part of the Mediterranean Sea between Greece and Turkey. Bounded by Crete to the s, it is connected to the Black Sea and the Sea of Marmara by the Dardanelles to the ne. In classical times it was known as Archipelago, literally the "chief sea", and was an important trade link between the Greek city states. Oil and natural gas have been discovered in the area.

Aegina (Aiyina), island in the Aegean Sea off e central Greece, 27km (17 miles) sw of Athens. Occupied by the Dorians (1000 BC), it was the site of the minting of the first Greek coin. It was the capital of Greece (1828-29). Area: 83sq km (32sq miles). Pop. 9,500.

Aegir, Norse master of the seas. He did not have the status of a god, but his relations with the Nordic gods were friendly. He was welcomed to their feasts and returned their hospitality in his marine palace. Germanic peoples believed that treasures engulfed during shipwrecks were stored in Aegir's palace.

Aegle, in Greek mythology, a sacred goat-skin garment worn by Zeus and occasionally borrowed by his daughter ATHENA. Later it came to mean a shield or breastplate which possessed the power to protect friends and terrify enemies. The aegis of Athena was patterned with a border of snakes and had a central, petrifying image of the gorgon MEDUSA.

Aegyptopithecus, fossil primate of the Oligocene period, about 30 million years ago. Together with *Propliopithecus*, it is one of the earliest known precursors of the hominoids, the group of primates that includes apes and human beings. See also p.108.

Aelfric (c.955-1010), Anglo-Saxon priest who composed works of religious instruction. His *Catholic Homilies* and *Lives of the Saints* were written in rhythmic, alliterative English, to appeal to poorly educated audiences. His *Colloquy* was a primer in dialogue form intended for novice monks.

Aeneas, in Greek mythology, the son of Anchises and APHRODITE. Active in the defence of Troy, he was removed by Poseidon from the city since he was destined to rule over the survivors of Troy. Aeneas led the Trojans westward to Italy.

The Romans acknowledged Aeneas and his Trojan company as their ancestors.

Aeneid, poem written by the Roman poet VIRGIL, between 30 and 19 BC. Written in 12 books, the *Aeneid* recounts the legendary founding of the town of Lavinium by the Trojan AENEAS. The *Aeneid* resembles the writings of Homer in both form and concept: the first six books have been called "Virgil's *Odyssey*" and the second six, his *Iliad*. The two themes of Rome's destiny and human suffering are contained in the character of Aeneas who tries in spite of human limitations to fulfil the divine mission. The *Aeneid* was regarded by Romans as their national epic and the study of Virgil's works was widespread in the Roman Empire. See also pp.1224, 1228, 1248.

Aeolian harp, instrument introduced in the late 17th century, consisting of a number of strings, tuned to unison, on a wood resonance box. It is hung in a tree and the wind produces vibrations which set off the strings' HARMONICS, so producing a chord-like effect. See also pp.832-835.

Aeolian Islands (Lipari Islands), group of volcanic Italian islands N of Sicily. There are seven main islands, including Lipari, Stromboli and Vulcano, with a total area of about 116sq km (45sq miles).

Aeolians, ancient Greek people. In the late Bronze Age, c.1100 BC, they settled on Lesbos and other islands. They were famous for their music and poetry. See also 1172.

Aeolus, in Greek mythology, the son of Poseidon and guardian of the winds. The winds lived with him on the floating island Aeolia, where they were kept in a cave. Aeolus set them free whenever he wanted to, or whenever the gods requested.

Aeration, bringing air into contact with a fluid by bubbling through or by agitation. Compressed air, providing oxygen to promote bacterial action, is blown into a reagent tank in the treatment of sewage. Aeration is also used in the fermentation and soft drinks industries, as well as in the manufacture of penicillin and other antibiotics. See also pp.544-545.

Aerial, or antenna, component of radio systems for the radiation (broadcasting) of signals and for their reception. Coiled receiving aerials are often fitted inside radio sets, but for the transmission of VHF and UHF signals, aerials must normally be placed above the heights of buildings. See also pp.638-640, 646.

Aerobatics, form of display flying in which highly manoeuvrable, usually single-seater aircraft climb, dive, roll, turn, spin, and/or loop the loop. In competition aerobatics, the manoeuvres are marked by judges; world championships began in the 1960s. The British RAF aerobatic team, the Red Arrows, earned worldwide fame with their Gnat jet aircraft.

Aerobe, minute organism that usually grows only in the presence of free atmospheric oxygen. Some aerobes can however remain alive even in the absence of oxygen and are called facultative ANAEROBES.

Aerodynamics, science of gases in motion and the forces acting on objects, such as aircraft, in motion through the air. An aircraft designer must consider four fundamental factors and their interrelationships: weight of the aircraft and the load it will carry; lift to overcome the pull of gravity; drag, or the forces that retard motion; and thrust, the driving force. A heavier-than-air craft must have sufficient thrust to propel itself at speeds high enough for its wings (or rotor) to generate enough lift to overcome the pull of gravity. Air resistance increases as the square of an object's velocity and must be minimized by streamlining to limit turbulence (which causes drag). The WIND TUNNEL is an essential tool used by the aerodynamic engineer to predict the performance of an aircraft. See also pp.831, 518.

Aerofoil, any shape or surface, such as a wing, tail or propeller blade on an aircraft, that has as its major function the deflection of airflow to produce a pressure differential or lift. A typical aerofoil has a leading and trailing edge, and an upper

and lower camber. See also pp.518-519.

Aerolite, stony meteorite, as opposed to an iron (siderite) one. Aerolites are composed chiefly of silicate materials, with less iron and nickel than siderites.

Aeronautics, study of flight and the control of aircraft. The study developed from the principles of lighter-than-air flight of balloons and dirigibles, which mainly concerned the raising of a load by means of buoyancy, into the multi-disciplined science of heavier-than-air flight of gliders, rotorcraft (helicopters and autogyros) and aeroplanes. All aircraft share some principles of flight, but are unique in others. BALLOONS and dirigibles go aloft by displacing air with a gas, usually hydrogen, helium or hot air. Balloons have no means of propulsion, but dirigibles are powered by engines. Rotorcraft utilize lift provided by a rotating wing or rotor. A HELICOPTER propels itself forwards by tilting the plane of rotation of its powered rotor, but an AUTOGYRO (also called gyroplane) has a free-wheeling rotor which generates lift only after the autogyro has gained forward speed using a powered propeller. GLIDERS and aeroplanes use wings to provide lift, but a minimum forward speed is essential to maintain it. A glider dives in relation to the surrounding air to maintain forward motion and lift. Some modern gliders can maintain lift if they dive at angles of 30 or 40 to 1. An AEROPLANE is pulled forwards (when propeller driven) by a propeller which advances through the air as a screw through wood, or is pushed (when jet-propelled) by the reaction forces of hot expanding gases. See also AIRCRAFT; pp.512-520.

Aeronomy, study of the Earth's upper atmosphere, including its composition, density, temperature and chemical changes as recorded by rockets and satellites. See also p.246.

Aeroplane, heavier-than-air flying machine that depends upon fixed wings for its support in the air, as it moves under the thrust of its engines. This thrust may be provided by an airscrew (propeller) turned by a piston or turbine engine, or by the exhaust gases of a jet engine or rocket motor. GLIDERS differ from aeroplanes only in their complete dependence upon air currents to keep them airborne. The main body of an aeroplane is the fuselage, to which are attached the wings and tail assembly. Engines may be incorporated into or slung below the wings, but are sometimes mounted on the fuselage towards the tail or, as in some fighter aircraft, built into the fuselage near the wings. The landing gear or undercarriage, with its heavy wheels and stout shock absorbers, is usually completely retractable into the wings or fuselage. Wing design varies with the type of plane, high-speed fighters having slim, often swept-back or adjustable wings that create minimal air resistance (drag) at high speeds. At the other extreme heavy air freighters need broader wings in order to achieve the necessary lift at take-off. AUTOGYROS are rather dated aeroplanes that obtain lift not only from wings but also from a rotor similar to that on a HELICOPTER. A delta wing is a broad wing, or fuselage extension, that is aerodynamically suited for both large and small high-speed planes. An aeroplane is steered by the pilot moving flaps and ailerons on the wings and rudder and elevators on the tail assembly. This deflects the pressure of air on various aerofoil surfaces, causing the plane to rise or descend, to bank (tilt) or swing and turn in the air. A pilot needs to refer to many control instruments, including an altimeter showing height, an artificial horizon showing tilt, and indicators for air speed, ground speed, rate of climb and rate of banking and turning. Engine and airframe systems are monitored by numerous additional gauges, meters and warning lights. Radar systems aid navigation, an automatic pilot keeps the aircraft steady on a fixed course, and pressurized cabins allow passenger aeroplanes to fly at heights exceeding 10,000m (32,000 ft). See also pp.514-521, 568-571.

Aerosol, suspension of liquid or solid particles in a gas. Fog or mist – millions of tiny water droplets suspended in air – is a liquid-based example; airborne dust or smoke is a solid-based equivalent. Manufactured aerosols are used in products such as deodorants, cosmetics, paints and household spray. See also 598.

Aerosport, general term for any pursuit connected with flying machines or devices. Aeroplanes take part in races, record-breaking, team displays and display and competition aerobatics. In gliding and ballooning there are distance, altitude and endurance events. Other aerospports include PARACHUTING ("sky-diving") and HANG-GLIDING. In parachuting, there are precision events as well as events for style and relative work (team formations). HELICOPTER flying has world championship events such as precision flying, rescue and navigation.

Aerostat, another name for a BALLOON. See pp.512-513.

Aertsen, Pieter (c.1508-75), Dutch painter, whose pictures of food, kitchen utensils and other everyday subjects did much to promote the development of still-life painting; he may have influenced CARAVAGGIO and VELÁZQUEZ. One of his best-known works is *Christ in the House of Martha and Mary* (1559).

Aeschines Socraticus (4th century BC), Greek philosopher and orator. He was a student of SOCRATES and present at his teacher's condemnation and death. Aeschines composed several Socratic dialogues. See also p.1209.

Aeschylus (c.525-456 BC), Greek dramatist. The earliest of the great Greek playwrights, he is said to have been responsible for the development of tragedy as a dramatic form by his addition of a second actor to the older tradition of one actor and a chorus. He was also the first to introduce scenery. His work is best remembered for its lofty and grandiloquent verse. Among his surviving works are *The Suppliants*, *The Persians*, *The Seven Against Thebes* and *Prometheus Bound*, but his best-known work was the trilogy *Oresteia*, comprising *Agamemnon*, *The Choephoroe* and *The Eumenides*. These plays, on the subject of the house of Atreus, were first performed in 458 BC. See also p.1208.

Aesir, primary group of Nordic gods who lived in ASGARD. Three of them – Woden (Odin), Thor (Donar) and Tyr (Tiw) – with a few others, were the object of a cult that extended throughout the lands inhabited by Germanic peoples. Secondary to the Aesir was a group of gods known as the Vanir.

Aesop (c.620-560 BC), semi-legendary Greek fabulist. A former slave, he was the reputed creator of numerous short tales about animals, all illustrating human virtues and failings (although they were almost certainly written by several people). Aesop supposedly died at Delphi, where he angered citizens and was thrown off a cliff. Most of the fables are simple tales in which animals symbolize human characteristics to convey a moral lesson, eg *The Hare and the Tortoise* teaches "slow and steady wins the race", and *The Fox and the Crow* cautions against trusting flatterers. The fables attributed to Aesop were preserved principally through Babrius, Phaedrus and Maximus Planudes. See also p.1512.

Aesthetic Movement, English literary and artistic movement of the 1880s, founded in protest against the "philistine" tastes of the period. "Art for art's sake" was its chief doctrine, and the periodical *The Yellow Book* its main publication. Walter PATER and OSCAR WILDE were leaders of the movement, which was also represented by the poet W.B. YEATS and such artists as J.M. WHISTLER and Aubrey BEARDLEY.

Aesthetics, study of beauty and of standards of value in judging beauty, especially in art. The term was first used in the 18th century to describe a science whose object is beauty, although philosophizing about the arts dates from the writings of PLATO and earlier. In the 1820s, G.W.F. HEGEL employed the term in its present sense. In the 20th century, aesthetics has

come to be regarded as a branch of philosophy involving the study of works of art, human behaviour towards art and the enjoyment of art. See also MS pp.232, 233.

Aetiology, in medicine, the science of the origins and causes of diseases. See pp.1058-1105.

Afars and the Lusas, former name of the African nation Djibouti. See p.2021.

Affenpinscher, small German "monkey dog" (toy dog group) known since the 17th century in Europe. It has a rounded head, short muzzle and small, pointed, erect ears. Its prominent chin, bushy whiskers and moustache, and eyebrows that hang down over its eyes, give it a distinctive expression. The black coat is hard, wiry and short, except on the legs and face, where it is more shaggy. Average height: 20-25cm (8-10in) at the shoulder. Average weight: 3-3.5kg (7-8lb).

Affiliative motive, need to associate with, and form attachments to, other living beings.

Affirmation, promise by a witness in a court of law to tell the truth, accepted from someone who for religious reasons refuses to swear an OATH on the Bible.

Affluent Society, *The* (1958), book by US economist JOHN K. GALBRAITH. Its theme is that, in an advanced Western industrial society, a serious imbalance between the provision of public goods and private goods develops. According to Galbraith, as economic development progresses, more cars and leisure will necessarily mean more of such unwanted results as congestion and pollution.

Afghan hound, aristocratic hunting dog (hound group) originating in Egypt 4000-3000 BC and later established in Afghanistan. Aloof and dignified, it has a long, slender head and jaws; long, hanging ears; level back; arched loins; long, straight legs with large feet; and a long, tapered tail with a ring or curve at the end. The thick, silky coat is short and smooth on the back and longer over the rest of the dog. There is a long topknot on the head. Average size: 61-71cm (24-28in) high at shoulder; 23-27kg (51-60lb).

Afghanistan (Afghanestan), landlocked mountainous country in s central Asia. Area: 647,497 sq km (249,999 sq miles). The economy is predominantly agricultural. Pop. 19,796,000. See p.1970.

Afghan Wars, three wars fought by Britain, 1838-42, 1878-80 and 1919, in an attempt to block Russian influence in Afghanistan and so secure the northwest frontier of India. The first war began well for Britain with the capture in 1839 of Kandahar (Quandahar) and Ghazni, but the war ended with the Russian favourite, Dost Mahomed, restored to the emirate at KABUL. The second war ended with Britain having gained control of Afghanistan's foreign policy in return for guaranteeing the emir against foreign aggression and paying him a subsidy. Britain easily won the third war, but by the treaty of Rawalpindi lost foreign policy control. See also p.1617.

Alonso. See ALFONSO.

Africa, the second largest continent, straddles the equator and lies largely within the tropics.

Land. Africa forms a large plateau between the Atlantic and Indian oceans; its highest features include the Atlas and Ahaggar mountains in the NW, the Ethiopian Highlands in the E and the Drakensberg Mountains in the S. Kilimanjaro 5,895m (19,340ft) is the continent's highest peak. The huge sunken strip in the SE is known as the East African or Great Rift Valley. The SAHARA, the largest desert in the world, stretches across the north, covering more than a quarter of the continent. The Kalahari and Namib are smaller deserts in the S and SW. The island of Madagascar off the SE coast is the world's fourth largest.

Structure and geology. The continent is largely composed of ancient metamorphic rocks overlain with Tertiary Mesozoic and Palaeozoic sediments. The mountains of the NW are folded sedimentary material, roughly contemporaneous with the Alps. The Great Rift Valley, formed by the progressive movement of the Arabian Penin-

sula away from Africa, is in the N largely of igneous and in the S mainly of older Precambrian rocks.

Lakes and rivers. The Rift valley contains the lakes Albert, Malawi and Tanganyika. Lake Victoria (69,484 sq km; 26,828 sq miles) to the E is Africa's largest. Lake Chad (Tchad), which dries to a salt pan in dry periods, lies in the southern Sahara. The Nile, at 6,653 km (4,132 miles) the longest river in the world, flows from the dual sources of Lake Victoria and Lake Tana in the Ethiopian Highlands. Other major rivers are the Niger, Congo (Zaire) and Zambezi.

Climate and vegetation. Much of the continent is hot and, outside the desert areas, humid. The belt along the Equator receives more than 254cm (100in) of moisture a year and is thickly covered by tropical rain forest. The forest gives way both to the N and S to areas of acacia and brush and then through savanna grassland to desert. The northern strip of the continent and the area around the Cape have a Mediterranean climate.

Animal life. Although the continent is traditionally the home of big game hunting, strenuous efforts are being made to conserve the remnants of Africa's wild life. Game reserves have been established, mainly in a Africa, where there are vast herds of zebras and wildebeest. All the world's largest carnivores, except the tiger and the bear, are found there and the world's largest terrestrial animal, the African elephant, is indigenous. At the opposite extreme Africa has an enormous population of insects, some of which are important disease carriers and far more dangerous in terms of human mortality than the larger animals.

People. Originally the whole continent was populated by Negroid palaeolithic peoples who depended economically on hunting and gathering. In the Sahara they were replaced by Arabs who moved in from the Middle East in the 7th and 8th centuries AD. Today three-quarters of the population is rural. Of note are the Masai and Watusi tribes of a Africa who have lived for centuries as nomadic herdsmen. The pygmies of the rain forest have remained gatherers and hunters, as have the Bushmen and Hottentots of the SW deserts.

Economy. Agriculture is restricted in the central part of the continent by the large expanse of tropical rain forest, although such cash crops as cocoa, rubber and ground nuts are grown in plantations. Along the N coast Mediterranean crops such as citrus fruits, olives and cereals are grown. The Sahara is largely unproductive, supporting only a nomadic herding community. East and southern Africa are the richest areas agriculturally, containing large mixed farms and cattle ranching. Apart from South Africa the entire continent is industrially underdeveloped. Mining is most important; Zambia contains the largest deposits of copper ore in the world. Bauxite is extracted in a Africa and oil in the Libyan and Algerian deserts. South Africa is extremely rich in minerals, especially gold, diamonds and coal.

Recent history. At the end of the 19th century the whole continent, except for Liberia and Ethiopia, was under foreign domination by either European powers or by the Ottoman Empire. In 1977 only Rhodesia (Zimbabwe) was technically a European colony and, in 1980, it too became independent.

Area approx. 30,244,050 sq km (11,677,240 sq miles).
Highest mountain Kilimanjaro 5,895m (19,340ft).
Longest river Nile 6,653km (4,132 miles).
Population (1971 est.) 354,000,000.
Largest cities Cairo (6,133,000); Alexandria (2,259,000); Johannesburg (1,498,000).

See also pp.296-297, 308-309, 314-317, 1924-1927 and articles on individual countries in the *Survey of Nations*.

African art, rich and varied, especially in its sculpture, ranges from the remarkable Nok terracotta heads, Ife bronzes and BENIN ivory masks of Nigeria to rock paintings, (such as those at Tassili,

Aesop, Greek fabulist who created the moralistic tales such as *The Hare and Tortoise*.

Afghan hound, now fashionable pet that was once used for hunting gazelles and leopards.

Afghanistan - profile

Official name Republic of Afghanistan
Chief cities Kabul (capital) (1973 est.) 18,094; Kandahar, 134,000; Herat, 42,000.
Government Head of state, Babrak Karmal, president (seized power Dec 1979)
Religion Islam
Languages Pushtu, Dari
Monetary unit Afghani
Gross national product (1978) 11,715,000,000.
Trading partners USSR, India.

Africa: a Xhosa woman, Bantu-speaking peoples of Cape Province in South Africa.

African hunting dog

African violets display attractive purple or pink blossoms in clusters around a stalk.

Aga Khan III, racing celebrity and descendant of an ancient line of Muslim rulers.

Agamemnon, who according to legend led the Greeks in the siege and capture of Troy.

Agincourt; battle where English bowmen, outnumbered four to one, routed the French.

Sahara) spanning 5,000 years; from the complex, body painting systems of the Nuba of SE Sudan to the carved musical instruments and the stylized metal and wood "spirit guardian" figurines of tribes in Gabon. The decorative arts, particularly in textiles, murals and pottery, flourish throughout Africa. Knowledge of the origins, development and stylistic relationships of African art is at present fragmentary. Established forms evolved centuries before the arrival (in the late 15th century) of the Portuguese, the first European visitors, but because of its perishable nature - wood being the dominant material used - most early work has not survived. PICASSO, MODIGLIANI and others were influenced by African art forms. See also pp.1504-1505.

African hunting dog, wild dog found in Africa, where it hunts in packs preying on small mammals. Unlike most dogs it has only four toes on each foot. Its head is flat with a short muzzle and large ears; the coat is yellow, black and white. Height: approx. 60cm (24in) at the shoulder. Species *Lycaon pictus*.

African National Congress, South African political party, formed in 1913, banned in 1960. It worked for Black parliamentary representation and racial equality. Similar parties were formed in Rhodesia and Nyasaland. See also p.1736.

African violet, tropical African flowering house plant. The velvety, rounded leaves grow in spreading rosettes around purple, white or pink blossoms with yellow stamens. The stems and undersides of the leaves are often purple. Propagation is by leaf cuttings or crown division. Height: 10-15cm (4-6in). Family Gesneriaceae; genus *Saintpaulia*.

Afrikaans, official language of the Republic of South Africa. It is derived from the language spoken by the original Dutch settlers of the 17th century but quickly evolved its own forms, so that it was a distinct language when the first Britons arrived in 1795. This evolution occurred unusually fast because there were no formal schools or educational institutions, and the language remained almost entirely a spoken one until the mid-19th century. Although based on Dutch, its vocabulary also shows the influence of English, German, French, Portuguese and Hottentot; the grammatical structure is based entirely on Dutch. Many original Dutch inflections have been dropped.

Afrikaans is regarded as a cultural focal point by South Africans of Dutch origin. As a result, the political struggles of the BOERS for recognition by the British in the late 19th century found expression in the self-conscious development of the Afrikaans culture, mainly in the Cape Province. This movement was led by Rev. S.J. du Toit, with encouragement from new immigrants from The Netherlands, such as Arnoldus Pannevis. By 1925 Afrikaans had replaced Dutch as one of the official languages of the South African state, education system and church.

Today the Afrikaans vocabulary is large and expanding; it has been codified and adapted to the needs of a technological society, and is spoken by almost three million people, including many detribalized Hottentots. See also p.2134.

Afrika Korps, German armoured force in WWU that operated in the N African desert. Under its commander Gen. Erwin Rommel it had spectacular but transient success against the British 8th Army. See also pp.1682, 1683, 1683.

Afro-Asiatic languages. See HAMITOSEMITIC.

Afro-Basaldella (1912-), Italian painter whose work was influenced first by CUBISM and, after WWU, by ABSTRACT ART. Among his best-known paintings is the *Garden of Hope* (1958), in the UNESCO building, Paris.

Afterbirth, PLACENTA and fetal membranes expelled from a womb after childbirth. The expulsion is carried out naturally by contraction of the womb. See also pp. 168-169.

Afterimage, image retained by the brain and seen even after looking away from an object. The colour of the afterimage is the

complement of that of the object viewed. Television and motion pictures use this phenomenon. See also MS p.48.

Afternoon of a faun. See APRES-MIDI D'UN FAUNE, L'.

Alfzeliuss, Arvid August (1785-1871), Swedish historian and folklorist. A parish priest, he is best known for his collection of Swedish folk-songs.

Aga, title of a person of high position in the OTTOMAN EMPIRE, such as a commander or chief officer.

Agade. See ARKADIA.

Agadir, town in SW Morocco, Africa, 121km (75 miles) S of Mogador. It was the scene of an international incident in 1911. Pop. (1971) 61,192. See also HC2 p.186.

Agaja, (c.1673-1740), third ruler of DAHOMEY (r.1708-40). He centralized the country and added to it by war the kingdom of Alladé (1724) and the state of Whydal (1727).

Aga Khan, name of the leaders of the sect of Ishma'ili Muslims. Aga Khan III (1877-1957) was the best known. He succeeded his father in 1885, and headed the All-India Muslim League in support of British rule in 1906 and represented India at the World Disarmament Conference (1932) and at the League of Nations (1932; 1934-37). He moved to Europe early in his life and was known for his enormous wealth and love of racehorses. His son, Prince Karim, became Aga Khan IV in 1957; he was educated at Harvard. **Agam, Yaacov** (1928-), Israeli artist, real name Yaacov Gipsstein. He did pioneer work in KINETIC ART and OP ART. His work, which emphasizes change and movement and in which the component elements can often be rearranged, is typified in *Three Times Three Interplay* (1970-71).

Agamemnon, King of Mycenae, ancient Greece, brother of Menelaus. According to Homer's ILLAD, he led the Greeks at the siege of TROY. When Troy fell, Agamemnon returned home with his captive Cassandra, but was murdered by his wife CLYTEMNESTRA and her lover Aegisthus. His death was avenged by his children ORESTES and Electra.

Agamid, member of the family of iguanas and related lizards living in Africa, S and central Asia, and Australia. See also p.70.

Agammaglobulinaemia, abnormal condition in which the gamma globulin part of the blood is missing, causing a reduction in ANTIBODIES and a high susceptibility to repeated and persistent infections.

Agana, capital of Guam in the Mariana Islands, W Pacific Ocean, located NE of Apra Harbour, on the W coast. Pop. 2,100.

Agar, complex substance extracted from certain seaweeds; its powder forms a "solid" gel in solution. It is used as a thickening agent or emulsifier in foods, an adhesive, and a medium for growing bacterial cultures.

Agaricus, order of fungi that includes edible mushrooms, ink caps and the poisonous AMANITAS, including the red-and-white spotted fly agaric, and the deadly destroying angel and death cap. See also pp.352, 353.

Agassiz, Jean-Louis Rodolphe (1807-73), Swiss naturalist who in 1840 proposed the theory of an Ice Age that once covered most of northern Europe. The previous year he had shown that glaciers move. He also produced an important work of zoological classification between 1840 and 1846.

Agate, James Everhed (1877-1947), British drama critic. He was critic for the *Manchester Guardian* (1907-14) and the *Sunday Times* (1923-47). He published his diary *Ego* in nine vols. (1935-49).

Agate, hard type of silica (SiO₂) with parallel bands of colour, used as a semi-precious stone and for making ornaments. **Agatha**, Saint, 3rd-century Christian martyr, patron saint of Catania, Sicily, said to have been tortured by a Roman consul for repulsing him. Feast: 5 Feb.

Agathon, BELUNOSROMAN (2 vols, 1766-67) by Christoph Martin Wieland, set in Greece. In an idealized environment where the mind and the senses can live

harmoniously, a young man abandons his fervent religious beliefs as a consequence of his experiences with a courtesan.

Agave, short-stemmed, succulent, flowering plant found in tropical, subtropical and temperate regions. Agaves have narrow, lance-shaped leaves clustered at the base of the plant, and many have large flower clusters. The well known century plant (*Agave americana*) of SW North America grows up to 7.6m (25ft) in one season. Each plant produces a flower spike once a year or less often, after which the leaves die, leaving the roots to produce a new plant. Other species are SISAL HEMP (*A. sisalana*) and the many species of YUCCA. Family Agavaceae. See also p.378.

Agee, James (1909-55), US writer. His works include *Let Us Now Praise Famous Men* (1941), *The Morning Watch* (1951) and *A Death in the Family* (1957), a novel which won the Pulitzer Prize.

Age of Reason, term used to describe the intellectual temper and scientific advances of the 17th century, associated especially with DESCARTES, GALILEO and NEWTON. Its ruling notions were RATIONALISM and MECHANISM, its method increasingly observation. It led to the ENLIGHTENMENT. See also SCIENTIFIC REVOLUTION, pp.774-775, 1436-1437.

Agglomerate, in geology, coarse volcanic rock that includes both rounded and angular fragments in a finer matrix, thus combining the characteristics of CONGLOMERATES and BRECCIAS.

Agglutination, clumping of BACTERIA or red blood cells by ANTIBODIES that react with ANTIGENS on the cell surface.

Agglutinative language, language in which words are composed of a series of elements representing only one grammatical category, eg Japanese and Finnish. It is also called an agglutinating language. See also p.1878.

Aggregate, material such as sand, crushed and broken stone, pebbles and boiler ashes, used to form concrete by mixing with cement, lime, gypsum or other adhesive. It provides volume and resistance to wear. See also pp.548-549.

Aggregate equilibrium, in macro-economics, the national income equilibrium for the economy. This equilibrium occurs when the economy functions in such a way that the total demand for goods and services equals the total (or aggregate) supply of goods and services. This balance means there is no tendency for prices to fall or rise or for producers to increase or decrease output.

Aggression, state of mind that is expressed in ways ranging from verbal attack to physical violence. Aggression in animals is generally regarded as instinctive. Psychologists do not agree, however, about the origin of human aggression. Some regard it as instinctive, others as entirely learned, and still others as a mixture of the two. Imitation may be a way in which children acquire aggressive behaviour. See also pp.1131, 1135.

Agincourt, village in Pas de Calais, NE France, 53km (33 miles) W of Arras. It is the site of Henry V's decisive victory over the French in 1415 during the HUNDRED YEARS WAR. The French were more heavily armoured but the superior rate of fire of the English long-bow over the French cross-bow proved decisive. Pop. (1968) 276. See also pp.1346-1347.

Agitprop Theatre, type of drama or dramatic technique popular in the 1930s, characterized by social protest and a Marxist viewpoint. The term derives from "agitation" and "propaganda".

Agnatha, the jawless fishes. Only the LAMPREY and the HAGFISH live today, but many fossil species date from as long ago as 450 million years. See also p.56.

Agnes, Saint (b.c.304), Roman Christian martyr and patron of girls. She was murdered by DIocETIAN. Her feast day is 21 January.

Agnew, Spiro Theodore (1918-), outspoken US politician. He was Richard Nixon's Republican vice-presidential candidate in the elections of 1968 and 1972, serving as vice-president (1969-73). In 1973 he was brought to trial on charges of bribery, conspiracy and tax evasion. He

pleaded no contest and then resigned **Agni**, fire god in Vedic mythology revered as god of the home and appearing in lightning and the Sun as a nature deity. He was a messenger between men and the gods when he carried consumed offerings of the sacrificial altars.

Agnon, Shmuel Yosef (1888-1970), Israeli novelist and short-story writer, b. Poland. He shared the 1966 Nobel Prize in literature with Nelly Sachs, his works (in Hebrew) include three epic novels on East European Jewry.

Agnosticism, theory of religious knowledge, associated with English rationalist Thomas Huxley (1825-95), that it is impossible either to demonstrate or to refute God's existence, on the basis of available evidence.

Agora, in ancient Greece, the central square of a city, used as a place of assembly and market place. It was usually surrounded by important public buildings. See also p.1204.

Agoraphobia, morbid fear of open spaces, the first element of the term being derived from the Greek AGORA in its original meaning. Afflicted people are apt to panic when alone in an open or public place. See also p.1113.

Agostini, Giacomo (1942-), Italian motorcyclist who, riding MV Augusta machines, won the 500cc world championship seven times (1966-72) and the 350cc championship once (1973). He joined the Yamaha team in 1974.

Agouti, fairly large, herbivorous rodent of Central and South America and the West Indies. Hunted as food by other animals and man, it has short ears, long legs, a minute tail and coarse fur that ranges from orange through brown to almost black. Family Dasyproctidae. See also PACA.

Agra, city in N central India, on the Yamuna River. It is an important rail junction and commercial and administrative centre. It was founded in 1566 by the MUGOL emperor AKBAR. Emperor SHAH JAHAN built the TAJ MAHAL there (c.1632-43) as a tomb and memorial to his wife. The city's importance declined after 1658 when the Mogul capital moved to Delhi. It was annexed to the British empire in 1803 and became the capital of the North West Province during the mid-19th century. It has much fine Mogul architecture including the Pearl Mosque, the Great Mosque and Akbar's fort. Industries: glass, shoes, textiles. Pop. 592,000.

Agranulocytosis, acute and serious illness caused by chemicals or hypersensitivity to drugs, in which granular white blood cells that counter infection decrease in number. Infection may rapidly ensue, involving mouth ulcers, fever and sore throat. Cortisone and antibiotic drugs are generally used in treatment.

Agrarian revolution, term used to describe the transition in the human economy from hunting to farming, c.9th-8th millennia, in western parts of Asia and Mesopotamia. See also AGRICULTURAL REVOLUTION. pp.1158-1159.

Agricola, Georgius (1494-1555), real name Georg Bauer, German mineralogist who pioneered the science with his book *De Re Metallica* (1530).

Agricola, Gnaeus Julius (AD 37-93), Roman general, conqueror and governor of Britain. As governor (c.78-84), he Romanized Britain without oppression and extended Roman influence to Wales and part of Scotland. His enlightened rule was described by Tacitus, his son-in-law. See also p.1234.

Agricultural revolution, term used by some historians to describe a variety of changes - crop rotation, new machinery, increased capital investment, scientific breeding, land reclamation and enclosure of common lands - which greatly increased the productivity of English agriculture between the early 18th and the late 19th centuries. It is also used sometimes to refer to the AGRARIAN REVOLUTION. See also pp.1464-1465.

Agriculture, the science of cultivating crops and raising livestock. Originally man hunted animals and gathered roots, berries and fruits. Later a knowledge of

husbandry and crop farming enabled him to produce food on a small scale for himself and his family. Modern archaeological dating techniques suggest that the production of cereals, such as wheat and barley, and the domestication and breeding of animals were widespread throughout a Mediterranean countries by about 7000 BC. The Egyptians and Mesopotamians (c.3000 BC) were the earliest civilizations to organize agriculture on a large scale. They bred sheep and goats for meat, milk, butter and cheese, and developed new strains of cereals. They made use of irrigation techniques and used manure as fertilizer. The development of agriculture took place at differing rates in different areas but by Roman times (200 BC-AD 400) crop farming and the domestication of animals were commonplace in western Europe.

In the 1,000 years that followed, the changes that occurred were developments of techniques already known. Methods of land reclamation and drainage were developed in Europe in the 11th century and there were improvements in ploughs and in the harnesses used for the horses and oxen that pulled them. In the 17th and 18th centuries, breeding was practised to increase yields of milk and meat, and the use of the Norfolk Four Course system of crop rotation meant that plentiful fodder was produced in fields which in the past had lain fallow.

The greatest changes in agriculture, however, came with the industrial growth of the 18th century. Farm machinery was introduced during the 19th century and became widespread in the UK in the 1840s when prices were falling and labour costs were rising. In Western Europe and North America mechanization has advanced greatly and a large proportion of agricultural production is now carried out by FACTORY FARMING, involving the battery production of livestock such as pigs and poultry. The mixed farm is more common in Western Europe than elsewhere. The enormous food-producing regions of the USA mid-west and the Russian steppes consist largely of farms given over to the production of either grains or livestock. In much of the underdeveloped world, such as SE Asia, agriculture still relies heavily on labour, 75% of the world's labour force is engaged in farming. Shifting agriculture of the slash and burn method is still sometimes practised in equatorial regions. See also pp.1158-1159, 1158-1159, 652-675.

Agrimony, the name of three plants. *Agrimonia* of the rose family, and *Bidens*, the bur marigold and *Eupatorium*, hemp agrimony, both of the composite family.

Agrippa, Marcus Vipsanius (c.63-12 BC), Roman general, adviser to Octavian (who became the Emperor AUGUSTUS). After the death of Julius CAESAR in 44 BC, he helped Octavian win the throne by commanding two naval battles against Sextus Pompeius in 36 BC and helping to defeat MARK ANTONY at ACTIUM in 31 BC. Agrippa was appointed consul three times, married Augustus's daughter and became his heir designate. See also p.1232.

Agrippa von Nettesheim, Heinrich Cornelius (c.1486-1535), German philosopher and occultist. He was court secretary to Charles V and physician to Louise of Savoy, and was constantly under attack for his writings in defence of occultism, which included *De Occulta Philosophia*.

Agrippina, name of two Roman princesses. Agrippina I, Vipsania Agrippina (14 BC-c. AD 33), was the granddaughter of the Emperor AUGUSTUS. She married Germanicus, the heir of TIBERIUS, and after her husband's death engaged in plots against Tiberius whom she suspected of killing Germanicus. She was banished to an island near Naples in AD 29. Her daughter Agrippina II, Julia Agrippina (c. AD 15-59), was the mother of NERO. She married CLAUDIUS after he became emperor and persuaded him to make Nero his heir designate. She is believed to have murdered Claudius in AD 54.

Agronomy, science of soil management and improvement in the interests of agriculture. It includes the studies of particular plants and soils and their interrela-

tionship. Agronomy has resulted in disease-resistant plants, selective breeding and the development of chemical fertilizers. See also pp.656-657, 664-665, 668-669.

Aguaascalientes, city in central Mexico, 58.2 km (36.4 miles) NW of Mexico City and capital of Aguaascalientes State since 1835. It is a health resort noted for its mineral springs and is built over an ancient system of tunnels of advanced construction and unknown origin. It was founded in 1575 by the Spanish as a silver-mining town. Pop. 222,000.

Agulhas, Cape, southernmost point of the African continent, in South Africa, 193 km (120 miles) ESE of Cape Town.

Aguti. See AGOUTI.

Ahab, two biblical figures. Ahab (d. c. 853 BC) the son of Omri, King of Israel, was reprimanded by ELIAH for allowing his wife Jezebel to worship BAAL. He was killed in a battle at Gilead. The other Ahab was a lying prophet burned to death by NEBUCHADREZZAR.

Ahaggar (Hoggar) Mountains, plateau region in the north centre of the Sahara, rising to 2,918 m (9,573 ft) at Mt Tahat. The main town is Tamanrasset, but most of the population are nomads, herding goats and sheep.

Ahasuerus, in Christian legend, a Jew doomed to wander forever for mocking Christ at the Crucifixion, not named as a Jew until the 18th century. The many treatments of the subject include Shelley's *Queen Mab*.

Ahidjo, Ahmadou (1924-), first President of Cameroon. After serving in the territorial government of the French Cameroons, he managed to gain independence for his country in 1960 and union with the newly independent former British Cameroons in 1961, while maintaining close ties with France.

Ahimsa, non-violence or non-injury to both men and animals, a central concept of JAINISM and BUDDHISM, important also in HINDUISM. This belief led to the condemnation of sacrificial cults by Jains and Buddhists and inspired Mahatma GANDHI's passive resistance.

Ahmadabad, city in W India, on the Sabarmati River, capital of Gujarat state. Founded in 1411, it is the cultural, commercial and transport centre of the state with many magnificent mosques, temples, and tombs, and Gujarat University (1950). It has the headquarters of the INDIAN NATIONAL CONGRESS, and GANDHI located his school for political training nearby. The city's principal industry is cotton. Pop. 1,600,000.

Ahmadnagar, city in W central India, on the River Sina. It was the birthplace of Shivaji, famed leader of the Marathas (Maharattas). Today it is an administrative and textile manufacturing centre. Pop. 118,700.

Ahmad Shah Durrani (c.1722-73), Emir of Afghanistan (1747-73) and founder of the Durrani dynasty. He united the Afghan tribes and is sometimes known as the founder of modern Afghanistan. He invaded India, taking Delhi twice, in 1757 and 1760. But he was unable to hold on to the territory gained and in the 1760s he lost the Punjab to the Sikhs.

Ahmose, also Amosis, Amasis, two kings of ancient Egypt. Ahmose I (r. c. 1570-1546 BC) re-established THEBES as the centre of government, reconquered Nubia and expelled the HYKSOS. He was the father of AMENHOTEP I. Ahmose II (r. 570-525 BC) encouraged Greek trade with Egypt (founding a market town at Naukratis), but allowed his kingdom to be threatened by CYRUS THE GREAT of Persia. See also p.1166.

Ahriman, or **Angra Mainyu**, Zoroastrian principle of evil standing in opposition to AHURA MAZDA, the omniscient God and creator of life. Like God, Ahriman is pure spirit and has with him subsidiary evil spirits such as lust and heresy. Born of infinite time along with Ahura Mazda, Ahriman will nevertheless be defeated in the end. See also ZOROASTRIANISM.

Ahura Mazda (Mazdah), in ZOROASTRIANISM, in early times the only God and creator. Later called Ohrmazd, Ahura

Shmuel Yosef Agnon, arriving with his wife in Stockholm to receive a 1966 Nobel Prize

Giacomo Agostini, seven times world 500cc motorcycle champion, riding a MV Augusta

Agoutis, similar to rabbits in behaviour and diet, are hunted for their tasty white flesh

Agriculture is the world's most important industry and influences the way all men live

Ahvenanmaa

Air conditioning heats, cools or cleanses the atmosphere; the motor is equipped with fans.

Air-cushion vehicles skim over land or water on a layer of air created by powerful fans.

Airedale terriers are a courageous and affectionate breed; they are good swimmers.

Airships flourished in the 1920s and 1930s; they carried few passengers (100 at most).

Mazda was pure goodness. Evil was attributed to an opposing principle, AHRIMAN. Ahura Mazda will defeat Ahriman in the end. The six Bounteous Immortals springing from Ahura Mazda represent godly attributes that can be acquired by righteous men. See also p.1192.

Ahvenanmaa. See ÅLAND ISLANDS

Ahvaz (Ahwāz), city in sw Iran on the Karun River, capital of Khūzestān province. In the 12th and 13th centuries it was a flourishing Arab trading centre. It is now an important oil pipeline terminus and has petrochemical, food processing and textile industries. The ruins of the ancient Persian city remain. Pop. 302,000.

Alcand, François Victor Jean (1848-1921), French author who wrote poems, plays and novels. His most significant volume of poetry was *Poèmes de Provence* (1874), he was the author of *Maurin des Maures* (1908), a novel about Provençal life, and wrote 14 plays.

Aida (1871), tragic opera in four acts by Giuseppe Verdi (1813-1901), Italian libretto by Verdi and Antonio Ghislanzoni (1824-93). The opera was commissioned by the Khedive of Egypt for a new opera house in Cairo and concerns the love of an Egyptian hero (Rhadames) for an Ethiopian slave (Aida). See also p.1598.

Aidan, Saint (d.651), Irish monk from Iona who c.635 began the conversion of Northumbria to Christianity. He became the first Bishop of Lindisfarne. See also p.1268, 1274.

Alken, Conrad (1889-1975), US poet, novelist and critic. His works include *Selected Poems* (1929; Pulitzer Prize 1930), *Brownstone Eclogues and Other Poems* (1942) and *Ushant* (1952), an autobiography.

Aikido, martial art based on an ancient Japanese system of self-defence. Unlike some other martial art forms, where force is met with counter-force, Aikido employs the technique of avoiding action by giving way to an opponent's impetus, thereby causing the attacker to suffer a temporary loss of balance. Forms of Aikido such as *tomiki* are also sports.

Aileron, hinged control surface on the outer trailing edge of each wing of an aeroplane. By rotating the control wheel, the pilot deflects the ailerons down or up in opposite directions to increase or decrease lift, causing the aeroplane to roll or bank. See also pp.516-517.

Ailey, Alvin (1931-), US modern dancer and choreographer. He danced with Hanya Holm and the Martha Graham Company before forming the Alvin Ailey Dance Theater in 1958, a primarily Black, modern dance group which has toured widely throughout the world.

Ailua Craig, small island at the mouth of the Clyde, 16km (10 miles) off the sw coast of Scotland. It has a lighthouse and a bird sanctuary.

Ain, river in E France, rising in the Jura Mountains and flowing s into the River Rhône. Length 190km (118 miles).

Ainsworth, William Harrison (1805-82), British author of historical romances, notable for their accuracy of detail and sensational action. His most popular novel, *The Tower of London* (1840), was illustrated by the British artist George Cruikshank.

Aintree, borough in Merseyside, NW England, N of Liverpool. Its race-course is famous for the annual Grand National steeplechase. Pop. (1971) 8,271.

Ainu, aboriginal people who live on Hokkaido (N Japan), Sakhalin and the Kuril Islands. Racially distinct from the Japanese, the Ainu possess certain Caucasoid features, notably heavy body and facial hair. Traditionally hunters, fishermen and trappers, they practise animism and are famed for their bear cult.

Air, the gases above the Earth's surface. See ATMOSPHERE, pp.194, 944.

Air bladder, abdominal sac in some fish, which fills with gas according to the density of the surrounding water in order to give the fish buoyancy.

Air compressor, machine that delivers air or gas at pressure. It is used for furnace blast systems, ventilation and refrigeration systems, pneumatic drills and for inflating vehicle tyres. Reciprocating and rotary compressors are the two basic types.

Air conditioning, process of controlling the temperature, humidity, flow and sometimes odour and dust content of air in any enclosed space. The air is cooled by refrigeration or heated by steam or hot water. Odours and dust are removed by filters and the moisture content is adjusted by humidifiers before the air is circulated by fans which also remove stale air.

Aircraft. See AEROPLANE, AIRSHIP, AUTOGYRO, GLIDER, HELICOPTER, pp.512-521, 568-571.

Aircraft carrier, military vessel with wide open deck which serves as runway for the launching and landing of aircraft. A modern nuclear-powered carrier may have a flight deck about 300m (1,000ft) long, a displacement of about 75,000 tonnes, a 4,000-man crew and carry 90 aircraft of various types - launched one at a time with each of four steam catapults. Some carriers have large, angled decks to permit launching and landing simultaneously. See also p.566.

Air-cushion vehicle, also called hovercraft, machine capable of hovering several inches to a few feet above ground or water, and of forward, backward or lateral motion. It is used to provide scheduled passenger services in many places, particularly for short sea journeys, and has been experimented with by the military. See also p.476.

Airdrie, town in Strathclyde Region, a central Scotland. Its 19th-century growth was based on local deposits of coal and iron. Industries, chemicals, electrical and electronic equipment. Pop. (1971) 17,900.

Airedale terrier, working dog, largest of the terriers. This wire-haired, black-and-tan dog has a long, flat head squared off by chin whiskers. Standard size 58cm (23in) high at the shoulder; weight 20kg (45lb).

Air force, military force forming the primary national instrument of air power. Britain merged its Royal Flying Corps and Royal Naval Air Service into the royal Air Force, formed on 1 April 1918, the first independent air force. The US Air Force was created from the Army Air Force in 1947. The USSR's air power is divided between many arms including Frontal Aviation (tactical), Long-Range Aviation, Naval Aviation and the PVO (air-defence force which also includes missiles). See also pp.568-571.

Air gauge. See PRESSURE GAUGE.

Airglow, faint permanent glow of the Earth's ionosphere resulting from the recombination of molecules, such as oxygen and nitrogen, that have been ionized by ultra-violet radiation from the sun and probably by cosmic-ray and solar-wind particles.

Airlock, hermetically sealed passageway between two leakproof doors connecting an airless environment, eg the sea depths or outer space, with a pressurized cabin or work area. Entry is made through the outer door, which is then closed, air is pumped into the airlock until its pressure is equal to that inside and then the inner door opens.

Air New Zealand, state-owned international airline, established in 1940. Its principal routes are to Honolulu and Los Angeles, and Hong Kong and Singapore.

Air pollution. See POLLUTION.

Airport, tract of land upon which aircraft regularly take off and land. Airports generally contain facilities for cargo storage, maintenance and fuelling of aircraft, navigational aids, a control tower and passenger facilities. Some are huge complexes, lavishly equipped, but others are simply grass landing strips with windsocks at one end. See also AIR-TRAFFIC CONTROL, p.526.

Air pressure. See ATMOSPHERE.

Aircrew, or propeller, dual or multiple blade that rotates on a hub and deflects air to produce a thrust at right-angles to the blade. Aircrews are used mainly to propel aeroplanes and air cushion vehicles. See also pp.568, 570.

Airship, powered lighter-than-air craft able to control its direction of motion. A rigid airship, or Zeppelin, maintains its form with a framework of girders covered by a rubberized fabric. Non-rigid airships have no internal structure, only the pressure of the contained gas maintains the shape. A semi-rigid airship has a rigid or jointed keel to stiffen the rubberized envelope. See also pp.512-513.

Air-speed indicator, instrument that measures the speed of an aircraft relative to the air through which it passes. It measures the difference in pressures of air rushing through a pitot tube (generally mounted on the wing) and static air from a vent on the fuselage; air-speed is usually indicated in miles per hour or knots. See also GROUND-SPEED.

Air-speed record, the fastest speed achieved by an aircraft that can take off and land unaided. In May 1965 a Lockheed YF-12A achieved a speed of 3,331.5km/h (2,070mph), and this record stood until July 1976 when it was broken by a Lockheed SR-71A, which achieved a speed of 3,531km/h (2,194mph). Faster speeds have been achieved by rocket-powered aircraft launched in the air from a "mother" plane. In June 1964 for instance a North American Aviation X-15A-2 reached a speed of Mach 6.72 - 7,297km/h (4,534mph). The official record for the fastest piston-engined aircraft was set in Aug. 1969 by a Grumman F8F-2 Bearcat at 776.4km/h (482.5mph), although a Hawker Sea Fury in Aug. 1946 recorded a speed of 836km/h (520mph). See also p.402.

Air-traffic control, system of guidance to provide for the safe and orderly movement of aircraft to and from an airport, directed from the control tower. It consists of ground and local control for airport vehicles and emergency services, arrival and departure control operating from radar rooms where the "stacking" and timing of aircraft traffic to or from the runways is monitored, and a system of route control that allows controllers to "hand over" to the next control station flights that reach the limits of their airspace. See also p.526.

Airy, Sir George Biddell (1801-92), British astronomer who also made discoveries in optics, such as a cylindrical lens for correcting the eye defect astigmatism. He was Astronomer Royal from 1853 to 1881. See also p.966.

Aisne, river in France which rises near Vaubecourt and flows NW and W from the Argonne Forest to join the River Oise near Compiègne. In WWI the plateau along the river near Craonne saw bitter fighting. Length 282km (175 miles).

Aitken, Robert Grant (1864-1951), US astronomer who discovered more than 3,000 double stars. He was director of Lick Observatory from 1930 to 1935.

Aix-en-Provence, city in SE France, 27km (17 miles) N of Marseilles. Founded in 123 BC by the Romans, its nearby mineral springs make it a popular spa. It is a cultural centre with a university (1409) and an 11th-13th-century cathedral. Paul Cézanne lived there. It has industries producing wine-making equipment and electrical apparatus. Pop. 102,000.

Aix-la-Chapelle. See AACHEN.

Aix-la-Chapelle, Treaty of (1748), diplomatic agreement, principally between France and Britain, that ended the War of the Austrian Succession (1740-48). The treaty provided for the mutual restitution of conquests made during the war, and contributed to the continuing rise of Prussian power. Britain was confirmed in its control of the trade in slaves to Spanish America. See also p.1448.

Ajaccio, seaport town and capital of the island of Corsica, France, on the Gulf of Ajaccio, an inlet of the Mediterranean Sea. It was founded in 1492 by Genoese colonists. Napoleon was born there and his home is now a national museum. The Germans occupied the town in WWI. Industries: sardine fishing, shipbuilding, cigars, wax. Pop. 42,300.

Ajanta, village in Maharashtra State, W central India. It is situated in the foothills of the Ajanta Range at an elevation of

about 400m (1,300ft). Nearby are the famous Ajanta caves consisting of 29 chambers carved out of the side of a steep ravine by the followers of Gautama Buddha, used for centuries as Buddhist monasteries and temples. The walls are decorated with a series of remarkable frescoes, depicting the life of Buddha through the eyes of ancient India. Pop 1,560. See also p.1254.

Ajax, in Greek mythology, name given to two heroes who fought for Greece during the Trojan War. The Greater Ajax was the son of Telamon, King of Salamis, the Lesser Ajax was the son of Oileus, King of Locri. The Greater Ajax is depicted in Homer's *Iliad* as a courageous warrior who led the troops of Salamis against Troy. The Lesser Ajax was so called because he was not the equal of the Telamonian Ajax. There are many versions of the manner in which he died. **Ajax** (c.447 BC), Greek tragedy thought to be Sophocles' earliest surviving play. It tells the story of Ajax who, angered when the armour of Achilles is awarded to Odysseus, offends Athena and is sent mad, his humiliation on recovery leads him to suicide, and a dispute ensues over the burial-honours due to him.

Ajivika, ascetic religious sect of India that flourished under Emperor Ashoka in the 3rd century BC. The Ajivikas lived in the Bihar region in caves which had magnificent carved entrances.

Ajmer, town in NW India in the state of Rajasthan. It is an administrative town and a centre for the cotton and marble industries. Pop (1971) 262,851.

Akaba. See AQABA.

Akaroa, small summer resort and fishing port in New Zealand, on French Bay. It was originally a French settlement, bought by the New Zealand government in 1849. **Akashi**, city and fishing port of w Honshu Island, Japan, on the Harima Sea. Industries: electrical and farm machinery. Pop (1974) 228,205.

Aksakov, Sergei Timofeevich (1791-1859), Russian writer of humorous novels that accurately described his life and times. His sons Konstantin (1817-60) and Ivan (1823-86) were also writers.

Akbar (1542-1605), Mogul emperor of India (1556-1605). He greatly expanded the Mogul Empire, conquering Bengal, Gujarat, Kandahar, Kashmir and Sind. He reformed government, centralized banking and attempted to introduce one unifying religion. See also p.1495.

A Kempis, Thomas. See KEMPIS, THOMAS A. **Akenside, Mark** (1721-70), British poet and physician to Queen Charlotte (wife of George III). His best-known works were *The Pleasures of Imagination* (1744) and *Odes on Various Subjects* (1745).

Akhenaton (died c.1362 BC), ancient Egyptian king of the 18th dynasty (reigned c.1379-1362 BC). He succeeded his father, Amenhotep III. His name at his accession was Amenhotep IV. Renouncing the old gods, he introduced worship of the sun god, Aton, and established a new capital at Akhetaten (modern Tell el Amarna). After his death Egypt rejected sun worship. See also p.1180.

Akhmatova, Anna (1889-1967), pseudonym of Anna Andreyevna Gorenko, Soviet poet. Her simple, intense lyrics and personal themes are best represented in the volumes *The Rosary* (1914) and *The Willow Tree* (1940). Although twice denounced, in 1946 and 1957, for 'bourgeois decadence', she has remained a popular poet in the Soviet Union.

Akhmatov, Ser. See AKHENATON. **Akihito** (1933-), son of Emperor Hirohito, Crown Prince of Japan. After extensive travel abroad, he married a commoner, Michiko Shoda, in 1959. They have three children.

Akit-Bua, John (1949-), Ugandan athlete. He won the Olympic Games 400m hurdle event in 1972 in 47.8 sec., but did not defend his title in 1976, when Uganda withdrew from the Games.

Akita, town in Japan, on the Sea of Japan, capital of Akita prefecture. It is a port for the export of rice and timber and an oil-refining centre. Pop (1974) 253,606.

Akkadia (Agade), ancient region of MESO-

POTAMIA, named after the city-state of Akkad. From the mid-4th millennium BC the area's cities fought each other until Sargon united the Akkadians, Sumerians and Elamites in the 2300s. His empire reached to the Mediterranean in the west and the Black Sea in the N. Under pressure from hostile tribes, the Sumerians moved the capital from Akkad to UR. At the end of the 3rd millennium ELAM controlled the area, later known as Babylonia. See also SUMERIA, BABYLON pp.1162,1507.

Akkana. See ACHAEAN LEAGUE.

Akko. See ACEH.

Akō, town in N Honshū, Japan, on the Harima Sea. It is famous for its Oishi (Shinto) Shrine and Kogakuyū (Buddhist) temple. Industries include salt extraction, fishing nets and cement. Pop 45,900.

Akosombo Dam, dam on the River Volta, Ghana, finished in 1965. It is 113m (370ft) high, stores water for irrigation, and supplies electricity for industry.

Akron, city in NE Ohio, USA, on the Cuyahoga River, 48km (30 miles) SSW of CLEVELAND. The opening of the Ohio and Erie Canal in 1827 promoted the city's growth. Places of interest include abolitionist John Brown's home and a large dirigible airlock. Industries include rubber, plastics, engineering and chemicals. Pop (1970) 275,425.

Aksu. See AXUM.

Akureyri, city in N Iceland, on the River Eyjafjörður, the country's third largest municipality. Settled c.900, it is now an industrial, commercial and fishing centre. Pop 10,800.

Alabama, state in SE USA in the chief cotton-growing region. The N of the state lies in the Appalachian Highlands, which have coal, iron ore and other mineral deposits, and the rest consists of the Gulf Coastal Plain, crossed by a wide strip of rich soil valuable for agriculture. The Mobile River (flowing S to the Gulf of Mexico) and its tributaries, the Alabama and Tombigbee, form the chief river system. The principal crops are cotton, groundnuts, soy beans and maize. Industries include chemicals, textiles and metal products. BIRMINGHAM, the largest city, is one of the nation's leading iron and steel centres. Other main cities are Montgomery, which is the state capital, Huntsville and Mobile, the chief port.

First settled by the French in 1702, the region was acquired by Britain in 1763. Most of it was ceded to the USA after the AMERICAN WAR OF INDEPENDENCE (1783). Alabama was admitted as the 22nd state of the Union in 1819. It seceded in 1861 - one of the original six states of the Confederacy - and was re-admitted to the Union in 1868. It has been the scene of many civil rights demonstrations. Area 133,667sq km (51,609sq miles). Pop (1975 est.) 3,614,000. See also p.1586.

Alabama case (1872), award of \$155 million compensation to the USA against the UK for damage done by Confederate ships built in England during the AMERICAN CIVIL WAR (1861-65).

Alabaster, fine-grained, massive variety of gypsum (calcium sulphate), snow-white and translucent in its natural form. It can be dyed or made opaque by heating and has been used ornamentally for centuries. See also GYPSUM.

Alain-Fournier (1886-1914), pseudonym of Henri-Alban Fournier, French writer killed in action at the Battle of the Marne (1914). His reputation was secured by his only completed novel, *Le Grand Meaulme* (1913), a lyrical account of the experiences of a schoolboy.

Alajuela, city in central Costa Rica, NW of San José, capital of Alajuela province. A former national capital (1830s), it is now a trade centre for the central plateau region. Industries include coffee, sugar, timber, flowers, hides and tourism. Pop 29,000.

Alamanni. See EL ALAMANI.

Alamein. See EL ALAMAIN.

Alamo, chapel in San Antonio, Texas, the scene of an incident in the Texas Revolution. In 1836 about 180 Texans, led by William Travis, Davy Crockett and James Bowie, were overwhelmed after defending heroically against superior

Mexican forces. See also p.1627.

Alanbrooke, Alan Francis Brooke, 1st Viscount (1883-1963), British general. During WWII he commanded the 2nd Army Corps in France and was Commander-in-Chief of the British Home Forces (1940-41). He was Chief of the Imperial General Staff (1941-46) and directed British tactics against Germany and co-ordinated Anglo-American strategy with Gen. Eisenhower.

Åland (Ahvenanmaa) Islands, archipelago in the Baltic Sea between Sweden and Finland, a province of Finland. The chief town is Maarianhamina (Mariehamn), a port in Åland, the largest island. Fishing, forestry, farming and tourism are the main occupations. The islands are Swedish speaking. Pop (1975) 22,000.

Alanine, colourless soluble AMINO ACID, CH₃CH(NH₂)COOH, that occurs widely in PROTEINS, for example those derived from milk.

Alarcón, Pedro Antonio de (1833-91), Spanish novelist. His works reflected his own transition from a staunch anticleric to a devout Roman Catholic. He was wounded in a campaign in Morocco, and wrote a journal of his war experiences (1859-60). He gained international fame upon the publication of the short novel *El sombrero de tres picos* (The Three-Cornered Hat, c.1874).

Alarcón y Mendoza, Juan Ruiz de (c.1581-1634), Spanish dramatist. b Mexico. He is best known for his comedies, such as *La verdad sospechosa* (c.1619) and *Las paredes oyen*.

Alaric (c.370-410), King of the visigoths (395-410). His forces conquered Thrace, Macedonia and Greece and occupied Epirus (395-96). He invaded Italy in 401 and 408 and besieged (408) and sacked (410) Rome, permanently reducing the power of the Empire. He planned an invasion of Sicily and Africa, but his fleet was destroyed in a storm.

Alas, Leopoldo (1852-1910), Spanish novelist, critic and short-story writer who adopted the pen-name Clarín. In his best-known novel, *La Regencia* (1884-85), he analysed provincial life.

Alaska, state of the USA in NW North America, separated from the rest of continental USA by the province of British Columbia, Canada. About 25 per cent of Alaska lies N of the Arctic Circle. The Alaska Range includes the highest peaks in North America. The chief river is the Yukon, flowing W into the Bering Sea. The Alaskan economy is based on fish, oil and timber. The largest city is Anchorage and the capital is Juneau. Russian hunters first settled Alaska in the late 1700s. The USA purchased the area from Russia in 1867 for \$7.2 million (less than two cents an acre). Fishing drew settlers and, after the gold rush of the 1890s, the population doubled in ten years. The long-standing dispute between the USA and Britain (representing Canada) over the boundary between Alaska and British Columbia was settled in 1913. Because of its strategic position and petroleum reserves, Alaska has been developed as a military area and linked to the rest of the USA by the Alaska Highway and an oil pipeline. Area 1,518,800sq km (586,400sq miles). Pop 352,000.

Alaskan North Slope, lowland plain in N Alaska where petroleum, discovered in the 1960s, was being developed in the mid 1970s. The land is frozen tundra for most of the year, making the extraction of oil particularly difficult.

Al Azhar, University of, in Cairo, Egypt, one of the world's oldest universities (founded 970). It is also one of the largest universities, and in 1971 had more than 20,000 students.

Alaungpaya, 'the Victorious' (1711-60), also called Alompra or Aungmye, King of Burma (1752-60). Alaungpaya refused to become a vassal of the kingdom of Mon (in the Irrawaddy Delta) when Ava, the Burmese capital, was captured in 1752. He organized resistance, recaptured Ava in 1753 and took over the Mon capital, Pegu, in 1757. He tried to conquer Siam in 1760, but died with his army in retreat.

Ajax the Greater took his own life when he failed to inherit the armour of Achilles.

John Achi-Bua was not able to defend his title in the 1976 Olympics for political reasons.

Akureyri, Iceland, is an important fishing centre at the head of the Eyjafjörður.

Alaska, the American state that extends into the Arctic Circle, is rich in petroleum.

Alba, Fernando Alvarez de Toledo

Albacore have a body temperature up to 9°C (16°F) warmer than the surrounding sea

Albatross, clumsy-looking on land, is an excellent flyer, the female lays a single egg

Albania profile

Official name Socialist People's Republic of Albania
Chief cities Tirane (capital) (1973) 182,500
 Durres 57,000 Shkoder 35,000
Government Communist, first secretary
 Enver Hoxha (re-elected 1976)
Religion Muslim, Eastern Orthodox
Language Albanian (official)
Monetary unit Lek
Gross national product (1978) \$960,000,000
Agriculture Corn, wheat, potatoes, tobacco
Industries Mining, food processing, textiles, petroleum products, cement
Minerals Coal, natural gas, iron, chromium, copper
Trading partners China, Czechoslovakia, Poland, East Germany

Leon Battista Alberti, an architect, also wrote on art and design, including perspective

Alba (or Alva), Fernando Álvarez de Toledo, Duke of (1508-82), Spanish general and statesman. After successful campaigns in Germany and Italy, he was appointed regent of The Netherlands in 1567 by Philip II. He ruthlessly suppressed Protestant and nationalist opposition and thousands of people were executed. In 1572 the Dutch rose up in armed rebellion which Alba failed to suppress. He was recalled to Spain in 1573. After being out of favour for several years, in 1580 he led a successful invasion of Portugal.

Albacete, city in central Spain, capital of Albacete province. It has a 16th-century cathedral, Moorish remains and is an agricultural centre. Pop. (1974) 100,545.

Albacore, long-finned, fast swimming tuna of warm seas. Cigar-shaped, with a large tail sharply divided into two lobes, it has a long pectoral fin. It is an important commercial and game fish. Length 91cm (1ft), weight 18-36kg (40-80lb). Family Scombridae, species *Thunnus albacula*.

Alba Longa, city of ancient Latium near Lake Albano, 19km (12 miles) SE of Rome. According to legend it was founded c.1152 BC by Ascanius (son of Aeneas), it was the head of the Latin League and, as the traditional birthplace of Romulus and Remus, the mother city of Rome.

Alban, Saint (died c.304), first British martyr, from the Roman town of Verulamium (now St Albans). He was put to death for hiding a Christian priest from the Romans. About 500 years later King Offa founded an abbey on the site of Alban's execution.

Albanet, Charles (1616-96), French Missionary and explorer in Canada. In 1671 he established fur trading routes after exploring the Saguenay River and Hudson Bay.

Alban, Madame Emma (1847-1930), Canadian soprano. She made her first public appearance in 1870, performed first in Britain at Covent Garden in 1872, and made her debut at the Metropolitan Opera in 1890. She was a leading Wagnerian soprano of her day.

Albania, small, independent Communist republic on the Balkan Peninsula in SE Europe, on the Adriatic Sea. In 1961 it became the first European country to ally itself with China. Agriculture includes wheat, cotton, corn and tobacco, and the major industries are textiles, food processing and chemicals. Area: 28,749sq km (11,098sq miles). Pop. (1976 est.) 2,549,000. See also p.1970.

Albany, dukes of, branch of the Scottish royal house, the STUARTS. The 1st Duke, Robert (c.1340-1420) was Regent from 1388 to 1399 and again after 1402. John (c.1481-1536), grandson of James II, was made Regent in 1515 and heir to the throne the following year, his regency was annulled in 1524.

Albany, city and capital of New York State, on the Hudson River, 232km (145 miles) N of New York City. First settled in 1614, it replaced New York as state capital in 1797. It has many old buildings and the state capitol (1867-98). Industries include paper, machine tools, metal products and textiles. Pop. (1973) 111,373.

Albany, town in SW Western Australia, on King George Sound, 384km (240 miles) SSE of Perth. Founded in 1826 as a penal colony, it is the state's oldest settlement. It is a popular health resort and its industries include fish canning and wool. Pop. 13,000.

Albatross, large migratory oceanic bird of the Southern Hemisphere famed for its effortless gliding flight. There are 13 species. The wandering albatross has a long, thick, hooked bill, short tail, webbed toes and the greatest wing span of any living bird - 3.5m (11.5ft) or more. After an elaborate courtship, the female lays a single white egg in a small nest on an isolated island. Length: 0.7-1.4m (2.3-4.4ft). Family Diomedidae. See also pp.145, 80, 338.

Albatross, in golf, a term used for a hole completed in three under par. The most celebrated occasion this shot was played

occurred in the 1935 US Masters at Augusta when Gene Sarazen holed his tee shot at the 15th, a 500-yard par-five, for an albatross. This shot is also referred to as a double eagle.

Albedo, the fraction of light or other radiation that is reflected from a surface. An ideal reflector has an albedo of 100%, those of real reflectors are less. The mean albedo of snow is 45 to 90%, that of the Earth, viewed from satellites, is 35%.

Much has been deduced about the surfaces of planets by comparing their albedos with those of known substances. **Albee, Edward Franklin** (1928-), US dramatist. His best-known play is *Who's Afraid of Virginia Woolf?* (1962). His clever, biting commentaries on American life include the plays *Tiny Alice* (1964), *A Delicate Balance* (1966) and *Seascape* (1975).

Albéniz, Isaac (1860-1909), Spanish Romantic composer and pianist. He often used Spanish folk elements in his compositions, which included the piano suite *Iberia* (1906-09). See also p.1754.

Alberoni, Giulio (1664-1752), Italian statesman who, after the War of the Spanish Succession (1701-14), served as premier of Spain (1716-19). He sought to drive Austrians from Italy, and to protect Spanish-American trade.

Albers, Joseph (1888-1976), German-American painter, designer and art teacher. After teaching at the Bauhaus (1923-33) he settled in the USA, where he developed a new free abstract style and became a pioneer of OP ART. *Homage to the Square* (1949), his best-known work, is a subtle experiment in colour relationships. **Albert I** (1875-1934), King of the Belgians (1909-34). Son of Philip, Count of Flanders, he succeeded his uncle, Leopold II. In 1914 he led the Belgian resistance to the Germans while the Allied defence formed. He led the Belgian and French forces through Belgium in the Allies' final general offensive of 1918. After war he devoted himself to the task of reconstruction.

Albert, Prince, of Saxe-Coburg-Gotha (1819-61), husband and cousin of Queen Victoria of England, whom he married in 1840. He was of German origin and won great respect from the British for his integrity. He was given the title of Prince Consort and advised and influenced the Queen, particularly in foreign affairs. He organized the Great Exhibition of 1851 and founded the Victoria and Albert Museum. See also pp.1590-1591.

Albert, Lake, former name of Lake Mobutu Sese Seko in central Africa on the border between Zaïre and Uganda, in the Great Rift Valley. The Semliki River and the Victoria Nile empty into the lake and it is drained by the Albert Nile. It was discovered by Samuel Baker in 1864. It is 160km (100 miles) long, has an average width of 35km (22 miles) and its maximum depth is 51m (168ft).

Alberta, province of W Canada. The Rocky Mountains lie along part of the W boundary, but most of Alberta is prairie, part of the high plains of central North America. The principal rivers are the Athabasca, Peace, North and South Saskatchewan and Milk. Lesser Slave Lake is the largest of the many lakes. The fertile plains support wheat farming and livestock (cattle, pigs, sheep and poultry). Major resources are coal, minerals and wood from the forests in the S. Oil and natural gas fields in central Alberta have been a major stimulus to the economy since WWI. Manufacturing is mostly concentrated in the areas of Edmonton, the capital, and Calgary, the second largest city. Industries include petroleum products, metals, chemicals, food and wood products.

The area was part of a large territory granted in 1670 by Charles II to the Hudson's Bay Company, a fur-trading enterprise. In 1870 the government of Canada bought the region from the company. Settlement began on a large scale in the late 1800s, when migrants arrived from other Canadian provinces, the USA and Europe. A transcontinental railway was completed across the region in 1885. The area was

part of the Northwest Territories and governed from Ottawa, but in 1882 this area was divided into four districts, Alberta being one. It was admitted to the then Confederation as a province in 1905. Area 661,188sq km (255,285sq miles). Pop. (1975 est.) 1,770,000. See also pp.1614, 2004.

Albert Canal, waterway 130km (80 miles) long, in NE Belgium, linking the industrial city of Liège with the port of Antwerp. **Alberti, Leon Battista** (1404-72), Italian architect, humanist and writer. The first major art theorist of the Renaissance, he influenced its painters, sculptors and architects with his theories, contained in *On Painting* (1435). His buildings include the Rucellai Palace, Florence, the Tempio Malatestiano, Rimini and the church of San Andrea, Mantua. See also p.1387.

Alberti, Rafael (1902-) Spanish poet and playwright. He wrote some remarkable poetic plays, including *Concerning Angels* (1927-28). His poetry became more intimate after he joined the Communist Party, but it lacked the vivacity of some of his contemporaries' work.

Albertinelli, Mariotto (1474-1515), Florentine painter. His works sometimes resemble those of Fra Bartolommeo with whom he collaborated. His paintings include *Visitation* (1503).

Albertus Magnus, Saint (c.1200-80), German theologian. Introduced to Aristotle's philosophy in Padua, he became a Dominican monk in 1223, and Bishop of Regensburg in 1260. Albertus wrote *Books on the Sentences* and a *Summa Theologiae*; his work shows the influence of Aristotle's scientific writings. Thomas Aquinas was one of his pupils. He was canonized in 1931. See also p.1322.

Albi, town in France on the River Tarn of Tarn département. The old part of the city, known as 'ville rouge', has many redbrick medieval buildings. It was the birthplace of Toulouse-Lautrec and a museum displays his paintings. Pop. 57,100.

Albigensians, followers of the Catharist heresy in Languedoc, southern France, in the 12th and 13th centuries. They believed in a Manichaean division between the forces of good and evil, and practised extreme asceticism. Innocent III called for a crusade against them (started in 1209) which was led by Simon de Montfort, who mercilessly persecuted the heresy. The French crown then conquered Languedoc in 1229.

Albino, person or animal with an hereditary absence of pigment from the skin, hair and eyes. The hair is white and the eyes, which often are extremely sensitive to light, have a pink iris and a red pupil (because, in the absence of pigment, the blood vessels are visible). See also pp.151, 1075.

Albinoni, Tomaso (1671-1750), Italian violinist and composer. He was one of the first composers of concertos for a solo instrument (violin and oboe). He also wrote nearly 50 operas.

Albion, old name for Britain or England from the Latin *albus* (meaning white), referring to the white cliffs of Dover.

Albireo, also called Beta Cygni, a double star in the constellation Cygnus. It has a yellow primary and a greenish secondary. See also pp.990, 1013.

Al-Biruni (973-1048), Arab scholar who worked in astronomy, mathematics and geography. His accounts of travels in India, financed by members of the Turkish Ghaznavid dynasty, provide a valuable contemporary record.

Ålborg (Aalborg), city in N Denmark, capital of Nordjylland county. It is one of the oldest cities in Denmark, and has a 14th-century church and a 16th-century castle. Today it is a major centre for industry and for transport and communications. Pop. 154,700.

Albuera, Spanish village, where in 1811 the British army, under William Beresford, defeated the French forces commanded by Nicolas-Jean Soult.

Albumin, or **albumen**, type of soluble protein occurring in animal tissues and fluids. Principal forms are egg albumin, milk albumin and blood albumin.

Albuminuria, presence of PROTEIN (serum albumin or globulin) in the urine. It may result from eating certain foods, or from certain diseases, notably those of the kidney. See also p.1068.

Albuquerque, Afonso d' (1453-1515), founder of the Portuguese empire in the East. He took control of Malacca, Calicut, the Malabar Coast, Ceylon and Goa, which he made the Portuguese capital in the East (1510). From 1506 he also explored the Madagascar and East African coasts. See also p.1368.

Albuquerque, city in w central New Mexico, USA, on the Upper Rio Grande River, the largest city in New Mexico. Founded by the Spanish in 1706, it served as a military post until 1870. Industries: nuclear research, food processing, railway workshops. Pop. (1970) 243,751.

Alcaeus (c.620 BC), Greek lyric poet. He wrote political songs, hymns and love songs. He was imitated by the poet HORACE but only fragments of his poems have survived. See also p.1208.

Alcalá Zamora, Niceto (1877-1949), Spanish politician, President of Spain (1931-36). He was instrumental in overthrowing the monarchy in 1931 and was elected first President of the Second Republic. A moderate whose policies pleased neither the left nor right-wing, he was forced out of office in 1936.

Alcántara, town in w Spain, near the border with Portugal, on the Tagus River. It has a Roman bridge, more than 204m (670ft) long and 61m (200ft) high, which was built by TRAJAN in the second century, and the church and ruined convent of the Order of Alcántara. Pop. 5,000.

Alcatraz, island off the coast of California, in San Francisco Bay. Since its discovery by the Spanish in 1769, it has served as a fortification and then a federal prison until 1962, when it became part of the Golden Gate National Recreational Area.

Alcazar, name for Moorish palaces in Spain, reflected in the names of several towns. One of the five alcazars, Toledo, was defended by Nationalist troops in 1936 during the SPANISH CIVIL WAR, it held out for 71 days against the Republicans.

Alcestis (438 BC), Greek tragedy by EURIPIDES. The work is best known for its strong characterization of its noble heroine Alcestis takes her husband's place in Hades so that he may live. Hercules brings her back alive, and husband and wife are reunited.

Alchemy, primitive form of chemistry practised in Western Europe from early Christian times until the 17th century, popularly supposed to involve a search for the Philosopher's Stone - capable of transmuting base metals into gold - and the elixir of life. In fact, alchemy involved a combination of practical chemistry, astrology, philosophy and mysticism, based on the concept of the unity of matter and analogous ideas of the unity of man with the universe. Similar movements existed in China and India. See also PARACELSUS; PHLOGISTON, p.774.

Alcibiades (c.450-404 BC), Athenian general and statesman, ward of PERICLES, intimate of SOCRATES. After inspiring a campaign to Sicily in 415 BC that was a disaster, he temporarily aided Sparta. After regaining his position in Athens, he was exiled following the Athenian defeat (in his absence) at Notium in c.406. See also p.1204.

Alcmaeon (6th century BC), Greek physician and philosopher. He was a pioneer in the separation of the study of medicine from philosophy, and developed a theory of physical equilibrium to define and explain health.

Alcman (c.650 BC), chief lyric poet of Sparta, regarded as the founder of erotic poetry. He abandoned the hexameter and wrote in varied, simple meters. Among his known work, which survives only in fragments, is the poem *Parthenon* (a choir song for girls), which was found in Egypt in 1855 on a pre-Christian papyrus.

Alcock, George (1912-) British amateur astronomer who discovered four comets and the nova HR Delphini. See also pp.969,995.

Alcock, Sir John William (1892-1919),

pioneer British airman who, together with Arthur Whitten-Brown, was the first to fly non-stop across the Atlantic Ocean. Their transatlantic flight was in a standard twin-engined Vickers Vimy bomber biplane, in response to a £10,000 prize put up by the British newspaper *Daily Mail*. They flew from St John's, Newfoundland on 14 June 1919 and landed 16.5 hours later near Clifden, Ireland. Alcock was killed in an air crash six months later when flying from London to Paris.

Alcohol, member of a class of organic compounds having a hydroxyl (-OH) group bound to a hydrocarbon group. There are three types of alcohols: primary (RCH₂OH), secondary (RR'CHOH) and tertiary (RR'R''COH), where R is either hydrogen or a hydrocarbon group. Primary alcohols can be oxidized to aldehydes, eg ethanol C₂H₅OH + O → CH₃CHO (acetaldehyde, ethanal). An alcohol reacts with a carboxylic acid to give an ester and water: ethanol and acetic (ethanoic) acid give ethyl acetate, C₂H₅OH + CH₃COOH → CH₃COOC₂H₅ + H₂O. See also pp.698-699,895.

Alcoholics Anonymous, organization that seeks to help alcoholics help themselves, with the ultimate goal of rehabilitation. Founded in 1934, it has local autonomous groups in more than 90 countries. Membership is open to anyone who has the desire to stop drinking, and the group makes use of shared experiences and mutual help.

Alcoholism, disorder caused by excessive drinking of alcohol, and the effects it can have on the nervous system and organs of the body. Intoxication (drunkenness) is acute alcoholism, experienced by anyone who has too much to drink. Its symptoms, which range from slurred speech and unsteady gait to unconsciousness, disappear as the body "burns up" the alcohol. Chronic alcoholism, in which the victim becomes dependent on alcoholic drinks, can be regarded as a form of drug addiction. Perhaps prompted by a personality disorder, it results in personality changes. The heavy drinker may be rejected by his family and friends, lose his job, and rely even more heavily on alcohol to "escape" from his problems. Physical damage, such as CIRRHOSIS of the liver and inflammation of the stomach and intestines, may result. Extreme cases may lead to delirium tremens (pts) and even death. Treatment for chronic alcoholism ranges from the prescription of sedatives and aversion drugs such as ANTABUSE to psychotherapy. See also pp.1080-1081.

Alcools (1913), volume of poetry by Guillaume APOLLINAIRE. The collection, including many of his early poems, records his transition from SYMBOLISM to the early developments of CUBISM. The later poems are uncompromisingly modern in style and content.

Alcor, one partner of a double star (its companion is Mizar) in the constellation Ursa Major (the Plough). See also pp.990,991,1010.

Alcott, Louisa May (1832-88), US author. She is best known for her stories for children. She was a friend of EMERSON and THOREAU. Her first published book was *Flower Fables* (1855), a collection of fairy stories. Family debts led her to write the autobiographical novel *Little Women* (1868-69). Its success led her to write *An Old-Fashioned Girl* (1870), *Little Men* (1871), *Jo's Boys* (1886) and others.

Alcuin (c.732-804), scholar and cleric from Northumbria trained at the cathedral school at York. Invited to set up a palace school in the court of CHARLEMAGNE, he became a central figure of the CAROLINGIAN RENAISSANCE, and inaugurated the medieval study of the seven liberal arts. His prolific writings include a corrected text of the Vulgate Bible. See also p.1286.

Aldebra, island group in the Indian Ocean, approx. 400km (250 miles) NW of Madagascar, part of British Indian Ocean Territory and a dependency of the Seychelles. It includes Aldabra Island, the largest atoll in the Seychelles, and Assumption. L. usual flora and fauna,

including the giant land tortoise, can be seen on the islands. First visited by the Portuguese in 1511, the group became British in 1810 and now has a military base.

Aldanov, Mark Alexandrovich (1886-1957), pen-name of Mark Landau, Russian author who wrote mainly about social conflict. His works include *The Thinker* (1921-27), a trilogy about the French Revolution, and *The Fifth Seal* (1939), about the Spanish Civil War.

Aldebaran, or Alpha Tauri, red giant star in the constellation of Taurus. Characteristics: apparent mag. 0.85, absolute mag. -0.7, spectral type K5, distance 76 light-years. See also p.979.

Aldeburgh, town in SE England on the E coast of Suffolk. It has an annual music festival founded by Benjamin BRITTEN in 1948. Pop. 2,800.

Aldehyde, member of a class of organic compounds characterized by the group -CHO. The simplest example is formaldehyde, HCHO, used as a preservative. Aldehydes can be made by oxidizing primary ALCOHOLS. They are generally reducing agents, being oxidized to carboxylic acids. Their systematic names are formed using the suffix -al; acetaldehyde, CH₃CHO, is ethanal.

Alder, Kurt (1902-58), German chemist who shared the 1950 Nobel Prize in chemistry with Otto PAUL for their development of a method of organic synthesis.

Alder, ornamental trees and shrubs of the birch family native to the Northern Hemisphere and w South America. They have toothed leaves and woody cones that remain on the branches after the needles are released. The bark is used in dyeing and the wood, which is water-resistant, is used for bridges. There are 30 species. The red, speckled, and European (black) alders are the best known. They are usually among the first trees to re-appear in denuded areas. Family Betulaceae, genus *Alnus*.

Alderfly, any of several species of soft-bodied flying insects commonly seen near ponds and streams. Its large aquatic larvae feed for three years on insects and then emerge to pupate on land. See also pp.36-37,37.

Alderman, elected or appointed member of a local legislative body that decides broad policies of municipal government. The office of alderman was abolished in local councils in England in the late 1970s.

Aldermaston, town in Berkshire, England, 16km (10 miles) SW of Reading. In the early 1960s its atomic energy plant became a rallying point for members of the CAMPAIGN FOR NUCLEAR DISARMAMENT (the "Aldermaston Marchers"), who made annual marches to London.

Alderney, northernmost island of the Channel Islands, separated from France by a 13km (8 mile) channel, the Race of Alderney. It is part of the Guernsey bailiwick (administrative area) and St Anne is the principal town. Early potatoes are exported, cattle are raised, and tourism is the chief industry. Area: 8sq km (3sq miles). Pop. (1971) 1,686. See also p.2006.

Aldershot, town in NE Hampshire, s England, 55km (34 miles) SW of London. It has a military training camp founded in 1854. Pop. 33,400.

Aldhelm (Ealdhelm), Saint (c.639-709), English cleric and poet. He became abbot of Malmesbury (c.675) and first bishop of Sherborne in 705. He established many monasteries and churches, including the one at Bradford-on-Avon. Although his Latin works survive, none of the Old English poems that he is said to have written have been found. See also HCL p.165.

Aldington, Richard (1892-1962), British writer who was a member of the IMAGIST movement (1910-18). His works include the novel *Death of a Hero* (1929), *Complete Poems* (1948) and *Lawrence of Arabia* (1955), a critical study of T. E. LAWRENCE.

Aldosterone, mineralocorticoid hormone which is secreted by the cortex (outer part) of the ADRENAL GLANDS. It regulates the salt and water balance of the body. See also pp.154-155.

Alcatraz prison, sometimes known as "The Rock" was believed to be escape proof.

Alchemy, the study of matter and the universe, attracted scientists and takes.

Alderburgh, Suffolk, is the venue for the music festival founded by Benjamin Britten.

Alders make up about thirty species of trees and shrubs in the birch family.

Aldrich, Robert

Alessandria, a hat-making town in northern Italy where the Borsalino hat is made

Alewife an important food fish returns when adult from the ocean to its native stream

Teer Alexander III tried to change the liberal tendencies of the previous reign

Alexander the Great, Greek king and general, pushed his empire as far as northwest India

Aldrich, Robert (1918-), US film director. He has had box office success with often violent films - eg *The Dirty Dozen* (1968) - and has a reputation for explicit treatment of sensitive subjects, such as the lesbian theme in *The Killing of Sister George* (1970).

Aldridge, Ira Frederick (1805-67), US actor. Known as "African" Roscius, he was regarded as one of the finest actors of his time. After a triumphant London debut as Othello in 1826, he went on to great fame in England and, after 1853 elsewhere in Europe. He became a British citizen in 1863.

Aldrin, Edwin ("Buzz") (1930-), US astronaut. Aldrin piloted the Gemini XII orbital rendezvous space flight (Nov 1966) and the lunar module for the first Moon landing (July 1969). During the landing he followed Neil Armstrong to become the second man on the Moon. See also 930-931, 1025-1038.

Aldrin, chlorinated naphthalene derivative (formula $C_{12}H_8Cl_2$) widely used as a contact insecticide. It is insoluble in water and is used as an emulsion or powder. It is also incorporated into plastic cable coverings to make them resistant to attack by termites.

Ale. See BEER, pp.704-705.

Aleatoric, word used to describe that music of the 20th century in which the sequence of notes is determined partly by chance, either at the time of composition or at the discretion of the performers. See also p.1756.

Alegría, Ciro (1909-67), Peruvian novelist, the outstanding writer of the indianista (pro-Indian) movement. His best-known work is *Broad and Alien Is The World* (1941), which describes an Indian tribe's struggle against the expropriation of their land by Europeans. He was a social reform activist and was jailed twice in Peru (1931 and 1933) and exiled to Chile in 1934. He returned in 1948.

Aleichem, Shalom (1859-1916), pseudonym of Solomon Rabinowitz, Yiddish novelist, dramatist and short story writer. He was born in Russia and emigrated to the USA. He portrayed the oppression of Russian Jews with humour and compassion. His works include *The Old Country* (3rd ed 1954) and *The Milkman (Tevye)* (c 1949), adapted as the musical *Fiddler on the Roof* (c 1965). He helped to establish Yiddish as a literary language.

Aleixandre, Vicente (1898-), Spanish poet. His considerable influence on younger Spanish writers derives from his original if difficult style, based on free verse and strange metaphors. Love of nature and of his fellow men are recurrent themes in his work, which includes *Historia del corazón* (1954). He was awarded the 1977 Nobel Prize in literature.

Alekhine, Alexander (1892-1946), French chess master, b. Moscow. He became a naturalized French citizen after the Russian Revolution of 1917, and was world chess champion 1927-35 and 1937-46.

Aleman, Mateo (1547-c 1614), Spanish novelist. After a turbulent career in Spain, he emigrated to Mexico in 1608. He wrote a popular picaresque novel, *Guzmán de Alfarache* (1599-1604), which had strong moral overtones, and published a life of St Antonio de Padua.

Alemanni, or Alamanni, loose confederation of ancient Germanic tribes. It was first mentioned in AD 213 as being attacked by the Romans between the Elbe and the Danube.

Alembert, Jean Le Rond d' (1717-83), French philosopher and mathematician. He was a religious sceptic and physicist, and formulated d'Alembert's principle, used to solve certain problems in mechanics. He collaborated with Diderot on the French *ENCYCLOPÉDIE* (1751-72), for which he contributed the *Preliminary Discourse* (1851). He wrote a systematic *Treatise on Dynamics* (1743) as well as several pieces on differential equations. See also p.1468.

Aleazar, José Martiniano de (1829-77), Brazilian novelist, considered to be Brazil's first great prose writer. He is best

known for three novels about his country's Indians: *O Guarani* (1857), *Itacema* (1865) and *O sertanejo* (1875). He has been praised for his vivid descriptions but criticized for romanticizing the "noble savage". Also a lawyer and journalist, he became Brazil's Minister of Justice in 1868.

Aleppo (Halep), city in NW Syria, approx 110km (70 miles) E of the Mediterranean coast, second largest city in Syria. It was captured from the Byzantines by the Arabs in AD 637, and then taken in 1516 by the Turks, under whom it became a great trading centre. Its commercial importance declined in the late 19th century with the opening of the Suez canal. A part of Syria since 1924, it has a 12th-century citadel, the Great Mosque (715) and a university. Industries include cotton, silk, pistachio nuts and fruit. Pop. 639,400.

Alessandria, capital city of Alessandria province, in the Piemonte region of NW Italy. Founded in the 12th century as Civitas Nova, then Cesaria, it was renamed after Pope ALEXANDER III. It is a transport and commercial centre and its industries include hat making, furniture and food processing. Pop. 105,000.

Aletsch, glacier in the Bernese Alps, s central Switzerland, the largest glacial feature of the Alps. It is 16km (10 miles) long and covers an area of 171sq km (66sq miles).

Aleutian Islands, volcanic island chain, an extension of the Aleutian Range in SW Alaska. They separate the Bering Sea from the Pacific Ocean, and were purchased with Alaska by the USA in 1867. Industries include fishing and furs. Area approx 17,666sq km (6,821sq miles). Pop. 8,000.

Aleutian Range, volcanic mountain system that stretches along the E coast of N Alaska. It includes Mt Katmai, 2,047m (6,716ft), and the Katmai National Monument, a recreational area. Length approx 970km (602 miles).

Aleuts, a branch of the Eskimo people who occupy the ALEUTIAN ISLANDS and Alaska Peninsula. They are divided into two major language groups, the Unalaska and Aitka. First discovered by Vitus Bering (1681-1741) in 1741, they were forced into service as fur hunters and front-line attackers of other native peoples of the west coast. They numbered about 20,000 at that time, a total reduced to less than 1,500 a century later due to brutal treatment by the invaders. Today approx 4,000 Aleuts live in scattered villages throughout SW Alaska. The women weave superb baskets of sea-grass that are often regarded as among the finest such articles made by native Americans. The Aleuts are racially similar to Siberians and the majority belong to the Russian Orthodox Church.

Alewife, marine commercial fish found in the N Atlantic and landlocked in large freshwater lakes. It is grey-green with dark horizontal side stripes. When canned or salted it is sold as "river herring". Length, 30cm (12in); weight 0.4kg (14oz). Family Clupeidae, species *Pomolobus pseudoharengus*.

Alexander, name of eight popes. Alexander III (r.1159-81) was born Orlando Bandinelli (c 1105-81). He was a canon lawyer who had been an associate of ADRIAN IV, but his election to the papacy was opposed by the Holy Roman Emperor FREDERICK I, who had an anti-pope, Victor IV, elected. The ensuing schism ended 17 years later with the victory of the Lombard League over Frederick at the Battle of Legnano. Alexander furthered the canon law and decreed that the College of Cardinals be solely responsible for the election of future popes. Alexander VI (r.1492-1503) was born Rodrigo Borgia (c 1431-1503). He was the father of four children, including Cesare and Lucrezia Borgia. His use of the power of his office for personal and political ends as well as the patronage of the arts, was overthrown. ALEXANDER VII was an outspoken critic of his pontificate.

Alexander (c 886-913), Byzantine

emperor. He was co-ruler with his brother Leo VI for 26 years (886-912), and sole ruler for one (912-913). During the lifetime of Leo VI, Alexander (who was a pleasure-loving man) took little part in government. His tenure as sole ruler was disastrous, for he provoked a war with the BULGARS.

Alexander, name of three Russian tsars. Alexander I (1777-1825) came to the throne in 1801, and with his chief minister Michael SPERANSKY introduced administrative and educational reforms. He repelled NAPOLEON's invasion of Russia in 1812 and led his troops across Europe and into Paris in 1814. After the war, influenced by Alexis Arachev, he introduced many reactionary measures. His mystical interests led him to help form the HOLY ALLIANCE. He was named constitutional monarch of Poland in 1815 and annexed Finland, Georgia and Bessarabia. Alexander II (1818-81), who became Tsar in 1855, was best known for his emancipation of the serfs in 1861. Although he ended the CRIMEAN WAR in 1856, his Pan-Slavist affections led him to declare war on Turkey in 1877 and the Russian victory in 1878 resulted in the independence of Bulgaria from Turkey. He expanded his empire to the east despite selling Alaska to the USA in 1867. He was assassinated by revolutionaries in 1881. His successor Alexander III (1854-94) introduced reactionary policies which limited the powers of local government and extended press censorship. Arbitrary arrest and exile became common and ethnic minorities were persecuted. The principles of orthodoxy, autocracy and nationalism underlay his rule. See also pp.1648-1649.

Alexander the Great, Alexander III of Macedonia (356-323 BC), the greatest general in ancient history. Tutored by ARISTOTLE, he became king at the age of 20, destroying rivals and consolidating power in Greece. In 334 BC he began the Persian expedition, conquering western Asia Minor and storming the island of Tyre in 332 BC, his greatest military achievement. He subdued Egypt and occupied Babylon, marching north in 330 BC to Media and then conquering central Asia in 328 BC. In 327 BC he invaded India and set about consolidating his empire. While planning a voyage around Arabia he caught a fever and died at the age of 33. See also pp.1214-1215.

Alexander, the name of three kings of Scotland. Alexander I, The Fierce (c 1100-1124) reigned between 1100 and 1124. He divided the kingdom between the north and the south of the Forth river with his younger brother David. Alexander II (c 1198-1249) reigned between 1214 and 1249 and concluded peace with England in 1214 with his sister. He ruled with firm authority. Alexander III (c 1249-1286) reigned between 1249 and 1286. His great achievement was the peaceful end of the Hebrides and the loss of Man from Norway in 1266. In addition he promoted peace with England and Norway and consolidated Scottish unity.

Alexander 1893-1920, King of Greece (1917-20) after the Alex forced the abdication of his pre-German father King Constantine. Premier Venizelos approved the entry of Greece into WWI joining Serbia and France and hoping to form Greater Greece. Alexander died from the effects of peritonitis before the plan could be put into operation.

Alexander I (c 888-934), King of the Serbs, Croats and Slovenes (1921-29) and King of Yugoslavia (1929-34). In his efforts to forge a united country from the rival national groups and ethnically divided political parties he created an autocratic police state. He was assassinated by a Croatian terrorist.

Alexander, Albert Victor (1885-1966), British Labour politician who became the 1st Earl Alexander of Hillsborough. He held the posts of First Lord of the Admiralty (1929-31) and Minister of Defence (1947-50).

Alexander, Frederick (1899-), Australian educationalist and author. He has travelled widely to centres of higher

education in other Commonwealth countries and the USA. Several of his books are about Australian history.

Alexander, Samuel (1859–1938), philosopher, b. Australia. A realist metaphysician strongly influenced by evolutionary theory, he expresses in his major work, *Space, Time and Deity* (1920), his theory of knowledge in which pure motion is held to be the basis of the universe.

Alexander Nevski (c 1220–63), Russian ruler, national hero, Grand Duke of Novgorod from 1236, and from 1252 Grand Duke of Vladimir (the political centre of Russia at that time). He submitted to Mongol rule following their invasion of Russia and the Great Khan appointed him Grand Duke of Kiev. He defeated the Swedes on the Neva in 1240 (hence the name Nevski) and the Teutonic knights in 1242. He was canonized in 1547. His exploits were the subject of a 1938 film by Sergei Eisenstein, with music by Sergei Prokofiev (later adapted as a cantata).

Alexander of Hales (c 1185–1245), English theologian. He was the founder in Paris of the first Franciscan school of theology. The *Summa Universae theologiae* attributed to him is the work of his followers. It introduced Aristotelian and Arabic elements into a basically Augustinian framework.

Alexander of Tunis, Harold Rupert Leofric George, 1st Earl (1891–1969), British military commander. He directed the British offensive in Egypt and Libya in 1942 and was Gen. Eisenhower's deputy in the victorious Tunisian campaign of 1943 before becoming Commander-in-Chief of Allied forces in Italy. He was Governor-General of Canada (1946–52) and British Minister of Defence (1952–54). See also p 1680.

Alexander Severus, Marcus Aurelius (208–35), Roman emperor (222–35). He became emperor at the age of 14 and throughout his reign he was strongly influenced by his mother, Julia Mamaea. As a military leader, he fought the newly established Persian Sassanid Empire (231–33) and restored the Roman frontier in the Near East. On the Rhine frontier, he chose to buy peace from the Germans rather than fight them. His troops rebelled, killed Alexander and plunged the empire into military anarchy.

Alexander Island, formerly Alexander I island, off the west coast of the Antarctic Peninsula in the British Antarctic Territory and separated from the Palmer Peninsula by George VI Sound. It was discovered in 1819–21 by the Russian explorer Fabian von Bellingshausen, who named the area after his emperor. It is uninhabited. Area 43,253 sq km (16,700 sq miles).

Alexandra, Queen (1844–1925), Queen Consort of Edward VII of Britain, daughter of Christian IX of Denmark and mother of George V. She married Edward in 1863. She began Alexandra Rose Day in 1902.

Alexandra, Princess (1936–), cousin of Queen Elizabeth II and 20th in succession to the British throne. She is the daughter of Prince George, Duke of Kent, and Princess Marina.

Alexandra, African township 13 km (8 miles) N of Johannesburg, South Africa. Established early in the 1900s with facilities for 5,000 people, Alexandra's population quadrupled after WWII. It has since been extensively rebuilt. Pop. 60,000.

Alexandria, see ISKENDRIYA, GULF OF ALEXANDRIA (Al Iskandariya), chief port and second largest city in Egypt, situated on the western extremity of the Nile Delta. Founded by ALEXANDER THE GREAT in 332 BC, it became a centre of Hellenistic culture and contained one great library that was progressively destroyed from the time of Caesar's invasion. Under Muslim rule, the city slowly declined from 642 until the early 19th century. It contains a university, several famous museums and parks and is the Middle East Headquarters for the World Health Organization. Industries: oil refining, textiles, paper, food processing, vegetables and plastics. Pop. 2,259,000.

Alexandrian school, group of Greek poets

including Aratus (c 315–c 240), APOLLONIUS RHODIUS and THEOCRITUS who, between the 3rd and 1st centuries BC, worked in ALEXANDRIA.

Alexandrine, a 12-syllable line in poetry. Its name is probably derived from French medieval poetry about ALEXANDER THE GREAT. The most noted use of alexandrine is in classical French tragedy. Famous occurrences in English are Drayton's *Polyolbion* (1612–22) and the last line of the stanza form used in Spenser's *The Faerie Queene* (1589–96).

Alexeev, Vasil (1942–), Russian weightlifter. Olympic super heavyweight champion in 1972 and 1976, Alexeev dominated the sport in the 1970s.

Alexius I Comnenus (1048–1118), Byzantine emperor (r 1081–1118), founder of the Comnenian dynasty. This soldier-emperor came to the throne at a time when Byzantium was virtually destroyed, having lost vast territories to foreign invaders. During the 37 years of his reign, Alexius held off the Normans from their threatened attack on Constantinople, turned the Western armies of the First Crusade to his own advantage by using them to reconquer parts of Anatolia, and defeated the Patzinaks and Seljuk Turks. See also p 1310.

Alfalfa. See LUCERNE.

Alfieri, Vittorio (1749–1803), Italian poet and dramatist. He sought to arouse a spirit of nationalism in his countrymen and wrote a score of verse-tragedies, among them *Filippo* (1781) and *Saul* (1782) that proved influential.

Alfonso, name of a number of rulers of Spanish kingdoms. The kings of Aragon were not "numbered" in the same sequence as rulers of the other kingdoms. Alfonso V (994–1028) became King of León and Asturias after his supporters took the city of León following the death of the Moorish ruler in 999. He was killed in battle against the Moors. Alfonso VIII (1155–1214) was King of Castile (1158–1214). He succeeded his father Sancho III at the age of three. He took control of his kingdom in 1166 and at first opposed both Moors and fellow-Christian kings. In 1212 he forged a coalition with the Christian rulers and won a major victory over the ALMOHADS at Las Navas de Tolosa.

Alfonso X (1221–84), King of Castile and León (1252–84), was the son and successor of Ferdinand III. He continued his father's wars against the Moors but his chief ambition was to become Holy Roman Emperor. In 1257 a dissident group of German nobles named him anti-king (to Richard, Earl of Cornwall) but papal opposition kept him in Spain. A distinguished scholar, he codified the law and wrote histories of Spain and the world. He was a patron to Jewish, Moorish and Christian scholars, philosophers and scientists. Alfonso V (1396–1458) was King of Aragon (1416–58). He pursued military activity in deference to tradition, to protect his Eastern trade, and to curb Turkish power.

Alfonso XIII (1886–1941) was born after the death of his father, Alfonso XII, and his mother acted as regent until 1902. Although personally popular, he could not satisfy the conflicting demands of the nationalist groups, socialists, republicans and others. In 1923 he supported the setting up of a right-wing military dictatorship under Gen. Miguel PRIMO DE RIVERA, which fell in 1930. A year later the republic was proclaimed.

Alfonso I (Alfonso I) (1109–85), first King of Portugal (1139–85). He was the son of Henry of Burgundy, Count of Portugal. After his father's death (1112), his mother ruled as regent until 1128, when Alfonso deposed her. From about 1130 to 1139 he fought against the King of León and Castile and against the Moors, in 1147 he captured Lisbon. From 1139 he styled himself as King, a title ratified by Castile and the Pope in 1179. He was succeeded by his son SANCHO I.

Alfred (849–99), King of Wessex (871–99), called Alfred the Great. Warrior and scholar, he saved Wessex from the Danes and laid the foundations of a united English kingdom. Youngest of four successively reigning sons of King Ethelwulf,

he became king at a time when the Danes threatened to overrun the kingdom. After the Danish invasion of Wessex in 878, he escaped to Athelney in Somerset, returning later to defeat the Danes at Edington and recover the kingdom. The legend in which he is reprimanded by a peasant woman for letting her cakes burn probably derives from this period. To strengthen Wessex against future attack he built a fleet of ships, constructed forts and reorganized the army. He instituted political reform by publishing a code of laws, translated and commissioned several Latin works into English and founded several schools. See also pp 1288, 1290.

Allerton, market town in Derbyshire, N central England. The major industries are coal mining and iron working. Pop. 21,700.

Alfvén, Hannes (1908–), Swedish astrophysicist who shared the 1970 Nobel Prize in physics with Louis Néel of France. He laid the foundation of what has become known as magnetohydrodynamics (MHD), he advanced the theory of frozen-in flux, which states that PLASMA is contained by the magnetic lines of flux through it.

Algae, large group of essentially aquatic plants found in salt and fresh water throughout the world. Algae make their own food by PHOTOSYNTHESIS, and they are the primary source of food for molluscs, fish and other aquatic animals. Algae are directly important to man as a food (especially in Japan) and as FERTILIZERS. They range in size from microscopic plants such as those that form green pond scum to huge brown KELPS more than 45 m (150 ft) long. The smallest algae are variously shaped single-celled organisms, some of which can move by means of whip-like "arms" called flagellae. Many-celled species – including the SEAWEEDS – grow in a variety of shapes, including cords, ruffled sheets and intricately branched structures resembling some land plants. But even the most advanced algae do not have true roots, stems or leaves like those of the higher plants. Algae are classified in 11 major botanical divisions. See also pp 358–361.

Algardi, Alessandro (1595–1654), Italian sculptor, one of the most important Italian portraitists in the 17th-century BAROQUE style. His works include the famous statue of Pope Innocent X (1645) in the Palazzo dei Conservatori, Rome. See also pp 1438, 1439, 1441.

Algarve, southernmost province of Portugal, the capital is Faro, on the Cabo de Santa Maria. It was first settled by the PHOENICIANS, then the MOORS, who were defeated by Alfonso III in 1253. Products: fruit, tuna and sardines. Area 5,070 sq km (1,958 sq miles). Pop. (1970 est.) 266,600.

Algebra, form of arithmetic in which symbols replace numbers. Thus $3 + 5 = 8$ is a statement in arithmetic, $x + y = 8$ is one in algebra, involving the variables x and y . Boolean algebra (an example of a higher algebra) can be applied to sets and to logical propositions. See also MATHEMATICS, pp 784–790.

Algebraic fraction. See FRACTION.

Algeciras, seaport city in Andalusia, S Spain, on the Bay of Algeciras. It was the first Spanish town to be conquered by the MOORS (711). It was taken by Alfonso XI of Castile in 1344. Algeciras suffered great damage during the war between the Moors and the Spaniards, who rebuilt it in 1704. The city is an important resort and port. Pop. 81,700.

Algeria, independent republic in N Africa, on the Mediterranean Sea. A mostly Muslim country, it was a French colony before its independence in 1962. The chief city is ALGIERS. Industries include petroleum products (oil accounts for 70% of exports) and food processing. Agriculture is based on fruit, cereals and livestock. Area 2,381,741 sq km (919,397 sq miles). Pop. 16,776,000. See p 1972.

Algiers (Al-Jazair), capital city of Algeria, on Algiers Bay, N Africa's chief port on the Mediterranean. At various times in its history it has been colonized by Romans, Spanish, Turks, Barbary Pirates and French. It has a Casbah (16th-century

Princess Alexandra, Queen Elizabeth's cousin, 20th in succession to the British throne.

Algae – the simple organisms that purify air and water and provide food for other life.

Algarve, from the Arabic meaning 'the west', has about 32 small fishing seaports.

Algeria profile

Official name Democratic and People's Republic of Algeria
 Chief cities Algiers (capital) (1975 est.) 1,179,000; Oran, 327,493; Constantine 241,600
 Government Military
 Religion Islam
 Languages Arabic, French
 Monetary unit Dinar
 Gross national product (1978) \$45,000,000
 Agriculture Wheat, barley, corn, oats, flax, tobacco, olives, dates, livestock
 Industries Wine, iron ore, olive oil, natural gas, petroleum products, leather goods
 Minerals Oil and natural gas, iron, zinc, lead, mercury, coal, copper
 Trading partners France and other members of the EEC, USA, USSR

Algie, Sir Ronald

Alhambra, the palace and fortress in Granada and the last stronghold of the Moors in Spain

Muhammad Ali has thrilled the world with his combination of boxing and showmanship

Alkmaar, the colourful town in The Netherlands, world famous for its cheese markets

All Blacks, formidable New Zealand rugby union side in their distinctive 'all black' strip

Turkish citadel) and a Great Mosque (14th century). Industries include iron ore, food processing, cement and tobacco. Pop (1975 est.) 1,179,000.

Algie, Sir Ronald (1888-1978), New Zealand politician. He founded the anti-socialist Freedom Association (1937) and sat as a Nationalist MP from 1943 to 1966.

Algin, any of a group of substances obtained from brown algae, used to stabilize emulsions and suspensions, including ice cream, chocolate and paints.

Algol (Beta Persei), eclipsing binary star in PERSEUS. See pp 991, 992, 1009.

Algonquin, or Algonkin, group of Canadian Indian tribes that gave their name to the Algonquian languages of North America. The Algonquin people occupied the Ottawa River area as early as 6000 at which time they numbered about 6,000. Driven from their home by the Iroquois in the 17th century, they were eventually absorbed into other related tribes in Canada.

Algren, Nelson (1909-), US novelist. His works are realistic tales of petty criminals such as the hero of *The Man with the Golden Arm* (1949). The novel is best known for the way it deals with drug addiction, and won the National Book Award in 1950.

Alhambra, Moorish palace and citadel overlooking Granada, Spain. Built by the Moorish rulers of Granada in the 13th-14th centuries, it is the finest example of Moorish architecture in Spain and is regarded as a masterpiece. The buildings fell into disrepair after the expulsion of the Moors in 1492 but were restored in the 19th century.

Ali (c 600-61), 4th Muslim Caliph (656-61), son of Abu Talib, the Prophet MUHAMMAD's cousin. Ali married Mohammed's daughter Fatima and was expected to become Caliph on the Prophet's death but had to wait 24 years before succeeding Uthman. He crushed a revolt in Iraq but was unable to suppress Muawiyah, Mohammed's former secretary who governed Syria. When Ali was murdered by fanatics his son Husayn was persuaded to forgo his claim to the throne by Muawiyah. The division in Islam between the SUNNIS and SHIS dates from this time. Ali and his wife are venerated by the Shites, who believe Ali to have been the rightful heir of Mohammed. See also p. 1282.

Ali Bey (1728-73), ruler of Egypt. Although Egypt was under Ottoman control, he wielded great power and invaded and captured Syria and Mecca (1771). He was later betrayed and fled to Syria. He tried to regain Egypt, but without success.

Ali, Muhammad (1942-), US boxer. b. Cassius Clay in Louisville. He won the Olympic light-heavyweight championship in 1960 and then beat Sonny Liston for the world heavyweight championship in 1964 in Miami Beach, Fla. The World Boxing Association took away Ali's title in 1967 after he refused to serve with the US Army because of his religious beliefs. In June 1971 the US Supreme Court upheld Ali's appeal on religious grounds, although upon returning to the ring in the same year he lost against Joe Frazier who was then World champion. He subsequently regained the title when he defeated George Foreman in 1974 in Zaire. He lost to Leon Spinks in 1978 but regained the title for a third time later that year. In 1980 he lost a world heavyweight championship fight with Larry Holmes.

Alicante, city in SE Spain, 360km (225 miles) SE of Madrid, capital of Alicante province. It was a Roman naval base and is now an important Mediterranean port and tourist resort. The town was recaptured from the Moors c 1265. Falangist leader Antonio PRIMO DE RIVERA was executed there by the Republicans in 1936. It exports wine, fruit, esparto, cereals and olive oil from the fertile region surrounding it. Other industries include clay products, textiles and tobacco. Area (province) 5,864sq km (2,264sq miles). Pop (province) 920,100, (city) 213,143.

Alice's Adventures in Wonderland (1865) book by LEWIS CARROLL. In a carefully constructed world of nonsense a

young girl, Alice, encounters such characters as the White Rabbit, the Duchess, the Cheshire Cat, the March Hare, the Mad Hatter and the Queen of Hearts.

Alice Springs, formerly Stuart, town in central Australia, on the Todd River. Founded in 1860 by McDouall Stuart, its importance increased in 1871 as a telegraph station between Adelaide and Darwin. It was the capital of the former state of Central Australia (1926-31). Industries: gold, copper and mica mining. Pop (1968) 7,810.

Alien, in law, citizen of one country who resides in another. An alien is subject to the laws of the country he lives in but owes allegiance to his country of birth. In Britain an alien is a citizen of a non-Commonwealth country. Aliens can obtain citizenship through naturalization which may be applied for usually only after a specified period of residence. A knowledge of the local language is normally essential for acceptance.

Alienation, in psychology, state of being alienated or diverted from normal functions. An alienated person is out of touch with reality. In drama, a term applied to plays in which audience and actors are encouraged not to identify with the characters (see ARCHT). See also p. 116.

Aligarh, city in Uttar Pradesh state, central India, between the Ganges and Yamuna rivers. It is a Muslim cultural centre and is famous for its Muslim University (1920) and Aligarh Movement, which sought to prepare Muslims for participation in political life, resulting in the All Muslim League. A market town and administrative centre, it has cotton mills and ancient Buddhist remains. Pop 252,300.

Alimentary canal, digestive tract of an animal that begins with the MOUTH, continues through the OESOPHAGUS to the STOMACH and INTESTINES, and ends at the ANUS. It is about 9m (30ft) long in human beings. See also DIGESTIVE SYSTEM pp 160-161.

Aliphatic compound, any organic chemical compound whose atoms are not linked to form rings. They include the alkanes (paraffins), alkenes (olefines) and alkynes (acetylenes). See also AROMATIC COMPOUND.

Alizarin (1,2-dihydroxyanthraquinone), red vegetable dye, first extracted from the root of the Madder plant. A metal oxide mordant is used when dyeing fabrics.

Al-Jirah. See ALZA.

Alkalid, star in Ursa Major. See pp 916, 1008, 1018.

Alkali, soluble base that reacts with an acid to form a salt. Strong alkalis include the hydroxides of the alkali metals, and ammonium hydroxide. The carbonates of these metals and ammonium carbonate are weak alkalis.

Alkali elements, univalent metals forming Group IA of the periodic table: lithium, sodium, potassium, rubidium, caesium and francium. They are soft silvery-white metals that tarnish rapidly in air and react violently with water to form hydroxides which make strongly basic solutions. See also pp 888, 900.

Alkaline-earth elements, bivalent metals forming Group IIA of the periodic table: beryllium, magnesium, calcium, strontium, barium and radium. They are all light, soft and highly reactive. All, except beryllium and magnesium, react with cold water to form hydroxides (magnesium reacts with hot water). Radium is important for its radioactivity. See also p. 888.

Alkaloid, member of a class of complex nitrogen-containing organic compounds found in certain plants. Many alkaloids are tertiary amines. They are sometimes bitter and highly poisonous substances, used as drugs. Examples include atropine, codeine, morphine, nicotine, quinine and strychnine. See also pp 1090-1091.

Alkalosis, abnormal condition in which the blood becomes too alkaline. It may result from acid loss in protracted vomiting, ingestion of alkalis or a kidney complaint. Symptoms include muscle spasms and weakness.

Al-Khwarizmi (fl 820), Arabian math

ematician. He wrote original works on ALGEBRA, which he systematized, and arithmetic. See also pp 772, 784.

Alkmaar, market city in NW Netherlands, 12km (20 miles) NW of Amsterdam. It was the first Dutch city successfully to resist the Spanish in 1573. Industry: food processing. Pop 52,000.

Al-Kawayt. See KUWAIT.

Alkyds, synthetic resins, generally of phthalic acid and glycerol. They can be moulded at high speed under low pressure and cured quickly. They are widely used as paint resins and in products where good insulation, high strength and good temperature, voltage and humidity stability are important, such as in car ignition systems. See also POLYESTER p 588.

Alkylbenzenesulphonic acid. See DETERGENT p 580.

Allah, Arabic term for God. The one and only God of ISLAM. Allah is the omnipresent and merciful rewarder. Unreserved surrender to Allah as preached in the KORAN, is the very heart of the Muslim faith. See pp 1278-1279, 1914, 1917.

Allahabad, city in Uttar Pradesh state, central India, at the confluence of the Rivers Ganges and Yamuna. It is a pilgrimage centre, based on the belief that the goddess Saraswati joined the two rivers at this point. It has the Kumbh Mela fair, a religious celebration that occurs every twelve years, and one of the oldest universities in India, dating from 1887. It is an agricultural trade centre. Pop 490,600.

All-American Canal, canal in SE California, USA. Part of the irrigation system of the HOOPER DAM, it was completed in 1940 and crosses the Colorado Desert. Length 129km (80 miles).

Allan, David (1774-96), Scottish portrait and genre painter, nicknamed the 'Scottish Hogarth'. His humour and gift for caricature are seen in such works as *Scottish Wedding*.

Allan, Sir Hugh (1810-82), Canadian financier and shipbuilder, b. Scotland. In 1856 he founded the Allan Line of steamships and later helped plan the Canadian Pacific Railroad. His donation of \$350,000 to the Conservative Party of John MACDONALD resulted in the PACIFIC SCANDAL of 1873.

Allan, Sir William (1782-1850), Scottish historical painter, elected President of the Royal Scottish Academy in 1838. His paintings include scenes from the *Waterloo* novels by Sir Walter SCOT.

All Blacks, national rugby union football team of New Zealand. They get their name from their playing strip - black jerseys, shorts and socks - which became their regular uniform in 1901. The first New Zealand touring side visited the British Isles and France in 1905-06, and it was then that the term 'All Blacks' was first coined. These 'Original All Blacks' under the captaincy of Dave Gallaher, had a most successful tour, winning 12 of their 33 matches, with a remarkable points record of 868 against 47. This tour established the All Blacks as the leading rugby side in the world, a 'title' that has been disputed vehemently over the years by the Springboks of South Africa. Of the Home Countries of the British Isles, only Wales has consistently proved to be in the same class, and it was against Wales that the All Blacks lost their only game on their first tour. Of the later touring sides, the most outstanding were the Fifth All Blacks (1963-64, captained by Wilson Whineray), who won 32 and lost only 1 of their 34 matches, and the Sixth (1967, Brian Lochore), who won 14 and drew 1 of their 15 matches. In clashes with their great rivals the Springboks, the home side has usually had the edge. The All Blacks scored a series of successes in the 1978 tour when they beat Ireland, Wales, England and Scotland. See also FOOTBALL RUGBY.

Allbutt, Sir Thomas Clifford (1836-1925), British physician, educated at Cambridge where he became regius professor (1892). His short clinical thermometer introduced in 1866 replaced the 30 cm (1ft) long type previously used.

Allegheny Mountains, range in the USA extending from Pennsylvania through

Maryland, Virginia and West Virginia, where Spruce Knob (1,408m, 4,619ft) is the highest point. There are large deposits of coal and extensive forests.

Allegory, literary work in either prose or verse in which more than one level of meaning is expressed simultaneously. The fables of Aesop and of La Fontaine, which give human meaning to animal behaviour, are simple allegories.

Allegri, Antonio. See **CONREGGIO**
Allegri, Gregorio (1582-1652), Italian composer. He spent much of his life in the pope's service and his *Miserere*, acclaimed as a setting of ethereal beauty, was written for the Sistine choir.

Allen, William Hervey (1889-1949), US author. His most successful novel, *Anthony Adverse* (1933), sold more than a million copies. He also wrote *Toward the Flame* (1926), *Action at Aquila* (1938), *Bedford Village* (1944) and several other novels.

Allen, Bog of, area of peat bogs in central Ireland, in Kildare, Offaly, Laois and Westmeath counties. Some peats are cultivated and in others peat is cut for fuel. Area 958sq km (370sq miles).

Allen, Lough, lake in N Republic of Ireland, approx. 13km (8 miles) N of Carrick, the upper Shannon River flows through it. It is 13km (8 miles) long and 5km (3 miles) wide.

Allenby, Edmund Henry Hynman, 1st Viscount (1861-1936), English military commander. A distinguished cavalry officer, he defeated the Turkish forces in Palestine and Syria (1917-18), capturing Jerusalem, Damascus and Aleppo. He was made a Viscount in 1919 and served as British High Commissioner in Egypt and Sudan from 1919 to 1925.

Allende Gossens, Salvador (1908-73), President of Chile (1970-73). He died in a military coup in Sept. 1973. Candidate of the Popular Unity coalition, he was the first democratically elected Marxist head of state in Latin America. A doctor and active member of the Chilean Socialist Party since its formation in 1933, he was a senator from 1945 and unsuccessfully ran for the presidency in 1952, 1958 and 1964. See also p 1740.

Allerdale, county district in NW Cumbria, England, created in 1974 under the Local Government Act (1972). Area 1,255sq km (485sq miles). Pop. (1974 est.) 94,500.

Allergy, hypersensitive reaction of the body to certain substances (allergens) not normally considered distressing. Allergens include pollen, animal hair, fungi, dust, occasionally foods and increasingly drugs such as penicillin. Typical allergic reactions are sneezing (hay fever), "wheezing" and difficulty in breathing (asthma) and skin eruptions and itching (eczema). The tendency to allergic reactions is often hereditary. Treatment usually requires the identification of the allergen and its avoidance if possible, or a course of desensitization. Drugs can be useful in relieving acute symptoms. See also p 1062.

Alleyne, Edward (1566-1626), English actor. He won fame and riches in tragic roles such as Marlowe's *Dr Faustus* (c 1589), was a theatre-owner and founded Dulwich College (1613-16).

Alliance, in international relations, an agreement for furtherance of mutual or similar aims between states or other parties, sometimes arrived at by formal treaty. The North Atlantic Treaty Organization (NATO) is one such alliance.

Allied Powers. See **ALLIES**, THE
Allier, river in S central France that flows NNW to the River Loire. It is 410km (255 miles) long.

Allies, the term used in WWI and WWII for the forces that fought the CENTRAL POWERS and AXIS POWERS respectively. In WWI they numbered 23 and included Belgium, Britain and its empire, France, Italy, Japan, Russia and the USA. In WWII the 49 Allies included Belgium, Britain and the Commonwealth, France, The Netherlands, the USSR and the USA.

Alligator, broad-snouted reptile crocodilian found only in the United States and China. In the breeding season the female

alligator lays 20-70 eggs on shore in a mound nest of leaves and mud and remains nearby to guard them. The American alligator, *Alligator mississippiensis*, is found in the SE USA; it grows up to 5.8m (19ft) long. The almost extinct smaller Chinese alligator, *A. sinensis*, is restricted to the Yangtze-Kiang river basin. Unlike the American alligator it has no webbing between its front toes. Length up to 1.5m (5ft). Family Alligatoridae. See also pp 66-67.

Alligator gar, primitive freshwater bony fish found in shallow weedy waters of North America, east of the Rocky Mountains. Its long cylindrical body is covered with bony diamond-shaped flat plates. It has a "snout" studded with teeth, and vertebrae resembling those of reptiles. Length to 3.05m (10ft), weight to 136kg (302lb). Family Lepisosteidae. See also p 56.

Alliulova, Svetlana (1926-), daughter of Joseph Stalin by his second wife, Nadezhda Alliulova. In 1966 she defected to the West while in India and settled in the USA the following year. She wrote an account of her experiences under various Soviet regimes, *Only One Year* (1969).

Allingham, Margery Louise (1904-66), British writer of detective novels. Her stylishly written stories included *Flowers for the Judge* (1936) and *The Mind Readers* (1965).

Allingham, William (1824-89), Irish poet. He wrote a number of attractive lyrical poems, *Up the Airy Mountain* being the best known.

Allium. See **LILY**.

Alloa, seaport town in central Scotland, on the River Forth, 40km (25 miles) NE of Glasgow. It has a 13th-century tower on Mar's Hill, which marks the seat of the Erskines, Earls of Mar. Alloa became part of the Central Region in 1975. Its major export is coal. Other industries include brewing, tiles, hosiery and bottles. Pop. (1974 est.) 13,500.

Allopathy, the treatment of diseases by methods and remedies that produce effects contrasting with those caused by the disease, theoretically opposite to homeopathy.

Allori, Agnolo. See **BRONZINO II**.

Allotropy, property of some chemical elements which enables them to exist in two or more distinct physical forms. Each form (called an allotrope) can have different chemical properties but can be changed into another allotrope - given suitable conditions. Examples of allotropes are molecular oxygen and ozone, white and yellow phosphorus, and graphite and diamond (carbon).

Alloy, mixture of two or more metals. Its properties are frequently different from those of constituent elements: alloys are generally harder, stronger and have lower melting points (those with lowest melting points are called eutectic mixtures). Most are prepared by mixing when molten. Some mixtures combining a metal with a non-metal, such as in steel, are also referred to as alloys. The proportions in which the component metals are mixed greatly affects the properties of an alloy. See also pp 402, 840.

All Quiet on the Western Front (1929), novel by Erich Maria Remarque. Based on the author's experience in WWI, it records with grim realism the horror of trench warfare. It has been adapted for several films, notably in 1930. See also p 1760.

All Saints' Day, in the Christian liturgical calendar, the day on which all the saints are commemorated. The feast is observed on 1 November in the West and on the first Sunday after Pentecost (Whitsun) in the East. It was known as All Hallows in medieval England, and the eve of the day is celebrated in some western countries as Halloween.

All Souls' Day, day of remembrance and prayer for all the departed souls, observed by Roman Catholics and High Church Anglicans on 2 Nov. or on 3 Nov. if the former falls on a Sunday. It is believed that prayers for the departed will help prepare them for heaven.

Allspice, or pimento, aromatic tree native to the West Indies and Central America. The fruits are used as a spice, in perfume and in medicine. Height up to 12m (40ft). Family Myrtaceae, species *Pimenta officinalis*, *P. dioica*. See also p 707.

Allston, Washington (1779-1843), the first US artist to paint romantic landscapes. Allston experimented with colour to achieve atmospheric effects of light. His finest paintings, often fantasies of seascapes and landscapes, include *The Deluge* (1804) and *Moonlit Landscape* (1819).

All's Well That Ends Well (1602-03), comedy by William Shakespeare. See also p 1418, 1418.

All the Talents, Ministry of (1806-07), misleading name for the government formed by Lord Grenville, including Charles James Fox. It is famous for abolishing the slave trade.

Alluvium, general term that describes sediments - sand, silt and mud - deposited by flowing water along the banks, delta or flood-plain of a river or stream. Fine-textured sediments that contain organic matter form soil. See also p 220.

Alma, battle of the CRIMEAN WAR in 1854. The Russians were defeated by the British and the French but the latter failed to consolidate their victory. See also p 1663.

Alma-Ata, largest city and capital of Kazakhstan, USSR, near the border with China, capital of Alma-Ata oblast. It was founded in 1855 as a Russian fortress and commercial centre and named Verny. It is now a terminus of the Turkistan-Siberian railway. Its industries include food processing, tobacco, timber and machinery. Pop. (1971) 730,000.

Almagro, Diego de (c 1475-1538), Spanish conquistador. He joined Francisco Pizarro in the initial expedition (1524-27) to Peru and was instrumental in the subjugation of the Incas. There was a land dispute between him and the Pizarro brothers and he tried to claim Cuzco but was executed by order of Hernando Pizarro. See also p 1368.

Alma mater (Latin, *fostering mother* or *beloved mother*), term applied by students and graduates to their college, probably first used early in the 19th century.

Al-Ma'mun, seventh Abbasid caliph (r 813-33). Although his reign was troubled and orthodox Muslims were persecuted, it was nevertheless a period of great cultural development.

Almanza, town in SE central Spain, approx. 69km (43 miles) ESE of Albacete. It has mineral springs and a ruined Moorish castle. It is a market centre for the fertile plain around it. The major industry is textiles. Pop. 16,700.

Al-Mansur, Ahmad (1549-1603), Emir of Morocco (1578-1603). His brother Abd al-Malik defeated Sebastian of Portugal at al-Qast al-Kabir in 1578. The emir traded in slaves, gold and ivory, and built up the power of Morocco.

Alma-Tadema, Sir Lawrence (1836-1912), Netherlands-born painter who settled in England (1870). He was highly popular for his idealized and colourful paintings of Greek and Roman life.

Almeida, Francisco de (1450-1510), Portuguese soldier and colonial official, first viceroy of Portuguese India (1505-09). He set up fortified trading posts and his son established a settlement on Ceylon (Sri Lanka). He was killed on his way back to Portugal.

Almeida-Garrett, Joao Batista de (1799-1854), Portuguese author and statesman. Exiled after the 1820 revolt, he was influenced by the Romantic movement in England and France. He returned to Portugal in 1832 and became a Liberal cabinet minister. His works include the heroic poems *Camoës* (1825) and the play *Frei Luis de Sousa* (1843). See also ROMANTICISM.

Almeria, city in SE Spain, 104km (65 miles) ESE of Granada, capital of Almeria province. It is an important Mediterranean seaport on the Gulf of Almeria. A former Moorish naval base, it was taken by Christians in 1489. It has a Gothic cathedral and the ruins of a Moorish fort. It exports grapes and esparto and its

Salvador Allende, Marxist president of Chile who died in the 1973 military coup.

Alligators are generally much less active and vicious than crocodiles.

Allspice, or pimento, is a shrub whose berries provide a versatile flavouring.

Almeria has a dazzling brightness reminiscent of a Moroccan rather than a Spanish city.

Almohads

Aloe is one of a group of about 100 fleshy-leaved plants found mainly in South Africa

Alphabet, the Hymyaric script developed from an earlier Phoenician alphabet

Alps, the peaks of the Eiger and Mönch in Europe's greatest mountain system

Albrecht Altdorfer, *The Battle of Alexander at Issus*, a masterpiece in dramatic illumination

industries include oil refining, chemicals, light engineering, food processing, fishing and tourism. Pop. 125,700.

Almohads, **ʾAḥḥād** Muslim dynasty (1145-1269) in N Africa and Spain. The followers of a monotheistic reform movement within Islam, Mohammed ibn Tumart, its founder, set out from the region of the Atlas mountains to purify Islam and to oust the Almoravids from Morocco. Their conquest of the Almoravids in Spain was completed by Abd al-Mumin, Yusuf II and Yakub I. In 1212 ALFONSO VIII of Castile routed them at Las Navas de Tolosa, and in 1269 their capital Marrakesh fell to the MARINIDS. See also pp.1304-1305, 1362.

Almond, small tree native to the S Mediterranean region and SW Asia; also the nut-like seed of its fruit. The tree is related to the PEACH and APRICOT but is larger and lives longer. The fruit of the sweet almond may be eaten raw or roasted; that of the bitter almond is pressed for its oil. Species *Prunus amygdalus*. See also pp.710, 711, 713.

Almoravids, **ʾAḥḥād** Muslim dynasty (1054-1145) that ruled in Morocco and Spain. It rose to power under Abdullāh ibn Yūsuf who converted Saharan tribes in a religious revival. Abu Bakr founded Marrakesh as the Almoravid capital in 1070; his brother Yusuf ibn-Tashufin defeated ALFONSO VI of Castile in 1086. Almoravid rule was ended by the rise of the ALMOHADS. See also pp.1255, 1362.

Almqvist, Carl Jonas Love (1793-1866) Swedish writer. His enormous output ranging from romantic, mystical verse to realistic novels, appeared chiefly in the 14-volume series *The Book of the Thorn Rose* (1832-51). He was a fugitive in the USA (1851-65) from accusations of fraud and attempted murder.

Al-Muḥallāh al-Kubra, city in the central Nile delta of Lower Egypt, 120km (75 miles) W of Cairo. Since 1927 it has had a cotton textile factory, which is now a major centre of the country's textile industry. Pop. (1971 est.) 263,400.

Al-Muḥarrraq, one of four main islands, 14sq km (5.5sq miles) in area, that form the state of BAHRAIN in the Persian Gulf. Bahrain International Airport, which is able to take supersonic aircraft, is to the S of Al-Muḥarrraq city. Pop. (1974 est.) 41,800. See p.1986.

Al-Mukalla, city of the People's Democratic Republic of Yemen on the Gulf of Aden. An important fishing port, it is also a centre of trade for the surrounding region. Pop. (1976 est.) 25,000.

Alnitak. See ZETA.

Aloe, genus of South African plants with spiny edged, fleshy leaves. The plants grow in dense rosettes and have drooping red, orange or yellow flower clusters. They are often grown as houseplants. Family Liliaceae. See also p.316.

Alonso, Damaso (1898-), Spanish poet and literary critic. His works include *Essays on Spanish Poetry* (1944), *Wind and Verse* (1925) and *Children of Wrath* (1944).

Allopecia. See BALDNESS.

Alor Setar (Alor Star), city in Malaysia on the central Malay peninsula, on the Kedah River, capital of Kedah state. A trade centre for rice and rubber, it also has the Sultan's residence. Pop. 66,260.

Aloysius, Saint (1568-91), entered the Society of Jesus (1585) against his parents' wishes and died nursing the victims of plague. Aloysius is regarded as the special protector of students and as patron of Christian youth.

Alpaca. See LLAMA.

Alp Arslan (1029-72), Sultan of the Seljuk Turks (r.1063-72). He conquered Armenia, Syria, Cilicia and Cappadocia. In 1066 he attacked the Byzantine Empire. After his decisive victory over the Byzantines at the Battle of Manzikert in 1071, Turkish domination of Asia Minor was assured.

Alpenhorn, or **alpenhorn**, simple musical instrument, a long wooden horn, played by Alpine herdsmen. Gioacchino Rossini (1792-1868) used a typical alpenhorn melody in the overture to his opera *William Tell*.

Alpha Aquilae. See ALTAIR.

Alpha Aurigae. See CAPELLA.

Alphabet, system of letters representing sounds of speech, used in writing, a word derived from *alpha* and *beta*, the first two letters of the Greek alphabet. In a perfect system one symbol represents just one sound, but this is rarely achieved. The International Phonetic Alphabet consists of a series of symbols devised to transcribe precisely the speech sounds for any language. The most important alphabets in use today are the Latin (Roman), Cyrillic, Greek, Arabic, Hebrew and Devanagari. Because an alphabet permits a written language it makes possible the dissemination of knowledge and its preservation. Primitive man communicated by sound, gesture and painting, and the earliest script developed from a type of picture writing of the fourth millennium BC. Devised by the Sumerians, it evolved into cuneiform, made up of wedge-shaped characters that represented sounds. Egyptian hieroglyphics date from about 3000 BC and by 2000 BC the Semites of Syria and Palestine were using a consonantal alphabet known as North Semite, which influenced a variety of forms throughout Asia and Europe. The Phoenicians transmitted the alphabet to the Greeks who adapted it further and added vowels. The Latin version, which grew out of the Greek by way of the Etruscans, was perfected about AD 100. It is the foundation on which Western alphabets are based. Some alphabets (eg the Devanagari of India) represent syllables rather than phonemes, and Braille and Morse code are alphabets invented to meet special needs. See also pp.608-609.

Alpha Canine. See CANOPUS.

Alpha Centauri, sometimes called Rigil Kent or Tolman, triple star composed of a binary, having a period of 80 years, and Proxima, a faint red dwarf - the nearest star to Earth. It is also the closest of the bright stars, is visible through a telescope, and is one of three stars (the others are Sirius and Procyon) in our Solar System that are more luminous than our Sun. See also pp.990, 998, 1015, 1020, 1025.

Alpha rays, or **alpha particles**, stable, positively charged particles emitted spontaneously by certain radioactive isotopes (undergoing alpha decay). They were discovered by Pierre and Marie CURIE and by Ernest RUTHERFORD, who in 1899 identified them as two protons bound to two neutrons - nuclei of helium atoms. Their penetrating power is low compared with that of beta particles (electrons) but they cause intense ionization along their track. See also RADIOACTIVITY p.812.

Alpha waves, principle slow waves produced by the human brain (frequency < 10Hz), when the subject is awake but relaxed, recorded on an electroencephalogram (EEG). The state in which the brain produces Alpha waves can be induced. See also BRAIN WAVES.

Alphege, Saint (954-1012), Archbishop of Canterbury (1005). Originally a monk of Deerhurst, he became Abbot of Bath and in 984 was made Bishop of Winchester. In 1012 he was murdered by drunken Danes after he had refused to be ransomed by his impoverished tenants. His feast day is 19 April.

Alpheratz, also called Alpha Andromedae, one of the four stars included in the Square of Pegasus and linking it to Andromeda. See also pp.1012, 1012.

Alpine plants, small plants found above the tree line in mountain meadows and on rocky slopes, generally at altitudes above 2,000m (7,546ft). The term is frequently applied to all mountain plants, irrespective of altitude. See also pp.320, 321.

Alpine sub-race, subdivision of the CAUCASIAN race, characterized by thickset stature, tawny skin, dark to pale brown hair, with facial and body hair abundant in the male. Alpines extend across central Europe between the Cévennes and the Ukraine. See also p.120.

Alps, mountain system in S central Europe, extending approx. 1,200km (745 miles) from the Gulf of Genoa on the Mediterranean Sea through France, Italy, Switzerland, Austria, Germany and

Yugoslavia. It is cut by many gaps and passes, and has a distinctive mountain landscape, the result of mountain building and glaciation. It is noted for its scenery, ski slopes and lakes, and tourism is a major source of income. Resorts include Chamonix, St Moritz, Zermatt and Interlaken. The Alps form the watershed of many of Europe's major rivers, including the Rhine, Rhône, Danube and Po, and their fast-flowing headstreams and waterfalls provide an important source of hydroelectric power. Agriculture, including fruit and vines, is limited to the valley floors and some sunny slopes of the foothills; the slopes below the snowline provide summer pasture for cattle and goats. The highest peak is Mont Blanc, 4,810m (15,781ft). See also pp.1928, 212, 214, 215.

Alsace-Lorraine, region in E France, comprised of Bas Rhin, Haut Rhin, Moselle, Meuse, Meurthe-et-Moselle and Vosges départements. It is separated from West Germany by the River Rhine. The region has always caused friction between France and Germany. France lost it (except for Belfort) to Germany at the end of the FRANCO-PRUSSIAN WAR (1870-71), but regained it after WWI. Germany took the area during WWII but it was returned to France at the end of the war. There are rich deposits of iron ore, and industries include steel and textile mills. STRASBOURG is the leading city.

Alsatian, historical German, and later French, province in NE France between the River Rhine and the Vosges Mountains. The départements of Bas-Rhin and Haut Rhin now cover this region, which was ruled originally by Rome, then the Franks followed by the Holy Roman Emperor. It passed to the Germans in 1871, and was incorporated in the province of ALSACE-LORRAINE.

Alsatian, breed of working dog, also known as a German shepherd. It was originally bred for herding, but is now used also as a police dog, guard dog and guide dog for the blind. It has a double coat ranging from light tan to black. Weight 27-38kg (60-85 lb).

Alsop, Richard (1761-1815), US author and poet, known as one of the 'Hartford Wits'. He collaborated in the verse satire *The Felo*.

Also Sprach Zarathustra, prose-poem (1883-92) by Friedrich NIETZSCHE that inspired Richard STRAUSS's symphonic poem of the same name (1895).

Altai (Altaysk), complex mountain system in central Asia between W China and W Mongolia and between Gorno-Altayskaya autonomous oblast and Kazakhstan. USSR. A densely forested area, it is the source of the Irtysh and Ob' rivers. Highest peak 4,620m (15,157ft).

Altair, or **Alpha Aquilae**, white star in the constellation of Aquila. Characteristics: apparent mag. 0.77, absolute mag. +2.3, spectral type A7, distance 16 light-years. See also pp.978, 1019.

Altstätten, town in central Switzerland, 3km (2 miles) from the SE tip of Lake Lucerne, capital of Uri canton. It was the scene of the exploits of the legendary William Tell, commemorated by an annual festival and a museum. Industries: cables, rubber and tourism. Pop. 8,600.

Altdorfer, Albrecht (c.1480-1538), German painter and engraver. One of the first true landscape painters in Europe, he used figures in his pictures as a complement to landscape. His masterpieces include *The Battle of Alexander at Issus* (1529). See also p.1394.

Alternating current. See CURRENT, ELECTRICAL.

Alternation of generations, two-generation cycle by which some plants, such as mosses and ferns, reproduce. The asexual (SPOROPHYTE) form produces spores that, in turn, grow into the sexual (GAMETOPHYTE) form. The gametophyte produces the egg cell (fern) or capsule (moss) that grows into another sporophyte. The moss gametophyte consists of the protonema, or moss plant. The fern gametophyte is the prothallus or familiar fern plant. See also pp.350, 362, 364.

Alternator, electrical generator that pro-

duces an alternating current. See pp.876-879

Altegeid, John Peter (1847-1902), us politician and Governor of Illinois (1893-97) Born in Germany, Altegeid was a man of liberal views and a champion of labour

Althing, Icelandic Parliament, one of the oldest legislative assemblies in the world It was first convened at Thingvellir, near Reykjavik, in 930 The 60 members (40 in the lower house and 20 in the upper house) are elected by proportional representation for four-year terms At times the two houses act as a united Althing, as in 1944 when they voted for independence from Denmark

Althusius, Johannes (1557-1638), Dutch Calvinist political theorist He held that the highest power in a state is possessed by the people The right to govern is merely delegated, the people have a legal right to resist tyranny His *Methodical Digest of Politics* (1603) was an influential treatise against absolute royal power

Altichiero da Zevio (c 1330-c 1395), Italian painter from Verona, whose style was influenced by the frescoes of Giotto at Padua Altichiero's paintings are early examples of the use of realistic proportions in the depiction of the human figure and spatial relationships

Altimeter, instrument that indicates the altitude of an aircraft by measuring atmospheric pressure Essentially it is an aneroid barometer calibrated in heights, and must be adjusted frequently in flight to compensate for local pressure changes

Altiplano, high plain in the South American Andes of Peru and w Bolivia, where it is at an elevation of about 3,650m (12,000ft) See also p.245

Altitude, in astronomy, angular height of a celestial body above the horizon, measured in degrees along a vertical circle passing through the body Altitude and azimuth are the co-ordinates used to locate the position of celestial bodies in the celestial sphere

Altman, Robert (1925-), us film director Versatile and inventive, his films include *Brewster McCord* (1971), *M*A*S*H* (1971), *Images* (1972) and *Nashville* (1975)

Alto, in singing, the highest male voice, also called counter-tenor, or the lowest female voice, also called contralto

Altruism, acting in others' interests The word was coined by Comte from the Latin *altruus*, "for some one else" It is used in biology of an animal which offers itself to a predator to save its fellows

Altwegg, Jeannette (1930-), British ice-skater She won the 1951 world and 1952 Olympic figure-skating titles Her best event was the compulsory figures

Alum, double sulphate of aluminium (or another trivalent metal) and another, univalent metal The most important is potash alum, potassium aluminium sulphate, it is used as a mordant in dyeing and as a styptic (to staunch bleeding) in medicine

Alumina, aluminium oxide (Al_2O_3), an important mineral Its hydrated form BAUXITE, ($Al_2O_3 \cdot 2H_2O$), is the chief ore of aluminium Other forms include corundum, two impure varieties of which are the gemstones sapphire and ruby. See also pp.400, 260, 261

Aluminium, metallic element (symbol Al) of group IIIA of the periodic table, first obtained (1827) in pure form by Friedrich Wöhler It is the most common metal in the Earth's crust, the chief ore is BAUXITE (a hydrated oxide) from which the metal is extracted by electrolysis Alloyed with other metals, it is extensively used in machined and moulded articles, particularly where lightness is important, as in aircraft It is protected from oxidation by a thin, natural layer of oxide Properties at no 13; at wt 26.9815; s.g. 2.699, m.p. 660.21°C (1,220.38°F), b.p. 2,467°C (4,473°F), most common isotope Al^{27} See also ANODIZING, pp.400, 890

Alvarado, Pedro de (c.1485-1541), Spanish conquistador who accompanied Hernán Cortés during the conquest of Mexico (1519-21) His actions led to the death of MONTZUMA He became

Governor and Captain-General of Guatemala in 1524 See also p.1370

Alvarez, Alfred (1929-), British poet and critic An influential critic of contemporary poetry, his works include *The Shaping Spirit* (1958), a discussion of modernism in English and American poets, and *The Savage God* (1971), a study of suicide

Alvarez, Luis Walter (1911-), us physicist and 1968 Nobel Prize-winner in the field of sub-atomic particles, in which he discovered and identified a number of extremely short-lived particles He helped to design bubble-chambers for studying such particles, and to construct the first proton linear accelerator

Alvarez Quintero, Serafin (1871-1938) and **Joaquin** (1873-1944), Spanish playwright brothers who collaborated on more than 200 plays, dealing mainly with life in Andalusia Some of their best have been translated into English, including *Fortunato*, *A Hundred Years Old* and *The Lady from Alfiqueque*, all published in 1928

Alveolus, sac-like structure, one cell thick, that protrudes from the end of a bronchiole in the LUNGS Each contains a network of capillary blood vessels that permit the exchange of gases between the air and the blood. See also pp.158, 159

Alwyn, William (1905-), British composer who is best known for his music for films such as *Odd Man Out* and *The Magic Box* Other works include the symphonic prelude *The Magic Island* (1953)

Alyssum, genus of herb native to Europe Alyssums have lance-shaped leaves, often covered with pale down, and white or yellow flowers Species include annual *Alyssum alyssoides* and perennial golden tuft (*A saxatile*) Height, about 30cm (12in) Family Brassicaceae

Alzheimer's disease, degenerative condition, or atrophy, of the brain associated with mental deterioration similar to that in senile dementia, but occurring in people between 30 and 50 years of age No cause or treatment are known. See also p.1111

Amadeus VIII (1383-1451), count and duke of Savoy who became Antipope FELIX V in 1439, but gave up the claim to Nicholas V in 1447

Amadeus (1845-90), King of Spain (1870-73) He was the son of King Victor Emmanuel II of Italy After Queen Isabella II of Spain was forced to abdicate in 1868, Amadeus was elected king by the Cortes He reluctantly ruled for three years and abdicated after the CARLIST Wars started again in 1872

Amadeus, large shallow lake in central Australia, s of the Macdonnell Ranges It was discovered by the Australian explorer Ernest Giles in 1872 Length approx 145km (90 miles)

Amador Guerrero, Manuel (1833-1909), first President of Panama (1904-08) He was leader of the Panamanian movement to gain independence from Colombia The Panama Canal Zone treaty was ratified during his period of office

Amagasaki, city on a Honshu Island, Japan, on Osaka Bay It has a 16th-century castle The city was damaged by us air raids in 1945 Industries: iron, steel, chemicals, textiles Pop 553,700

Amalekites, people who originally inhabited Canaan and the Sinai peninsula and who, until scattered by SAUL, waged war against the Hebrews Some authorities identify them with the HYXOS

Amalgam, solid or liquid alloy of mercury with other metals Most metals dissolve in mercury, although iron is an exception See also p.890

Amalthea, one of the 13 known satellites of Jupiter, discovered in 1892 by Edward Bernard It is asteroidal in size and is closest to the planet. See also pp.964, 964, 1048, 1048

Amanita, large, widely distributed genus of fungi, most of which are poisonous Amanitas usually have distinct stalks and the prominent remains of a veil in a fleshy ring under the cap and at the bulbous base See also pp.350, 355, 305

Amanullah Khan (1892-1960), ruler of Afghanistan (1919-29) He began educa-

tional and road-building projects but was forced into exile by a revolt led by Bachcheh Saqqow in 1929

Amaranth, plant from the tropics of America and Africa The flowers, densely clustered in spikes or tassels, are often hidden by colourful foliage The 800 species include love-lies-bleeding (*Amaranthus caudatus*) with its crimson-purple flowers Family Amaranthaceae

Amarylus, any of a number of flowering plants of the genus of the same name They have several white or coloured lily-like flowers attached to a single stem Amarylus is also the name of a shepherdess referred to in the poetry of Virgil and Theocritus

Amaterasu-O-mikami, sun goddess of the SHINTO pantheon, considered to be the ancestor of the Japanese imperial clan Because of this traditional belief, an emperor was safe on his throne, his descent from the sun prevented anyone else from holding his office The spirit of the sun goddess is said to reside in the sacred mirror in the Grand Shrine of Ise, the most holy Shinto shrine in Japan

Amati, family of Italian violin-makers in Cremona in the 16th and 17th centuries, including Andrea (c 1520-78), the founder of the Cremona school of violin-making, his two sons Antonio (c.1550-1638) and Girolamo (1551-1635), and Girolamo's son Niccolò (1596-1684), and grandson Girolamo (1644-1740)

Amatol, high explosive made from ammonium nitrate and TNT See pp.582, 583

Amazon, greatest river of s America, and second longest river in the world, draining the vast rain forest of N South America Its drainage basin, an area of 7,000,000sq km (2,700,000sq miles), includes three-quarters of Brazil and extensive areas of Colombia, Ecuador, Guyana, Peru and Venezuela Carrying the greatest volume of water of any river in the world, the Amazon is the central artery of an extensive river system that feeds it from n, w and s Major tributaries are the Madeira, Purus, Juruá, Ucayali, Marañón (the headstream of the Amazon), Napo, Putumayo, Japurá and Negro rivers The river basin is flanked by the Brazilian Highlands (s), the Andes Mountains (w) and the Guyana Highlands Cultivation of the region has been limited to the sporadic harvesting of the natural resources, dependent upon economic demand - eg, the great rubber boom of the late 19th and early 20th centuries The development of a timber industry has been hampered by the absence of pure stands of valuable woods, the rain forest having a wide variety of trees growing side by side The basin is sparsely inhabited, chiefly by Brazilians, who live mainly along the flood bank, a small American Indian population lives and hunts in the wider area of the rain forest The Amazon is navigable as far w as Iquitos, Peru - more than 3,700km (2,300 miles) inland It was first descended from Peru in 1541 by the Spaniard Francisco de Orellana Length approx 6,516km (4,050 miles) See also p.124

Amazonis Planitia. See MARS

Amazona, in Greek mythology, a race of female warriors who lived in a totally matriarchal society HERCULES, THESEUS and other Greek heroes challenged the Amazons They were believed to have been the first to use cavalry and, as allies of the Trojans, took part in the siege of Troy, where their queen Penthesilea was slain by ACHILLES after she had killed many Greek warriors

Ambassador, diplomatic representative of the highest rank, appointed by a head of state to represent his government abroad

Ambato, city in central Ecuador, in a high Andean valley, capital of Tungurahua province A wealthy resort area, it is known as the "Garden City" because of its variety of local fruits It is a road, rail and air transport centre Pop 75,000

Ambedkar, Bhim-Rao Ramji (1893-1956), Indian lawyer and politician, leader of the country's "untouchables" In 1947 he became independent India's first

Alyssum is a hardy plant that has clusters of white or yellow flowers

Amanita, a common genus of fungus, includes many species that are poisonous

Amaranth, a plant family that flourishes in warm climates, includes garden flowers

Amazons, a legendary race of female Greek warriors, enslaved any men they captured

Amber

law minister and helped to draft the 1950 constitution which outlawed untouchability and the caste system.

Amber, hard yellow or brown, translucent fossil resin found in alluvial soils, in lignite beds or on sea-shores, especially near the Baltic Sea (where deposits represent extinct flora 50 million years old). It sometimes occurs with embedded fossil insects or plants as rods or as irregular nodules. Deeply coloured amber takes a fine polish and is prized as a gem. See also p 260.

Amburger, Christoph (c.1500–c.1561), German portrait painter, influenced by HOLBEIN and by the VENETIAN SCHOOL of painting. His many sitters included Emperor Charles V (1532).

Ambegria, musky, waxy, solid formed in the intestine of SPERM WHALES. It is used in perfumes as a fixative for the scent.

Ambivalence, having contradictory emotions such as love and hate towards the same person or object. It was first used in its specific psychological sense by Carl JUNG. Paul BLEULER linked ambivalent complexes to pathological behaviour.

Ambler, Eric (1909–), British writer of stories based on espionage and intrigue, one of the most popular writers of his kind. His first work was *The Dark Frontier* (1936), followed by such titles as *Journey Into Fear* (1940), *The Night-Corner* (1956) and *The Light of Day* (1965).

Ambonina (Amboina), one of the Moluccas (formerly the Spice Islands), Indonesian part of the Malay archipelago. It has high mountains and active volcanoes. Its crops include tropical fruits and spices. Pop 114,000.

Ambon, seaport city on Amboina Island in the Malay archipelago. Founded by the Portuguese in 1521, it was taken over by the Dutch East India Co in 1605. It became part of Indonesia in 1956. Pop 73,000.

Ambrose, Saint (c.339–97), Bishop of Milan, who resisted demands to surrender Milan's churches to the Arians and refused to compromise his orthodox position. He was the author of works on theology and ethics that greatly influenced the thought of the Western Church. He also acquired a reputation for administrative skill and eloquence, and AUGUSTINE OF HIPPO attributed his own conversion to Ambrose. See also ARIANISM, HC2 p.207.

Ambrosia, divine substance eaten by gods of Greek and Roman mythology, often equated with honey. The gods kept their immortality by bathing in it or rubbing it into their skin. Without ambrosia a god became weak, a mortal who ate it became strong and immortal. Nectar, the wine of the gods, was drunk with it.

Ambulatory, continuation of side aisles around the east (sanctuary) end of a Christian church, usually giving access to subordinate chapels. Ambulatories were originally used for processional purposes.

Amenemhet, four kings of ancient Egypt.

Amenemhet I (r.1991–1962 BC) overthrew the local minor monarchs, created a centralized government and founded the 12th Dynasty. His co-regent, Sesotris I, succeeded Amenemhet II ruled with his father, Sesotris I, and with his son and successor, Sesotris II, between 1929 and 1895 BC.

Amenemhet III (r.1842–1797 BC) succeeded Sesotris III. He reclaimed thousands of acres in Faiyum, but his successor, Amenemhet IV (r.1798–1790 BC), let the dynasty decline. See also p.1166.

Amenhotep, or **Amenophis**, name of four Egyptian kings of the 18th Dynasty (For Amenhotep IV, see AKHENATON). Amenhotep I (r.1546–1526 BC) succeeded his father AMHUSE I. He campaigned successfully in Syria as far as the River Euphrates and pushed Egypt's southern boundary as far as the second cataract of the River Nile. He was succeeded by THUTMOSE I.

Amenhotep II (r.1450–1425 BC) ruled as co-regent (c.1452–1450 BC) with his father Thutmose III before becoming king. He crushed an uprising in Syria, defended Egypt's frontiers as far as the River Euphrates, invaded Nubia and completed temples to the god AMON at Karnak, central Egypt. He was succeeded by his son Thutmose IV, whose son Amenhotep

III ruled Egypt 1417–1379 BC. The 18th Dynasty reached its peak during Amenhotep III's reign, and despite raids by the Hittites and Bedouin, peace was maintained. He built the Temple of Luxor and completed the Great Temple of Amon. See also pp.1180, 1180.

Amenorrhoea, abnormal absence of menstruation in a non-pregnant, non-lactating female between the ages of puberty and menopause. It is not a disease in itself, but the symptom of a hormonal imbalance which can arise from emotional or physiological disorders.

Amerbach, Johann (1443–1513), Swiss printer, the first of those based in Basle. His teacher and editor was the Humanist Heynlin (Johannes de Lapide), and his books reflected Humanist views.

America, comprising North and South America, extends from N of the Arctic Circle to 56°S and separates the Atlantic Ocean from the Pacific. The continents are linked by the isthmus of Panama.

Land The continent of North America slopes up gradually from the Appalachian Mts in the S to the Rockies in the W. The highest peak is Mt McKinley in Alaska, 6,194m (20,321ft), and the lowest point is in Death Valley, California, 86m (282ft) below sea-level. The Andes of South America, towering above the rest of the continent, rise abruptly from the Amazonian Basin and the S plains and contain the highest peak of either continent – Aconcagua 7,265m (23,844ft). The Brazilian and Venezuelan highlands are the other main mountainous areas of the continent.

Structure and geology N Canada is an old Precambrian shield area forming a saucer-shaped depression centred in the Hudson Bay and rising towards the flanking Palaeozoic and Mesozoic sediments of the USA. The Appalachians in the E have their origins in the Precambrian era and are composed largely of eroded metamorphic rocks. The highly complex fold mountains in the W that form the Rockies are much younger and extend the entire length of the continent, continuing in South America as the Andes. The Amazonian Basin and much of Argentina is composed of Cenozoic sediments, the highlands of Brazil and Venezuela of much older sedimentary and metamorphic rocks.

Lakes and rivers Lake Superior is the largest lake in North America, 82,413sq km (31,820sq miles), and together with Michigan, Huron, Erie, and Ontario, makes up the Great Lakes. The St Lawrence River forms a navigable link between the Great Lakes and the Atlantic Ocean. The longest river is the combined Mississippi-Missouri system with a total length of 6,050km (3,760 miles). Other important rivers include the Yukon, Mackenzie, Colorado, Columbia, Delaware and Rio Grande. Lake Maracaibo in Venezuela, an extension of the Gulf of Venezuela, if classified as a lake, is the largest in South America with an area of 13,512sq km (5,217sq miles). The largest landlocked body of water is Lake Titicaca, in the Andes, on the border between Peru and Bolivia, covering 8,288sq km (3,200sq miles). The N part of South America is dominated by the Amazonian Basin whose many rivers feed the mighty River Amazon which flows for 6,516km (4,050 miles) and is the second longest river in the world (only the River Nile is longer). The Paraguay and Parana drain the central area, S of the Mato Grosso.

Climate and vegetation Except for parts of the W seaboard, North America experiences hot summers and cold winters, with the most extreme ranges occurring within the plains of N USA. The natural vegetation of the plains is grass, bordered by mixed and coniferous forests in the mountains to the E, W and N. Tropical rain-forest is found in the lower areas of Central America and desert is found in the SW. The far N of Canada and Alaska is covered with tundra and permanent snow. Cypress thrive in the SE, oak and maple in the E, and giant redwoods in the W. Except in the mountains and the extreme S, the climate of South America remains generally warm and humid. Much of the N sup-

ports tropical rain-forest, while the Venezuelan highlands in the extreme N and the Brazilian highlands are areas of tropical grassland. The pampas of Uruguay are temperate grasslands. The Atacama Desert on the W coast of N Chile is the driest in the world. Pine and other temperate forests grow in the S along the W coast.

Animal life In the W of North America bears, wolves and pumas have become scarce, but foxes remain widespread and lynxes occupy many forests. Coyotes range across the SW, and ocelots live in the S of the USA. These predators catch deer, rabbits, hares and mice. Beavers and members of the weasel family are important for their fur. There is a wide variety of bird species, and snakes – many extremely dangerous – are widespread throughout the continent. The mammals of South America include monkeys, ocelots, pumas, deer, tapirs, peccaries and coatis. Found in the Andes are small members of the camel family llamas, alpacas and vicuñas, of which only the vicuñas are not domesticated. Many colourful birds abound, including macaws, toucans and tiny humming-birds; condors are found in the mountains. South American snakes include anacondas and boa constrictors. Many rivers of the tropical region contain alligators and piranha fish.

Peopling North America's first settlers probably arrived about 35,000 years ago from Asia by way of Alaska. By the time the Vikings discovered America, around AD 1000, the descendants of the original inhabitants had occupied the entire continent. Christopher Columbus was the first to call them Indians when he sailed to the New World in 1492. The Spaniards settled in Mexico and the West Indies, whereas the English and French settled farther N in the USA and Canada. Swedes, Germans and the Dutch also made early settlements. Europe's political and economic problems later drove numbers of Italians, Irish and Jews to North America. Negroes were imported as slaves, Japanese and Chinese arrived with less coercion to be labourers on the W coast. Descendants of the Spanish settlers are predominant in Mexico, Central America, and some Caribbean islands and French concentrations exist in Quebec province, Canada, and parts of the West Indies. Negroes outnumber whites in many Caribbean islands. Protestantism is dominant N of Mexico, whereas Roman Catholics are more numerous in Spanish- and French-speaking areas. In South America some pure-blood INCAS (Quechuans) still remain in the Andes and some Mapuche (Araucanians) are found in Chile. However, most Indians are now of mixed blood, having interbred with the Portuguese in Brazil and the Spaniards in the rest of the continent. Brazil has a large Negroid population, descendants of slaves, as do the small countries on the N coast. Although many Germans have migrated to Argentina and some, along with the Italians, to Chile, people of Spanish and Portuguese descent remain the two main groups and theirs are the dominant languages. Roman Catholicism is the major religion.

Economy The plains region of North America is one of the world's major grain and livestock-producing areas. The S area produces mainly cotton, tobacco, coffee and sugar cane. The NE is heavily industrialized. In the W mining and irrigated farming are important. Fishing is conducted off most coasts but particularly in the NE. In South America livestock are reared on the grassland areas with cattle predominating in Venezuela, Brazil and Uruguay. Sheep are found mainly in the far S of Argentina. The main grain area is situated in E Argentina S of the Rio de la Plata (River Plate). Valuable nitrates are found in the Atacama Desert. Copper, tin, silver and gemstones are most important. Venezuela's Maracaibo region yields petroleum. Most of these countries remain underdeveloped industrially.

Recent History The USA and Canada have each, in recent years, been faced with a growing crisis, not yet resolved in the USA the nascent strength of the BLACK POWER movement and in Canada the threat to the

unity of the confederation posed by the separatist movement in Quebec. The separatist Parti Québécois won power in Quebec in the 1976 provincial election. In Central and South America the traces of the colonial past have been almost entirely obliterated, but democracy has failed to establish itself. Military rule is in force in Argentina (since 1975), Brazil (since 1964), Chile (since 1973), Ecuador (since 1972) and Peru (since 1968). Perhaps the outstanding development has been the success of the revolution in Cuba, where 20 years of US pressure have not succeeded in toppling Fidel CASTRO.

Area 42,205,800sq km (16,295,700sq miles). North America 24,398,000sq km (9,420,100sq miles).

South America 17,807,800sq km (6,875,600sq miles).

Highest mountains North America, Mt McKinley 6,194m (20,321ft).

South America, Aconcagua 7,265m (23,844ft).

Longest rivers North America, Mississippi 6,050km (3,760 miles).

South America, Amazon 6,516km (4,050 miles).

Population 560,933,000.

North America 236,841,000.

South America 324,092,000.

Largest cities North America, Mexico City (8,591,750), New York City (7,567,000), Chicago (7,173,000), Los Angeles (2,747,000).

South America, São Paulo (5,869,966); Rio de Janeiro (4,296,782); Santiago (3,263,000), Buenos Aires (2,976,000).

See also pp.296–297, 300–301, 304–307, 310–311, 314–317, 320–321, 324–325.

1942–1943, 1946–1947; articles on individual countries in the *Survey of Nations*.

American, The (1877), novel by Henry JAMES set in Paris in the mid-1800s. It demonstrates the interaction of two cultures as seen in the story of a wealthy American who falls in love with the daughter of an aristocratic but impoverished family.

American Ballet Theater, one of the foremost dance companies in the world, stressing modern works with US themes as well as classical pieces, founded in 1939 and called Ballet Theater. Based in New York City, it has produced the works of such notable choreographers as Michel FOKINE (1880–1942), George BALANCHINE (1904–) and Antony Tudor (1909–).

American Civil War (1861–65), the war fought in the USA between the Unionist forces of the federal government and the forces of the southern secessionist states, the CONFEDERATE STATES OF AMERICA. It began on 12 April 1861 at FORT SUMTER, South Carolina, and ended with the surrender of the Confederate commander Robert E. LEE at APPOMATTOX, Virginia, on 9 April 1865. The Confederacy collapsed and the Union was restored. See also pp. 1628–1631, 2166.

American Constitution, the seven articles of government adopted by the delegates at the Constitutional Convention of 1787, and 26 subsequent amendments. The Convention was called to frame a constitution to replace the ARTICLES OF CONFEDERATION, which had been in force since 1781 but, in not empowering the federal government to raise taxation, for example, had left too much authority with the state governments. The federal structure of the 1781 Articles was nevertheless retained in the 1787 constitution. The chief concern of the delegates was to reach a compromise satisfactory both to the small states (who were jealous to safeguard their power against a purely democratic majority), and the large states. The solution provided two cardinal features of the constitution. The first was that in the House of Representatives (elected every two years) each state is represented according to its population, whereas in the Senate (one-third elected to a six-year term every two years) each state has two representatives. In determining the population of a state for electoral purposes, a slave was counted as three-fifths of a voter. The second salient feature

of the constitution was its system of checks and balances which, from a misunderstanding of the much admired British "mixed constitution" of king, lords and commons and a devotion to the separation of powers commended by MONTESQUIEU, sharply divided the function of the judiciary (the SUPREME COURT), the executive (the President and Vice-President) and the Legislature (the two houses of CONGRESS). By late 1788 ten states had ratified the articles, and the Convention called for the first elections and set 4 March 1789 as the date on which the first President should take office. By 1790, when Rhode Island entered the Union, all 13 of the late colonies had ratified the new constitution. There have since been 26 amendments to the constitution. Important among them are the 1st (1791), which guaranteed freedom of speech, religion and peaceful assembly, the 5th (1791), which freed an accused person from the obligation of testifying against himself and guaranteed him due process of law (the equivalent of natural justice in English law), and the 13th, 14th and 15th (1865, 1868 and 1870), which abolished slavery, guaranteed that no person of whatever colour should be deprived of life, liberty or property without due process of law, and guaranteed to every citizen of whatever colour the right to vote. See also pp.1541, 2166.

American Independence, Declaration of (4 July 1776), statement issued by the CONTINENTAL CONGRESS announcing that the American colonies no longer considered themselves to be ruled by Britain. Drafted mainly by Thomas JEFFERSON, the Declaration restated the political notions associated with John LOCKE and the ENLIGHTENMENT, that government must rest on the consent of the governed and that when the implied contract between ruler and ruled is broken by the ruler the people have a natural right to rebel. See also pp.1540-1541.

American Independence, War of (1775-83), the successful revolt by the British colonies in America against imperial rule from London. A number of issues produced the conflict - the restrictions on trade and manufacturing imposed by the NAVIGATION ACTS, imperial control of land settlement in the virgin West, and the British attempt to raise revenue in America by such means as the Sugar Act (1764), the STAMP ACTS (1765), the Revenue Act (1767) and the Tea Act (1773) - leading to the BOSTON TEA PARTY. "No taxation without representation" became the colonial radicals' rallying cry. Each dispute narrowed to one question, whether the colonies ought to be self-governing. The British parliament's rigid adherence to at least the principle of the supremacy of parliament, embodied in the DECLARATORY ACT (1766), made war inescapable. Shots were fired first at Lexington and Concord, Massachusetts, in April 1775. In May the second CONTINENTAL CONGRESS met at PHILADELPHIA, established an army under George WASHINGTON and assumed the role of a revolutionary government. On 4 July 1776 the Declaration of Independence was proclaimed. The first decisive colonial victory, at SARATOGA in 1777, brought France into the war against Britain. Spain also entered the lists on the colonial side in 1779. When Gen. CORNWALLIS surrendered to the Americans at YORKTOWN in 1781 the war was effectively ended. It was formally ended by the PEACE OF PARIS (1783) which granted independence to America. See also pp.1540-1541, 2166.

American Indians, the aboriginal peoples of North and South America, also called Amerindians. Most North American Indians are thought to be of Mongoloid stock and to have crossed from Asia via the Bering Strait or the Aleutian Islands in about 20,000 BC or even earlier. They spread throughout the continent and developed into many regional varieties with hundreds of different languages.

North American Indians can be divided into eight cultural and geographical groups, the Arctic area (Aleut, eskimo), the North-eastern Mackenzie area

(mainly Eastern Woodland tribes), the North-west Coast area (Tlingit, Haida, Kwakiutl), the South-western area (Five Civilized Tribes, Tuscarora, Powhatan Confederacy), the Plains area (Blackfoot, Crow, Comanche, Dakota), the California Inter-mountain area (Paiute, Shoshone, Nez Perce), the South-western area (Pueblo, Navaho, Apache) and the Mesoamerican area (Maya, Toltec, Aztec).

South American Indians derived from North American groups that had migrated southwards. There are three main cultural and geographical groups. Indians of the Andean area, including the INCAS (a branch of the Quechua, who after 1300 dominated almost the entire region), those of the Amazon basin, mainly isolated primitive agricultural communities, and the Indians of the Pampas, including warlike nomadic tribes and the southern Araucanians, who successfully resisted both the Incas and the Spaniards. See also pp.118-119.

American National Theater and Academy (ANTA), self-supporting organization in the USA, founded in 1935. It helps to finance touring theatre companies and since 1968 has served as a performing arts centre for non-profit-making groups.

American Revolution. See AMERICAN INDEPENDENCE, WAR OF.

American Samoa, US territory in the e part of the Samoa island group in the s Pacific Ocean. Exports include canned fish, copra and local crafts. Area: 197 sq km (76 sq miles). Pop. 29,000. See p.1973.

America's Cup, competition for 12-metre yachts held off Newport, Rhode Island (since 1934) between the "defender" and the "challenger" over a best-of-seven series of races. The trophy was put up in 1857 by the New York YC and named after the *America*, which had beaten the best British yachts in 1851. Most of the challenges (every few years) up to the 1950s were from British yacht clubs. Several countries now take part in an eliminating series to challenge the Americans, who were still unbeaten in the late 1970s.

Americium, radioactive metallic element (Am) in the actinide group, made by Glenn Seaborg and others by neutron bombardment of plutonium. Am²⁴¹ is used as a source of gamma rays. Properties: at no 95; s.g. 13.67, m.p. 995°C (1,821°F); b.p. 2,607°C (4,725°F), most stable isotope Am²⁴¹ (half-life 8,800 yr).

Amerika (1927), novel by Franz KAFKA, written between 1911 and 1914 and translated in 1938.

Amerindian. See AMERICAN INDIANS.

Amery, Leopold Charles Maurice Stennett, (1873-1955), British Conservative politician, a minister in several administrations. In the 1930s he was a leading opponent of the policy of appeasement.

Amethyst, transparent, violet variety of crystallized QUARTZ, containing more iron oxide than other varieties, found mainly in Brazil, Uruguay, Ontario and North Carolina. It is valued as a semi-precious gem. See also p.260.

Amharic, language of the Semitic or Hamito-Semitic family. Original to the province of Amhara and Shoa, it has been the official language of Ethiopia since c.1300 and has many words from ancient Ghez, the official language at the time of the conversion to Christianity in 335.

Amiens, city in N France, on the River Somme, 115 km (72 miles) N of Paris, capital of the Somme département. It was the capital of the historical region of Picardy. The Germans took the city during the Franco-Prussian War, 1914 and 1918. It has a fine Gothic church, the Cathedral of Notre Dame. Industries: chemicals, textiles, electrical equipment. Pop. 118,000.

Amiens, Treaty of (March 1802), peace agreement between France and her enemies in the Revolutionary Wars. Spain, Britain and the Batavian Republic (France recovered most of her colonies, but evacuated the kingdom of Naples). Britain withdrew from Egypt, but kept Ceylon and Trinidad. The peace lasted only until May 1803. See also p.1552.

Amin, Idi (c.1925-), President of

Uganda (1971-1979). He staged a military coup in 1971, overthrowing Milton OBOTE in 1972. He expelled about 80,000 Asian Ugandans. His tyranny ended when Tanzanian forces joined rebel Ugandans in the march on Kampala. Amin fled the country. See also p.1512.

Amine, any of a group of organic compounds derived from ammonia by replacing hydrogen atoms with organic groups. Methylamine, CH₃NH₂ (a primary amine) has one hydrogen replaced. Replacement of two hydrogens gives a secondary amine and of three hydrogens, a tertiary amine. Amines are produced in the putrefaction of organic matter and are weakly basic. See also ALKALOID.

Amino acid, organic acid containing at least one carboxyl group (-COOH) and at least one amino group (-NH₂). These acids are of great biological importance because they combine together to form PROTEINS. They have the general formula R-CH(NH₂)-COOH and link to form the peptide structure -NH-CO- by condensation of the -NH₂ group of one acid and the -COOH of another. Proteins are cross-linked polypeptides consisting of hundreds of amino acid "building blocks". About 20 amino acids occur in proteins, not all organisms are able to synthesize all of them. Essential amino acids are those that an organism has to obtain ready-made from its environment. There are ten such essential amino acids for man. See also pp.906-910.

Amirante Islands, group of islands in the Indian Ocean, 800 km (500 miles) NNE of Madagascar, a dependency of the SEYCHELLES ISLANDS. They include the African Islands. Chief product, copra.

Amis, Kingsley (1922-), British novelist. He was a university teacher until 1963 and draws on his experience in his novels. These include *Lucky Jim* (1954), *That Uncertain Feeling* (1955) and *Ending Up* (1974).

Amish, conservative Protestant sect, members of the old order Amish Mennonite Church. Followers of Jakob Ammann, a 17th-century Mennonite leader who broke away from the parent body in Europe and advocated strict community conformity, they established themselves in North America. See also MENNONITES.

Amiripryline, antidepressant drug of the TRICYCLIC group. See p.1116.

Amleth, hero of a Danish legend recorded in the 13th century by SAXO GRAMMATICUS and used by William SHAKESPEARE in his play *Hamlet*.

Amman, capital of Jordan, 80 km (50 miles) NNE of Jerusalem. Known as Rabbath-Ammon, it was the chief city of the Ammonites. Ptolemy II Philadelphus renamed it Philadelphia, under which name it prospered as part of the Roman Empire. It became Jordan's capital in 1921. It has a university (1962), and industries include cement, textiles, tobacco and leather. Pop. 598,000. See also p.2086.

Ammanati, Bartolommeo (1511-1592), Florentine MANNERIST sculptor and architect. In Florence he carved the Neptune fountain (1571-75), built the famous Bridge of the Trinity (1567-70) and made extensions to the Pitti Palace. He also designed buildings in Rome. See also p.1499.

Ammeter, instrument for measuring electric current. In the moving-coil type (for direct current) the current to be measured passes through a coil suspended in a magnetic field and deflects a needle attached to the coil. In the moving-iron type (for both direct and alternating current) current through a fixed coil magnetizes two pieces of soft iron which repel each other and so deflect the needle.

Ammonia, colourless non-flammable pungent gas (NH₃) manufactured by the HABER PROCESS, it is a very important nitrogen compound because it is produced in the fixing of nitrogen for fertilizers. The gas is extremely soluble in water, forming an alkaline solution of ammonium hydroxide (NH₄OH), which can give rise to ammonium salts containing the ion NH₄⁺. Chief properties: m.p. -77.7°C

(-107.96°F), b.p. -33.35°C (-28.03°F). See also pp.893-895, 904.

Ammonite, any of an extinct group of shelled cephalopod molluscs. They are believed to be descended from the nautilus (of which the pearly nautilus is the only surviving form). They are common as fossils in marine rocks. See pp.24, 274, 275.

Ammunition, any projectile launched, dropped from an aircraft or fired from a gun, also any explosive charge used in a weapon to fire a projectile. Ammunition thus includes bullets, cartridges, shells (and their cases), bombs, mortars, grenades and rockets, together with chemical and nuclear explosive warheads. See also pp.556-564, 568-574.

Amnesia, loss of memory, more particularly, partial or complete inability to recall. Selective amnesia, in which only certain unpleasant memories are eliminated, is generally caused by psychological disturbance. Amnesia caused organically is usually not selective, but also usually not total. In retrograde amnesia, memory loss extends back in time from the moment of onset (eg, a head injury). See also pp.1106-1107.

Amnesty, official act of pardon granted by the head of government to violators of a national law. Amnesty may be absolute or conditional. If absolute, it absolves the violator of all offences. If conditional, it stipulates certain obligations the offender must meet in order to obtain the pardon.

Amnion, membrane or sac that encloses the embryo of a reptile, bird or mammal. The embryo floats in the amniotic fluid within the sac. An outer membrane, the chorion, encloses the amniotic sac. In mammals both are in the womb or uterus. See also pp.166-169.

Amoeba, microscopic, almost transparent protozoan animal that has a constantly changing, irregular shape. Found in ponds, damp soil and animal intestines, it consists of a thin outer membrane, a large nucleus, food and contractile vacuoles and fat globules. It reproduces by binary fission. Length up to 3 mm (0.1 in). Class Sarcodina, species include the common *Amoeba proteus* and *Entamoeba histolytica*, which causes amoebic dysentery. See p.2, 11.

Amok, murderous frenzy, usually following severe depression. Domestic problems or a grievance may lead to brooding, and a sufferer may suddenly run "amok", killing indiscriminately.

Amon, or Amun, ancient Egyptian deity of reproduction or of the animating force. He is represented as a ram or as a ram-headed man, or a goose or snake, and often as a crowned king. Amon was worshipped at Thebes in the 12th Dynasty and later as a powerful national god renamed Amon Re, identified with the sun. Amon's temples are at Luxor, Karnak and Thebes.

Amor, also called CUPID, Roman equivalent of EROS, the Greek god of love. **Amorites**, Biblical people who lived in Canaan and were descended from an earlier dynasty of Babylon (18th century BC) whose greatest ruler was HAMMURABI. The Amorites were gradually incorporated into the ISRAELITES.

Amorphous substance, non-crystalline solid, its atoms or molecules have no regular order. Super-cooled liquids such as glass, rubber and some plastics are amorphous. Many powders appear amorphous but are microcrystalline in structure. See also CRYSTALS, p.840.

Amoy, Old Testament name, third of the 12 minor prophets.

Amoy (Xiamen), seaport city in SE China, on an island in the Formosa Strait. It flourished in the 19th century after being opened for trade by the Treaty of Nanking (1842). It gained great strategic importance after the Communists took control of the Chinese mainland (1949). Pop. 308,000.

Ampère, André-Marie (1775-1836), French physicist and mathematician. He was professor of chemistry and physics at Bourg and later of mathematics at the Ecole Polytechnique in Paris. He founded ELECTRODYNAMICS (now called ELECTRO-

Amphetamines

MAGNETISM) and performed numerous experiments to investigate the magnetic effects of electric currents. He was the first to devise techniques for measuring electricity, and constructed an early type of GALVANOMETER. Ampère's law proposed by him – is a mathematical description of the magnetic force between two electric currents. His name is also commemorated in the fundamental unit of current, the ampere (A), used in the SI system of units. The ampere is defined as the current in a pair of straight and parallel conductors of equal length one metre apart that produces a force of 2×10^{-7} newton per metre of their length. This force may be measured on a current balance, which becomes the standard against which CURRENT METERS such as AMMETERS and galvanometers are calibrated. See also p.872.

Amphetamines, drugs that stimulate the central nervous system. Formerly used to treat psychiatric disorders, reduce appetite in people who are overweight and provide temporary stimulation and prevention of fatigue, they are now rarely prescribed. These drugs, known as "pep pills", can lead to drug abuse and dependence. After the immediate sense of well-being wears off, the user can experience fatigue and depression. Amphetamines can also cause apprehension, insomnia, dizziness, headache, digestive disturbances, confusion and even PSYCHOSIS and convulsions. See also ADDICTION pp.1081, 1110, 116.

Amphibians, class of egg-laying vertebrates whose larval stages are usually spent in water but whose adult life is normally spent on land. Amphibians have smooth moist skin and are cold-blooded. Larvae breathe through gills, adults usually have lungs. Amphibian eggs are shell-less and, as a result, are laid in water or humid surroundings to prevent drying out. All adults are carnivorous but larvae are frequently herbivorous. There are three living orders: URODELA – newts and salamanders, ANURA – frogs and toads, and APODA or CAECILIANS – an elongated, blind and burrowing form. The caecilians are the smallest and least-known group of amphibians. See also pp.3, 64–65, 70–71.

Amphibole, any of a large group of complex rock-forming minerals characterized by a double-chain silicate (Si_2O_{11}) structure. They all contain water (as OH ions) and usually Ca, Mg, Fe, and are found in KINEOUS and METAMORPHIC rocks. They form wedge-shaped fragments on cleavage, their orthorhombic or monoclinic crystals are often needle-like or fibrous. Common varieties are hornblende, tremolite, actinolite and anthophyllite. Some varieties are used in commercial ASBESTOS.

Amphineura, class of MOLLUSCS that includes the CHITONS, small dwellers on rock surfaces. It also includes *Neapalina*, a small marine mollusc recently dredged from great depths which is so primitive as to show some similarities to the ANNELID worms. See also p.120.

Amphioxus, or lancelet, marine, fish-shaped animal found off sandy shores in warm seas. It has a well-developed NOTOCHORD instead of a true backbone but no distinct head region or brain. It has rudimentary eyes and tentacles round its mouth for straining food from water. Length up to 8cm (3in). Subphylum Cephalochordata, genus *Branchiostoma*. See also pp.54, 55.

Amphipod, or acud, mainly marine crustacean, although some amphipods are freshwater and a few, such as the sandhopper, are semi-terrestrial. There are about 4,600 species, all of which have laterally compressed bodies. Some are parasitic. Length 0.1–14cm (0.04–5.5in).

Amphisbaenid, or worm lizard, cylindrical, usually legless, burrowing reptile found in tropical America and Africa. Amphisbaenids resemble earthworms and have rings of scales around their bodies and tails, and no external ear openings. Some species have short front legs. Length 20cm (20in). Formerly regarded as lizards, the 100 species are now classified as a Squamata suborder Family

Amphisbaenidae. See also LIZARD, SQUAMATA, p.66.

Amphitheatre, in ancient Rome and the Roman Empire, a large semi-circular, elliptical or circular building used as a theatre for gladiatorial and wild-beast shows and similar events. Many ruined amphitheatres remain, the best-known being the Colosseum in Rome. The term is also used to refer to any open, banked arena, particularly for sports fields and theatres. See also p.1241.

Amphitrite, in Greek mythology, daughter of Nereus. Wooed by the god Poseidon, she at first rejected his proposal of marriage and fled to Atlas but was brought back by a dolphin to be made queen of the sea. Poseidon translated the dolphin to the heavens as a constellation.

Amplifier, device for changing the magnitude but not the variation of a signal, such as voltage, current or mechanical motion. Amplifiers are used in radio sets and in various kinds of audio equipment. The first electronic amplifiers were thermionic valves, the triode (invented in 1907 by Lee De Forest) was widely used but is now almost completely replaced by the TRANSISTOR. See also p.638, 884.

Amplitude, See WAVE AMPLITUDE.

Amplitude modulation (AM), encoding a wave having constant amplitude (the carrier wave) with information to be transmitted, giving a single wave with varying amplitude. See p.638.

Amphulla, part of the inner EAR, or any small membranous vesicle. See p.138.

Amritsar, city in Punjab state, NW India, an industrial and administrative centre. The Sikh religious centre, it was founded in 1574 on land donated by the Mogul Emperor AKBAR. The Golden Temple is especially sacred to the Sikhs. Modern Sikh nationalism began there and the city was the scene of the Amritsar Massacre in 1919. Pop. 408,000. See also p.1350.

Amsterdam, capital and largest city in The Netherlands, on the River Amstel and linked to the North Sea by the North Sea Canal. Amsterdam was chartered in c.1300 and joined the HANSEATIC LEAGUE in 1369. The Dutch East India Company (1602) brought great prosperity and an influx of European refugees to the city. It also became a great centre of learning and book printing during the 17th century. Its commerce and importance declined when captured by the French in 1795 and blockaded by the British during the Napoleonic Wars. A major European port, it has an important stock exchange and diamond-cutting industry, and is one of Europe's leading cultural centres. It has many interesting buildings, including the house of REMBRANDT, the Royal Palace and a National Museum (1876–85). Industries include iron and steel, oil refining, rolling stock, food processing, chemicals, glass, and ship-building. Pop. (1970 est.) 820,400. See also pp.1331, 2102, 2103.

Amu Darya, river 2,540km (1,578 miles) long from its longest headstream, formed by the junction of the Vakhsh and Pundi Rivers in the Pamir Mountains of Central Asia. Originally called the Oxus, it played an important role in the early history of Persia.

Amun. See AMON.

Amundsen, Roald (1872–1928), Norwegian explorer and discoverer of the South Pole. From 1903–06 he sailed through the NORTH-WEST PASSAGE and, from his observations, was able to locate the exact position of the North Magnetic Pole. His next expedition took him to the ANTARCTIC, and in December 1911 (one month ahead of Capt. Robert Scott) he reached the South Pole. In his later years he conducted an exploration of the north polar regions by air in 1925 and 1926. His books include *North West Passage* (1908), *The South Pole* (1912), *The North East Passage* (1918–20) and *My Life as an Explorer* (1927).

Amun-Re. See AMON.

Amur, district of SE USSR, bounded by the Amur River to the S and the Stavropol Range to the N. The main town is Blagoveshchensk (pop. 155,000). Industries: agriculture, coal, timber, gold-mining.

Pop. (1974 est.) 849,000.

Amygdala, almond-shaped mass of nerve cells in the roof of the lateral ventricles of the BRAIN. It is concerned with emotion. See also p.129.

Amyl alcohol ($\text{C}_4\text{H}_9\text{OH}$), ALCOHOL which has eight isomers. Commercial amyl alcohol, a mixture of these, has a sharp odour and is used as a solvent.

Amylase, digestive enzyme secreted by the SALIVARY GLANDS (salivary amylase, or ptyalin) and the PANCREAS (pancreatic amylase or amylolipin). It aids digestion by breaking down starch into MALTOSE and GLUCOSE. See also pp.160–161.

Amylopectin, carbohydrate organic chemical compound that makes up 80% to 90% of STARCH (the remainder being amylose).

Amyot, Jacques (1513–93), French scholar whose famous translation of PLUTARCH'S *Lives* (1559) influenced the development of French classical tragedy and formed the basis of Sir Thomas North's translation into English (1557), from which Shakespeare took his Roman plots. Amyot became the tutor to the sons of Henry II of France (1552) and Bishop of Auxerre (1570).

Anabaptists, Protestant sect founded c.1525 by followers of ZWINGLI. Believing that infants, unaware of good and evil, were not punishable for sin, they insisted on adult baptism as an act of free choice.

Anabasis, seven-book prose narrative account by XENOPHON of the Greek mercenary soldiers who fought (401–399 BC) for Cyrus when he tried to seize the Persian throne. See also p.1209.

Anabulism. See CATABOLISM.

Anacletus, Saint (died c. AD 88), also known as Cletus, Roman martyr and pope (c.76–88) who is named in the Canon of the Mass. His feast day is 26 April.

Anacoda, huge constricting SNAKE of South America, the heaviest snake in the world. Species *Eunectes murinus*. Length up to 9m (30ft). See also pp.69, 315.

Anacreon of Teos (d.c.570 BC), Greek Lyric poet, whose surviving works deal with love and the pleasures of life. He was admired by Byron and Goethe, for whom he was the "happy poet" of *Anacreontic Grab*, made into a song by Hugo Wolf.

Anemia, condition in which there is a decrease in the amount of the pigment HAEMOGLOBIN in the red blood cells or a decline in the number of red blood cells produced. It may be caused by excessive blood loss, by a decrease in the production of haemoglobin or red blood cells, or by excessive destruction of red blood cells. Symptoms include fatigue, weakness, pallor and, in severe cases, faintness and palpitations. There are several types of anaemia. The most common is iron-deficiency anaemia. It is usually caused by poor nutrition, excessive menstrual bleeding, chronic blood loss from a minor disorder such as haemorrhoids (piles) or from more serious conditions such as CANCER or ulcers. Pernicious anaemia is an impairment of the body's ability to absorb vitamin B_{12} , a VITAMIN necessary for the normal development of red blood cells. Deficiencies in other substances, such as folic acid or other B vitamins, may also reduce blood cell production. In haemolytic anaemia there is excessive destruction of these cells. It may be due to hereditary abnormalities (such as SICKLE-CELL ANAEMIA), adverse reaction to drugs, or the production of antibodies to one's own red blood cells. Red blood cells are produced in the bone marrow and damage to it because of radiation, drugs or chemicals, cancer, etc., may also cause anaemia. See also pp.1061, 1067.

Anaerobe, minute organism that grows only in the absence of free atmospheric oxygen. Anaerobic BACTERIA can be a hazard in food canning because they can multiply in foods even under vacuum. See also AEROBE.

Anaesthetic, any drug used to numb feeling. Procaine is ordinarily used as a local anaesthetic. The most common drugs for a general anaesthesia are trichloroethylene, cyclopropane and halothane.

Anagram, word or group of words whose letters have been transposed to produce

other words, such as "time", "item" and "mute" from the word "emit". A sophisticated anagram would be a transposition of letters producing a word or phrase that bears some logical relation to the original, such as "isotonic coteries".

Analgescic, drug that relieves or prevents pain without causing loss of consciousness. It does not cure the cause of the pain, but helps to deaden the sensation. Common analgesics include aspirin, codeine and morphine. See also pp.169, 1091.

Analog computer, type of computer that processes continuously variable information, unlike a digital computer which uses the BINARY SYSTEM. Information is converted into proportional electrical quantities which are manipulated by AMPLIFIERS and other circuits that perform the mathematical functions. See also COMPUTER, p.466.

Anan, city in S Shikoku, Japan, on the Kii Channel, 22km (14 miles) SE of Tokushima. Created in 1958 by merging the towns of Tomoka and Tachihana, it is a trade centre for the surrounding agricultural region. Industries include shipbuilding and chemicals. Pop. (1970) 58,467.

Ananda (fl. c.500 BC), cousin and favourite disciple of the BUDDHA, but the only close associate not to have attained enlightenment by the time of the Buddha's death. See also p.1257.

Anarchy, the absence of standard forms of government. The philosophy of anarchism maintains that people will be better off if governments are abolished. The natural goodness of men will then prevail, and they can use voluntary associations to deal with any problems that may arise. Some anarchists advocate violence to overthrow and eliminate the state. See also pp.1840–1841, 1870–1871.

Anastasia (1901–c.1918), Grand Duchess of Russia, youngest daughter of the last tsar, Nicholas II. She was presumably murdered together with other members of the royal family in July 1918, after the Revolution. Since 1920, several women have claimed to be Anastasia, the legal heir to the ROMANOV fortune held in Swiss banks. None of the claimants has been able to prove her identity.

Anastadus, name of four POPES of the Roman Catholic Church. Anastasius I, St (r.399–401) attacked and condemned errors in the works of ORIGEN. Anastasius II (r.496–498) ruled on heresies and dealt with the prevalent belief that children could inherit souls from their parents. Anastasius III (r.911–913) helped to heal rifts among the German churches. Anastasius IV (r.1153–54) helped to reconcile the Holy Roman Emperor, FREDERICK I (Barbarossa), to the Church.

Anatomy, branch of biological science that studies the structure of an organism. The study of anatomy can be divided in several ways. On the basis of size, there is gross anatomy, studying structures with the naked eye; microscopic anatomy, studying finer detail with a light microscope; submicroscopic anatomy, studying even finer structural detail with an electron microscope; and molecular anatomy, studying with sophisticated instruments the molecular make-up of an organism. Microscopic and submicroscopic anatomy involve two closely related sciences: HISTOLOGY, the study of tissue that makes up a body organ, and CYTOLOGY, the study of cells that make up tissue. Anatomy can also be classified according to the type of organism studied, eg. plant, invertebrate, vertebrate and human anatomy. Developmental anatomy, or embryology, is the study of the origin, development and relationship of various body parts. See also PHYSIOLOGY, pp.4–5, 124–161, 356–357.

Anatomy of Melancholy, The (1621), treatise by Robert BURTON on the causes, symptoms and nature of melancholy, but ranging so widely as to be a record of human life and society.

Anaxagoras of Clazomenae (c.500–428 BC), Greek philosopher, the most important before SOCRATES. He was the teacher of EURIPIDES, PERICLES and, possibly, SOCRATES. He believed that all matter was composed of "seeds" or minute particles

He explained the true nature of eclipses. Towards the end of his life he was exiled from Athens for his impious teaching that the sun was a white-hot stone and that the moon was composed of earth and merely reflected the sun's rays.

Anaximander (c 611-c 547 bc), Greek scientist and philosopher credited as the author of the first geometric model of the universe. His fame rests chiefly on his doctrine of a single world-principle, the starting point and origin of the cosmic process, which he identified as *apeiron* or "the infinite". See also p.1216

Anaximenes (fl 545 bc), member of the Milesian Greek philosophy, along with Anaximander and Thales. Attempting to resolve the problem of the origin and structure of the universe, he held the fundamental and most pervasive thing in the world to be air, which, being infinite, allows for the manifold processes of nature. See also p.1216

Ancestor worship, varieties of religious belief and practice found in societies where kinship is strong. Ancestral spirits, believed capable of good or harm, are propitiated by prayers and sacrifices. Now declining in India and the Far East, it is practised chiefly in sub-Saharan Africa and Melanesia. See also pp.1916-1917

Anchieta, José de (1534-97), Portuguese missionary and educator, b. Canary Islands. In 1553 he was sent by the Jesuits to Brazil, where he founded the city of São Paulo in 1554 and wrote the first grammar of the Tupi Indian Language. He wrote the mystic poem *De Beata Virgine Dei Matre Maria* (1563), which established him as the first major writer of Brazil.

Anchorage, city in s central Alaska, 757km (470 miles) s of Fairbanks. Founded in 1914, the city grew as a railway town, becoming a supply centre for the gold and coal mining regions to the N. Its industries today include oil and natural gas and these are expected to expand further with the construction of new oil pipelines. Pop. (1970) 48,000

Anchoveta, tropical species of ANCHOVY, used to catch tuna. Species *Engraulis mysticetus*. See also pp.738, 739

Anchovy, commercially valuable food marine fish found worldwide in shoals in temperate and tropical seas. There are more than 100 species, including the European anchovy *Engraulis encrasicolus*. Length: 10-25cm (4-10in). Family Engraulidae. See also pp.340, 745

Ancien Régime, term used to cover the rigid political, legal and social system in France roughly from the late 16th century to the revolution of 1789. See also pp.1434-1435, 1448-1449, 1458-1459

Ancient lights, legal right of a building's owner to prevent the obstruction of light to a window that has been unobstructed for 20 or more years.

Ancient Society (1877), book by the US anthropologist Lewis MORGAN which describes the evolution of human society. See also pp.1382, 1387

Ancona, port in a central Italy, on the Adriatic Sea, capital of Ancona province and of Marche region. Founded by Syracusan colonists c 39 bc, it was a flourishing port under the Romans by the 2nd century bc. In the 9th century it became a semi-independent maritime republic, nominally ruled by the popes. It came under direct papal rule in 1532. Allied bombing inflicted heavy damage during WWII. Industries include oil refining, shipbuilding, fishing and chemicals. Pop. 108,000

Andalusia (Andalucía), southern region of Spain, crossed by the Guadalquivir river. In the N are the mountains of the Sierra Morena, which are rich in minerals, including copper, iron and zinc. Farms in the low-lying SW raise horses and cattle (including fighting bulls) and grow most of the country's cereals, other important crops are citrus fruits, olives, sugar and grapes. Sherry is made from grapes grown in the neighbourhood of Jerez de la Frontera, near Cádiz

Andalusite, crystalline form (one of many) of aluminum silicate, occurring in contact metamorphic rock and in other deposits. It is mined commercially in the

USA, USSR and South Africa to make temperature-resistant and insulating porcelain. See also pp.211, 258, 259

Andaman and Nicobar Islands, territory of India comprising two chains of islands in the Bay of Bengal. See also p.1972

Andean Indians. See AMERICAN INDIANS

Anders, Władysław (1892-1970), Polish nationalist and army commander. In WWII he led Polish troops in the tsarist army and in WWII he fought against both Soviet and German troops. Exiled in 1946, he became a leader of the Polish forces-in-exile in Britain.

Andersen, Hans Christian (1805-1875), Danish writer of some of the world's best-loved fairy tales. He had already gained a reputation as a poet and novelist before his genius found its true expression in his humorous, delicate and fanciful stories, first published in 1835. They include *The Ugly Duckling*, *The Little Mermaid*, *The Little Match Girl* and *The Emperor's New Clothes*.

Anderson, Carl David (1905-), US physicist who shared the 1936 Nobel Prize in physics with Vidor Hess. In 1932 he discovered the first known particle of antimatter, the positron or anti-electron, while studying cosmic rays.

Anderson, Elizabeth Garrett (1836-1917), British physician and pioneer of women's rights. She had to overcome intense prejudice against women doctors to secure the right to practise. Later she became England's first woman mayor.

Anderson, Judith (1898-), Australian-born actress who, by 1924, was famous for her portrayals of classical and modern characters. Her stage roles included *Lady Macbeth* (her London debut, 1937) with Laurence Olivier and *Medea* (1947). She appeared in the films *Rebecca* (1939) and *Cat on a Hot Tin Roof* (1958). She was made a Dame of the British Empire in 1960.

Anderson, Keith (1898-1929), Australian aviator who died while trying to rescue the aviation pioneer Sir Charles Kingsford Smith. Kingsford Smith's plane, the *Southern Cross*, had been forced down while he was trying to establish a Sydney-London record. Anderson and his mechanic joined in a search for him but crashed in the Australian desert and died of thirst.

Anderson, Lindsay (1923-), British film and theatrical director. He has worked with great distinction in both fields and has been closely associated with the plays of David Storey. *If* (1968) and *O Lucky Man!* (1973), his best-known films, present critical views of society in a vividly memorable form that confirms his status as a provocative and influential artist.

Anderson, Marian (1902-), US contralto. She secured her reputation as a singer by touring America and Europe in recitals (1925-35). She made her METROPOLITAN OPERA debut in 1955 as Ulrica in Verdi's *Un Ballo in Maschera*; this was the first appearance of a black singer in a leading role at the Metropolitan.

Anderson, Maxwell (1888-1959), US dramatist. He wrote a number of plays in verse, the most successful of which were *Winterset* (1935) and *High Tar* (1936), a romantic comedy. He also wrote many historical dramas including *Elizabeth the Queen* (1930) and *Valley Forge* (1934). He wrote the libretto for the Kurt Weill musicals *Knecht Rupprecht* (1938) and *Lost in the Stars* (1949).

Anderson, Robert Woodruff (1917-), US playwright, author of *Tea and Sympathy* (staged 1953, filmed 1956), dealing with the problems of homosexuality and its effects on a New England schoolboy. His other plays include *All Summer Long* (1955) and *Silent Night, Lonely Night* (1959).

Anderson, Sherwood (1876-1941), US short story writer and novelist. He wrote about life in the Midwest, and achieved fame with the publication of *Winesburg, Ohio* (1919). His other works include *Dark Laughter* (1925) and *Beyond Desire* (1932).

Andes, chain of mountains in South America, the longest in the world. They

stretch for 8,900km (5,500 miles) along the whole W coast. At their widest, in the central area, they are about 800km (500 miles) across. There are more than 50 peaks over 6,700m (21,980ft) high, and they are the second-highest range (after the HIMALAYAS) in the world. They contain many active volcanoes, including Cotopaxi in Ecuador. Earthquakes are common, and cities such as Lima and Callao (Peru) and Valparaíso (Chile) have been severely damaged. The highest peak is Aconcagua, rising 6,959m (22,831ft) in Argentina, near the border with Chile. Lake TITICACA, the highest lake in the world, lies in the Andes at 3,810m (12,500ft) above sea-level on the Peru-Bolivia border. See also pp.1974, 2006, 2022, 2120

Andesite, volcanic rock mineral, second in abundance only to basalt, found in mountain folds, sills, dykes and lava streams. It is composed largely of finely crystalline FELSPARS, with occasional larger crystals called phenocrysts. See also p.209

Andhra Pradesh, state in SE India on the Bay of Bengal, created in 1956. Although mountainous to the NW, most of the region is flat coastal plain. Its products include rice and groundnuts, and coal, chrome and manganese are mined. The capital is Hyderabad. Area: 276,814sq km (106,878sq miles). Pop. (1971) 43,502,708

Andorra, small independent state situated high in the E Pyrenees between France and Spain. Area: 453sq km (175sq miles). Pop. (1975 est.) 27,000. See p.1972

Andrade, Edward Neville da Costa (1887-1971), British physicist who did research in atomic structure and brownian movement and discovered a formula relating the viscosity of liquids to their temperature.

Andrássy, Count Julius (1823-90), Hungarian statesman. An ardent nationalist, he joined the abortive rebellion of 1848 against Austria and escaped execution by remaining in exile until 1857. He became the first Prime Minister of Hungary (1867-71). He was Minister of Foreign Affairs for the empire (1871-79), which he represented at the CONGRESS OF BERLIN in 1878.

André, John (1751-80), British military officer executed by the Americans for working with Benedict ARNOLD. He was caught by American soldiers as he returned from negotiations with Arnold for the betrayal of West Point.

Andrea del Castagno. See CASTAGNO, ANDREA DEL

Andrea del Sarto (1486-1531), Florentine artist whose extraordinary skill as a fresco painter places him among the outstanding representatives of the High RENAISSANCE in Florence. Andrea was the first Florentine to reject the coloured drawing in favour of composition by areas of coloured light and shade. His frescoes *Birth of the Virgin* (1514) and *Madonna del Sacco* (1524) epitomize the High Renaissance style.

Andrée, Salomon August (1854-97), Swedish aeronautical engineer and arctic explorer. He was killed in an attempt to fly from Spitsbergen, Norway, to the North Pole in a balloon. His body was found 33 years later on White Island near Greenland.

Andreev, Leonid (1871-1919), Russian novelist and dramatist. He lost popularity after declaring his anti-Bolshevism, and emigrated to Finland in 1917. His work varies from the realistic to the metaphysical and includes the plays *The Red Laugh* (1904) and *The Pretty Sabine Women* (1912), and the story *The Governor* (1906).

Andreotti, Giulio (1919-), Italian journalist and politician. A leader of the Christian Democratic party, he first attained ministerial rank in 1954. He served as Prime Minister (1972-73) and formed a minority government following the elections of July 1976.

Andrew, Saint, in the New Testament, brother of Simon Peter and one of the original 12 disciples of Jesus. According to tradition he was crucified on an X-shaped

Anchovy, the valuable small fish found worldwide, is a member of the herring family

Hans Christian Andersen, creator of the famous tale *The Emperor's New Clothes*

Marian Anderson became the first black singer to appear at the Metropolitan Opera

Andes, the longest mountain range in the world, still contains active volcanoes

Andrew, Prince

Anemometers measure wind speed by the number of revolutions the cups make

Angelfish, the colourful tropical fish popular in domestic warm-water aquaria

The *Angelus* by Millais was a firm Victorian favourite due to its religious sentimentality

Anglesey is joined to the Welsh mainland by Telford's well-known suspension bridge

cross. He is patron saint of Scotland and Russia, his feast is observed on 30 November

Andrew, Prince (1960–), second son of Queen ELIZABETH II and Prince Philip, Duke of Edinburgh, second in succession to the British throne. See also ROYAL FAMILY

Andrewes, Lancelot (1555–1626), English divine, scholar and (from 1619) Bishop of Winchester, one of the translators of the Authorized Version of the Bible. He is also remembered for his *Private Devotions*, written in Greek and Latin and published in English in 1647

Andrews, Julie (1935–), British singer and actress, best known for her performances in the musical films *Mary Poppins* (1963), for which she was awarded an OSCAR as the best US film actress, and *The Sound of Music* (1964). She became an international star in the stage musical *The Boy Friend* (New York, 1954) and *My Fair Lady* (New York, 1956, London, 1958)

Andrews, Thomas (1813–1885), Irish physicist and chemist who established the concepts of critical temperature and pressure. He also proved that ozone is a form of oxygen. See also p.837

Andrić, Ivo (1892–1975), Yugoslav writer of Serbo-Croatian novels and short stories. He was awarded the Nobel Prize for literature in 1961. He was recognized, as a writer of verse and prose, in 1918 with the publication of *Ex Ponto*, written while he was a prisoner in WWI

Andriessen, Jerrisaan (1925–), Dutch composer, conductor and pianist whose works include the *Sinfonietta concertante* and the chamber work *Homage to Mahaut*. His father, Hendrik (1892–), was the director of Utrecht Conservatory and composer of much Roman Catholic church music

Androcles, Roman slave who ran away from his master and hid in a cave. He removed a thorn from the paw of a suffering lion. Later Androcles faced the same lion in the Roman Arena, the lion recognized him and refused to harm him. He has been immortalized in George Bernard Shaw's play *Androcles and the Lion*

Androgen, general name for male sex hormones, such as TESTOSTERONE. See also ANDROSTERONE, pp.154–155

Andromache, in Greek mythology, the daughter of Eetion and wife of Hector. Her relatives died when TROY was taken by ACHILLES. She became the captive of ACHILLES' son, Neoptolemus, and bore him three sons

Andromeda, northern constellation situated between Cassiopeia and Pegasus. It contains ALPHERATZ, or Alpha Andromedae, which is in the Square of Pegasus, and the spiral galaxy M31. It was named after the Ethiopian princess of Greek mythology who was rescued from a sea monster by PERSEUS. See also p.1012

Andromeda Galaxy, or M31, spiral galaxy in the constellation of ANDROMEDA. It is the largest member of the local group of galaxies and, at a distance of about 2 million light-years, is the closest spiral galaxy to Earth, it is just visible to the naked eye. See also pp.1000, 1012

Androstosterone, STEROID hormone that produces masculine characteristics. It is obtained from the testes and from male urine, and controls the growth and function of male sexual organs and the production of secondary male sexual characteristics, such as hair growth. See also p.154

Andrzejewski, Jerry (1909–), Polish author. His first novel was *Ead cerca* (1938), this was followed by *Ashes and Diamonds* (1948), which describes the conflicts of post-war Poland. His later works include *The Inquinum* (1957) and a play, *Prometheus* (1972)

Anemometer, instrument using rotating cups, vanes and propellers to measure the speed or force of the wind. Weather vanes indicate the direction. See also p.252

Anemone, perennial plant found worldwide, it is also called pasqueflower and windflower. Anemones have sepals resembling petals and numerous stamens and pistils covering a central knob, two or

three deeply-toothed leaves appear in a whorl midway up the stem. Many are wild flowers, including the wood anemone (*Anemone nemorosa*), with white flowers, common in Britain, and the pasqueflower (*A. patens*), with large white or blue flowers appearing before the foliage. There are 150 species. Family Ranunculaceae. See also BUTTERCUP, SEA ANEMONE, p.307

Aneroid barometer. See BAROMETER
Aneurin, or Aneirin (fl.c AD 600), Welsh bardic poet, whose work survives in a 13th-century manuscript. His poem *Gododin* is an account of the Saxon victory at Cattraeth over the Strathclyde Britons. **Aneurysm**, bulging of an artery caused by blood pressure distorting a weakened arterial wall. It can occur almost anywhere in the body, and was once a common complication of syphilis and pulmonary TUBERCULOSIS. See also pp.1066, 1072

Antiasen, Christian Boehmer (1916–), American biochemist who in 1972 shared the Nobel Prize in chemistry with Stanford MOORE and William STEIN. He carried out research into the relationships between the biological function and molecular structure of proteins

Angel, spiritual being superior to man but inferior to God. In the Bible, angels appear on earth as messengers and servants of God. They are generally depicted with wings

Angeles, Victoria de los (1923–), Spanish soprano. She gave her first public concert in 1944 in Barcelona, made her debut at the Paris Opera and LA SCALA, Milan, in 1949, and her American debut at CARNEGIE HALL in 1950. In that year she joined the METROPOLITAN OPERA COMPANY

Angelfish, tropical fish found in the Atlantic and Indo-Pacific, popular as an aquarium fish because of its graceful, trailing fins and beautiful markings. Length 2–10cm (0.75–4in). Family Cichlidae

Angelica, plant of the carrot family that grows in northern temperate regions and in New Zealand. Garden angelicas (*Angelica archangelica*) grow to 1.5m (5ft) and have greenish flowers. The stems, usually crystallized, and oil from the roots and seeds, have culinary uses

Angelico, Fra (c.1387–1455), Italian painter from Tuscany, noted for the spirituality of his painting. A Dominican friar whose real name was Guido di Pietro, Fra Angelico is celebrated for his series of some 50 frescoes in the convent of S. Marco, Florence, which was taken over by his Order in 1436. His paintings, all of religious subjects, show a harmonious sense of composition and a love of line and pure colour. His style was influenced by GENTILE DA FABRIANO and MASACCIO. He painted a chapel in the Vatican (c.1446–49) and in 1447 he painted two frescoes in Orvieto Cathedral. See also p.1383

Angell, Sir Norman (c.1872–1967), British economist and worker for international co-operation who was awarded the Nobel Peace Prize in 1933. His best known work is *The Great Illusion* (1910), in which he suggested that there would be fewer wars if nations had greater awareness of the economic ravages they caused

Angelus (c.1858), popular painting by Jean-François MILLET, depicting a religious aspect of peasant life

Angelus Silesius, pseudonym of Johann Scheffler (1624–77), German poet and mystic. His *Der Cherubinische Wandersmann* (1674) embodies almost the entire range of mystic thought, expressed in epigrammatic form

Angevins, line of English kings named after Henry II, Count of Anjou, who ascended the throne in 1154. The Angevins, also known as the PLANTAGENETS, retained the crown until 1377. See also pp.1302, 1442

Angina pectoris, pain in the chest that may be a symptom of various disorders, often of diseased coronary arteries in the heart. It generally follows exertion or stress and may be treated with drugs such as glyceryl trinitrate. See also p.1066

Angiosperms, plants with true flowers, as distinct from GYMNOSPERMS and other non-flowering plants. They include all

trees, bushes and non-woody herbs divided into two main groups: MONOCOTYLEDONS (which have one seed-leaf) and DICOTYLEDONS (which have two seed-leaves). See also pp.246–247

Angiotensin, peptide in the blood that increases blood pressure by inducing contraction of narrow blood vessels. See also RENIN

Angkor, site of several ruined capitals of the KHMER Empire, near the present city of Siem Reap. The ruins date mainly from the 10th–12th centuries and consist of temples to Hindu deities, Buddhist shrines and royal palaces. Many are grouped within the walled enclosure of Angkor Thom, the capital built 1181–95 by Jayavarman VII (c.1120–1215). The nearby temple complex of Angkor Wat, created by Suryavarman II (c.1113–50) as his sepulchre and shrine, is probably the world's most imposing religious structure. Angkor was abandoned for Phnom Penh in 1434. Its ruins were discovered in 1858 by the French. See also pp.1361, 1997

Angler fish, marine fish found at the bottom of temperate and tropical seas. Its dorsal fin is modified to resemble a movable rod with lure, to attract prey. Species include goosefish, batfish and frogfish. Order Lophiiformes. See also pp.61, 341

Angles, Germanic tribe from a district of Schleswig Holstein now called Angeln. In the 5th century AD they invaded England with their neighbouring tribes, the JUTES and SAXONS. They settled in Northumbria, East and Middle Angles. The Roman author TACITUS (AD c.55–120) described them as worshippers of the Scandinavian deity Nerthus. The name England derives from their name (Angle-Land). See also p.1272

Anglesey, Henry William Paget, Marquis of (1768–1854), British military commander who fought at the Battle of WATERLOO (where he lost a leg). He became Lord Lieutenant of Ireland (1828–29, 1830–33), where he favoured emancipation for Catholics

Anglesey (Ynys Môn), island off the NW coast of Wales, separated from the mainland by the Menai Strait. Formerly a Welsh county, it became part of Gwynedd in 1974. The chief town is Beaumaris. Most occupations are agricultural, particularly stock raising. Area 718sq km (276sq miles). Pop. (1977) 63,200

Anglican Communion, worldwide fellowship of independent national or regional churches which trace their origin to the CHURCH OF ENGLAND and are in communion with the See of CANTERBURY. The Anglican Communion does not proclaim any distinctive doctrines of its own, instead it claims to hold fast to the faith and order of the primitive, undivided Church of the first centuries. Consequently its theology contains both Catholic and Protestant elements and it permits a large measure of freedom to its members. Its liturgical worship is based on the Book of COMMON PRAYER as adapted by each national church to suit its local needs. Its structure is episcopal. The Archbishop of Canterbury is accorded a primacy of honour. Since 1867 all Anglican bishops of the world have been invited to the LAMBETH CONFERENCE, normally held every ten years. The total number of Anglicans in the world in the mid-1970s was about 45 million

Angling. See FISHING

Anglo-Boer War. See SOUTH AFRICAN WARS

Anglo-Egyptian Sudan, name given to the Sudan under British and Egyptian rule set up in 1899, following their joint conquest of it in 1897–98. The Sudan gained independence in 1956. See also p.2142

Anglo-Saxon Chronicle, collection of four monastic chronicles written in England between the 890s and 1155. The original Chronicle, possibly commissioned by ALFRED the Great, attempted a history of England from the 5th century Anglo-Saxon invasions, the later chronicles updated the historical content to their own times. See also p.1289

Anglo-Saxons, peoples of Germanic origin comprising ANGLES, SAXONS and other tribes who settled in England from the mid-5th century. The term itself was first used in the late 8th century to distinguish the Saxon settlers in England from the "Old Saxons" of northern Germany. The term became synonymous with "English". See also pp.1272, 1288, 1296, 1301.

Angola, independent nation of sw Africa, known as Portuguese West Africa until it gained its independence in 1975, after which it was torn by wars. It is a Bantu nation. The principal products are petroleum, coffee and diamonds. The capital is LUANDA. Area: 1,246,700sq km (481,250sq miles). Pop. (1975 est) 6,761,000. See p.1972.

Angora. See ANKARA.

Angora, domestic rabbit bred in France in the early 18th century. It produces white, black, blue and fawn wool and is also excellent as meat. Weight. (English angora) 3kg (6.6lb); (French angora) 2.5kg (5.5lb).

Angora cat, long-haired domestic cat with a round head, short body and tail and short, strong legs. It is also commonly called a Persian. Its large, wide-set eyes can be blue, yellow or green, depending on the colour of the fine silky coat. Smoky and black varieties, for instance, have yellow eyes. A blue-eyed white Angora is usually deaf.

Angora goat, domestic GOAT native to the Turkish province of Ankara (formerly Angora), now found also in South Africa and USA. Its body is covered with long, silky hair (mohair), important in the clothing and upholstery industries.

Angostura. See CIUDAD BOLIVAR.

Angostura bark, bark of a South American tree *Cuspara infoliata*, known also as cusparia bark. It has been used in the past to treat fever, but is now used as aromatic bitters often added to drinks.

Angry young men, term applied to a group of British writers in the 1950s, taken from Leslie Allen Paul's autobiography *Angry Young Man* (1951) and popularized through John Osborne's play *Look Back in Anger* (1956). All the writers and their heroes shared a working- or lower-middle-class background and a rebellious attitude towards what they saw as the hypocrisy and conventions of British society. Other writers associated with the group include Kingsley AMIS, John BRAINE, Alan SILLITOE and John WAIN.

Angstrom, Anders Jonas (1814-74), Swedish astronomer and physicist, one of the founders of the science of spectroscopy. In 1861 he began to use the spectroscopic and photographic plates to study the Solar System. His experiments proved that the sun contains hydrogen, and in 1868 he was able to map the entire solar spectrum. A unit for the wavelength of light is named after him - the angstrom unit, Å, equal to 10⁻⁸ cm. See also pp.810, 836.

Anguilla, island in the West Indies, one of the Leeward Islands. In 1967 it became part of the St Kitts-Nevis-Anguilla group, but left shortly afterwards and re-adopted British colonial status in 1971. Area 91sq km (35sq miles). Pop. (1971 est) 6,000. See also p.1974.

Angular acceleration, rate of change of angular velocity. The average angular acceleration of an object whose angular velocity changes from ω_1 to ω_2 over a time t is $(\omega_2 - \omega_1)/t$. Instantaneous angular acceleration is the value approached by ω as t becomes small. The direction of the angular acceleration vector is perpendicular to the plane of motion. The tangential acceleration a_t of a particle at a distance r from a fixed point is directly proportional to the fixed magnitude of its angular acceleration α . $a_t = r\alpha$.

Angular distance, in astronomy, apparent distance on the CELESTIAL SPHERE between two celestial bodies measured along an arc of a great circle passing through them with the observer at the centre. For example, the angular distance of the Pointers of Ursa Major (The Plough) is 5°.

Angular momentum, product of the moment of inertia I and the angular velocity ω of an object or the centre of gravity of

a system of particles. Usually denoted by L , angular momentum is a vector quantity that is conserved at all times.

Angular velocity, rate of change of an object's angular position relative to a fixed point. Average angular velocity ω of an object moving from angle θ_1 to θ_2 in time t is $(\theta_2 - \theta_1)/t$. Instantaneous angular velocity ω is the value approached by ω in succeeding instants (mathematically, as t tends to zero). The direction associated with the angular velocity of an object is perpendicular to the plane of its motion. The speed v of an object at a distance r from a fixed point is directly proportional to the magnitude ω of its angular velocity ($v = r\omega$).

Angus, former county in s Scotland, bounded by the North Sea (s) and the Firth of Tay (s). Originally Forfarshire (until 1928), it became part of the Tayside Region in 1975. Oats, barley and root crops are grown; industries include textiles and food processing. Forfar, once the county town, is the seat of authority in the district of Angus, which includes most of the former county. Area, 2,033sq km (785sq miles). Pop. (1971) 97,000.

Anhui (Anhui), province in e central China. It is divided by the Wan Mountains into two areas. The n is an extensive plains area where agriculture is limited because of the cold winters, the s has a subtropical climate and rice and tea are grown. The capital is Hefei (Hefei). Industries: iron and steel. Area, 139,898sq km (54,015sq miles). Pop. 35,000,000.

Anhydrite, mineral form of calcium sulphate (CaSO₄), usually found in sedimentary rocks in salt beds. Its crystals are orthorhombic, and usually occur in large deposits. It has a glassy or pearly lustre and is colourless when pure. Properties: hardness 3-3.5, s.g. 3. See also GYPSUM, pp.258, 411.

Aniline, highly poisonous, colourless oily liquid (C₆H₅NH₂) made by the reduction of nitrobenzene. It is an important starting material for making organic compounds such as drugs, explosives and particularly dye-stuffs. Properties: s.g. 1.02, m.p. -6.3°C (20.6°F); b.p. 184.13°C (363.43°F). See also ANILINE, p.896.

Animal, living organism of the animal kingdom, usually distinguishable from members of the plant kingdom by its power of locomotion (at least during some stage of its existence); a well-defined body shape, limited growth, its feeding exclusively on organic matter, the production of two different kinds of sex cells, and the formation of an embryo or larva during the developmental stage. Higher animals, such as the VERTEBRATES, are easily distinguishable from plants, but the distinction becomes blurred with the lower forms. Some one-celled organisms could easily be assigned to either category. Evolutionists believe that the difficulties in such areas point to the fact that animals and plants must have originated from a common ancestor. Scientists have classified about a million different kinds of animals. PROTOZOA, SPONGES, JELLYFISH, segmented WORMS, ARTHROPODS, MOLLUSCS, ECHINODERMS and CHORDATES make up the major phyla out of more than twenty. See pp.2-9, 182-183.

Animal behaviour. See ETHOLOGY.

Animal classification, systematic grouping of animals into categories based on shared characteristics. The first major classification was drawn up by Aristotle. The method now used was devised by Carl LINNAEUS, a Swedish botanist, in the 1750s.

Each animal is given a two-part Latin name, the first part indicating its GENUS, the second its SPECIES. A species is composed of animals capable of interbreeding in nature. A genus includes all similar and related species. The FAMILY takes in all related genera, and an ORDER is made up of all related families. Similar orders are grouped in a CLASS, and related classes make up a PHYLUM. More than twenty separate phyla comprise the animal kingdom. For example, the dog is classified thus: phylum Chordata, class Mammalia, order Carnivora, family Canidae, genus *Canis* and species *familiaris*. See also pp.2, 3, 36, 57, 56-57, 72-73, 86-87, 183.

Animal Farm (1945), satirical novel by George ORWELL about the Russian Revolution and Stalinism in the Soviet Union. The animals of Manor Farm drive out their brutal, human master and elect to be governed by the pigs, whose rule grows to be just as authoritarian.

Animal Kingdom, about one million species of animals classified into about 20 major groups, or phyla. All phyla but one are invertebrate (ie lack backbones). The CHORDATE phylum includes some animals that are not true vertebrates, as well as the vertebrate fishes, amphibians, reptiles, birds and mammals. See also pp.2-3, 192.

Animal worship, various beliefs and practices dating from prehistoric times. In North America, where the bear was the chief cult animal, Indians believed each animal to be inhabited by a spirit. The bear is still sacred to the AINU of Japan. Among Australian ABORIGINES, whose TOTEMISM is highly developed, kinship links clans and animals. Ancient Egyptians believed that certain animals were divine incarnations and in Hindu literature the god VISHNU appears as a fish, wild boar and giant turtle. See also pp.1907, 1911.

Animation, cinema, illusion of motion created by projecting successive images of still drawings or inanimate objects. A series of drawings, each showing a stage in the motion being created, is made and photographed singly, a jointed model can be similarly photographed. Projecting the images at normal speed, normally 24 frames per second, creates an illusion of motion. See also pp.630-633.

Animatism, belief that all objects, beings and natural phenomena (such as stones, trees, water, fire, stars, thunderstorms) and animals possess a life and consciousness but not a spirit (soul). See also ANIMISM.

Animism, belief that within every object dwells an individual spirit capable of governing its existence. Natural objects and phenomena are regarded as possessing life, consciousness and a spirit (soul). By extension of this, the spirits of dead animals live on and, if the animals have been killed improperly, their spirits can inflict harm. These beliefs are widespread in primitive religions. See also ANIMATISM.

Anion, a negative ion.

Anise, annual herb native to Egypt and widely cultivated for its small ridged liquorice-flavoured seeds. It has small white flowers. Height, up to 76cm (2.5ft). Family Umbelliferae, species *Pimpinella anisum*. See also pp.703, 706, 706.

Anjou, region and former province in w France, bounded by the River Maine (N), Touraine (E), Poitou (S) and Brittany (W). It was ruled by HENRY II of England after his marriage to Eleanor of Aquitaine. Louis XI annexed it to the French crown in 1480. See also p.1280.

Ankara, city in w central Turkey, at the confluence of the Cubuk and Ankara rivers, capital of Turkey and Ankara province. In ancient times it was known as Ancyra (and later Angora) and was an important commercial centre as early as the 18th century BC. It was a Roman provincial capital and flourished particularly under AUGUSTUS. The Mongol conqueror TAMERLANE took the city in 1402. In the late 19th century Ankara declined in importance until the Turkish Nationalists set up a provisional government there in 1920. It replaced Istanbul as the national capital in 1923. Industries include textiles (it is particularly noted for its angora wool and mohair products), food processing, cement and farm machinery. Pop. (1974 est) 1,522,400.

Ankylosaurus, armoured ornithomimid dinosaur of the upper Cretaceous period (65-136 million years ago) of w USA and Canada. It was a squat herbivore with short, massive legs and hooved feet, and the leathery skin on its back and sides was armoured-plated with bony nodules and plates arranged in geometric rows. Its tail ended in a bony club much like the head of a mace. Length, 4.5m (15ft), height 1.2m (4ft). See also p.281.

Anglo-Saxons built in a style distinguished mainly by semicircular or triangular arches

Angola profile

Official name Angola
Chief cities Luanda (capital) (1970) 475, 128 Huambo (Nova Lusoal), 89,000
Area 74,000
Government Transitional (nationalist military parties)
Religions Roman Catholic (state religion) and local cults
Language Portuguese (national)
Monetary unit Escudo
Gross national product (1978) £1,000,000,000
Agriculture Coffee, corn, sugar, cotton, wheat, tobacco, sisal, cattle
Industries Food processing, brewing and bottling, cement, glass, paper, cotton footwear, soap, fishing
Minerals Diamonds, petroleum, iron, copper, manganese, sulphur, phosphates
Tending partners Portugal, FPC USA

Anise is a Mediterranean herb: its seeds are used as a flavouring and to make anise

Ankylosaurus, a dinosaur of North America was short and squat and heavily armoured

Ankylosis

Queen Anne of England (reigned 1702-14) was the last monarch of the House of Stuart

Anoa, a small type of buffalo. Is ordinarily timid, but becomes dangerous if provoked

Anole, or American lizard, changes colour in response to mood, temperature and light

Jean Anouilh is often linked intellectually with the ideas of Camus and Sartre

Ankylosis, condition occurring when a joint of the body becomes or is made fixed, leaving only a limited degree of movement. Causes include inflammation and fusion of bones, often after arthritis. *See also* p.1062

Annaba, city in NE Algeria, formerly Bone; Mediterranean port and departmental capital. The city was founded by the Phoenicians and flourished as a Roman port (Hippo Regius) until approx AD 300. It was plundered by the Vandals in 431, but rebuilt by the Arabs in the 7th century. It was a centre of early Christianity. Industries: cork production, metal-working, chemicals, food-canning. Pop. 150,000

Anna Christie (1921), drama by US playwright Eugene O'Neill about a prostitute whose father, a hard-drinking captain of a coal barge, sent her away as a child to protect her from the sordid life on the waterfront. The play portrays the reconciliation of Anna and her father, it won the Pulitzer Prize in 1922

Anna Karenina, realist novel (1873-77) by Count Leo Tolstoy in which he explores the related themes of marriage, social order and responsibility. The passionate but adulterous, and ultimately ruinous, love affair between Anna Karenina and Count Vronsky is contrasted with the routine and conventional marriage of Levin and Kitty. *See also* p.1575

Anakin, Ken (1914-), British film director. He made his name with short comedies, then switched to large-scale productions such as *The Swiss Family Robinson* (1960) and *Those Magnificent Men in their Flying Machines* (1965)

Annales Cambriae, ancient Latin annals of Welsh history by an unknown compiler. The earliest existing manuscript is from the late 10th century. They are a source for the Arthurian legend

Annam, former kingdom on a coast of Indochina, now in Vietnam, the capital was Hue. The ancient empire fell to China in 214 BC. It regained self-government but was again ruled by China from 939 to 1428. The French obtained missionary and trade agreements in 1787, and a protectorate was established (1883-84). During WWII it was occupied by the Japanese, in 1949 it was incorporated into the Republic of Vietnam. *See also* p.2168

Annapolis, seaport and capital of Maryland, USA, on the S bank of the Severn River, 35km (22 miles) S of Baltimore. It was founded in 1649 by Puritans from Virginia, and was the scene of the signing of the peace treaty with Britain ending the War of Independence. It has many pre-Revolutionary buildings. It also has boatyards and a seafood packing industry. Pop. (1970) 30,000

Annapurna, mountain massif in the Himalayas, N central Nepal, includes two of the highest peaks in the world. Annapurna 1 in the W rises to 8,078m (26,504ft) and was first scaled in 1950 by the French expedition led by Maurice Herzog. Annapurna 2 in the E rises to 7,937m (26,041ft)

Annates, tax on the income of a benefice for one year, paid to the pope as first fruits. Originally paid only by bishoprics, they were extended to rectories and abbeys. In 1534 in England they were appropriated to the Crown by Henry VIII as part of the Reformation

Anne (1665-1714), Queen of Great Britain and Ireland (r 1702-14). The second daughter of James II, she was the last reigning Stuart, and after the Act of Union of 1707 the first monarch of the United Kingdom of England and Scotland. She was dependent on her favourites, Sarah Churchill, Duchess of Marlborough, and Abigail Masham, but presided over an age of military success and cultural distinction. Despite 18 pregnancies, no child survived her. *See also* pp.1446-1447

Anne, Princess (1950-), daughter of Queen Elizabeth II and fourth in line of succession to the British throne. During the 1970s, as a noted horsewoman, she represented Britain at various international events. In 1973 she married Lt Mark Phillips

Annealing, slow heating and cooling of a metal, alloy, or glass to relieve internal stresses and make up dislocations or vacancies that may have been introduced during mechanical shaping such as rolling or extruding. Annealing increases the material's workability and durability. Machine tools, wire and sheet metal are annealed during manufacture. *See also* TEMPERING

Anne Boleyn. *See* BOLEYN, ANNE

Annelid, animal phylum of segmented worms. All have encircling grooves usually corresponding to internal partitions of the body. A digestive tube, nerves and blood vessels run through the entire body, but each segment has its own set of internal organs. Annelids form an important part of the diets of many animals. The three main classes are Polychaeta, marine worms, Oligochaeta, freshwater or terrestrial worms, and Hirudinea, leeches. *See also* pp.2, 4, 18-19

Anne of Austria (1601-66), wife of Louis XIII of France, mother of Louis XIV. Her husband died in 1643 and she ruled France as regent with Cardinal Mazarin until Louis XIV was crowned (1661)

Anne of Bohemia (1366-94), queen consort of Richard II of England. She was the daughter of Emperor Charles IV, and married Richard in 1382. She died of the plague 12 years later

Anne of Cleves (1515-57), fourth wife of Henry VIII of England. Her marriage (1540) was a political alliance joining Henry with the German protestants, and was declared null after only six months. Anne received a pension from Henry, and remained in England until her death

Anne of Denmark (1574-1619), Queen Consort of James I of England. She married James in 1589 but her extravagance and adherence to Roman Catholicism led to their separation from 1606

Ansenky, Innokenty Feodorovich (1856-1909), Russian poet who wrote about beauty and death. His verse has been published in two books: *Quiet Songs* (1904) and *The Cypress Chest* (1910)

Annihilation, in particle physics, the complete conversion of matter into energy. An elementary particle and its antiparticle are converted, on collision, into gamma radiation. An electron and positron annihilate to produce two gamma-ray photons, travelling in opposite directions to conserve momentum. Each has an energy of 0.511 MeV, which is equivalent to the rest mass of the electron or positron. *See also* pp.818-819

Annigoni, Pietro (1910-), Italian painter, especially of society portraits. He has painted portraits of Queen Elizabeth II, Prince Philip and Princess Margaret

Anno Domini, Latin for "in the year of our Lord" and abbreviated to AD, the location in time of a year after the supposed year in which Christ was born. Years before 1 AD are denoted as "before Christ". *See also* CALENDAR

Annual, plant that completes its life cycle in one growing season. Annuals are used in summer flower beds, window boxes, pots or winter greenhouses. Popular garden annuals include zinnias, nasturtiums, sweet peas and petunias. Some plants may be started indoors and others sown outdoors. Some, such as cosmos and marigolds, self-seed and appear as new plants the following year. *See also* PERENNIAL, PERENNIAL

Annunciation, as recounted in the New Testament (Luke 1:26-38), the announcement made to the Virgin Mary by the Angel Gabriel that she was to be the mother of Christ. In many Christian Churches the Feast of the Annunciation is kept on 25 March, a date often called "Lady Day". The Annunciation was a common subject of painters of medieval and Renaissance times

Annes Mirabilis (1666), poem by John Dryden consisting of 300 quatrains recounting the principal great events of the period Aug. 1665-Sept. 1666: the sea battles leading to the British victory over the Dutch fleet off the Dutch coast, and the FIRE OF LONDON

Anoa, or dwarf water buffalo, smallest representative of wild cattle, native to

Celebes and the Philippines. The young are covered with yellow woolly hair, adults are almost hairless with black or brown skin blotched with white. Height up to 104cm (41in) at the shoulder. Family Bovidae, genus *Anoa*, there are three species. *See also* BUFFALO, OX p.294

Anode, the positive electrode, usually of an electrolytic cell or electron tube (valve). *See* ELECTROLYSIS, ELECTRON TUBE, pp.884-885, 902

Anodizing, electrolytic process by which ALUMINIUM or MAGNESIUM is coated with a thin layer of oxide by making the metal the anode in an acid solution. The coating, which is steamed to seal the pores, is insoluble and a good insulator. It can be dyed bright colours, many of which are resistant to sunlight. *See also* p.903

Anole, arboreal LIZARD found in warm regions of North and South America and the West Indies. Enlarged finger and toe pads enable it to cling to surfaces. It is best known for its ability to change from brown to yellow and several shades of green. Males often have an expandable dewlap. Length 13-46cm (5-18in). There are about 200 species. Family Iguanidae, genus *Anolis*. *See also* IGUANA; pp.68-69, 71

Anomalistic period, time taken for a celestial body to make one complete revolution around another, starting and finishing at the same point, such as PERIGEE or PERHELION. It is slightly longer than the SIDEREAL PERIOD - 27 55455 days for the Moon and 365 25964 days for the Earth

Anopheles. *See* MALARIA, MOSQUITO

Anorexia nervosa, abnormal loss of appetite and even a refusal to eat. It is a pathological condition, probably of psychological origin, which occurs most commonly in young females and results in emaciation, a cessation of menstruation and other disorders. *See also* p.1114

Anouilh, Jean (1910-), French dramatist and film writer. Like some other contemporary French writers, he has found inspiration in Greek myth, but the underlying theme of many of his plays is the contrast between innocence and bitter experience. His works include *Le Bal des Voleurs* (1938, translated as *Thieves' Carnival*, 1952), *Eurydice* (1942, *Point of Departure*, 1951), *L'Invitation au Chateau* (1947, *Ring Round the Moon*, 1950) and *La Waltz des Tordadors* (1952, *Waltz of the Tordadors*, 1956). *See also* p.1820

Anquetil, Jacques (1934-), French racing cyclist. A master time-trialist, he won a record five Tours de France (1957, 1961-64) and numerous other "classics"

Amibach, town in West Germany, 40km (25 miles) SW of Nuremberg (Nürnberg), on the River Regnitz. The residence of the Franconian branch of the Hohenzollern family from 1331 to 1791, it passed to Prussia in 1791 and to Bavaria in 1806. Industries: electrical equipment, textiles, chemicals. Pop. 30,800

Anschluss, the unification of Austria and Germany. Prohibited by treaty at the end of WWI, expressly to limit the strength of Germany, the Anschluss was nevertheless favoured by Germans and Austrians of all political persuasions. Unification finally took place through a show of force under Hitler (1938). The union was dissolved by the Allies in 1945, and Austria, after ten years' Allied occupation, again became an independent state. *See also* pp.1678-1679, 1982

Anselm of Canterbury, Saint (1033-1109), English theologian, born in Italy. He was an early scholastic philosopher and became Archbishop of Canterbury in 1093. He refused to allow the king to appoint new bishops. His belief in the powers of reason led him to propose an ontological argument for the existence of God. *See also* ONTOLOGY; MS pp.231, 233

Anseriformes, order of birds that includes ducks, geese and swans together with a small group of primitive South American wading birds called screamers. Intermediate between these is the semi-palmated goose of Australia, the most primitive of the geese. *See also* p.72

Ansermet, Ernest (1883-1969), Swiss

orchestral conductor. In 1915 he conducted for the BALLET RUSSOS on tour. In 1918 he founded the Orchestre de la Suisse Romande in Geneva, and was its permanent conductor until 1967.

Anshan, city in Manchuria, China, 96km (60 miles) sw of Shenyang (Mukden). Iron mining dates from the 10th century and the city is now the centre of China's iron and steel production. It has many blast furnaces and steel converters. Other industries include chemicals and machinery. Pop. 805,000.

Anskar, Saint, missionary in medieval Europe and the first Bishop of Hamburg. He is the patron saint of Scandinavia.

Anson, George Anson, Baron (1697-1762), British admiral who sailed around the world in 1740-44. He was made First Lord of the Admiralty in 1751, and again in 1757. He reformed naval discipline by greatly reducing corruption and inefficiency. In 1755 he created the Marine Corps.

Anstey, Frank (1865-1940), Australian trade unionist and federalist (1910-34). A pioneer of Australian socialist thought and politics, he was elected deputy leader of the Labor Party in 1922.

Ant, social insect belonging to a family that also includes bees and wasps. Ants range in length from 2 to 25mm (0.08-1.0in) and are found worldwide. They feed on plants, nectar and other insects. Most ants are wingless except at times of dispersal. Family Formicidae. See also pp.8, 9, 43, 46, 297, 312, 314, 317.

ANTA. See AMERICAN NATIONAL THEATRE AND ACADEMY.

Antabuse, drug that causes an abnormal physiological reaction to alcohol, marked by vomiting. It is sometimes used in the treatment of ALCOHOLISM.

Antakya (formerly Antioch), city in s Turkey on the Orontes River and capital of Hatay province. Founded in c 300 BC by Seleucus I, it rivalled Alexandria. It was taken by Pompey (64 BC) and became an important Roman commercial, cultural and eventually Christian centre. The modern city occupies only a small part of the ancient site. The remains of an aqueduct, theatre, castle and the city walls are still visible. Industries: olives, tobacco, cotton, cereals. Pop. 66,500.

Antananarivo. See TANANARIVE.

Antarctica, fifth largest continent, surrounding the South Pole and surrounded by the Antarctic Ocean, the southernmost section of the Atlantic, Pacific and Indian oceans. Almost entirely within the Antarctic Circle and perpetually snow-covered, it holds strategic and scientific interest for the rest of the world. No people live permanently in Antarctica, although scientists frequently stay there for short periods for purposes of research and exploration.

Land. Resembling an open fan, with the Antarctic Peninsula as a handle, the continent is a snowy desert covering about 13,209,000sq km (5,100,000sq miles). The land is a high plateau, having an average elevation of 1,800m (6,000ft). Mountain ranges occur near the coasts. The interior, or South Polar Plateau, lies beneath about 2,000m (6,500ft) of snow, an accumulation of tens of thousands of years. Mineral deposits exist in the mountains, but their recovery has not become practicable. Coal may be plentiful, but the value of known deposits of copper, nickel, gold and iron will not repay the expenses of extracting and exporting them.

Seas and glaciers. The rivers of Antarctica are frozen, inching towards the sea, and instead of lakes there are large bodies of ice along the coasts. The great Beardmore Glacier creeps down from the South Polar Plateau and eventually becomes part of the Ross Ice Shelf. This shelf of ice is that part of the Ross Sea that never thaws. The southernmost part of the Atlantic is the portion of the Antarctic Ocean known as the Weddell Sea.

Climate and vegetation. Antarctica remains cold all year, with only a few coastal areas being free from snow or ice in summer - December to February. On most of the continent the temperature

remains below freezing and in August it has been recorded at nearly -90°C (-130°F). Precipitation generally amounts to 17.5-38cm (7-15in) of snow a year, but melting is less than that, allowing a build-up over the centuries. Nevertheless, mosses manage to survive on rocks along the outer rim of the continent. Certain algae grow on the snow, and others appear in pools of fresh water when melting occurs.

Animal life. The best-known Antarctic animals are PENGUINS, especially the emperor and Adélie. Whales, such as the blue and finback, live in the icy waters, as do a few species of hair seals.

History. Islands associated with the continent were sighted in the 18th century, and in 1820 Nathaniel Palmer, an American hunting for seals, reached what is now called the Antarctic Peninsula. Charles Wilkes of the United States explored enough of the coast between 1838 and 1840 to prove that a continent existed, and James Clark Ross of Britain made coastal maps at about the same time. Towards the end of the 19th century, exploration reached inland until a race for the SOUTH POLE developed. Roald AMUNDSEN of Norway won, reaching the pole on 14 December 1911, a month before Robert SCOTT. The aeroplane brought a new era of exploration, and Richard F. Byrd of the United States became the best-known of the airborne polar explorers. In the 1970s scientists from a dozen nations studied the continent and its past. See also pp.502, 226, 322-3, 415, 502.

Antares, or Alpha Scorpii, red supergiant star in the constellation of Scorpion, it has a smaller green companion. Characteristics: apparent mag. 0.92, absolute mag. -4.7, spectral type M1; distance 420 light years. See also pp.978, 990, 1016, 1020.

Ant bear. See ANTEATER.

Anteater, or ant bear, toothless, mainly nocturnal, insect-eating mammal that lives in swamps and savannas of tropical America. It has a long, sticky tongue and powerful claws. Length: up to 152cm (60in). Family Myrmecophagidae. See also EDENTATE, PANGOLIN, TAMANDUA, pp.301, 314.

Antelmi, Benedetto (c 1150-1230), the major Italian sculptor before the Pisano family. He was renowned for the profoundly expressive faces of his figures and for his skilful carving of drapery. He executed a relief of the *Deposition* (1178) and other work in Parma cathedral.

Antelope, hollow-horned, speedy RUMINANT found throughout the Old World except in Madagascar, Malaya and Australasia, most antelopes occur in Africa. They range in size from that of a rabbit to that of an ox. In some species both sexes bear horns of varied shapes and sizes, in others, only the males are horned. Family Bovidae. See also pp.296, 311, 320.

Antenna, long sensory organ (usually of touch) on the heads of insects and most other arthropods. Insects have a single pair of antennae, crustaceans generally two pairs. See also AERIAL; pp.37, 19.

Anterus, Saint, pope for a brief period in 235-236. He was executed for insisting that the acts of martyrs should be recorded in church archives.

Anthem, choral composition in Anglican and other English-speaking church services analogous to the Roman Catholic LAUD. MOTET. Developed in the 16th century as a verse anthem with soloists, the anthem was later performed with orchestral accompaniment and by a choir without soloists. Composers of anthems include Henry PURCELL and Ralph VAUGHAN WILLIAMS.

Anthemius of Tralles, Greek architect from Asia Minor who, with Isidorus of Miletus, designed the Byzantine cathedral HAGIA SOPHIA (532-87) in Constantinople for Justinian I. See also p.1277.

Anthodite, branching, flower-like formations, often coloured by impurities, found on the roofs of some caves. Anthodites grow, like ordinary stalactites and stalag-

mites, from the seeping of water rich in calcium carbonate.

Anthony (or Antony), Saint (AD 250-355), the first Christian monk. Born of Christian parents in Egypt, he withdrew into complete solitude at the age of 20 to practise ascetic devotion. The monastic ideal, outlined in the *Life of St Anthony* attributed to St Athanasius, attracted many. By the time of his death Christian monasticism was well established.

Anthony and Cleopatra (1606-07), a tragedy by William SHAKESPEARE.

Anthozoa, also called Actinozoa, a class of COELENTERATES characterized by a columnar body, top mouth surrounded by tentacles and bottom disc for sliding or holding. There is no MEDUSA stage. The name means flower animals. They include SEA ANEMONES, CORALS and sea pens. Sub-phylum Cnidaria. See also pp.12-13.

Anthracene, organic chemical compound, the molecular structure of which consists of three BENZENE rings linked together. Its formula is thus C₁₄H₁₀(CH)₂C₆H₄. It is produced in the distillation of coal, and was used for the manufacture of dyes. See also pp.584-585.

Anthracite, form of coal consisting of almost pure carbon. It burns with the hot pale-blue flame of complete combustion. It is the final form in the series of fuels peat, lignite, bituminous coal and black coal. See also COAL, pp.414, 418, 436.

Anthracnose, various fungal plant diseases that attack crops and are indicated by ulcer-like lesions of dead tissues on fruit, leaves and twigs. Spores of anthracnose fungi are commonly transmitted by insects, seeds and rain. See also PF, p.221.

Anthrax, contagious disease, chiefly of grass-eating animals (but also affecting man, pigs, dogs and captive wild animals), caused by the microbe *Bacillus anthracis*. Animals catch it from contaminated feed and water and certain insects that harbour the germ. The symptoms of this fatal disease are bloody discharges, staggering and convulsions. Human beings can catch anthrax by handling infected animals or their hides. It needs early diagnosis for treatment to be effective. See also p.1061.

Anthropology, scientific study of human beings, a method of examining how they developed and how different races are related to each other. It is concerned with the whole chronological and geographic range of human societies. Modern anthropology stems from the first half of the 19th century when a systematic racial classification was made. Public interest in cultural evolution followed the publication in 1859 of DARWIN'S *Origin of Species*. Another aspect of this science, known as applied anthropology, is where specific studies are made to discover and learn about a particular community and its relationships, either collectively or individually. See also ETHNOGRAPHY, ETHNOLOGY pp.108-122, 1826-1834.

Anthropometry, measurement of human physical characteristics. It was one approach to racial classification and a method used to compare humans with other primates. See also BERTILLOIN MEASUREMENT CEPHALIC INDEX, p.648.

Anthropomorphism, assigning human characteristics or forms to the divine spirits of such things as winds and rivers, events such as war and death, and emotions. It is found in many primitive religions, especially Greek and Roman. See also ANIMISM, pp.1900-1901.

Anthroposophy, type of mystical philosophy founded in Basle in the early 1900s by the Austrian philosopher Rudolph STEINER, who made use of "non-scientific knowledge". See also THEOSOPHY.

Anti-aircraft artillery, ground-based weapons used against aircraft in flight. Until the end of WWI the term referred to cannon, although during the war the Germans tested rockets. Increasingly since the war the term has referred to surface-to-air missiles (or rockets). Flak, the German term for anti-aircraft shrapnel, proved effective in WWII, Korea and Vietnam.

Antibes, resort in s France, on the Riviera, 18km (11 miles) sw of Nice. Originally a

Antarctica, the fifth largest and last continent to be explored by man

Antelope: an animal of plains, mountains, and forests, is widely hunted for its meat

Anthozoa are often vividly coloured: many form colonies that give rise to coral

Anti-aircraft artillery in World War II consisted of mounted and often portable guns

Antibiotic

Antigone, in Greek mythology, was the daughter of Oedipus and Jocasta

Anti-tank weapons such as mounted guns proved valuable artillery aid in World War II

Antlers are grown and shed annually by deer; size increases with age until maturity

Antlion adults, usually nocturnal, have dark wing markings and short antennae

Greek colony called Antipolis (founded 340 BC), it contains the ruins of a later Roman settlement and 16th to 17th century fortifications. Products: fruit, wines and perfume. Pop 47,550.

Antibiotic, chemical produced by a micro-organism - eg, by specific strains of certain bacteria or moulds - that is capable, in small doses, of stopping the growth of or destroying bacteria and other disease-causing micro-organisms. The introduction of antibiotics during WWI revolutionized medical science, making possible the control, and in some cases the virtual elimination, of once widespread and often fatal diseases, including typhoid, plague, cholera and tuberculosis. Most antibiotics are selective - that is, effective only against specific micro-organisms, those effective against a large number of micro-organisms are known as broad-spectrum antibiotics. They inhibit the growth of sensitive bacteria, and some dissolve or kill bacteria. Important antibiotics include PENICILLIN, the first widely used antibiotic and effective against many infections, such as bronchitis and tonsillitis, streptomycin, effective against tuberculosis and some lung, liver and urinary infections, and the TETRACYCLINES, effective against many bacterial and rickettsial infections. Some bacteria, once sensitive to certain antibiotics, have become resistant, posing a threat to continued antibiotic therapy and giving impetus to the search for new substances for treating diseases. See also pp. 1064, 1073, 1089, 1091, 1092, 1093.

Antibody, or **immunoglobulin**, globular protein of the blood that reacts specifically with foreign substances or organisms that enter an animal, rendering it immune to them. Pre-formed antibodies, such as tetanus ANTITOXIN, can be injected for immediate protection against disease. See also pp. 156-157.

Antichrist, term that loosely refers to the greatest enemy of Christ. It is used in the letters of St JOHN to refer to a force that will appear at the end of time. Martin LUTHER and other leaders of the REFORMATION applied it to the POPE.

Anticline, fold in rock strata in the shape of an arch. Unless the formation has been overturned, the oldest rocks are found in the centre with younger rocks symmetrically on each side of it. See pp. 212-213.

Anticoagulant drugs. See DRUGS.

Anti-Corn Law League, organization formed at Manchester in 1839 to agitate for the removal of import duties on grain. It was led by the Radical MP Richard COBBEN and JOHN BAUGH. By holding mass meetings, distributing pamphlets and contesting elections it helped bring about the repeal of the CORN LAWS in 1846. See also pp. 1571, 1572.

Anti-Cosmos. See MOHOLE.

Anticyclone, area of high atmospheric pressure around which air circulates in a clockwise direction in the Northern hemisphere and in an anticlockwise direction in the Southern hemisphere. Anticyclones are associated with slowly subsiding, stagnant air masses which bring periods of hot dry weather in summer and cold, often foggy, weather in winter. Stable belts of high pressure occur just to the N and S of the tropics. See also p. 248.

Antidepressant drugs. See DRUGS.

Antidiuretic hormone. See HORMONE.

Antidote, remedy or other agent used to counter the effects of a poison. Antidotes may be either specific or general in their effect.

Antietam, Battle of (17 Sept. 1862), also known as Sharpsburg, battle in the AMERICAN CIVIL WAR, fought at Sharpsburg, Md. Gen. George McClellan's 70,000 Union soldiers made five assaults on Gen. Robert E. LEE's 50,000 Confederates. Each side lost more than 12,000 men. Neither side won, but Lee was forced to abandon his Maryland campaign and retreat to Virginia. See also pp. 1628-1629.

Antifreeze, substance dissolved in a liquid to lower its freezing point. Ethylene glycol (ethane diol, HOCH₂CH₂OH), is commonly used in car radiators. See also p. 898.

Antigen, any substance or organism which when injected into animal tissues, induces the production of an antibody that reacts specifically with the antigen. See also pp. 156, 157.

Antigone, Greek mythological figure, the daughter of Oedipus and Jocasta. She accompanied her father through his banishment until his death. Despite her efforts, her brother Polymoeus rebelled unsuccessfully against Eteocles, another brother and ruler of Thebes. In defiance of the king, Antigone buried her brother and hanged herself rather than face the punishment of being buried alive. The tragedy *Antigone* (c. 441 BC) by SOPHOCLES is based on the legend.

Antigonius I (c. 382-301 BC), general of ALEXANDER THE GREAT. He became governor of Phrygia in 333 BC and, in the struggles over the regency, he defeated challengers and controlled Mesopotamia, Syria and Asia Minor. At Salamis in 306 BC he defeated his former ally, Ptolemy I, and he was himself killed at Ipsus.

Antigua, Caribbean island in the Leeward Island group. It is self-governing except for foreign policy, which is controlled by Britain. Pop. 65,525. See also p. 2034.

Antihistamine, any one of certain drugs that counteract or otherwise prevent the effects of histamine, a natural substance released by the body in response to injury or more often as part of an allergic reaction. Histamine can produce symptoms such as sneezing, running nose and burning eyes. See also HAY FEVER, p. 1065.

Anti-inflammatory drug. See DRUGS.

Antilogarithm, numbers having specified numbers as their LOGARITHM. Thus the antilogarithm (or antilog) of 0.4771 is 3, because log₁₀ 3 = 0.4771 (to 4 places of decimals). See also pp. 788-789.

Antill, John (1904-), Australian composer. His works include the ballet *Corroboree* (1947), an evocation of Australian aboriginal life, the opera *Endymion*, based on KEATS's poem, and the cantata *The Song of Hagar*.

Antimatter, matter made up of antiparticles, which are identical to ordinary particles in every way except charge and magnetic moment. When an antiparticle such as a positron (anti-electron), antiproton or antineutron meets its respective particle, both are annihilated. Since the PHOTON is its own antiparticle the possibility exists that there are stars or galaxies composed entirely of antimatter. See also p. 818.

Antimony, toxic metallic element (Sb) of Group V of the periodic table. Stibnite (a sulphide) is its commonest ore. It is used in some alloys, particularly in hardening lead for batteries and type metal. The element has two allotropes, a silvery metallic form and an amorphous grey form. Properties: at no. 51, at wt. 121.75, s.g. 6.684, m.p. 630.5°C (1,166.9°F); b.p. 1,750°C (3,182°F); most common isotope Sb¹²¹ (57.25%). See also p. 393.

Antineutron, in particle physics, the antiparticle of a NEUTRON. It has no electric charge, and a magnetic moment equal but opposite to that of the neutron. An antineutron is sometimes formed in a bubble chamber when a PROTON collides with an antiproton. See also ANTIMATTER, p. 818.

Anti-novel, or non-novel, type of fiction that first became popular in France. The term was first used by Jean-Paul SARRAUTE in 1957 in an introduction to Nathalie SARRAUTE's *Portrait of a Man Unknown*, (first published 1947). An avant-garde approach to literature, the anti-novel is characterized by painstaking descriptions of physical and psychological details while avoiding traditional expression of the author's values, and omitting any dialogue or biographical detail that might explain the characters or develop the plot. Significant anti-novels are SARRAUTE's *Tropisms* (1938); Alain ROBBE-GRILLET's *The Erasers* (1953) and *The Voyeur* (1955), and Michel BUTOR's *Passing Time* (1956).

Antioch. See ANTAKYA.

Antiparticle. See ANTIMATTER.

Antipater (c. 397-319 BC) Macedonian general and aide of PHILIP II. In 347-336 BC he negotiated peace with ATHENS and

later helped ALEXANDER THE GREAT. Disliked for favouring tyranny and oligarchy, he nevertheless ruled Athens until his death in 319, which precipitated the breakup of authority in the empire.

Antiphanes (c. 408-c. 334 BC), Greek playwright. A leading writer of comedy, he wrote 260 plays, including parodies of myths. His style is based on wit, charm and elegance. His plays include *Cratichne* of Man, *Sappho* and *As Much Again*.

Antiphon, method of singing psalms or canticles, often in PLAINSONG, in which alternate verses are sung by two halves of a choir or by a priest (or deacon) and choir. The word applies also to a single verse sung by either side.

Antipodes Islands, barren uninhabited islands in the South Pacific, 740 km (458 miles) SE of New Zealand, of which they are a part. Discovered in 1800 by British seamen, the islands were so named because they are antipodal or diametrically opposite to Greenwich. Area 62 sq km (24 sq miles).

Antipope, name given to rivals of legitimately elected popes, generally "appointed" by unauthorized religious factions. The first was HIPPOLYTUS (217-35), a Trinitarian heretic and rival of Calixtus I. The most famous were the AVIGNON POPES, starting with Clement VII, during the Great Schism of 1378-1417.

Antipsychotic drug. See DRUGS.

Anti-Semitism, prejudice against Jews. Since ancient times, Jews have been persecuted for religious reasons and accused of being Christ's crucifiers. Many Jews of the Middle Ages became moneylenders and were looked upon with contempt. The growing nationalism of the 19th century further isolated the Jews who were considered racially inferior. HITLER in the 20th century used these attitudes to strengthen his own position. After WWII, anti-Zionism among the Arabs and the Soviet Union added a new dimension to anti-Semitism. See also pp. 1674, 1675.

Antiseptics, agents that destroy or arrest the growth of putrefaction-producing GERMS as distinct from DISINFECTANTS which destroy the germs that cause disease. Among commonly used antiseptics are ALCOHOL, IODINE and CHLORINE compounds. ANTIBIOTICS are the most commonly used antiseptics in surgery. See also p. 1096.

Anti-tank weapons, arms ranging from grenades, large-calibre rifles, high-velocity cannon and mines to rockets and missiles. Mines and grenades disable tanks by damaging their running gear, the other weapons are designed to penetrate their thick armour. See also pp. 562, 565.

Antitoxin, ANTIBODY produced by the body in response to toxins. They are specific in action, and neutralize the toxin. Antitoxin serums are used to treat and prevent bacterial diseases such as TETANUS and DIPHTHERIA. See also pp. 156-157.

Antlers, bony outgrowth on the skulls of male DEER (and female reindeer). In temperate-zone species, antlers begin to grow in early summer. They are soft, well supplied with blood and covered with thin, velvety skin. Later, the blood recedes and the dried skin is rubbed off. Antlers then serve as sexual ornaments and weapons until they are shed the following spring. First-year males grow short spikes. More branches (points) are added each year until maturity is reached. See also HORN.

Antlion, larva of the neuropteran family Mymecoptera, found in most parts of the world. Carnivorous, with large, sickle-shaped jaws, it digs a pit in dry sand where it lies waiting for ants and other insects to fall in. See also LACEWING, NEUROPTERA.

Antofagasta, major sea port on the coast of N Chile and the capital of Antofagasta province. Built in 1870 to provide port facilities for the nitrate deposits in the ATACAMA DESERT, it now has both ore refining and concentrating plants. Pop. 125,100.

Antonello da Messina (c. 1430-79), Sicilian painter, who passed on to Giovanni BELLINI his knowledge of the Flemish technique of working in glazes of pure oil paint, and thus influenced the develop-

ment of Venetian painting. His works include *Portrait of a Young Man* (1472) and *The Virgin Annunciate* (1476).

Antonescu, Ion (1882-1946), Romanian general, leader of the pro-Nazi Iron Guard movement. After losing office because of his pro-Nazi sympathies, he was appointed Premier in 1940 at Germany's insistence, and in 1941 he set up a military dictatorship, forcing the abdication of King Carol II. Antonescu suppressed all opposition, modelling his regime on that of Germany and siding with the Axis powers. He was arrested during King Michael's coup in September 1944, and later executed.

Antonine Wall, Roman defensive wall built in AD 142, extending about 58.7 km (36.5 miles) across Scotland from the Forth to the Clyde. Traces remain. See also pp. 1234, 1316.

Antonio (1921-), stage name of the Spanish dancer Antonio Ruiz Soler. He made his debut in Liège in 1928. Since then his performances, such as *Zapateado*, have been acclaimed all over the world.

Antrim, County, county in Northern Ireland, bounded to the N by the Atlantic Ocean and to the NE and E by the North Channel. Mainly a low basalt plateau, it is noted for perpendicular basalt columns (the Giant's Causeway). The county town is Belfast. County Antrim is chiefly an agricultural region, cereals and livestock being important. Industries include linen and shipbuilding. Area, 3,043 sq km (1,175 sq miles). Pop. (1971) 353,417.

Antung (Andong), port in NE China, on the Yalu (Yalujiang) River, on the North Korean boundary, 200 km (125 miles) S of Mukden (Shenyang). Its importance increased after 1907 when the railway connecting Mukden with Korea was built. Industries: timber, trading, food processing. Pop. 360,000.

Antwerp (Antwerpen, Anvers), city in N Belgium, on the River Scheldt, 37 km (23 miles) N of Brussels and capital of Antwerp province. Antwerp rose to commercial prominence in the 15th century and became a centre for English mercantile interests. The site of Europe's first stock exchange (1460), its commercial importance was affected adversely by the closing of the River Scheldt after the PEACE OF WESTPHALIA in 1648. The reopening of the river to traffic (1795) and improvements made by NAPOLEON I in c 1803 transformed Antwerp into one of the world's major ports. It is the site of the State University Centre (1965) and the Royal Museum of Fine Arts (1880-90). It possesses the fine large 14th-century Cathedral of Notre Dame. Industries: oil refining, food processing, shipyards, diamond cutting. Pop. 672,703.

Antwerp Mannerists, group of Antwerp painters, mostly unknown, who worked c 1510-30.

Antwerp School, school of painting that developed in the late 15th century and was strongly influenced by Italian art in its use of rich warm tones in intimate paintings. The school reached the height of its fame in the 17th century. In the early 16th century the ANTWERP MANNERISTS developed an over-elaborate Italianate style.

Anu, in Assyro-Babylonian mythology, the supreme god of the pantheon, chief of the triad Anu, Ea and Enlil. Anu is the sky-god, the ruler of destiny, and the creator of the four winds. See also p. 1507.

Anu, also Danu or Dana, in Celtic mythology, the earth mother. As the female principle in nature she was associated with the wind and with the birth and suckling of other deities. The Irish gods, and later the fairy folk of Irish folklore, were known as the people of the goddess Danu.

Anubis, jackal-headed god of the ancient Egyptians. Son of Nephthys and Osiris, he conducted the souls of the dead to the underworld and presided over mummification and funerals. In the myths, Anubis accompanied Osiris on his world conquest and buried him after his murder. See also p. 1339.

Auradhapura, town in Sri Lanka on the Aruvi River and capital of the North Central province. The former capital of the Sinhalese Kingdom, it is noted for its

Buddhist ruins, including several STUPAS, the Brazen Palace and the sacred bo tree. It is a famous pilgrimage centre and was founded in 437 BC. Pop. 30,000.

Anus, end of the alimentary canal, from the rectum to the exterior, through which waste material and solid excretions of undigested food are expelled from the body.

Anuszkiewicz, Richard (1930-), US painter. An originator of OP ART, he emphasizes visual sensation and optical illusion in his work, which is characterized by geometric shapes and vibrant colours. His best-known work includes *All Things Live in the Three* (1963).

Anxiety, in clinical psychology and psychiatry, emotional state similar to FEAR and involving apprehension and dread, but not associated with any specific event or stimulus. Chronic anxiety is considered to be one of the primary symptoms of NEUROSIS. See also EMOTION, pp. 1106, 1107, 1112, 1113, 1118.

Anyang, city in central China. The former capital of the ancient state of the Shang dynasty (17th-11th centuries BC), it is today an important trade area. Pop. 124,900.

ANZAC, short for Australian and New Zealand Army Corps, a volunteer force of 30,000 men which played a major part in the GALLIPOLI CAMPAIGN in WWI. They spearheaded the Gallipoli landings (25 April 1915), and also fought in France and the Middle East. About 8,500 ANZAC troops were killed during the war. ANZAC Day (25 April) is a public holiday in Australia and New Zealand. See also p. 1671.

Anzenberger, Ludwig (1839-89), Austrian novelist and dramatist. He wrote dramatic works, numerous short stories and two novels. He also wrote popular comedies and tragedies for the Viennese stage, including *Das vierte Gebot* (1877), but these had limited success.

Anzio, town in E central Italy, on the Tyrrhenian Sea. Supposedly founded by Anteias, it was a favourite resort of the Romans by 341 BC, and the birthplace of Caligula and Nero. Anzio was the scene of one of the bloodiest battles of the Italian campaign in WWII, when the Allies landed there in 1944. Industries: tourism, fishing. Pop. 23,500.

ANZUS Pact (Australia-New Zealand-United States Treaty Organization), defensive alliance organized by the United States in 1951 in response to waning British power, the KOREAN WAR, and alarm at increasing Soviet influence in the Pacific. The treaty stated that an attack on any one of the three countries would be considered as an attack on them all. See also p. 1735.

Aorta, the largest ARTERY in the body. Oxygenated blood passes from the heart's left ventricle through semi-lunar valves to the aorta. Outside the heart, the aorta curves and branches to form the arteries that carry the oxygenated blood to all parts of the body (except the lungs). See also CIRCULATORY SYSTEM, HEART, pp. 152, 153.

Aosta, Prince Amedeo Umberto, Duke of (1898-1942), Italian soldier. He was Viceroy of Italian East Africa (1937-41) and commander in the East African campaign (1939-41).

Aoudou, or Barbary sheep, wild SHEEP, found in N African rocky hills. It has a uniform reddish-brown coat and long, soft mane on throat and chest. Both sexes have large, backward-pointing horns. Length up to 1.9 m (6.25 ft). Family Bovidae, species *Ammotragus lervia*.

Apache, Athabaskan-speaking tribe of North American Indians that live in Arizona, New Mexico and Colorado. Divided culturally into Eastern Apache, including Mesquero and Kiowa, and Western Apache, which included Coyotero and Tonto, they migrated from the northwest in about AD 1000 with the Navajo but separated to form a distinct tribal group. They retained their earlier nomadic raiding customs, which brought them into military conflict with Mexico and the USA. They live in brush huts or tepees and are noted for their basketry. The total popula-

tion is approximately 11,000. See also pp. 1626, 1627.

Apartheid, South Africa's policy of racial segregation, translated as "separate development" from Afrikaans. The policy was made official by Daniel F. MALAN after his Afrikaner National Party came to power in 1948. Apartheid limits aspects of the lives of South Africa's Blacks and Coloureds (82.5% of the population), but is intended gradually to free them from economic and political subservience. South Africa left the British Commonwealth in 1961 in response to anti-apartheid criticism. See also pp. 1733, 2134.

Apatite, phosphate mineral, usually found as calcium phosphate associated with hydroxyl, chloride or fluoride ions. It occurs in igneous rocks and sedimentary deposits, as prismatic or tabular hexagonal crystals, as granular aggregates or in massive crusts. It is usually too soft for cutting and polishing, but there are two gem varieties. Hardness 5; s.g. 3.1-3.4.

Ape, term usually applied to the anthropoid apes - PRIMATES that are man's closest relatives. There are three great apes - CHIMPANZEE, GORILLA and ORANG-UTAN - and one lesser, the GIBBON. Apes differ from MONKEYS in being larger, in having no visible tail and in possessing more complex brains. Two monkeys are also called "apes" - the BARBARY APE of N Africa and Gibraltar, and the black ape of Celebes. See also pp. 102, 103.

Apeldoorn, resort city in the E Netherlands, N of Arnhem, with many beautiful gardens and Het Loo, the royal summer palace. Industries: drugs, furniture, paper, tourism. Pop. 124,000.

Aperture, in an optical instrument, the uncovered part of a lens or mirror through which light passes. In a telescope it is the clear diameter of the main mirror or objective lens and controls the instrument's light-gathering power. In a camera it is the "hole" (often called a stop) which controls the amount of light passing through the shutter to the film. Camera apertures are often variable - using a diaphragm - and are expressed as f-numbers (equal to the focal length of the lens divided by the diameter of the aperture), the larger the aperture, the smaller the f-number. See also pp. 628-633, 919.

Apes, in astronomy, point on the CELESTIAL SPHERE, located in the constellation of Hercules, towards which the Sun appears to be moving. As the Sun slowly orbits the galactic centre, nearby stars (as seen from the Earth) appear to move away from it because of the Sun's relative velocity.

Aphasia, condition usually associated with brain damage involving the loss or impairment of ability to communicate through language. It can mean that a sufferer is unable to write or make signs, or is unable to understand. It is often characterized by vague and confused speech. See also BRAIN DISORDERS p. 1073.

Aphid, or plant louse, winged or wingless, soft-bodied insect found throughout the world. It transmits virus diseases of plants when sucking plant juices. Females reproduce with or without mating, producing one to several generations annually. Length to 5 mm (0.2 in). Family Aphididae. See also COTTON APHID, HOMOPTERA, pp. 40, 326.

Aphorism, concise sentence expressing an important truth. Hippocrates published his famous series of precepts under the title *Aphorisms*. One of these, later translated by Chaucer, is: "The life so short, the craft so long to learn".

Aphrodite, Greek goddess of love, beauty and fruitfulness, identified by the Romans as VENUS. She was the daughter of ZEUS and Dione. Her husband was designated as Hephaestus (Vulcan), although she loved many gods and legendary mortals. Among these were ARES, ADONIS (whose death left her broken-hearted) and Anchises, who was the father of AENEAS. Statues of her include the Venus de Milo (Paris) and Aphrodite of Knidos (Rome). **Apia**, capital city and chief port in Western Samoa, on Upolu Island in the SW central Pacific Ocean, it is the location of

Aoudou or Barbary sheep (sometimes called uad) is the only wild sheep living in Africa

Apaches in New Mexico lived in tepees whereas those in Arizona used brush huts

Aphids are sometimes farmed by ants for the tasty honeydew which these insects secrete

Aphrodite represented the physical and spiritual aspects of love to the ancient Greeks

Apollo was the epitome of goodness and reason to both the Greeks and the Romans

Apollo programme at its culmination: the saluting of the American flag on the Moon

Apostles, portrayed here in a 9th-century manuscript, spread the doctrine of Christ

Karel Appel, whose ghostly fantasy pieces show the influence of primitive art forms

the government hospital Robert Louis STEVENSON spent his last years there. Products: coconuts, cacao, bananas, coffee. Area (island) 1,114sq km (430sq miles). Pop. (city) 32,600. See also p.2170

Apis, sacred bull of the Ancient Egyptians, worshipped at Memphis. The bull was sacred to OSIRIS, believed to be his incarnation, and was even mummified upon its death.

Ap Ivor, Denis (1916–), Irish-born composer of Welsh parentage, much of whose work employs the twelve-tone music system. His works include the cantata *The Hollow Men* (1939, revised 1946), based on T.S. ELIOT's poem, the ballet *Blood Wedding* (1953) and the opera *Yerma* (1957–58), based on gipsy plays by F. Garcia Lorca.

Apocrine gland, odour-producing gland in human skin, restricted mainly to the armpits and groin. In response to sex and stress stimuli, they secrete a liquid which is readily decomposed by bacteria to give odour. See also ECCRINE GLAND p.151

Apocrypha, certain books of the OLD TESTAMENT included in the Anglican and Roman Catholic canon (although only as deuterocanonical) but not those of the Jews and Protestants. They comprise 1 and 2 Esdras, Tobit, Judith, Wisdom, Ecclesiasticus, Baruch, 1 and 2 Maccabees and parts of Esther and Daniel. At the end of the Roman Catholic Old Testament, the books of 3 and 4 Esdras and the Prayer of Manasseh are also to be found, although they are not in the Anglican canon. These books are hardly ever read aloud in church but are nevertheless considered useful background information.

Apodiformes, order of birds that includes HUMMINGBIRDS and SWIFTS. They are among the most aerial and acrobatic of all birds, and have weak feet which make them unable to walk or hop. Unlike hummingbirds, some species of swifts are unable to perch on twigs or wires. See also p.73

Apogee, point in its orbit round the Earth of the Moon or an artificial satellite at which it is farthest from the Earth.

Apollinaire, Guillaume (1880–1918), b. Wilhelm Apollinarius de Kostrowitzky. He championed CUBISM and FUTURISM. His poetry, varying from the lyrical to the modernist, includes *Alcools* (1913) and the typographically experimental *Calligrammes* (1918). Other works are the short stories *L'Hérésiarque et cie* (1910) and the play *Les Mamelles de Tirésias* (1918).

Apollo, in Greek mythology god of the sun, archery and agriculture, patron of farmers, poets and physicians, founder of cities and giver of laws. He was the son of ZEUS and Leto, twin to Artemis. In the Trojan War he sided with Troy, sending a plague against the Greeks. See also p.1900

Apollo Belvedere, sculpture, in the Vatican museum, of the Greek god of sun or light. The most famous statue of this god, it is a Roman copy of an original Greek statue, probably by Leochares, 4th century BC. It influenced MICHELANGELO and other Renaissance artists.

Apollodorus (5th century BC), Athenian painter. He was called "Sciagraphus" (Shadow Painter) because he introduced shading into his work, all of which is now lost. He also experimented with foreshortening.

Apollodorus (2nd century BC), Greek scholar who wrote about history and theology. His best-known works are *On the Gods* and *Chronicle*, a history in poetry of Greece from the fall of Troy.

Apollonius of Tyana (fl. 1st century AD), Greek philosopher in the school of PYTHAGORAS. He travelled widely in India and also visited Babylon and Nineveh. Many of his contemporaries regarded him as a magician.

Apollonius Rhodius (3rd century BC), Greek poet. He was a pupil of CALLIMACHUS but disagreed with the views of his teacher on epic poetry. Apollonius is best known for his epic poem *Argonautica*. See also ARGONAUTS p.1208

Apollo programme, US project to land

men on the Moon. Initiated in May 1961 by President John Kennedy, it achieved its objective on 21 July, 1969, when Neil ARMSTRONG set foot on the lunar surface. The programme terminated with the successful Apollo-Soyuz linkup in space during July 1975, having placed more than 30 astronauts in space and 12 on the moon. See also SOYUZ PROGRAMME pp.930, 946 1022 1025, 1026, 1041

Apologetics, branch of theology concerned with the defence of Christian truth on intellectual grounds. A famous early Apologist was ORIGEN of Alexandria, whose Greek work *Contra Celsum* appeared in the 3rd century. Two celebrated Latin Apologists were TERTULLIAN (2nd century) and LACTANTIUS (4th century).

Apomorphine, powerful narcotic drug (C₁₇H₁₉NO₂) prepared from the opium alkaloid morphine. It is sometimes used in medicines as an expectorant and, when injected, as an emetic, but like many alkaloids it is an addictive drug which must be used carefully. See also p.1118

Apoplexy. See STROKE

Apostle, commissioned and authoritative messenger Jesus, who taught that he had been "sent" by the Father, in turn commissioned his twelve original disciples to carry out the purpose of God for man's salvation (Mark 3:14, Matt 10:1; Luke 6:13f). The first qualification for apostolic office was to have "seen the Lord". The twelve were the first apostles: Simon Peter, Andrew, James the son of Zebedee, John, Philip, Bartholomew (or Nathanael), Thomas, Matthew (the tax-collector), James the son of Alphaeus, Jude (Lebbaeus, or Thaddaeus), Simon the Zealot and Judas Iscariot (whose place was taken by Matthias). The term is also applied in the New Testament to St Paul who received his commission from Jesus in a vision on the road from Jerusalem to Damascus. In modern usage the title is sometimes given to the leader of the first Christian mission to a country, eg to St Patrick, the "Apostle of Ireland". See also pp.1244–1245

Apostles' Creed, statement of Christian faith, based on evidence in the New Testament and divided into three sections devoted to God the Father, his Son Jesus Christ and the Holy Spirit. The last section also affirms the tradition of the "holy Catholic Church, the communion of saints, the forgiveness of sins, the resurrection of the body, and the life everlasting". The text evolved gradually from very early times and its present form was fixed by the early 8th century. It is used widely in private and public worship in all the major Churches in the West. See also NIKENE CREED

Apostolic Succession, doctrine held by the Orthodox, Roman Catholic and Anglican Churches that bishops are successors of Christ's apostles, from whom they derive their commission in an unbroken chain of historic succession. The doctrine is held to be a guarantee of the continuity of the Church with the Church of the apostles. **Apothecary**, pharmacist, one who prepares and sells medicines and drugs. In Britain until 1617, when the Society of Apothecaries was formed, practitioners were not distinguished from physicians. An Act of Parliament of 1815 granted licences to practise following an approved course of study.

Apotheosis, act of deifying a human being. The Greeks elevated founders of cities and colonies to the status of gods after death. The Romans deified ROMULUS, CAESAR, AUGUSTUS and others. After Christianity became the official religion of the Roman Empire, deification of emperors gradually ceased.

Appalachians, mountain system running from Canada to Alabama, USA. They include the White Mts, Green Mts, Catskills, Alleghenies, Blue Ridge and Cumberland Mts.

Apparent movement, also called illusory movement, phi phenomenon, or the marquee effect, movement that appears to occur when two or more stimuli are turned on and off in rapid succession, if they are lights, a spot of light appears to jump from

one location to another. Motion pictures, which are really a series of sequential still pictures, make use of apparent movement. See also p.134

Appeal, in law, the review of a court's decision in an action, heard in a higher court. Normally either party to a law-suit may appeal but must generally show good reason for doing so—for example, a misinterpretation of the law by the judge concerned.

Appesment, policy in which one government grants unilateral concessions to another to forestall a political, economic or military threat. Appesment of Germany at MUNICH in 1938 at the expense of Czechoslovakia is considered a classic example. See also MUNICH AGREEMENT p.1360

Appel, Karel (1921–), Dutch painter, exhibited with the Cobra group from 1949 and settled in Paris (1950). His colourful paintings are in the ABSTRACT EXPRESSIONIST style. In 1960 he was awarded the International Guggenheim Award for his *Woman with an Osmich* (1957).

Appendicitis, inflammation of the APPENDIX caused by obstruction and infection. Symptoms include severe pain in the lower right abdomen, nausea and vomiting. Acute appendicitis is generally treated by surgery. A ruptured appendix can cause peritonitis and even death.

Appendix, finger-like organ, about 10cm (4in) long, located near the junction of the small and large intestines, usually in the lower right part of the abdomen. It has no known function in man but can become inflamed or infected (APPENDICITIS). See also pp.1068, 1069

Appennines (Appennino), mountain range extending the length of Italy, a continuation of the Alps. Unselective deforestation over the years has caused deep erosion and landslides. They are the location of numerous hydroelectric plants and sheep and goats are grazed on the slopes. The highest point is Mt Corvo Grande (2,914m, 9,560ft). Length 1,350km (840 miles). See also p.1920

Appert, Nicholas (c.1750–1841), confectioner and distiller who invented a method for preserving food in sealed glass containers, regarded as the forerunner to today's food canning.

Appia, Adolphe (1862–1928), Swiss theatrical designer. He revolutionized stage effects by introducing three-dimensional sets, and by his use of light to create atmosphere. His works include *The Staging of the Wagnerian Drama* (1895) and *Music and Staging* (1899).

Appian Way, ancient military road in Italy, constructed in c.312 BC by the censor Appian Claudius Caecus. Initially connecting Rome with Capua, it was later extended through Beneventum and Tarentum to Brundisium. It formed the first stage of routes to Greece and the East, portions of it remain today. Length approx. 563km (350 miles).

Apple, common name for the most widely cultivated fruit tree of temperate climates. Developed from a tree native to Europe and SW Asia, apples are propagated by budding or grafting. From the flowers, which require cross-pollination to produce a desirable fruit, the fleshy fruit grows in a variety of sizes, shapes and acidities, it is generally roundish, 5–10cm (2–4in) in diameter, and a shade of yellow, green or red. A mature tree may yield up to 1cu m (30 bushels) of fruit in a single growing season. Europe produces 50–60% of the world's annual crop, the USA produces 16–20%; and Japan, Korea, China, India, Australia, New Zealand, Argentina and Chile are also important producers. Apples may be eaten raw, cooked or made into jams, tarts, pies, puddings, preserves or sauces. The alcoholic drink CIDER is made from fermented apple juice. Family Rosaceae, genus *Malus*. See also pp.670, 671, 688, 689

Appiegarth, Robert (1834–1924), British trade union leader. He was secretary of the Amalgamated Society of Carpenters and Joiners in 1862, and became a leader of the "new unionism". See also p.1565

Appleton, Sir Edward Victor (1892–

(1965), British physicist. He was awarded the 1947 Nobel Prize in physics for the discovery of the Appleton layer of the ionosphere. This layer reflects radio waves, and its discovery spurred the development of RADAR. See also p.639

Applied art, use of artistic principles in objects in which art and utility are both considered. The term is generally used in distinction to fine art, such as painting and sculpture, which is judged chiefly in aesthetic terms, although the line between the two is sometimes hard to define. Examples of applied art are the design of a manufactured item, such as pottery, glass, furniture, jewellery and clothing. Illustration and graphic design are also applied arts. See also BAUHAUS

Applied mathematics, application of mathematical tools in science or engineering. More generally, it is a body of knowledge and theory with a mathematical structure including the abstract entities and formal rules of "pure" MATHEMATICS together with physical measurable quantities and physical laws. It includes mechanics, statistics and relativity theory. See also pp.806-807; 858-859

Applied psychology, use of psychological theory and techniques in problems of everyday life as diverse as industrial relations, military training, aircraft design, teaching, vocational guidance and mental health. An important task involves the determination of character traits and likely responses to given situations. See also pp.170-171, 1118-1119, 1122-1123

Appledore. See EMBOURDERY
Appomattox Court House National Historical Park, area in Virginia, USA, 110km (80 miles) w of Richmond, it was established in 1954 on the site of the Confederate surrender by Gen. Robert E. LEE to the Union army under Gen. Ulysses S. GRANT (1865). The park has a restoration of the McLean house where Grant and Lee signed the terms of surrender.

Appreciation, in economics, increase in the market value of an asset. It is usually not the result of any activity on the part of the current owner, a house may appreciate in value regardless of any improvements made or not made.

Apprenticeship, term of practical instruction in a craft or trade, usually over several years. Known since ancient times, the practice became highly organized in medieval Europe under the supervision of the GUILDS. Today government-regulated apprenticeship schemes are sponsored by trade unions and professional organizations.

Approved school, in Britain, school for delinquent children that had been approved by the Home Secretary under the Children and Young Persons Acts (1933-1963). In 1969, under a new Children and Young Persons Act, approved schools were discontinued in favour of community homes.

Après-Midi d'un Faune, L' (1876), poem by Stéphane Mallarmé which inspired a piece of music by Achille-Claude Debussy (1894). Vaslav Nijinsky choreographed a ballet of the same name (1912), using Debussy's music.

Apricot, tree cultivated throughout temperate regions, which botanists believe originated in China. The large, spreading tree with dark green leaves and white blossoms bears yellow or yellowish-orange edible fruit, with a large stone. Species *Prunus armeniaca*. See also p.689

April, fourth month of the year, having 30 days. Its name derives from the Latin *aprilis*, "to open", either because it is the time when buds begin to open or because the ground in the Northern Hemisphere is then opened to receive seed. Until 153 BC *Aprilis* was the second month in the Roman calendar. In some countries 1 April is known as All Fool's Day and people traditionally play practical jokes on each other.

Apse, in architecture, a semicircular or polygonal space sometimes at the end of an aisle, in a church or temple it may be the place of a choir, an altar or statue.

Apsis (pl. apses), either of the two points at the extremities of the major axis

of the elliptical orbit of a planet, comet or satellite. Perihelion and aphelion are the apses for a solar orbit.

Apterygiformes, order of birds that contains only the three living species of kiwis. See also pp.72,85,309

Apterygota, sub-class of small, wingless insects, worldwide

Apteryx. See KIWI

Aptitude test, examination designed to predict how well a person is likely to perform a particular task or job. Scholastic aptitude tests assess academic abilities and performances. Vocational aptitude tests measure abilities and skills involved in specific occupations, and may be used in vocational counselling (to help people find jobs they can do well) and vocational selection (to help employers screen job applicants).

Apuleian, Lucian (c.125-170), Roman author. His prose narrative *Metamorphoses* (or *The Golden Ass*) is the only classical Latin novel that has survived in its entirety. He also wrote philosophical treatises influenced by PLATO and Eastern mysticism.

Apulia (Puglia), region in se Italy, composed of the provinces of Bari, Brindisi, Foggia, Lecce and Ionia; the capital is Bari. Colonized by the Greeks, it was conquered by the Romans in the 3rd century BC. It became part of Italy in 1861. Products: wheat, almonds, figs, tobacco, wine, salt. Area: 19,345sq km (7,470sq miles). Pop. (1971) 3,582,787.

Aqaba, only seaport of Jordan, at the head of the Gulf of Aqaba, on the NE end of the Red Sea. Once a strong Roman military post, it was an important part of medieval Palestine. In 1917 it was captured from Turkey by T.E. LAWRENCE, and ceded to Jordan in 1925. Pop. 10,000.

Aquaculture. See FISH FARMING

Aquae Sulis. See BATH

Aqualung, breathing apparatus for skin-divers comprising a cylinder of compressed air or oxygen and helium which supplies these gases to the diver through a valve and a flexible tube ending in a mouthpiece. A harness attaches the cylinder to the diver's back. See also SCUBA DIVING; p.484

Aqua planing, water sport, similar to water skiing in that the rider is towed by a power-driven boat. In aquaplaning the rider places both feet on a board usually 1.68 by 0.76m (5.5 by 2.5ft), weighing 9-32kg (20-70lb), and slightly raised at the front. The rider achieves balance by holding two hand ropes fastened to each side of the bow of the aquaplane, and can travel at speeds of up to 100km/h (62mph). Aquaplaning originated in Florida in 1914, some eight years before water skiing.

Aqua regia, mixture of concentrated nitric and hydrochloric acids. Its Latin name means "royal water" and was given because the acid dissolves the "royal" metal gold. See also p.782.

Aquarium, tank, pond or building in which aquatic animals, usually fish, are held in captivity in fresh or salt water. Aquariums may be used for scientific research or for public or home entertainment. Fish were kept in captivity in Sumeria as early as 2500 BC, and the ancient Romans kept marine fish in large pools connected to the sea. The first indoor aquariums were developed by Chinese of the Sung Dynasty (960-1279), who kept goldfish in porcelain vessels. A UK aquarium may have minnows, sticklebacks, goldfish, axolotls and water-snails, together with a variety of useful aerating water plants. TROPICAL FISH require special care and conditions.

Aquarius, or the Water-bearer, equatorial constellation situated on the ecliptic between Capricornus and Pisces; the eleventh sign of the Zodiac. It contains the Saturn Nebula (NOC 7009), the globular cluster M2 (NOC 7089) and the Helix Nebula (NOC 7293). The brightest star is Beta Aquarii. See also pp. 1894, 1016.

Aquatint, method of engraving on copper to produce transparent tones. The copper plate, etched by acid through a porous ground of granulated resin, becomes tex-

tured and produces a speckled tone when printed. See also PRINTMAKING

Aquaviva (Acquaviva), Claudio (1543-1615), general of the Jesuits, who drew up a practical code of education.

Aqueduct, artificial channel or conduit, often an elevated masonry or brick structure, for conveying water from source to destination. Among ancient examples there exist traces of aqueducts built in Assyria and Egypt. The Greeks also built conduits. The most ambitious aqueducts in the classical period were built by the Romans. See also pp.539, 542, 544.

Aqueous humour, watery fluid that fills the eyeball between the lens and the cornea. It serves a double purpose to nourish the eyeball and to refract, or bend, light rays, so helping them to focus on the retina. See also VITREOUS HUMOUR; pp.136-7.

Aquifer, rock, usually sandstone or limestone, which because of its porosity and permeability is capable of both storing and transmitting water. Much of the world depends for its water supply on aquifers, which may be exploited directly by sinking wells or by pumping the water into a reservoir. See also pp.216-217.

Aquilegia. See COLUMBINE

Aquinas, Saint Thomas (1225-74), Roman Catholic theologian and philosopher. He played a leading part in the 13th-century movement of SCHOLASTICISM. Aquinas joined the Dominican Order and followed the Aristotelian ALBERTUS MAGNUS to Paris in 1245. Thereafter Thomas refused ecclesiastical positions in order to preach and work on his most important treatise, *Summa Universae Theologiae* (1266-73). Reconciling Aristotelianism with Christian theology, he argued that revelation could not conflict with reason, and while separate, both rested on the one absolute Truth - the existence of God. He provided five proofs of God's existence. He was canonized in 1323. See also pp. 1322-1323, 1884, 1884-1887.

Aquitaine, historical region in sw France, named after a Celtic tribe, the Aquitani, and called Aquitania by the Romans. It became an integral part of the Roman Empire in 56 BC and included all the land between the Pyrenees and the Garonne. Independent for a time during the early Middle Ages, it became part of France and then England. In the early 13th century all but the southern part (Gascony) was returned to France, the rest was returned in 1453. See also pp.1346-1347.

Arab, peoples of many nationalities found predominantly in the Middle East and North Africa, who share a common heritage in the religion of Islam and their language (Arabic). Most Arabs are either agriculturalists or city dwellers; the remainder practise pastoralism, raising camels, sheep and goats. The patriarchal family is the basic social unit in a strongly traditional culture that has been little affected by external influences, although wealth from oil is bringing rapid modernization. See also pp.608-609, 772-774, 781, 1108, 1278-1279, 1282-1287, 1304, 1305, 1354-1355, 1670-1671, 1782-1783, 1878, 1895, 1917.

Arab Emirates, Union of, also known as the United Arab Emirates, federation of seven states on the Persian Gulf. Its capital is ABU DHABI. The land is mostly desert and oil production is central to the state's economy. See p.2158.

Arab horse, horse bred in Arabia before the 7th century AD and the first to be developed for endurance and speed. It was used as parental stock for many later breeds. Its coat is bay, chestnut, grey or brown. Height: 1.4-1.5m (4.6-5ft) at the shoulder.

Arabia, peninsular region of sw Asia bordered by the Persian Gulf (to the E), the Arabian Sea (S), the Syrian Desert (N) and the Red Sea (W). It was unified by the Muslims in the 7th century and dominated by Ottoman Turks after 1517. Hussein led a successful revolt against the Turks and founded an independent state in the Hejaz region in 1916, but the Saud family defeated Hussein in a violent siege and founded Saudi Arabia in 1925. Britain

Aquatint, an engraving process designed to imitate the effect of ink or wash drawings

Aqueducts were a feature of Roman engineering. This is the Pont du Gard, Nîmes

Aquifer, the geological formation vital in the provision of domestic water supply

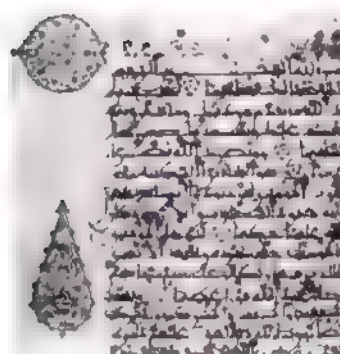

Arab horse: a slender short-backed breed noted for its intelligence, grace and speed

Arabian Nights, The

The Arabian Nights includes the tale of the sultan and Scheherazade, the story teller

Arabic's 28 consonants read from right to left, the vowels are marked above and below

Fatty Arbuckle, seen here with Buster Keaton in a scene from *Good Night Nurse* (1918)

Arbutus is a member of the heath family, best-known is the strawberry tree (*A. unedo*)

had protectorates there, but after ww2 British influence declined greatly and Arab nations have become increasingly independent Area: approx. 2,600,000sq km (1,000,000sq miles) Pop. approx 20,000,000. See also pp.2068, 2088, 2126, 2158.

Arabian Nights, The, (*A Thousand and One Nights*), originally called *Alf Laylah Wa Laylah*. Of a variety of origins - Arab legends, Indian and Persian fairy tales and Egyptian love stories - the tales were compiled in written form from oral tradition as long ago as the 15th century in the colloquial Arabic language.

Arabian Sea, nw arm of the Indian Ocean, bordered by Somalia and the Arabian Peninsula (w), Pakistan (n), India (e) and the Indian Ocean (s). In the nw, the Gulf of Aden links it to the Red Sea, and the Gulf of Oman links it to the Persian Gulf. The River Indus is the only major river with an outlet into the Arabian Sea. Medieval trade routes between Arab kingdoms and the Chinese Empire passed through the Arabian Sea and the Persian Gulf. Area: 3,108sq km (1,200sq miles).

Arabic, Semitic language. Classical Arabic is the language of the Muslim scriptures, the KORAN. With many colloquial variations, the written form is understood in all Muslim countries across northern Africa to Iraq. Originating in the Arabian Peninsula, it spread with Islamic conquests in the 7th and 8th centuries. It is estimated that 100 million people now speak Arabic. See also p.1878.

Arabic numeral, any of the common notations 0 to 9. See NUMERAL; p.780.

Arabis, or rock cress, flowering plant found growing on sand dunes, belonging to the Cruciferae (wallflower family). Cultivated species are used in rock gardens.

Arab-Israeli Wars (1948-49, 1956, 1967, 1973-74), conflicts between Israel and the Arab states. After being established in 1945 Israel made substantial gains from the Palestinians. Israeli independence (14 May 1948) saw troops from Egypt, Iraq, Lebanon, Syria and Transjordan (modern Jordan) invade the country. Initial Arab gains were halted and armistices arranged at Rhodes (Jan.-July 1949). UN security forces upheld the truce until Oct. 1956 when Israeli forces under DAYAN attacked the SINAI PENINSULA, supported a few days later by France and Britain, alarmed at the nationalization of the SUEZ CANAL. International opinion forced a ceasefire in Nov. when Israel surrendered gains after being guaranteed access to the Gulf of AQABA. In 1967 guerrilla raids led to an Israeli mobilization. In the ensuing SIX DAYS WAR, Israel captured Sinai, the GOLAN HEIGHTS on the Syrian border and the Old City of JERUSALEM. In 1973, after intermittent hostilities, the Arabs again began to prepare for war. Egyptian and Syrian forces invaded on 6 Oct. 1973, on Yom Kippur, a Jewish holiday. Israel pushed back their advance after severe losses. Disengagement talks began on 26 Dec, but fighting continued until 1974. See also pp.1782, 2074, 2086, 2088, 2244.

Arab League, organization formed in 1945 to give a collective political voice to the Arab nations. Its members include Syria, Lebanon, Iraq, Jordan, Sudan, Algeria, Kuwait, Saudi Arabia, Libya, Morocco, Tunisia, Yemen, People's Democratic Republic of Yemen, Qatar and the United Arab Emirates. Its main sphere of activity is economic: in 1953 it set up an Arab Telecommunications Union, in 1954 a postal union was organized and in 1959 a financial organization (Arab Bank) was developed. The Arab Common Market was formed in 1965 and is open to all members. Political unity has been hampered by divisions over attitudes to the Western nations.

Arachnid, arthropod (animal with jointed limbs) of the class Arachnida, which includes SPIDERS, TICKS, MITES, SCORPIONS and HARVESTMEN. Arachnids have four pairs of jointed legs, two distinct body segments (cephalothorax and abdomen) and chelicerae jaws (consisting of clawed pincers). They lack antennae and wings. See pp.32-34.

Arad, city in w Romania, 420km (265

miles) nw of Bucharest, on the River Muresul. It passed from Turkish, to Austrian then to Hungarian rule (1699). In 1849 Hungarians used the city as their headquarters for the revolt against the Hapsburg empire. Arad, which became part of Romania in 1919, has the state theatre, a philharmonic orchestra, a museum and an 18th-century citadel. Industries: engineering, electrical equipment, textiles, distilling. Pop. 146,000.

Arakat, Yashir (1929-), leader of the Palestine Liberation Organization (PLO), one of the first Palestinians to advocate guerrilla war against Israel. In 1974 the PLO was recognized by Arab leaders as the sole legitimate representative of the Palestinian people. See also p.1785.

Arafura Sea, shallow stretch of water between Arnhem Land, the N central promontory of Australia, and New Guinea. It contains several Indonesian island groups. The dangerous Torres Strait at the S end links it with the Coral Sea. Area: approx. 650,000sq km (250,000sq miles).

Aragon, Louis (1897-), French novelist, poet and essayist. A founder of the Surrealist movement with the review *Littérature* (1919), Aragon advocated "automatic writing". Early poetry includes *Feu de Jone* (1920). He visited Russia in 1930, became a Communist, and turned to social realism and the dissemination of Soviet literature. Later works include a series of novels *Le monde réel* (1933-42), the autobiographical novel *Blanche ou l'oubli* (1967) and a two-volume novel about the life of the painter Henri Matisse (1971).

Aragon, region in NE Spain, bordered by the Pyrenean mountains (to the N), the Iberian mountains (S), Catalonia (E), and Old Castile (W); formerly part of the ancient Roman province of Hispania Tarraconensis. In 1479 the Kingdom of Aragon became part of Spain, but retained its own government, currency and military forces until the early 18th century. It is an agricultural region producing grapes, wheat and sugar-beet. Industries: textiles, chemicals, iron ore, marble and limestone. Area: 47,670sq km (18,500sq miles). Pop. 1,152,700.

Arakan Coast District, division of w Burma, extending along the coast of the Bay of Bengal and bordered in the E by the Arakan Yoma range. The capital is Sitwe. Products: tobacco, rice. Area approx. 36,500sq km (14,000sq miles). Pop. (1971) 1,847,000.

Arak Sea (Aralskoye More), formerly Lake Aral, inland sea in the USSR, central Asia. The world's fourth largest inland body of water, it has no outlet, contains many small islands, and is fed by the rivers Syrdarya in the NE and Amudarya in the S. It is generally shallow and only slightly saline, indicating its geologically recent separation from the Caspian Sea 400km (250 miles) to the E. The shores are sparsely populated, mostly in the NE in the Aralsk and Novokizlinsk areas. Area: 68,681sq km (26,518sq miles).

Arameans, North Semitic people who lived in Aram and northern Syria from the 11th to the 8th century BC. They were incorporated into the New Babylonian, or Chaldean, empire by the 8th century.

Aramaic, Biblical Semitic language, the original language of parts of the Old Testament. After the Babylonian captivity, it was the common written and spoken language of the Middle East until replaced by ARABIC. Minor dialects still persist today in parts of the Near and Middle East. See also pp.605, 609.

Aras Islands, group of small islands off the W coast of Northern Ireland at the entrance to Galway Bay, the chief islands are Inishmore, Inishmaan and Inisheer. They are of pre-Christian archaeological interest. Area: 47sq km (18sq miles). Pop. 2,270.

Aranya, See ARUNTA.

Arany, János (1817-82), Hungarian epic poet. He was secretary of the Hungarian Academy (1865-79) and wrote many ballads and lyrics. His best-known work was an epic trilogy on the life of the hero Toldi (written 1846-79).

Ara Pacis (9 BC), Roman Altar of Peace,

whose rich bas-relief carvings provide a contemporary picture of the era of AUGUSTUS. See also p.1240.

Ararat, town in Victoria, Australia, at the foot of Mt Ararat, 177km (110 miles) NW of Melbourne. Industries: textiles, wine. Pop. 8,300.

Araucanian, independent language family of South American Indians who live in Chile and Argentina. A loose confederation of Araucanian-speaking sub-tribes including the Picunche, Mapuche and Huilliche, they offered strong resistance to the Spanish invasion under Diego de ALMAGRO in 1536 and were never completely conquered, although Pedro de Valdivia set up a Spanish province in 1541. They drove the Spaniards back to the Bio-Bio River in 1598 and retained possession of interior portions of Chile to the present time. Their descendants prefer the name Mapuche, meaning "land people". The population has declined from approximately 1 million in the 16th century to about 300,000 today.

Araucaria, genus of evergreen trees native to the Southern Hemisphere. They have scale-like leaves and seed-bearing cones. Family Araucariaceae. See also MONKEY PUZZLE, NORFOLK ISLAND PINE; p.326.

Arawak, the largest and most widely spread South American Indian language family, at one time spoken from the Caribbean to the Gran Chaco. Some 40 Arawak tribes remain in Brazil today.

Arbitration, submission by disputing parties to a ruling made by an arbiter chosen by them to decide between them. In some countries such rulings or decisions may be enforced by the government. Arbitration is a procedure most commonly used in commercial and industrial disputes, although it may be employed to settle international disagreements - often before the United Nations International Court of Justice, based at The Hague, Netherlands. Arbitration was practised in the Middle Ages when high ecclesiastical authorities were called upon to settle controversies.

Arbly, Frances d'. See BURNBY, FRANCES.

Arbor Day, day celebrated by the planting of trees, usually by school children. First suggested by the US politician Julius Sterling Morton in 1872, Arbor Day occurs at different times throughout the USA because of varying planting seasons.

Arbor vitae, common name for six species of trees or shrubs of the genus *Thuja*, resinous, evergreen conifers of the cypress family native to North America and Asia. They have thin outer bark, fibrous inner bark, and characteristically flattened branches. Family Cupressaceae.

Arbroath, town and seaport of E Tayside region, E Scotland, it is a tourist resort. Industries: fishing and engineering. Pop. 22,600.

Arbuckle, Roscoe ("Fatty") (1887-1933), US star and director of silent films who starred in Mack Sennett Keystone Comedies (1913), and became an actor-director in 1914. He later appeared in short films with CHARLES CHAPLIN and BUSTER KEATON. Charged with manslaughter over the death of a model (1920), he was acquitted (1922), but his career was ruined.

Arbutus, genus of evergreen trees and tall shrubs native to the Mediterranean region and W North America. They have dark green, glossy leaves and reddish brown bark. The urn-shaped flowers are white or pink, and the strawberry-like fruit is red or orange. Family Ericaceae.

Arc, geometric, portion of a curve. For a circle, the length (s) of an arc is the product of the angle (θ) it subtends at the centre, measured in RADIANS, and the radius (r) that is $s = rθ$.

Arcadia, ancient region in Peloponnesus, Greece, completely surrounded by mountains. The chief city, Megalopolis, was founded c 370 BC. It became the centre of political activity and the capital of the Arcadian Confederacy, although by the

end of the 2nd century AD it was in ruins. **Arcadia** (1504), pastoral romance by Jacopo Sannazaro, consisting of 12 verse eclogues interspersed with 12 prose narratives. It influenced many authors, including Tasso, Sidney, Spenser and Cervantes. Dignified and musical in style, it is noted for the principal, autobiographical character, Sincero.

Arcadia, pastoral romance (1590) by Sir Philip Sidney. It consists of prose tales interspersed with verse and was intended to teach morals as well as to entertain. Three versions exist, two by Sidney and one with alterations by the Countess of Pembroke, his sister.

Arc de Triomphe, commemorative monument in Paris begun in 1806 by Napoleon to celebrate his victories. Completed in 1836, it still stands in the Place Charles de Gaulle, at the western end of the Champs-Élysées.

Arch, Joseph (1826–1919), British Methodist preacher and politician. In 1872 he founded the National Agricultural Labourers Union and was its first president. He was an MP in 1885–86 and 1892–1902, one of the first representatives of labour at Westminster.

Arch, in construction, curved self-supporting structure used to support a load, such as a bridge or a ceiling. A stone arch is made from wedge-shaped stones to prevent slip, and achieves its stability only after the keystone (the top-most and largest stone) is in position. The weight of each stone and the load they bear are essential for the arch's stability. The weight being supported is transmitted through adjacent stones to points called imposts on the vertical supports. Modern arches are made from steel or reinforced concrete units. See also pp.532–535.

Archaeus, precambrian geological period. It ended 570 million years ago at the beginning of the Palaeozoic. See also pp.268–269.

Archaeology, scientific study of former human life and activities through material remains (fossils, artefacts and buildings). An archaeologist's work includes excavation and retrieval of remains from the ground or sea-bed, recording and interpreting the circumstances in which objects were found (such as their level in the soil and association with other objects), thorough examination and description of their finds; and hence the building up of a picture of the culture that produced the objects. In the study of cultures that developed the art of writing, written remains supplement other material, but archaeology increasingly relies on the aid of various scientific techniques to increase knowledge about the past. See also pp.108–119, 1154–1155.

Archaeopteryx, first known bird. About the size of a crow and fully feathered, its fossilized skeleton is more like that of a reptile than a modern bird, and its beak had pronounced jaws with teeth. It was probably capable only of weak, flapping flight. See pp.184, 281, 282.

Archangel, superior angel. The archangels Michael, Raphael, Gabriel and Uriel stand on all sides of God's throne. **Archangel** (Archangel'sk), city and port in NW USSR, at the head of the Dvina Gulf and the northern Dvina delta. During the winter icebreakers have to keep the large harbour clear. It was originally settled in the 10th century by Norsemen, but founded officially as Novo-Kholmogory in 1583. The city was opened to European trade in c.1600 by Boris Godunov, and it prospered as Russia's only port until 1703. The monastery of Archangel Michael was built there between 1685 and 1699. The port received Allied convoys during WWII. Industries: shipbuilding, timber, wood pulp, paper. Pop. 376,000.

Archbishop, chief bishop or metropolitan of an ecclesiastical province or archdiocese. See also bishop.

Archdeacon, in the Roman Catholic and Anglican Churches, a high-ranking diocesan official with many administrative responsibilities.

Archer, Fred (1857–86), British jockey. In 8,084 races he rode 2,748 winners, including 21 classics; he was a champion

jockey for 13 consecutive seasons. He committed suicide when only 29, at the peak of his career.

Archer, William (1856–1924), British theatre critic and dramatist whose best known play was *The Green Goddess* (1921). His translation of Ibsen's *Samfundets Støtter*, performed in London as *The Pillars of Society* (1880), occasioned much critical hostility.

Archer fish, fish found in brackish waters of SE Asia and Australia. It is yellowish-green to brown with dark markings, and catches insect prey by spitting water "bullets". Length up to 20cm (8in). Family Toxotidae, five species include *Toxotes jaculator*. See also p.63.

Archery, sport that makes use of a bow and arrow. Archers try to accumulate points by shooting a specified number of arrows at a target that consists of five concentric circles, the innermost circle being the "gold". Other than target-shooting, the three other divisions of archery are field, flight and cross-bow. Archery was the prime military weapon used before the advent of gunpowder and was revived as a sport in England in 1676 by Charles II. Its popularity grew after the Grand National Archery Association, the sport's first governing body, was formed in England in 1861.

Archetype, in the psychology of Carl Jung, primordial symbol or idea present in the "collective unconscious" and inherited from ancestors. Archetypes occur in dreams, myths, religion, art and fairy tales. The term is often used in literary criticism to describe archetypal characters, such as Mother or Hero, and archetypal situations such as Birth or Rites of Passage. See also p.1120.

Archilochus (7th century BC), Greek poet. Fragments of his intense, personal lyrics still survive. He is considered to be the first Greek poet to write about individual experiences and emotions.

Archimedes (287–212 BC), Greek mathematician and engineer. He developed a method for expressing large numbers and made outstanding discoveries about the determination of areas and volumes, which led to a new accurate method of measuring π (pi). In his work *On Floating Bodies* he enunciated "The Principle of Archimedes", which states that a body in a fluid is buoyed up by a force equal to the weight of the fluid it displaces. An Archimedean screw is a machine used for raising water, thought to have been invented by Archimedes. It consists of a cylindrical pipe enclosing a revolving helix, with its lower end in the water. See also pp.770, 830, 838.

Archipelago, name given either to a region of ocean where many islands are clustered, or to the islands themselves.

Archipenko, Alexander (1887–1964), Russian-American sculptor, one of the first in the cubist style, which he later rejected in favour of abstract sculpture. His use of hollows to complement mass in depicting the human form, as in *Walking Woman* (1912), has influenced many sculptors. His many innovations have included the collage sculpture (using wood, glass, metal, etc.).

Architecture, art and science of building and an indication of a civilization's beliefs and ideas at a given time. The development of architectural style and expertise can be traced through extant examples, which serve as visual evidence of the progress of man. Architecture in its earliest form occurred in ancient Egypt and Mesopotamia, where the impulse to build was heightened by powerful dynastic and religious motivations.

Until the 20th century there were three major structural systems: the trabeate system, employing horizontal beams and vertical posts, the arch (and its developments, the vault and dome), and the steel-frame system of the late 19th century. Trabeate architecture in its earliest related form is evident in Egypt's tombs (mastabas) erected before 3000 BC, and in the brick temples and palaces of the same period built by the Babylonians and Assyrians, who also constructed brick vaulted roofs. Greek temple architecture

(7th–4th centuries BC) represents the trabeate system at its most perfect in proportion and subtle in detail.

The Romans combined the trabeate system and the round arch, and erected a wide variety of buildings (temples, theatres, amphitheatres, aqueducts, baths, etc.) throughout their empire. The development and extensive use of concrete enabled them to span vast areas with vaulting and to develop the dome, seen at its most impressive in the Pantheon, Rome (AD 120). The Romans and early Christians, like the Greeks, also used wooden truss roofing in their basilican halls and churches (essentially a development of the Greek temple).

The Byzantines perfected the pendentive, which they employed so brilliantly in the dome of Hagia Sophia, Constantinople. Dating from the late 9th century, Romanesque architecture was characterized by massive arches and vaults of finely cut stone. Early Gothic architecture introduced the pointed arch (hitherto used only in Muslim building) and buttress, making the possibilities endless for taller buildings with higher vaults and windows. Gothic as a consistent style began in France c.1140 with the cathedrals of St Denis, Notre Dame de Paris, Amiens and Chartres. It predominated in Western Europe until the rise of Renaissance architecture in the 15th century. This heralded a period of nearly five hundred years during which no major structural innovations emerged, although the forms of Antiquity (first Roman and later Greek) were revived and presented in countless permutations and styles, including Mannerist, Baroque, Rococo and Georgian. This eclecticism continued into the first half of the 19th century with Neoclassicism and the Gothic Revival.

By mid-century architects, tiring of the long imitation of historic styles and confronted with the demands of a society being rapidly transformed by technology, industry and speed, searched for new aesthetic and structural forms. A landmark was the use of prefabricated iron and glass, notably in the Crystal Palace (1851), which inspired the great railway terminals of the era. The last great technical breakthrough of the century occurred in the 1890s in the USA with the development by W. Jenney, H.H. Richardson, Burnham and Root and Louis Sullivan of the steel-frame multi-storey building – ancestor of the modern skyscraper. In the 20th century this was exploited in the USA by Mies van der Rohe, Frank Lloyd Wright and others. Further inventions, such as reinforced concrete and pre-stressed concrete, were employed to create new forms. Distinguished European pioneers included Walter Gropius and Le Corbusier, two of the most powerful and original influences of the century. In contemporary architecture, whether in flats on stilts or the geodesic domes of Buckminster Fuller, innovative ideas and designs find expression in structures still built in response to the changing needs and functional requirements of society. See also articles under styles, eg Art Nouveau; individual architects, eg Andrea Palladio; structural elements, eg Basilica, etc. for further information on architecture.

Architrave. See ENTABLATURE.

Archives, documentary materials accumulated and preserved for their historical and literary value. The concept of archives located independently from a library reached full development during the French Revolution.

Arciniegas, Germán (1900–), Colombian writer, politician, diplomat and educator. The theme of liberalism permeates his essays, biographies and histories. He lived in exile in the USA from 1942 to 1960 teaching at Columbia University.

Arc-lamp, device in which light is produced by an electric arc between two electrodes. Many modern arc-lamps, used as sources of intense light, have metal and oxide electrodes immersed in a gas which becomes luminous during arcing.

Arcoot, town in SE India, on the Palari

Archer fish catch flying insects by knocking them down with a forceful spit

Archery: originally used in hunting and waging war, is nowadays an international sport

Archimedes discovered that a floating body displaces an equal weight of water

Architecture: the new National Theatre on the South Bank, London

Arctic

River, 105km (65 miles) w of Madras. It was ceded to the British by the French in 1801. It is an agricultural market town and the chief industry is textiles. Pop. 25,000.

Arctic, vast region of icy seas and cold lands around the North Pole, often defined as extending from the Pole to the Arctic Circle, latitude 66°30'N. In areas N of this latitude the sun does not set during the height of summer nor rise during the depths of winter. Other definitions place the limit of the Arctic proper at the tree line, the northern boundary of forest growth, or make the limit the summer isotherm of 18°C (50°F). The more southerly areas are frequently referred to as the subarctic. At the centre of the Arctic is the Arctic Ocean, with its many seas and inlets. The Bering Strait gives access to the Pacific Ocean and the Greenland and Norwegian seas provide a connecting passage to the Atlantic that is some 1,600km (1,000 miles) across. The ocean's area is about 12,257,000sq km (4,732,400sq miles). In the region around the North Pole the waters of the Arctic are permanently covered with sheet ice or a floating mass of ice debris called the ice pack, but some parts of the ocean are frozen only in winter. When the ice starts to melt in the spring it disintegrates into floes and drifting pack ice. Icebergs have their origins in fresh water glaciers flowing into the ocean from the surrounding lands.

Lands and climate Bordering the Arctic Ocean are the most northerly lands of Asia, Europe and North America. By far the greater part of the huge frozen sea and of Greenland lies N of the Arctic Circle. Five-sixths of Greenland's surface is always hidden by a thick ice-cap, although arctic lands generally have a summer that is free from ice and snow. Most of the arctic tundra is flat and marshy in summer but the subsoil is permanently frozen to a considerable depth. This frozen subsoil is called permafrost. For most of the year arctic temperatures are below freezing point. In spring the sun appears, and some arctic lands have sunshine every day from March or April to September.

Plant and animal life Mosses and lichens are the characteristic tundra vegetation, but many other kinds of plants are found too: sedges, grasses and flowers. Several kinds of trees and woody shrubs grow, but almost always in a dwarfed form. The commonest trees are willow, alder and birch. When the winter snows melt in tundra areas, the vegetation bursts into life and colour. Tundra is found in the subarctic as well as in the more northerly latitudes, but many parts of the subarctic are covered in thick evergreen forests of fir, pine, spruce and larch. Coniferous forests of this kind, called taiga, stretch seemingly endlessly across Siberia. The name taiga is also used for subarctic forests in North America. Much of the animal life of the Arctic is made up of summer visitors that move in winter, but some mammals and birds have adapted to survive arctic conditions the whole year round. The commonest land mammals include polar bears, reindeer, arctic wolves, arctic foxes, caribou, lemmings, voles, ermines and martens, whales, walrus and seals live in the sea. Land and fresh water birds include ptarmigan, snowy owls, plovers and falcons. Among sea birds the commonest is the old squaw duck, others include auks, gulls, terns and petrels.

People Despite the severity of the climate and the restricted food resources, many peoples live in the Arctic. The most scattered are the 60,000 or so eskimos spread across polar North America, including Greenland and NE Siberia. Several culturally separate groups of people live in northern Siberia. They include the Chukchi of the Chukchi Peninsula, the Kamchadals of Kamchatka, the Yakuts and the Samoyeds. In the European part of the USSR there are the numerous Zyryans and in Lapland - northern Norway, Sweden and Finland - the Lapps. Most of these peoples follow ancient traditional patterns of life, but the discovery of great mineral wealth in arctic lands, especially in Alaska and the USSR, is

already bringing change to their homelands. See also pp. 1929, 2056, 2156.

Arctic fox, also called white fox or polar fox, fox found on tundra or mountains of the Arctic. It changes in winter either from grey-brown to white or grey to grey-blue. Length 50-60cm (20-24in).

Arctic tern, sea bird whose migrations are the longest of any bird - from summer breeding areas in the far north to wintering areas in Antarctica, a round trip of about 35,500km (22,000 miles). It has grey, black and white feathers and a reddish bill and feet. It nests in colonies and lays one to four eggs in a sandy scrape nest. Length 38cm (15in). Species *Sterna paradisaea*. See also p. 74.

Arcetum, or **Alpha Bootis**, red giant star in the constellation of Boötes. Characteristics: apparent mag. -0.06, absolute mag. -0.2, spectral type K2, distance 36 light years. See also p. 978.

Ardabil, city in NW Iran, on the Qareh Su River, near the USSR border. It has become important as the birthplace of Safi ad-Din (founder of the Safavid Order) and site of the Safavid Shrine visited by pilgrims. Products: carpets and cereals. Pop. 90,000.

Ardashir I, King of Persia (c. 224-41). He overthrew the last Parthian king, Artabanus V, and re-united Persia. He founded the Sassanid dynasty and established Zoroastrianism. He strengthened Persia by going to war against the Roman emperor, Alexander Severus.

Ardens, Elizabeth (1884-1966), Canadian-born US cosmetic manufacturer. She founded, and gave her name to, an international organization of health farms and beauty salons. Her organization also manufactures a complete range of world-famous beauty products.

Ardens, John (1930-), British playwright, whose plays, eg *The Waters of Babylon* (1957) and *Live Like Pigs* (1958), are often an exciting mixture of poetry, prose and Brechtian ballads, used to develop universal themes. *Sergeant Musgrave's Dance* (1959), produced throughout the world, is widely accepted as a masterpiece of modern British drama.

Ardennes (Forest of Ardennes), sparsely populated wooded plateau in SA Belgium, N Luxembourg and the Ardennes département of N France. The chief towns are Charleville-Mézières and Wiltz. It was the scene of heavy fighting in both world wars, notably in the Battle of the Bulge (Dec. 1944-Jan. 1945). In the well-preserved forest areas, wild game is abundant and cleared areas support arable and dairy farming.

Ardizzone, Edward (1900-1979), British artist and book illustrator of great individuality and author of children's books. He was an official war artist (1940-46).

Area, two-dimensional measurement of a plane figure or body (eg this page) given in square units, such as cm² or in². The area of a rectangle of sides *a* and *b* is *ab*, the areas of triangles and other polygons can be determined using trigonometry. Areas of curved figures and surfaces can be determined by integral calculus. See also SURFACE AREA; pp. 782-783, 798.

Arecia, genus of flowering plants, commonly known as palms. It includes the areca palm, *A. catechu*, from which edible BETEL NUTS are obtained.

Arecibo radio telescope. See RADIO TELESCOPE.

Arensky, Anton Stepanovich (1861-1906), Russian composer. He was professor of composition at the Moscow Conservatory and in 1895 became conductor of the Imperial Chapel Choir. He is best remembered for his chamber music and songs, he also wrote operas, including *Dream on the Volga* (1892).

Areola, in anatomy a small area of the body, such as the iris of the eye or the darkened bit around the nipple of a breast. **Areopagitica** (1644), pamphlet by John Milton giving the text of a speech in defence of freedom of the press. Under the Cromwellian Commonwealth in England books required a parliamentary licence before publication. Milton called this an affront to learning and noted the parallel between such licences and the

censorship imposed by the Papacy during the Inquisition. See also p. 1424.

Arequipa, city in S Peru and capital of Arequipa department, which extends along the Cordillera Occidental and is bounded in the W by the Pacific Ocean. The city is a regional trade centre and the site of two universities founded in 1828 and 1961. It was established in 1540 by Francisco Pizarro on the site of an INCA settlement. Pop. 194,700.

Ares, Greek god of war, identified by the Romans as Mars. He was the son of Zeus and Hera and the lover of Aphrodite. Ares' activities consisted of making war and love. In the Trojan War he sided with the Trojans, whose leader, Hector, received his personal protection. Among his offspring were Alcippe, Harmonia and Cynos, who was slain by Hercules. In art Ares is often represented as a stalwart figure with a helmet, shield and spear. **Areteus**, respected Greek physician of the 1st century in Cappadocia. He also practised in Rome and Alexandria, and was a follower of the teachings of Hippocrates. See also p. 1076.

Arête, sharp ridge, peak or horn formed by erosion where two glaciers meet. An example is the Matterhorn on the Swiss-Italian border. See also pp. 224, 225.

Arretino, Pietro (1492-1556), Italian Renaissance satirist. Vigorous, bawdy, often scurrilous, his six volumes of letters (1537-57) and many other works vividly portray contemporary court society. He also wrote five comedies (1534-46).

Arretino. See SPINELLO, ARRETINO. **Arezzo**, city in central Italy; capital of Arezzo province in the Toscana region. As the former Etruscan town of Arretium, it became famous for Arretine red-clay vases. There are numerous 14th-century houses and palaces, an Etruscan museum and a cathedral (1286-1510). It is an agricultural, trade and transport centre. Industries, textiles and food processing. Pop. 81,800.

Argali, or **arkal**, wild sheep native to the highlands of central Asia. The largest of all sheep, the ram has large spiral horns often more than 1m (3 ft) long. Height 1.3m (4 ft) at the shoulder, weight 140kg (310lb). Family Bovidae; species *Ovis ammon*.

Argander, Friedrich Wilhelm August (1799-1875), German astronomer who, in 1837, became director of the observatory at the University of Bonn. The positions and brightness of about 324,000 stars are recorded in his *Bonner Durchmusterung* (1862).

Argemola brothers, Bartolomé Leonardo de (1562-1631) and Lupercio Leonardo de (1559-1613), Spanish writers. Bartolomé's best-known work is *Conquista de las Islas Molucas* (1609). Lupercio's most famous plays are *Isabela* and *Alejandra*.

Argentina, second largest country in South America (after Brazil). Formerly a Spanish possession, it has been an independent republic since 1816. Since then Argentina has been disrupted by a series of political upheavals. It has a basically agricultural economy, with the export of beef the principal earner of foreign currency. Area: 2,776,889sq km (1,072,156sq miles). Pop. (1976 est.) 25,719,000. See p. 1974.

Argentine Confederation, the establishment of modern Argentina by the Republic Constitution of 1853. The province of Buenos Aires at first refused to join, but was incorporated by force of arms and became the seat of government.

Arghezi, Tudor (1880-1967), real name Ion N. Theodorescu, Romanian writer. He won the National Poetry Prize in 1947. His poetry includes *Cămăci de seară* (1935) and *Hore* (1939). His first two novels (1930) were *Icoane de lemn* and *Poarta neagră*.

Argon, monatomic gaseous element (Ar) of the noble gas group, discovered (1894) in air by Lord Rayleigh and Sir William Ramsay. Of the argon in the atmosphere (0.93% by volume), 99.6% is argon³⁶; the remainder is argon³⁸ (0.34%) and argon³⁹ (0.06%). It is obtained commercially by the fractionation of liquid air and is used in electric light bulbs, fluorescent tubes, arc

welding and semiconductor preparation. The element forms no compounds. Properties: at no 18, at wt 39.948, density 1.7837g cm⁻³; m.p. (-189.4°C) (-308.9°F); b.p. -185.9°C (-302.6°F). See also NOBLE GASES; p. 888.

Argonaut, or **paper nautilus**, ocean-dwelling cephalopod mollusc found in many parts of the world. Related to the octopus, it has eight arms with suckers. Two of the female's arms are modified to secrete a coiled, paper-thin, ridged shell that is actually an egg-case. Length, to 40cm (16in). Family Argonautidae. See also p. 26.

Argonauts, in Greek legend, 50 heroes who sailed the ship *Argo* to Colchis, a kingdom at the eastern end of the Black Sea, in search of the Golden Fleece. Their leader was Jason, husband of Medea. Many adventures and tragedies characterized their wanderings.

Argo Navis (the Ship *Navis*), large group of stars once considered as a constellation but now divided into four: Carina (Keel), Puppis (Poop), Pyxis (Compass) and Vela (Sails). See also p. 1014, 1020.

Argonne, wooded plateau in NE France, S of the Ardennes near the Belgian border, where the Meuse-Argonne offensive of WWI took place.

Argos, town in NE Peloponnesus, Greece. It is referred to in Homer's *Iliad* as the Kingdom of Diomed, and occupies the site of Greece's oldest city state, dating from the middle Bronze Age. It is now a small market town. Pop. 19,000.

Argus, name of three figures in Greek legend. One was a giant with 100 eyes, half of which remained open at all times. The second was the shipbuilder who built the ship *Argo* for Jason and became a member of the crew. Argus was also the name of the dog who recognized Ulysses on his return to Ithaca.

Argus pheasant, colourful bird native to Malaya and Borneo. The inner wing feathers are long, broad and marked with round eyespots. At mating time the male clears a site on his forest floor and performs a courtship display, elevating his wing feathers to form 'reflectors' on each side of the back. Length 1.8m (6ft). Species *Argusianus argus*.

Argyll, family of Scottish earls and dukes prominent in 16th- and 17th-century politics. Archibald Campbell, 5th Earl (1530-73), was a follower of Knox in 1556 but later supported Mary, Queen of Scots. He was implicated in the murder of her husband Lord Darnley in 1567. Eventually he gave his support to James VI. His grand-nephew Archibald Campbell, 8th Earl and 1st Marquess (1598-1661), was a leader of the Presbyterian cause in Scotland. He won some concessions from Charles I in 1641 and led a Parliamentarian army during the English Civil War. He opposed the execution of Charles and in 1651 crowned Charles II King of Scotland. After the failure of an invasion of England the following year, Argyll returned to the Commonwealth side.

After Charles's restoration, Argyll was executed for treason. His son Archibald, 9th Earl (1629-85), was a royalist, but after defending the Scottish Presbyterians against James, Duke of York (later James II) was accused of treason. He fled to Holland, was implicated in the Rye House Plot of 1683 and was executed after supporting Monmouth's invasion of 1685. His son Archibald, 1st Duke (c. 1651-1703), offered the Scottish crown to William and Mary in 1689. His troops were responsible for the massacre of the MacDonalds at Glencoe in 1692. His son John, 2nd Duke (1678-1743), promoted the Act of Union (1707) and was later involved in political intrigue supporting both the Whigs and the Tories. His brother Archibald, 3rd Duke (1682-1761), was Lord High Treasurer of Scotland after 1705. He acted as Walpole's chief adviser in Scotland. See also pp. 1432-1433.

Argyllshire, former county of W Scotland, on the Atlantic coast, now a part of the Strathclyde region. It has a deeply indented coastline and includes many islands. Much of the terrain is mountainous and forested. Industries: tourism,

agriculture, manufacturing, granite quarrying, fishing, forestry Area 8,055sq km (3,110sq miles)

Argyll's rebellion, rising of the Campbell clan in Scotland in 1685, planned by Archibald Campbell, the 9th Earl of Argyll, to coincide with Monmouth's rebellion. It marched on Glasgow but failed through lack of support

Argyre Dorsum, prominent ridge in the s polar region of the MOON See p.949

Aarhus (Aarhus), university city and port on the Kattegat coast of Denmark. It became an episcopal see in the 10th century and is the site of a 13th-century cathedral. The town hall was built between 1938 and 1942 of Norwegian marble. Industries include engineering, textiles and food processing. Pop 245,212

Aria, solo song with instrumental accompaniment; also a lyrical instrumental piece. An important element of operas, cantatas and oratorios, the aria form originated in the 16th century. See also pp. 1452-1453

Ariadne, in Greek mythology, Cretan princess who fell in love with Theseus but was abandoned by him. She was consoled by the god Bacchus who later married her. See also pp.1248, 1904

Arianism, theological school based on the teachings of Arius (c. ad 250-336), considered heretical by orthodox Christianity. Arius taught that Christ was a created being, not divine and that the Son was neither equal nor co-eternal with the Father. Arianism was condemned by the First Council of Nicaea (325). See also pp. 1268-1270

Arica-Tacna Dispute, 46-year quarrel between Chile and Peru over two former Peruvian provinces, Arica and Tacna. Chile took these over in 1883 by the Treaty of Ancón after the War of the Pacific. In 1929 it was agreed that Chile should keep Arica and Peru should have Tacna

Arège, river in s France. It flows through the E Pyrenees and forms the border between the Pyrénées-Orientales département and Andorra. Length 170km (106 miles)

Aries, or the Ram, northern constellation situated on the ecliptic between Taurus and Pisces. As the first sign of the Zodiac it formerly contained the First Point of Aries, the intersection of the ecliptic and the equator marking the vernal equinox. (owing to precession this has now shifted into Pisces. The brightest star is Hamal (Alpha Aries)). See also pp.1008, 1012, 1894

Ariosto, Ludovico (1474-1533), Italian Renaissance poet and dramatist. He was forced by financial difficulties to work as a statesman and administrator for the d'Este family. His plays were the first to imitate Latin comedy in the vernacular. His most famous work is the epic poem *Orlando Furioso* (1532). See also pp. 1416

Aristarchus of Samos (310-230 bc), Greek astronomer, supposedly the first person to put forward the theory that the Earth orbits the Sun. See also HC1 p.83

Aristarchus of Samothrace (c. 217-c. 145 bc), member of the school of Aristophanes of Byzantium at Alexandria, leading philologist of his age. Aristarchus produced critical editions of classical authors (especially of Homer) and wrote commentaries on the classics

Aristides the Just (d.c. 468 bc), Athenian statesman and general. He led the Athenian forces at the Battle of Marathon (490 bc) and, after a period of exile, fought at Salamis (480) and led the Athenians at Plataea in 479

Aristillus, on the surface of the Moon, a prominent crater on the eastern edge of the Mare Imbrium. It is 56km (35 miles) in diameter. See also pp.934, 934

Aristippus (c. 435-366 bc), Greek founder and leader of the CYRENAICS. Basing his hedonism on man's ignorance of the objective world, he formulated as the goal of life prudent enjoyment of present pleasure

Aristocracy, social system based on privilege, literally meaning "rule by the best". The term has been applied in

Western Europe usually to describe the rule of a hereditary landed nobility, but could be used to include a "meritocracy" in which leaders are chosen solely for their ability or education. See also pp.1850-1855

Aristophanes (c. 448-c. 388 bc), Greek writer of comedies. Eleven of his more than 40 plays survive, the only extant comedies from that period. All follow the same basic plan: realistic characters become involved in absurd situations. Graceful choral lyrics frame caustic personal attacks. A conservative, Aristophanes attacked Euripides' innovations in drama, Socrates' philosophical radicalism and Athens' expansionist policies. His most noted plays are *The Clouds* (423), *The Birds* (414), *Lysistrata* (411) and *The Frogs* (405). See also p.1209

Aristotle (384-322 bc), Greek philosopher, Plato's disciple for 20 years. His work on logic founded the science and has until recently remained unchallenged. In direct opposition to Plato's idealism, Aristotle's philosophical work is based on the principle that all knowledge and theorizing must proceed directly from observation of the particular. Among his works are the *Organon*, in which he defines the syllogism and logic, *Politics*, on the conduct of the state and *Nicomachean ethics*, which he describes the virtuous life. His work was the basis of medieval SCHOLASTICISM. See also pp. 482, 1195, 1202, 1216, 1322-1323, 1850, 1880-1881, 1882, 1883, 1886-1887

Aristoxenus, Greek philosopher of the late 4th century bc and the first authority on musical theory. His interest extended to ethics and biographies, but many of his works have been lost or exist only in fragments

Arithmetic, calculations and reckoning using numbers and such operations as addition, subtraction, multiplication and division. The study of arithmetic usually involves learning procedures for operations such as long division and extraction of square roots. See also MATHEMATICS pp.778-780

Arithmetical progression, sequence of numbers in which each term is produced by adding a constant term (the common difference *d*) to the preceding one. It has the form *a*, *a + d*, *a + 2d*. An example is the sequence 1, 3, 5. The sum of such a progression, *a + (a + d) + (a + 2d) + ...* is an arithmetic series. For *n* terms it has a See also p.788

Arius, (c. 250-336), heretical priest who founded ARIANISM. He supported a subordinationist teaching about the person and nature of Christ: the Son is a perfect creature, but inferior to the Father and less than divine. In 325 the Council of Nicaea condemned him

Arizona, state in the sw USA, bordering on Mexico. The Colorado Plateau occupies the n part of the state and is cut by many steep canyons, notably the Grand Canyon, through which the Colorado River flows. Arizona's mineral resources and its grazing and farming land have long been mainstays of the economy. Mining and agriculture are still important, but since the 1950s manufacturing has been the most profitable sector. Between 1950 and 1970 Arizona's population more than doubled, and in the 1970s its annual growth rate was more than 35%. At the end of the MEXICAN WAR (1848), Mexico ceded most of the present state to the USA. Arizona became a US territory in 1863. Area: 295,025sq km (113,909sq miles). Pop. 2,224,000

Ark, Noah's, according to Genesis 6:14-16, 18-22, the floating house Noah was ordered to build and live in with his family and one pair of each living creature during the flood. The ark was believed to have come to final rest on Mt Ararat. See also p.1907

Arkansas, state in the s central USA and one of the 11 Confederate states during the AMERICAN CIVIL WAR. In the e and s the land is low, providing excellent farmland, cotton, rice and soy beans are the main crops. The principal river is the Arkansas which, together with all the state's other rivers, drains into the Mississippi. Forests

are extensive and economically important. Bauxite processing from local ore, timber and chemicals are the important industries. Most of the population are descended from immigrants who moved westwards from the s Atlantic states after 1815. Area: 137,539sq km (53,104sq miles). Pop. (1970) 1,923,295

Ark of the Covenant, according to Jewish tradition, the chest containing the two stone tablets on which the TEN COMMANDMENTS were inscribed. It symbolized God's covenant with His chosen people. Only the high priest could look upon it, no one could touch it. The tabernacle built by King Solomon to house it was destroyed in 586 bc and no further record of the original Ark remains. In today's synagogues, the Ark of the Covenant is a closet or recess in which the sacred scrolls of the congregation are kept. See pp. 1912-1913

Ark Royal, name of four fighting ships of the Royal Navy, separated in time by several centuries. The most famous was the third of the name, the aircraft carrier launched in 1937 (22,500 tonnes, 48 aircraft, 1,216 men) that helped to hunt and destroy the German battleship *Bismarck*. HMS *Ark Royal* was torpedoed in the w Mediterranean and sank while being towed to Gibraltar. The latest of the line, launched in 1950 (43,050 tonnes), is the largest carrier in the Royal Navy and has been much modified

Arkwright, Sir Richard (1732-92), British inventor and industrialist. He introduced powered machinery to the textile industry with his water-driven frame for spinning; he started work on this machine in 1764 and completed it four years later, although it was not patented until the following year. He opened textile factories in Nottingham. See also p.592

Arland, Marcel (1899-), French novelist and literary critic, influenced by André Gide. His novels include *L'Ordre* (1929, awarded the Prix Goncourt), a study of pride and shyness, and *La Vie* (1935)

Arlen, Harold (1905-), US composer and songwriter. His first song to achieve popularity was *Get Happy*, which appeared in the *915 Revue* (1928). In 1939 he received an Academy Award for his song *Over the Rainbow*, featured in the film *The Wizard of Oz*. Other film music includes *A Star is Born* (1954)

Arlen, Michael (1895-1956), British writer, b. Dikran Kuyumjian at Roustchouk, Bulgaria. He became a naturalized Briton in 1922 and won fame for his novel *The Green Hat* (1924)

Arlès, town in s France on the River Rhône delta, 72km (45 miles) nw of Marseilles. The Romans called it *Arelate* and joined it by canal to the Mediterranean Sea in 103 bc. The counts of Savoy and kings of France gradually acquired the Kingdom of Arles during the 14th century. There is a 12 14th-century abbey, Montmajour, and the remains of a 2nd-century Roman amphitheatre now used for bullfighting. Industries: boat-building, metalworking, sulphur refining. Pop. 45,700

Arlington, Henry Bennett, 1st Earl of (1618-85), English statesman. He was Secretary of State (1662-74) under Charles II and a member of the CABAL

Arlington, city in N Virginia, across the Potomac River from Washington, DC. It is the location of the Arlington National Cemetery, Tomb of the Unknown Soldier, Pentagon and Marymount College (1950). Originally a part of the District of Columbia, it was made a county of Virginia in 1847. Pop. (1975) 102,228

Armada, Spanish (1588), fleet launched by the Catholic Philip II of Spain against England to overthrow the Protestant Elizabeth I. See also p.1410

Armadillo, nocturnal mammal found from Texas to Argentina, noted for the armour of bony plates that protects its back and sides. When attacked, some species roll into a defensive ball. It eats insects, carrion and plants. Length: 13-150cm (5-59in). Family Dasypodidae. See p.300

Armageddon, from the Hebrew *har megiddo* ('hill of Megiddo'), a city of

Palestine. According to Revelation 16 16, the place where the final battle between the demonic kings of the earth and the forces of God will be fought at the end of the world

Armagh, city of Armagh district, SE Northern Ireland. It is the county town of Armagh, and the seat of Roman Catholic and Protestant archbishops. The chief industry is linen. The district of Armagh is low-lying in the N, hilly in the S, and is drained by the rivers Blackwater, Newry and Upper Bann. Much of the land is used for farming. Apart from Armagh, the main towns are Lurgan and Portadown. Pop. (city) 12,315, (district) 133,969

Armagnac, region in sw France, formerly part of the old province of Gascony. It is an agricultural area famous for its brandy. Once part of the Roman Empire, it became a countship in the 10th century, and was annexed by France in 1607

Armagnacs, faction supporting the Duke of Orleans in the early 15th-century civil war in France. Led by Bernard VII Count of Armagnac, they opposed the BURGUNDIANS led by John, Duke of Burgundy, who co-operated with the English invaders in this phase of the HUNDRED YEARS WAR. See also pp.1337, 1346

Armaments race. See ARMS RACE

Armature, central part of an electric motor or generator. In most machines the armature consists of several coils of wire on a spindle and rotates in a magnetic field. In an electric motor the armature rotates when an electric current passes through it, thus providing the driving force of the motor. See also p.876

Armed merchant cruisers, sometimes called defensively equipped merchant ships (DEMS), fast merchant ships hastily equipped with one or two large guns, used to defend Atlantic convoys in the early stages of WWI. Merchantmen with concealed guns, "Q-ships", were also used

Armed Neutrality, league formed by Denmark, Norway, Sweden and Russia in 1780, and later other European countries, opposing Britain's claim to have the right to search these nations' vessels during its war with the American colonies. The league was revived in 1800-01

Armenia, ancient region of W Asia, now divided between Iran, Turkey and the USSR. It is centred on the mountainous region SE of the Black Sea and SW of the Caspian Sea and is the source of the Euphrates and Araks rivers. Strategically located between Europe and Asia, this historically important area has been the scene of repeated battles for more than 3000 years. After enjoying prosperity under the Great from 95 to 55 bc, Armenia came under Roman and Byzantine rule until 1064, when it fell to the Seljuk Turks. It was ravaged by Mongol forces in the 13th century and in the 16th and 17th centuries was divided between the Ottoman Turks and the Persians. The Persian sector came under Russian rule in 1828. The Turkish Armenians' fight for independence began in 1894, but this led to the almost total destruction of the Armenian population by 1915. Armenia's declaration of independence in 1918 was opposed by Russia and Turkey. The Russo-Turkish Treaty of 1921 established the present national boundaries. See also pp.2068, 2150, 2156

Armenia (Armenakia Republic), smallest constituent republic of the USSR, in the Transcaucasia. Established in 1936, it occupies the e part of ancient ARMENIA. It is a mountainous region, rising to 4,094m (13,431ft) at Mt Aragats. Yerevan is the capital, and other major cities are Leninakan and Kirovakan. Lake Sevan supports a fishing industry, and the valley of the chief river, the Araks, is an agricultural region producing cotton, fruit, rice and tobacco. Area approx 30,000sq km (11,500sq miles). Pop. 2,842,000. See also pp.2150-2158

Armenian language, Indo-European tongue spoken in the Armenian, Georgian and Azerbaijan Soviet Socialist Republics, and in parts of the Middle East, Europe and the USA

Armenières, town in NE France on the

Armillary sphere

River Lys 13km (8 miles) NW of Lille. During WWI it was just behind the front line and was completely destroyed by various offensives. It inspired the marching song *Mademoiselle from Armentières*. Products: lace, velvet, hosiery, beer. Pop. 27,000.

Armillary sphere, skeleton sphere made up of hoops so that models of the heavenly bodies can be seen in motion through it. **Arminius Hermann** (c.18 ac–AD 19), German tribal leader, chief of the Cherusci. In AD 9 he destroyed a Roman army commanded by Varus advancing in the Teutoburg Forest. It was the last Roman attempt to conquer lands N of the Rhine. **Arminius, Jacobus** (1560–1609), Dutch theologian whose views, especially of salvation, became widespread and were known as Arminianism. He rejected Calvin's notion of absolute predestination in favour of conditional election and universal redemption. See also p.1403.

Armistice Day, day of remembrance for the dead of WWI and WWII, held on 11 November, the day war ended in 1918.

Armstrong, Kenneth (1916–), British sculptor. His semi-abstract figures, usually in bronze and often presented in groups, achieve an effect of movement and vitality, as in *Family Going for a Walk* (1951). He has won many prizes, including an award at the Venice Biennale (1958).

Armory Show, international exhibition of modern art held in New York City in 1913. Originally the show was intended to exhibit radical US artists, but the European section created a greater controversy. The show introduced impressionism, post-impressionism, fauvism and cubism to the USA, beginning of modern art there.

Armour, (1) protective clothing and headgear usually made of metal or thick leather used to prevent injury to warriors in battle. Employed since antiquity, body armour, except for the helmet, ceased to be of use in Europe in the 17th century. (2) Metal plating on warships or armoured vehicles which is at least strong enough to deflect small-arms fire. Warships were first armoured in the mid-19th century, vehicles during WWI. (3) Military units having a high concentration of armoured vehicles such as tanks, armoured personnel carriers and mechanized artillery. See also pp.394, 554, 564.

Armoured car, in military use, a wheeled armoured fighting vehicle operating primarily on firm terrain and used for reconnaissance, combat and convoy protection. See also TANK, p.564.

Arms, small, weapons that can easily be carried. Strictly, small arms include maces, swords, spears and bows and arrows, although today the term is generally used for portable firearms such as pistols and rifles. See also AUTOMATIC FIREARM, pp.554–559.

Arms race, rivalry between nations or blocs of nations to achieve supremacy in military strength. The first modern instance was the race between Germany and Britain to build up their navies before WWI, but the term refers principally to the race in nuclear weapons – atomic and hydrogen – between the USSR and the USA since WWI. The first atomic bomb was developed (1942–45) in the USA, the first used by the USA at Hiroshima in 1945. The USSR tested its first atomic bomb in 1949. The first thermonuclear device was tested by the USA in 1952, the USSR first tested one in 1953. Four other nations – China, Britain, France and India – have tested nuclear weapons and several others have the potential to do so. As the stockpiling of nuclear weapons leaves West and East balanced, attention has increasingly turned to chemical and biological warfare. See also DISARMAMENT, pp.574–575.

Armstrong, Daniel Louis (1900–71), US jazz trumpeter, singer and bandleader, known as "Satchmo" (satchel mouth). He learned to play in New Orleans and in 1922 moved to Chicago where he joined "King" Oliver's band. His music of the 1920s, with the Hot Five and Hot Seven, was important in the development of improvisation in jazz bands. See also p.1756.

Armstrong, Henry (1912–), US boxer, real name Henry Jackson. He held the world featherweight title in 1937–38, lightweight title in 1938–39 and welterweight title in 1938–40.

Armstrong, John (1758–1843), US army officer and politician. In 1812 he was charged with the defence of New York City. As Secretary of War he received the blame for the failure of the expeditions to Canada in 1813 and the British destruction of the city of Washington.

Armstrong, Neil Alden (1930–), US astronaut. In July 1969 he became the first man to walk on the Moon. He was chosen as a NASA astronaut in 1962 and was the command pilot for the Gemini 8 orbital flight in 1966. See also p.1025.

Armstrong, William Howard (1914–), US author of children's books. His best-known work is *Souther* (1969), the story of a black sharecropper's family during the Great Depression, which won the Newbery Medal in 1970. Other works include *Barefoot in the Grass* (1970) and *Sour Land* (1971).

Army, organized group of soldiers trained to fight on land, usually rigidly hierarchical in structure. An army can be used to maintain order and provide aid in times of civil emergency. The first evidence of an army – as opposed to a horde – comes from Sumer in the third millennium BC. The use of cavalry was a Hittite development and the Assyrians added archers and developed siege machines. The phalanx, heavily armed spearmen eight rows deep in a solid rectangle, was a tactical formation introduced by the Sumerians and also used by the Greeks, who developed such machines as the CATAPULT and BALLISTA. The phalanx was a defensive structure which could withstand a cavalry charge but it was unable to move rapidly or attack over rough ground. The Romans organized their army into divisions – legions – which were composed of 100-man groups called centuries. These had greater flexibility than phalanxes and each was in three lines of small phalanxes or cohorts. The Romans built roads and bridges to link their forts, and their intensively trained and strictly disciplined legions were thus extremely mobile.

In the Middle Ages armies used the improved armour and weapons of cavalry, and battles were won or lost by charges of heavy cavalry. The short-term feudal levy, by which these armies were raised, proved inflexible and this in turn led to the use of mercenaries. This change coincided with the downfall of heavy cavalry as all-important, and its replacement by a combination of infantry and archery. The end of the HUNDRED YEARS WAR saw the inception of royal standing armies and an end to the chaos caused by mercenaries. Muskets and bayonets replaced the combinations of longbow, pike and infantry, and artillery was much improved. In the FRENCH REVOLUTIONARY WARS a citizen army was raised by conscription and it contained various specialist groups such as quartermasters, ordnance troops, engineers and medical personnel. Other European armies followed suit and the age of the mass nationalist army began.

The invention of the MACHINE GUN brought about the deadlocked war, as in WWI, with masses of infantry bogged down in trenches. This deadlock was broken by the TANK, and WWII saw highly mechanized and mobile armies such that, by its end, the logistics of supply and support demanded an integration of the forces of land, sea and air. Since WWII nuclear weapons have been deployed both tactically and strategically and again the nature of its weapons has determined an army's structure. See also pp. 554–564, 574–575.

Army, or driver, ant. highly predaceous ant found in tropical and subtropical parts of the world. Ranging in length from 3.25 to 43.75mm (0.13–1.75in), these ants travel in huge armies, when hunting for food and migrating. Family Formicidae, subfamily Dorylinae. See also HYMENOPTERA, pp. 8, 9, 46.

Araud, Yvonne Germaine (1892–1958), French actress who spent most of her

working life in England. She excelled in farce and musical comedy. A theatre, opened in Guildford in 1965, was named after her.

Arne, Thomas Augustine (1710–78), English composer. His first opera *Rosamond* (1733) gained him renown. Today his fame rests on his settings of Shakespearean songs, such as *Under the Greenwood Tree*. He also wrote the song *Rule, Britannia*.

Arnell, Richard Anthony Sayer (1917–), British composer. He has written five symphonies, chamber music, three operas and various concertos.

Arnhem, city in a central Netherlands, 55km (35 miles) S of Utrecht on the Neder-Rijn River, capital of Gelderland province. An important medieval trading centre, it was occupied variously by the Dutch (1585), French (1672, 1795) and Prussians (1813). An abortive Allied airborne attack of 1944 almost destroyed the city. Industries: metallurgy, textiles, electrical equipment, chemicals. Pop. 127,000.

Arnhem Land, region on the N coast of Australia, on the wide peninsula of the Gulf of Carpentaria. Discovered in 1623 by Jan Carstensz, it is now Australia's largest Aboriginal reserve. Bauxite is mined in the region. Area: approx. 80,808sq km (31,200sq miles).

Arnim, Ludwig Achim von (1781–1831), German poet. He is best known for *Des Knaben Wunderhorn* (1805–08), written with Clemens Brentano, which Gustav Mahler set to music.

Arnim, Mary Annette von (1866–1941), Australian-born writer. She married Count von Arnim of Prussia and, after his death, Earl Russell. As Elizabeth von Arnim she wrote many books, including *Elizabeth and her German Garden* (1898), *The Pastor's Wife* (1914) and *Mr Skeffington* (1940).

Arno, river in central Italy. It rises in the Apennine Mountains in Arezzo province, and enters the Ligurian Sea below Pisa. Flood control works, some planned by Leonardo da Vinci, failed to prevent the Arno causing flooding of Florence in 1966, resulting in major damage to the city's art treasures. Length: 241km (150 miles).

Arnold of Brescia (c.1100–55), Italian monk and church reformer. He attacked the church for owning property and from 1145 led the republican commune in Rome. He was excommunicated in 1148 and arrested and executed by FREDERICK I in 1155.

Arnold, Benedict (1741–1801), American soldier. He was placed in command of Philadelphia in 1778 after being wounded at the Battle of SARATOGA. In 1780 he became commander of West Point, a fort he planned to betray to the British for money. After the plot was discovered, Arnold fled and was made a general by the British.

Arnold, Henry Harley (1886–1950), US general, known as "Hap". He joined the aviation division of the Signal Corps in 1911, and became chief of the US Army Air Corps (1938) and chief of the US Army Air Forces in 1941. In 1949 he became the first five-star general of the independent Air Force.

Arnold, Malcolm (1921–), British composer. Formerly principal trumpet with the London Philharmonic Orchestra, he won immediate acclaim for his many compositions: symphonies, concertos, overtures (eg. *Beckus the Dandipratt*, 1943), ballets (eg. *Hommage to the Queen*, 1953) and film scores.

Arnold, Matthew (1822–88), British poet and critic, the son of Thomas Arnold. He held the Oxford chair in poetry (1857–67) and was a school inspector (1851–86). His writings include literary criticism, such as *Essays in Criticism* (series 1, 1865, series 2, 1888), and social commentary, such as *Culture and Anarchy* (1869). See also p.1576.

Arnold, Thomas (1795–1842), headmaster of Rugby School 1828–42. A Liberal publicist and spokesman for a "Broad Church", he raised the standard of public school education and manners, making

the formation of Christian character the chief end of education.

Arnoldson, Klas Pontus (1844–1916), Swedish politician who shared with Fredrik Bajer the 1908 Nobel Peace Prize for his efforts to inspire world peace. He introduced a motion for the permanent neutrality of Sweden while he was a member (1882–87) of the Riksdag.

Arnolfini Wedding, The (1434), double portrait of great psychological insight by Jan van Eyck; (National Gallery, London). See also p.1384.

Arnolfo di Cambio (c.1232–c.1310), Italian architect and sculptor, designer (c.1300) of Florence Cathedral. He was first architect of the Church of S. Croce, Florence, and sculpted its facade. His celebrated statue of Charles of Anjou (c.1277) is among the first modern portrait statues. See also pp.1351, 1382.

Aromatic compound, organic chemical compound that contains atoms of carbon (often six) joined to form a ring-shaped molecule, eg. BENZENE. See also p.896.

Arp, Jean or Hans (1887–1966), Alsatian sculptor, painter and poet. He was a pioneer of abstract art and a leader in European avant-garde movements in the first half of the 20th century. In Zürich during WWI he was a founder of the DADA movement and in the 1920s joined the SURREALISTS. His works are marked with a simple exuberance, of which *Navel Shirt and Head* (1926) and *Human Concretion* (1935) are typical examples. See also pp.1684, 1686, 1687.

Arpino, Giuseppe Conari (1568–1640), among the last and most conservative of Italian MANNERIST painters. He designed the mosaics for the Dome of St Peter's, Rome, and painted frescoes in S. Martino, Naples. CARAVAGGIO was his pupil. **Arquebus**, late 15th-century firearm and immediate precursor of the musket; it was the first type of gun to be fired from the shoulder. It had a pivoted clamp which held a slow-burning "fuse". When the trigger was pulled the fuse dipped into priming powder, which fired the main charge. See also pp.556–557.

Arrabal, Fernando (1932–), Spanish novelist and playwright. His satirical method, as in *A Picnic in the Country* (1959) and *The Car Cemetery* (1962), has made him unacceptable in Spain. He writes in French and lives in France.

Arraignment, the appearance of a person in court, the reading of the charge and the recording of his plea.

Arran, island off SW Scotland, in the Firth of Clyde, a popular tourist resort. The main town is Brodick. Area: approx. 430sq km (166sq miles). Pop. (1971) 3,576.

Arras, town in NE France on the River Scarpe, 40km (25 miles) S of Lille, capital of Pas-de-Calais département. Settled during Roman times, it became a wealthy commercial and weaving town in the Middle Ages. By the Treaty of the Pyrenees (1659) it became part of the French crown lands. Industries: food, food processing, brewing. Pop. 48,000.

Arras, Union of (1579), pact signed by the Walloon (southern, Roman Catholic, French-speaking) provinces of the Low Countries, which separated them from the northern, Protestant provinces. In response the northern provinces formed the UNION of UTRECHT. Although the signatories of the Union of Arras signed a peace treaty with the Spaniards, they were soon reconquered by them. The lands covered by the Union of Arras formed the basis of present-day Belgium and Luxembourg, the Utrecht Provinces led to the formation of The Netherlands. See also p.1406.

Arrau, Claudio (1903–), Chilean pianist, best known for his interpretations of the Romantic repertoire. He made his debut in Santiago at the age of five.

Arrest, the taking into custody – usually by a policeman or other agent of the government – of a person suspected of a crime or other offence. Under common law, the person making the arrest must have a warrant or reasonable cause for thinking that an offence has been committed. See also pp.648–649.

Arrhenius, Svante August (1859-1927), Swedish chemist and physicist, awarded the Nobel Prize in chemistry in 1903 for his theory of electrolytic dissociation. His later work was concerned with reaction rates, biochemistry, the structure of the universe and the revelation that light exerts pressure.

Arrol, Sir William (1839-1913), Scottish engineer who constructed the new Tay Bridge, the Forth Bridge and Tower Bridge. He was also a Member of Parliament (1892-96).

Arromanches-les-Bains, coastal village in the Calvados département of France, 5 km (3 miles) NNE of Bayeux. During the Allied invasion of Normandy in 1944 it was used as a landing-place.

Arrow, Kenneth Joseph (1921-), US economist who shared the 1972 Nobel Prize in economics with Sir John Richard Hicks.

Arrowhead, fresh water plant found in tropical and temperate America. Its leaves are arrow-shaped, and the flowers are white and cup-shaped. Species include the broad-leaved arrowhead (*Sagittaria latifolia*). Family Alismataceae. See also p.378.

Arrowroot, tropical and subtropical perennial plant found in wet habitats of North and South America. Its leaves are lance-shaped and the flowers are usually white. The dried and ground roots are used in cooking. Family Marantaceae. See also PRAYER PLANT; p.683.

Arrowworm. See CHAETOGNATHA.

Art Amatoria, manual of seduction written by the Roman poet OVID at the beginning of the 1st century AD. The work was an obvious challenge to the moral reforms of Emperor Augustus. The first two books are addressed to men, the third to women.

Arsenic, toxic metallic element (As) of group Va of the periodic table, probably obtained (1250) by Albertus Magnus. The chief ores are realgar and orpiment (both sulphides) and mispickel (arsenopyrite, FeSAs). Arsenic is used for hardening lead and in semiconductors. Three allotropes are known: a grey metallic form, black arsenic and a yellow non-metallic form. Properties: at no. 33, at wt. 74.9216, m.p. 817°C (1,503°F) at 28 atm.; sublimes 613°C (1,135°F), most common isotope As⁷⁵ (100%). See also p.882.

Arson, intentional burning of the property of another. In some countries the crime of arson is judged in degrees of seriousness, the heaviest punishment being given for actions which endanger life.

Art Poetica or Epistle to the Pines, verse essay written by Roman poet HORACE in c. 19-18 BC. His longest work, it is a survey of the history and theory of dramatic poetry.

Art Poetica, poem by Archibald MACLEISH published in *Streets in the Moon* (1926). It presents MacLeish's thoughts on poetry, such as: "A poem should not mean/But be".

Art, treated in the *Fact Index* under the main headings of PAINTING, SCULPTURE, DRAWING and ARCHITECTURE. These articles contain numerous cross-references to related subjects. There are articles about individual artists and architects and the various movements, styles and schools are described in articles such as ART NOUVEAU, BAUHAUS, MANNERISM and ROMANESQUE art and architecture. There are articles on techniques, eg. AQUATINT and FRESCO, as well as a number of entries on famous paintings, buildings, museums and galleries.

Artaud, Antonin (1896-1948), French director and theorist of drama. He was co-founder of the Théâtre Alfred Jarry, where he experimented with his idea of the "Theatre of Cruelty". His most important book was *Le Théâtre et son Double* (1938).

Artaxerxes, name of three Persian kings of the Achaemenid dynasty. During the reign of Artaxerxes I (r. 465-425 BC) there were several revolts in his empire, including those of Egypt (459-454 BC), Bactria and Cyprus. He allowed Judaism to revive. Artaxerxes II (r. 404-359 BC), the successor of Darius II, also suffered disaf-

fection in the empire; his brother Cyrus tried to assassinate him and several of his satraps rebelled. His son Artaxerxes III (r. 359-338 BC) restored the authority of the emperor by murdering most of his family, and reconquered Egypt. See also p.1192.

Art Deco, style in the decorative arts first promoted in Paris in 1925, which flourished in the late 1920s and throughout the 1930s. It sought to create for mass-production sleek, linear, decorative and industrial designs that made use of modern technology. Glass, semi-precious stones and man-made materials, such as concrete and plastics, were used.

Artel, Soviet organization of farmers and industrialists which forms the collective farms and industrial co-operatives. The term has been extended to include groups of intellectuals and artists.

Artemis, Greek goddess, daughter of ZEUS and Leto, twin sister of APOLLO, called DIANA by the Romans. She was a virgin who assisted in childbirth and protected the young of human beings and animals. She was goddess of the hunt and deity of light, associated with the moon.

Arteriography, medical technique for examining blood vessels. A dye opaque to X-rays is injected into the patient's bloodstream and the arteries revealed in an X-ray photograph. The technique is particularly useful in detecting ARTERIOSCLEROSIS. See also p.1094.

Arteriosclerosis, several diseases of the arteries, including ARTERIOSCLEROSIS, the most common form, popularly known as "hardening of the arteries". It is caused by deposits of fatty materials and sometimes calcium on the artery walls, narrowing the passage for blood, the calcium also makes the arteries less elastic. There is usually an absence of overt symptoms until the disease is well advanced. Serious cases can lead to coronary complications, when the symptoms may include sharp pains in the chest radiating to the arms or neck (ANGINA PECTORIS). So-called senile forgetfulness or confusion may occur if the brain is affected. Evidence suggests that predisposition to the disease is hereditary and that it is more likely in cigarette smokers, people who do not exercise regularly or those with high-fat diets. The favoured method of control of the disease is adherence to a low cholesterol diet and exercise. If an ANEURYSM or obstruction in the artery is identified, surgery may be needed. Anticoagulant drugs are sometimes effective on a short-term basis. See also pp.1063, 1066, 1067, 1094.

Artery, blood vessel that carries blood away from the heart. The pulmonary artery carries deoxygenated blood to the lungs, but all other arteries carry oxygenated blood to the body's tissues. An artery is usually protected and embedded in muscle, its walls are thick, elastic and muscular and pulsate as they carry the blood. A cut artery causes rapid loss of blood. See also pp.152, 153.

Artisian wells, wells from which water is forced out naturally under pressure. They occur where water is sandwiched between two layers of impervious rock in a reservoir, or aquifer, such as sandstone. If, because of the configuration of the strata, water is able to flow into the aquifer at a higher level and if a well shaft is drilled down through the upper impervious strata, water flows up to the surface (providing that the well-head is lower than the original entry point). See pp.216-217, 217.

Arthritis, inflammation of the joints. The most common forms are osteoarthritis and rheumatoid arthritis. Osteoarthritis, common among the elderly, occurs when joint cartilage wears away. Rheumatoid arthritis is generally more crippling and occurs most often in women. The cause is unknown but physical and emotional stress may trigger symptoms, with aching and stiffness developing into pain in the affected joints. People with chronic rheumatoid arthritis usually show swelling and deformation of the hands, feet or wrists, movement is both difficult and painful. Although often severely crippling, it rarely leads to total disablement. Treat-

ment includes prescribed exercise, diet and rest, with analgesics to relieve pain. The most severe cases may need surgery or treatment by cortisone drugs. See also RHEUMATISM; pp.1062, 1063, 1070, 1071. **Arthropod**, member of the largest animal phylum, Arthropoda. Living forms include CRUSTACEANS, ARACHNIDS, CENTIPEDES, MILLIPEDES and INSECTS. The more than 800,000 species are thought to have evolved from ANNELIDS. All have a hard outer skin of CHITIN that is attached to the muscular system on the inside. The body is divided into segments, modified among different groups, with each segment originally carrying a pair of walking or swimming jointed legs. In some animals some of the legs have evolved into jaws, sucking organs or weapons. Arthropods have well-developed digestive, circulatory and nervous systems. Land forms use tracheae for respiration. See pp.2-5, 28-29, 34, 38-39, 274, 321.

Arthur, King. See KING ARTHUR.

Arthur I, Duke of Brittany (1187-1203), French duke who claimed the English crown that his uncle, JOHN, had taken. Arthur was captured in 1202 and was probably murdered by John.

Arthur, Chester Alan (1830-86), 21st President of the USA. A Republican, he became President in 1881 after the assassination of James Garfield. He tried to reform the spoils system (by which incoming presidents replaced all government staff with their own appointments). He was not renominated by his party.

Arthur's Pass, route through the Southern Alps of New Zealand, named after the explorer, Sir Arthur Dudley Dobson.

Arthur's Seat, rock (a volcanic plug) in Edinburgh, Scotland. According to legend, it is the place from which KING ARTHUR watched the defeat of the Picts. Height: 251m (823ft).

Artichoke, or globe artichoke, tall, thistle-like perennial plant native to the Mediterranean region, widely grown in warm parts of the world for its large, edible, immature flower heads. It has spiny, deeply-cut leaves, and its flowers are blue. Height: 0.9-1.5m (3-5ft). Family Compositae; species *Cynara scolymus*. See also p.285.

Articles of Confederation (1781), the first federal constitution of the USA, superseded in 1789. Each state had one vote in the weak central government, revenues were appropriated on the basis of the value of surveyed lands, and the states were prevented from interfering with the western territories. See also p.1540.

Articles of the Church of England, 39 articles accepted by the synod in 1571, setting out the doctrinal orthodoxy of the Church. Their formulation was supervised by Archbishop PARKER, although they were based on earlier series of articles. They are included in the Book of Common Prayer.

Artificial insemination, method of inducing PREGNANCY without sexual intercourse by artificially injecting viable SEMEN into the female genital tract. Some of the first successful insemination experiments on mammals were those of Lazzaro Spallanzani (1729-99). The artificial impregnation of livestock allows proven sires to "mate" with many females at low cost. In human reproduction the semen may be from the husband of the woman inseminated or from an anonymous donor. See also pp.723, 724.

Artificial kidney, popular term for a device operating outside the body that performs the functions of a properly functioning natural kidney. See also DIALYSIS; p.1078.

Artificial limbs, man-made limbs or segments thereof used to replace parts of the body lost by amputation. Made from new metals or plastics, modern artificial legs, feet, arms and hands can perform most of the original functions. See also p.1097.

Artificial respiration, method of maintaining breathing in someone whose lungs are not working. This is an important aspect of First Aid training.

Artillery, projectile-firing weapons with a carriage or mount. An artillery piece is generally one of four types - gun,

Arrowroot has large, distinctive leaves, its roots are used for culinary purposes.

Artemis, the Greek goddess, was worshipped as the protector of animals and children.

Arthritis affects the joints, especially of the hands and feet: movement is often difficult.

Artichoke, *Cynara scolymus*, flourishes in mild and humid climates, it needs a rich soil.

Artiodactyla

Artiodactyla is an order that includes the antelope *Kobus kob*

Art Nouveau is a turn of the century decorative style recently brought back into vogue

Aschelminthes are a group of worm-like animals, either aquatic or terrestrial

Ascoot, where traditionally the sovereign drives down the course in an open carriage

howitzer, mortar, or missile launcher. Modern artillery is classified according to calibre, ranging from under 105mm for light artillery to more than 155mm for heavy. The exact origin of artillery using gunpowder is unknown, although such weapons appeared in Europe and the Near East in the 14th century. Used by the Turks to take Constantinople in 1453, artillery changed the whole strategy and tactics of siege warfare. Advances in the 19th century, including smokeless powder, elongated shells, rifling and rapid-fire breech loading made artillery indispensable on the battlefield. See also pp.560-563

Artiodactyla, order of mammals characterized by hoofs with an even number (2 or 4) of toes. It includes GIRAFFES, HIPPOPOTAMUSES, DEER, CATTLE, PIGS, SHEEP, GOATS and CAMELS. They are mostly of Old World origin and range in size from the 3.6kg (8lb) mouse deer to the 4.5 tonne hippopotamus. See also pp.87, 94

Art Nouveau, movement in decoration and architecture that evolved from the ARTS AND CRAFTS MOVEMENT. Starting in Britain, as a reaction against what some designers considered the poor design standards of the period, it spread through Europe and the USA, lasting until about 1910. Art Nouveau has two distinct styles, although these are often used together. One is characterized by a sinuous linearity and organic asymmetry reminiscent of writhing plant forms (as in an Aubrey BEARDSLEY drawing), the other by a severe geometry and reduced decoration (as in the architecture and interior design of C.R. MACINTOSH). In Britain the movement's leaders included Mackintosh, A. MACMURDO and Beardsley. In Belgium it achieved its peak in the architecture of Victor Horta and Henri van de Velde. In France the architect Hector GUIMARD and the designers Emile GALLÉ and René LAQUE led the way. In Spain the architect Antoni GAUDÍ evolved his own unique interpretation of the style. Louis Comfort TIFFANY led the US movement with his elegant and indolent glassware.

Ariège, region in NE France, close to the English Channel. A former province between Picardy and Flanders, and once ruled by counts of Flanders, it was first annexed by France in 1180. An agricultural region, it also contains part of the Franco-Belgian coal basin.

Arts and Crafts Movement, late 19th- and early 20th-century British movement to revive the standard of the decorative arts by means of a return to the ideals of medieval craftsmanship. Inspired by William MORRIS, the movement contributed to the European renaissance in design, but was eventually transformed by acceptance of modern industrial methods.

Arts Council (of Great Britain), body established in 1946 to develop a greater knowledge, understanding and practice of the arts in Britain. It receives government aid, most of which goes to bodies or individuals involved in promotion or performance of the arts.

Artzybashev, Mikhail Petrov (1878-1927), Russian novelist, famous for *Sanine* (1907) and *Breaking-Point* (1912).

Arun. See GILY.

Arundel, Thomas FitzAlan (1353-1414), English churchman. He was Archbishop of Canterbury (1396), several times Chancellor, and vigorously opposed the LOLLARDS.

Arundel, Thomas Howard (1586-1646), English politician and patron of the arts. He had a celebrated collection of antiques, paintings, books and sculptures (the Arundel Marbles).

Arundel, market town in W Sussex, England, on the River Arun, with an 11th-century castle, it is the seat of the Duke of Norfolk. Pop. 2,000.

Aranis, native Australian desert people of N central Australia. They believe in pre-existence, reincarnation and totemism and live basically by food gathering. They were, and still are, noted for their art forms. See also ABORIGINES.

Arap, Ove (1895-), Danish consulting engineer, based in London, who

worked there with the architect Berthold LUBETKIN in the 1930s to produce High-point apartments, the Penguin Pool and Finsbury Health Centre. He designed London's WW2 air-raid shelters. Later works include the design for Somerville College, Oxford, and the construction of SYDNEY OPERA HOUSE (1959-73).

Aryal Brethren, college of 12 priests in ancient Rome, selected from senatorial families and always including the emperor. They particularly worshipped Dea Dia, a goddess of agriculture.

Arvida, industrial town in s Quebec, Canada, on the Saguenay River, 8km (5 miles) W of Chicoutimi. The chief industry is aluminium smelting. Pop. 18,400.

Aryans, language of an ancient people who lived in the region between the Caspian Sea and Hindu Kush mountains. About 1500 BC one branch entered India, introducing the Sanskrit language, another branch migrated to Europe. In their racist propaganda in the 1930s the Nazis traced German descent from Aryans.

Arya Samaj, revivalist Hindu organization founded by Dayananda Saraswati (1824-83) in Bombay in 1875. Begun as an expression of absolute faith in the Vedas, it reflected Dayananda's militant character, asserting Hindu nationalism from its stronghold in N India.

Asahikawa (Asahigawa), city in central Hokkaido, Japan, on the Ishikari River. It is a commercial, rail and agricultural centre. Industries: timber, wood, pulp, paper. Pop. 288,500.

Asaph, Salini (died c.596), first bishop of St Asaph (Llanellwy) in Chwyd, Wales. A Briton and the grandson of a chieftain, he became abbot of a monastery that had been founded by the Scottish bishop St Kentigern, whose disciple he was. Later the monastery became the centre of a bishopric.

Asbestos, fibrous naturally occurring mineral used in insulating, fireproofing and friction materials. Asbestos is used in the form of wool, fabric and various asbestos-cement compounds. Several types exist; they are varieties of amphibole, pyroxene and chrysotile minerals. Blue asbestos (crocidolite) has certain advantages over the white forms, but can cause a serious lung condition (asbestosis). See also pp.147, 149.

Asbjørnsen, Peter Christen (1812-85), Norwegian writer. He travelled around Norway with his friend and poet, Jørgen Engebreten MOB, collecting folk tales. These appeared in a four-volume collection, *Norwegian Folk Stories* (1841-44).

Ashbury, Francis (1745-1816), US Wesleyan leader, b Britain. In 1771 he volunteered for service in the USA, where in 1784 he became superintendent of Methodist societies. See also METHODISM.

Ascari, Alberto (1918-55), Italian motor racing driver. He won the world championship in a Ferrari in 1952 and 1953, but like his father Antonio died at the wheel of his car.

Ascariasis, infestation of the intestine by a number of large roundworms, ascars, which may migrate throughout the body. Intestinal evacuation is the first treatment followed by special drugs. See also pp.1064, 18.

Ascension, island in the S Atlantic Ocean, a dependency of St Helena. See p.2126.

Ascension day, Christian feast that commemorates Christ's ascension into heaven. It falls on a Thursday, the 40th day after EASTER. It used to be called Holy Thursday.

Asceticism, self-denial of bodily pleasures and worldly pursuits, indulged in for religious purposes. It is practised in some form in most religions, in Christianity it is regarded as an imitation of Christ. The commonest form of ascetic discipline - and the form most often practised by lay people - is fasting.

Asch, Sholom (1880-1957), Polish-born American author. He emigrated to the USA in 1914 and wrote many novels about Jewish life. These include *Mother* (1937) and *Three Cities* (1933).

Ascham, Roger (1515-68), English writer and widely travelled classical scholar. His

treatises *Toxophilus* (1545) and *The Scholemaster* (published 1570) discuss the ideal elements of a Humanist education. He believed that British scholars should write in English, but recommended a "pure" prose style based on Latin.

Aschelminthes, phylum of small worm-like animals. Rather a mixed assemblage, it consists of the Rotifers, Gastrotrichs, roundworms (Nematodes), threadworms (Nematomorphs) and a small group of marine worms, the Kinorhyncha. Each of these groups was often accorded phylum status. See also p.2.

Ascomycetes, one of the four main classes of fungi, characterized by the formation of asci (enlarged, commonly elongated cells, in which eight spores are usually formed). Examples are yeasts, truffles and blue and green moulds. See also pp.353, 360.

Ascorbic acid. See VITAMINS.

Ascot, village in Berkshire, England, 10km (6 miles) SW of Windsor. A racecourse was established there in 1711 by Queen Anne. The Royal Ascot Meeting still takes place every June, although the course is used throughout the year.

Asdic. See SONAR.

Asellus, genus of aquatic crustaceans that includes the water louse. Most grow to about 1cm (0.4in) long. See also pp.35, 328.

Asen, medieval Bulgarian dynasty (1185-1257), set up after John, or Ivan, Asen I (d.1196) and his brother Peter (d.1197) rose against Byzantium. Their brother Kaloyan, or Joannitsa (r.1197-1207) made peace with the Greeks in 1201. He took advantage of the 4th crusade's capture of Constantinople in 1204 to break with the Eastern Orthodox Church. The benevolent rule of John, or Ivan, Asen II (1218-41) marked the height of the Second Bulgarian Empire. He added Epirus, Macedonia, Thessaly and part of Albania to his realm.

Aseptic, exclusion of bacteria or germs during operations or injections. In an operating theatre, clothes, gloves, equipment and even the air are sterilized. See also pp.1098-1099.

Asexual reproduction, type of reproduction in organisms that does not involve the union of male and female reproductive cells. It occurs in several forms: fission - division of a single individual, as in bacteria and protozoa; budding - growing out and eventual splitting off of a new individual, as in HYDRA; spore formation, as in YEAST; vegetative reproduction - in which a plant sends out "runners" that take root to form new plants, as in strawberries; regeneration - the regrowth of an individual from a detached part of the "parent", as in planarian worms; and PARTHENOGENESIS - the birth of young from an unfertilized female, as in APHIDS. See also SEXUAL REPRODUCTION, pp.382-383.

Asgard, in ancient Scandinavian mythology, the domain of the gods, who resided there in splendid palaces. Chief of these was VALHALLA, to which heroes slain in battle were carried in triumph.

Ash, group of mainly deciduous trees growing in temperate regions. The wood is elastic, strong and shock-resistant, and is widely used for tool handles, sporting equipment and furniture. Species include manna ash, *Fraxinus ornus*, the flowering ash of southern Europe and Asia Minor, the European ash, *F. excelsior*, which grows to 45m (148ft) tall; and *F. floribunda*, a native of the Himalayas. Family Oleaceae. See also p.307.

Ash, volcanic, fine particles of lava thrown up by a volcanic explosion. The cone of compound volcanoes consists of built-up layers of ash and lava. See also pp.204-205.

Ashanti, Negroid people of s and central Ghana. In the 18th century they established a powerful empire, based on trade in slaves with the Dutch and British. Conflicts with the British throughout the 19th century were finally resolved in 1902, when the Ashanti territories were declared a British Crown colony. Ashanti society is MATRILINEAL and traditionally agricultural, plantains, bananas, manioc, yams and cocoa being the chief crops. Gold and diamonds are mined and large

reserves of bauxite are being developed west of Kumasi, the capital. Most Ashantis follow ethnic religions and bear allegiance to a paramount chief who is advised by his mother or sister. Their crafts include high-quality gold-work and weaving, particularly the famous gold-encrusted stool that was a symbol of their sovereignty. See also p.2052

Ashanti, administrative region in central Ghana. A kingdom (capital Kumasi) was founded there in 1697, it came under British protection in 1896 and was part of the British Gold Coast from 1901. Products: cocoa, kola nuts, hardwoods and food crops. Industries: gold and bauxite mining. Pop. 1,477,400. See also p.2052

Ashbee, Charles Robert (1863-1942), British designer and architect, a leader of the Arts and Crafts Movement. He founded the Guild of Handicraft (1888-1913), distinguished for its fine work in the decorative arts, especially in book design.

Ashcan School, nickname given in the 1930s to a group of late 19th- and early 20th-century US artists, including George Bellows and Robert Henri, who rejected academic and "aesthetic" subjects for the seamer aspects of city life (especially New York).

Ashcroft, Dame Peggy (1907-), leading British actress. Since her debut in 1926, she has covered the classical repertoire from SHAKESPEARE (notably as Desdemona in *Othello* in 1930) to PINTER. In 1968 she became a director of the ROYAL SHAKESPEARE COMPANY with whom she has appeared both at Stratford-upon-Avon and in London.

Ashdod, port in Israel, 5km (3 miles) from the Mediterranean Sea and 56km (35 miles) w of Jerusalem. It was a centre of the worship of Dagon. Revived by the Romans, the city ultimately became a centre of early Christian learning. Today it is one of the most important Israeli ports, with factories that make chemicals and synthetic fibres. Pop. 37,600.

Ashie, Arthur Robert (1943-), US tennis player. He won the US men's singles championships in 1968. In 1975 he won the World Championship Tennis title, and the Wimbledon Tournament - the first black American to do so.

Ashendene Press, important English printing concern founded in 1894, in an attempt to re-emphasize the earlier craft traditions of the trade and to adapt them to the requirements of the commercial press. Highly successful for a time, it closed in 1935.

Ashes, *The*, cricket trophy held by the winners of a Test series between England and Australia. It is an urn of ashes kept at Lord's, no matter which country wins the series. This sporting trophy originated in 1882 with a mock obituary notice in the *Sporting Times* about the death of English cricket after England had lost to Australia in a Test Match. The last words were: "The body will be cremated and the ashes taken to Australia". The next season England won the series and a stump was burnt and the ashes presented in an urn to the English captain. See also CRICKET

Ashes and Diamonds (1958), last of a trilogy of Polish films directed by Andrzej Wajda. It is heavily symbolic and deals with the political and social atmosphere in postwar Poland.

Ashikaga, city in central Japan, 80km (50 miles) n of Tokyo. It is an ancient silk-weaving centre and the site of a 9th-century school, containing a large collection of Chinese classics. Industries: textiles, metal products, machinery. Pop. (1970) 156,004.

Ashkenazy, Vladimir (1937-), Soviet pianist. He studied at the Central Music School of Moscow and the Conservatoire, Moscow. In 1956 he won the Queen Elizabeth International Piano Competition in Brussels, and in 1962 he shared first prize in the Tchaikovsky Piano Competition in Moscow.

Ashkhabad (Ashkhabad), formerly Poltoratsk, a city in sw central Asia, USSR, near the border with Iran, capital of Turkmenistan (Turkmenkaya). It was founded in 1881 as a fortress. The city was severely

damaged by an earthquake in 1948. Located on the Trans-Caspian Railway, it has factories that make textiles, glass and light machinery. Pop. 2,510,000.

Ashmole, Elias (1617-92), English antiquary who amassed a fine collection of books and other objects, which he donated (1675) to Oxford University. His collection was housed in the "Old Ashmolean" (opened 1683) and is the nucleus of the present museum (built 1841-45).

Ashmore and Cartier Islands, group of four uninhabited islands, administratively linked to Northern Territory, Australia, and lying in the Indian Ocean 320km (200 miles) nw of Western Australia. A weather station is maintained on West Island, part of the Ashmore group.

Ashoka (c.274-c.236 bc), Emperor of India, the first to unite most of the Indian subcontinent under a single authority. After the violent conquest of Kalinga in c.261 he turned to Buddhism, which he promulgated throughout his realm in edicts which are preserved in rocks and pillars. See also pp.1194-1196.

Ashram, also called ashrama, a hermitage, retreat or settlement for a religious group, usually a guru and his disciples. The term originated in India, but is also used for other religious communities.

Ashton, Eric (1935-), British rugby league player. One of the finest centres in the game, he captained Wigan and Great Britain, scoring more than 1,800 points in 501 appearances for his club.

Ashton, Sir Frederick (1906-), British choreographer, b. Ecuador. In 1935 he joined the Sadler's Wells Ballet in London (now the Royal Ballet) and was its chief choreographer until 1963, and subsequently became its director (1963-70). His classics, *Cinderella* (1948), *Ondine* (1958), *La Fille Mal Gardée* (1960), and many other works have been performed by major ballet companies around the world. See also p.1759.

Ashton-Warner, Sylvia (1905-), New Zealand teacher and author who was influential in developing many progressive educational methods. Works recounting her teaching philosophy and experiences in Maori and US schools include *Teacher* (1963) and *Spearpoint Teacher in America* (1972). Among her novels are *Spinster* (1957), *Bell Call* (1964) and *Three* (1970).

Ashtar, national god of the Assyrians. A god of battle, he was depicted as eagle-headed and winged, usually in combination with the winged solar disc surmounted by a warrior. He is identified with the storm god BAAL (Bel-Marduk) of the city of Ashur, and has similarities to YAHWEH of the early Israelites.

Ashturbanipal (Assurbanipal), last great King of ASSYRIA (668-c.627 bc). During his reign Assyria reached its highest level in art, architecture, literature and science. See also pp.1160, 1188.

Ashturbanipal, or Ashurnasirpal, II, King of ASSYRIA (883-859 bc). He contributed to the establishment of a more centralized Assyrian state by appointing governors to rule the western regions of the empire. See also pp.1160, 1188.

Ash Wednesday, the first day of Lent, 40 days before Easter (excluding Sundays). In Roman Catholic Churches, ashes are placed on the foreheads of members on that day, reminding them of their need for penance and forgiveness.

Ash Wednesday (1930), poem by T.S. ELIOT. Written after Eliot's conversion to Anglo-Catholicism, this six-part poem has a more traditional form and more hopeful religious theme than his earlier works.

Asia, largest continent of the world, entirely in the Eastern Hemisphere. It extends from n of the Arctic Circle in the USSR to s of the Equator in the islands of Indonesia.

Land. On the w Asia's boundary with Europe follows a line through the Ural Mountains, w of the Caspian Sea and along the Caucasus. Geographically Europe and Asia are one enormous continent - Eurasia - but historically they have always been thought of as separate continents. Asia has six distinct regions, each defined by mountain ranges.

Northern Asia includes the inhospitable region known as Siberia, extending from the Urals to the Pacific. A large part lies within the Arctic Circle forming a vast cold, treeless plain known as the TUNDRA where the soil, except on the surface, is permanently frozen to depths exceeding 700m (2,000ft). The s part of this region includes great coniferous forests (TAIGA) and the Russian steppe lands. Its s boundary runs through the Tien Shan and Yablonovy mountains and Lake Baikal, the world's deepest lake. The high plateau area of Central Asia extends s to the Himalayas and includes the w Chinese provinces of Tibet and Sinkiang as well as Mongolia. This is a region of low rainfall and very low winter temperatures. Much of the area is desert, the largest being the Gobi and Takla Makan deserts. The Tibetan plateau, entirely above 400m (1,310ft) is mostly barren.

Eastern Asia lies between the plateaus of Central Asia and the Pacific. It is a region of highlands and plains, watered by broad rivers. Off the n coast there are many islands, the most important being the Japanese islands of Hokkaido, Honshu and Kyushu, and the Chinese island of Taiwan (Formosa). South-eastern Asia includes the Indochina Peninsula, part of which forms the Malay Peninsula, Burma and a large number of islands, the Philippines and the Indonesian islands are the most important. The n of this region is mountainous and the s mainly low-lying.

Southern Asia consists of the Indian subcontinent and the island of Sri Lanka (Ceylon). In the n it is bounded by the Hindu Kush, Pamir, Karakoram and Himalayan mountains. In the Himalayas, on the Nepal-Tibet border, is Mt Everest, 8,848m (29,029ft), the world's highest mountain. To the s of the mountains lie wide plains, crossed by rivers flowing from the Himalayas. Farther s is the Deccan, a triangular plateau that rises on its e and w edges culminating in the e and w Ghats. sw Asia includes most of the region known as the Middle East. It is made up largely of two peninsulas, Anatolia (Asia Minor) and the vast Arabian Peninsula. It is also a region of large inland seas: the Aral, Caspian, Dead and Black seas.

Structure and geology. The most striking feature of the continent is the massive range of Himalayan fold mountains that were formed when the Indo-Australian and Eurasian tectonic plates collided in the Mesozoic era. Most of China and southern USSR is composed of folded Palaeozoic and Mesozoic sediments and large expanses of central Siberia consist of flat-lying sediments of the same age, some completely exposed. The Indian subcontinent is largely Precambrian except for the Deccan Plateau which is a complex series of lava flows.

Lakes and rivers. Most of the major Asian lakes are found in the centre of the continent, and include the Caspian, which is the largest landlocked body of water in the world and is said to form the border between Europe and Asia, the Aral Sea, and lakes Balkhash and Baikal. The Chinese river Yangtze is the longest of Asia's many great rivers, 5,980km (3,716 miles) long. The Yellow River is China's other major river and until flood control measures were taken it flooded regularly, drowning thousands of people. The Indus, Brahmaputra and Ganges are the largest rivers of the Indian subcontinent, and the rivers Ob', Yenisey (Jenisey) and Lena are the continent's major n flowing streams.

Climate and vegetation. Except for the climate found on w temperate seaboard, all the world's major climatic divisions, with certain variations, are represented in the continent. The monsoonal climates of India and se Asia are peculiar to these regions and apart from extremes of heat and cold typify the continent. Large expanses are covered by desert and semi-arid grassland with belts of coniferous forest to the n and tropical forest to the s.

Animals. The richest variety of animal life is found in the s and se. Mammals include apes and monkeys, big cats such as tigers and leopards, and hoofed animals such as rhinoceroses and buffaloes.

The Ashes, symbolic trophy for the winner of the England-Australia cricket test series

Dame Peggy Ashcroft at the reopening of the Hampstead Theatre Club in London

Vladimir Ashkenazy, the Soviet pianist, has been resident in Britain since 1963

Asia has an economy founded mainly on agriculture, rice is the most important crop

Asia Minor

Asparagus can be grown as a vegetable or as an ornamental plant with fern-like foliage

Aspidistra is widely grown indoors; it has glossy leaves and purple-brown flowers

Asse survive in areas of little vegetation; the common donkey is a domesticated species

Assisi in central Italy is a historic hilltop town; St Francis was born and buried there

There are also many poisonous creatures including snakes, scorpions, spiders and insects. Antelopes, rodents, wild asses and wild goats are common in the sw Tibet and s China is the home of the giant panda. Wolves, reindeer, Arctic foxes, Arctic hares and lemmings roam the snows of the N. Birdlife ranges from penguins in the N to colourful tropical birds in the s.

People Asia has half the world's population and is made up of many peoples who can be divided into two main categories: Mongoloid, inhabiting the e half of the continent, and Caucasian, whether light skinned, (as in the USSR) or dark-skinned, (as in India), inhabiting the w. The main language groups are Indo-Aryan, Sino-Tibetan, Ural-Altaic, Malayan and Semitic. Hinduism is the religion with the most adherents, although it is confined to India and se Asia. Islam, Confucianism, Buddhism, Shintoism, Christianity, Taoism and Judaism are also important.

Economy. Agriculture is important to most Asian countries, although less than 10% of the continent is cultivated. Rice is the major crop in the s and s, and wheat and barley are grown in the w and n. China, Japan and the USSR are the most highly industrialized countries, with India rapidly catching up. Oil is an important export of many sw Asian states.

Recent history Since wwa the history of Asia has been dominated by two main themes, the throwing off of its Western colonial past and the steady advance of Communism. The Indian subcontinent gained its independence from Britain in 1947, when India and Pakistan became separate nations. In 1971 East Pakistan became the independent nation of Bangladesh. Malaysia achieved independence from Britain in 1957, Indonesia from Holland in 1945. The spread of Communism began with the victory of MAO TSE TUNG in China in 1949. North Korea failed during the war with South Korea (1950-53) to establish a united Communist state and Communism has been repulsed in Indonesia. Communists are now also a major power in Malaysia and have won control of Vietnam and Cambodia.

Area 44,391,206sq km (17,139,445sq miles)
Highest mountain Mt Everest (Nepal) 8,848m (29,029ft)
Longest river Yangtze (China) 5,980km (3,716 miles)

Population 2,255,458,000
Largest cities Shanghai (10,800,000), Tokyo (8,642,000), Peking (7,600,000). See also pp.296-297, 304-307, 312-313, 320-321, 324-325, 1932-1937, and articles on individual countries in the Survey of Nations.

Asia Minor (Anatolia), great peninsula of w Asia making up most of modern Turkey. It is bordered by the Black Sea (N), the Mediterranean Sea (s) and by the Aegean Sea (w). The waterway made up of the Bosphorus, the Sea of Marmara and the Dardanelles divides this region from Europe. Apart from a very narrow coastal plain the area is a high, arid plateau, in the se the Taurus Range rises to more than 3,750m (12,000ft). See also p.2150.

Asian Games, athletics championships for Asian countries, first held in 1951 and quadrennial since 1954. They have been dogged by political intrigue and usually dominated by Japan.

Asiento de negros, agreement, first made with Portugal in 1595 and later with Britain, by which Spain farmed out the slave trade in her colonies to foreign contractors.

Asimov, Isaac (1920-), US author and scientist, & the USSR. Although he has published several serious scientific works, he first became widely known for his science fiction novels and short stories including *I, Robot* (1950) and *The Foundation Trilogy* (1963).

Asmara (Asmera), city in N Ethiopia, 64km (40 miles) sw of Mekele, capital of Eritrean province. It was occupied by Italy in 1889, and was the main base for the Italian invasion of Ethiopia (1935-36), then called Abyssinia. It was capital of the Italian colony until captured by the British

in 1941, becoming part of Ethiopia in 1952. The University of Asmara opened in 1958. Industries: meat-canning, ceramics, textiles. Pop. 318,000.

Asoka. See ASHOKA.

Aso-san, volcano in Japan, approx. 40km (25 miles) e of Kumamoto on the island of Kyushu. It has one of the world's largest craters, between 16 and 24km (10-15 miles) across.

Asp, popular name for two species of viper, the asp viper of s Europe (*Vipera aspis*), and the Egyptian asp, a horned, side-winding viper of N Africa (*Cerastes cerastes*). Both are weakly venomous and eat small animals. Family: Viperidae. The asp that Cleopatra used to commit suicide was probably the Egyptian cobra (*Naja haje*; Family: Elapidae). See also p.313.

Asparagus, perennial plants primarily native to Asia and Africa. They have tuberous or fleshy roots, scale-like leaves and small greenish flowers. *Asparagus officinalis* is grown widely for its edible tender shoots. Family: Liliaceae. See also pp.684-685.

Aspasia (fl 440 bc), Greek noblewoman who became the mistress of the Athenian statesman PERICLES. Many famous Athenians used to meet in her house.

Aspen, one of three trees of the Poplar family, whose toothed, rounded leaves quake in the breeze. Native to temperate Eurasia, North Africa and North America, they grow up to 30m (100ft).

Asphalt, naturally occurring black or brown semi-solid bitumen, used mainly for road covering and roofing. Asphalts are found in deposits in many parts of the world, including Trinidad, Venezuela, Alabama and Texas. They are also a component of petroleum and are produced in oil refineries. They were probably produced by gradual chemical change of mineral oils. See also p.440.

Asphodel, perennial plants native to the Mediterranean region. They have white or yellow lily-like flowers. Family: Liliaceae, genera *Asphodelus* and *Asphodeline*. **Aspidistra**, or cast-iron plant, genus of durable house plants native to Asia, with long, broad, arching leaves. Height: to 91cm (3ft). Family: Liliaceae.

Aspirin (acetylsalicylic acid), a drug widely used to reduce fever (antipyretic) and to relieve pain (ANALGESIC). It is effective against low-intensity pain such as headache or muscular aches, but not so effective against deep-seated internal organic pain. How it relieves pain is not fully understood. Aspirin irritates the stomach, is toxic in overdoses and can cause death.

Asplenium, genus of ferns that includes spleenwort and bird's nest fern. Order: Polypodiales.

Asplund, Gunnar (1885-1940), leading 20th-century Swedish architect, a major exponent in N Europe of FUNCTIONALISM, which he endowed with grace and restraint. Among his best works are the extension of the Town Hall of Göteborg (1937) and Stockholm Crematorium.

Asquith, Anthony (1902-68), British film director. Apart from well-made entertainment films, he directed stylish adaptations of stage works, such as *Pygmalion* (1938), *The Winslow Boy* (1948) and *The Importance of Being Earnest* (1952).

Asquith, Herbert Henry (1852-1918), First Earl of Oxford and Asquith, British Liberal Prime Minister (1908-16), MP for East Fife (1886-1918). His second cabinet appointment was as Chancellor of the Exchequer (1906-08), when he made the first provision for old-age pensions. His government, faced with House of Lords opposition to reforms such as Lloyd George's welfare budget of 1909, saw the passing of the Parliament Act (1911), which ended the Lords' power of veto. In 1916 he was replaced as Prime Minister by Lloyd George, he resigned as head of the Liberal party in 1926.

Asquith, Margot, Countess of Oxford and Asquith (1864-1945), second wife of Herbert Henry ASQUITH. She wrote a frank autobiography (1922) and several volumes of reminiscences.

Ass, wild, speedy, long-eared member of

the HORSE family found in African and Asian desert and mountain areas. Smaller than the horse, it has a short mane and tail, small hoofs and dorsal stripes. It brays instead of neighing. The three African races (species *Equus asinus*) are the Nubian, North African and the rare Somali. Height: 90-150cm (3-5ft) at shoulder. Asian races are the XIANG and the ONAGER. Family: Equidae. See also pp.320, 343.

Assad, Hafiz al- (1928-), President of Syria. He attended the Syrian Military Academy and rose through the ranks to become a general. From 1965 to 1970 he was Minister of Defence and Commander-in-Chief of the air force, positions he used to gain power and influence. In 1970 he seized power through a coup. His policies have been militantly anti-Zionist. **Assam**, state in NE India, almost cut off from the rest of the country by Bangladesh and Bhutan. Ruled as part of the Ahom Empire (c.1400-1826), it became part of the British Empire in 1826. Industries: tea, jute, timber. Pop. 14,857,000. p.2060.

Assamese, language spoken in Assam by about 7 million people. It belongs to the Indic branch of the Indo-Iranian subdivision of the Indo-European family of languages.

Assamite, secret Muslim sect founded c.1090 by Hasan ibn al-Sabbah. It quickly gained control of the Muslim world by spreading terror. The members were organized into two classes with the highest class as devotees. They were used as instruments of assassination, sometimes sacrificing their own lives. The order was noted in the tales of Marco Polo and the Crusaders, who brought the term "assassin" to Europe. It derives from the alleged use of hashish (a drug made from Indian hemp) by terrorists seeking ecstatic visions. See also p.1358.

Assault, in law, an attempt by a person using force or violence and with the ability to do bodily harm to another person.

Assay, the result of determining the amount of a specific metal (especially gold, silver or platinum) in ores or metallurgical products.

Assembly line, in factory production, a process line in which each worker carries out a particular task, these culminating at the end of the line in a completely assembled complex unit - eg. a car engine or body. See also pp.454-456.

Assent, Royal, approval given by the British sovereign or his representative to a bill that has been agreed by Parliament. Once it has received the royal assent a bill becomes an ACT OF PARLIAMENT.

Amer (died c.910), Welsh monk who wrote an authoritative biography of ALFRED THE GREAT. He entered the royal household in about 885 and spent much of his time teaching the king and recording the history of his reign. As a reward, he was made Bishop of Sherborne.

Amer, Tobias Michael Carol (1838-1913), Dutch jurist. He shared the 1911 Nobel Peace Prize with Alfred Hermann FRIED.

Assisi, town of Perugia province, in the Umbria region of Italy, 19km (12 miles) ESE of Perugia. Its ancient name was ASISUM. The birthplace of St FRANCIS, the town contains a medieval fortress, a 12th-century cathedral and the sacred convent of St Francis. Chief industry: tourism. Pop. 24,600.

Assisi. See ASYUT.

Assizes, in English Common Law, courts that were held in provincial towns at regular intervals, presided over by peripatetic High Court judges. The assizes were founded by HENRY II in the 1160s. They have been replaced in England by CROWN COURTS.

Associated State of the United Kingdom, status which gives full internal self-government to a British colony, but control of external affairs to the UK. It was adopted first by Antigua in 1967.

Association football. See FOOTBALL.

Assumption, in the Roman Catholic Church, principal feast of the Blessed Virgin Mary, celebrated on 15 August. **Assuradun II**, ruler of Assyria from 935 to

913 BC. He briefly restored Assyrian military authority, but by his death the empire was at its smallest extent.

Assy, village and sanatorium, about 800m (2,600ft) above sea-level, in Haute-Savoie département, E France. Its Church of Notre Dame (1937-50) was decorated by Georges BRAQUE, Henri MATISSE and others.

Assyria, ancient empire of the Middle East. It took its name from the city of ASHUR, or Assur, which was located on the River Tigris near the modern city of Mosul, Iraq. At its height, the Assyrian Empire comprised the modern nations of Iraq, Syria, Jordan, Israel and Egypt, and it included parts of Saudi Arabia, Armenia and Asia Minor (Turkey). The Assyrian Empire had its beginning in the 3rd millennium BC, reached its zenith between the 9th and 7th centuries BC, and thereafter went into swift decline and was absorbed into the Persian Empire. ASHURBANIPAL (d.c. 627 BC) was the last great Assyrian king. Under his rule Assyrian art - particularly its great bas-relief sculpture - and Assyrian learning reached their peak. The luxuriance of Ashurbanipal's court at NINEVEH was legendary. The cost of maintaining his huge armies, added to the sumptuousness of his court, fatally weakened the empire. Two of his sons ruled briefly after his death, but with the capture of Nineveh in 612 BC, the empire fell into ruin. See also pp.1188-1189.

Assyro-Babylonian mythology described a cosmic order of heaven, earth and an underworld and populated it with some 4,000 deities and demons to direct the physical and spiritual activities of the world. The complex stories dealing with the Mesopotamian pantheon are generally regarded as literary entertainments or interesting explanations of natural occurrences and religious rituals, having little effect on the daily lives of the people. See also pp.1907-1908.

Astaire, Fred (1899-), US dancer and film star, real name Frederick Austerlitz. He worked with his sister, Adele, in music hall until she retired in 1932, after which he starred with Ginger ROGERS in a number of 1930s musical films outstanding for their sophisticated and exuberant choreography. His major films include *The Gay Divorcee* (1934), *Top Hat* (1935), *Swing Time* (1936), *Royal Wedding* (1951), *Funny Face* (1957) and the drama *On the Beach* (1959). See also p.1742.

Astarte, also Ashtar or Ashtoreth, Phoenician goddess of fertility and love, the equivalent of ISHTAR of the Assyro-Babylonians and APHRODITE of the Greeks. She is represented by a crescent, perhaps symbolic of the moon or the horns of a cow. The dove, gazelle and myrtle were sacred to her. See also p.1186.

Astatine, radioactive element (At) of the HALOGEN group, first made (1940) by bombarding bismuth with alpha particles. It has been made only in trace amounts. Properties at no.85, m.p. 302°C (576°F), b.p. 337°C (639°F), most stable isotope At²¹⁰ (half-life 8.3hr).

Aster, genus of mostly perennial, leafy-stemmed plants native to the Americas and Eurasia. Asters are popular garden plants and most bear daisylike flowers. The outer rays are yellow, white, blue, pink or purple and the inner discs are yellow, which turns darker with age. Family Compositae.

Asteroid, minor planet or planetoid, any of several thousand small celestial bodies orbiting the Sun in the region between Mars and Jupiter. Ranging in diameter from only a few kilometres to several hundred, asteroids may be the remains of a planet that broke up or failed to attain a stable existence. See also p.953.

Asthenosphere, the Earth's upper mantle, extending from 100 to 700km (60-430 miles) below the surface. See also MAPLE: p.194.

Asthma, disorder of the respiratory system in which the bronchial air passages narrow, making breathing difficult. It can result from infection in the lungs, nose or sinuses or, more commonly, by an allergic reaction to pollen, animals, dust, foods or

drugs. Attacks may be provoked by emotional stress, climate, polluted atmospheres and fatigue. The chest feels tight and breathing is difficult, with a characteristic "wheeze" and gasping for air, sputum is also coughed up. Allergic asthma may be treated, after tests, by injections aimed at lessening sensitivity to specific allergens. Otherwise treatment is by drugs, including steroids, antibiotics and inhalers, in severe attacks hydrocortisone injections may be given. Children often get better as they grow up, although some people suddenly acquire the disease in middle age. In the acute form, the attacks are usually severe and follow longish periods of otherwise good health. The chronic condition is marked less by severe attacks than by a general breathing impairment. See also BRONCHITIS, EMPHYSEMA, LUNGS, pp.1064-1065, 1114.

Asti, capital of Asti province in the Piedmont region, NW Italy, 45km (28 miles) SE of Turin (Torino). An influential medieval republic, it reached its prime in the 13th century, and was controlled by Savoy in the 16th century. Industries: chemicals, wine making, food processing. Pop. 76,150.

Astigmatism, defect of vision in which the cornea or lens is curved more strongly in one plane than another. It can usually be corrected with glasses. See also p.137.

Aston, Francis William (1877-1945), British scientist. He was awarded the 1922 Nobel Prize in chemistry for his work on isotopes. He invented the mass spectrograph, and proved that elements are composed of mixtures of various isotopes. See also p.905.

Astor, family of American financiers. Its founder, John Jacob Astor (1763-1848), was an immigrant from Germany who became a successful businessman in New York. He founded the American Fur Company in 1808, and after 1812 acquired a virtual monopoly of the US fur trade. He concentrated on land investment after 1834 and became the wealthiest man in the USA. His great-grandson William Waldorf (1879-1952) was married to Viscountess Nancy Wither Astor (1879-1964), who in 1919 became the first woman to sit in the House of Commons. William Waldorf was owner of the *Observer* newspaper. In the 1930s their country house, Cliveden, was the centre of a group that advocated appeasement of Nazi Germany. William's brother, John Jacob (1886-1971), 1st Baron Astor of Hever, was owner of *The Times* newspaper from 1922 to 1966.

Astraea, Greek goddess of justice. She is usually depicted carrying scales and wearing a crown of stars. Daughter of Zeus and Themis, she fled to the skies when men began forging weapons of war. Astraea formed the constellation VIRGO in the ZODIAC.

Astrakhan (Astrakhan), city in SE European USSR and a port on the Caspian Sea approx. 378km (235 miles) SE of Volgograd. It is capital of Astrakhan oblast and site of the USSR's largest fishery. A railway, airline and oil shipping terminal, it is an important trade centre. It possesses a walled kremlin (1587-89) and cathedral (1700-10). The city was expanded in the 13th century under Mongols near the site of the ancient Khazar city of Itil (8th-10th century). It became a Tartar stronghold until its capture (1554-56) by IVAN (IV) the Terrible. In the civil war (1917-20) the city remained in White Russian hands, becoming a base for the Caspian Sea conquest of 1920. Industries include shipbuilding, engineering, oil-refining, paper and food processing. Pop. (1970) 411,000.

Astringents, agents which heal mucous membranes and raw sores by narrowing the blood vessels (cocaine), abstracting water (alcohol) or making scabs (metallic astringents).

Astrodynamic, application of celestial mechanics, ballistics, mathematical perturbation theory, and the principle of observation reduction to determine, predict and correct orbits and trajectories in space. See also CELESTIAL MECHANICS.

Astrology, pseudoscientific study of the

influence supposedly exercised by celestial bodies upon the lives of human beings. It originated in Babylon about 3,000 years ago and sought, by means of arbitrary rules, to predict an individual's fate according to the motions and positions of the Sun, Moon and planets at the time of his birth. For this purpose accurate observational records were begun which led to the exact science of ASTRONOMY. See also p.1894.

Astronaut (Russian, cosmonaut), person who navigates or rides in a space vehicle, also a person selected for a training programme to fly in space vehicles. The first man in space was the Russian YURI GAGARIN in 1961. The first man on the Moon was the American NEIL ARMSTRONG in 1969. The first woman in space was the Russian Valentina Tereshkova in 1963. See also pp.930, 1026.

Astronomer Royal, head of the British Royal Observatory, which was founded in 1675 at Greenwich but has been gradually moved to Herstmonceux, Sussex, since WWI. The first Astronomer Royal was JOHN FLAMSTEED; since 1972 the position has been held by Sir Martin RYLE.

Astronomical telescope. See TELESCOPE.

Astronomical unit (AU), unit of length used for the measurement of distances within the solar system and as a base line for the measurement of stellar parallax. It is equal to the mean distance of the Earth from the Sun, approx. 149,600,000km (92,957,000 miles). See also p.916.

Astronomy, branch of science studied since ancient times and concerned with the universe and its components in terms of the relative motions of celestial bodies, their positions on the celestial sphere, physical and chemical structure, evolution and the phenomena occurring on them. It includes celestial mechanics, ASTROPHYSICS, COSMOLOGY and ASTROMETRY. Waves in all regions of the ELECTROMAGNETIC SPECTRUM can now be studied either with ground-based instruments or, where no atmospheric window exists, by observations and measurements made from satellites, space probes and rockets.

History Astronomy was first used practically to develop a calendar, the units of which were determined by observing the heavens. The Chinese had a calendar in the 14th century BC. The Greeks developed astronomy significantly between 600 BC and AD 200. THALES introduced geometrical ideas and PYTHAGORAS saw the universe as a series of concentric spheres. ARISTOTLE believed the Earth to be stationary but he explained lunar eclipses correctly. ARISTARCHUS put forward a heliocentric theory. HIPPARCHUS used trigonometry to determine astronomical distances. PROBLEMY's system was a geometrical representation of the SOLAR SYSTEM that predicted the motions of the planets with great accuracy.

From then on astronomy remained dormant until the scientific revolution of the 16th and 17th centuries, when COPERNICUS' theory, that the Earth rotates on its axis and, with all the other planets, revolves round the Sun, had a profound effect upon the religion and philosophy of the day. KEPLER's laws of planetary motion refined the theory of heliocentric motion, and his contemporary, GALILEO, made use of the TELESCOPE and discovered the moons of Jupiter. ISAAC NEWTON combined the sciences of astronomy and physics. His laws of motion and universal theory of GRAVITATION provided a physical basis for Kepler's laws and the work of many astronomers from then on - eg, in the prediction of HALLEY's COMET and the discovery of the planets Uranus, Neptune and Pluto. By the early 19th century the science of celestial mechanics, the study of the motions of bodies in space as they move under the influence of their mutual gravitation, had become highly advanced and new mathematical techniques permitted the solution of the remaining problems of classical gravitation theory as applied to the Solar System. In the second half of the nineteenth century astronomy was revolutionized by the introduction of techniques based on photography and SPECTROSCOPY. These encouraged investigation into the

Assyria produced striking architecture, many buildings had impressive sculpture

Fred Astaire, dancer supreme, partnered many famous screen stars, including Cyd Charisse

Astrology is based on the assumption that heavenly bodies influence people's lives

Aswan, a strategic city in ancient times, is now famous for its High Dam project

Kemal Atatürk, the name given to him by the Turkish assembly means *Father of the Turks*

Athena was childless and was often referred to as Pallas (Ma den) or Parthenos (Virgin)

Athens: the Acropolis and the magnificent Parthenon, dedicated to the goddess Athena

physical composition of stars, rather than their position. Einar HERTZSPRUNG and H. N. RUSSELL studied the relationship between the colour of a star and its luminosity. By this time also larger telescopes were being constructed, which extended the limits of the universe known to man. HARLOW SHAPLEY determined the shape and size of our galaxy and E. P. HUBBLE's study of distant galaxies led to his theory of an expanding universe. The "Big Bang" and Steady State theories of the origins of the universe were formulated. In recent years space exploration and observation in different parts of the electromagnetic spectrum have contributed to the discovery and postulation of such phenomena as QUASARS, PULSARS and BLACK HOLES.

Modern astronomy is divided into a number of different branches. The major divisions are as follows:

Gamma-ray astronomy is concerned with the study of gamma rays, which cannot penetrate the Earth's atmosphere and must be studied from satellites. The Sun is the principal source. See p.922

Infra-red astronomy is concerned with detecting infra-red (IR) waves, determining their source and studying their spectra. Most IR radiation is absorbed by the Earth's atmosphere. The Sun and the centre of the galaxy are sources of IR radiation. See p.922

Optical astronomy is the oldest branch which studies sources of light in space. Light rays can penetrate the atmosphere but, because of disturbances, many observations are now made from above the atmosphere. See pp.918, 920

Radar astronomy is used to determine distance, orbital motion and surface features of objects in the solar system. Radar pulses are bounced back to Earth from the object. See p.917

Radio astronomy uses radio telescopes to detect radio waves from space and determine their source and energy spectrum. The most powerful sources include the Sun, interstellar clouds of hot hydrogen, such as the Orion Nebula, supernova remnants and pulsars, like the Crab Nebula, quasars and radio galaxies. See p.922

Ultra-violet astronomy studies ultra-violet (UV) waves from space, their source and spectra. Higher wavelengths can be studied from the ground but lower wavelengths must be studied from satellites and balloons. Sources include the Sun, the Orion Nebula, and Wolf-Rayet stars. See p.922

X-ray astronomy is concerned with studying X-ray sources. X-rays are absorbed by the Earth's atmosphere so detecting instruments must be carried in satellites. Sources include the Sun, the Crab Nebula, Cygnus A and the galaxy M87. See p.922

Astrophysics, branch of ASTRONOMY that studies the physical and chemical nature of celestial bodies and their evolution. Many branches of physics, including nuclear physics, plasma physics, relativity and spectroscopy, are used in predicting properties of celestial bodies and in interpreting the information obtained from astronomical studies of the electromagnetic spectrum, including light, X-rays and radio waves. See also p.978

Asturias, Miguel Angel (1899-1974), Guatemalan novelist. He won the Nobel Prize in literature in 1967. His most famous novel, *El Señor Presidente* (1946), condemns dictatorship. Although it is based on conditions in Guatemala its message is universal. In it the author criticizes the change from a rural, "natural" world to an urbanized community dominated by a dictator.

Asturias, region in NW Spain, bordering the Bay of Biscay and traversed by the Cantabrian Mountains. The region was named by the Iberians in the 2nd century BC and is famous for its cider and coal mines, the richest in Spain. Industries: coal, manganese, mining, steel and non-ferrous metal production, fishing. Fruit. Pop. 1,045,600

Asunción, capital and largest city of Paraguay, located in the SW on the S bank

of the River Paraguay at its junction with the River Pilcomayo. It is Paraguay's chief port and an administrative, industrial and cultural centre. Founded about 1536 as a trading post and Jesuit mission (1538), it was the scene of the Comuneros rebellion against Spanish rule in 1721. It was later occupied by Brazil (1868-76). The city's features include the Panteón Nacional (a tomb for national heroes), the Encarnación Church, the National University (1889) and the Catholic University (1960). Industries: vegetable oil mills, textiles, food processing. Pop. (1975 est.) 574,000

Aswan, city in SE Egypt, on the S bank of the River Nile just above Lake Nasser, capital of Aswan province. Originally an Egyptian settlement called Syene, meaning "market place", the city was of strategic importance to the Egyptians and Greeks because it controlled all shipping and communications above the first cataract of the Nile. The modern city is a commercial and tourist centre and has benefited greatly from the construction of the Aswan High Dam. The dam, completed in 1970, has a generating capacity of 10,000 million kilowatt-hours. The rock terrain surrounding the lake abounds in Egyptian and Greek temples and although some archaeological treasures were lost under water, the temples of ABU-SIMBEL were moved and saved. Industries: steel, textiles, tourism. Pop. 246,000

Asynchronous transmission, the fastest method of programme execution in computers, the beginning of each operation is signalled by the stop bit at the end of the previous one.

As You Like It (1599-1600), comedy by WILLIAM SHAKESPEARE

Asyút, city and trade centre on the River Nile in a central Egypt. Its ancient name was Lycopolis. The nearby Asyút Barrage helps to regulate the flow of the Nile and stores water for irrigation. Industries: inorganic chemicals, textiles, ceramics, handicrafts. Pop. (1971 est.) 181,200

Atabrine, quinacrine hydrochloride, a drug used in the prevention and treatment of MALARIA

Atacama Desert, in N Chile, is considered to be the driest desert in the world and, except for where it is artificially irrigated, is devoid of vegetation. It was crossed in 1540 by the Spanish conquistador Pedro de Valdivia. Until the advent of synthetic fertilizers, the desert was extensively mined for sodium nitrate. Although the mining boom is over, large deposits of copper and other minerals remain.

Atahualpa (c.1502-33), also known as Atabalipa, last Inca ruler of Peru. The son of Huayna Capac, he fought his brother Huáscar for control of the Inca kingdom and defeated him in 1532, the year FRANCISCO PIZARRO arrived in northern Peru. Atahualpa was later taken prisoner by Pizarro and executed. See also pp.1366-1367, 1370-1371

Atalanta, in Greek mythology, a swift-footed huntress who was suckled by a she-bear. She offered to marry any man who could outrun her, and to kill those who failed. APHRODITE gave three of the golden apples of the Hesperides to Hippomenes, who undertook to race Atalanta. During the race he dropped them one by one, distracting and delaying his opponent. They married, but in later life ZEUS turned them into lions.

Atatürk, Kemal (1881-1938), b. Mustafa Kemal, founder of modern Turkey. As a youth he joined the Young Turks, a liberal movement that sought to establish a government independent of Ottoman rule. He fought against the Italians in Tripolitania in 1911 and served with distinction in WWI. In 1919 he organized a Turkish Nationalist party in E. Anatolia and formed an army. He also announced the aims of an independent Turkish state and in 1921-22 he expelled the Greeks from Anatolia. He abolished the sultanate in 1922 and proclaimed the republic in 1923. Elected President in 1923 and re-elected in 1927, 1931 and 1935, he instituted sweeping reforms aimed at Westernizing Turkey.

Atavism, out-of-date term for a genetic

reversion by an organism or any one of its parts to a characteristic of its ancestors after an interval of at least one generation in which the trait was absent.

Athabaskan, or **Athapascan**, also known as Slave Indians, tribe and language group of North American Indians inhabiting NW Canada. They were forced north to the Great Slave Lake and Fort Nelson by the Cree, and their common name, Slave, derives from the domination and forced labour exacted by the Cree. The Athabaskan tribe has always been closely linked to the Chipewyan people, and some authorities regard the two as one group. The Athabaskan language, which derives from the tribe, covers the largest geographical area of all North American Indian groups from the Cree in Canada to the Hupa in California, and the Navajo and Apache of the SW. The number of Athabaskan-speaking Indians in North America is believed to exceed 250,000.

Athanasian Creed, Christian profession of faith, probably written in the 6th century, that explains the teachings of the Church on the Trinity and the incarnation. It is accepted as authoritative by the Roman Catholic and Anglican churches.

Athanasius, Saint (c. 297-373), Doctor of the Church. As Patriarch of Alexandria he confuted Arianism and in *Four Orations against the Anans* (357) he represented the Trinity as three persons in one nature, thereby maintaining the divinity of Christ. He is no longer considered the author of the ATHANASIAN CREED.

Atheism, literally "without God", a system of thought developed around the denial of the existence of God. Atheism, so defined, first appeared during the ENLIGHTENMENT, the age of reason. In ancient Greece it meant refusal to worship the state deities. It is different from AGNOSTICISM, which merely expresses uncertainty about the existence of God. See also p.1918

Athelney, Isle of, historic area formerly surrounded by marshland in Somerset, SW England. In 878 King ALFRED took refuge there from the Danes and later moved from that stronghold to defeat them. He founded a Benedictine abbey on the Isle in 888 to give thanks for this victory.

Athelstan (c.895-939), King of England (924-939). As King of the Mercians and the West Saxons, he gained Northumbria and invaded Scotland. In 937 he confirmed his rule over most of England by his decisive victory over the Scots, Danes and Welsh at Brunanburh.

Athena (Athene), Greek goddess of war and patroness of the arts and industry (Roman, MINERVA). Athena was born fully grown and armed from the head of ZEUS. As a war goddess she emphasized skill and justice. In the TROJAN war she sided with the Greeks. She inspired sculptural masterpieces by Phidias and the ship *Argo* by Argus, for JASON and the Argonauts. Athens was named after her. See also p.1900

Athenagoras (fl. 2nd century), Greek philosopher and Christian apologist. His *Embassy for the Christians*, addressed to MARCUS AURELIUS, appeared in c.177.

Athens (Athina), capital city of Greece situated on the Saronic Gulf. The ancient city was built around the Acropolis, a fortified citadel, and was the greatest art and cultural centre in ancient Greece, gaining importance after the PERSIAN wars (500-449 BC). The city prospered under CIMON and PERICLES during the 5th century BC and provided a climate in which the great classical works of PHILOSOPHY and DRAMA were created. Defeated by SPARTA in the PELOPONNESIAN war of 431-404 BC, Athens lost supremacy in Greece and declined under Roman domination (from 228 BC). Since Greece became an independent kingdom after the Greek War of Independence (1821-32), Athens has regained its former standing as a cultural and commercial centre. The most noted artistic treasures are the Parthenon (438 BC), created by Ictinus and Callicrates, the temple to Athena, Athena Parthenos (a Doric statue), the Erechtheum (406 BC) and the Theatre of Dionysus (c.500 BC), the oldest of the Greek

theatres) Modern Athens and its port of Piraeus form a major transportation and economic centre in the Mediterranean area. Industries include shipbuilding, papermills, steel machinery, textiles, breweries, chemicals, glass and tourism. Pop. (1971) 2,530,207. See also pp.1204-1205, 1204-1205, 1850, 1856.

Atherosclerosis, thickening of artery walls caused by fatty deposits, a common arterial disease. See ARTERIOSCLEROSIS. pp.1066, 1067.

Athlete's foot, contagious, fungus-caused infection that usually appears first between the last two toes. Itching, macerated skin and blisters are usual symptoms. See also p.1074.

Athletic Park, sports stadium in Wellington, New Zealand, home of the New Zealand Rugby Union, rugby Test venue, and home ground of the Wellington provincial side.

Athletics, composite sport that includes running and hurdling events on the track, jumping and throwing field events, cross-country and long-distance road running, and walking. In the USA it is known as "track and field sports", the term "athletics" embracing all competitive sports. Men have competed with each other in tests of speed and strength for thousands of years. It is known that the ancient Greek OLYMPIC GAMES were held as early as 776 BC, and possibly as much as 600 years earlier, but it is thought that the Taitian Games in Ireland were founded even before that, in 1829 BC. A sport called pedestranism became popular in 17th-century England, in which wagers were struck by men of means on the road-running ability of their footmen. But it was not until the 19th century that modern athletics originated - at the Royal Military Academy, Sandhurst; in the public schools, and above all in the universities of Oxford and Cambridge, which inaugurated their annual match in 1864. The first modern Olympics were held at Athens in 1896, since when athletics has always been a predominantly amateur sport. The world's governing body, the International Amateur Athletic Federation, was established in 1912. Each athletics event has a separate article in the *Fact Index*.

Atholl, Scottish dukedom. John Murray (1635-1703), the 2nd Earl and 1st Marquess of Atholl, was a Royalist who was involved in a rising against the commonwealth in 1653 and later held office under CHARLES II. He lost royal favour after opposing the repression of the Scottish COVENANTERS by LAUDERDALE in 1678. He supported James II and flirted with the JACOBITES, was pardoned and he helped to pacify the Highlands. His son John Murray (1659-1724), 2nd Marquess and 1st Duke of Atholl, opposed the Act of Union but later rose to high office and helped to repress the JACOBITE REBELLION of 1715. See also pp.1432-1433.

Athos, Holy mountain in NE Greece, at the N end of the Acte Peninsula. It is located inside the autonomous Mt Athos community of monasteries. Height 2,032m (6,667ft).

Atkins, Thomas, nickname for the British infantry soldier, sometimes shortened to "Tommy". The name was first used on a specimen army form in the 1800s, it is possible that it commemorates a real person.

Atkinson, Sir Harry (1831-92), New Zealand Prime Minister, b. Cheshire, England. He formed three governments between 1876 and 1891. He was renowned for his financial expertise and for his social welfare programme.

Atlanta, industrial city and state capital of Georgia, USA. It is a major distribution, commercial, cultural and financial capital. The land was ceded to Georgia in 1821 by the Creek Indians and was settled in 1833, the city was founded in 1837 at the end of the Western and Atlantic Railroad and was originally called Terminus. It served as a Confederate supply depot and communications centre during the AMERICAN CIVIL WAR. On 2 Sept. 1864, it fell to Gen Sherman who fired it on 15 Nov. The city was rapidly rebuilt and soon recovered its

former importance. It was made temporary state capital in 1868 and, by popular vote, permanent capital in 1887. During the 20th century, Atlanta has grown to become one of the USA's major cities. The site of the state legislature, it contains numerous educational and cultural institutions among which are the High Museum of Art and the Emory University, founded in 1836. Industries, textiles, chemicals, glass, paper, timber, iron and steel, electronics, agricultural machinery, car and aircraft assembly and food processing. Pop. (1973) 451,123.

Atlantic, Battle of the (1939-43), WWII engagements arising from Germany's attempt to starve Britain into submission by U-boat attacks on merchant shipping. More than 14 million tonnes of shipping was destroyed. See also pp.1680, 1681, 1682.

Atlantic Charter, joint declaration of peace aims issued in Aug. 1941 by the US President Franklin D. ROOSEVELT and the British Prime Minister Winston CHURCHILL. It affirmed the right of all nations to choose their own form of government, promised to restore sovereignty to all nations that had lost it, and advocated the disarmament of all aggressor nations.

Atlantic Monthly, US magazine (founded 1857) of current events and reviews of high repute. James Russell LOWELL was its first editor, and William Dean HOWELLS edited the magazine from 1871 to 1881.

Atlantic Ocean, the world's second largest ocean. It stretches from the Arctic circle in the N to the Antarctic, or Southern, Ocean in the S. Its most striking feature is the Mid-Atlantic Ridge which runs N-S for its entire length. At the crest, the ridge is cleft by a deep rift valley which is frequently offset by E-W transform faults. The age of the crust steadily increases with distance from the central rift, and so there is little doubt that the rift has evolved by sea-floor spreading and is associated with the movement of the Americas away from Europe and Africa at a rate of 2-4cm (0.8-1.6in) per year.

Currents. The current pattern of the Atlantic consists of two gyres, a clockwise flowing gyre in the N and an anti-clockwise flowing gyre in the S. The N gyre is dominated by the fast flowing Gulf Stream, travelling at speeds of up to 130km (80 miles) per day, and forming the western boundary current of the gyre. The southern current gyre is atypical in having a weak western boundary current, the Brazil Current.

Resources. Apart from oil (which is found mainly in the Gulf of Guinea), sand and gravel are the most important minerals from the Atlantic. The largest single offshore mining operation in the world is located at Ocean Cay on the Grand Bahamas bank, where calcium carbonate is extracted in the form of aragonite. Valuable diamond deposits, exploited by dredging, occur off the coast of Namibia. The North Atlantic contains the most valuable fishing grounds in the world: the cod fisheries around Iceland, S. Greenland and the Grand Banks of Newfoundland. The relatively unexploited fisheries of the S Atlantic are a comparatively unknown quantity and are probably less stable than those of the N. Area: 82,400sq km (31,800sq miles). See also pp.198-201, 232-239, 412-413, 738-739, 1950-1951.

Atlantis, mythical island in the Atlantic Ocean from which a great empire is said to have tried to subdue the Mediterranean countries. It has been identified by some authorities with the Greek island of Thera, destroyed by an earthquake c.1450 BC.

Atlas, in Greek mythology, the son of the Titan Iapetus and the nymph Clymene and brother of PROMETHEUS. According to Homer he was a marine being who supported the pillars that divided heaven and earth. According to Hesiod he was one who, having warred against Zeus, was condemned to hold up the heavens.

Atlas, collection of maps and charts, usually in book form. It may contain information about climates, boundaries, geology, history and populations of the world or regions, often with pictures, facts

of interest and indexes of place names. The term comes from the name of the Greek god ATLAS who was thought to support the world on his shoulders. See also p.2176.

Atlas bone, the topmost vertebra of the spine, a ring of bone on which the skull sits. See also p.146.

Atman. See BRAHMAN.

Atmolytic, the process of separating mixed gases by allowing them to pass through a porous material.

Atmosphere, envelope of gases surrounding the Earth. Its shielding effect from the harsh environment of outer space and some of the gases it contains are vital to life. About 95% by weight of the Earth's atmosphere lies below the 25km (15 miles) altitude, the mixture of gases composing it is called air. The Earth is believed to have possessed three other atmospheres, the first probably consisted of hydrogen, helium, nitrogen and small amounts of argon, methane and ammonia. Hydrogen and helium drifted off but were replaced by volatile vapours including steam and carbon dioxide. These vapours, together with the remaining gases from the first atmosphere, made up the second atmosphere. As the Earth cooled, water settled and dissolved the soluble gases, leaving nitrogen, argon and carbon dioxide - the third atmosphere. The present atmosphere evolved with oxygen which replaced most of the carbon dioxide. Its composition by weight is: nitrogen 78.1%, oxygen 21%, argon 1.0% and 0.2% made up of carbon dioxide, hydrogen, the inert gases and varying amounts of water vapour. The atmosphere can be conceived as concentric shells, the first is the troposphere, in which dust and water vapour create the clouds and weather. The stratosphere extends from 10 to 55km (8-36 miles), it is cooler and clearer and contains ozone concentrated in its upper regions. Above, to a height of 70km (43 miles), is the mesosphere in which chemical reactions occur, powered by sunlight. The temperature climbs steadily in the thermosphere above, which gives way to the exosphere at about 400km (250 miles), where helium and hydrogen may dart off into space. The ionosphere ranges from about 50km (30 miles) out into the VAN ALLEN RADIATION BELTS. See also p.246.

Atoll, ring-shaped REEF OF CORAL enclosing a shallow LAGOON. An atoll begins as a fringing reef surrounding a slowly subsiding island, usually volcanic. As the island sinks the coral continues to grow upwards until eventually the island is below sea-level and only a ring of coral is left at the surface. See also p.231.

Atom, smallest particle of matter that can take part in a chemical reaction, every element having its own characteristic atoms. The atom, once thought indivisible, consists of a central, positively charged nucleus (identified in 1911 by Ernest RUTHERFORD) which is composed of tightly packed protons and neutrons. In 1913 Niels BOHR, using quantum mechanics, suggested that electrons (known then to surround the nucleus) moved in fixed orbits. The study of wave mechanics has since modified the concept of orbits. The HEISENBERG uncertainty principle requires that electrons encompass the nucleus as a cloud whose density varies according to the probable location of the electron. The number of electrons in an atom (its atomic number) and their configuration determine its chemical properties. Removal of an atomic electron produces a positively charged ion. The nucleus occupies a small fraction only of the atomic space, but accounts for almost the whole of the mass of the atom. See also pp.810-816, 892.

Atomic bomb. See NUCLEAR WEAPON p.574.

Atomic clock, the most accurate of clocks, keeping time to within thousandths of a second per year. It is an electric clock regulated by the natural resonance frequency of excited atoms, those of the metal caesium being most commonly used. See also pp.452-453.

Atomic energy. See NUCLEAR ENERGY.

Atomic nuclear reactor. See REACTOR, NUCLEAR.

Atomic nuclear reactor

The Battle of the Atlantic was crucial in the fight for survival against Nazi Germany

Atmosphere, the ever present danger of air pollution in the industrial world

Atolls are circular coral formations above the water common in the Pacific Ocean

Atom, the fundamental unit of matter consists of a nucleus surrounded by electrons

Atomic number

Attila the Hun forced the Romans to pay him not to attack their eastern empire

Daniel Auber's work influenced the early music of Gounod and Massenet

Aubusson tapestries have been manufactured in the city since the 18th century

Auckland, shades of rural England in New Zealand's chief port and provincial capital

Atomic number, number of protons in the nucleus of a neutral atom of an element or number of electrons moving around that nucleus, abbreviated to *at. no.* It determines the chemical properties of an element and its position in the PERIODIC TABLE. ISOTOPES of an element all have the same atomic number. See also pp.886-888.

Atomic power. See NUCLEAR POWER

Atomic weapons. See NUCLEAR WEAPONS

Atomic weight, mean mass of the atoms in a chemical element (assuming natural isotopic composition), expressed in atomic mass units, abbreviated to *at. wt.* It is the ratio of the mass of the atom in question to 1/12th the mass of the carbon-12 atom. See also pp.782-786

Atomism, doctrine originated by Leucippus and elaborated by DEMOCRITUS in Greece during the 5th century BC, which tried to reconcile Eleatic "being" with Heraclitan change, by suggesting that everything is composed of immutable and indivisible atoms. See also ELEATICISM, HERACLITUS

Atom. See AMUN

Atonal. See TWELVE-TONE MUSIC

Atonality, in music, composing in terms of the 12 tones of the chromatic scale without reference to traditional keys and harmony, as in *Pierrot Lunaire* (1912) by Arnold SCHOENBERG. See also p.1754

Atonement, in religion, the process by which a sinner moves towards union with God, through prayer, fasting, sacrifice or good works. In Christian theology Jesus Christ atoned for the sins of the whole world by his sacrifice on the cross. The Jews observe the Day of Atonement (Hebrew: YOM KIPPUR) as their most sacred feast

ATP. See ADENOSINE

Atrium, interior court of an ancient Roman house, also an open court of Early Christian churches. Atrium is also the medical term for one of the upper two chambers of the HEART, which are also called auricles; in zoology, the cavity behind the pharynx of certain tunicates and Urochordata

Atrophy, in medicine, refers to the shrinking or wasting of a cell, tissue or organ. It may be associated with a number of pathological conditions, usually muscular diseases, or with disuse. See also pp.1070-1071

Atropine, poisonous ALKALOID drug ($C_{17}H_{23}O_3N$) obtained from certain plants such as *Atropa belladonna* (DEADLY NIGHTSHADE), used medicinally to regularize the heartbeat during anaesthesia and to dilate the pupil of the eye

Atropos, in Greek mythology, one of the three Fates who shortened men's lives. She gave her name to the plant genus *Atropa*, which includes DEADLY NIGHTSHADE (*belladonna*)

Attainder, Act of, means by which in the 1640s the English Parliament, unable to convict STRAFFORD and LAUD by the judicial process of IMPEACHMENT, simply declared their guilt and sentenced them to death. See also pp.1420-1421

Attar of roses, perfume made using the essential oils distilled from rose petals

Attenborough, Sir Richard (1923-), British film actor and director. His first part was in *In Which We Serve* (1942) and he starred in *The Angry Silence* (1960) and *10 Rillington Place* (1971). *Oh What a Lovely War* (1971) was his first film as director and in 1977 he directed *A Bridge Too Far*

Atterbom, Per Daniel Armandus (1790-1855), Swedish poet, leader of the Uppsala school of Romantics. His greatest work was the dramatic verse fairy tale *Lycksalighetens ö* (1824-27)

Attika (Attiki), department in central Greece, the capital is Athens. According to legend, King Cecrops divided the region into 12 colonies that were united by THESEUS under the administrative control of Athens in 700 BC. Cleisthenes, a politician of Athens, reformed the aristocratic rule, classifying the people into ten tribes based on topographical divisions. Industries: lead, marble, shipping, tourism. Area: 3,375 sq km (1,301 sq miles). Pop. 2,060,000

Atticus, Titus Pomponius (109-32 BC), Roman businessman who lived in Athens and to whom many of CICERO's letters were addressed

Attila (c.406-53), King of the Huns (434-53), co-ruler with his elder brother Bleda until he murdered him in 445. THEODOSIUS II, eastern Roman emperor, was compelled to pay him tribute. Attila invaded Gaul in 451, although his motives for this action are unclear. His army suffered heavy losses, but he was still able to invade Italy the next year. But with his army suffering from disease and lack of provisions, he recrossed the Alps and died before he could again invade Italy. See also pp.1270-1271

Attila, in Greek mythology, a shepherd who was loved by CYBELLÉ, goddess of the earth, fertility and wild nature. In one version, the jealous Cybele caused Attila to lose his senses and castrate himself so that none other might have him; later she changed him into a fir-tree

Attila, one of the longer poems by the Roman poet CATULLUS. Probably modelled on the work of Calamachus or some other Alexandrian, it tells the story of Attis, an Athenian youth who sailed to Asia Minor and mutilated himself in religious frenzy

Attlee, Clement Richard, 1st Earl (1883-1967), British Labour politician, Prime Minister 1945-51. He began as a social worker in London's East End in 1907 and joined the PARLIAMENTARY SOCIETY the same year. He was elected MP for Limehouse in 1922, and served in the first Labour government of 1924. He was Postmaster-General in MACDONALD's government of 1929, but resigned in 1931 over the formation of the NATIONAL GOVERNMENT. Elected Labour leader in 1935, he served as deputy prime minister in CHURCHILL's wartime cabinet (1940-45). As Prime Minister he was responsible for the establishment of the NATIONAL HEALTH SERVICE, an extension of national insurance, and the nationalization of the Bank of England, the railways, the coal, iron, steel, gas and electricity industries. Attlee was also involved in the granting of Indian independence. His government's majority was substantially reduced in the election of 1950 and at the next election (in Oct. 1951) Labour was narrowly defeated. Attlee continued to be Labour leader until he retired in 1955. See also p.1688

Attorney, person who has authority to act for another, especially in a court of law. In Britain and the USA, the Attorney General is the chief law officer. The term attorney also refers to county and state prosecutors in the USA

Attrition, in warfare, a gradual wearing down of an enemy, often by inflicting casualties he cannot make good and by cutting or limiting his supplies of food and material. In theology, attrition is incomplete sorrow for a sin. See also pp.1668-1671

Attwell, Mabel Lucie (1879-1964), British illustrator of many books for children, including books of her own poems and stories. Her drawings of children have been widely reproduced

Atwood, Thomas (1783-1856), MP for Birmingham (1832-39). A country banker of radical views, his major political achievement was to found, in 1830, the Birmingham Political Union, a focus of agitation leading to the 1832 REFORM ACT

Atwood, Margaret (1939-), Canadian author. Most of her work is poetry that explores human relationships. Her books of poems include *The Circle Game* (1966), *The Journals of Susanna Moodie* (1970) and *Power Politics* (1971)

Aube, river in N central France which rises in the Haute-Marne département and flows W and NW into the River Seine. Length: 248 km (154 miles)

Auber, Daniel François Esprit (1782-1871), French composer. He studied under Cherubini and wrote more than 40 operas, including *La Muette de Portici* (The Dumb Girl of Portici), also called *Musaniello*, *Manon Lescaut* and *Fra Diavolo*. He is regarded as the founder of French grand opera

Aubergine, or eggplant, tropical plant whose egg- or pear-shaped purple fruit is eaten as a vegetable. Species *Solanum melongena*. See also p.684

Aubert, Louis (1877-1968), French composer. He had a brief career as a pianist and his compositions include piano music, songs and the ballet *Fourberies* (1950).

Aubert de Gaspé, Philippe (1786-1871), Canadian author. His historical novel *Les anciens canadiens* (1863) is a valuable record of 18th-century French-Canadian social customs and folklore

Aubignac, François-Hédeline (1604-76), French theorist of drama whose book *La Pratique du théâtre* (1657) provides an insight on the dramatic techniques of the 17th century

Aubretia, or *aubrietia*, plant having showy purple flowers, seen most commonly in rock gardens. It belongs to the mustard family and comes from the Middle East

Aubrey, John (1626-97), English antiquarian and author. His main work was *Lives of Eminent Men* (published 1813), originally collected for Anthony Wood's *Athenae Oxonienses*. Only one of his works, *Miscellanies* (1696), was published during his life

Aubusson, town in the Creuse département in central France, on the River Creuse. It has been the home of the famous Aubusson tapestries since the 16th century, and there is a museum of tapestry and a design school. Pop. 5,700

Auca, generic term loosely applied to several South American Indian peoples, there is no Auca tribe as such

Auch, capital city of the Gers département in SW France, 68 km (42 miles) W of Toulouse. It has a 15th-century cathedral, museum and library. Industries: tiles, tobacco, wines. Pop. 21,500

Auchincloss, Louis (1917-), US novelist and short-story writer. His first book was *The Indifferent Children* (1947). His collections of stories include *The Romantic Egots* (1954) and *Powers of Attorney* (1963)

Auchinleck, Sir Claude John Eyre (1884-), British field-marshal. After serving in the Middle East in WWI, he commanded operations in India in the 1930s and helped to mechanize the Indian Army. During WWII he commanded the abortive Narvik expedition, in 1940. In 1941 he succeeded Gen. Wavell as Commander-in-Chief in the Middle East and launched an unsuccessful campaign across Libya. In 1943 he once again became Commander in Chief in India where he remained until independence (1947)

Auckland, George Eden, Earl of (1784-1849), British statesman, Governor General of India (1836-42). He was a good administrator but lost the first AFGHAN WAR (1841)

Auckland, capital city of Auckland Province, New Zealand, and the country's chief port, it lies on an isthmus on NW North Island. It served as the country's capital (1840-65) and is now the chief base of New Zealand's navy and contains the War Memorial Museum and the University of Auckland (1882). Within the city's limits there are many volcanic cones. Industries: shipyards, canneries, chemicals. Pop. (1979 est.) 805,900

Auckland district, two statistical areas in the north island of New Zealand, formerly Auckland province. They are Central and South Auckland. The largest city is AUCKLAND. The two areas comprise about one-third of North Island

Auction bridge, a card game similar to, and older than, CONTRACT BRIDGE. The chief difference is that in auction bridge it is not necessary to bid "game" to score it. Developed by the British in India, it has been largely superseded by contract

Aude, river in S France which rises in the Pyrénées and flows N and S to the Mediterranean Sea. Length: 209 km (130 miles)

Auden, Wystan Hugh (1907-73), British poet, who moved to the USA in 1939. Known in the 1930s for his collaborations with Christopher SHAWNEWOOD and for his Marxist outlook, his postwar work was more Christian in approach. His *Collected Longer Poems* were published in 1976

Audenarde. See OUDENAARDE

Audubert, Jacques (1899-1965), French poet, novelist and dramatist. His poems such as *Race des Hommes* (1937), show the influence of Symbolism, and his novels, including *Abraxas* (1938) and *Marie Dubois* (1952), combine nightmarish fantasy and paganism. His best-known play is *Le Mal court* (1947).

Audiometry, technique for studying differences in hearing ability. An audiometer is an instrument that measures the sensitivity of the ear to sounds; it tests hearing by giving out sounds of low but controlled intensity through headphones. See also pp. 138-139.

Audio-visual aids, in teaching, the use of supplementary material (pictures, displays, slides, television, films, radio, recordings and other media) to facilitate learning. The extensive use of these media is a development of the 20th century; they have proved highly successful as an aid to the assimilation of information and often provide an effective basis for student motivation. See also p. 469.

Audit, investigation of a company's accounting procedures to ensure that the financial statements issued by the company are in accordance with the actual expenditure, income and valuation of stock, as recorded in any one financial year (or shorter period).

Auditory canal, the 2.5cm (1in) tube in the outer ear between the ear flap (pinna) and the eardrum. See pp. 138-139.

Auditory nerve, bundle of nerves that carry impulses related to hearing and balance from the inner ear to the brain. See pp. 138-139.

Auditory ossicles, three small bones in the middle ear that transmit vibrations from the eardrum to the cochlea in the inner ear. See pp. 138-139.

Audubon, John James (1785-1851), US ornithologist and artist, whose remarkable series of some 400 watercolours of birds, often in action, were published in *Birds of America* (1827-38).

Audhumla, in Norse mythology, a cow that gave nourishment to Ymir, the first being, who was a giant created from drops of water. It fed by licking salt-covered stones, which became Buri, the grandfather of ODIN. See also p. 1902.

Auer, Leopold (1845-1930), Hungarian violinist and teacher. He was a successful concert and chamber soloist, and became a teacher in Russia until 1918, when he moved to New York City. Auer taught many of the great 20th-century violinists, including Jascha Heifetz, Mischa Elman, Efrem Zimbalist and Nathan Milstein.

Auerbach, Frank (1931-), German-born British painter, one of a group of figurative painters influenced by David SOMMER in his use of thick heavily applied paint to achieve sculptural effects.

Auerstadt, Battle of (1806), conflict in the NAPOLEONIC WARS in which the French defeated the Prussians under Duke Charles of Brunswick. See also p. 1552.

Augean stables, in Greek mythology, the buildings in which Augeas, King of Elis, kept a large herd of cattle. The sixth labour of HERCULES was to clean the stables in one day (which he did by diverting a river through them).

Auger, Pierre Victor (1899-), French physicist who discovered the Auger effect, a change in an atom from an excited to a lower energy state with the emission of an (Auger) electron but without radiation. He became director general of the European Space Research Organization (ESRO) in 1962.

Augier, Emile (1820-89), French playwright. He is best known for *Le Gendre de Monsieur Poirer* (1854), which he wrote with Jules Sandeau.

Augsburg, city in s Germany, on the River Lech, founded by the Romans (c. 15 BC). It became a free imperial city in 1276, and was a prosperous banking and commercial centre in the 14th and 16th centuries. The AUGSBURG CONFESSION (1530) which was a

house Industries: textiles, motor vehicles. Pop. 213,000.

Augsburg, League of, alliance formed in 1686 by the Roman Catholic and Protestant enemies of the French King Louis XIV. Composed of Spain, Sweden, the Holy Roman Empire and a number of lesser states, its formation under Emperor Leopold I was a reaction to France's encroachment on the lands bordering the Holy Roman Empire. Following the French attack on the Palatinate in 1688, a new coalition against the French, the Grand Alliance, was formed in 1689. See also GRAND ALLIANCE, WAR OF THE.

Augsburg Confession, summation of the Lutheran faith, formulated in 1530 from Lutheran statements of faith principally by Philip MELANCHTHON. It was denounced by the Roman Catholic Church, but became a model for later Protestant creeds. See also pp. 1402-1403.

Augur, in ancient Rome, a religious official whose duty was to foretell future events and interpret the will of the gods in order to give advice on public affairs.

August, the eighth month of the year, with 31 days. It is named after the Emperor AUGUSTUS (63 BC-AD 14), who considered it his lucky month. He added one day (taken from February) to the existing 30 for parity with Julius CAESAR's month. July. Until 8 BC, the month was the sixth called *Sexilis*.

Augusta, capital city of Maine, USA, on the Kennebec River, 72km (45 miles) from the Atlantic Ocean. It was incorporated in 1797 on the site of the Plymouth Colony trading post. The Capitol was designed by Charles Bulfinch. The governor's mansion was formerly James G. Baine's house. A dam, built across the Kennebec River in 1847, made Augusta's industry change from shipping to manufacturing. Industries: tourism, timber, textiles, paper products. Pop. (1970) 21,945.

Augustine, Jacques-Jean-Baptiste (1759-1832), French artist who revived the art of miniature painting in France. Augustine's pictures are noted for their strength and purity of colour, high finish and attention to detail, and sureness in execution.

Augustine of Canterbury, St (d. 604), first Archbishop of CANTERBURY. He was sent from Rome in 596 by Pope GREGORY I at the head of a mission to England. Augustine converted King ETHELBERT and introduced Roman ecclesiastical practices into England. This brought him and his monks into conflict with the Celtic monks of the British Isles whose traditions had developed in isolation from the Continent. It was not until the SYNOD OF WHITBY (663) that their disputes were settled in favour of Roman practices. See also pp. 1236, 1273, 1296, 1886-1887.

Augustine of Hippo (354-430), Christian theologian and philosopher. Augustine's *Confessions* provide an intimate psychological self-portrait of a spirit in search of ultimate purpose. Thus he believed he found in his conversion to Christianity in 386. As Bishop of Hippo, North Africa (396-430), he defended Christian orthodoxy against MANICHEISM, DONATISM and PELAGIANISM. In his *Enchiridion* (421) he tended to emphasize the corruption of human will and the freedom of the divine gift of grace. *The City of God* (426), perhaps his most enduring work, is a model of Christian apologetic literature. Of the Four Fathers of the Latin Church, who also included AMBROSE, JEROME and GREGORY I, Augustine is considered the greatest. See also p. 1245, 1268, 1886-1887.

Augustinians, name of two distinct and long-established Christian orders. The order of Augustinian Canons was founded in the 11th century. Based on the recommendations of ST AUGUSTINE OF HIPPO, its discipline was milder than those of full monastic orders. The mendicant order of Augustinian Hermits or Friars was

of Julius CAESAR, and returned to Rome to avenge Caesar's murder in 44 BC. He was elected consul, forming the Second Triumvirate with MARK ANTONY and Lepidus. With Antony he defeated BRUTUS and CASSIUS, who had murdered Caesar, at the battle of Philippi in 42 BC. With the assistance of AGRIPPA he beat Pompeius in 36 BC and after Agrippa's victory over Antony at the battle of ACTIUM in 31 BC, Octavian's power at Rome was assured. The Senate voted him the title of "Augustus" in 27 BC, but he himself preferred to be called "First Citizen". As emperor, he sought to stabilize the power of Rome and to foster colonization in the empire. He rebuilt much of Rome, particularly the FORUM, took general censuses of his subjects and tried to make taxation more equitable. He set up fire and police services, and was an important patron of the arts and of learning. His only defeat occurred when his legions under the command of Varus were massacred by the German troops of ARMINIUS in AD 9. He was succeeded by his stepson TIBERIUS. See also pp. 1231-1233, 1240-1241.

Auk, squat-bodied sea bird of colder Northern Hemisphere coastlines. The flightless great auk (*Pinguinus impennis*), also called the Atlantic penguin, became extinct in the 1840s, height 76cm (30in). The razorbill auk (*Alca torda*) is the largest of living species. Family Alcidae.

Auld Alliance, name sometimes used to describe the long-standing similarity of interests between Scotland and France in their opposition to England from the 12th to the 18th centuries.

Auld Lang Syne, traditional song with words by Robert BURNS (1759-96), in the Scottish dialect; the refrain is taken from an earlier song. It is sung at gatherings of old friends, especially on New Year's Eve.

Auld Reekie, Scottish dialect, meaning "old smoky". It was once applied to Edinburgh because of the city's dirty appearance.

Aung, San (1914-47), Burmese politician. After opposing British rule and collaborating with the Japanese (1942), he helped expel the invaders. Appointed deputy chairman of the executive council in 1946, he was assassinated the following year.

Aurungzeb. See AURUNGEZEB.

Aurelian (Lucius Domitius Aurelianus) (c. 215-75), Roman Emperor (270-75). His victories against the Goths who invaded Italy, his reconquest of Palmyra and his recovery of Gaul and Britain earned him the title of "Restorer of the world". In Rome he established the Unconquered Sun God as the protective deity of the Empire. See also p. 1246.

Aurelius (Antoninus), Marcus. See MARCUS AURELIUS.

Auric, Georges (1899-), French composer. He was artistic director of the Opéra, Paris (1962-67), and wrote effective film scores, such as those for *Caesar and Cleopatra* (1946) and *Moulin Rouge* (1952).

Auricularia, genus of ten widespread species of fungus found on dead tree trunks in moist autumn conditions. Class Basidiomycetes. See also p. 353.

Auricularia, type of larva of ECHINODERMS (starfishes and their relatives) which is rather similar to the larvae of certain protochordates, primitive members of the phylum which includes the backbone animals. This resemblance has been taken to indicate a remote relationship between the echinoderms and the chordates, ie, human beings may have descended from something like a starfish. See also p. 51.

Auriga, or the Charioteer, northern constellation in Gemini. It has several open clusters, including M36 (NGC 1960). The brightest star is Capella (Alpha Aurigae). See also pp. 1012, 1018.

Aurignacian culture, Upper Palaeolithic group of people who lived in the Pyrenees region about 30,000 years ago. See also

Audio-visual aids help extend the experience of the student beyond the classroom.

John James Audubon captured the beauty and drama of the birds of North America.

Leopold Auer, whose brilliant pupils included Elman, Milstein, Zimbalist and Heifetz.

Aurochs

Aurochs, or urus, the now extinct wild ox of Europe was a massive fearsome beast

Auschwitz, the sinister motto on the gates of the death factory means 'work makes free'

Australian kelpies are tireless and intelligent shepherd dogs that thrive on work

Minister of Finance under Leon Blum in 1936-37. During WWII he fought in the Resistance before joining Charles de Gaulle's Government in exile.

Aurochs, or **urus**, extinct European wild ox, the long-horned ancestor of modern domesticated cattle. Once found throughout the forests of Europe and central and SE Asia, it became extinct in 1627. A dark, shaggy animal, it stood up to 2m (7ft) tall at the shoulder. Family Bovidae, species *Bos primigenius*. See also **WISENT**.

Aurora, Greek goddess of the dawn. She was the daughter of Hyperion and Theia, and sister of Helios (Sun) and Selene (Moon). By Astraeus she was the mother of the winds, Boreas (North), Zephyrus (West), Notus (South) and Eurus (East), as well as the evening star Hesperus.

Aurora, sporadic, radiant display of coloured light in the night sky, caused by charged particles from the Sun interacting with air molecules in the Earth's magnetic field. A polar phenomenon, they are known as aurora borealis (N) and australis (S).

Aurangzeb (1618-1707), last of the great Mughal emperors of India. In 1658 he had his father SHAH JEHAN imprisoned and crowned himself emperor. During his reign the Mughal empire reached its greatest size. Towards the end of this period his fanatical Muslim faith alienated many of his subjects, including the Hindus and the Marathas. See also p.1494.

Auschwitz, town in Poland, the site of a concentration camp in WWII where between 1941 and 1945 the Nazis executed about four million prisoners, mostly Jews. Pop. (1970) 39,600.

Auscultation, diagnostic act of listening to sounds within the body. The invention of the stethoscope in 1819 replaced the former method of placing the ear against the body.

Austriach, constitutional compromise made in 1867 between the Austro-Hungarian Emperor Francis Joseph, who wished to centralize his empire, and the Hungarians, who wanted an independent nation-state. By it the Empire became the dual monarchy and, although Francis Joseph remained King of Hungary, the Hungarians gained control of their country's internal affairs. See also pp.1560-1561.

Ausonius, Decimus Magnus (c.310-c.345), Latin rhetorician and poet of provincial Gaul. Called to Trèves (Trier) by VALENTINIAN I to be GRATIAN's teacher, on Gratian's ascension to the throne Ausonius became prefect and then consul. His works include *Ephemeris* and *Mosella*.

Aunty, nickname for an Australian, originally applied to Australian troops in WWII.

Austen, Jane (1775-1817), English novelist. She was a clergyman's daughter and wrote six novels of great art, insight and wit which deal with the society of upper-middle-class England. They are *Sense and Sensibility* (1811), *Pride and Prejudice* (1813), *Mansfield Park* (1814), *Emma* (1816), *Persuasion* (1818) and *Northanger Abbey* (1818). See also p.1574.

Austerlitz, Battle of (2 Dec. 1805), battle fought in Bohemia in which the French under NAPOLEON defeated the Austrians and Russians under Gen. Mikhail Kutuzov. See also p.1552.

201 See also p.1552.

Austin, John Langshaw (1911-60), British philosopher. His work centred on the use of words and their meaning. All of his books, including *Philosophical Papers* (1961) and *Sense and Sensibilia* (1962) were published posthumously.

Austin, capital city of Texas, USA, 120km (75 miles) NE of San Antonio on the Colorado River. Originally called Waterloo, it was first settled in 1835. In 1839 it was renamed after Stephen F. Austin, the "Father of Texas". It has some fine 19th-century architecture, including the Capitol building. Industries: electronics, furniture, machinery, building materials, food processing. Pop. (1970) 251,000.

Austral, Florence (1894-1968), Australian soprano who won worldwide acclaim as a concert artist and in opera. She made her debut in 1921 at the Royal Opera House, Covent Garden, and then embarked on an international career.

Australasia, region that includes Australia, New Zealand and Papua New Guinea. The term Australasia is not exact, and can be defined in a number of different ways. Sometimes it is used to include various Asian countries - principally Indonesia and Malaysia - as well as Australia, New Zealand and Papua New Guinea. In a political sense it may be extended to include also some Pacific island groups and the Australian and New Zealand territories in Antarctica - all the lands coming within a particular sphere of influence. Many botanists and zoologists use the term Australasia to mean the lands and seas to the E and S of Wallace's Line, a line drawn from the Sula Seas through the Celebes Sea and between Borneo and Bali on the W and Celebes Island (Sulawesi) and Lombok on the E. The native flora and fauna on one side of the line differ from those on the other. See also pp.294, 1974, 2104, 2118.

Australia, large island nation that is sometimes regarded as a continent. It is one homogeneous political unit. About 80 per cent of the population of British extraction. A low plateau makes up most of the country, bounded in the E by the Great Dividing Range. Agriculturally sheep and cattle rearing dominate. The interior is exceptionally rich in minerals. The capital is Canberra, although Sydney is the largest city. Area: 7,686,848sq km (2,967,909sq miles). Pop. 14,514,200. See also pp.1602, 1604-1605, 1732, 1733.

Australia Day, annual national holiday in Australia, on the Monday following 26 Jan. It commemorates the arrival of the First Fleet (carrying the first colonists) at Port Jackson, Sydney on 26 Jan. 1788.

Australian Alps, mountains in Victoria and New South Wales, SE of Australia. Part of the Great Dividing Range, it forms the watershed between the Murray River system and the streams flowing into the Tasman Sea. There are many resort areas and forest reserves. The Alps were first explored in 1839-40. The highest peak is Mount Kosciuszko, 2,230m (7,316ft).

Australian Antarctic Territory, external territory of Australia in the ANTARCTIC. It includes all the country's Antarctic territories (except Adélie Land). Area: 6,112,406sq km (2,360,000sq miles).

Australian Capital Territory (ACT or Commonwealth Territory), a district within, but administratively independent of New

high at the shoulder, weight 14kg (30lb).

Australian rules football, type of football popular in Australia and Papua New Guinea. It is played over four 25-minute quarters between two teams of 18 players using a rugby-type ball on an oval pitch 135 to 185m (440-600ft) long and 110 to 155m (345-504ft) wide. The ball may be kicked or handballed (punched) and the object of the game is to score a goal by kicking the ball between goal posts 6.4m (21ft) apart. There are two other posts further apart, 6.4 (21ft) from the goal posts, a ball passing between one of these and a goal post scores a behind.

Australian terrier, small rugged working dog (terrier group) bred from the first English dogs shipped to Australia. It has a long flat head with a light-coloured top-knot and pricked pointed ears. It has short legs and the docked tail is carried up. The rough coat can be blue-black or silver-black mixed with tan, or red. Average size: 25cm (10in) high at the shoulder, weight: 5-6kg (10-13lb).

Australopithecus, or "southern ape", race of extinct near-men whose fossilized bones, dating back about 3 million years, have been found in southern Africa. The Australopithecines had both more human than ape-like, and like man could move and stand fully erect without the help of their arms. They are therefore classified as hominids (men) and are possibly direct ancestors of modern man. See also PITHECANTHROPUS pp.110-112.

Austrasia, also called Ostrasia, Germanic northern and eastern part of the Frankish kingdom during the MEROVINGIAN period. Divided into the semi-independent regions of Austrasia, Neustria and Burgundy in the 6th and 7th centuries, the lands were reunited under the Austrasian Pepin family, one of whom, Charles Martel, defeated Arab invaders at POitiers (732). From this new foundation sprang the CAROLINGIAN Empire of CHARLEMAGNE. See also FRANKS.

Austria (Österreich), landlocked and largely mountainous country in central Europe. It was once the centre of an extensive empire embracing much of central Europe. Vienna (Wien) is the capital. Cereals and root crops are grown in the plains. Linz and Graz are industrial towns. Area: 83,848sq km (32,367sq miles). Pop. 7,523,000.

Austria-Hungary. See ALSTRO-HUNGARIAN EMPIRE.

Austrian Empire (1804-67), all lands controlled by the Hapsburg dynasty. The Holy Roman Emperor FRANCIS I proclaimed himself Francis I, Emperor of Austria in 1806. Under Francis and his Foreign Minister, METTERNICH, the Empire opposed change at home and abroad. Despite nationalist revolts in Vienna, Bohemia and Hungary in 1848, authoritarian rule continued under FRANCIS JOSEPH and Prince Schwarzenberg. Loss of land and prestige in war with Prussia in 1866 forced the emperor to negotiate with the Hungarian nationalists, and after the AUSGLEICH (compromise) of 1867 the term "Empire of Austria" applied only to the non-Hungarian Hapsburg possessions. The area as a whole was called the AUSTRO-HUNGARIAN EMPIRE or Dual Monarchy. See also pp.1558, 1586-1589.

Austrian Succession, War of the (1740-48), overall name for several related wars

Austin, Alfred (1833-1913), English poet laureate. His official verse and works in praise of the countryside attracted much adverse criticism.

Austin, Herbert (1866-1941), first and only Baron of Longbridge, founder of the only British Austin Motor Company. He spent his early life in Australia, becoming a director of the Wolesley Sheep Shearing Co. He designed and built the first Co. He designed and built the first three-wheeled Wolesley car in 1895 and in 1921 a name

capital city, CANBERRA. The area was first settled in 1824 and was set aside for the capital territory in 1908. In 1915 an additional 72sq km (28sq miles) were added, making a total of 2,432sq km (939sq miles). See also p.1980.

Australian cattle dog, working dog, also called the heeler, because it herds livestock by nipping their heels. It has a V-shaped head and pricked ears, and a short, rough, mottled blue coat with a tan or red

the war for the Austrian succession (1740-48), in which France supported Spain's claim to part of the Hapsburg domains, the first and second Silesian wars, in which FREDERICK II of Prussia took Silesia from Austria, and the war between France and Britain over colonial possessions (known as the Seven Years' War).

Austro-Hungarian Empire, or **Dual Monarchy** (1867-1918), organization of the old Austrian Empire into the Kingdom of Austria and the Empire of Hungary. The Emperor of Austria and the

Aversion therapy

wanted a readjustment with other German states. After the death of FRANK JOSEPH in 1916 and defeat in WWI, Czechoslovakia and Hungary declared their independence in 1918. Emperor Charles abdicated and Austria was declared a republic. See also p 1562

Austro-Prussian War (1866), conflict with Prussia and Italy allied against Austria, also known as the Seven Weeks War. Bismarck engineered the war to further Prussia's supremacy in Germany and remove Austria from the German Confederation. Defeat at Sadowa forced Austria to leave the Confederation and cede Venetia to Italy. See also p 1589

Authoritarianism, political philosophy that concentrates power in the hands of one person or small group of people not responsible to the population as a whole. Authoritarian systems deny the state and are based on anti-democratic principles. Modern examples are Germany under Hitler, Italy under Mussolini and Spain under Franco. See also pp 1842-1843

Authorized Version, of the Bible, is a translation into English first published in 1611, also called the *King James Bible*. It was authorized by King James I of England and more than 50 leading scholars worked on it for seven years. It has been the most influential Bible among English-speaking Protestant churches. See also pp 1403, 1416

Autism, disorder of young children characterized by failure to relate to others, failure to use language normally and ritualistic behaviour such as playing for hours with one toy. An autistic child seems to withdraw into a private world. The causes of autism are not known, but some experts believe it is genetic in origin while others regard it as primarily psychological.

Autobiography, record of a man's life written by himself. The first important one was the *Confessions* of Augustine of Hippo (4th century). The modern, introspective autobiography, dealing frankly with all aspects of life, is usually dated from Rousseau's *Confessions* (written 1765-72, pub 1787).

Autocracy, system of government in which a single person or small group of people wields absolute power. It is invariably imposed and generally aimed only at furthering the interests of the individual or group. Now rarely used, the term is applied to regimes before the development of modern technology and state institutions made totalitarianism possible. See also p 1834

Autocross. See MOTOR SPORTS

Auto-da-fé, strictly speaking any judicial sentence of the Spanish Inquisition, but usually referring to the solemn ceremony at the end of a session, when the convicted (mostly heretics) were publicly burned at the stake. It dates from c 1480.

Autogyro, heavier-than-air craft supported by a freely spinning horizontal rotor. The engine powers a tractor propeller (at the nose) for forward flight. See also AEROPLANE, p 520

Autolykus, in Greek mythology son of the Greek god Hermes and the mortal Chione. He received from his father the gift of making whatever he touched invisible. In this way he was able to commit numerous thefts until one day his victims, whose oxen he had stolen, caught him. Also, an astronomer and mathematician who flourished in Ptolemy in Aegina in the 4th century BC.

Automatic firearm, weapon that will continue to fire while the trigger is pressed until it runs out of ammunition. Machine guns and machine pistols are automatic firearms. The term is also often incorrectly applied to any self-loading weapon (in which the trigger has to be pressed every time a shot is fired), most so-called 'automatic' pistols are of this type. See also pp 548, 549

Automatic typesetting, system in which a machine casts and arranges individual letters (monotype) in lines or whole lines of type (linotype) as one piece of metal, generally on instructions from a punched paper or magnetic tape. By extension modern techniques of optical typesetting (photosetting) of letters or lines of letters

on photographic films are also examples of automatic typesetting. See also pp 613, 615

Automatic writing, in clinical psychology and psychiatry, a symptom of disturbed functioning: the individual writes something without being consciously aware of what he is writing or even that he is writing. In spiritualistic seances, it is a way in which departed souls may communicate with the living - ie, by causing a living person to write a message in the spirit's own handwriting. See also PARANORMAL PSYCHOLOGY

Automation, process that feeds back data from its own operations, usually through a computer, to controls that govern the process. It can dispense with all direct manpower. See also pp 455, 456, 464, 465

Automatism, in painting, suspension of the control of reason and allowing the release of subconscious imagery. Automatism as a technique is associated chiefly with Surrealism, which was defined in A. Breton's *Manifeste du Surrealisme* (1924) as 'pure psychic automatism'.

Automobile. See MOTOR CAR

Autonomic nervous system, part of the body's nervous system that, without conscious control of the brain, regulates the internal organs. It has two parts, the sympathetic and parasympathetic systems, which work in balanced opposition. See also pp 126, 127, 155

Autopilot, gyroscopic device for operating the flight controls of an aeroplane with limited attention from the pilot. Systems vary from simple wing levellers in light planes to computer-operated units consisting of gyroscopes, electric servo units and accelerometers. See also p 464

Autosuggestion, in psychology, the conscious or unconscious process by which a person can influence his own ideas. It has been proposed by psychotherapists as a method of treating some neuroses, but its effectiveness depends on the suggestibility of the patient. Suggestion by another person, usually under hypnosis, is called heterosuggestion. See also p 1890

Autumn, the season between summer and winter. In the Northern Hemisphere, it begins at the September equinox and ends at the December solstice. In the Southern Hemisphere, it begins at the March equinox and ends at the June solstice. In many places autumn is the harvest season, and the time when the vegetation of summer begins to fall. In the USA it is usually called fall, because deciduous trees then shed their leaves. The word autumn comes from a Latin word meaning 'maturing' or 'autumn'.

Autumn crocus. See COLCHICUM

Auvergne, region and former province of France, now divided into the départements of Puy-de-Dôme, Cantal and part of Haute-Loire. In Roman times it was conquered by Julius Caesar after the fall of the Gallic leader Vercingetorix. Running north are the Auvergne Mountains, a scenic chain of extinct volcanoes. The highest peak is Puy de Sancy (1,880m/6,188ft). The region also has many fine examples of Romanesque architecture. **Auxin**, hormone produced naturally in the growing tips of plant roots and stems. Auxins accelerate plant growth by stimulating cell enlargement and interacting with other hormones. Actions include the elongation of cells in response to geotropism and phototropism and fruit drop and leaf fall. Synthetic auxins are also applied to plants. See also GIBBERELLIN

Ava, village in central Burma, on the Irrawaddy River 10km (6 miles) SW of Mandalay. Ruins remain from when it was the capital of a dynasty of Burmese kings which moved to Amarapura in 1783.

Avalanche, tumbling down of a mass of rock or snow. It is most likely on an incline of slope greater than 35°. Any steep slope with 30cm (12in) or more of new snow may avalanche as a result of a weather change disturbance due to vibration or through its own accumulated weight. Large avalanches can carry down thousands of tonnes of rock.

Avalon, mythical island where King Arthur is supposed to have died after

going there to heal his wounds. See also pp 1154-1155

Avant-garde (French, 'advance guard') term applied to innovators in the arts, particularly those whose artistic audacity surprises their contemporaries. The phrase also has radical political overtones and derives from the military concept 'vanguard'.

Avars, Mongolian people who settled near the Volga River c AD 460. One group remained there, and another moved to the Danube River basin in the 6th century and occupied Dacia (modern Romania). Their domain extended from the Volga to the Baltic Sea, and they exacted huge tributes from the Byzantine Empire during this time. The Avars were finally crushed by Charlemagne in 796.

Avatar, in Hinduism a 'descent' or incarnation of God, from time to time God manifests himself in order to restore virtue. In Hindu tradition Vishnu has ten important avatars. Avatars appear also in Buddhist and Jain traditions. See also p 1253.

Avebury, John Lubbock, 1st Baron (1834-1913), Vice-Chancellor of London University (1872-80) and author of *Prehistoric Times*.

Avebury, village in Wiltshire, England, 47km (29 miles) E of Bristol. The megalithic remains there are of uncertain origin but are older than Stonehenge. There is also a medieval church and an Elizabethan manor house. Pop. 630.

Aved, Jacques (1702-66), French portrait painter who trained in Amsterdam and was influenced by Rembrandt. Unlike most of his French contemporaries, he often painted his subjects in their normal dress and surroundings. His work is sometimes confused with that of Chardin.

Ave Maria, Latin phrase meaning 'Hail Mary'. In the Roman Catholic Church it forms the first words of a prayer taken from the beginning of the angel Gabriel's address to Mary (Mother of Jesus) (Luke 1:28). Schubert and Chopin composed musical settings for the prayer.

Avens. See GELM

Avenue of Middelheim (1669), painting by Meindert Hobbema (National Gallery, London), one of the best-known Dutch realistic landscapes.

Average, in statistics, the one score that most typifies an entire set of scores. It may be the arithmetic mean of the scores (the sum of the scores divided by the number), the mode (the one score that occurs most often), or the median (the score that divides the set of scores into upper and lower halves). Most often the average is the arithmetic mean.

Avercamp, Hendrick (1585-1634), Dutch painter who specialized in winter landscapes with numerous tiny figures, and who was influenced by Bruegel the Elder.

Averescu, Alexandru (1859-1938), Romanian general and statesman. After reorganizing the army in 1907 as Minister of War, he became Chief of the General Staff in 1912. He became Prime Minister in 1918 and conducted the first peace negotiations with the Central Powers.

Averno (Lago d'Averno), later lake, an extinct volcano in Italy, about 13km (8 miles) W of Naples in the Campania region. It was regarded by Virgil as the entrance to the underworld. It became a naval harbour in the 1st century BC after Agrippa joined it by canal to the sea. There are Roman ruins nearby. Area approx. 2sq km (0.8sq miles).

Averrhoes, Latin name for Abu al-Wahid Ibn-Rushd (1126-98), leading Islamic philosopher in Spain. He served as a judge after 1169 and became physician to the Caliph of Marrakesh in 1182. He was banished in 1195 to Lucena near Seville for advocating reason over religion, but soon returned to favour. His major work *Incoherence of the Incoherence*, defends Neoplatonism and Aristotle. See also pp 1322, 1881

Aversion therapy, use of learning or conditioning procedures to develop aversive responses to certain situations or unwanted habits. The therapy consists of

Autogyros differ from helicopters in that the rotors are not powered by an engine

Autumn is the time for playing 'conkers', the delight of the English school boy

Avalanches are caused by vibrations, the wind or the ice thawing on the high glaciers

Hendrick Avercamp, whose ice-scenes are very popular, painted this scene in 1608

Aviaries act as both shelters and showcases for birds; spacious pens allow free flight

Avocet, a long-legged wader and strong swimmer, seeks food in marshy areas

Amadeo Avogadro postulated his famous theory, now known as Avogadro's law in 1811

Aye-aye, a rare lemur of Madagascar has prominent ears and eyes and a bushy tail

bad-tasting substance when the behaviour occurs (eg, over-eating or smoking) until an aversion to that behaviour is developed. See also p.1118.

Avesta, Zoroastrian scriptures. Most of the original was lost when ALEXANDER THE GREAT burned Persepolis. The Gathas, forming the oldest part, originated with Zoroaster. The other remaining parts are the Yashts, Yasna and Vendidad and prayers. See also ZOROASTRIANISM.

Avianus, or Avianus, Flavius (fl. 4th century AD), Latin author who wrote fables in elegiac verse.

Aviary, enclosure for the observation and/or breeding of captive birds. Sometimes spacious enough for flight, it is generally made of wire mesh round a metal or wood frame. Zoos usually contain large flight cages, private homes may have considerably smaller cages in the garden as an aviary. Natural botanical surroundings are preferred.

Avicenna (979-1037), Arab physician and philosopher whose work influenced the science of medicine for many centuries. His *Canon Medicinæ* became a standard work. See also pp.772, 1880, 1881, 1886-1887.

Avignon popes, during the BABYLONIAN CAPTIVITY (1309-77), popes who resided in Avignon instead of Rome (the city was bought by CLEMENT VI in 1348). See also GREAT SCHISM, pp.1321, 1374.

Avila, city in central Spain, on the River Adaja, 85km (53 miles) NW of Madrid, the capital city of Avila province. The birthplace of St Teresa, it is a religious centre and is noted for its medieval architecture, including the Cathedral, the basilica of San Vicente and an 11th-century wall. The city was captured from the Moors in 1088 by Alfonso VI of León and Castile. Industries: flour milling, tanning, woollen goods. Area (province) 8,047sq km (3,017 miles). Pop. (city) (1970) 30,938, (province) (1970) 203,798.

Aviz, dynasty that ruled Portugal (1385-1580). It was founded by JOHN I, who was grand master of Aviz, a knightly order. The dynasty's rule coincided with the most glorious period of Portuguese history. Its end brought a period of Spanish rule in Portugal.

Avocado, evergreen, broad-leaved tree native to the tropical New World. The name is extended to its green to dark purple, pear-shaped fruit. This has soft, greenish flesh (surrounding a single large seed) which is eaten fresh, often in salads; it has a high oil content and a nutty flavour. Weight up to 2kg (4.4lb). Species *Persea americana*.

Avocet, graceful, long-legged, black-and-white wading bird, related to the snipe. It has a long, slender upcurved bill with which it sifts through shallow water and mud for small fish, crustaceans and water insects. The hen lays 3-5 mottled eggs in a grass-lined scrape. Length 45cm (18in). Genus *Recurvirostra*.

Avogadro, Amadeo (1776-1856), Italian physicist and chemist. In 1811 he put forward the hypothesis, known as Avogadro's law, stating that equal volumes of gases at the same pressure and temperature contain an equal number of molecules. This led later physicists to determine that the number of molecules in one gramme molecule (the molecular weight expressed in grammae) is constant for all gases. This number, called Avogadro's number, equals 6.02257×10^{23} . See also p.836.

Avon, Lord (1897-1977), previously Robert Anthony Eden, British politician. He served in WWI as a captain in the King's Royal Rifle Corps, winning the Military Cross, and took a first-class degree in Oriental languages at Oxford (1922). He entered the House of Commons in 1923 and in 1935 became the youngest man ever to be made Foreign Secretary. He resigned in February 1938 in protest against the appeasement policy of Neville CHAMBERLAIN. He served again as Foreign Secretary in 1940-45 and 1951-55. He was Prime Minister 1955-57, when ill health and the dissatisfaction with his handling of the SUEZ CRISIS forced him to resign.

Avon, county in SW England, on the Bris-

tol Channel, formed in 1974 under the Local Government Act (1972) from the county boroughs of Bath and Bristol and parts of the former counties of GLOUCESTER(SHIRE) and SOMERSET. Bristol is the administrative centre. Area 1,346sq km (520sq miles). Pop. (1976) 920,200.

Avon, name of four British rivers. The Bristol, or Lower, Avon rises in the Cotswold Hills in Gloucestershire, and flows S and then W through Bristol, entering the Severn estuary at Avonmouth. Length 121km (75 miles). The Warwickshire, or Upper, Avon rises in Northamptonshire, and flows SW through Stratford-on-Avon to join the River Severn at Tewkesbury. Length 155km (96 miles). The Wiltshire, or East, Avon rises near Devizes and flows S into the English Channel. Length 77km (48 miles). The Scottish Avon flows E into the Firth of Forth. Length 29km (18 miles).

Awami League, opposition political party originally formed in Pakistan in 1949, since 1971 the major party of Bangladesh (formerly East Pakistan); renamed Awami Peasants' and Workers' League of Bangladesh in 1975. It was led by Sheikh Mujibur Rahman from 1953 to his death in a military coup in 1975. From 1966 the party advocated a federation government for Pakistan that would give more autonomy to East Pakistan. In 1970 the party won a majority in the legislature, but the government cancelled the election and outlawed the party. Civil war broke out in early 1971 and East Pakistan won its independence, becoming Bangladesh. See also p.1986.

Awe, Loch, largest lake in Scotland, drained into Loch Eive by the River Awe. Length 38.5km (24 miles).

Awolowo, Obafemi ("Awo") (1909-), Nigerian political figure and leader of the YORUBA ethnic group of W Nigeria. In 1950 he founded the Action Group political party, and later held political offices.

Axel Heiberg Island, Canadian island in the Arctic Ocean, W of Ellesmere Island, part of the Northwest Territories. It was explored by a Norwegian, Otto Sverdrup, in 1898-1902. Area: 40,867sq km (15,779sq miles).

Axelrod, Julius (1912-), American biochemist. He shared the 1970 Nobel Prize in physiology and medicine with Ulf Svante von ELIER and Sir Bernard KATZ for their work on the chemistry of nerve-impulse transmission. Axelrod discovered how the neurotransmitter noradrenalin is inactivated after it has performed its function. See also p.155.

Axholme, Isle of, lowland region, 210sq km (80sq miles) in area, in Humberside, N. England. Originally marsh and fenland it was first drained in the 17th century and is now an area of highly fertile soil. Pop. (1971 prelim.) 14,880.

Axial planning, the placing of several buildings or parts of a building along a single line.

Axiomatic method, method of mathematical reasoning based on logical deduction from assumptions (axioms). The method is fundamental to the philosophy of modern mathematics: it was used by the Greeks and formalized early in the 20th century by the German mathematician David Hilbert (1862-1943). In an axiomatic system certain undefined entities (terms) are taken and described by a set of axioms. Other, often unsuspected, relationships (theorems) are then deduced by logical reasoning. For instance, the points, lines and angles of Euclidean geometry are connected by postulates, theorems, such as Pythagoras' theorem, can then be deduced. This geometry describes measurements of position, distance and angle in space. See also p.794.

Axle, imaginary straight line about which a body rotates, or about which rotation is conceived. In mechanics an axle runs longitudinally through the centre of an axle or rotating shaft. In geography and astronomy, it is a line through the centre of a planet or star, about which the planet or star rotates. The Earth's axis joins its two geographic poles, is 12,700km (7,900 miles) long and is inclined at an angle of

66.5° to the plane in which the Earth orbits the sun. A mathematical axis is a fixed line, such as the x, y or z axis, chosen for reference. See also pp.780, 800.

Axis, the bone second from the top of the neck (the second cervical vertebra), on which the first bone (atlas) pivots.

Axis deer. See CHITAL.

Axis powers, term applied to Germany and Italy after they signed the Rome-Berlin Axis in Oct. 1936 and to Japan which joined them in the Tripartite Pact (27 Sept. 1940). Minor Axis powers were Hungary and Romania (1940) and Bulgaria (1941). See also pp.1674-1681.

Axminster, town in Devon, SW England, on the River Axe, a market town with an old carpet industry. Pop. (1971) 15,300.

Axolotl, larval form of certain species of SALAMANDER native to western USA and Mexico. Axolotls are aquatic amphibians and they normally mature and reproduce without developing into salamanders. Length: about 25cm (10in). Family Ambystomidae. See also p.64.

Axon, that part of a nerve cell, or NEURON, that carries a nerve impulse beyond and away from the cell body, such as an impulse for movement to a muscle. There is typically only one axon per neuron, and it is generally long and unbranched. It is encased by a fatty, pearly myelin sheath (white matter) in all peripheral nerves, and in all central nerves except those of the brain and spinal cord. Axons in peripheral nerves are covered by an additional delicate sheath, a neurilemma, which helps to regenerate damaged nerves. See also p.126.

Axum (Aksum), N. Ethiopian town, once the capital of a powerful empire of Semitic-Sabea origin. The empire was Christianized in the 4th century and at one time claimed to possess the Ark of the Covenant. A rich trading centre, Axum was known for its ivory, and dominated the Red Sea for centuries. Pop. 12,800.

Ayala, Francisco (1906-), Spanish writer, critic and novelist. He founded the reviews *Realidad* in Buenos Aires and *La Torre* in Puerto Rico.

Ayala y Herrera, Adelardo Lopez de (1828-79), Spanish playwright and politician who in 1878 became President of the Cortes (state assembly). His works include *Un hombre de estado* (1851), *El vejado de vidno* (1857) and *Consuelo* (1878).

Aye-aye, rare, primitive, squirrel-like lemur of Madagascar. Nocturnal and tree-dwelling, it has dark shaggy fur and an elongated third finger with which it scrapes insects and pulp from bamboo canes. Length 40cm (16in) excluding tail. Species *Daubentonius madagascariensis*.

Ayer, Sir Alfred Jules (1910-), British philosopher. Building on the ideas of the VIENNA CIRCLE of positivists and of George Berkeley, David Hume, Bertrand Russell and Ludwig Wittgenstein, he introduced LOGICAL POSITIVISM into British and American philosophy. His works include *Language, Truth and Logic* (1936), *The Problem of Knowledge* (1956) and *Philosophy and Language* (1960).

Ayers Rock, outcrop of rock, 348m (1,142ft) high, 448km (280 miles) SW of Alice Springs, Northern Territory, Australia. It is the largest single rock in the world and the distance around its base is 9.7km (6 miles). There are many aboriginal paintings in its caves. It was discovered by European settlers in 1872.

Aysha (Aisha) (614-678), favourite wife of the prophet MOHAMMED, daughter of ABU BAKR.

Aylesbury, county town of Buckinghamshire, SE England, 51km (32 miles) NW of London. A breed of large white ducks is named after the town. Industries: light engineering, printing, food processing. Pop. (1971) 41,266.

Aytward, Gladys (1902-1970), British missionary who went to China in 1930 and worked to spread the Christian faith. During WWI she led a hundred homeless Chinese children on a long and gruelling mountain trek to escape the Japanese invaders. Her story was told in the film *The Inn of the Sixth Happiness* (1958).

Aymará, major tribe of South American

Indians who live in the highlands of Bolivia and Peru. By 1500 they had been brought into the Inca empire, which was subsequently conquered by the Spanish. Today the Aymará number approx 1,360,000. Their struggle to survive in a harsh, semi-desert region accounts for their drab appearance and lack of interest in traditional arts. The Aymará language is spoken by about a million people in Bolivia and ½ million in Peru.

Aymé, Marcel (1902-67), French novelist. His novels, including *The Green Mare* (1933) and *The Secret Stream* (1936), combine fantasy and satire, as do his witty short stories, such as *Across Paris and Other Stories* (1958). He also wrote several plays and children's books, such as *Les Contes du Chat Perché* (1939).

Ayr, town in E of central Queensland, Australia. It is the chief processing centre of a sugar cane region. Pop. (1971) 17,000.

Ayrshire, former county in Scotland, now part of the Strathclyde region. Metal, textile and chemical industries in the towns are linked to the important local coal mines, and there is intensive farming on the lowland areas. Area, 2,929sq km (1,131sq miles). Pop. (1971) 361,074. The port of Ayr is the former county town. Industries: heavy engineering, textiles. Pop. (1971) 47,884.

Ayrshire, common breed of dairy cattle native to Scotland. They have been introduced into Canada and to a lesser extent into the USA, South Africa and New Zealand. Medium-sized, they are predominantly red and white or brown and white. They produce less milk than Friesians but it contains more butterfat. See also DAIRYING, p.724.

Ayrton, Hertha (1854-1923), British scientist, second wife of the electrical engineer William Ayrton. She invented (1915) a fan for use against war gases.

Ayrton, Michael (1921-75), leading British figurative sculptor, painter and draughtsman who derived his subject matter largely from Greek myth, eg. Dædalus, the Minotaur and the Delphic oracle. His sculpture includes a series of bronzes of Icarus. He was also a writer, his main book being *Testament of Dædalus* (1962).

Ayrton, William Edward (1847-1908), British inventor and electrical engineer who developed the electric arc, especially for use in searchlights.

Ayrton, Sir Robert (1570-1638), Scottish poet who is credited with the words to the song *Auld Lang Syne*.

Aytoun, William Edmonstone (1813-65), Scottish poet, best known for his parodies of Alfred Tennyson and others in *Bon Gaudier Ballads* (written with Sir Theodore Martin) and of Walter Scott in *Lays of the Scottish Cavaliers*.

Ayub Khan, Muhammad (1907-74), military leader and President of Pakistan (1958-69). His military career began in 1928 and he became Commander-in-Chief of the Pakistani army in 1951. From 1954-56 he was Defence Minister, and in 1958 a military coup made him ruler of the country. He became President in 1960 and again in 1965. Although Pakistan made economic progress under Ayub Khan, student riots over suffrage restrictions and disputes with India over the boundaries of Jammu and Kashmir forced his resignation in 1969.

Ayurveda, system of medicine practised by the ancient Hindus and derived from the vedas. It is still practised in India.

Ayutthaya, city in E central Thailand on the Chao Phraya River. It was the capital of a Thai kingdom in the 14th century and some of the few remaining monuments of Siamese civilization can still be seen there. Today it is a market centre for the surrounding rice-growing region. Pop. (1965 est.) 40,000.

Azad, Abdol Kāshim (1888-1958), Indian politician who was imprisoned several times for his part in Gandhi's civil disobedience movement that sought independence from the British.

Azalea, species of shrubs and small trees from temperate regions of Asia and North America. Mostly deciduous, they have

leathery leaves and funnel-shaped red, pink, magenta, orange, yellow or white flowers, sometimes variegated. Family Ericaceae, genus *Rhododendron*.

Azaña y Díaz, Manuel (1880-1940), Spanish politician. He was Prime Minister 1931-33 and in 1936 until he was elected President of the Second Republic. He was titular head of the Republican Government during the Spanish Civil War, and resigned in 1939.

Azande, Negroid people of the Sudan, Zaïre and the Central African Empire. They have a patrilineal, polygynous society noted for incorporating various ethnic minorities, and are highly skilled in crafts such as pottery, metalwork and woodwork. Azande religion is totemic and includes ancestor-worship. It holds that a man has two souls, one of which at death becomes a totemic animal.

Azariah, Vedanayakam Samuel (1874-1945), Indian Christian leader who in 1912 became the first of his people to become an Anglican bishop in India.

Azerbaijan (Azerbaydzanskaya SSR), constituent republic of the USSR. It lies largely in the lowland area of the Caucasus and extends over the Malaykavkaz mountains to the borders of Turkey and Iran. In the 7th century it was part of the Persian Empire. It was dominated by the Seljuk Turks in the 11th and 12th centuries, followed by the Mongols in the 13th century. It was not until 1936 that the whole area became part of the USSR. The valley and lowland areas produce grain, fruit and tobacco, sheep rearing for wool is also important. Although the region has deposits of copper, lead and iron, it is still developing industrially. Most of the inhabitants are Turkic speaking and belong to the Shiite sect of Islam. The capital is BAKU. Area 86,600sq km (33,435sq miles). Pop. (1976) 2,842,000. See also p.2156.

Azevedo, Aluizio (1857-1913), Brazilian novelist. His novel *O Mulato* (1881) helped to steer Brazilian writing towards a naturalist style. Graphically describing the harshness and violence of life among Brazil's poor, his novels have been praised for their energy and realism and criticized, like many other naturalistic works, for their lack of lyricism.

Azhar, Al, in Cairo, one of the oldest universities in the world, founded in 970 by the Fatimid army commander Jawhar. It became the centre of Islamic teaching.

Azikiwe, Benjamin Nnamdi "Zik" (1904-), Nigerian politician and author. He was President of Nigeria (1963-66). During the civil war (1967-70), he first supported Nnamdi but changed his support to the federal government in 1969.

Azilian culture, one of the earliest mesolithic cultures in Europe which sprang up in the Pyrenees region and spread to France, Belgium, Scotland and Switzerland.

Azimuth, the angle between the vertical plane on which a celestial body is located and the observer's meridian plane. It is measured, in astronomy, eastwards from the north point of the observer's horizon and, in navigation and surveying, westwards from the south point. Altitude and azimuth form an astronomical co-ordinate system for defining position.

Azo and diazo compounds, nitrogenous organic chemical compounds used widely for organic synthesis, particularly in the manufacture of dyes. An azo dye has the general formula Ar-N=N-Ar, where Ar is an aromatic group. Diazo compounds include reactive salts having the general formula Ar-N=N-X, where X is the anion. See also pp.584-585.

Azores, Portuguese island group in the N Atlantic Ocean, 1,288km (800 miles) W of Portugal. They consist of nine main islands, divided into three groups. A variety of fruits and vegetables are grown for export and the islands' economy has improved with the development of tourism. Area, 2,344sq km (905sq miles). Pop. (1970 est.) 336,100.

Azoris. See MARTINEZ RUIZ, José.

Azov, city in Rostov oblast, SW USSR. A former port on the River Don, it is today a manufacturing and trading centre and a

railway terminus. Built near the site of the Greek colony of Tanais (3rd century BC), it was secured by Russia in 1739. Industries: fishing, textiles, timber, farm machinery. Pop. 59,000.

Aztecs, Indian civilization that rose to a position of dominance in the central valley of Mexico in about AD 1450. A warlike group, the Aztecs (also called Tenochca) settled on islands in Lake Texcoco in about 1325 and there founded their capital Tenochtitlan (now Mexico City). They established an empire that included most of modern Mexico and extended southwards as far as Guatemala. The state was theocratic, with a number of deities whose worship included human sacrifice. The Aztecs built temples, pyramids and palaces and adorned them with stone images and symbolic carvings. At the time of the Spanish conquest, Aztec society was based on the exploitation of labour. As a result, Hernán Cortés was able to use disaffected Indians to help him defeat the Aztecs in 1521. See also pp.1364, 1365.

Azuela, Mariano (1873-1952), Mexican novelist. He is best known for his vivid, unsentimental novels of the Mexican Revolution. A physician, he served as surgeon for Pancho Villa's revolutionary forces in 1915. His best-known novel, *The Underdogs* (1915), examines the revolution's impact on a broad cross-section of characters.

Azurite, basic copper carbonate mineral found in the oxidized parts of copper ore veins, often as earthy material with MALACHITE. The crystals are blue, brilliant and transparent but are too soft for good gemstones. They were used by the ancients as pigments in wall paintings. Hardness 3.5-4, sg 3.77-3.89.

Az-Zarqa. See ZERQA.

Ayshire cattle are a rugged breed of dairy cattle that thrive in hilly country.

Azaleas, related to the rhododendron, have flowers with long pollen stalks.

B

B, second letter of the alphabet. It is probably derived from an Egyptian hieroglyph for a house (c.3000 BC), which entered the Semitic alphabet about 1500 years later as the letter *beth*. From there it was taken to Greece (c 600 BC) to become *beta*, which was a similar shape to the modern B. See also pp.608-609.

Bade, Walter (1893-1960), German-born US astronomer. In 1925 he discovered the asteroid Hidalgo. He held a position at the Hamburg Observatory in Germany (1919-31), and at the Mt Wilson observatory in the USA (1931-58). See also pp.954, 983, 993.

Baal, chief god of the Semitic pantheon, akin to the Greek Zeus. In the ancient Middle East he was linked with fertility as lord of the earth, the rain and the dew. The Canaanites looked upon him as the foe of Mot, god of death and barrenness.

Baalbek, town in E Lebanon, 56km (35 miles) NW of Damascus. An early Phoenician settlement, the Greeks occupied it in 323 BC and renamed it Heliopolis (city of the sun), it was colonized by the Romans in the 1st century BC. It is noted for its Greek and Roman remains, including the Temple of Jupiter. Pop. 11,700.

Ba'ath Party, political party in Syria and Iraq, founded in 1943. Its major objectives are socialism and pan-Arabism. From 1963 the Ba'ath Party has been the only legal political party in Syria, but divisions within it have caused frequent changes of government. In Iraq the party came to power in 1963 when Abdal Salam Arif became President.

Babar, group of five small islands and one large one (which is also called Babar), at the NW end of the Arafura Sea, E of Timor, Indonesia.

Baba-Yaga, in Russian folklore, a witch-like ogre who kidnaps and cooks her victims or eats the souls that Death provides for her. She travels through the air in an iron pot or a mortar, rowing with a pestle. In another aspect she is the guardian of the

Aztecs built temples and palaces that were of impressive size: many ruins remain.

Baalbek has attracted many archaeologists to excavate and clear the fine Greek temples.

Babbage, Charles

Baboon males, generally larger than the females, can sometimes be fierce fighters

fountain that supplies the the water of life

Babbage, Charles (1791-1871), British mathematician. He compiled the first actuarial tables and planned a mechanical calculating machine, the forerunner of the modern computer. He failed to complete the construction of the machine because the financial support recommended by the Royal Society was refused by the government. See also p.466

Babbitt, Milton (1916-), US composer, musicologist and teacher. He studied with Roger Sessions and has a mathematical background that influences his musical style. He analysed and systematized twelve-tone music. His compositions include vocal, piano and chamber music.

Babbitt (1922), novel by Sinclair Lewis about George Babbitt, a Mid-western American businessman and die-hard Republican, who begins to re-evaluate his life. After a brief rebellion against the deadening conformity that surrounds him, he again becomes a "good citizen"

Babbitt metal, any alloy with a high tin content as well as copper and antimony, specifically an alloy invented by Isaac Babbitt in 1839 as bearing material for steam engines

Babcock, Harold Delos (1882-1968), US physicist and spectroscopist who developed a modern theory to account for the formation of SUNSPOTS. See also p.973

Babcock, Stephen Moulton (1843-1931), US agricultural research chemist. In 1890 he helped to improve dairy production with his Babcock test, a method of measuring the butterfat content of milk.

Babel, Isaac Emmanuelovich (1894-1941), Russian short-story writer. His works included *Red Cavalry* (1926) and *Jewish Tales* (1927). He died a victim of Stalinist purges in a concentration camp.

Babel, Tower of, according to Genesis 11:1-9, was begun in the Babylonian city of Babel by Noah's descendants to reach Heaven. God made the people's speech incomprehensible and scattered them throughout the world, causing the work to cease.

Bab el-Mandeb, strait connecting the Red Sea and the Gulf of Aden. It separates the SW Arabian Peninsula from Africa, and contains Barim Island (Yemen etc). It is 32km (20 miles) wide.

Babenberg, Austrian dynasty (976-1246). Leopold I was the first Babenberg margrave of Austria. In 1156 Emperor Frederick I (Barbarossa) made Austria a duchy. The Babenbergs extended the authority of Austria to the E.

Babeuf, François-Noël (1760-97), called "Gracchus", political activist in the French Revolution. He supported land reform and the constitution of 1793. He was executed on the orders of the Directory after an attempted insurrection. His *Manifesto of Equals* (1796) influenced later socialists. See also p.1550

Babi faith, Muslim religious sect founded in 1844 in Iran (Persia) by SAYYID ALI MUHAMMAD, the self-proclaimed prophet Bab (gate). Drawing on the teachings of all existing branches of ISLAM, the Babists believed in the imminent coming of the Promised One. In 1848 they declared their secession from Islam but their rebellion against the new shah was crushed and their founder was executed in 1850.

Babille, Jean (1923-), French dancer and choreographer. He became the principal dancer of the Ballets de Paris (1947) and was director of the Ballet du Rhin (1972-73).

Babington Conspiracy (1586), plot against ELIZABETH I of England, led by Anthony Babington (1561-86), which aimed to restore Roman Catholicism by replacing Elizabeth with MARY QUEEN OF SCOTS. The conspiracy failed, and Babington was executed.

Babism. See BABI FAITH

Babi Yar (1961), poem by the Soviet poet Yevgeny YEVYUSHENKO evoking the horror of the Nazi massacre of 34,000 Jews at Kiev and attacking continuing anti-Semitism in the USSR.

Baboon, large African monkey with a dog-like face, which walks on all fours. Its buttocks have callous-like pads

surrounded by brilliantly coloured naked skin. Baboons are ground dwellers and active by day, travelling in families and larger troops led by old males, usually in open, rocky country. They eat a wide variety of food - plants, insects and small animals - carrying it, if necessary, in their cheek pouches. The males have huge canine teeth up to 5cm (2in) long. Weight, 14-41kg (30-90lb). Genus *Chaeropithecus* (or *Papio*). See also p.106

Baber (1483-1530), first Mogul ruler of India (1526-30). He became ruler of Fergana, a principality in central Asia in 1495. He struggled with various relatives for Samarkand but failed and settled in Kabul, from where he gained control of Delhi and Agra, establishing Mogul rule in India. See also p.1494

Baburen, Dirck van (c 1590-1624), Dutch painter, leading member of the UTRECHT SCHOOL. He worked briefly in Rome, where he was influenced by CARAVAGGIO, he was one of the first to introduce Caravaggio's *chiaroscuro* technique into the Netherlands.

Babylon, ancient city, sited on the River Euphrates in MESOPOTAMIA; it rose to prominence as the capital of BABYLONIA. It was rebuilt after being destroyed by the ASSYRIANS c 689 BC, and its new buildings included the Hanging Gardens, one of the seven wonders of the world. This was the period, under NEBUCHADREZZAR, of the BABYLONIAN CAPTIVITY of the Jews. The city declined after 275 BC, when it was replaced in importance by Seleucia.

Babylonia, ancient region and empire of Mesopotamia, based on the city of BABYLON. The Babylonian empire was first established in the early 18th century BC by HAMMURABI the Great, but it soon declined under the impact of Hittite and Kassite invaders in about 1595 BC. After a long period of weakness and confusion, the empire eventually fell to the ASSYRIANS in the 8th century. Babylon's greatness was restored as part of the Assyrian empire, and in about 625 BC its independence was won by NABOPOLASSAR, who captured the Assyrian capital NINEVEH, with the help of the Medes and Persians. This New Babylonian, or Chaldean, Empire defeated Egypt and took the Jews to captivity in Babylon in 586 BC, but in 538 BC it fell to the Persians, under whom it remained until the rise of ALEXANDER THE GREAT. See also pp.1164-1165

Babylonian Captivity, exile of the Jews to BABYLON from the fall of JERUSALEM (586 BC) to the completion of the new Temple (516 BC). The term was later applied also to the exile of the popes at AVIGNON (1309-77). A line of French popes began in 1305 with the election of Clement V. The papal court returned to Rome in 1377 but two French antipopes, Clement VII and Benedict XIII, lived at Avignon during the GREAT SCHISM (1378-1417).

Baccarat, French card game, popular in gambling casinos. The game involves a banker and two players. Each player, including the banker, receives two cards with an option for a third. The object of the game is to hold two or three cards that count nine or as close to nine as possible. Picture cards rate as *baccarat*, ie zero and the first digit is disregarded from all totals above nine. See also CHEMIN DE FER.

Bacchae (c.405 BC), Greek tragedy by EURIPIDES. Dionysus assumes human form, causing grief and confusion on earth.

Bacchus, Roman god of wine, identified with the Greek god Dionysus. The son of JUPITER and SEMELE, he was reared by nymphs, shepherds and satyrs, and learned the secrets of cultivating grapes and making wine. His worshippers indulged in riotous revelry and debauchery. See also p.695.

Bacchylides (c 516-c 450 BC), Greek lyric poet, most of whose work exists only in fragments although in 1896 some complete poems were discovered.

Bach, German family of composers, the most outstanding of whom were Johann Sebastian (1685-1750) and four of his sons, Wilhelm Friedemann (1710-84), Carl Philipp Emanuel (1714-88), Johann Christoph Friedrich (1732-95) and Johann Christian (1735-82).

In J. S. Bach, the greatest of the family, the style of Baroque counterpoint reached its highest expression (see BAROQUE, COUNTERPOINT). He was renowned as a virtuoso on organ and harpsichord, and composed prolifically for these instruments and for orchestra and choir. Bach's musical career began with a short time as court musician at Weimar, after which he was organist at Arnstadt (1703-07) and at Muhlhausen (1707-08). He served again at Weimar, as court organist and chamber musician (1708-17), and was the Prince of Anhalt-Köthen's musical director (1717-23). From 1723 until his death Bach was *Kapellmeister* at the church of St Thomas, Leipzig. Much of his work was therefore sacred music - more than 200 CANTATAS, more than 300 four-part chorales, the great *Passions* and the monumental *Mass in B Minor*. His secular works include the Brandenburg Concertos, the four orchestral suites and several concertos for solo instrument and orchestra. His keyboard works include 18 preludes and fugues for organ and the harpsichord compositions, the *Well-Tempered Clavier*, the French and English suites and the two-part and three-part inventions.

Carl Philipp Emanuel Bach was an important figure in the development of the classical concerto and symphony. Whereas his father had used the baroque forms of the FUGUE and the SUITE, Carl Philipp wrote principally in SONATA form. See also p.1484-1485.

Bache, peninsula on Ellesmere Island in N Northwest Territories, Canada. It was explored in 1898 by Robert Peary.

Bach System (1849-59), repressive administrative policy of absolute and centralizing bureaucracy applied to the whole HAPSBURG EMPIRE. It was introduced by Alexander von Bach, the Austro-Hungarian minister of the interior. In 1851 Hungary lost its historical identity and was ruled as a province by officials from Vienna. A rigorous programme was introduced to enforce the use of the German language. See also AUSTRO-HUNGARIAN EMPIRE.

Bacillus, genus of aerobic, spore-forming BACTERIA present in the soil. One species, *B. anthracis*, is PATHOGENIC to man, causing ANTHRAX. See also pp.190-191.

Backcross, the offspring of a first generation HYBRID and either of its parents. Backcrosses are used by biologists as a means of testing for the dominance of one quality over another.

Backgammon, game of strategy and luck usually involving two players. There is a specially marked board divided into two halves, each containing 12 alternately coloured points. Each player receives 15 discs that are arranged in a predetermined order on the boards. Each move is determined by the throw of dice, the first player to successfully move all 15 pieces around the board into his "home" or "inner board" and then off the board, wins.

Backhaus, Wilhelm (1884-1969), German pianist. He studied in Leipzig and Frankfurt and toured as a virtuoso from 1910. He was famous as an interpreter of Beethoven, he lived in Switzerland after WWI.

Backhuysen, Ludolf (1631-1708), Dutch painter, mainly of marine subjects. The realism of his style, in particular *Boats in a Storm* (1696, Dulwich), may have influenced Joseph Turner.

Bacolor, capital city of Negros Occidental Province on NW Negros Island, Philippines. Pop. 165,000.

Bacon, Delia Salter (1811-59), US author. In *Philosophy of the Plays of Shakespeare Unfolded* (1857) she publicized the theory that Shakespeare's plays were written by other authors such as Francis Bacon and Edmund Spenser. See BACONIAN THEORY.

Bacon, Francis (1561-1626), British philosopher, statesman and early advocate of the scientific method. He is also a literary figure of the first rank, especially in his essays. Successively Attorney-General, Lord Keeper and Lord Chancellor, he was forced to resign his offices in 1621 on charges of venality. None of this interrupted his efforts to break the hold of Aristotelian logic and establish an induc-

Babylonia produced some of the most beautiful temples of the ancient world

Bacchus inspired the legendary Bacchanals the wild drunken annual Roman festival

Bach, the "greatest genius of baroque music", brought religious feeling to his work

tive empiricism. He entertained the idea of cataloguing all useful knowledge in his *Advancement of Learning* (1605) and *Nunum Organum* (1620). *The New Atlantis* (1627) discusses his philosophy as practised in imaginary nation. See also pp.620, 622, 1416, 1436

Bacon, Francis (1561-1626), British painter, b. Dublin, mainly self-taught, whose powerful images capture and freeze the fleeting expression or gesture, often violent or hallucinatory. His work is largely based on photographs, eg the screaming nurse in the film *Battleship Potemkin*, or on his favourite paintings, eg Velázquez's *Innocent X*. To Bacon painting is "the pattern of one's nervous system being projected on canvas." See also pp.1664, 1664, 1765

Bacon, Sir Nicholas (1509-79), English lawyer, father of Francis Bacon, who in 1559 became lord chancellor under ELIZABETH I. He proposed that stern measures should be taken against MARY QUEEN OF SCOTS.

Bacon, Roger (1220-92), British philosopher and scientist. He was strongly influenced by Robert Grosseteste when studying languages, mathematics, alchemy and astronomy at Oxford. Writing the *Opus majus*, *Opus minor* and the *Opus tertium* (1267-68) for Pope Clement IV, he urged that extensive studies of these areas be included in university curricula. Clement died before acting on this proposal. See also GROSSETESTE, ROBERT pp.773, 1322

Bacon (meat) See p.732

Baconian theory, postulate that the plays of William Shakespeare were really the work of Francis Bacon. The theory was championed in 1856 by William Henry Smith, although it had been suggested three years earlier by the US author Dehn Bacon. It is furthered by the Bacon Society (founded 1886).

Bacteria, simple unicellular microscopic organisms (class Schizomycetes), usually classified in the plant kingdom. They lack a clearly defined nucleus and most are without CHLOROPLAST. There are three typical forms - rod-shaped (bacillus), round (cocci, eg streptococcus) and spiral (spirillum). Many are mobile, swimming about by means of whip-like flagella. Although many multiply by transverse fission, some species reproduce in different ways, chiefly by conjugation and transformation. Under adverse conditions many can remain dormant inside highly resistant spores with thick protective coverings. There are different kinds of metabolic functioning: AEROBIC, using free or atmospheric oxygen; ANAEROBIC, using oxygen from compounds; autotrophic obtaining some energy from light using bacteriochlorophyll. Although pathogenic bacteria are a major cause of human disease, many more are harmless or even beneficial to man by providing an important link in food chains, eg in decomposing plant and animal tissue, and in converting free nitrogen and sulphur into amino acids and other compounds that plants and animals can use. They are important too in such processes as FERMENTATION and food preservation. See also pp.181, 190-191, 661, 667, 719, 760, 911

Bacteriology, the scientific study of BACTERIA. They were first observed in the 17th century by Anton van LEEUWENHOEK, but it was not until the researches of Louis PASTEUR, the French chemist, and later Robert KOCH, a German physician, in the mid-19th century that bacteriology was established as a science.

Bacteriophage, VIRUS that lives on and infects BACTERIA, with a protein head containing DNA or RNA and a protein tail. Since its discovery in 1915 it has been important in the study of GENETICS.

Bactria, ancient name for the region between the Hindu Kush Mts and the River Oxus in NE Afghanistan. It is mountainous but fertile, with abundant water and a mild climate. The region gave its name to the two-humped Bactrian camel. The capital, Bactra, has adopted the modern name Balkh.

Badajoz, capital city of Badajoz province,

on the River Guadiana in SW Spain. There is a ruined citadel dating from the flourishing Moorish period and a 13th-century cathedral. Industries: distilling, food processing. Pop. (1970) 101,700.

Baden, town in E Austria 23 km (14 miles) SW of Vienna. It has been famous since Roman times for its hot sulphur springs. Pop. 22,500.

Baden-Baden, health resort in W Baden-Württemberg state, SW West Germany, 30 km (18 miles) SW of Karlsruhe in the Black Forest. The Roman mineral baths built there in the 3rd century remain a tourist attraction. Pop. 39,000.

Badenoch, wild, mountainous and densely-wooded area of NE Scotland near the upper reaches of the River Spey, includes Loch Laggan. The mountains extend for 72 km (45 miles), and the main town and tourist centre is Kingussie.

Baden-Powell of Gilwell, Robert Stephenson Smyth Baden-Powell, 1st Baron (1857-1941), British soldier and founder of the Scout movement. He held Malekings against the Boers (1899-1900) and from 1910 he devoted the rest of his life to the boy scouts. His sister Agnes (1858-1945) founded the Girl Guides (1910). His wife, Lady Olave St Clair Baden-Powell (1889-1977), also did much to promote these movements throughout the world.

Baden-Württemberg, region (land) in SW West Germany, formed in 1952, capital, Stuttgart. Agriculture and livestock-rearing are important, but industry is the major occupation. There are universities at Heidelberg and Freiburg, and the area is a popular tourist resort, with a spa at BADEN-BADEN. Industries: motor vehicles, machinery, textiles, glass. Area 35,750 sq km (13,803 sq miles). Pop. (1970) 8,959,700.

Badger, burrowing, nocturnal mammal that lives in Eurasia, North America and Africa. It has a stocky body with short legs and tail. Eurasian badgers (*Meles meles*) have grey bodies with black-and-white striped heads. American badgers (*Taxidea taxus*) are smaller and have grey-brown to red fur with a white head stripe. Length: 41-71 cm (16-28 in); weight: 10-20 kg (22-44 lb). Family Mustelidae.

Badings, Henk (1907-), Dutch composer, b. Java. His is famous especially for his ELECTRONIC MUSIC, including the electronic ballet *Evolution* (1958).

Badlands, region in SW South Dakota and NW Nebraska, USA. It is a rugged eroded area with layered sedimentary deposits containing numbers of fossils.

Badminton, game for two or four people. It enjoyed popularity in England in the 1870s, when it was called battledore and shuttlecock, afterwards it was taken to Poona in India where the first rules of the game were compiled. The game is similar to tennis and the object is to volley, with light rackets, a shuttlecock or bird (a cork base to which feathers are attached) unit. It is missed by an opponent or hit out of bounds. The court used for singles (indoors and out) is 5.3 by 13.4 m (17 by 44 ft), for doubles it is 6.1 by 13.4 m (20 by 44 ft). The net is 1.5 m (5 ft) high in the centre.

Badoglio, Pietro (1871-1956), Italian soldier and statesman. Chief of the general staff in 1919, he led the Italians at the WWI armistice talks. He was chief of staff again from 1925 to 1940. He headed the government that came to power after MUSSOLINI was overthrown and arranged the armistice (3 Sep 1943).

Baedeker, Karl (1801-59), German publisher best known for a series of guidebooks to various cities throughout Europe. The first English editions appeared in 1861. The firm's files were destroyed during WWII, although a great-grandson of Baedeker revived the business after the war.

Backeland, Leo Hendrik (1863-1944), US chemist, b. Belgium. He invented a type of photographic paper capable of being developed under artificial light. He also invented the first thermosetting plastic - BAKELITE - a substance that led to the development of the plastics industry.

Baena, Juan Alfonso de (fl. 1410-45), Spanish poet. He compiled an anthology, the *Cancionero de Buena* (1445) - of nearly 600 court poems, most of which were in Castilian.

Baer, Karl Ernst von (1792-1876), Estonian biologist. He described his discovery of the mammalian ovum in *De Ovi Mammalium et Hominis Geneu* (1827). He also wrote *On the Development of Animals* (2 vols 1828, 1837).

Baer, Maximilian Adelbert (Max) (1909-59), US boxer who in 1934 beat Primo Carnera for the world heavyweight championship. He held the title for one year, being beaten by James Braddock. **Baeyer, Johann Friedrich Wilhelm Adolph von** (1835-1917), German organic research chemist. He was awarded the Nobel Prize in chemistry in 1905 for his synthesis of indigo. He also investigated uric acid derivatives, discovered the phthalic dyes and devised a "strain" theory to account for the stability and conformation of carbon with five-membered and six-membered rings.

Baez, Joan (1941-), US folk singer. She first played in coffee houses and in the 1960s toured the USA and Europe (1970) and has made many recordings. She became associated with the protest movement, particularly against US involvement in Vietnam.

Baffin, William (1584-1622), English navigator and explorer. From 1612-16 he led several expeditions in search of the Northwest Passage, one of which led to the discovery of the bay between Greenland and Canada (since named after him). He was the first person to determine longitude at sea by observing the moon.

Baffin Bay, inlet of the Atlantic Ocean between Greenland and Baffin Island, Canada, connected with the Atlantic Ocean by the Davis Strait. First discovered in 1587 by John Davis, it was explored by William Baffin in 1616.

Baffin Island, large island at the E end of the Arctic Archipelago in the Northwest Territories, Canada, separated from Québec by the Hudson Strait. It is the fifth-largest island in the world, with largely mountainous terrain, and an almost entirely Eskimo population. Area 476,070 sq km (183,811 sq miles). Pop. 3,400.

Bagatelle, billiard game. It is played on a special table with nine balls. The object is to try to cue the balls in one of the nine numbered cups on the table. After playing all of the balls in turn, the players tally their score either by the number of cups filled or by the total points value of the cups that were filled.

Baggehoi, Walter (1826-77), British economist and writer. Trained as a lawyer, he became a banker (1852-58) and an influential editor of *The Economist* (1860-77), which was founded by his father-in-law in 1843. His book *Lombard Street* (1873) inaugurated the modern theory of central banking. Two of his other important works were *Literary Studies* (1879) and *Economic Studies* (1880).

Baghdad, capital city of IRAQ, on the River Tigris. Established in 762 as capital of the Abbasid Caliphate, it grew into a cultural and financial centre, a focus of caravan routes between the Orient and the West. It was almost destroyed by the MONGOLS in 1258. Soon after Iraq gained its independence from the Turks, Baghdad became the capital (1921). It is now an administrative, transport and educational centre. Industries: building materials, textiles, tanning, bookbinding, tourism. Pop. (1970 est.) 2,183,000. See also p.2069.

Baghdad Pact, joint defence agreement signed by Turkey, Iran, Iraq, Pakistan and Britain in 1955, as a bulwark against Soviet expansion in the Middle East. In 1959 Iraq withdrew, the headquarters were moved to Ankara, Turkey, and the name was changed to the Central Treaty Organization.

Baghdad Railway, rail link between Europe and the Middle East. In 1902 a German company was granted permission by the Ottoman Empire to extend the line from Turkey to Baghdad. Britain, Russia

Bacteria, found almost everywhere, can be both helpful and harmful to man

Badger, a distinctive member of the weasel family, can outdig even the mole

Badminton took its name from the Gloucestershire home of the Duke of Beaufort

Bagatelle almost certainly gave rise to the present day electronic pinball machine

Bagnold, Enid

Bagpipe music is characterised by a drone harmony sustained by the air filled bag

Bagworm moth gets its name from the cocoon of silk spun by its caterpillar

Bahamas, washed by the warm Gulf stream, the islands enjoy an almost perfect climate

John Logie Baird, the television pioneer who demonstrated the first "true" television

and France objected, seeing the railway as a threat to their own interests in the Middle and Far East. The resulting tension contributed to the hostility leading up to WWI

Bagnold, Enid (1889-), British author. Her best-known novel is *National Velvet* (1935), the story of a girl and her horse. Her other work includes *The Squire* (1938), *The Loved and Envisied* (1951) and the play *The Chalk Garden* (1956).

Bagot, Sir Charles (1781-1843), British colonial administrator who was minister to France (1814) and to the USA (1815-20). He helped negotiate the RUSH-BAGOT CONVENTION (1817) and in 1841 Robert Peel appointed him governor-general of Canada, an office he held until his death. **Bagpipe**, musical instrument with reed pipes connected to a windbag held under the arm and filled by mouth or bellows. The chanter pipe has finger-holes for melody, while drone pipes produce monotone accompaniment. The bagpipe originated in Greece or Asia and is closely associated with Scotland and Ireland, although it is also played elsewhere in rural Europe.

Bagritsky, Eduard (1895-1934), Russian poet, real name Eduard Dryubin. His best-known work is *Duma pro Opanasya* (1926), an epic poem set in the Russian civil war. His later poetry, which continued in a romantic style despite the official shift to SOCIAL REALISM, includes the collection *Yugo-Zapad* (1928).

Bagworm, moth caterpillar that partly conceals itself in a cocoon of silk strands and particles of leaves and twigs. The common bagworm (*Thyridopteryx ephemeraeformis*) attacks trees and shrubs, especially arborvitae and cedars. Family: Psychidae.

Bahadur Shah II (1775-1862), last Mogul Emperor of India (1837-58). He prevented Hindu-Muslim conflict in Delhi but in 1857 supported the mutiny against British rule of India and was dethroned. See also INDIAN MUTINY.

Bahai faith, religion founded in 1863 by BAHAU'LLAH as an outgrowth of the BABI FAITH. Its headquarters are in HAIFA, Israel, although it has centres throughout the world. It seeks world peace through the unification of all religions and stresses a simple life dedicated to serving others. It recognizes Bahaullah as the latest prophet of God.

Bahamas, small independent state in the W Atlantic, SE of Florida and consisting of about 700 islands of which Grand Bahama is the largest. The capital, Nassau, is situated on New Providence Island. Pop. (1976 est.) 208,000. See p. 1983.

Bahau'llah (1817-92), Persian religious leader, original name Mirza Husayn Ali Nuri, founder of the BAHAI FAITH. He embraced the BABI FAITH in 1850 but broke with it in 1867, proclaiming himself Bahaullah ("The Glory of Allah", the Promised One foretold by Bab). His work, the *Katibi-ikan* (The Book of Certitude) is the Bahai holy book.

Bahawalpur, city in a central Pakistan, on the River Sutlej; capital of the Bahawalpur division of the Punjab province. It was the capital of the principality of Bahawalpur in the late 18th century. Industries: machinery, textiles, food processing. Pop. (1972) 133,956.

Bahia, coastal state in a Brazil; capital, Salvador. Declared a province in 1823, it became a state in 1889. Products: cocoa, tobacco, piassava fibre, sisal, hardwoods, vegetable oils, natural gas, lead, titanium, asbestos, hydroelectricity. Area 561,026sq km (216,612sq miles). Pop. 7,430,000.

Bahr, Hermann (1863-1934), Austrian critic, novelist and dramatist. He founded the Jungwien Group, which was influenced by French symbolism. His notable works include the novel *Die gute Schule* (1890), the essay *Zur Kritik der Moderne* (1890), which established Modernism as a literary term, and the comedies *Das Konzert* (1909) and *Der Meister* (1914).

Bahrain, island state in the Persian Gulf between the Qatar peninsula and the E coast of Arabia, named after the main island. Main exports are oil and pearls.

Area: 663sq km (256sq miles). Pop. (1975 est.) 236,000. See also p. 1986.

Bain, small Italian holiday resort on the Gulf of Pozzuoli, 16km (10 miles) NW of Naples. Formerly called Baiae, it has warm sulphur springs, a mild climate and rich vegetation. HADRIAN died in the town, and JULIUS CAESAR had a villa there. Pop. 2,400.

Baikal (Baykal), lake in Siberia, the largest and deepest freshwater lake in the continent. It is fed by many small rivers but the only major outlet is the River Angara. It has a variety of fish and a unique species of seal, although some of these are threatened by the increasing pollution from lakeside factories. Area 31,494sq km (12,160sq miles); max. depth 1,742m (5,714ft).

Baile, William Balfour (1825-64), British explorer and colonial administrator. He led two important explorations of the River Niger in 1854 and 1859. On the second expedition he set up a trading community at Lokoja, where he studied African languages.

Bail, in law, the granting or obtaining the release from custody of someone awaiting trial, by the deposit of a security ensuring the accused's return when required, eg in court for trial. If the person on bail does not return then the monetary value of the security, also called bail, is forfeited.

Baile Atha Cliath. See DUBLIN (city). **Bailey, Sir Donald Coleman** (1901-), British civil engineer who designed the Bailey bridge for military use. The steel lattice girders can be assembled by groups of six men from easily handled component parts and cantilevered across a gap to provide a bridge to carry 70 tonnes over spans of up to 46m (150ft).

Bailey, James Anthony (1847-1906), circus impresario. He became involved with the Robinson and Lake Circus in 1863. In 1872 he became a partner in Cooper and Bailey, which merged with competitor P.T. BARNUM's in 1881. After Barnum's death in 1891, Bailey became head of the Barnum and Bailey Circus.

Bailey, Liberty Hyde (1858-1954), US botanist. He helped to establish horticulture as an applied science through the systematic study of cultivated plants. His work had an important influence on the development of genetics and plant pathology. He founded and directed the Bailey Hortorium at Cornell University. **Bailey, Pearl** (1918-), US jazz singer. She made her stage debut in the Broadway musical *St Louis Woman* (1946) and later played in various musicals and films, including *St Louis Blues* (1957), *Porgy and Bess* (1959) and *The Landlord* (1969). In 1975 she retired from show business and was appointed to the US delegation to the United Nations.

Bailey bridge. See BAILEY, SIR DONALD COLEMAN.

Baillie, Dame Isobel (1895-), Scottish soprano. In 1923 she made her first London appearance and in 1933 was the first British artist to sing at the Hollywood Bowl, USA. She was professor of singing at the Royal College of Music (1955-57) and at Cornell University, USA (1960-61).

Baillie, Joanna (1762-1851), Scottish poet and playwright. Her plays include the tragedies *De Montfort* (1800) and *Family Legend* (1810). Collections of her poems, which were written in Scottish dialect, include *Fugitive Verses* (1790) and *Merrical Legends* (1821).

Bailly, Jean-Sylvain (1736-93), French astronomer and politician, author of *Histoire de l'astronomie* (1775-87). In 1789 he was elected president of the NATIONAL ASSEMBLY. He was mayor of Paris (1789-91) but lost political favour. He was guillotined in 1793.

Baily, Edward Hodges (1788-1867), British sculptor, best-known for his statue of Lord Nelson in Trafalgar Square, London.

Baily, Francis (1774-1844), British astronomer. In 1836 he discovered the phenomenon known as "Baily's beads" - spots of light seen on the edge of the Sun before and after total eclipses. He calculated the Earth's mean density, using the data of Henry CAVENDISH. Baily was one of

the founders of the Royal Astronomical Society and became its president.

Bain, Alexander (1818-1903), Scottish philosopher who held the chair of logic at Aberdeen University (1860-80). In the British empiricist mould, he studied the physical basis of mental events and the nervous processes of the brain.

Bainbridge, Beryl (1934-), British novelist. Her first novel, *A Weekend with Claude*, was published in 1967. She won the *Guardian* fiction award in 1974 for *The Bottle Factory Outing* and the Whitbread fiction prize in 1977.

Bainbridge, Kenneth Tompkins (1904-), US physicist who in 1945 directed the testing of the atom bomb at Alamogordo, New Mexico. He also did research into radar and in 1961 became a professor of physics at Harvard.

Bainton, Edgar Leslie (1880-1956), British composer. In 1934 he went to Australia and was director of the State Conservatory of Music, Sydney (1934-47). His many compositions include the symphony *Before Sunrise*, which won the Carnegie Trust Award in 1917.

Balzac, Jacques (1779-1936), French historian. His work includes *History of France* (1924), *Napoleon* (1931) and *The French Republic 1870-1935* (1935).

Baird, John Logie (1888-1946), Scottish engineer, the first man to transmit moving pictures. He demonstrated the first true television to members of the Royal Institution, London, in 1926, he transmitted television to a ship at sea in 1928 and was granted experimental broadcasting facilities by the BBC, London, in 1929. His mechanical television system was used alternately with an electronic system for the world's first public television service set up by the BBC in 1936. See also TELEVISION pp. 640-641.

Baireuth. See BAYREUTH.

Baja California (Lower California), peninsula of NW Mexico extending SSE for 1,220km (760 miles) between the Golfo de California and the Pacific Ocean. The chief product of the region is long-staple cotton and the main industry is tourism. Pop. 998,400.

Bejaazet. See BEYAZID.

Bejer, Fredrik (1837-1922), Danish statesman. He was a Liberal member of the Danish parliament (1872-95) and did much work towards the development of Danish neutrality. In 1885 he was a delegate to the first Scandinavian peace conference and was one of the founders of the International Peace Bureau in Berne in 1891. He was president of the Bureau until 1907. He shared the 1908 Nobel Peace Prize with K.P. ARNOLDSON.

Bakelite, trade name (coined by Leo BAEKLAND) for a thermosetting plastic used for insulating purposes and in making paint. It was the first plastic made by the process called condensation, in which many molecules of two simple chemicals (in this case phenol and formaldehyde) combine to form large polymer molecules. See also PLASTICS p. 589.

Baker, Sir Benjamin (1840-1907), British civil engineer. He was the principal designer of the Forth railway bridge in Scotland, completed in 1890, which at 518m (1,700ft) had the longest bridge-span in the world until 1918. He was also responsible for the construction of much of London's underground railways and the first Aswan dam. See also p. 534.

Baker, Sir Herbert (1862-1946), British architect. With Sir Edwin LUTYENS he designed legislative buildings for NEW DELHI, India; in London his buildings include India House and the Bank of England. In South Africa he designed the estate of Groote Schuur, near Cape Town, and the Union Government Buildings at Pretoria.

Baker, Janet Abbott (1933-), British mezzo-soprano. She is renowned as a singer of *Lieder* and opera. Well known at COVENT GARDEN, BAKLER'S WELLS and GYNDENBOURNE, she has toured throughout the world. In 1971, she was awarded the Shakespeare Prize in Hamburg for her services to the arts. In 1976 she became a Dame Commander of the Order of the British Empire.

Baker, Josephine (1906-75), US entertainer. After starting in Paris in *La Revue Nègre* (1925) she was based in France for most of her career and became a French citizen. She was active in humanitarian and philanthropic work, and became a member of the French Legion of Honour.

Baker, Richard Edward St Barbe (1889-), British silviculturist, founder of the worldwide Men of the Trees Society. In 1963 he launched the first Sahara Reclamation Conference at Rabat and in 1972 helped to launch the World Year of the Tree.

Baker, Sir Samuel White (1821-93), British explorer. He made discoveries in Ethiopia about the sources of the River Nile (1861-62) and discovered and named Lake Albert (1864). Later, as a colonial administrator, he opposed the slave trade, and led an expedition up the River Nile, claiming land and establishing trade.

Baker, Sir Stanley (1928-76), Welsh film actor. He featured in adventure dramas and thrillers, in strong masculine roles. His major films included *The Cruel Sea* (1953), *The Criminal* (1960) and *Accident* (1968). Baker had his own production company that made several films, among them *Zulu* (1964) and *Robbery* (1967).

Bakewell, Robert (1725-95), British breeder of sheep and cattle who revolutionized animal husbandry by scientific breeding. He spent all his life in Leicestershire. His methodical inbreeding and selection produced better meat animals. (Previously sheep had been raised mainly for wool, and cattle as draught animals.) See also pp 724, 1464, 1465.

Bakewell, town in N Derbyshire on the River Wye, 16km (10 miles) ESE of Buxton. A spa town, it has a fine stone bridge and many old buildings. Chatsworth, the seat of the dukes of Devonshire, is 5km (3 miles) to the NE. Tourism is an important industry. Pop. (1971) 4,249.

Bakhtiari, or Bakhtiyari, nomadic people of SW Iran whose leaders have been prominent in Iranian politics. Their Muslim society is noted for the freedom afforded its female members. Today there are more than 400,000 Bakhtiari, about one-third of them nomadic herders.

Baking powder, mixture used in cooking as a substitute for yeast. It contains bicarbonate of soda mixed with an acid component such as tartaric acid or cream of tartar. During cooking, the acid reacts with the bicarbonate to generate carbon dioxide gas, which causes the food to rise without the fermentation effects of yeast.

Baking soda, common name for sodium bicarbonate, NaHCO₃, so-called because it is a constituent of baking powder. See BICARBONATE OF SODA.

Bakr, General Ahmad Hassan al-. See HASSAN AL-BAKR GENERAL AHMAD.

Bakst, Leon (1866-1924), Russian painter, and stage designer, b. Lev Rosenberg. He lived in Paris from 1908, and joined Diaghilev's BALLETS RUSSES, his sets, especially for the ballets *Cleopatra* (1909) and *Schéherazade* (1910) causing sensations. Bakst's designs, exotic and colourful, were the first to integrate sets and costumes into a visual entity.

Baku, capital of Azerbaijan, USSR; an oil-shipping port on the W coast of the Caspian Sea. A trade and craft centre in medieval times, Baku prospered under the Shirvan shahs in the 15th century. It was ruled by the Persians from 1509 until 1723 and annexed by Russia in 1806. Commercial oil production began in the 1870s and Baku now handles more freight, mainly oil and petroleum products, than any other Soviet port. Pop. (1975) 851,547.

Bakunin, Mikhail Alexandrovich (1814-76), Russian political philosopher. He became a believer in violent revolution while in Paris in 1848, and was active in the First COMMUNIST INTERNATIONAL until expelled by MARX in 1872. His approach, known as revolutionary ANARCHY, repudiates all forms of governmental authority as fundamentally at variance with human freedom and dignity. In *God and the State* (1882) Bakunin recognized natural law

alone as consistent with liberty. See also p. 1650.

BAL (British Anti-Lewisite), oily chemical used as an antidote for poisoning by organic arsenic compounds and certain heavy metals. (Lewisite was an arsenical poison gas developed during WWI.)

Bala, Lake (Welsh, Lyn Tegid), largest natural lake in Wales, 30km (18 miles) NE of Dolgellau. It is 7km (4 miles) long and acts as a reservoir, its waters being pumped to Merseyside.

Balaam, in the Bible, Midianite prophet hired by BALAK, King of MOAB, to curse the Israelites wandering in the wilderness. But he blessed them instead, as recounted in Numbers 22-24.

Balacava (Balaklava), town 13km (8 miles) SE of SEBASTOPOL, Crimea, USSR. It was the scene of an inconclusive battle in 1854 in which the British, French and Turks defended against a Russian attack on their supply port of Balacava. The battle is famous for a disastrous charge by Lord CARDIGAN's Light Brigade of cavalry to capture Russian guns. The incident was recorded in a poem by Alfred, Lord TENNYSON. See also CRIMEAN WAR, p. 1561.

Balaguer, Joaquín (1909-), lawyer, diplomat and president of the Dominican Republic (1960-62; 1966-). He was deposed after a military coup in 1962, but returned in 1966 and defeated Juan Bosch in an election for the presidency. He was elected in 1970 and again in 1974 after a violent political campaign. His rule has promoted economic stability, but has had constant opposition.

Balaguer, Víctor (1824-1901), Spanish poet, historian and Catalan nationalist. He was leader of the Liberal Party in Barcelona (1843-68). His poetry, written in Catalan, was among work published in a 39-volume collection *Obras Completas* (1882-1899).

Balakirev, Mili Alexeyevich (1837-1910), Russian composer. One of the RUSSIAN FIVE dedicated to advancing Russian nationalism in 19th-century music, his best-known compositions are *Islemye* (1869) and incidental music to *King Lear* (1858-61). He founded the St Petersburg Free School of Music in 1862. See also p. 1582.

Balalaika, triangular-shaped musical instrument popular in the USSR. The strings (usually three) are fingered on a fretted neck and may be plucked, or plucked with the fingers. It sounds similar to the MANDOLIN.

Balance of payments, overall surplus or deficit that occurs as a result of the exchange of all goods and services between one nation and the rest of the world. A country with a balance of payments deficit is in debt and this must normally be repaid, usually from the nation's gold reserves. Such deficits, if frequent, can pose a serious problem, because they cause a reduction in the reserves. This in turn leads to economic pressure for devaluation in order to correct the balance. A country with a surplus is in a favourable position, but it may come under international pressure to revalue its currency in order to adjust the imbalance. See also pp 1786, 1866, 1867.

Balance of power, system in international affairs by which nations seek to keep peace and order by maintaining an approximate balance of forces among rivals, thereby preventing any single one from obtaining a marked advantage. See also pp 1558-1559.

Balance of trade, the surplus or deficit incurred by a country in its trading. It is the difference between the sum of its imports and the sum of its exports. See also BALANCE OF PAYMENTS.

Balance sheet, financial statement that sets out the assets, liabilities, profits and losses of a company or organization. It is usually produced at the end of the financial year by accountants.

Balanichne, George (1904-), US ballet dancer and choreographer. He left his native Russia in 1924 and became a principal dancer and choreographer for DIAGHILEV'S BALLETS RUSSES in Paris. He moved to the USA in 1933 and was director of the Metropolitan Opera ballet (1934-37). He

became the first artistic director of the New York City Ballet in 1948. Works he has choreographed include *The Prodigal Son* (1929), *The Nutcracker* (1954) and *Don Quixote* (1965). See also p. 1759.

Balanoglossus, the acorn worm, a small marine animal which has a soft, ribbon-like body, an acorn-shaped proboscis and numerous gill slits. It has long been classified as a primitive CHORDATE, and so remotely related to the VERTEBRATES, but this has lately been disputed. See also p. 54.

Balan, Iolanda (1936-), Romanian high-jumper. She completely dominated her event from 1957 to 1966, with two Olympic (1960, 1964) and two European (1958, 1962) titles and 14 world records. The last of these (1961) was 1.91m (6ft 3in).

Balassi, or Balassa, Balasi (1554-94), Hungarian soldier and poet, the greatest Hungarian lyric poet of his time. He wrote war poems and love lyrics and created a new verse form known as the Balassi stanza. His best-known poem is *In praise of the outposts* (1589).

Balaton, lake in W central Hungary, 89km (55 miles) SW of Budapest. This shallow lake, rich in fish, is the largest in central Europe. There are many holiday resorts and vineyards along its shores. Area: 600sq km (232sq miles).

Balboa, Jerónimo (c. 1670-1760), Mexican architectural designer who designed large building complexes. His works are incompletely documented but include the Altar de los Reyes for theapse of the Mexico City Cathedral (1718-37).

Balboa, Vasco Núñez de (c. 1475-1519), Spanish conquistador and discoverer of the Pacific Ocean. He went to Hispaniola in 1500 and to Darien (Panama) ten years later, where the colonists ousted the governor and he took control. With a group of local Indians he crossed the isthmus and discovered the Pacific in September 1513. He was summoned home and executed for treason.

Balboa, town and port in the Panama Canal Zone on the Gulf of Panama, Pacific Ocean. It is the location of a US naval base and of Balboa Heights, which is the administrative headquarters for the canal. Pop. (1970) 2,568.

Balch, Emily Greene (1867-1961), US economist and sociologist. She taught at Wellesley College, Massachusetts (1897-1918). In 1915 she was a delegate to the International Congress of Women at The Hague and was one of the founders of the Women's International League for Peace and Freedom. She was secretary-treasurer of the League (1919-22, 1934-35). In 1946 she shared the Nobel Peace Prize with John Raleigh Mott.

Balchin, Nigel Martin (1908-70), British author. He became known after the publication of his novel *The Small Back Room* (1943), which dealt with scientific military research during WWI, an area in which Balchin worked.

Balcan, Sir Michael (1896-1977), British film producer. He exercised a powerful influence on British film-making at Gainsborough Pictures, Gaumont-British and at Ealing Studios where he controlled production from 1938 to 1955 and produced films such as *Passport to Pimlico* (1949), *The Cruel Sea* (1953) and *The Ladykillers* (1955).

Balczó, Andras (1939-), Hungarian modern pentathlete. Five times world champion, he reached the peak of his career with an Olympic gold medal in 1972. He also won team medals in the 1960 and 1968 Olympics.

Baldassarino Belgiojoso (fl. 16th century), also known as Balazarini or Balthazar de Beaujoyeux, French violinist of Italian birth who proclaimed himself inventor of the dramatic "ballet" which was to lead gradually to the conception of opera.

Balder, Scandinavian god of light, beauty, brightness and wisdom, the much beloved son of ODIN and FRIGGA. Balder was supposedly indestructible but through the treachery of LOKI, god of evil, he was killed by a dart made of mistletoe. His death heralded the fall of ASGARD, the stronghold of the gods.

Balakirev set the course for orchestral music and lyrical song in later 19th-century Russia

Balalaikas are made in five sizes from treble to double bass and form a whole orchestra

Balanoglossus, the acorn or tongue worm, lives in the mud and sand of shallow waters

Sir Michael Balcan was a powerful influence in the success of postwar British cinema

Bald-headed eagle

Bald-headed eagle, the national emblem of the USA, is now an endangered species

Bald-headed eagle, large bird of prey that lives in North America, where it feeds on fish and small mammals. It is brown with a white head and tail and a yellow bill. Its tail feathers were used in the head-dresses of some American Indians, and it is the national emblem of the USA. Although now protected by law, it is an endangered species. Species *Haliaeetus leucocephalus*. See also p 305

Baldness, or alopecia, the absence of HAIR from the areas of skin where hair was formerly present. Causes include disease (eg scarlet fever), ageing, deficiencies of diet, stress and the use of certain drugs. In some cases hair will grow back normally, but in others loss is permanent. Premature baldness, loss of hair in late adolescence or early adulthood, occurring most often in males, is believed to be hereditary. Hair loss in women occurs much later and is much less severe than in men. See also MS p 1075

Baldovimetti (or Balduvetti), Alesio (c 1425-99), Florentine painter whose *Nativity* (1460-62), a fresco in the church of S. Annunziata, Florence, shows his interest in landscape and the sensitivity of his colour. He influenced GHIRLANDAIO

Baldung-Grien, Hans (c 1484-1545), German painter and graphic artist. His work shows the influence of Albrecht DÜRER under whom he probably studied. He painted portraits and religious subjects and designed tapestries and stained-glass. His best-known work is the altarpiece *The Coronation of the Virgin* (1512-16) in Freiburg Cathedral, Breisgau, for which he also designed the choir windows.

Baldwin, name of two Latin emperors of Constantinople. Baldwin I (r 1204-05) was, as Baldwin IX of Flanders (1195-1205), a leader of the Fourth Crusade which took Constantinople in 1204. He was elected ruler of the new state. Baldwin II (r 1228-61) was the last emperor of the Latin Empire. He fled from Constantinople when MICHAEL PALAEOLOGUS captured the city and restored the Byzantine Empire.

Baldwin, name of five kings of Jerusalem. Baldwin I (1098-1118) came to the throne in 1100 after leading the first CRUSADE. He consolidated the power of the Crusader states in the Middle East. His cousin succeeded him as Baldwin II (r 1118-31), after he had been Count of EDessa. He had been captured by the SELJUK Turks in 1104 and ransomed four years later, as king he was again captured in 1123-24. His grandson, Baldwin III (1131-62), succeeded to the throne in 1143 as co-ruler with his mother until he defeated her supporters in a civil war in 1151. The second Crusade occurred during his reign. Baldwin IV (1161-85), called the Leprous King (r 1174-83), had to contend with internal struggles as well as the attacks of SALADIN. He died of leprosy after crowning his nephew (1177-86) as Baldwin V in 1183 who, however, did not come to the throne until his uncle's death in 1185. His regent Raymond III won a truce with Saladin that lasted for four years. See also pp 1310-1311

Baldwin, James (1924-), US author. He was born in Harlem, New York, and his works deal with the problems of colour and race relations. They include the novel *Go Tell It on the Mountain* (1953); the books of essays *Notes of a Native Son* (1955), *Nobody Knows My Name* (1961) and *The Fire Next Time* (1963); and the play *Blues for Mister Charlie* (1965). See also pp 1773, 1773

Baldwin, Robert (1804-58), Canadian statesman. He shared the first premiership of united Canada with LOUIS LA PONTAINE, who represented the French of Lower Canada (1841-43, 1847-1851). He advocated co-operation between French and British Canadians, organized an effective system of municipal government for Ontario, and re-organized the courts.

Baldwin, Stanley, 1st Earl Baldwin of Bewdley (1867-1947), British Conservative statesman. He ran the family iron and steel business before entering Parliament in 1908. He became Chancellor of the Exchequer (1922-23), and although his handling of the US debt was criticized,

he succeeded BONAR LAW as Prime Minister (1923-24). He was Prime Minister again in 1924-29. Prime Minister for a third time (1935-37) as leader of the NATIONAL GOVERNMENT, he had to deal with the ABOLITION crisis (1936). See also pp 1676-1677

Bale. See BASKI.

Balearic Islands, Spanish resort islands in the W Mediterranean Sea, off the coast of Spain, forming the Balearic province. Successively occupied by all the Mediterranean civilizations, the Moorish kingdom of the 10th century was a base for piracy. The chief islands are MAJORCA, MINORCA and IBIZA. Industries: tourism, silver-working, olive oil, wine, fruit. Pop. (1970) 558,287

Baleen whales, the whalebone whales - giant marine mammals in which the mouth is filled with sheets of whalebone, fringed with hairs, that act as filters to extract food from seawater. See pp 100-101

Balewa, Sir Abubakar Tafawa (1912-66), Nigerian political leader. He was a founder and officer of the Northern People's Congress political party, and served as Nigeria's first prime minister (1957-66). After independence in 1960 his power was diminished and in 1966 he was killed in a coup.

Balfour, Arthur, James Balfour, 1st Earl of (1848-1930), British Conservative statesman, b Scotland. His time as Prime Minister (1902-05) was marked by party friction. He was an energetic leader of the opposition (1906-11) and First Lord of the Admiralty (1915-16). In 1917, as Foreign Minister, he issued the BALFOUR DECLARATION in favour of founding a Jewish nation in Palestine. He played a major role in various post-war European agreements.

Balfour Declaration, letter written in 1917 by British foreign secretary ARTHUR BALFOUR to the British Zionist Federation pledging co-operation for the settlement of the Jews in PALESTINE. Jews were admitted to the area, a province of the OTTOMAN EMPIRE, when it became a British mandate after WWI. British forces withdrew in 1948 and the state of ISRAEL was proclaimed. See also p 1782

Bali, fertile, densely populated island province in Indonesia, off the S tip of Java, between the Bali Sea and the Indian Ocean; the capital is Denpasar. It was under Javanese control from the 10th to 15th century and was a Dutch possession from 1908 to 1949. It is the centre of Majaphit Hinduism, and its scenic beauty and native culture make it a popular tourist resort. Industries: rice, sweet potatoes, cassava, copra, meat processing. Area, 5,623sq km (2,171sq miles). Pop. (1970) 2,247,000

Balikpapan, port city in S Borneo, Indonesia, on Balikpapan Bay. It is a major oil-producing and refining centre, with a pipeline connection to the Samarinda oil-fields. It was occupied by the Japanese from 1942-45. Pop. (1975) 137,340

Baliol, Edward de (d 1364), John de BALIOL's son, became king of Scotland in 1332. Deposed in 1333, he was restored by EDWARD III, to whom he surrendered the throne in 1356.

Baliol, John de. See BALLIOL, JOHN

Balkan Mountains, major mountain range of the Balkan Peninsula extending from S Yugoslavia through central Bulgaria, a continuation of the Carpathian Mts. It is rich in minerals and forms a climatic barrier for the inland regions. The highest pass is Shipka Pass, approx. 1,270m (4,166ft), and the highest peak is Botev 2,375m (7,793ft).

Balkan Wars (1912-13), two wars involving Balkan states. In the first the Balkan League (Serbia, Bulgaria, Greece and Montenegro) conquered most of the OTTOMAN EMPIRE's European territory. The second war, mainly between Serbia and Bulgaria, arose out of dissatisfaction with the distribution of these lands, Serbia's victory added to the tension in the Balkans before WWI. See also p 1666

Balkhash (Balchas), city of S Kazakhstan, S central USSR. It is a copper-smelting centre, served by a branch railway. Pop.

(1968) 77,000. It is on the N shore of Lake Balkhash (Ozero Balchas), a landlocked, saline lake. The lake is fed at its W end by the fresh-water River Ili, and so its salinity increases towards the E. Area 18,907sq km (7,300sq miles). Average depth 6m (20ft).

Ball, John (d 1381), English priest and one of the leaders of the PEASANTS' REVOLT. He was imprisoned in 1360 and excommunicated (1376) for his radical preaching. In 1381 he was released from Maidstone prison by the followers of WAT TYLER, but he was recaptured and executed at St Albans. See also p 1349.

Ball, Lucille (1911-), US actress and comedienne. Her film debut was in *Broadway through a Keyhole* (1933). She went on to make more than 70 films including *Mame* (1973). Her greatest success came in the television series *I Love Lucy* (1951-60).

Balla, Giacomo (1871-1958), Italian painter, a founder of FUTURISM and a signatory of the Futurist manifesto (1910). In *Dog on a Leash* (1912), a logical expression of Futurism, Balla attempted to break down the dog's running movements into separate superimposed images. Later he abandoned this naturalistic approach and began to express movement in painting in abstract terms. See also p 1657

Ballad, form of popular poetry, often sung, narrative in style with simple metre, rhyme and often a refrain. It dates from medieval times and typically consists of four-line stanzas. Subjects include historical events, folk-lore and love.

Ballade, non-narrative poem of three stanzas of seven or eight lines and a final stanza (envoy) of four or five lines in which the poet's conclusion or moral is drawn. A widely used form, it flourished in the Middle Ages and was often sung. Composers have used the name for instrumental pieces.

Ballet opera, English type of comic opera in which a play with a burlesque plot is interspersed with songs adopted from ballads and popular folksong. Its main vogue was in the mid-18th century and the first, *The Beggar's Opera* (1728) by JOHN GAY, remains the best.

Ballad of Reading Gaol, The (1898), long poem by OSCAR WILDE. It was inspired by Wilde's own experiences while serving a two-year sentence for homosexuality.

Balcanec, John (1839-93), New Zealand journalist and politician, b Northern Ireland. In 1866 he emigrated to New Zealand and became editor of the *Wanganui Herald*. He entered politics and held various government posts before becoming Prime Minister (1891-93).

Ball and socket joint, type of joint that allows one part to rotate at almost any angle with respect to another. Such joints are used in machinery and occur naturally, as in the human hip joint. See also pp 146-147

Ballantyne, David Watt (1924-), New Zealand author. His novels include *The Cunninghams* (1948), *The Last Pioneer* (1963) and *A Friend of the Family* (1966). He has worked as a journalist in New Zealand and in Britain.

Ballantyne, Robert Michael (1825-94), Scottish author of many books for boys including the well-known *The Coral Island* (1858). He worked with the Hudson's Bay Company in Canada as a young man and wrote about the experience in *Hudson's Bay, or, Every-Day Life in the Wilds of North America* (1845).

Ballarat, city in central Victoria, Australia, 113km (70 miles) NW of Melbourne. A leading sheep-breeding centre and former gold-mining boom town, it was the scene of the EUREKA STOCKADE rebellion (1854). Pop. (1971) 58,434.

Ballard, James Graham (1930-), British science fiction writer. His first story was *Prima Belladonna* (1956). It was followed by novels such as *The Wind from Nowhere* (1962), *The Drought* (1965), *The Crystal World* (1965), *Crash* (1970) and *High Rise* (1974).

Ballard, John Frederick ("Fred") (1884-1957), US dramatist who is best known for his comedies, such as *Believe*

Stanley Baldwin, was three times British Prime Minister

James Balfour, who pledged co-operation by founding a Jewish homeland in Palestine

Bali is an island of great natural beauty and treasure house of old Indonesian culture

Me and Ladies of the Jury

Ball bearing, type of BEARING for machinery, consisting of two concentric rings of steel which together form a "race" for a number of steel balls positioned between them. The inner ring is fixed to a shaft and the outer one to a support.

Ballet, theatrical art form in which stylized dancing to music conveys a story or theme. It evolved from RENAISSANCE COURT spectacles. The first formal ballet, the *Ballet comique de la Reine*, was performed at the French court of Catherine de' MEDICI in 1581. Thoinot Arbeau wrote the first treatise on ballet, *Orchesographie* (1588). LOUIS XIV, who performed in ballet, founded the Royal Academy of Dance in 1661. Jean-Georges Noverre, the most influential choreographer and theorist of the 18th century, argued for meaningless gestures and masks to be replaced by a greater naturalism. The performance of *Les Sylphides* in Paris (1832) set the model for the Romantic ballets of the 19th century. Towards the end of the century Russian ballet began emphasizing technique and virtuosity. Subsequently Sergei DIAGHILEV and his BALLETS RUSSES revolutionized ballet with dynamic choreography and dancing, and the mid-20th century saw a melding of elements of Classical ballet and modern dances. See also pp 1482-1483, 1758-1759.

Ballet, Royal, ballet company formed in 1956 from the SADIERS' WELLS Ballet and Sadler's Wells Theatre Ballet. It dates from Ninette de VALOIS' Academy of Choreographic Art (founded in 1926) that became the Vic-Wells, and subsequently Sadler's Wells Ballet. It inherited high standards and a reputation that it added to and is indisputably one of the top ballet companies in existence. Resident at the Royal Opera House, Covent Garden, it runs a ballet school and has a second company that tours and performs in London at Sadler's Wells Theatre. The Royal Ballet, strong on classics, has performed important new works such as *Ondine* (1958), *Antigone* (1959), *Enigma Variations* (1968) and *A Month in the Country* (1976). From the 1960s the partnership of Margot FONTEYN and Rudolf NURIEV has become the most celebrated in modern ballet. See also FREDERICK ASHTON, Kenneth MACMILLAN p 1759.

Ballet, Sadler's Wells, ballet company that grew out of the Vic-Wells Ballet founded in 1931 by Ninette de VALOIS. Alicia MARKOVA, Robert HELPMANN and Frederick ASHTON worked with the company and major productions included *Job* (1931), *Coppelia* (1933) and *Daphnis and Chloe* (1951). In 1948 a second mainly touring company was formed as the Sadler's Wells Theatre Ballet. Both were incorporated in the Royal Ballet in 1956. See also p 1758.

Ballet Rume de Monte Carlo, the name of several ballet companies that succeeded the BALLETS RUSSES. One of its most successful managers was Col W de Basil. In 1938 René Blum and Léonide MASSINE formed their own, separate company. It inherited many of Diaghilev's choreographers and dancers, such as George BALANCHINE. It was disbanded in 1947.

Ballets Russes, dance company founded in 1909 in Paris by Sergei DIAGHILEV, with Michel FOKINE as chief choreographer. It revitalized and reshaped ballet by bringing together great dancers (PAVLOVA, NUTINSKY) and choreographers (Léonide MASSINE, Vaslav Nijinsky and BALANCHINE). Leading composers, such as STRAVINSKY, DEBUSSY and Richard STRAUSS composed music for the company, and top artists such as Picasso, Chagall and Matisse designed sets and costumes. It disbanded soon after Diaghilev's death in 1929; many members later joined the BALLET RUSSE DE MONTE CARLO. See also pp 1758-1759.

Ballinrobe, town in Mayo, Republic of Ireland. It is on the River Robe near its entry to Lough Mask, 27km (17 miles) S of Castlebar. It is noted for its trout fishing. Pop 1,300.

Balliol, Edward. See BALLIOL, EDWARD.
Balliol, John (1249-1315), King of Scotland (1292-96). His claim to the Scottish

throne was upheld by EDWARD I of England, who claimed feudal overlordship of Scotland in consequence (1291). Balliol quarrelled with Edward and Edward invaded Scotland in 1296. Balliol was captured. He died in exile in Normandy. See also pp 1316-1317.

Ballista, firing device used by the Romans and later, medieval, armies to hurl rocks and other missiles at enemy formations and fortifications. It had a range of about 400m (1,320ft) for missiles weighing up to 27kg (60lb). See also p 560.

Ballistic missile. See GUIDED MISSILE pp 563, 574.

Ballistics, the science of projectiles, including bullets, shells, bombs, rockets and guided missiles. Interior ballistics deals with the propulsion and motion of the projectile within the firing device. Exterior ballistics investigates the trajectory of the projectile in flight. Terminal ballistics is concerned with the impact and effect of the projectile at the target. At each stage scientists try to maximize the performance of the gun and projectile by improving their design. It has developed along with the technology of ARTILLERY and with the invention of instruments to monitor such factors as the ignition and burning of the propellant explosive, the stresses on a gun barrel and the effect of air resistance and gravity on the trajectory. For example, a gun has its maximum range when fired at an elevation (angle between the barrel and the horizontal) of 45°. The shape of the trajectory is a PARABOLA and at less than maximum range there are two possible trajectories (one high, one low). See also pp 512-513.

Balloon, lighter-than-air craft used for recreation or for scientific or military purposes. The first balloons to fly were of the open-necked hot-air type. Unmanned military meteorological or other scientific balloons are usually filled with hydrogen, lightest in weight of all gases but dangerously inflammable. Manned balloons are now generally filled with the safer gas helium. See pp 512-513.

Ballooning, travelling by balloon ie, suspended in a basket underneath a balloon inflated with a gas lighter than air. Now largely a leisure activity, ballooning was the method by which man first succeeded in flying. Generally credited with the achievement are the French brothers Jacques and Joseph MONTGOLFIER who devised a hot air balloon in which Jean François Pilâtre de Rozier and the Marquis d'Arlandes made the first free ascent on 21 Nov. 1783. Ten days later, another two Frenchmen made the first flight in a hydrogen-filled balloon.

Although hydrogen ballooning is considered by many to be the purest form of the sport, because it is completely silent, it has been largely superseded by the cheaper hot-air method. In this, burning propane gas is used to heat the air through an opening in the bottom of the balloon, which is usually made of nylon fabric. After the initial inflation and heating, occasional re-heating is required during flight. Descent is accomplished by releasing air slowly through a valve. In Britain passenger-carrying balloons have to be registered. See also pp 512-513.

Ballot, object used to cast a vote. The word derives from the Italian *ballotta* ("little ball"). Since 5th-century BC Athens, balls have been used to cast votes, white for yes, black for no. Today, the ballot is a sheet (or sheets) of paper, although in some countries voting machines are increasingly being used to register votes.
Ballot Act (1872), law introduced by William GLADSTONE's first government, that required parliamentary elections to be held by secret ballot, so ending bribery at elections. See also REFORM ACTS.

Ballot, Australian, form of BALLOT generally used today, and originating in Victoria, Australia, in 1856. In secret, the voter indicates his choice on a printed form that lists all the candidates.

Ballpoint pen, pen that employs as its writing point a small ball-bearing that rolls against and picks up semi-solid ink from a reservoir. It was invented by John Loud in 1888 but László Bíró was the first to make

a reliable model in 1938, which was patented in 1943.

Ball python, small, stout-bodied West African PYTHON, which twists itself into a ball when frightened or handled. It is pale yellow with slate grey markings, it kills its prey by constriction. Length up to 153cm (5ft). Family Boidae; species *Python regius*.

Ballymena, market town in NE Northern Ireland, on the River Braid. Industries: linen and woollen goods, carpets, tobacco. Pop 16,500.

Balm, resin from a BALSAM plant and the name of various aromatic plants, particularly those of the genera *Melissa* and *Melissis*, also an old name for any soothing ointment.

Balmoral castle, private residence of the monarch of Britain, in the Scottish Highlands, 85km (53 miles) W of Aberdeen. It was left to Queen VICTORIA by Prince ALBERT on his death in 1861. It is served by the villages Ballater, Crathie and Braemar. See also p 1644.

Balon, Jean (1676-1739), French ballet dancer. He first performed in 1691 and spent many years with the Académie Royale. He was noted for his exceptional lightness, and his name is often used to describe this characteristic of ballet.

Balsa, lightweight wood used particularly for modelling, eg aeroplanes, and for building rafts, obtained from a tree of South America. Species (*Akhuma lagopus*).

Balsam, aromatic RESIN obtained from plants, or healing preparations, especially those with benzoic and cinnamic acid added to the resin; or balsam-yielding trees, such as the balsam fir and balsam poplar. The name is also given to numerous species of tropical succulent plants of the family Balsaminaceae that are sprawling, waterside forms with thin leaves and pendulous flowers. See also IMPA TIENS.

Baltazarini. See BALDASSARINO BELGIOIOSO.
Balthazar de Beaujoyeux. See BALDASSARINO BELGIOIOSO.

Baltic Sea, arm of the Atlantic extending past Denmark, along the N German coast and separating Sweden from the USSR and Finland. The sea extends roughly N-S with an arm reaching out to the E. The N part is known as the Gulf of Bothnia and the S part as the Gulf of Finland. The Baltic is the largest body of brackish water in the world. Its low salinity is due to the size of its catchment area, about four times the area of the sea. Each year the sea receives a fresh water inflow of 1/40 of its volume, which being less dense floats on top of the more saline and therefore denser water. There is a constant surface out-flow of brackish water through the Danish sound which is replaced by more saline Atlantic water at a greater depth. The low salinity of the surface water accounts for the ease with which the Gulf of Bothnia freezes over in the winter. The tidal range is low and currents, flowing in a clockwise fashion, are weak. During the Middle Ages there was an important herring fishing industry. Its sudden decline at the end of the 15th century is thought to be a contributory factor in the demise of the HANSEATIC LEAGUE. Area, 414,400sq km (160,000sq miles).

Baltic, Battle of the (2 April 1801), alternative name of the Battle of COPENHAGEN in which the British defeated the Danish fleet.

Baltic states, countries of ESTONIA, LATVIA and LITHUANIA, on the E coast of the Baltic Sea. The region was settled by various tribes in the 7th century AD, but until the 20th century they remained mostly under Danish, Russian or Polish rule. Each was set up as an independent state in 1918, following the Russian Revolution, but came under the control of the USSR in 1940.

Baltimore, chief city of Maryland, USA, at the mouth of the Patuxent River on Chesapeake Bay. Founded by the Barons of Baltimore as a tobacco port in 1729, it later began exporting wheat. Baltimore was burned down in 1904, but was rapidly rebuilt. A major port, it has steelworks, oil refineries, shipbuilding and other industries, and is a centre for insurance firms. Pop. (1973) 877,838.

Ballet dancers express the most sublime of human emotions through their movement

Ballista, a development of the bow, sometimes hurled dead or live prisoners

Balloon racing, a sport determining who can remain aloft longest or travel farthest

Ball pythons kill by constriction, death results from suffocation rather than crushed ribs

Baluchistan

Honoré de Balzac, whose many characters depicted French bourgeois society in detail

Bananas contain vitamins A, B and C and are always available fresh throughout the year

Bandicoots, unlike the kangaroos, have a pouch that opens at the bottom

Baneberry, a member of the buttercup family producing poisonous red or white berries

Baluchistan, region and province in central and SW PAKISTAN, bordered by Iran (W), Afghanistan (NE), and the Arabian Sea. Quetta is the capital. The terrain is hilly and arid, being mostly desert and is inhabited by a few nomadic tribes such as the Baluchi. The region was ruled by the Arabs from the 7th to the 10th centuries. It became a British dependency in 1876 and a province of India in 1887. The boundaries with Iran and Afghanistan were settled in 1885 and 1896. The region became part of Pakistan in 1947. Some cotton is grown, and fishing is the chief occupation on the coast. Natural gas is extracted and exported along with salt and fish. Area approx. 344,747 sq km (133,107 sq miles). Pop. (1969 est.) 1,484,000. See also p.2116.

Balzac, Honoré de (1799-1850), French novelist. Balzac began by writing thrillers in a Paris attic. His first success was *Les Chouans* (1829), and more than 90 novels and short stories followed at a prolific rate in his grand scheme - *The Human Comedy*. He devised this as a detailed, realistic study of contemporary French society. Among his best known novels are *Eugénie Grandet* (1833), *Le Père Goriot* (1834) and *La Cousine Bette* (1846). See also pp.1574, 1575

Balzac, Jean Louis Guez de (c.1597-1654), French author who is regarded as one of the best prose writers of his time. His works include *Lettres* (1624), *Le Barbon* (1648) and *L'Arisppe* (1658).

Bamako, capital of MALI, on the River Niger 145km (90 miles) NE of the border with Guinea. Once a centre of Muslim learning (11th-15th centuries), it declined until the French occupied it in 1883 and later made it capital of the French Sudan (1908). Industries: shipping, groundnuts, meat, metal products. Pop. (1970 est.) 187,700.

Bambara, Negroid people of the upper Niger valley, MALI. Their decentralized, patrilineal society is based on subsistence farming, although cash crops such as groundnuts are also grown. Now largely intermixed with other local peoples, they are still known for their wood and metal sculpture.

Bamboo, tall, tree-like grass native to tropical and subtropical regions. The hollow, woody stems grow in branching clusters from a thick rhizome and the leaves are striped blades. It is used in house construction and for household implements. Some bamboo shoots are eaten. The pulp and fibre may form a basis for paper production. Height to 40m (131ft). There are 1,000 species. Family Gramineae; genus *Bambusa*. See also GRASS, pp.376, 378.

Banana, long, curved, yellow or reddish fruit of the tree of the same name. It has soft, creamy flesh. A spike of yellow, clustered flowers grows from the centre of the crown of the tree and bends downwards and develops into bunches of 50-150 fruits or "hands" of 10-20. More than 100 varieties are cultivated. Fruits used for cooking are called cooking bananas or plantains. Height: 3-9m (10-30ft). Family Musaceae; genus *Musa*. See also p.308.

Banaras. See VARANASI.

Banbury, town in Oxfordshire, England, on the River Cherwell, 35km (22 miles) N of Oxford. Industries: food processing, electrical and metal goods. Pop. (1971) 29,216.

Bancroft, George (1800-91), US diplomat and historian. He was appointed secretary of the navy in 1845 and established the US Naval Academy at Annapolis, Maryland. He served as minister to Britain (1846-49) and to Germany (1867-74), where he became a friend of BISMARCK. His *History of the United States* (10 vols., 1834-74) studied the origins and development of the country.

Band, group of musicians, usually playing wind and percussion instruments - in contrast to an ORCHESTRA, in which stringed instruments predominate. The lineal ancestors of European bands were the Turkish military bands of the Ottoman empire, loud and raucous ensembles which were intended to terrify the enemy. From these, Europe borrowed or adapted

several instruments, such as the cymbals. By the end of the 18th century many European countries had military, town and village bands. These were the forerunners of the various types of modern bands.

A modern big band normally has about 16 musicians in four sections - trumpets, trombones, saxophones and a rhythm section of piano, guitar, double bass (or bass guitar) and drums. This kind of band evolved in the swing era of JAZZ, and performs swing music. A brass band often contains only brass instruments, some surely heard elsewhere, although percussion instruments may be added. There are 20 or more players, usually amateurs. The music may be specially written but arrangements of well-known tunes and classical pieces are often also performed. A dance band plays in strict tempo for dancing. It has a rhythm section to provide the beat and instruments such as saxophone, trumpet and violin to play the tunes. A big band may also play for dancing. A jazz band varies according to the style of jazz. A traditional jazz band has a clarinet, trumpet and trombone playing independent melodic lines over a rhythm section. A swing band has the same "line-up" as a big band. In modern jazz, bands are small, often having only a trumpet and saxophone with a rhythm section.

A military band contains sections of brass and woodwind instruments with percussion. It plays music for marching and must itself be able to march while performing. A percussion band consists solely of percussion instruments and is mainly a musical activity for schoolchildren. It is also known as a rhythm band. A rock band contains a core of electric guitar, bass guitar and drums to which singers and instruments such as saxophones and keyboards may be added; all are heavily amplified.

Benda, Hastings Kamuzu (c.1902 -), President of MALAWI (1966 -). He studied medicine in the USA and practised in England before returning to Africa in 1953. He became a nationalist political leader, guiding Nyasaland to independence as Malawi within the British Commonwealth (1964) and establishing an autocratic Presidency (1966). He has been criticized by other black African leaders for maintaining amicable relations with SOUTH AFRICA.

Bandar Abba, town in SE Iran at the mouth of the Persian Gulf, capital of the Persian Gulf province. It was founded in 1623 and flourished as a port until the 18th century. Today it is a fishing centre. Industries: food processing, textiles. Pop. (1971 est.) 38,000.

Bandaranaike, Sirimavo (Ratwatte Dias) (1916 -), Prime Minister of SRI LANKA (formerly Ceylon). She became the world's first woman Prime Minister in 1960 after her husband, the former premier, was assassinated in 1959. Her Sri Lanka Freedom Party was defeated in 1965, but returned to power in 1970. In 1971 she put down an uprising led by the Marxist People's Liberation Front. In 1972 a republican constitution was adopted and the country's name was officially changed to Sri Lanka. Mrs. Bandaranaike and her party were resoundingly defeated by J.R. Jayawardene's United National Party in the July 1977 general election.

Bandaranaike, Solomon West Ridgeway Dias (1899-1959), Prime Minister of Ceylon (now Sri Lanka) from 1956-59. He made Sinhalese the official language and founded the Sri Lanka Freedom Party, which united the nationalists and socialists. Following his assassination by a disident Buddhist monk, his wife, Mrs. Sirimavo Bandaranaike, succeeded him as Prime Minister.

Bandeira, Manuel (1885-1968), Brazilian poet. His work deals mainly with his home-town in N Brazil. His first book of verse, *Ash of the Hours* (1917), had a strong influence on the development of modern Brazilian poetry.

Bandicoot, Australian MARSUPIAL about the size of a rabbit and with similarly long ears, hopping gait and burrowing habits.

But it eats insects rather than vegetation and its long pointed snout is probably an adaptation for this diet. Genus *Perameles*. See also pp.88, 90, 303.

Bandinelli, Baccio (or Bartolommeo) (c.1493-1560), Florentine sculptor, the rival of MICHELANGELO and Benvenuto CELLINI. He executed a series of bas-relief of apostles, prophets and saints in Florence Cathedral.

Bandjarmasin, city in S Borneo, Indonesia, on the Martapura River; it is the capital of the South Kalimantan province. A settlement established by the Dutch in 1711, it is now a trading centre. Exports: diamonds, oil, rubber products. Pop. 282,000.

Bandundu (Banningville), capital of the Bandundu Region (1966) in SW ZAIRE, W Africa, on the Kasai River. The region is mainly agricultural, but also yields timber from its forests. Pop. (capital) 107,000.

Bandung, capital of West Java province, Indonesia, 121km (75 miles) SE of Djakarta. The Asian-African conference took place there in 1955. Industries: canning, chemicals, quinine, textiles, food processing. Pop. 1,202,000.

Bandung Conference (1955), meeting in BANDUNG of representatives of 29 non-aligned countries of Asia and Africa, including China, to express their united opposition to colonialism and to gain recognition for the "Third World". See also pp.1738-1739.

Baneberry, any of about ten species of perennial plants (genus *Actaea*) of the buttercup family (Ranunculaceae) found throughout the Northern Hemisphere. All have poisonous berries appearing in the autumn. Height to 61 cm (2ft).

Banff, town in SW Alberta, Canada, on the Bow River in the Rocky Mountains. It is noted for its Indian and natural history exhibits. It is a popular resort town and the home of the University of Alberta. Pop. 3,500.

Banffshire, former county of Scotland, now part of the Grampian Region. It lies S of the Moray Firth and is drained by the rivers Spey, Deveron and Avon, and contains some of the highest peaks in the Cairngorms. Industries: whisky, cattle, fishing, quarrying. Area: 1,640 sq km (630 sq miles).

Bangalore (Bangaluru), city in S central India, 290km (180 miles) W of Madras, capital of Mysore state. Established in 1537 by the Mysore Dynasty, the city was retained by Britain as a military headquarters until 1947. It is the sixth largest city in India, and an important industrial and communications centre. Pop. (1971) 1,540,741.

Bangalore torpedo, metal pipe or tube filled with high explosive. It is used by infantry to blow up beach obstacles, cut paths through barbed wire, or explode mines.

Banghazi (Benghazi), city in Libya, on the NE shore of the Gulf of Sidra, 650km (400 miles) E of Tripoli. Founded by the Greeks in the 6th century BC, it has been conquered and ruled by Romans, Vandals, Byzantines, Arabs and Turks. The Italians captured it in 1911 and during the 1930s developed it into a port, an air and naval base, and used it as a supply base during WWII. It is a commercial and industrial centre for Cyrenaica province and its industries include food processing, shipping and oil. Pop. 140,000.

Bangkok, capital and chief port of Thailand, on the S bank of the River Menam (or Chao Phraya) and headquarters of SEATO. A busy market centre, it is cosmopolitan, with a large Chinese minority. Bangkok became the capital in 1782 and grew quickly, with many ornate palaces and temples. Today it is Thailand's communications centre. Pop. (1976 est.) 4,349,500.

Bangladesh, formerly East PAKISTAN, country in S Asia situated on the Ganges delta and bordered on the N, E and W by India. Dhacca is the capital city. The main products are jute, rice, sugar cane and tobacco. Area 142,776 sq km (55,126 sq miles). Pop. (1975 est.) 76,815,000. See p.186.

Bangor, town in County Down, SE Nor-

thern Ireland, 19km (12 miles) SNE of Belfast. It is noted for its ruined abbey, founded in the 6th century by St Comgall. The town is a popular seaside resort and yachting area. Pop. (1971) 35,105.

Bangor, cathedral city and borough in Gwynedd (formerly Caernarvonshire), NW Wales, on the Menai Strait. The town, which grew up beside a Norman castle, is the home of the University College of North Wales (1884). Industries: slate quarrying, tourism. Pop. 14,500.

Bangui, capital of the CENTRAL AFRICAN EMPIRE, founded in 1890 by the French on the Ubangui (Oubangui) River, near the Zaïre border. It is the nation's chief port for international trade. Industries: textiles, food processing, beer, soap. Pop. (including suburbs) 301,800.

Banja Luka (St Luke's Baths), town in Bosnia, Yugoslavia, 306km (190 miles) W of Belgrade on the River Vrbas. It has fine mosques, Christian monasteries and ruined Roman baths. There were battles there between the Turks and the Russians in 1527, 1688 and 1737. Pop. (1971) 89,866.

Banjo, musical instrument with from four to nine strings, a body of stretched parchment on a metal hoop, and a long, fretted neck. It is played with a plectrum or the fingers. Probably of African origin, it was taken to the USA by slaves. It is most often used in minstrel shows, Dixieland jazz and folk music.

Banjul (Bathurst), capital of GAMBIA, W Africa, on St Mary's Island, where the River Gambia enters the Atlantic Ocean. Founded by the British in 1816 as a trading post, it is the country's chief port and commercial centre. Industries: groundnut processing, hides, beeswax. Pop. (1975 est.) 42,689.

Bangka, or **Banga**, island of Indonesia off the SE coast of Sumatra, in the Java Sea. Tin was discovered c.1710, since when Bangka has been one of the world's major tin-producing regions. Pepper is the chief agricultural product. The capital is Pangkalpinang and the chief port is Muntok. Area: approx. 11,915sq km (4,600sq miles). Pop. (1971) 303,804.

Bankhead, Tallulah Brockman (1903-68), US stage and screen actress. She won the New York Drama Critics' Circle Award for her performance in *The Little Foxes* (1939) by Lillian Hellman and *The Skin of Our Teeth* (1942) by Thornton Wilder. Her flamboyant lifestyle made her a legendary star.

Bank holidays, in Britain, weekdays on which the banks are closed, schools, factories, offices and most shops also close. Traditionally they were church holy days ('holidays'): Good Friday, Easter Monday, Whit Monday, Christmas Day and Boxing Day, with August Bank Holiday included to provide a break at the beginning of that month. Now in England and Wales New Year's Day has been added, Whit Monday has become Late Spring Bank Holiday (Monday nearest 31 May) and the August Bank Holiday has moved to the end of the month. In Scotland and Northern Ireland there are some differences. See also pp.1965, 1966.

Banking, commercial process providing individuals, companies and institutions with a wide range of services such as holding and transferring money, providing loans and giving stability to the financial sector of the economy. Clearing banks deal with the general public, MERCHANT BANKS provide services to business and industry such as investment loans and share floatations, and the central bank, under government control, is the bankers' bank and can be used as an economic regulator. The banking system facilitates exchange through the use of cheques, and the acceptance of these as a means of payment enhances the buying and selling of goods and services. See also p.1860.

Bank of England, Britain's central banking institution, founded in 1694 and situated in Threadneedle Street, City of London. Nationalized in 1946, it regulates foreign exchange, issues bank-notes, advises the government on monetary matters and acts as the government's financial agent.

Bank of Scotland, bank founded in 1695 by an Act of the Parliament of Scotland; it was the first Scottish bank. In the mid-1970s it had more than 500 branches in Scotland, with a total staff in excess of 8,000.

Bank rate, the minimum rate of interest at which a bank (in Britain the Bank of England) is prepared to discount bills of exchange. Rates of interest on deposits and loans of other banks and BUILDING SOCIETIES are based on the bank rate, which therefore is an effective means of controlling the amount of borrowing. See also p.1860.

Bankruptcy, legally determined status of a person or company, usually when debts greatly exceed income and assets. A person or company may ask to be declared bankrupt by the court, or else the creditors may do so. A court-appointed receiver takes charge of the bankrupt's property with the aim of meeting, as far as possible, the bankrupt's financial obligations to his creditors.

Banks, Don (1923-), Australian composer who settled in London in 1950. He studied there under Matyas SEIBER and in Florence (1953) under Luigi DALLAPICOLA. Works, in the TWELVE-TONE system, include a horn concerto and various chamber works; he also composed film scores.

Banks, Gordon (1937-), English footballer. Regarded as the world's best goalkeeper of his day, he won 73 international caps (1963-72) before an eye injury sustained in a car crash (1972) curtailed his career.

Banks, Sir Joseph (1743-1820), British explorer and naturalist. He studied botany on one of COOK's voyages to Australia, and was influential in promoting the sciences in Britain. He was honorary director of the Royal Botanical Gardens at Kew from 1762 and made it a centre of botanical research. He was elected president of the Royal Society in 1778.

Bankside, principal theatrical district of Tudor London, on the opposite bank of the River Thames from the city itself. The Globe, Rose and Swan theatres were located there.

Banks Island, small wooded island in the Torres Strait, NE Australia. It was named after Sir Joseph BANKS, a botanist who travelled on COOK's *Endeavour* with Capt James Cook (1768-71). Circumference: approx. 45km (28 miles).

Banks Island, hilly, lake-dotted island in NW Northwest Territories, Canada, in the Arctic Archipelago. First circumnavigated by Sir Robert McClure in 1851, it was explored by the Canadian Vilhjalmur Stefansson in 1914-17. It has a small Eskimo population. Area: 60,166sq km (23,230sq miles).

Banks Peninsula, land that projects from the E central coast of South Island, New Zealand. Lyttelton is on the S side, Akaroa Harbour on the SE. It is 56km (35 miles) long by 40km (25 miles) wide.

Banks Strait, channel off the S coast of Australia, NE of Tasmania and S of Clark Island connecting the Bass Strait and the Tasman Sea. Width: approx. 21km (13 miles).

Banneker, Benjamin (1731-1806), US scientist, mathematician, astronomer, surveyor and clock-maker. In 1789 he became the first black presidential appointee when George WASHINGTON appointed him to the District of Columbia Commission to survey the site of the new Capitol.

Bannister, Sir Roger Gilbert (1929-), British athlete. At Oxford University he became the first man to run a mile in less than four minutes (on 6 May 1954 in a time of 3 min. 59.4 sec.). He received his medical degree at St Mary's Hospital Medical School and later became a government sports adviser.

Bannockburn, town and moor in central Scotland. In the battle on the moor in 1314, Scottish troops under ROBERT THE BRUCE defeated the much larger English army led by EDWARD II. Today the town has a textile industry. Pop. 4,000.

Banteng, wild cattle that inhabit hills and forests in Asia. The size of small cows,

with narrow curving horns and white stockings on their legs, bantengs are sometimes domesticated for meat and milk. Species *Bos banteng*. See also p.294.

Banting, Sir Frederick Grant (1891-1941), Canadian physician. He shared, with J.J.R. Macleod, the 1923 Nobel Prize in physiology and medicine for his work in extracting the hormone INSULIN from the PANCREAS, thus making possible the effective treatment of DIABETES MELLITUS.

Bantock, Sir Granville, (1868-1946), British composer, professor of music at the University of Birmingham (1907-34). His works include *Omar Khayyam* (1906-09), for soloists, chorus and orchestra; the unaccompanied choral symphony *Atalanta in Calydon* (1912), and *Hebrews Symphony* (1916).

Bantry, port and resort in SW Cork, Ireland, at head of Bantry Bay. The Bay is a natural anchorage and a terminus for oil tankers, including supertankers. Industries: fishing, tweed, quarrying. Pop. (1961) 3,159.

Bantu, group of African languages in the Niger-Congo branch of the Niger-Kordofanian language family. The most widely-spoken of the several hundred tongues used from the Congo Basin to South Africa are Swahili, Ruanda, Zulu and Sotho. There are more than 70 million Bantu-speakers and it is widely used in schools. They are all tonal languages, ie the same word in a different tone has a different meaning. See also pp.123, 1833.

Baudouin, Théodore-Faustin de (1823-91), French PARNASSIAN poet. His work influenced BAUDELAIRE, REMBAUD and MALHERBE. He wrote many volumes of verse including *Odes funambulesques* (1857) and *Les Exiles* (1867).

Banyan, evergreen tree of India. The branches send down aerial shoots that take root, forming new trunks. Such trunks from a single tree may form a circle up to 100m (330ft) across. Height to 30m (100ft). Family Moraceae, species *Ficus benghalensis*.

Bauer Suarez, Hugo (1926-), Bolivian army officer who became president in 1971. He rose to power through a coalition of the National Revolutionary Movement (MNR) and the Bolivian Socialist Falange (FSB), but by 1974 the MNR had broken with him. He crushed a military coup in 1974 and suspended elections scheduled for 1975.

Baobab, tropical tree native to Africa. It has a stout trunk containing water storage tissue, and short, stubby branches with sparse foliage. Fibre from its bark is used for rope. Its gourd-like fruit has edible pulp. Height: to 18m (60ft); trunk diameter: to 12m (40ft). Family Bombacaceae, species *Adansonia digitata*.

Baofu. See PAOKIN.

Baptism, one of the SACRAMENTS of the Christian Church. It is a rite of initiation into the Church and is administered by the pouring of water - which symbolizes regeneration - on to the forehead or by immersion (as by the BAPTISTS), accompanied by the invocation of the TRINITY. In churches which practise infant baptism it is the occasion when children are given their names. See also pp.1244, 1898-1899.

Baptistery, part of a church, or a related separate building, originally used for baptism. Based on the Early Christian baptistery in the Lateran basilica at Rome, many were octagonal. Baptisteries were still built even after baptism by immersion was no longer generally practised. There are superb examples at Pisa and Florence.

Baptists, members of a Protestant denomination who profess a personal religion based on the principle of religious liberty. There is no official creed and no hierarchy, and individual churches are autonomous; they evolved from ANABAPTISTS. They practise BAPTISM of believers and regard immersion as the only legitimate form sanctioned by the NEW TESTAMENT. They reject the practice of infant baptism. Insisting on freedom of thought and expression, Baptists have developed a democratic form of church government. The Baptist World Alliance, an advisory

Banjos produce the r percussive sound from the tightly stretched vellum resonator

Baggarah

body, holds regular international congresses. Baptists are active throughout the world and have suffered for their beliefs in the USSR, where they form the second largest religious group. The total number of baptists in the world in the mid-1970s was estimated at about 31 million.

Baqarah, or Baggara, nomadic Muslim herdsmen of Arab descent who live in a Sudan. They reached Lake Chad from Egypt in about the 16th century. Today they number about 5 million.

Bar, unit of pressure corresponding to the pressure of a column of mercury 75.007cm high. Atmospheric pressure is about 1.01325 bars, or 1,013.25 millibars.

Bar, The. See **INN OF COURT**.

Barn, Theda (1890-1955), leading US actress of silent films, real name Theodosia Goodman. Her first major film was *A Fool There Was* (1915) and she was an immediate sensation as the first screen "vamp" or sex goddess. She made more than 40 films including *Cleopatra* (1917) and *Salome* (1918).

Barabbas, in the New Testament, convicted felon who was in prison at the time Jesus Christ stood trial before Pontius Pilate. The people, given the choice of which prisoner to set free, nominated Barabbas and Christ was crucified.

Barab, Robert (1876-1936), Swedish physician, b. Austria. He was awarded the 1914 Nobel Prize in physiology and medicine for his work on the physiology and pathology of the vestibular apparatus of the ear. His studies of the normal and abnormal functioning of this important balancing mechanism greatly advanced understanding of the ear.

Barassi, Ron (1936-), Australian Rules footballer. The Melbourne captain and ruckman, he won the "best and fairest" awards in 1961 and 1964. His move in 1965 to the rival club Carlton as player-coach created a sensation.

Barb. See **BARBIE**.

Barb, light horse breed native to the Barbary region of N Africa. Introduced into England by King Charles II (c.1660-85) to develop racing thoroughbreds, it is similar to the Arab but has a more rugged physique. It has an average height of 14.2 hands (92cm) and may be grey, black, brown, chestnut or bay.

Barbados, island state in the West Indies. A popular tourist resort, the capital is Bridgetown. Pop. 245,000. See also p.187.

Barbieri, Jacopo de (1440-1516), Venetian painter and engraver. He was consulted on style by Dürer, whose work he influenced. Barbieri was possibly the first artist to paint a signed and dated still life, which included a dead partridge, gauntlets and an arrow. His work also included engravings on copper, etchings and woodcuts. Two well known etchings are *Judith and St Sebastian*.

Barbarians, term given to all uncivilized tribes by the ancient Greeks and Romans. It is more specifically used to apply to the Germanic and Slavonic tribes that invaded the Roman Empire after about 50 BC and eventually overthrew it. See also pp.1270-1271.

Barbarians, Barbarian Football Club, touring British rugby union club. Formed in 1890, the Barbarians have six traditional annual fixtures in Wales and the Midlands, and since 1948 have played the final game against major touring sides. Membership is by invitation, and teams are selected from players of all countries. Famous for their open, attacking play, the Barbarians also tour abroad.

Barbarossa. See **FREDERICK I**.

Barbarossa (c.1466-1546), Ottoman naval commander; also called Khayr-ad-Din. In 1529 he seized Algiers from Spain for the Ottoman Empire and later gained all the Barbary States. He continued to harass European shipping and gained control of most of the Mediterranean. He was admiral of the Ottoman fleet (1533-44).

Barbary, general name for the countries of N Africa except Egypt. The name is derived apparently from the Arabic for "barbarians". The coast of the area was notorious for piracy from the 16th to the

19th centuries. Animal life in the region includes the tailless **BARBARY APE**. Barbary Coast is also the name given to a waterfront area of San Francisco.

Barbary ape, tailless, yellowish-brown, ape-like monkey native to Algeria, Morocco and introduced into Gibraltar. It is the size of a small dog. The Gibraltar Barbary apes are the only wild monkeys in Europe. According to legend, if the Barbary apes leave Gibraltar, so will the British. Species *Macaca sylvana*. See also MACAQUE, PRIMATE.

Barbary sheep. See **AGOUTI**.

Barbary States, historic coastal region of N Africa now occupied by Libya, Algeria, Tunisia and Morocco. At one time Roman and later independent Muslim states (7th-15th centuries), they became infamous pirate states under Turkish control (16th-19th centuries). The pirates raided Mediterranean trade for booty and prisoners to ransom. After many attempts, the European powers and the USA finally subdued them in the early 19th century.

Barbastelle, BAT found in Europe and Asia. It is small - up to 6cm (2.5in) long - with greyish fur; it roosts in buildings or caves. Genus *Barbastella*.

Barbed wire, form of wire fencing patented in 1873 by Joseph F. Glidden. The metal wire had barbs spaced every few inches. This simple product changed the history of the USA by allowing the fencing of ranches, so containing livestock on the open ranges. Barbed wire is also used for defence in warfare.

Barbel, or barb, carp-like freshwater fish of W Asia and S central Europe. A game and food fish, it has an elongated body, flattened underbelly and two pairs of fleshy mouth whiskers (barbels). It is a strong swimmer well adapted to fast-flowing rivers. Length, 50-90cm (19.7-35.4in), weight, 16kg (35lb). Family Cyprinidae, species *Barbus barbus*.

Barber, Samuel (1910-), US composer. He has composed works in many forms, including chamber music, two symphonies, a *Piano Concerto* (1962) and two operas, *Vanessa* (1958) and *Antony and Cleopatra* (1966). The piano concerto and the first opera each won a Pulitzer prize.

Barberini, name of an aristocratic Roman family. Maffeo Barberini (1568-1644) was elected Pope URBAN VIII in 1623 and made cardinals of his nephew Francesco, his brother Antonio the Elder, and another nephew Antonio the Younger (the patron of the Baroque artist BERNINI).

Barber of Seville, The (1816), two act comic opera by Gioacchino Rossini, Italian libretto by Cesare Sterbini, after Pierre BEAUMARCHAIS's play satirizing aristocratic foibles. Figaro (baritone), a barber, helps Count Almaviva (tenor) to win Rosina (soprano) despite the efforts of her guardian Bartolo (bass) to marry her for her dowry. See also pp.1398, 1399.

Barberry. See **BERBERIS**.

Barbershop quartet, four male vocalists who sing traditional and popular songs in a style generally featuring part-singing with close harmony. The four parts are usually lead (who sings the melody), tenor, baritone and bass. It first became a popular entertainment in US barber-shops in the 1890s.

Barber's itch, ringworm of the beard, contagious skin disease affecting the bearded region of a man's face. It is caused by a fungus and is generally treated with antifungal drugs.

Barber surgeons, men who practised as both barbers and surgeons, common in Europe until well after the Renaissance. Owing mainly to the influence of GALLEN, a Greek physician of the 2nd century AD, medicine became separated from surgery. The former was regarded as worthy of intelligent study whereas the latter, necessitated by the more unpleasant aspects of war and disease, was left to barbers and other professional wielders of sharp instruments. See also pp.1096-1097.

Barberton, town in South Africa, 290km (180 miles) E of Pretoria. Gold, nickel and asbestos are mined there. It was founded in 1886. Pop. (1967 est.) 13,200.

Barbet, brightly coloured tropical bird,

known for its monotonous call. It is stout-bodied with a large head, heavy bill, beard-like bristles and short legs. It is a poor flier, although some species can climb tree trunks. It lives in the tops of trees, and eats fruit and insects. The female lays 2-5 white eggs in a nest hollowed out of a tree branch. Length 9.30cm (3.5-12in). Family Caprimulgidae. Genus *Malauma*. See also p.312.

Barbirolli, Sir John (1899-1970), British conductor who won international acclaim for sensitive performances of a wide range of music. He conducted the New York Philharmonic (1937-42) and was then resident with the Halle Orchestra, Manchester (1943-68), which he transformed into a world-class ensemble.

Barbiturates, drugs used as sedatives or to induce sleep or sedation. Among the common barbiturates are phenobarbital, secobarbital (Seconal) and pentobarbital (Nembutal). When taken in controlled doses, they are safe, effective medical agents. But barbiturates are also dangerous drugs in often repeated doses they are addictive, and when combined with other drugs such as alcohol or tranquilizers can result in sudden unconsciousness and death. See also pp.1080-1081, 1092-1093.

Barbizon School, mid-19th-century French school of Romantic landscape painting that derives its name from a village SE of Paris near the forest of Fontainebleau. A group of artists, led by Theodore Rousseau and Jean-François Millet, gathered there (c.1840-80) to discuss art and to paint the unacademic aspects of the countryside and peasant life. In painting directly from nature they were forerunners of IMPRESSIONISM. They were inspired by CONSTABLE and 17th-century Dutch landscapists, and in turn influenced DAUBIGNY and CROCKETT.

Barbour, John (c.1316-1395), Scottish poet. In about 1375 he wrote *The Bruce*, Scottish literature's earliest epic, describing Scotland's fight for independence from England. It combines patriotic sentiment with historical accuracy and is widely used as an historical source.

Barbthroat. See p.315.

Barbuda, coral island in the West Indies, a dependency of ANTIGUA. The chief industry is cotton. Pop. (1960) 1,100.

Barbusse, Henri (1873-1935), French novelist and journalist. He received the Prix Goncourt for *Under Fire* (1916), a bitterly disillusioned account of the experiences of front-line soldiers in WWI. His growing Communist sympathies are evident in his later works, *Light* (1918) and *Chains* (1925).

Barcarole, musical composition derived from the type of song sung by Venetian gondoliers. Well-known examples are those composed by Jacques Offenbach and Frédéric Chopin.

Barcelona, Mediterranean port and city in Catalonia, NE Spain, 507km (315 miles) NE of Madrid, capital of Barcelona province. Founded by the Carthaginian Barca family, it became a major trading centre in the late Middle Ages. Several times the French occupied and lost it (1640-52, 1715, 1808-14). It has long been the focus of radical political and Catalan separatist movements. The autonomous Catalan government there (1932-39) was swept away by the SPANISH CIVIL WAR. Industries: cars, aircraft, textiles, machinery, electrical goods. Pop. (1970) 1,745,142.

Barceloneta, city and port in N Venezuela, on the W bank of the River Nevarin; capital of Anzoategui state. The surrounding areas produce petroleum, coal, cotton, beef and cocoa. Industries: food processing, textiles, sawmilling. Pop. 55,000.

Barchara dune, crescent-shaped sand hill found in sandy deserts throughout the world where the wind is constant in speed and direction. Barchars also occur fairly frequently in coastal regions; they are quickly shifted by the wind, particularly when small. See also DESERT DUNE p.228.

Barchester Towers (1857), by Anthony Trollope, second of the "Barchester Novels", six stories examining the ecclesiastical-rural Establishment in the imaginary English county of Barsetshire.

Barclay, Alexander (c.1475-1552), British poet, probably of Scottish birth. He is best remembered for his adaptation of Sebastian Brant's *Narrenschiff* into the satirical poem *The Ship of Fools* (1508).

Barclay, John (1582-1621), French-born Scottish author. He wrote a number of political and satirical novels, most of them in Latin. These novels included *Euphorio his Lusts Satyricon* (1603), an attack on the Jesuits, and *Argenis* (1621).

Barclay, Robert (1648-90), Scottish Quaker and apologist of QUAKERISM. Often imprisoned for his religious views, he was eventually befriended by the Duke of York (later JAMES II) and made nominal governor of the Quaker province of East New Jersey (1682-88) although he never visited it. His collected works were published as *Truth Triumphant* (1692).

Bard, in Celtic society, poet and singer charged with celebrating the exploits and virtues of the king or chieftain in whose court he lived. In Ireland and Wales the bards formed an hereditary order with jealously guarded privileges analogous to those of the nobility and clergy. The medieval bardic *estrumpion* (gathering) in Wales was revived as an annual event in the 19th century, at which the winner of a national poetry competition is "chaired" as a bard.

Bardeen, John (1908-), US physicist known for his research into SEMICONDUCTIVITY. He worked with the Bell Telephone Laboratories (1945-51) and in 1951 became professor of physics at Illinois University. In 1956 he shared the Nobel Prize in physics with William SHOCKLEY and Walter BRATTAIN for their joint invention of the TRANSISTOR. In 1972 he again won the Nobel Prize in physics, sharing it with Leon COOPER and John SCHRIEFFER, for his work on SUPERCONDUCTIVITY. See also p.885.

Bardi, Giovanni, Count of Vernio (1534-1612), Italian musician, founder of the Florentine Camerata (c.1580). That society of writers and musicians sought to revive Greek musical tragedy and laid the foundations of modern opera.

Bardot, Brigitte (1934-), French film actress who became a sex-symbol of the 1960s. She became famous for her roles in *And God Created Woman* (1956) and *Heaven Fell that Night* (1957), directed by her then husband, Roger Vadim. Her later films include *La Verité* (1960), *Le Mépris* (1963) and the comedy *Viva Maria!* (1965).

Barra, Arturo (1897-1957), Spanish author. He fought as a republican in the SPANISH CIVIL WAR. In 1939 he travelled to Britain where he wrote a trilogy based on his war experiences - *The Forge* (1941), *The Track* (1943) and *The Clash* (1946). The trilogy was published in Spanish as *La forja de un rebelde* (1952).

Barbours' Parliament, or Parliament of Saints (July-Dec 1653), the last Parliament of the English COMMONWEALTH. Named after the MP "Praise God" Barbours and hand-picked by CROMWELL and the Puritan army chiefs, it was intended to usher in godly rule. But religious disputes, especially about Church patronage and tithes, ruined its effectiveness and it voted its own dissolution, handing over power to Cromwell. See also pp.1424-1425.

Barreilly, city in N India, capital of Bareilly district. It became a British possession in 1801 and Bareilly College was founded there in 1837. Industries: sugar, cotton, furniture. Pop. (1971) 296,248.

Barenboim, Daniel (1924-), Israeli pianist and conductor b. Argentina. He has performed with many of the world's leading orchestras, including the New York Philharmonic, the London Symphony, the Berlin Philharmonic and the Orchestre de Paris. In 1967 he married the violinist Jacqueline du Pré.

Barents Sea, part of the ARCTIC Ocean lying between Spitzbergen and Novaya Zemlya. It is named after the Dutch explorer Willem Barents who discovered Spitzbergen (1596). The sea bed consists of an uneven surface distribution of Quaternary sediments. The deeper order sediments bear evidence of long periods above sea-level. The fishing grounds are

particularly rich in cod and herring. Area 1,370,360 sq km (529,096 sq miles).

Barczak, or Barczak, Willem (d.1597), Dutch navigator. He made three expeditions in search of the north-east passage (1594-97). On his third voyage he discovered Spitzbergen, off Norway, but after rounding Novaya Zemlya was trapped by ice for the winter. He died on the return journey.

Barère de Vieuzac, Bertrand (1755-1841), French politician. During the FRENCH REVOLUTION he supported the execution of Louis XVI and was a member of the Committee of Public Safety. In 1794 he was party to the overthrow of ROBESPIERRE. Imprisoned for his part in the Terror, he escaped and later worked for NAPOLEON. See also pp 1550-1551.

Baretti, Giuseppe Marc-Antonio (1719-89), Italian writer and literary critic. In 1751 he went to London and was associated with Samuel Johnson. His writings include a *Dictionary of English and the Italian Language* (1760), and *A Journey from London to Genoa* (1770-71).

Barge, boat for carrying freight or, occasionally, passengers, usually flat-bottomed and often towed by tugs or (more traditionally) by horses. Barges have long been the principal means of heavy freight transport on rivers, canals and other inland waterways. Because of its low cost, this method of transport is enjoying a new popularity in western countries. Originally a barge was a shallow-draught sailing vessel. See also pp 538-539.

Bargello, Italian national art museum in Florence. Built as a high-towered civic palace-fortress in 1255, the Palazzo del Podestà became the seat of the chief of police (*bargello*) and was a prison from 1574. In 1865, it was established as a museum and today is famous for its collection of Renaissance sculpture including MICHELANGELO's unfinished *David*, and works by DONATELLO, GIOTTO, CELLINI and Della Robbia.

Bargello, type of zig-zag embroidery that originated in 17th-century Florence. It has long flat stitches, generally on a canvas-like fabric, that create a design consisting mainly of chevrons. It is also called Florentine canvas work.

Barham, Richard Harris (1788-1845), British humorist. In 1837, using the pseudonym Thomas Ingoldsby, he began a series of humorous tales that were first published in 1840 under the title *The Ingoldsby Legends*.

Barl, port city in ss Italy, capital of Bari and Apulia province. It was colonized by several peoples, such as the Romans, Saracens and the Normans. Industries: oil refining, building materials, textiles, food processing. Pop. (1975) 376,467.

Barisal, city in the Khulna Division, s Bangladesh, in the Ganges Delta on the w bank of the Barisal River, 118 km (73 miles) s of Dacca. It is an important port and has three colleges. Pop. 79,000.

Barisan, mountain range that extends along the w coast of Sumatra, Indonesia, length 1,600 km (1,000 miles). Many lakes have formed between the two parallel chains, the largest being Lake Toba. The highest peak is Mt Kerinci (3,805 m, 12,483 ft).

Barisano de Trani (2nd half of the 12th century), southern Italian sculptor, famous for his bronze doors in the cathedrals of Trani (c.1175), Ravello (1179), and Monreale (1185).

Barite, translucent, white or yellow mineral, barium sulphate (BaSO_4), found in sedimentary rocks and in ore veins in limestone. It occurs as orthorhombic system tabular crystals or masses. Radiating clusters of crystals are called "barite roses". Hardness 3-3.5, s.g. 4.5. See also pp 258-259, 259.

Baritone, name for the register of the human voice which falls between that of TENOR and BASS.

Barium, metallic element (Ba) of the alkaline-earth group, discovered in 1808 by Sir Humphry Davy. Chief sources are heavy spar (sulphate) and witherite (carbonate). Barium sulphate is swallowed to permit X-ray examination of the stomach and intestines because barium

atoms are opaque to X-rays. Properties at no. 56, at wt. 137.34, s.g. 3.5, m.p. 725°C (1,337°F); b.p. 1,640°C (2,984°F), most common isotope Ba^{137} (71.66%).

See also ALKALINE-EARTH ELEMENTS

Bark, outer protective covering of a woody plant stem. It is made up of several layers. As food-conducting cells die, they become the inner layer. The cork layer, waxy and waterproof, is the thickest and hardens into the tough, fissured outer covering. Spongy areas (lenticels) allow the stem to breathe. See also p.374.

Barka, Mehdi ben (1920-), Moroccan nationalist leader. He was president of the National Consultative Assembly in 1956-59. In 1959 he formed the National Union of Popular Forces. From 1960 he lived in self-imposed exile, mainly in Algeria, and launched attacks on the Moroccan government.

Bark beetle, or engraver beetle, small, brown to black beetle that tunnels through the inner bark and wood of trees. The tunnels of some species form characteristic patterns, resembling engravings.

Barker, Lady Mary Anne (1831-1911), New Zealand author. Her novels, *Station Life in New Zealand* and *Station Amusements in New Zealand*, describe 19th-century sheep farming life.

Barker, Sir Herbert Atkinson (1869-1950), British surgeon who became famous for his ability to treat orthopaedic disorders by means of manipulation, without the need for surgery.

Barking deer. See MUNTJAC.

Barkla, Charles Glover (1877-1944), British physicist who was awarded the 1917 Nobel Prize in physics for his discovery that elements have a characteristic X-ray spectrum, which enables them to be identified. He also formulated laws governing the scattering of X-rays and their transmission through solids.

Barkly, Sir Henry (1815-98), colonial administrator and governor of the Cape of Good Hope (1870-77). His initiative led to the solving of the Griqua-Natal dispute by Britain's annexation of Griqualand West in 1871.

Barkly Tableland, vast plateau region in N central and s Australia, extending from Northern Territory into Queensland. Beef cattle are grazed there on large cattle stations. Height 300 m (1,000 ft).

Bar Kokba, Simon (d.135), leader of the rebellion of the Jewish community against the Romans in JERUSALEM in 131-135. At first successful, he was finally slain in battle at Bethar.

Bark painting, art form practised by Australian Aborigines, particularly along the coast of Arnhem Land. A great variety of sacred and common subjects are painted on sheets of bark that have been stripped from trees and flattened and smoothed. Pigments are made with ochres and clay; sticks dipped in the paint are used as "brushes".

Barlach, Ernst (1870-1938), German sculptor, graphic artist, writer and dramatist. He was a major pioneer of the German expressionist movement. The compact angularity of his forms, as in the figure *Man in a Stock* (1918), conveys intense compassion. His writings include poems and plays (some of which he illustrated) and an autobiography.

Barley, cereal grass native to Asia and Ethiopia, cultivated perhaps since 5000 BC. Three cultivated species are *Hordeum distichum* commonly grown in Europe, *H. vulgare*, favoured in the USA, and *H. irregulare* or irregular barley, grown in Ethiopia. Barley is eaten by human beings and animals, and is also used in making malt beverages. Family Gramineae. See also pp 754, 676, 677, 700-701.

Barlow, Eddie (1940-), South African cricketer. A fine, robust batsman, medium bowler and expert slip-fielder, he played for South Africa, Transvaal, Eastern Province and Western Province before emigrating to England and joining Derbyshire in 1976.

Bar Mitzvah, Jewish ceremony in which a young male (traditionally aged 13 years and 1 day) is initiated into the religious community. At the ceremony he reads a

portion of the TORAH in a synagogue. The religious rite is followed by a social celebration. See also p.1135.

Barn, scientific unit of area used in nuclear physics for measuring the cross-sections of atomic nuclei, 1 barn = 10^{-28} cm^2 . This area is a measure of the probability that fission will occur when a neutron moves towards a heavy nucleus. It is usually different from the geometric area of the nucleus.

Barn (building). See p.658.

Barns, Victor (1911-), Hungarian table-tennis player who won 15 world championships, including five singles (1932-35) and seven Swaythling Cup gold medals. He played 82 times for Hungary and 56 times for England (he became naturalized in 1947).

Barnaba da Modena (fl.1362-83), Italian painter. He worked in Genoa and was popular there, in his attempt to combine Byzantine stylization with the freer techniques of Giotto's work.

Barnabas, Saint, Christian apostle of the first century, originally named Joseph. Barnabas accompanied PAUL (Saul) on two proselytizing missions to Cyprus and the European mainland. A rift developed between the two, after which Paul replaced Barnabas as head of the church in Antioch. Feast 11 June.

Barnaby Rudge (1841), CHARLES DICKENS' fifth novel. One of Dickens' earlier studies of a recurrent theme involving the interplay of public and private violence, it follows the lives of a wide variety of characters against the background of London's anti-popeery riots, led by Lord George Gordon in 1780.

Barnacle, CRUSTACEAN that lives mostly on rocks and floating timber. Some barnacles live on whales, turtles and fish, without being parasitic, although there are also parasitic species. The larvae swim freely until ready to become adults, when they settle permanently on their heads, their bodies become covered with calcareous plates. The adult uses its appendages to scoop food into its mouth. Two main types are those with stalks (goose barnacles) and those without (acorn barnacles). Subclass Cirripedia. See also p.334.

Barnard, Christian (1922-), South African surgeon. He was the first to perform a human heart transplant (3 Dec. 1967). In 1974 he was the first to implant a second heart in a patient and to link the circulations of the two hearts so that they worked together as one.

Barnard, Edward Emerson (1857-1923), US astronomer. He is chiefly known as an acute observer and pioneer in astronomical photography. He discovered comets, catalogued dark nebulae and made observations of BARNARD'S STAR.

Barnard Castle, town in County Durham, N England, on the River Tees. It is an ancient market town, with the ruins of a 12th-century castle and a fine European art collection in the Bowes Museum. Pop. (1971 est.) 5,200.

Barnard's star, red dwarf star in the constellation of Ophiuchus. It was discovered by the US astronomer Edward BARNARD in 1916, and is remarkable for having the greatest proper motion of any star yet observed. A companion body, perhaps an orbiting planet with a mass 1.5 times that of Jupiter, was detected near it in 1963. Characteristics: apparent mag. 9.5, absolute mag. 13.2, spectral type M5, distance 6 light-years. See also pp 978, 1053.

Barnardo, Thomas John (1845-1905), British philanthropist who founded the Dr Barnardo Homes for destitute children.

He was born in Ireland and in 1866 moved to London to study medicine. In 1867, while still a student, he founded the East End Mission for orphan children - the first of his famous homes. These spread rapidly through the UK and still flourish today. **Barnato, Barney** (1852-97), South African mining millionaire (real name Barnett Isaacs). Born in London, he went to Kimberley in 1873 and in 1889 he formed the Johannesburg Consolidated Investment Company. Possibly fears of what an inquiry into the Jameson Raid (1895) might reveal of his financial dealings led him to drown himself in 1897.

Barnaul, capital of Altai Krai, s central USSR, a port and railway junction on the River Ob'. It is an industrial and trading centre serving local farms and mining. It also has industrial and teachers' training colleges. Pop. 502,000.

Barnave, Antoine (1761-93), French politician, member of the ESTATES-GENERAL and NATIONAL ASSEMBLY (1789). He supported constitutional monarchy and was guillotined for treasonable correspondence with the king.

Barn dance, US paired dance in quadruple time. Originally called the Military Schottische, the present name was coined from the tune which frequently accompanied it, *Dancing in a Barn*. The dance involves hops and waltz steps, and is occasionally progressive.

Barnes, Ernest William (1874-1953), British mathematician and clergyman, a friend of Bertrand RUSSELL. He became Bishop of Birmingham (1924). Many of his mathematical articles concerned special functions.

Barnes, Sydney Francis (1873-1967), British cricketer, a medium-pace bowler of unrivalled consistency. He played most of his cricket in the Minor Counties and northern leagues and only 27 Tests took 189 wickets (average 26.43), including 17 for 59 against South Africa at the age of 41. He played as a league professional until 1946, as late as the 1938 season when he was 65, he took 126 wickets for an average of less than 7 runs each.

Barnes, Thomas (1785-1841), English journalist and editor of *The Times* newspaper. In 1809 he became dramatic critic on *The Times* and as its editor (1817-41) aimed to make the paper independent of any political party.

Barnet, Battle of (April 1471), battle of the Wars of the Roses, in which EDWARD IV defeated WARWICK "the King-maker" and thus prepared for the restoration of the Yorkist dynasty later in the year. See also p.1377.

Barn owl, generally nocturnal bird of prey that lives mainly in the Eastern hemisphere. The widely distributed common barn owl (*Tyto alba*) has a heart-shaped face and long legs. It lives in old buildings where its acute hearing enables it to locate rodents and other prey in almost total darkness. Family Tytonidae. See also owl.

Barnsley, city in South Yorkshire 19 km (12 miles) N of Sheffield. Its market day (Wednesday) dates from 1249 when it was established by Henry III, and it has many old buildings. Industries: coal-mining, engineering, textiles. Pop. (1971) 75,300.

Barnuevo, Pedro de Peralta (1663-1743), Peruvian poet and playwright, best known for his epic play *The Founding of Lima* (1732). He was also a mathematician, historian and astronomer. His intellectual activities caused him to be persecuted by the Inquisition.

Barnum, Phineas Taylor (1810-91), US showman. He established the American Museum in New York City in 1842, where he presented the dwarf TOM THUMB, a bearded lady and other "freaks". In 1850 he introduced Jenny Lind to the USA for a concert tour. In 1871 he opened his circus, billed as "The Greatest Show on Earth". He merged with rival James BAILEY in 1881 to form Barnum and Bailey's Circus.

Barocci, Federico (c.1526-1612), Italian MANNERIST painter, a precursor of the BAROQUE style and, after RAPHAEL, the most important painter in Urbino. His work is marked by emotional expression, as in his famous *Madonna del Popolo* (1579).

Baroda, city in Gujarat state in w India, on the fertile alluvial plain between the Mahi and Narmada rivers. Many of its palaces, gates and gardens were built by the Gaekwar princes in the 18th century. There is a state museum, gallery and university. Industries: cotton, textiles, chemicals. Pop. (1970 est.) 404,200.

Baroja y Nessi, Pio (1872-1956), Spanish novelist. He gained recognition for his bitter, humorous and pessimistic novels portraying down-and-out characters moving in a colourful but meaningless world. His works include *The Tree of Knowledge* (1911) and *Memoirs of a Man of Action*

Barometer

(1913-35)

Barometer, instrument for measuring atmospheric pressure. Mercury and aneroid barometers are the two basic types. They are used in WEATHER FORECASTING to predict probable local weather changes: a rising barometer (increasing pressure) presages fair weather; if pressure is falling, worse weather can be expected. In a barograph the needle of an aneroid barometer is replaced by a pen which traces variations in pressure on a revolving cylindrical chart. A barometer can also be employed in an ALTIMETER, which uses air pressure as a measure of altitude. See also MM pp 33, pp 399, 451, 600

Baron, in Britain, member of the lowest rank of the PEERAGE. Inheritance is usually confined to male heirs or to collateral male descendants. A baron is addressed as 'Lord' and his wife as 'Lady'.

Baronet, member of a British hereditary order of honour made up of commoners who rank below BARONS. BARONETS are designated 'Sir' or 'Lady' before the forename and 'Bart' or 'Bt' after the surname to distinguish them from KNIGHTS. See also PEBRAGE

Barons' Wars (1263-65), conflict between HENRY II of England and his barons, led by Simon de MONTFORT. Henry provoked war by breaking his pledge of 1258 to rule through a council of barons rather than foreign favourites. The barons defeated the king at LARVES in 1264 and summoned a "parliament" in 1265 to show the broad support for their actions. De Montfort was eventually defeated at Evesham in 1265. See also pp 1312-1313, 1342-1343

Baroque, term (perhaps derived from the Portuguese *barroca*, a mis-shapen pearl) applied to the style of art and architecture that succeeded MANNERISM and lasted from the end of the 16th century into the 18th century. Baroque was at its height in Rome under BERNINI, BORROMINI and PIETRO DE CORTONA (c.1630-80) and in S. Germany under Balthazar NEUMANN and RICHARD VON ERLACH (c.1700-50). The High Baroque at its best was a union of architecture, painting and sculpture in a blend of light, colour and movement calculated to overwhelm the spectator by a direct emotional appeal. Paintings contained visual illusions, sculpture exploited the effect of light on surface and contour. Architecture was created in series of geometrically controlled spaces (squares, circles, ovals and triangles) which enclosed, adjoined and superimposed each other to create the illusion of rhythmic movement. Buildings conforming to this design were heavily decorated with stucco ornament and free-standing sculpture. Baroque was closely linked to the COUNTER-REFORMATION and especially to the Jesuits, and therefore lasted longest in Catholic countries. Spanish and Portuguese missionaries carried the style to South America, where it was an important European influence until the late 19th century. Baroque became increasingly florid before it merged with the lighter style of ROCOCO. The AGE OF REASON eventually rejected both in favour of NEO-CLASSICISM. In music, the term Baroque is applied loosely to the period between MONTEVERDI and J. S. BACH. See also pp 1438-1440

Barotseland (Western Province), historical region in W. Zambia, central Africa. The capital is Mongu. The River Zambezi drains the province, which is primarily savanna grassland. It is a livestock-rearing and grain-growing region, with some teak forest. In 1911 it became a province of the British Protectorate of Northern Rhodesia, and was called Western Province after Zambian independence in 1964. Area 126,385sq km (48,798sq miles). Pop. (1972 est.) 448,000

Barque, also spelled bark, standard merchant ship on the N. Atlantic during the second half of the 19th century, characterized by two square-rigged masts and a third with fore-and-aft sails. Four and five-masted barques were also built. See also p 477

Barquentine, large commercial sailing ship which came into use at the beginning

of the 19th century. It had a single square-rigged mast and as many as three masts with fore-and-aft sails. See also SCHOONER

Barquisimeto, city in NW Venezuela, capital of Lara state, 274km (170 miles) WSW of Caracas on the Pan American Highway. Founded in 1552, it was rebuilt after an earthquake in 1812. A university was founded there in 1968. Industries: cement, sisal rope, sugar. Pop. (1970) 291,353

Barra, small rugged island in the Outer Hebrides, off NW Scotland, it is separated from South Uist by the Sound of Barra. The main occupations are fishing and weaving, and some people still live in crofts. The main settlement is Castlebay. Area 91sq km (35sq miles). Pop. 1,260

Barraçota, also called sneek, atun, or South African mackerel, commercial food fish found in tropical and temperate marine waters. A snake (deep-sea) mackerel, it has a laterally compressed body, elongated lower jaw and two dorsal fins. Length 1m (3.3ft); weight 4-10kg (8.8-22.0lb). Family Scombridae; species *Thyrsites atun*

Barraçuda, marine fish found in tropical Atlantic and Pacific waters. Known to attack man, it has a large mouth with razor-sharp teeth; its olive green body is elongated. Length: usually 1.2-1.8m (4-6ft); weight 1.4-22kg (3-50lb). Family Sphyrnidae, there are 20 species. See also p 57

Barraquilla, city and major port in N. Colombia, on the River Magdalena. It became a river port in the mid-19th century, and the river was deepened to take seagoing ships in 1935. Located in an agricultural region, it has two universities. Industries: textiles, food processing, chemicals, shipbuilding, glass. Pop. (1973) 661,920

Barraque, Jean (1928-73), French composer. He was a pupil of MESSIAEN, and one of the earliest composers of ELECTRONIC MUSIC. His best known work is his piano Sonata

Barraque, Paul François Jean Nicolas, Vicomte de (1755-1829), French revolutionary leader. He joined the JACOBIENS and was a member of the CONVENTION. He was a leader in the coup which brought down ROBERT PIERRE in July 1794 (which, in the Revolutionary Calendar, was 9 Thermidor). By turning over his troops to the command of NAPOLEON during a royalist uprising in Paris in 1795, he helped advance Napoleon's career. He was a member of the DIRECTOIRE (1795-99)

Barraud, Jean-Louis (1910-), French actor and director. He is best known for his roles as Hamlet in the André Gide translation (1946) and as the mume in the film *Children of Paradise* (1944). In 1946 he formed a repertory company and later directed (1959-68) the successful Théâtre de France. In 1940, he married the actress Madeline Renaud

Barrel jumping, sport in which an ice-skater jumps over a number of barrels. It is believed to have originated in Holland in the 17th century and now has a following in the USA

Barrel organ, mechanical musical instrument in which pins on a rotating drum open valves that let air from a wind-chest enter organ pipes to produce the sound. MOZART and HANDEL wrote compositions for it. It has been used in village churches and by street musicians. The name is sometimes incorrectly applied to a mechanical PIANO OF THE HERBY-GURDY type. See BOTTLE TREE

Barres, Auguste Maurice (1862-1923), French author and politician. A prolific writer, his interest lay in the cult of the self, as depicted in the trilogy of novels *Le Culte du Moi* (1888-91), and the concept of anti-German, French nationalism, as asserted in the treatise *Scène et Doctrines du Nationalisme. Leurs Figures* (1902)

Barrett, David (1930-), Canadian politician, Prime Minister of British Columbia (1972-75). He was a social worker and entered the provincial legislature in 1960 as a member of the New Democratic Party. He was the first non-Conservative to be elected Prime

Minister, but his policies were voted out in 1975

Barrie, Sir James Matthew, (1860-1937), Scottish dramatist and novelist. Despite a degree of sentimentality, his works generally have a clever twist in their plots. J.M. Barrie re-wrote his novel *The Little Minister* (1891) into a play (1897). His other plays include *The Admirable Crichton* (1902), *What Every Woman Knows* (1908) and *Peter Pan* (1904), which remains popular to this day

Barrier island, any long, low island of sand parallel to a shore and permanently separated from it. It may be composed of dunes, swamps and areas of vegetation. See also pp 230-231

Barrier reef, long narrow coral reef lying some distance from and roughly parallel to the shore, but separated from it by a deep lagoon. The GREAT BARRIER REEF is the most famous. See also p 231

Barrington, Joseph (1940-), British squash player. A left-hander, he dominated squash in the late 1960s with a game based on tenacity and supreme physical fitness. He turned professional in 1969

Barrington, Ken (1930-1981), British cricketer for England and Surrey. A dour but nonetheless prolific batsman, he played in 82 Test matches between 1955 and 1968 (6,806 runs, average 58.67), scoring 20 centuries. He became an England selector in 1975

Barrios, Eduardo (1884-1963), Chilean novelist. His novels deal with abnormal psychological types. In *Los hombres del hombre* (1950) he divided the main character into several different men in order to explore the fragmented personality

Barriker, name given in some countries to lawyers entitled to practise as advocates in the higher courts. In Britain the right to "call to the bar" is vested in the four Inns of Court

Barrow, Errol Walton (1920-), Prime Minister of Barbados from 1966 to 1976. Co-founder of the Democratic Labour Party and the island's premier (1961-66), he became Prime Minister when the country gained independence

Barrow, Isaac (1630-77), English philosopher. He resigned his position as professor of mathematics at Cambridge in favour of his pupil, Isaac Newton. He became vice-chancellor of Cambridge in 1675. He wrote *Optical Lectures*, and his *Sermons* were popular

Barrowclough, Sir Harold (1894-), New Zealand soldier and lawyer. He fought in WWI and was New Zealand's Pacific commander in WWII. He was Chief Justice of New Zealand from 1953 to 1966

Barrow-in-Furness, town in SW Cumbria, on the coast 84km (52 miles) N of Liverpool. It has several ironworks, but the local ore is now nearly exhausted. Industries: iron-mining, iron and steel, paper, engineering, shipbuilding. Pop. 75,300

Barry, Sir Charles (1795-1860), British architect. In collaboration with PUGIN, he designed the Houses of Parliament at Westminster, in the Gothic style which was a term of the commission. Barry was influenced by the Italian Renaissance, as in his Travellers' Club and the Reform Club in London. See also p 1600

Barry, James (1741-1806), Irish painter of heroic and historical pictures. He went to London (1764), and although largely self-taught was elected an RA (1773)

Barry, John (1913-), British composer and musician. A jazz arranger and band leader, he gained fame with imaginative scores for James Bond films - eg *From Russia With Love* (1963), *Goldfinger* (1964) - and many others such as *King Rat* (1965), *Born Free* (1966) and *Midnight Cowboy* (1969)

Barrymore, famous US family of actors. Maurice (1847-1905) made his stage debut in London in 1872. In 1875 he went to the USA where he married the actress Georgiana Drew. They had three children: Lionel (1878-1954), Ethel (1879-1959) and John (1882-1942). Lionel, a fine character actor, made many films, among them *Dinner at Eight* (1933) and *A Free Soul* (1931), for which he won an Academy Award. Ethel was best

known for her stage performances in *A Doll's House* (1905) and *The Corn is Green* (1942). She won an Academy Award for her part in the film *None but the Lonely Heart* (1944). John's good looks quickly won him a huge following. Among his many films were *Beau Brummel* (1924), *Don Juan* (1926) and *Grand Hotel* (1932)

Barstow, Stanley (1938-), British novelist. His first novel, *A Kind of Love*, was published in 1960. He wrote the script for *South Riding*, which won the BAFTA award for the best television serial in 1974. In 1976 he published *Right True End*

Bart, Lionel (1931-), British songwriter. He began his career writing songs for Tommy Steele and later wrote lyrics and music for musicals including *Fings Ain't What They Used To Be* (1959) *Oliver!* (1960) and *Maggie May* (1964)

Bartered Bride, The (1866), three-act comic opera by Bedřich Smetana, Czech libretto by Karel Sabina. First produced as an opera with dialogue, it was later enlarged. Villagers Hans and Wenzel (tenors) and Marie (soprano) contend with their families and the marriage broker Kezal (bass). It was Bohemia's first important opera and established Smetana as a "nationalist" composer. See also pp 1583, 1598

Barth, Heinrich (1821-65), German explorer and geographer. In 1845 he led a two-year expedition which explored Italy, Tunis, Barea, Egypt, Palestine and Greece. In 1851-56 he accompanied a British sponsored expedition through central Africa. See also pp 1620-1622, 1622

Barth, John (1930-), US author. A professor of English, he has written several complex and imaginative novels. They include *The End of the Road* (1961), *The Sorcerer's Factor* (1961), *On the Boat* (1966) and three novellas entitled *Chimera* (1972), for which Barth won the 1973 US National Book Award in fiction

Barth, Karl (1886-1968), Swiss theologian. He was a leading thinker of 20th-century PROTESTANTISM, he tried to lead theology back to principles of the REFORMATION and to emphasize the revelation of God through Jesus Christ. His school has been called dialectical theology or theology of the word. In 1935 he was suspended from his position at the University of Bonn for his anti-Nazi stance and so he returned to Switzerland. His works include *Epistle to the Romans* (1919) and *Church Dogmatics*

Bartholdi, Frédéric Auguste (1834-1904), French sculptor, best known for his *Liberty Enlightening the World* (Statue of Liberty) in New York harbour, dedicated in 1886. His colossal *Lion of Belfort* at Belfort, France, is considered one of his best works

Bartholin, Casper (1585-1629), Danish physician who advanced the study of human anatomy, professor of medicine at Copenhagen University. His best-known work was *Anatomicae Institutiones Corporis Humani* (1611). His son Thomas (1616-80) and grandson Casper (1655-1738) were also well-known physicians

Bartholomew, Saint, according to the New Testament, one of the 12 apostles of Christ. He is mentioned in the gospels of Matthew, Mark and Luke, and is probably identical with the Nathanael of St John's Gospel. Feast: 24 Aug

Bartholomew's Day Massacre, Saint (24 Aug. 1572), attempt by the leaders of Catholic France to extinguish French Protestantism. More than 3,000 Huguenots were killed and a milder persecution followed in the provinces. It contributed to the resumption of civil war. See also pp 1406-1407, 1406

Bartlett, Sir Frederic Charles (1886-1969), British experimental psychologist who made important contributions to the study of memory. His major works include *Remembering: A Study in Experimental and Social Psychology* (1932) and *Thinking: An Experimental and Social Study* (1958)

Bartlett, Robert Abram (1875-1946), US Arctic explorer. Between 1897-1909 he accompanied Robert PEARY on his historic

polar expeditions. Later he commanded his own expeditions to the Arctic, including voyages to Greenland, Alaska, Siberia and Labrador.

Bartók, Béla (1881-1945), Hungarian composer. With Zoltán Kodály, Bartók amassed a definitive collection of Hungarian folk music that became the basis of many of his compositions. His orchestral works include *Music for Strings, Percussion, and Celesta* (1936), *Violin Concerto No 2* (1938) and *Concerto for Orchestra* (1943), and he wrote one opera *Bluebeard's Castle*. His six string quartets have been described as the finest since Beethoven. He was also a pianist and composed three piano concertos and a six-volume set of piano pieces, *Mikrokosmos*. See also pp 1599, 1754-1755.

Barlotomaeo della Porta, Fra (1475-1517), Florentine RENAISSANCE painter and draughtsman, who collaborated (c. 1509-12) with ALBERTINELLI. He was deeply influenced by RAPHAEL. His finest work includes *Vision of St Bernard* (1504-07).

Barlow, Clara (1821-1912), US humanitarian, founder of the American National Red Cross in 1882. She was responsible for the "American amendment" at the 1884 Geneva Convention which enabled the Red Cross to be active in peacetime emergencies, such as natural disasters.

Barlow, Sir Derek Harold Richard (1918-), British chemist who did innovative research into conformational analysis - the study of the geometric structure of complex molecules. He was professor of organic chemistry at Birkbeck College, London (1953-55), professor of chemistry at Glasgow University (1955-57) and later professor of organic chemistry at Imperial College, London. He shared the 1969 Nobel Prize in chemistry with Odd Hassel of Norway.

Barlow, Sir Edmund (1849-1920), first Prime Minister of Australia (1901-03). Born in Sydney, he qualified as a barrister and became a member of the New South Wales parliament in 1879. Disliking party tensions, he soon resigned as prime minister, and served as a senior High Court judge until his death. See also HC2 pp 1604-1605.

Barlow, Otis. See BEARDS, CHARLES WILLIAM.

Baruch, Book of, biblical book included in the APOCRYPHA. It consists of an introduction, believed to have been written by Baruch (fl. 600 BC), the disciple of JEREMIAH, a liturgical confession, a sermon and a set of canticles.

Baryon, any of the heavier sub-atomic elementary particles, such as protons and neutrons. Their corresponding anti-particles are called antibaryons. The difference between the number of baryons and antibaryons in a system is called the baryon number. See also LEPTON.

Baryshnikov, Mikhail (1948-), ballet dancer, b. in the USSR. He was a member of the Kirov Ballet in Leningrad from 1969 to 1974, when he defected from the USSR. He has toured Australia and various European countries and performed with the AMERICAN BALLET THEATRE.

Basalt, hard, fine-grained igneous rock, which may be intrusive or extrusive. Its colour can be dark green, brown, dark grey or black. If it originally solidified quickly it can have a glassy appearance. There are many types of basalt with different proportions of elements. It may be compact or vesicular (porous) because of gas bubbles contained in the lava while it was cooling. If the vesicles are subsequently filled with secondary minerals, eg quartz or calcite, it is called amygdaloidal basalt. Basalts are the main rocks in the world's major lava flows, eg the Deccan trap in India. See also pp 239, 208, 209, 262.

Basalt ware, fine-grained unglazed stoneware, named after volcanic rock basalt. It was first manufactured (1768) by Josiah Wedgwood, who used it to imitate Classical originals, such as Greek vases, antique busts and jewellery.

Base, chemical compound that accepts protons, ie it has available electrons. Bases react with acids to form salts and water. Most are oxides or hydroxides of

metals, others are compounds, such as ammonia and the amines, that yield hydroxide ions in water. Soluble bases (called ALKALIS) colour litmus blue. Strong bases are fully dissociated into ions, weak bases are partially dissociated in solution. See also ACID.

Base, in geometry, the side opposite the vertex from which an altitude is drawn in a triangle. The area of a triangle is one-half the product of the base and the height. See also pp 780, 796.

Baseball, sport popular in the USA (where it is the national game), Japan, the Caribbean and Latin America and gaining popularity in Australia. It is played by two opposing teams of nine players each - a pitcher, catcher, four infielders and three outfielders. A game is divided into nine innings; each team having three outs in an innings and runs being scored each time a player completes the circuit of four bases. Games tied at the end of nine innings are played until there is a winner. Baseball evolved from the old English game of rounders, played in the 19th century. The basic rules of the game were compiled by Alexander J. Cartwright in 1845. In the USA two leagues - the American and National - play a series of post-season games whereby the winners then compete in the World Series to decide the champion side.

Basel (Bâle, or Basle), city and river port in NW Switzerland, on the River Rhine; capital of Basel-Stadt canton. It joined the Swiss Confederation in 1501. It is an economic, financial and historically important intellectual centre. There is a cathedral, where BASILIUS is buried, a 15th-century university and a 16th-century town hall. Industries: publishing, silk, chemicals, food processing, metal goods. Pop. 212,860.

Basenji, ancient, deer-like, barkless hunting dog (hound group) native to central Africa. It has a flat head with rounded muzzle and wrinkled forehead. Standard size, 43cm (17in) at the shoulder; weight, 11kg (24lb).

Baschkir (Bashkirskaja Autononomnaja), region in the S Urals, a European USSR. A mountainous, forested area, it occupies the basins of the Belaya River and its tributary the Ufa. Its people, the Bashkirs, are mostly farmers or herdsmen and are Muslims. The capital is Ufa. There are valuable mineral deposits, including oil. Area: 141,007 sq km (54,443 sq miles). Pop. (1970) 3,819,000.

Baschkirtsev, Marya Konstantinovna (1860-84), Russian painter and author, a friend of Guy de Maupassant. Her works include the pastel *Meeting* (1884) and her best-known writing was *Journal* (1887).

Basidiomycetes, class of FUNGI, including the jelly fungus, the bird's nest fungus, the ear fungus and mushrooms. They reproduce by sexual spores.

Basie, Count (1904-), US jazz bandleader, pianist and composer. He formed his own band in 1935, became a leading figure in the "swing" era, and has remained a popular performer. Many of his compositions, including *One O'Clock Jump*, have entered the jazz repertoire. **Basile**, name of two Byzantine emperors, Basil I (r. 867-86) and Basil II (r. 960-1025). Basil I was the founder of the Macedonian dynasty. He was befriended by Emperor MICHAEL III, who assisted him in his rise to power. After Michael designated him co-emperor, Basil had his former patron murdered and assumed sole power in BYZANTIUM. Basil converted the Bulgars to Orthodox Christianity rather than Roman Catholicism. Basil II annexed Bulgaria in 1018 and later expanded the BYZANTINE EMPIRE by extending its eastern frontier to the Caucasus. See also pp 1276-1277, 1281.

Basil, common name for a tropical plant of the MINT family (Labiatae). It has white or purple flowers, and its dried leaves are used for flavouring. Species *Ocimum basilicum*. See also pp 687, 708.

Basilar membrane, part of the COCHLEA, a structure in the inner EAR. See p. 138.

Basildon, urban district in Essex, ENGLAND, 40km (25 miles) ENE of London. The S part is a planned new town with fac-

ilities nearby. Industries: milk bottling, printing, clothing, light engineering, chemicals. Pop. (1973) 135,720.

Basilica, in Roman architecture, a public hall used as a market or court-room and with the similar rectangular plan as a Greek temple. In Early Christian and later church architecture, it is a building consisting of a nave and aisles, with windows above the level of the aisle roofs.

Basilisk, semi-aquatic LIZARD found in trees near streams of tropical America. It has a compressed greenish body, whip-like tail, a crest along its back and an inflatable pouch on its head. It can run over water for short distances on its hind-legs, and eats plants and insects. Length up to 61cm (2ft). Family Iguanidae, genus *Basiliscus*. See also p. 66.

Basil the Great, Saint (c. 330-79), Bishop of Caesarea and one of the three Cappadocian Fathers. He is recognized in both East and West as a Doctor of the Church. He is principally known for establishing the orthodoxy of the NICENE CREED over ARIANISM in Asia Minor and for laying down rules for monastic orders. Feast 2 Jan. in the West; 1 Jan. in the East.

Basingstoke, town in N Hampshire, 74km (46 miles) WSW of London. For centuries a market town, it now has industries producing farm machinery, leather goods, textiles and clothing. Pop. (1971) 52,500.

Baskerville, John (1706-75), British printer and type designer. In 1750 he began experimenting with typefaces and in 1757 set up his own printing house. In 1758 he became printer to Cambridge University and produced many excellent books including editions of the Bible (1763) and Latin authors (1772-73). His typefaces remain in common use.

Basketball, ball game, originating in the USA, but now played throughout the world. It is played by two teams of five people, usually indoors on a court up to 28.7m (94ft) long and 15.2m (50ft) wide. At each end of the court is a backboard to which a bottomless netting basket is attached at right angles 3m (10ft) above the floor. The object of the game is to get the ball to drop down through the opposing team's basket, thus scoring a goal. Each field goal (thrown during normal play) counts two points and a successful free throw (unimpeded shot taken as a result of a penalty) counts as one point. The game was devised in 1891 by Dr James Naismith, a US physical education instructor. It has been part of the Olympic Games since 1936.

Baskis, Leonard (1922-), US sculptor and printmaker. His massive figures are sculpted in limestone, bronze and wood. His well-known works include *Blake* (1955), *Barlach Dead* (1959) and *Seated Man With Owl* (1959).

Basle. See BASEL.

Basov, Nikolai Gennadiyevich (1922-), Soviet physicist who did pioneer work on the development of MASERS, which led in turn to LASERS. For this contribution to science Basov and his co-worker Alexandr PRIGOROV shared the 1964 Nobel Prize in physics with the US physicist CHARLES TOWNES (who had made similar discoveries independently).

Basques, indigenous people of N Spain and SW France, numbering about 3,900,000. Their language is not related to any other European tongue. Throughout history they have tenaciously maintained their cultural identity. The kingdom of NAVARRRE, which existed for 350 years, was the home of most of the Basques, after its dissolution in 1512 most of the Spanish Basques enjoyed a degree of political autonomy. This autonomy was taken away in 1873, and Basque unrest followed. In 1977 the Spanish government promised renewed autonomy to the Basques.

Basra (al-Basrah), city and only port in Iraq, on the River Shatt al-Arab, capital of Basra province. After harbour renovations, the building of a railway link to Baghdad and the discovery of large oil-fields nearby in the early 20th century, it has thrived as a commercial and industrial centre. Industries include oil refining, flour milling, wool. Pop. (1965) 313,327.

Basilisk, where the focus is on the skill of the pitcher against the skill of the batter.

Basel, Rhine port and major industrial and commercial centre of NW Switzerland.

Basketball gets its name from its resemblance to the legendary monster basilisk or cockatrice.

Basketball was invented by James A. Naismith in 1891 as an indoor winter team sport.

Bass, George

Bass, name of several sea and freshwater fish caught by fishermen around the world

Giorgio Bassani, the Italian novelist who wrote *The Garden of the Finzi-Continis*

Jacopo Bassano, whose genuine works are rare, this is his *Supper at Emmaus*

Bassett hounds were bred originally in the 1700s by the Abbots of St Hubert in France

Bass, George (c.1771–c.1803), British explorer. With Matthew FLINDERS he explored parts of the coast near Sydney, Australia, that were as yet unmapped, and in 1798 they circumnavigated Tasmania. The dividing strait they found is now named **BASS STRAIT**. In 1803 Bass disappeared while on a voyage to South America. See also pp.1602, 1603, 1603

Bass, Sam (1851–78), US bandit. He led a band of bank and train robbers in Texas, but had little success until 1877 when his gang stole \$60,000 in gold from a Union Pacific train at Big Springs. One of his men betrayed him to the Texas Rangers, and he was killed at Round Rock in a shootout with the Rangers.

Bass, term denoting low or deep pitch, used of the lowest-pitched part of a composition, or the lowest-pitched member of a family of instruments, and of a male singing voice that descends to the F below the bass stave.

Bass, any of several bony fishes, both freshwater and marine, and not all closely related. They include the white, black, striped, rock and calico basses. See also pp.742, 744, 745

Bassani, Giorgio (1916–), Italian novelist. He examined the life of Ferrara's Jews under **FASCISM** in the collection of short stories *A Prospect of Ferrara* (1955) and the novel *The Garden of the Finzi-Continis* (1962). His other works include *The Gold-Rimmed Spectacles* (1958) and a collection of poetry, *L'alba al verno* (1942–50).

Bassano, Jacopo (c.1517–92), Venetian painter of the late **RENAISSANCE**, the most talented of a family of five painters. After 1540 he was heavily influenced by the Florentine and Roman **MANNERISTS**. His portraits and religious paintings are noted for the realism of their landscape settings. His works include *Flight into Egypt* (1536) and *Adoration of the Shepherds* (c.1540).

Bass drum. See **ORFUM**

Bassein, city and river port in SW Burma, on the Irrawaddy Delta, approx. 145km (90 miles) W of Rangoon; it is the capital of Bassein district and the Irrawaddy division. Captured by the Japanese in 1942, it was retaken by Allied forces in 1945. Industries: rice mills, machine shops and fancy goods. Pop. 175,000

Basse-Terre, city and port in the French West Indies; it is the capital of Guadeloupe département. Founded by the French in 1643, it is an important trade centre serving the surrounding agricultural region. Pop. 16,000

Basseterre, town in the West Indies, on St Kitts island in the Leeward Islands group, capital of the British Associated State of St Kitts-Nevis. Founded in 1627, it is an important commercial centre, with a sugar-refining industry. Pop. 14,000

Basset horn, musical instrument resembling a bass CLARINET in appearance but without the horizontal mouthpiece. MOZART wrote chamber music for the instrument and Richard Strauss employed it in some of his operas. The basset horn is usually replaced in modern performances by the alto clarinet.

Basset hound, short-legged hunting dog (a type of **HOUND**) originally bred in France to flush out game such as rabbits and pheasants from thick ground cover. After the **bloodhound**, it has the most highly developed sense of smell among dogs. Bassets have long bodies and long floppy ears which, when the dog is following a scent, touch the ground. The short coat is generally tan and white. Standard size: 30–38cm (12–15in) at the shoulder, weight: 11.3–22.7kg (25–50lb).

Bassoon, bass WOODWIND instrument with a range of three octaves, corresponding to that of the **CELLO**. It has a double-reed mouthpiece and a conical bore, the tube bending back on itself to reduce the instrument's length. Bassoons are used in symphonic and chamber music.

Bass Rock, small island in the Firth of Forth, Scotland, the lava plug of an extinct volcano. It provides a nesting ground for many kinds of sea-birds. St Baldred lived there until his death in 756.

Bass Strait, channel between Tasmania and Victoria, SE Australia. In 1798 Mat-

thew FLINDERS and George BASS discovered the Strait, thus proving that Tasmania was not part of the Australian continent. It has natural gas and oil deposits and rich fishing grounds. Width, 129–241km (80–150 miles).

Bast, also **Bastet** and **Pasht**, ancient Egyptian goddess of the city of Bubastis, depicted as a lion-headed woman crowned with the solar disc and sacred asp, or as a cat-headed goddess with the sistrum, or ritual rattle, in the latter form she is **Pasht**, the personification of life and fecundity. Two festivals were held in her honour, one at Bubastis and the second and lesser at Memphis.

Bast, type of vegetable fibre or matting made from the inner bark (phloem) of plants. Examples include **JUTE**, **HEMP** and **FLAX**. See also p.712

Bastard feudalism. See **FEUDAL SYSTEM**

Bastia, city in NE Corsica, France, on the Tyrrhenian Sea, 35km (22 miles) S of Cape Corse. Founded in the 14th century by the Genoese, it was the Corsican capital until 1791 and is still the chief commercial city. It has a citadel built in the 16th–17th centuries and many old buildings. Industries: tourism, food processing, timber. Pop. (1968) 49,375

Bastien-Lepage, Jules (1848–84), French painter who produced mainly peasant scenes, although his best-known work is probably *Jeanne d'Arc*.

Bastille, 14th-century fort and prison in Paris. Political prisoners were often incarcerated there and it became a symbol of royal oppression in the 18th century. On 14 July 1789 a Parisian mob stormed it, captured the ammunition store and released its prisoners (only seven, none of whom was political). Its governor was killed, its troops surrendered and the fort was pulled down. The incident marked the beginning of the **FRENCH REVOLUTION** and its anniversary (14 July) is celebrated as the major holiday in France. See also pp. 550, 551

Bastotland. See **LESOTHO**

Bat, only **MAMMAL** that has controlled flight (although a few others can glide). Bats are nocturnal and found in all tropical and temperate regions. Most are brown, grey or black. A bat's wing is formed by a sheet of skin stretched over a frame of greatly elongated "arm" and "hand" bones. Bats are able to navigate in complete darkness by means of a kind of **SONAR**, which uses echoes of the bat's own supersonic squeaks to locate obstacles and prey. Many bats live largely on insects, some are carnivorous, some drink blood, some live on nectar and pollen and one group – the flying foxes – subsists on fruit. Most are small, although they range in wingspan from 25 to as much as 147cm (10–58in). The 178 genera of bats make up the order **Chiroptera**. See also pp.93, 304, 309, 326

Batana, province of the Philippines, on the peninsula of Luzon Island that extends S from the W central coast, shielding Manila Bay from the South China Sea, the capital is Balangos. Densely forested on the W side, the population is concentrated in the E. There was heavy fighting there during **WWII**. Products: rice, sugar cane. Area, 1,373sq km (530sq miles). Pop. (1970) 214,100.

Batak, people (five tribes) and language of Sumatra, Indonesia, centred around Lake Toba, part of the Malay group of peoples and languages. They have a Christianized, patrilineal, agricultural society and grow mainly rice and maize. The language has a very simple phonetic structure.

Batambang (Baidāmbāng), second-largest town in Cambodia and the capital of Batambang province, W Cambodia. It was ceded to Thailand in 1809, became part of French Indo-China in 1907, and was returned to Cambodia in 1946. It is a market centre in a major rice-producing area. Pop. 39,000

Batangas, province of the Philippines, on the SW tip of Luzon Island, the capital is Batangas. Mountainous and largely forested, it contains Lake Taal, 243sq km (94sq miles) in area, and a nearby volcano that erupted in 1965 causing many deaths.

Products: rice, cocoa, coffee, timber. Area: 3,165sq km (1,222sq miles). Pop. (1970) 926,308

Batanes Islands (Batanes), island group between Luzon Island, Philippines, and Formosa, it is the northernmost province of the Philippines. The main islands are Itbayat, Sabtang and Batan, which has the capital, Basco. Industries: corn, rice, coal-mining. Area: 205sq km (80sq miles). Pop. 11,000

Batavi (Batavians), ancient Germanic tribe that settled in the Rhine-Meuse delta in the 1st century BC. Famous as warriors, they served in the Roman army. In about AD 70 **Claudius Civilis** led them in an unsuccessful revolt against Roman rule. In the 4th century they were displaced by the **Saxan Franks**.

Batavia. See **DIAKARTA**

Batavian Republic, name of The Netherlands when it was reorganized and occupied by French forces from 1795 to 1806.

Bates, Alan (1934–), British actor. He has won acclaim for his sensitive performances on stage and in films. His main films include *The Caretaker* (1963), *The Fixer* (1968), *Women in Love* (1970) and *The Go-Between* (1971).

Bates, Daisy (c.1860–1951), British welfare worker who spent 35 years of her life among the Australian **ABORIGINES**. She wrote *The Passing of the Aborigines* (1938).

Bates, Henry Walter (1825–92), British naturalist. His work on the natural selection in animal **MIMICRY** lent support to Charles Darwin's theory of evolution. Bates collected 14,712 unknown species of insects on a trip to the Amazon (1844–59) and recounted his experiences in *The Naturalist on the River Amazon* (1863). See also **NATURAL SELECTION**

Bates, Herbert Ernest (1905–74), British novelist and short-story writer, notable for his descriptions of England and its countryside. His novels include *Far Stood the Wind from France* (1944), *The Jacaranda Tree* (1949), *The Darling Buds of May* (1958) and *Oh! To Be in England* (1963).

Bateon, William (1861–1926), British biologist. He founded and named the science of **GENETICS**. Bateson translated much of Gregor MENDEL's pioneering work on inheritance in plants, so bringing it recognition. By his own experiments he also extended Mendel's theories to animals, which provided a foundation for the modern understanding of heredity. See also pp.178, 179, 186–189

Bath, city in Avon, SW England, situated on the River Avon, 19km (12 miles) SE of Bristol. Hot springs were discovered there by the Romans in the 1st century AD and have been used ever since to treat rheumatism, arthritis and gout. In the 18th century the city became a fashionable resort. Many fine Georgian streets remain from the city's expansion at that time. Each June a festival of music and drama is held. Industries: printing, electrical engineering and clothing. Pop. (1970 est.) 84,800

Bath, Knights of the, second highest order of knighthood in Britain. Founded by Henry IV in 1399, it fell into disuse but was revived by George I in 1725. The sovereign confers the title on members of the armed forces, scientists, artists, scholars and other distinguished citizens. Women were first admitted to the order in 1971. See also **GARTER, ORDER OF THE**

Batholith, huge mass of igneous rock at the earth's surface that has an exposed surface of more than 104sq km (40sq miles). It may have originated as an intrusive igneous structure that was gradually eroded and which became surface material. See also pp.208, 209

Bathory, noble Hungarian family. Its most notable member was Stephen, King of Poland (1575–86). Stephen's brother Christoph succeeded him as Prince of Transylvania (1575–81). Christoph's son Sigismund (1572–1613), Prince of Transylvania from 1581, abdicated in favour of Emperor Rudolf in 1598 and later tried unsuccessfully to regain his throne. Stephen's son, Gabriel, was ousted from the throne and murdered in 1613.

Bass, George (c.1771–c.1803), British explorer. With Matthew FLINDERS he explored parts of the coast near Sydney, Australia, that were as yet unmapped, and in 1798 they circumnavigated Tasmania. The dividing strait they found is now named BASS STRAIT. In 1803 Bass disappeared while on a voyage to South America. See also pp.1602–1603,1603.

Bass, Sam (1851–78), US bandit. He led a band of bank and train robbers in Texas, but had little success until 1877 when his gang stole \$60,000 in gold from a Union Pacific train at Big Springs. One of his men betrayed him to the Texas Rangers, and he was killed at Round Rock in a shootout with the Rangers.

Bass, term denoting low or deep pitch, used of the lowest-pitched part of a composition, or the lowest-pitched member of a family of instruments, and of a male singing voice that descends to the F below the bass staff.

Bass, any of several bony fishes, both freshwater and marine, and not all closely related. They include the white, black, striped, rock and calico basses. See also pp.742,744,745.

Bassani, Giorgio (1916–), Italian novelist. He examined the life of Ferrara's Jews under FASCISM in the collection of short stories *A Prospect of Ferrara* (1955) and the novel *The Garden of the Finzi-Continis* (1962). His other works include *The Gold-Rimmed Spectacles* (1958) and a collection of poetry, *L'alba al vein* (1942–50).

Bassano, Jacopo (c.1517–92), Venetian painter of the late RENAISSANCE, the most talented of a family of five painters. After 1540 he was heavily influenced by the Florentine and Roman MANNERISTS. His portraits and religious paintings are noted for the realism of their landscape settings. His works include *Flight into Egypt* (1536) and *Adoration of the Shepherds* (c.1540).

Bass drum. See **DRUM**.

Basmala, city and river port in SW Burma, on the Irrawaddy Delta, approx. 145km (90 miles) W of Rangoon. It is the capital of Bassein district and the Irrawaddy division. Captured by the Japanese in 1942, it was retaken by Allied forces in 1945. Industries: rice mills, machine shops and fancy goods. Pop. 175,000.

Basse-terre, city and port in the French West Indies; it is the capital of Guadeloupe département. Founded by the French in 1643, it is an important trade centre serving the surrounding agricultural region. Pop. 16,000.

Basseterre, town in the West Indies, on St Kitts island in the Leeward Islands group, capital of the British Associated State of St Kitts-Nevis. Founded in 1627, it is an important commercial centre, with a sugar-refining industry. Pop. 14,000.

Basset horn, musical instrument resembling a bass CLARINET in appearance but without the horizontal mouthpiece. MOZART wrote chamber music for the instrument and Richard Strauss employed it in some of his operas. The basset horn is usually replaced in modern performances by the alto clarinet.

Basset hound, short-legged hunting dog (a type of HOUND) originally bred in France to flush out game such as rabbits and pheasants from thick ground cover. After the bloodhound, it has the most highly developed sense of smell among dogs. Bassets have long bodies and long floppy ears which, when the dog is following a scent, touch the ground. The short coat is generally tan and white. Standard size: 30–38cm (12–15in) at the shoulder, weight 11.3–22.7kg (25–50lb).

Bassoon, bass woodwind instrument with a range of three octaves, corresponding to that of the CELLO. It has a double reed mouthpiece and a conical bore, the tube bending back on itself to reduce the instrument's length. Bassoons are used in symphonic and chamber music.

Bass Rock, small island in the Firth of Forth, Scotland, the lava plug of an extinct volcano. It provides a nesting ground for many kinds of sea-birds. St Baldred lived there until his death in 756.

Bass Strait, channel between Tasmania and Victoria, SE Australia. In 1798 Mat-

thew FLINDERS and George BASS discovered the Strait, thus proving that Tasmania was not part of the Australian continent. It has natural gas and oil deposits and rich fishing grounds. Width: 129–241km (80–150 miles).

Bast, also Bastet and Pasht, ancient Egyptian goddess of the city of Bubastis, depicted as a lion-headed woman crowned with the solar disc and sacred asp, or as a cat-headed goddess with the sistrum, or ritual rattle, in the latter form she is Pasht, the personification of life and fecundity. Two festivals were held in her honour, one at Bubastis and the second and lesser at Memphis.

Bast, type of vegetable fibre or matting made from the inner bark (phloem) of plants. Examples include JUTE, HEMP and FLAX. See also p.712.

Bastard feudalism. See **FEUDAL SYSTEM**.

Bastia, city in NE Corsica, France, on the Tyrrhenian Sea, 35km (22 miles) S of Cape Corse. Founded in the 14th century by the Genoese, it was the Corsican capital until 1791 and is still the chief commercial city. It has a citadel built in the 16th–17th centuries and many old buildings. Industries: tourism, food processing. Pop. (1968) 49,375.

Bastien-Lepage, Jules (1848–84), French painter who produced mainly peasant scenes, although his best-known work is probably *Jeanne d'Arc*.

Bastille, 14th-century fort and prison in Paris. Political prisoners were often incarcerated there and it became a symbol of royal oppression in the 18th century. On 14 July 1789 a Parisian mob stormed it, captured the ammunition store and released its prisoners (only seven, none of whom was political). Its governor was killed, its troops surrendered and the fort was pulled down. The incident marked the beginning of the FRENCH REVOLUTION and its anniversary (14 July) is celebrated as the major holiday in France. See also pp.1550,1551.

Basutoland. See **LESOTHO**.

Bat, only MAMMAL that has controlled flight (although a few others can glide). Bats are nocturnal and found in all tropical and temperate regions. Most are brown, grey or black. A bat's wing is formed by a sheet of skin stretched over a frame of greatly elongated "arm" and "hand" bones. Batana, province of the Philippines, on the peninsula of Luzon Island that extends S from the W central coast, shielding Manila Bay from the South China Sea, the capital is Balangos. Densely forested on the W side, the population is concentrated in the S. There was heavy fighting there during WWII. Products: rice, sugar cane. Area: 1,373sq km (530sq miles). Pop. (1970) 214,100.

Batak, people (five tribes) and language of Sumatra, Indonesia, centred around Lake Toba, part of the Malay group of peoples and languages. They have a Christianized, patrilineal, agricultural society and grow mainly rice and maize. The language has a very simple phonetic structure.

Batambang (Bătdămbăng), second-largest town in Cambodia and the capital of Batambang province, W Cambodia. It was ceded to Thailand in 1809, became part of French Indo-China in 1907, and was returned to Cambodia in 1946. It is a market centre in a major rice-producing area. Pop. 39,000.

Batangas, province of the Philippines, on the SW tip of Luzon Island, the capital is Batangas. Mountainous and largely forested, it contains Lake Taal, 24.3sq km (9.4sq miles) in area, and a nearby volcano that erupted in 1965 causing many deaths.

Products: rice, cocoa, coffee, timber. Area: 3,165sq km (1,222sq miles). Pop. (1970) 926,308.

Batan Islands (Batanese), island group between Luzon Island, Philippines, and Formosa; it is the northernmost province of the Philippines. The main islands are Itbayat, Sabtang and Batan, which has the capital, Basco. Industries: corn, rice, coal-mining. Area: 205sq km (80sq miles). Pop. 11,000.

Batavi (Batavians), ancient Germanic tribe that settled in the Rhine-Meuse delta in the 1st century BC. Famous as warriors, they served in the Roman army. In about AD 70 Claudius Civilis led them in an unsuccessful revolt against Roman rule. In the 4th century they were displaced by the Salian Franks.

Batavia. See **DIAKARTA**.

Batavian Republic, name of The Netherlands when it was reorganized and occupied by French forces from 1795 to 1806.

Bates, Alan (1934–), British actor. He has won acclaim for his sensitive performances on stage and in films. His main films include *The Caretaker* (1963), *The Fixer* (1968), *Women in Love* (1970) and *The Gu-Bye* (1971).

Bates, Daisy (c.1860–1951), British welfare worker who spent 35 years of her life among the Australian ABORIGINES. She wrote *The Passing of the Aborigines* (1938).

Bates, Henry Walter (1825–92), British naturalist. His work on the natural selection in animal mimicry lent support to Charles Darwin's theory of evolution. Bates collected 14,712 unknown species of insects on a trip to the Amazon (1848–59) and recounted his experiences in *The Naturalist on the River Amazon* (1863). See also **NATURAL SELECTION**.

Bates, Herbert Ernest (1905–74), British novelist and short-story writer, notable for his descriptions of England and its countryside. His novels include *Fair Stood the Wind for France* (1944), *The Jacaranda Tree* (1949), *The Darling Buds of May* (1958) and *Oh! To Be in England* (1963).

Bateson, William (1861–1926), British biologist. He founded and named the science of GENETICS. Bateson translated much of Gregor MENDEL's pioneering work on inheritance in plants, so bringing it recognition. By his own experiments he also extended Mendel's theories to animals, which provided a foundation for the modern understanding of heredity. See also pp.178–189.

Bath, city in Avon, SW England, situated on the River Avon, 19km (12 miles) SE of Bristol. Hot springs were discovered there by the Romans in the 1st century AD and have been used ever since to treat rheumatism, arthritis and gout. In the 18th century the city became a fashionable resort. Many fine Georgian streets remain from the city's expansion at that time. Each June a festival of music and drama is held. Industries: printing, electrical engineering and clothing. Pop. (1970 est.) 84,800.

Bath, Knights of the, second highest order of knighthood in Britain. Founded by Henry IV in 1399, it fell into disuse but was revived by George I in 1725. The sovereign confers the title on members of the armed forces, scientists, artists, scholars and other distinguished citizens. Women were first admitted to the order in 1971. See also **GARTER, ORDER OF THE**. **Batholith**, huge mass of igneous rock at the earth's surface that has an exposed surface of more than 104sq km (40sq miles). It may have originated as an intrusive igneous structure that was gradually eroded and which became surface material. See also pp.208,209.

Bathory, noble Hungarian family. Its most notable member was Stephen, King of Poland (1575–86). Stephen's brother Christoph succeeded him as Prince of Transylvania (1575–81). Christoph's son Sigismund (1572–1613), Prince of Transylvania from 1581, abdicated in favour of Emperor Rudolf in 1598 and later tried unsuccessfully to regain his throne. Stephen's son, Gabriel, was ousted from the throne and murdered in 1613.

Bass: name of several sea and freshwater fish caught by fishermen around the world

Giorgio Bassani, the Italian novelist who wrote *The Garden of the Finzi-Continis*

Jacopo Bassano, whose genuine works are rare, this is his *Supper at Emmaus*

Basset hounds were bred originally in the 1700s by the Abbots of St Hubert in France

Baths

Batteries of the lead-acid automobile type are re-charged by current from the dynamo

Charles Baudelaire, poet who explored the irrational and symbolic elements of man

Bauhaus: German school of design which has influenced art education everywhere

Bavaria, state in West Germany where at most half of the population work on the land

Baths, public bathing facilities. Originally public baths were probably related to religious ritual. The first baths were made in ancient Egypt and the Indus River Valley. The ancient Greeks built elaborate public baths, which were copied and further embellished with mosaics and gilt details by the Romans. Water, brought by a system of pipelines and aqueducts from reservoirs, was heated in pipes. The grandest Roman baths, now ruined, were built by three emperors: TITUS IN ADRIANUM, CARACALLA IN 217, and DIOCLETIAN IN 302. Even more richly designed baths were built in Islamic lands, including the baths of the Alhambra in Granada, Spain, which were built in the 14th century. See also pp.1228, 1238-1242.

Bathsheba, in the Bible, wife of Uriah the Hittite and, later, wife of DAVID, who arranged Uriah's death in battle. SOLOMON was one of her sons by David.

Bathurst (Gambia). See BANJUL.

Bathurst, city in New South Wales, Australia, on the Macquarie River. Founded in 1815, this tourist centre is noted for its trout fishing. Industries: mining, fruit growing, food processing, tobacco, wheat. Pop. 17,200.

Bathurst, town in New Brunswick, Canada, on Nepisiguit Bay. Founded in 1818 as St Peter's, becoming Bathurst in 1826, it is a popular holiday resort. Industries: paper, mining, fishing. Pop. (1971) 16,404.

Bathyal zone, region of the ocean floor from the edge of the continental shelf, about 133m (436ft) in depth, to about 2,000m (6,560ft), where the ABYSSAL PLAIN begins. Only a feeble light penetrates to the upper layers of this zone. See also pp.482-483.

Bathysphere and bathyscaphe, manned vehicles for deep-sea exploration. The bathysphere, invented by Otis Barton in the USA, has steel walls and toughened glass windows several inches thick. Used mainly during the 1930s it was released from a surface vessel and descended to depths greater than 900m (2,950ft). The bathyscaphe, an improved version invented by August PICCARD of Switzerland, has the bathysphere slung below a tank which can be sunk or made buoyant in a controlled manner. This reached even greater depths. See also pp.479, 484-485.

Bathythermograph, instrument that simultaneously measures the temperature and depth of the sea to a depth of 300m (1,000ft). See also p.483.

Batik, method of decorating textiles, practised for centuries in Indonesia and introduced into Europe by Dutch traders. Molten wax is applied to the parts of a fabric that are to remain undyed, before the fabric is dipped into cool vegetable dye. The fabric is then dipped in hot water to remove the wax from the undyed areas. The process may be repeated, using different coloured dyes.

Batista y Zaldivar, Fulgencio (1901-73), Cuban political leader. A sergeant in the army, he led a successful coup in 1933. From then until 1940 he ruled through figurehead presidents. In 1946 he was elected president. He retired in 1944 and moved to Florida, but in 1952 a military coup returned him to power. In 1959 he was overthrown by Fidel CASTRO.

Batista y Ordóñez, José (1856-1929), Uruguayan President (1903-07, 1911-15), and leader of the Colorado Party. He initiated an extensive social welfare programme, and at his urging the country adopted a nine-man National Council of Administration that shared power with the President (1917). See also URUGUAY.

Batoidel, or **Batoides**. See RAY.

Battambang. See BATAMBANG.

Batten, Jean Gardner (1909-), New Zealand aviator who in 1935 became the first woman to make the solo flight from Australia to Britain (having made the Britain-Australia flight the year before). She also flew solo across the Atlantic Ocean to South America and in 1936 and 1937 established records for the fastest flights between Britain and Australia.

Battenberg, German family. In the 19th century the titles Prince or Princess of

Battenberg were bestowed on the grandchildren of the Grand Duke of Hesse-Darmstadt. One of them, Louis Battenberg (1854-1921), became an English admiral, was created marquis of Milford Haven, and married a grand-daughter of Queen VICTORIA. The English branch of the Battenbergs anglicized the name to Mountbatten during WWI. Prince PHILIP, Duke of Edinburgh, is a Mountbatten.

Battery, collection of cells that convert energy, usually chemical into direct current electricity. Primary batteries, such as those in a torch, are not rechargeable; storage batteries (accumulators), are recharged when a current in the reverse direction restores the original chemical state. See also pp.820-869-902.

Battery, in law, illegal violent beating of one person by another. In some cases the use of reasonable force is permissible, eg in self-defence or when punishing a child. See also ASSAULT.

Bathányi, Lajos (c.1806-49), premier of the first Hungarian ministry, a leader of the revolution of 1848 who tried to prevent a total break with Austria. He was executed on 6 Oct. 1849.

Battleaxe, broad-headed hewing weapon, used particularly in the early Middle Ages. See pp.554-555.

Battlecruiser. See CRUISER.

Battle of the Books, *The* (1704), prose satire by Jonathan SWIFT in defence of the "ancients". In it books representing ancient and modern authors "battle" to decide if the ancients should continue to take precedence on Mt Parnassus.

Battle of... See second part of name.

Battleship, most powerful type of naval warship in use during the late 19th and early 20th centuries, the largest displacing 72,000 tonnes. Battleships combined the thickest armour and the most powerful naval guns. In addition to their main gun batteries, housed in armoured turrets, most were armed with smaller batteries for combating lighter enemy warships and, later, automatic weapons for defence against aircraft. See also AIRCRAFT CARRIER; p.568.

Battleship Potemkin (1925), film directed by S. M. Eisenstein and starring A. Antonov, Vladimir Barski and Gligori Alexandrov. Made to commemorate the 1905 Russian revolution, it has great dramatic power and startling effects, and immediately won world acclaim. See also p.1683.

Batu, group of islands in Indonesia, in the Indian Ocean off the west coast of Sumatra. There are three main islands, Pinu, Tanahmasa and Tanahbala, and approx. 50 islets. The land is low-lying and forested. Products: copra, coconut oil. Area, 1,200sq km (463sq miles). Pop. 13,100.

Batumi (Batum), city and major port in SW Georgia, USSR, on the Black Sea near the Turkish border; capital of Adzharia. The Russians annexed it from the Turks in 1878. It is a commercial centre with an oil pipeline terminus and a Soviet naval base. Industries: oil refining, shipbuilding, food processing, engineering. Pop. (1970 prelim.) 101,000.

Bat Yam, city in central Israel, a suburb of Tel Aviv-Jaffa (Yafo), on the Mediterranean Sea. It is an industrial area and a tourist resort. Industries: engineering, printing, publishing. Pop. (1970 est.) 83,500.

Baudelaire, Charles Pierre (1821-67), French poet and critic. His first volume of poetry, *Les Fleurs du Mal* (1857), was the introduction of symbolism. The poetic theory of correspondences - of scent, sound, colour - was explored and the aesthetic creed of the inseparability of beauty and corruption proclaimed. The poems were condemned by the censor and six of them suppressed. Baudelaire was much influenced by Edgar Allan Poe, whose poetry he translated and whose works figure prominently in his major pieces of criticism, *Curiosités Esthétiques* (1868) and *L'Art Romantique* (1868). See also pp.1576-1577.

Baudot, Jean-Maurice-Emile (1845-1903), French electrical engineer who devised a telegraph code that used the presence or absence of an electrical pulse,

rather than the short and long pulses of the morse code. He also invented a distributor system which permitted several messages to be transmitted along the same wire. See also p.635.

Baudouin (1930-), King of Belgium (1951-). During WWI he was interned by the Germans and after the war joined his father Leopold III, in exile (1945-50) in Switzerland. His father abdicated in 1951 and Baudouin became king. He granted independence to the Belgian Congo in 1960.

Bauhaus, school for architects and artists founded in 1919 at Weimar, Germany by Walter GROPIUS. Such diverse talents as those of Marcel BRUNER, Paul KLEE, Wassily KANDINSKY, László MOHOLY-NAGY and Ludwig MIES VAN DER ROHE worked together to produce a distinctly modern approach to design. The Bauhaus style emphasized craftsmanship and its architecture, in particular, was severely functional. In 1925 the Bauhaus moved to Dessau where its buildings, designed by Gropius, exemplified its ideals. In 1928 Mies van der Rohe succeeded as director. The Bauhaus was closed by the Nazis in 1933. Many of its members moved to the USA, where Chicago became the Bauhaus centre, with Moholy-Nagy as its new director (1937). See also pp.1659, 1813.

Baugh, Gaspard (1560-1624), Swiss anatomist and botanist. He gave a scientific binomial system of classification to anatomy and botany and was the first to describe the ileocecal valve (Bauhin's valve) between the large and small intestines.

Baum, Vicki (1888-1960), US author, b. Austria. Her best-known works include *Grand Hotel* (1929), a novel that became both a successful play and a film, and *Grand Opera* (1942).

Baumé, Antoine (1728-1804), French chemist. He invented the Baumé hydrometer which utilized the Baumé scales (one scale is used for liquids less dense than water, one for liquids denser than water). He also improved bleaching and salt-petre purification processes.

Baumgarten, Alexander Gottlieb (1714-62), German philosopher, considered to be a disciple of Christian WOLFF. His ambitious system is now chiefly remembered for the *Aesthetica* (1750-58). The word AESTHETICS, in its modern use, was devised by him.

Baudeite, the mineral from which nearly all aluminium is extracted. Chemically it is an hydrated aluminium oxide (ALUMINA), $Al_2O_3 \cdot 2H_2O$. Large deposits occur in France, Hungary, the USA, Guyana, Jamaica, Sunnam, Italy, Greece and the USSR. See also pp.259, 400-401, 411.

Bavaria (Bayern), largest state in West Germany, bounded by East Germany in the N, Hesse and Baden-Württemberg in the W, Austria in the S and Czechoslovakia in the E. Munich is the capital. Part of the Roman Empire until the 6th century it was taken by CHARLEMAGNE in 788 and formed part of the Holy Roman Empire until the 10th century. Incorporated into Germany in 1871, it became a state within the German Federal Republic in 1946. Industries: glass, porcelain and brewing. Area: 70,511sq km (26,224sq miles). Pop. 10,820,900.

Bax, Sir Arnold (1883-1953), British composer. His works include symphonies, three symphonic poems (which made his reputation) and piano and chamber compositions. He was knighted in 1937 and became Master of the King's Music in 1941.

Baxter, James Keir (1926-72), New Zealand poet, critic and dramatist. His several verse collections include *The Fallen House* (1953) and *Pig Island Letters* (1966). Among his other works are *Recent Trends in New Zealand Poetry* (1951) and *The Iron Breadboard* (1957).

Bay, tree or shrub of the laurel family, the leaves of some varieties being commonly used as flavouring in cooking. In the Classical tradition, head wreaths of bay leaves were awarded as tokens of honour to conquerors and bards. Bay should not be

confused with the cherry laurel, a common evergreen shrub of another family, the leaves of which are poisonous. Family Lauraceae, species *Laurus nobilis*. See also p. 377

Bayamón, town in NE Puerto Rico, 8 km (5 miles) SW of the capital San Juan. Founded in 1772, it is one of the island's oldest settlements. Situated in a fertile fruit-growing region, it is a residential suburb of the capital. Pop. (1970) 147,552

Bayard, Pierre de Terrail, Seigneur de (c.1473-1524), French military hero of the Italian wars. In 1521, against overwhelming odds, he held Mézières against an attack by the forces of Emperor Charles V. He was known as the *chevalier sans peur et sans reproche* (knight without fear or reproach)

Bavaria. See **BAVARIA**

Bayeux tapestry (c.1080), strip of linen embroidered in wool, measuring 70m x 48cm (231ft x 159in) and depicting in more than 70 scenes the life of King Harold of England and the NORMAN CONQUEST. An unfounded tradition attributes its design to Matilda, wife of William the Conqueror, but it was probably commissioned by William's half-brother Odo Bishop of Bayeux. See also p.102

Baykal, Lake. See **BADKAL**

Bayle, Pierre (1647-1706) French Protestant philosopher. Forced into exile, he taught philosophy at Rotterdam (1681). He argued against superstition in *Thoughts on the Comet* (1682) and advocated toleration and PYRRHONIAN scepticism in the erudite *Historical and Critical Dictionary* (1690-1702). The French ENLIGHTENMENT claimed Bayle's critical approach to tradition as an inspiration

Baylis, Lilian Mary (1874-1937), British theatrical manager. From 1898 she managed the Royal Victoria Coffee Music Hall, where in 1912 she created the Old Vic Company. She produced both opera and drama, and in 1914 began the regular Shakespearean seasons which established her reputation. In 1931 she took over SADLER'S WELLS for the production of opera and ballet exclusively

Bayliss, Sir William Maddock (1860-1924), British physiologist. He studied blood pressure, circulation and digestion, and with Professor Ernest H. Starling discovered (1902) secretin, a hormone secreted by the DUODENUM

Bay of Islands, on the NE coast of New Zealand's North Island, has about 150 tiny islands, some Maori reserves. Tourist attractions include big-game fishing. The main towns include AUCKLAND, New Zealand's first capital

Bay of Pigs Invasion (1961), unsuccessful effort by Cuban exiles to overthrow Fidel CASTRO by invading the S coast of CUBA near the Bay of Pigs. About 1,500 Cubans, trained, equipped and transported by the USA, were involved. John KENNEDY, the US president, initially denied but then accepted US involvement in the invasion attempt. See also p.1739

Bayreuth, city in Bavaria, West Germany, where the WAGNER Festival is held at intervals. The festivals are held in the *Festspielhaus*, which was built to Wagner's specification, for the performance of his music dramas. The first festival was held in 1876

Bazaine, Achille François (1811-88), French army officer. He served in the Crimean War (1854-56) and in Mexico in 1863. He commanded French troops in the Franco-Prussian War (1870-71), although his incompetence led to the disaster at Sedan, in which Emperor Napoleon III and his army were captured. Convicted of treason in 1873 - for intrigues with the Germans during the war - Bazaine escaped and lived thereafter in exile. See also FRANCO-PRUSSIAN WAR

Bazin, René François Nicolas Marie (1851-1932), French novelist and biographer, who also wrote books on travel. His writings portrayed the realities, beauty and social problems of simple rural dwellers in France

Bazooka, portable rocket launcher with a calibre of 60mm (2.36in), developed in the USA during WWII. It was used with considerable success by infantry against tanks

and small fortified emplacements. See also p.563

BBC (British Broadcasting Corporation), state-financed radio and television network. Its directors are appointed by the government, but in terms of policy and content, the BBC is largely independent. It was set up in 1927 to replace the British Broadcasting Company that had been in operation since 1922. Its first director-general (1927-38) was Lord SUTHER, whose philosophy of the BBC as an instrument of education and civilization has greatly shaped the policies of the corporation

BCG (*Bacillus Calmette-Guérin*), vaccine against tuberculosis. It was named after its discoverers, the French bacteriologists Albert Calmette and Camille Guérin

Beach, the gently sloping zone of the shore, covered by sediment, sand or pebbles, that extends from the low-water line to the limit of the highest storm waves. The sediment is derived from coastal erosion or river alluvium. Waves breaking on the beach move the sediment back and forth so the heavier pebbles remain on the upper beach and the sand works downwards towards the water

Beach Boys, an rock group, formed in 1961, which made its name with records about surfing. Their main hits included *Surfer* (USA 1963), *I Get Around* (1964), *Help Me Rhonda* (1965) and *Good Vibrations* (1966)

Beachy Head, promontory on the S coast of England, between Eastbourne and Seaford, in the English Channel. There is a chalk cliff 175m (575ft) high and a famous lighthouse. In 1690 the French defeated the English and Dutch forces there. See also p.227

Beacon, radio, navigational aid for ships and aircraft. It consists of a transmitter and an aerial which broadcast radio signals of a fixed frequency, peculiar to one beacon only. A navigator can find his position from the bearings of two beacons, using a DIRECTIONAL AERIAL to receive the signals. See also p.527

Beaconsfield, Earl of See **SIR ISAAC**

Beaconsfield, residential town in Buckinghamshire, S central England, 35km (22 miles) NW of London. Edmund WALLER and Edmund SPURKS both lived there, as did Benjamin DISRAELI, who became the Earl of Beaconsfield in 1876. Pop. (1971) 11,900

Beadle, George Wells (1903-) US biologist. During his study of mutations in the bread mould *Neurospora crassa*, he and Edward TATUM found that genes are responsible for ENZYME synthesis and that these enzymes control each step of all biochemical reactions occurring in an organism. For this discovery they shared with J. Lederberg the 1958 Nobel Prize in physiology and medicine

Beagle, hunting dog, (hound group) used in packs to chase and follow small game. Of ancient origin, the modern breed was developed in England in the mid-1800s. It has a long, slightly domed head with a medium, square-cut muzzle, long, hanging ears and widely set, large, gentle eyes. Average size (two varieties) up to 33cm (13in) at the shoulder and not exceeding 38cm (15in), weight 8-14kg (18-31lb)

Beagle, HMS, British survey ship that carried Charles DARWIN as ship's naturalist on his famous expedition. The *Beagle* left England in Dec. 1831 and for five years explored parts of South America and the Pacific islands. See also pp.186-187

Beaglehole, John Cawte (1901-71), New Zealand historian. His works include *The Exploration of the Pacific* (1934), *The Discovery of New Zealand* (1939) and an edition of the journals of James COOK. He became professor of Commonwealth history at Wellington's Victoria University in 1963

Beak, or bill, horny or stiff animal mouthparts, projecting or pointed. Beaks are found among cephalopods, some insects, some fish and all egg-laying mammals, including some whales and turtles and birds. Bird bills are adapted to many functions: grasping, preening, seed-cracking, piercing, tearing, nectar-sipping, stabbing and display. See also p.75

Beaked whale, small to medium-sized

toothed WHALE with a distinct beak. It dives swiftly and deep for fish and CEPHALOPODS. It is also called the bottle-nosed whale. Length: 4-13m (13-44ft) family, Hyperoodontidae. See also DOLPHIN, PORPOISE, p.101

Beaker culture, distinctive culture that spread throughout Europe in the late 3rd millennium BC. It was characterized by its single-grave burials in round barrows and a common type of decorated beaker-shaped pot accompanying the burial. It is likely that the diffusion of this culture represented a gradual spread of new ideas to existing groups, rather than the migration of large numbers of people. See also pp.1218, 1218

Beale, Dorothea (1831-1906), British educationalist, a pioneer in women's education and a leading figure in the struggle for female suffrage. In 1858 she became headmistress of the Ladies' College at Cheltenham

Beamon, Robert (1946-), US long-jumper. He won the Olympic gold medal in 1968 with a jump of 8.90m (29ft 2in), which beat the world record by 55cm (21in), more than the cumulative improvements of the previous 40 years

Bean, Roy (c.1825-1903), US frontier judge. After the Civil War he followed the construction camps of the Southern Pacific Railroad as a saloon keeper and a gambler. In 1882 he settled in Vinegaroon, Texas, where as justice of the peace he kept order in court with his six-guns and dispensed harsh but just sentences

Bean, plant grown for its edible seeds and seed pods, species include broad, string, kidney and runner beans. The broad bean (*Vicia faba*) is native to N Africa. The string bean (*Phaseolus vulgaris*) is native to tropical South America and is common in the USA, several varieties are cultivated. Its long pods or kidney-shaped seeds are eaten as vegetables. The scarlet runner (*Phaseolus coccineus*) has scarlet, rather than white or lilac flowers and shorter, broader seeds. Family Leguminosae. See also SOYA BEAN; pp.667,670,680-681, 684

Bean weevil, stout-bodied, dull grey or brown beetle found throughout the world. It lays eggs on bean pods and the hatched larvae bore into the beans. It can breed all the year round in stored dried beans. Length up to 5mm (0.2in). Family Bruchidae, species *Acanthoscelus obtectus*

Bear, large omnivorous mammal with a stocky body, thick coarse fur and a short tail. Bears are native to the Americas and Eurasia. The sun bear is the smallest species, the Kodiak brown bear the largest. Bears have poor sight and only fair hearing, but an excellent sense of smell. Except for the polar bear, which lives almost exclusively on fish, walrus and seals, bears eat a wide variety of plant and animal foods. They kill their prey with a blow from their powerful fore-paws. In cold regions most bears hibernate in winter. Length 1.3-3m (4-10ft); weight 45-725kg (100-1,600lb). Order Carnivora, family Ursidae, there are approximately nine species. See also 98,304,310, 322,341

Bear, Great and Little, constellations in the northern sky, that help in the recognition of other groups. Two stars in the Great Bear (Ursa Major) align so that they point to Polaris, the North Star, which is in the Little Bear (Ursa Minor). See also pp.915-916,991,1018-1019

Bear baiting, popular pastime in England (11th-19th century) in which dogs were let loose on a tethered bear. The 'bait' continued until either the supply of dogs ran out or the bear was too badly injured

Bearden, Romare (1914-), US painter and collage artist, a founder (1963) of the Spiral Group of black artists. His pictures, often with religious or musical themes, are in flat planes of glowing colour

Beardsley, Aubrey (1872-98), British

Bayeux tapestry (11th century), a detail from this important and historical document

Bazookas have a range of up to 480m (1,500ft) and can pierce 30cm (1ft) armour plating

Beaks, or bills, vary greatly in design and structure according to their function

Bears swim and climb well and can run at speeds of up to 60km/h (30mph)

Bearing

Bearings on axes are of two main types: roller bearings (left) and ball bearings (right).

Beavers repair their lodges and keep their dams in good condition for many years.

Lord Beaverbrook acquired a fortune and founded a British press empire.

Sydney Bechet, one of the founding fathers of jazz, and virtuoso of the soprano saxophone.

period 1892-98. Many people condemned him for his eroticism.

Bearing, supporting component, usually of a resistant metal alloy, used to minimize friction between moving parts of machines. Some bearings are cylindrical shells which separate the surfaces of moving parts by trapping a thin film of lubricant between them. BALL BEARINGS use balls confined to a race to reduce the areas in contact. ROLLER-BEARINGS use rollers. See also p.398.

Beas, river in NW India, rising in the Himalayas and flowing SW through the Kulu Valley and the Siwalik Hills into the Sutlej River. It is one of the "five rivers" that gave the Punjab its name. Length approx. 466km (290 miles).

Beat frequency oscillator, device in which an OSCILLATOR is designed to mix a variable radio frequency with a fixed one to give a pulsating beat frequency that can be amplified to give an audible sound.

Beat Generation, term applied to a group of US writers in the 1950s who rejected middle-class values and commercialism. They included the poets Allen Ginsberg, Gregory Corso and Lawrence Ferlinghetti and novelists Jack Kerouac and William S. Burroughs. Ferlinghetti's City Lights Press in San Francisco published works of many of the Beat writers. See also pp.1772,1772.

Beating the bounds, ancient English ceremony to mark the boundaries of each parish and offer prayers for good crops. Every year the priests and villagers would walk around the parish boundaries, beating the route, buildings or trees with sticks. The custom is still practised in some parts of England.

Beatitudes, blessings spoken by Jesus at the opening of the SERMON ON THE MOUNT upon those worthy of admission to the Kingdom of God. They are found in simple form in Luke 6:20-23 but are recorded most fully in Matt. 5:3-12.

Beatles, British pop music group consisting of John Lennon (1940-1980), Paul McCartney (1942-), George Harrison (1943-) and Ringo Starr (real name Richard Starkey) (1940-). From Liverpool, the Beatles based their style on US RHYTHM-AND-BLUES influences which, blended with their song-writing talent and attractive harmony, raised pop music to a new level of sophistication. The group disbanded in 1971 to pursue individual careers. The Beatles' many records included *Rubber Soul* (1965), *Revolver* (1966) and *Sergeant Pepper's Lonely Hearts Club Band* (1967). They also made some successful films, including *Hard Day's Night* (1964) and *Help!* (1965).

Beatnik, name applied in the early 1960s to young people who adopted unconventional dress, hairstyles and behaviour to set themselves apart from the society of the time. The term originally applied to members of the US BEAT GENERATION. See also pp.1134-1137.

Beaton, Sir Cecil Walter Hardy (1904-1980), British photographer, costume and stage designer, and writer. He commenced his career in the 1920s as a fashion photographer, and took up stage designing in the 1930s. His WWII photographs recorded the endurance of wartime hardship by the British people. His film and stage designs include *Gigi* (film, 1951), *My Fair Lady* (stage, 1956, film, 1964) and *Coco* (1969). Beaton's books include *The Wandering Years* (1962) and *Memoirs of the 40s* (1973).

Beaton, or Bethune, David (c.1494-1546), Scottish Roman Catholic prelate. Created cardinal (1538) and Archbishop of St Andrews (1539), Beaton opposed an English alliance and became Chancellor of Scotland in 1543. He was murdered in reprisal for the execution of George Wishart, a Reformation supporter.

Beatrice and Benedict (1862), opera by BERLIOZ, based on the story of Shakespeare's play *Much Ado about Nothing*. The libretto was written by the composer.

Beatrix (1938-), Crown Princess of The Netherlands. Married to Claus von Amsberg, she has three sons (after three generations of only female heirs to the Dutch throne).

Beattie, James (1735-1803), Scottish philosopher. Like Thomas Reid, he opposed Hume's moral philosophy. In the *Essay on the Nature and Immutability of Truth* (1770) he argues for the "universality and immutability of moral sentiment". Poetical works by Beattie were popular.

Beatty, David, 1st Earl (1871-1936), British admiral. He served in Egypt and the Sudan (1896-98) and in the China War (1900). In WWI he commanded naval actions at Heligoland Bight, Dogger Bank and the Battle of Jutland. He became Commander-in-Chief of the Grand Fleet in 1916 and First Sea Lord in 1919.

Beaufort wind scale, range of numbers from 0 to 17 representing the force of winds, together with descriptions of the corresponding land or sea effects. The Beaufort number 0 means calm, less than 1km/h (1mph), with smoke rising vertically. Beaufort 3 means light breeze, 12-19km/h (8-12mph), with leaves in constant motion. Beaufort 11 is storm, 103-116km/h (64-72mph) and Beaufort 12-17 is hurricane, 117.5-219+ km/h (73-136+ mph), with devastation.

Beaumont, Alexandre, Vicomte de (1760-94), French general who served in the American War of Independence. In 1789 he was a deputy of the nobility in the revolutionary French States-General. He was guillotined during the Reign of Terror and his widow, Joséphine, later married NAPOLEON I. Joséphine's son, Eugène (1781-1824), served with his stepfather at the battles of Marengo and Lützen. He was later adopted by Napoleon and in 1805 became viceroy of Italy. He went to live in Bavaria after Napoleon's downfall.

Beaumont, Josephine. See JOSÉPHINE. **Beaumont, Marquis de (Charles de la Boche)** (1670-1749), Governor of French Canada (1726-46). A successful naval commander, he attempted to improve relations with Canadian Indians, thus falling out with the intendant, Claude-Thomas Dupuy. He backed Pierre de Véndrye's explorations and rose to the rank of Lieut.-Gen. after his retirement from politics.

Beaujolais, former region in central France on the W bank of the River Saône, N of Lyon in the Rhône département. The region was formed around the small village of Beaujeu and became famous for its fine Beaujolais wines.

Beaulieu, Victor-Lévy (1945-), Canadian author. His novels, which are written in French, deal with modern urban life. They include the trilogy *Race de monde* (1969), *Les Connaissances* (1970) and *Les grands-pères* (1972).

Beaumarchais, Pierre Augustin Caron de (1732-99), French dramatist whose related plays, *The Barber of Seville* (1775) and *The Marriage of Figaro* (1778) were made into operas by ROSSINI and MOZART respectively. A cosmopolitan adventurer, Beaumarchais satirized the court society into which he had married. See also BARBER OF SEVILLE, THE MARRIAGE OF FIGARO, THE.

Beaumont, Francis (c.1584-1616), English dramatist closely associated with the dramatist John Fletcher. Between 1607 and 1613 they produced at least ten outstanding plays including *Philaster*, *The Maid's Tragedy* and *A King and No King*. Beaumont is usually credited with sole authorship of two plays, *The Woman Hater* (1607) and *The Knight of the Burning Pestle* (c.1607). See also HC1 p.285.

Beaune, town in France 37km (23 miles) SW of Dijon, known for some of the finest Burgundy wines. It is the home of the Hotel-Dieu, a hospital founded in 1443 for the poor, which is supported by the proceeds of its vineyards. Industries: wine, textiles, cutlery, leather. Pop. (1968) 16,874.

Beauzouff, André (c.1330-1410), French architect, sculptor, miniaturist and illuminator. One of the last great wandering artists of the Middle Ages, his work survives in four figures on the royal tombs at St Denis, France, and in the miniatures at the beginning of the *Psalter of the Duke of Berry*.

Beaufort, town in Canada on the St Lawrence River, 8km (5 miles) NE of

Québec. It was settled in 1634 and is one of the oldest towns in the country. Montcalm had his headquarters there in 1759. Pop. (1971) 14,739.

Beauregard, Pierre Gustave Toutant de (1818-93), US Confederate general. He served in the Mexican War and was superintendent of West Point when the Civil War broke out in 1861. On 13 April 1861 he forced the Union surrender of Ft. Sumter in the first action of the war. **Beauséjour, Fort**, in the Fort Beauséjour National Historic Park (1926) in St. John's, Brunswick, Canada, was established by the French in 1751 and occupied by the British in 1755. It had strategic importance in the American War of Independence and the War of 1812.

Beauvoir, Simone de (1908-), French novelist and essayist. *She Came to Stay* (1943) and *The Mandarins* (1954) are portraits of the existentialist intellectual circle of which she and her close companion, Jean-Paul Sartre, were members. Her best-known work remains the feminist essay *The Second Sex* (1949). Other significant works include *The Prime of Life* (1960), *A Very Easy Death* (1964) and *Old Age* (1972).

Beaux-Arts, École des, national art school of France, founded as the *Académie d'Architecture* in 1671 by COLBERT. It merged with the *Académie Royale de Peinture et de Sculpture* in 1793 and acquired its present casts of antiquities and old-master drawings.

Beaux' Stratagem, *The* (1707), comedy by the English playwright George Farquhar. The plot involves Airmwell and Archer, two young rakes whose scheme to marry well provokes intrigue and deception. It combines Restoration cynicism with 18th-century sentimentality and is notable for its realism and gentility.

Beaver, large rodent with fine brown to black fur, webbed hind feet, and a broad scaly tail, it lives in streams and lakes of Europe, North America and Asia. Beavers eat parts of trees, shrubs and other plants. They build "lodges" of trees and branches above water-level and dam streams and rivers with stones, sticks and mud. In many places they are hunted for their fur. Length to 1.2m (4ft), weight up to 32kg (70lb). Family Castoridae, species *Castor fiber*. See also pp.304,305.

Beaverbrook, William Maxwell Aitken, 1st Baron (1879-1964), British newspaper proprietor and politician, b. Canada. He arrived in England in 1910 after making a fortune in stockbroking. He entered Parliament in the same year and was made a peer in 1917. He was CHANCELLOR OF THE DUCHY OF LANCASTER (1918-22) and a member of CHURCHILL's war cabinet (1940-45). He bought a majority interest in the *Daily Express* newspaper in 1916 and afterwards founded the *Sunday Express* and the *Evening Standard*.

Beavogui, Louis Lamou (1923-), Guinean politician. He was minister of trade and industry (1957-58), of economic affairs (1958-61, 1969-72) and of foreign affairs (1961-69) before becoming Prime Minister in 1972.

Bebo, or bop, form of jazz with subtle harmonies and shifting rhythm. It arose in the late 1940s as a development from the simpler "SWING" style. See also pp.1756, 1756.

Behel, Ferdinand August (1840-1913), German politician. One of the founders of the German Social Democratic Party (SPD) in 1869, he was its leader for more than 40 years and, by 1912, had made it the largest single party in the state.

Beccafumi, Domenico (1486-1551), Siennese MANNERIST painter and sculptor. His masterpiece is the mosaic for the pavement in the cathedral, Sienna. He also worked in Genoa and Pisa. He was influenced by the pictorial composition of RAPHAEL and the boldness and vigour of MICHELANGELO.

Beccaria, Cesare di (1738-94), Italian philosopher and criminologist. He wrote *On Crime and Punishment* (1764), advocating penal reform and the creation of an enlightened judicial code.

Bechet, Sidney (1897-1959), US JAZZ

clarinetist and soprano saxophonist. A New Orleans-born Creole, Bechet was noted for his broad vibrato and sweeping phrases, especially on soprano sax. A professional from 14, he worked in New Orleans with Joe "King" Oliver, and in 1919 toured Europe with the Southern Syncopated Orchestra, where he was praised by the Swiss conductor Ernest Ansermet.

Bechstein, Friedrich Wilhelm Carl (1826–1900), German piano-maker. He began his own business in 1856 and quickly won a reputation as a master craftsman. His company soon had branches in France, Russia and Britain, and built the Wignmore Hall, in London in 1900.

Bechuanaland, former name of BOTSWANA. See p.1992.

Beck, Józef (1894–1944), Polish statesman. He served in WWI and as military attaché in Paris (1922–23). As Foreign Minister (1932–39) he firmly rejected Hitler's demands for concessions in the Polish Corridor and Danzig, although he tried to remain on friendly terms with Hitler. On 6 April, 1939 he signed an alliance with Britain that later resulted in Britain's declaring war on Germany – the start of WWII – in Poland's defence.

Beckenbauer, Franz (1945–), West German footballer. He was captain of Bayern Munich when it won the EUROPEAN CUP (1974, 1975, 1976) and of West Germany when it won the WORLD CUP (1974). His roving, attacking style has become the ideal for a centre half-back. He joined the New York Cosmos in 1977.

Becket, Thomas à (c 1118–70), English clergyman and statesman. He was appointed Chancellor of England (1155), became a friend of HENRY II and vigorously pursued the interests of the Crown. In 1162 he became Archbishop of Canterbury. Resigning the Chancellorship that year, he devoted all his energies to Church affairs. Conflict with Henry over clerical privileges and the independence of ecclesiastical courts followed and Becket fled from England and sought support from the Pope. Returning to Canterbury after six years' exile, he was murdered there by four of Henry's knights. He was acclaimed a martyr and canonized in 1173. See also pp.1320, 1328.

Beckett, Samuel (1906–), Irish novelist and playwright. Based in Paris since 1937, he writes in both English and French. His mastery of the Theatre of the Absurd is shown in such plays as *Waiting for Godot* (1952), *Endgame* (1957), *Krapp's Last Tape* (1958) and *Not I* (1973). His novels, such as *Murphy* (1938), *Malone Dies* (1951) and *Watt* (1953) humorously study the plight of the alienated individual. He was awarded the 1969 Nobel Prize in literature. See also p.1767.

Beckford, William Thomas (1760–1844), British writer and traveller. He achieved note with the baroque Arabian romance *The History of the Caliph Vathek* (1786), which he wrote in French. He collected books and paintings, and built a gothic folly at Fonthill, Bath.

Becklin's object, invisible body detected inside the Orion Nebula by infra-red techniques. It is concealed by nebular dust through which only infra-red radiation can pass. See also pp.923, 982, 984.

Beckmann, Max (1884–1950), German expressionist painter. His work is unique in its constructed treatment of space, primitive angular forms, vividness of colour, and the stark intensity of its faces. Condemned as a decadent artist in 1933, Beckmann left Germany in 1938 and eventually settled in the USA. His most famous work, nine triptychs painted after 1932, includes the monumental *Departure*. See also p.1655.

Becknell, William (c 1790–c 1832), US trader and explorer. He established the trading route known as the SANTA FE TRAIL (1821–22), which was used for 50 years and has become part of US legend.

Beckwith, Julia Catherine (1796–1867), Canadian author. Her romance *St Ursula's Convent, or The Nun of Canada* (2 vols., 1824) was the first novel to be written by a native-born English-speaking

Canadian and published in Canada. She wrote the novel while in her teens.

Béquer, Gustavo Adolfo (1836–70), Spanish lyrical poet. He is best remembered for his melancholy *Rimas* collection, posthumously published in 1871, which assured him a place amongst the finest Spanish lyrical writers.

Becquerel, Antoine Henri (1852–1908), French physicist. He was Professor of Physics at the Paris Museum of Natural History and later at the Ecole Polytechnique. In 1896 he discovered RADIOACTIVITY in uranium salts, for which he shared the 1903 Nobel prize for physics with Pierre and Marie CURIE. He was also concerned with the rotation of the plane of polarized light in a magnetic field. See also pp.812–814.

Bed, in geology, a layer of rock. It underlies the surface material (regolith) except where regolith has been removed by erosion. Bedrocks can be classified according to their origins as igneous, sedimentary or metamorphic. SEDIMENTARY ROCKS are formed on the surface, IGNEOUS may be formed on the surface or within the Earth's interior, and METAMORPHIC are formed only deep inside the Earth.

Bedding plane, in geology, layers in which sedimentary material is deposited. It may also describe the layering of other, non-sedimentary material such as an ore. See also p.210.

Bedbug, broad, flat, wingless bug found worldwide. It feeds by sucking blood from mammals, including human beings. Bedbugs usually gorge themselves at night and remain hidden during the day. Length to 6mm (0.25in). Family Cimicidae, species *Cimex lectularius*.

Bede, Saint (c 673–735), the Venerable Bede, monk and scholar from Northumbria who spent his entire life in the monasteries of Wearmouth at Sunderland and Jarrow. The most important of his many works on science, grammar, history and theology is the *Ecclesiastical History of the English Nation*, which remains an indispensable primary source for English history from 54 BC AD 597. See also pp.1154, 1272, 1273.

Bedford, county town of BEDFORDSHIRE, on the River Ouse, 77km (48 miles) NNW of London. It is noted for its public school, dating from the 16th century, and a chapel in memory of John BUNYAN who preached there in the 17th century. Industries: electrical equipment, agricultural machinery, diesel engines. Pop. (1971) 73,064.

Bedford Level, low-lying area of about 3,000sq km (1,200sq miles) in SE England, s of the Wash. Drained in the 17th century, it is now a rich agricultural area which yields vegetables, fruit and flowers.

Bedford, Master of the Duke of (fl.1405–30), French painter. Working for the Duke of Bedford, regent of France (1423–35) during the English occupation, he illuminated a breviary and *The Bedford Book of Hours*.

Bedfordshire, county in central England. The land is mostly flat with low chalk hills, the Chilterns, in the S. The region, drained by the River Ouse, is fertile and agriculture is the chief economic activity. Agriculture includes growing of cereal crops, cattle raising and market gardening. Industries include the manufacture of motor vehicles, electrical equipment and precision instruments. The main towns are BEDFORD (the county town), Luton and Dunstable. Area: 1,235sq km (477sq miles). Pop. 463,500.

Bedi, Bishan (1946–), Indian cricketer. A slow left-arm spinner with a Punjab and Delhi, he made his Test debut in 1966–67. Ten years later he was India's captain and leading wicket-taker, with 168 in Tests. He played for Northants 1972–77.

Bedlam, popular name for Bethlehem Royal Hospital, London, an institution for the insane. Founded as a priory of the Order of the Star of Bethlehem in 1247, it was converted to its later use in c 1400. Its present site in Croydon. See also p.1109.

Bedlington terrier, graceful, lamb-like breed of dog (TERRIER group) established in the 1880s. It has a pear-shaped head, hanging ears, long legs and a gracefully

curved 23–28cm (9–11in) tail. The coat can be blue, liver, sandy or a combination of any two of these colours. Standard size 39cm (15in) high at the shoulder, 8–11kg (18–24lb).

Bedouin, nomadic, desert-dwelling ARAB peoples of the Middle East and followers of ISLAM. Traditionally they live in tents, moving with their herds of camels, goats, sheep and sometimes cattle across vast areas of arid land in search of the sparse grazing. Their society is patrilineal and they are renowned for their hospitality, honesty and fierce independence. In the 20th century many Bedouin have been forced to abandon the nomadic way of life and work in agriculture or in towns.

Bedser, Alec and Eric (1918–), British twin brothers who both played cricket for Surrey. Alec was a fast bowler who played for England in 51 Test matches, in which he took a total of 236 wickets. After retiring as a player he became chairman of the England selectors.

Bedsore, ulcerous sore that results from prolonged pressure on the skin, as in a patient who has to lie in one position in bed during a long illness. Bedsore can be prevented by a frequent change of the patient's position. Cloth pads and air cushions can also help to prevent sores, as can frequent bathing and dusting pressure points with antiseptic powder.

Bedstraw, small wildflower found from tropical to temperate regions. Once used as a mattress filling, this plant has tiny, clustered flowers, slender square stems and stalkless, whorled leaves. Family Rubiaceae, genus *Galium*.

Bee, insect distinguished from other members of the order Hymenoptera, such as ants and wasps, by the presence of specially adapted hairs, with which they collect POLLEN, all bees feed their young NECTAR and pollen. The body is usually quite hairy and the hairs are multi-branched (plumose). Although HONEYBEES and BUMBLEBEES are social insects living in well-organised colonies, many other bees are solitary, and some species even live in the colonies of other bees. Found throughout the world except near the N and S poles, they are important pollinators of flowers. Entomologists recognize about 12,000 species, but only the honeybee provides the HONEY used by man. It also builds combs of six-sided cells from wax produced within its body. A honeybee colony may consist of up to 60,000 individuals. See also pp.8–9, 38, 39, 43, 46.

Beebe, Charles William (1877–1962), US naturalist and explorer, Curator of Ornithology (1899–1919) at the New York Zoological Gardens and Director of Tropical Research (1919–52) at the New York Zoological Society. He led explorations in central and S America, the West Indies and the Orient. His numerous books include *Galapagos* (1923) and *Beneath Tropic Seas* (1928).

Beeby, Clarence Edward (1902–), New Zealand educationalist, b. England. Director of education in New Zealand from 1940 to 1960, he was Assistant Director-General of UNESCO (1948–49), becoming chairman of its executive board in 1963.

Beech, deciduous tree native to the Northern Hemisphere. Beeches have wide-spreading branches, smooth grey bark and alternate, coarse-toothed leaves. Male flowers hang from thin stems, pairs of female flowers hang on hairy stems and develop into triangular, edible nuts enclosed by burs. The American beech (*Fagus grandifolia*) is an important timber tree used for furniture and tool handles. Height to 36m (117ft). Family Fagaceae, there are 10 species. See also p.377.

Beecham, Sir Thomas (1879–1961), British conductor, one of the greatest of his day. He founded the New Symphony Orchestra in 1906, the London Philharmonic in 1932 and the Royal Philharmonic in 1947. He became artistic director of Covent Garden Opera in 1933, introduced the operas of Richard Strauss into England, and was widely known as an interpreter of such composers as FREDERICK DELIUS and JEAN SIBELIUS.

Thomas à Becket, murdered while in the Cathedral by four of King Henry's knights

Henri Becquerel shared the 1903 Nobel Prize for the discovery of natural radioactivity

Bedbugs, because of their flat shape can hide, by day, in the tiniest cracks and crevices

Bees, the only insects that produce food eaten by man, sting only when frightened

Beeching, Richard

Beef cattle, generally larger than dairy breeds, convert most of their food into flesh

Beer Sheva, a thriving town in modern Israel, is the place where Abraham first settled.

Beethoven, one of the greatest, if not the greatest composer in music history

Beetles are the most numerous of insects. There are over 250,000 known species

Beeching, Richard, Baron (1913-). British industrialist. As chairman of the British Transport Commission and of the British Railways Board (1961-63) he was responsible for the re-shaping of Britain's railways.

Bee eater, tropical bird of the Eastern Hemisphere that swoops to catch bees and wasps. It has a long, curved beak, bright, colourful plumage and a long tail. It nests in large colonies and builds a tunnel to its egg chamber. Length 15-38cm (6-15in). Family Meropidae. See also p.303

Beef cattle, breeds of domesticated cattle reared primarily for meat. Generally larger than DAIRY CATTLE, they are chunky and rectangular in appearance and convert most of their food into flesh. Beef production includes three distinct agricultural phases: breeding, a period of growth and final fattening. Some farmers do all three but the modern trend is towards specialization, concentrating on one phase of production. Breeds include Aberdeen Angus, Brahman, Charolais, Hereford, Longhorn and Shorthorn. See also pp.653-724-725, 730

Beefsteak. See YEDMEN OF THE GUARD

Beekkeeping. See p.692

Beelzebub, or more properly Beelzeboul ("Lord of demons"), corrupted deliberately in Syrian texts and the (Latin) Vulgate Bible to Beelzebub ("Lord of the flies") as a gesture of contempt. Originally an aspect of BAAL, it was later merely another name for SATAN or the Devil - as in Matt. 10:25 and 12:24, 27, Mark 3:22, and Luke 11:15, 18, 19.

Beer, alcoholic beverage produced by brewing and fermentation of a cereal extract (malt), which is flavoured with a bitter substance (hops). Other ingredients are water, sugar and yeast. The alcohol content of beer ranges from about 3.5 to 12% by weight. Among the types of beer are ales, which are pale or brown in colour, stouts, very dark brown and bitter, and porter, a sweeter stout. Beer is especially popular in Britain, the USA and Germany. See also p.700

Beerbohm, Sir Max (1872-1956), British caricaturist and drama critic. His writings include *A Christmas Garland* (1912), parodies on contemporary writers, and *Around Theatre* (1930, 1953). He also wrote a novel *Zuleika Dobson* (1911), an amusing satire set in Oxford. Some of his caricatures were published in *Rossetti and His Circle* (1922).

Beerneert, Auguste (1829-1912), Belgian politician, a member of the Christian Social Party. He served in several cabinet posts before becoming Prime Minister (1884-94). He was a delegate at the Hague peace conferences of 1899 and 1907 and in 1909 he shared the Nobel Peace Prize with ESTOR BELLES DE CONSTANT.

Beer Sheva (Be'er Sheva'), chief city of the Negev Desert, in s Israel, approx 88km (55 miles) s of Tel Aviv. It was the most southerly point of biblical PALESTINE. It flourished under Byzantine rule, but declined thereafter until re-established by the Ottoman Turks c 1900 as a market centre for the nomadic tribes of the Negev. In 1917, it became the first city to be taken by the British in the Palestine campaign of WWI. Industries: chemicals, textiles, ceramics. Pop. (1970 est.) 77,400.

Beet, vegetable native to Europe and parts of Asia, and cultivated in most cool regions. Its leaves are green or red and edible, although it is generally grown for its thick red or golden root. Beets thrive on sandy loam or in a sunny area. Some varieties are eaten as a vegetable, others are a source of sugar and some are used as fodder. Family Chenopodiaceae, species *Beta vulgaris*. See also SUGAR-BEET, p.684

Beethoven, Ludwig van (1770-1827), German composer who exerted a profound influence on the development of musical styles. Despite the onset of deafness, which finally became total, he wrote many masterpieces that are among the finest and most popular of their type. He provides a link between the formal classical style of HAYDN and MOZART and the romanticism of WAGNER, BRAHMS and

BRUCKNER. Born in Bonn, Beethoven visited Vienna in 1787 and was taught briefly by Mozart, he made Vienna his home from 1792 and took lessons from Haydn. He was a proud, determined and independent man. Unlike his predecessors he was never directly employed by a European ruler, aristocrat or Church, he did get support from men of means, but he wrote to satisfy his own inclinations. As a result he liberated music from many of the conventions then current. His music is ultimately optimistic, although sometimes involving dark, gloomy struggle. With the onset of deafness from about 1800 Beethoven became difficult, unpredictable and suspicious, alternately cheerful and moody, tender and boisterous. He composed nine symphonies, five piano concertos, a violin concerto, one opera (*Fidelio*), more than 30 piano sonatas and a sizeable body of chamber music. He is best known for having made the symphony a dramatic form, he also expanded the size of the orchestra and wrote compositions that were considered long. His output is often divided into three periods. Until 1800 he generally followed the convention of Haydn and Mozart, from about 1800-14 he wrote passionate works, now among his most popular, including the third and fifth symphonies, the violin concerto and *Appassionata* piano sonata, and from 1814 date his most sublime compositions, among them the last five string quartets, the ninth symphony and the *Missa Solemnis*. See also p.1582

Beetle, insect characterized by horny front wings that serve as protective covers for the membranous hind wings and are not used in flight. These protective sheaths are often brightly coloured. Beetles are usually stout-bodied and their mouthparts are adapted for biting and chewing. They are poor fliers, but, like all insects, are protected from injury and drying up - which can be a serious hazard - by an EXOSKELETON.

Beetles are the most numerous of the insects, and more than 250,000 species are known and new ones are still being discovered. Most feed on plants, some prey on small animals, including other insects, whereas others are scavengers. Beetles undergo complete METAMORPHOSIS: their larvae, called grubs, usually have three pairs of legs. Unlike caterpillars and worms, the grubs have distinct heads, usually dark in colour. Length 0.5mm-16cm (0.02-6 1/2 in). Order Coleoptera. See also pp.44-45, 306.

Beeton, Mrs (1836-65), compiler of *Mrs Beeton's Household Management* (1861), probably the world's most famous cookery book. It was originally published in monthly parts between 1860 and 1861.

Beetroot, edible bulbous root of the cultivated red BEET (*Beta vulgaris*). Widely grown in temperate regions, it is usually boiled and eaten cold as a salad vegetable. Beetroot is also canned, whole or diced.

Beggar's Opera, The, opera with libretto by John GAY and popular music of the day arranged by J C Pepusch, first performed in England in 1728. Very popular in its time, it is one of the few successful "ballad" operas, and formed the basis of the 20th-century comic opera *The Threepenny Opera* (1928).

Begin, Menachem, (1913-), Polish born Zionist who, as commander of the Irgun Zeva'i Leumi, led the fight against British rule and won independence for Israel in 1948. As head of the Herut (Freedom) Party he spent twenty years in opposition until 1967 when he served in the Government of National Unity. In 1977 he became Prime Minister and in 1978 he shared the Nobel Peace Prize with President SADAT for his efforts to establish Middle-East peace.

Begonia, family of plants, shrubs or trees native to tropical America and SE Asia. Those popular as house plants have leaves of various sizes and shapes, white, pink or red flowers, and often hairy stems. There are three types: rex, with ornamental leaves that combine green, red and silver colours, rhizomatous, with fleshy, creeping stems and glossy leaves, and basket with trailing stems and brightly coloured

leaves. Family Begoniaceae, genus *Begonia*. See also p.675

Behan, Brendan (1923-64), Irish writer notorious for his notorious lifestyle. He became a member of the IRA at the age of 14 and served several years in borstal and prison, which he described in his autobiography *Borstal Boy* (1958). His first play, *The Quare Fellow* (1956), was also based on his experiences in prison. His second, and last complete, play was *The Hostage* (1959).

Behavioural ecology, study of the interactions between a natural environment and the animal behaviour that takes place within it. Drawing on biology, behavioural ecologists study such topics as the ways in which an organism adapts to its habitat. Human behaviour is also studied in this way. See also ECOLOGY, ETHOLOGY.

Behavioural sink, term applied by John Calhoun, a US behavioural sociologist, to conditions that develop where there is severe overcrowding. His studies with experimental animals suggest that overcrowding leads to a breakdown of normal social patterns, an increase in aggression, and a decline in normal reproductive and maternal behaviour. See also OVERPOPULATION.

Behaviour in animals. See ETHOLOGY

Behaviourism, school of psychology that seeks to explain all animal and human behaviour primarily in terms of observable and measurable responses to stimuli. It uses objective, scientific methods, particularly laboratory experiments. Pavlov's work on conditioned reflexes was a source for the early behaviourists such as the American J B Watson. Accepting the basic emotions of fear, rage and love, they rejected the evidence introspection gives of feelings, motives and will. Later behaviourists such as B F SKINNER explain learning and development by "operant conditioning". See also MS pp.1118-1119, 170.

Behaviour Therapy (Behaviour Modification), treatment of psychological disorders by using principles and methods of BEHAVIOURISM. It assumes that abnormal, like normal, behaviour is learned through conditioning and reinforcement. The therapy is designed to reward desirable, constructive behaviour whereas abnormal behaviour is ignored or punished. See also pp.1118-1119.

Behn, Aphra (1640-89), playwright, poet and novelist. After a childhood in Dutch Guiana and marriage to a London merchant she acted as unpaid spy for CHARLES II in Antwerp. She produced 15 risqué comic plays in London, as well as writing excellent poetry and philosophical novels, notably *Oroonoko*.

Behrens, Peter (1868-1940), German architect, painter and designer, one of the first artists to consider the commercial manufacturing process as something worthy of original design rather than adaptation. As adviser to the electrical firm AEG in Berlin (1907-12), he produced designs for factories, offices and shops and controlled product design. His turbine factory for AEG (1909) is widely acknowledged as "the first modern building". He was director of Dusseldorf School of Art (1907-07). See also pp.1658, 1765.

Behring, Emil Adolph von (1854-1917), German bacteriologist and pioneer immunologist. In 1901 he was awarded the first Nobel Prize in physiology and medicine for his work on serum therapy, especially for developing immunization against DIPHTHERIA (1890) and TETANUS (1892) by injections of antitoxins, a word he introduced. His discoveries led to the treatment of many childhood diseases.

Behring, Vilus Jonassen. See BEIRING, VITLUS JONASSEN.

Beiderbecke, Bix (1903-31), US jazz cornetist, pianist and composer, real name Leon Bismarck Beiderbecke. He played with Paul Whiteman's band (1928-30), but his best recordings were made with his own bands such as the Wolverines, and with the saxophonist Frankie Trumbauer. The piano solo, *In a Mist* (1927) is one of his finest compositions.

Beijing. See PEKING.

Beilby, Sir George Thomas (1850-1924),

British chemist who developed the manufacture of potassium cyanide on an industrial scale for use in extracting gold and silver from ores of low yield. He was president of the Institute of Chemistry from 1909 to 1912.

Beinum, Eduard van (1901-59), Dutch conductor. He was conductor of the Concertgebouw Orchestra of Amsterdam from 1931 and musical director of the Los Angeles Philharmonic from 1956 until shortly before his death.

Beira, port city on the coast of Mozambique; capital of the Manica and Sofala District. Developed in 1891 as a railway terminus to the interior, it is now a centre for trade and commerce and a tourist resort. Products: minerals, tobacco, cotton, sugar. Pop. 59,000.

Beirut (Bayrūt), capital of the LEBANON. It is situated on the Mediterranean coast on the site of the ancient Phoenician city of Berytus. Under the Romans it was an important colony and the site of a prominent law school (AD 3). The city was taken by the Arabs in AD 635 and by the Ottoman Turks in 1516. Before the devastating civil war of 1975-76 the city was an important banking, trading and cultural centre. Pop. 702,000.

Beit-Lahm. See BETHLEHEM.

Beja, town in s Portugal, 137km (85 miles) sw of Lisbon, capital of Beja district and Baixo Alentejo. It flourished under Roman rule and was used by the Moors as a fortress. Today, mining and farming are the chief occupations. Pop. 28,100.

Beja, town in n Tunisia, 105km (65 miles) w of Tunis. Once a Moorish fortress city, it was reconquered by the Portuguese in 1162. It was the scene of fighting in WWI (1943). Chief export: wheat. Pop. 28,100.

Bejaia (Bougie), town in Algeria, 185km (115 miles) e of Algiers. A former centre for the Barbary pirates, it is now the chief oil-exporting port of the w Mediterranean, being the terminus of the Hassi Messaoud pipeline. Other exports include phosphates, iron ore, olive oil and fruit. Pop. 49,900.

Bejart, Maurice Jean (1928-), French ballet dancer and choreographer. He added avant-garde modern dance techniques and acrobatics to classical movements to become one of the most innovative choreographers. He founded the Ballet of the 20th Century in Brussels (1960). Works include *Nijinsky*, *Clown of God* (1971) and *The Triumphs of Petrarch* (1977).

Beke, Charles Clifton (1800-74), British explorer and geographer. He was the first man scientifically to chart the course of the BLUE NILE. He published a series of works on the languages of Ethiopia and the sources of the Nile (1847-65), and later produced several books on biblical geography.

Békery, Georg von (1899-1972), US biophysicist, b. Hungary. As director of the Hungarian Telephone System Research Laboratory (1923-46), he worked on problems of communication and the mechanics of human hearing. At Harvard University (1949-66) he carried on his research on the cochlea of the ear, for which work he received the 1961 Nobel Prize in physiology and medicine.

Béla, name of four kings of Hungary. Béla III (r.1173-96), of the Árpád dynasty, introduced Greek culture to Hungary and laid the foundations for feudalism. Béla IV (1206-70), of the same dynasty, became king in 1235, Hungary was overrun by the Mongols during his reign.

Belaïonte, Harry (1927-), US singer and actor. He appeared on Broadway, and in films and television programmes. He gained fame with calypso recordings and was a civil rights worker.

Belaïazar, Sebastián de. See BENALCAZAR, SEBASTIÁN DEL.

Bel and the Dragon, two stories added to the book of DANIEL after its recognition as part of the canon of the Bible. The story of Bel shows the error of idolatry through Daniel's guidance. In the second story, Daniel is thrown into the lions' den and remains unharmed because of his faith.

Belasco, David (1853-1931), US actor, producer and playwright. He was respon-

sible for innovations in scenic realism and stage lighting and encouraged US writers and performers such as Mrs Leslie Carter, David Warfield and Ina Claire.

Bel canto, Italian for "beautiful song", used to describe the flowing, lyrical style of solo song that was developed in Italian opera in the 17th and 18th centuries, in contrast to the more declamatory, dramatic style of the 19th century.

Belém (Pará), port and capital city of Pará state in n Brazil, on the Pará River. It was founded in 1616 and was a notable exporter of sugar and, later, rubber until the early 20th century. Products: cocoa, tobacco, rubber. Industries: saw-milling, engineering. Pop. (1970) 642,514.

Belemnite, extinct squid-like CEPHALOPOD, related to the ammonites. Its shell, shaped like a rifle bullet, is found fossilized. See also pp.271,275.

Belfast, capital city of Northern Ireland, in County Antrim and County Down, at the mouth of the River Lagan on Belfast Lough, an inlet of the Irish Sea. The city was founded in 1177 but did not develop until after the industrial revolution, when French Huguenots stimulated the growth of the linen industry. Belfast is now the centre for the manufacture of Irish linen. Since the 19th century the city has been the scene of bitter strife between Catholics and Protestants resulting from religious and political differences, and violence has intensified in recent years. The shipbuilding industry is of great importance in Belfast, and its large harbour includes the Harland and Wolff yard, which has produced many of the world's largest liners. Other industries include aircraft, machinery, food processing, tobacco. Pop. (1972) 362,400. See also pp.1780-1781, 2112.

Belgae, Germanic and Celtic tribes who banded together about 2,000 years ago and lived in what is now Belgium, The Netherlands, Germany and n France. The German tribes overcame and mixed with the Celts. Julius Caesar, who called them the bravest of the Gauls, conquered them in 57 BC. Many Belgae then went to and settled in Britain. See also p.1219.

Belgian sheepdog, sheep-herding dog (working group) developed in Belgium in the 1880s. It has a flat head with a pointed muzzle, triangular erect ears and a long tail. Its black coat is long and straight, with shorter hair on the head and lower legs. Average size: 56-66cm (22-26in) at the shoulder; 22.5-27kg (50-60lb).

Belgium (Belgique, België), a small densely-populated country in nw Europe. The country is intensively farmed, cereals and root crops are most important. Brussels is the capital. Area, 30,513sq km (11,781sq miles). Pop. 9,804,000. See p.1986.

Belgrade (Beograd), capital city of YUGOSLAVIA, situated at the junction of the Sava and Danube rivers. It was incorporated into the area which came to be known as Yugoslavia in 1929, and during German occupation in WWI suffered much damage. Industries: chemicals, metals, machine tools, textiles. Pop. 870,000.

Belgrano, Manuel (1770-1820), Argentine independence leader. He participated in the revolution of 1810 and led Argentine forces against Paraguay in 1811. As commander of one of the Argentine armies, he defeated royalist forces in 1812 and 1814. At the Congress of Tucumán in 1816 he recommended an INCA monarchy for Argentina.

Belinski, Vladimir Grigoryevich (1811-48), Russian writer and critic. He wrote for the journals *Notes from the Fatherland* and *Contemporary* and condoned the Russian social order, but after 1840 he advocated literature that expressed social and political ideas, as in his *Letter to Gogol* (1847).

Belisarius (c.503-65), Byzantine general. Under Justinian I he waged campaigns against the Germanic tribes that threatened Byzantium on its western frontiers. He subjugated the Vandals in northern Africa and the Ostrogoths in Italy. See also p.1276.

Beliung, island in Indonesia, off the se coast of Sumatra in the Java Sea. The chief

port is Tandjungpandan. It has large tin deposits, which have been worked since 1860. Area, 4,850sq km (1,872sq miles). Pop. 102,000.

Belize, town and former capital of Belize, central America, on the Caribbean Sea 80km (50 miles) nw of the new capital Belmopan. It was almost totally destroyed by a hurricane in 1961, but is still the largest town and the principal port. On the mouth of the Belize River, it is a trading centre for timber, fruit and coconuts. Industries: food processing, saw-milling. Pop. (1970) 39,050. See also p.1986.

Bell, Alexander Graham (1847-1922), inventor of the telephone. Born in Scotland, he first worked with his father, inventor of a system for educating the deaf. The family moved to Canada in 1870, and Bell taught speech at Boston University (1873-77). His work on the transmission of sound by electricity led to the first demonstration of the telephone in 1876. A year later he founded the Bell Telephone Company. His many other inventions included the photophone (an instrument for transmitting sound by light vibrations) and the wax cylinder for phonographs. See also p.636.

Bell, Arthur Clive Howard (1881-1964), British literary critic. His essays included *Since Cézanne* (1922) and *Art* (1923). His wife, Vanessa (1879-1961), was the sister of Virginia Woolf and a fellow-member of the BLOOMSBURY GROUP.

Bell, Sir Charles (1774-1842), Scottish anatomist and surgeon, the first man to distinguish between sensory and motor nerves in the brain and to describe the facial paralysis known as Bell's palsy. He was professor of anatomy and surgery at the Royal College of Surgeons, London, and from 1836 was professor of surgery at Edinburgh University.

Bell, Sir Francis Henry Dillon (1861-1936), New Zealand politician. Elected to parliament in 1893, he became a minister in 1912. In 1925 he was Prime Minister for a short period.

Bell, Gertrude Margaret Lowthian (1868-1926), British writer, archaeologist, traveller and a founder of modern Iraq. She travelled widely in the Middle East, joined the British Intelligence Service and advised the Arab Bureau of Iraq. Chiefly responsible for the selection of Faisal I as King, she also founded and directed the Iraq National Museum. Her works include *The Desert and the Sown* (1907), *Amurath to Amurath* (1911) and *Palace and Mosque at Ukhaidr* (1914).

Bell, Henry (1767-1830), Scottish engineer and pioneer of steam navigation in Europe. He designed and ran, on the River Clyde (1812-20), the steamboat *Comet*, which developed 3hp.

Bell, John (1799-1868), Canadian explorer and fur trader, b. Scotland. He was associated with the NORTHWEST COMPANY and HUDSON'S BAY COMPANY (1818-21), and explored the Winnipeg (1821-24) and Mackenzie River districts. He explored extensively in the Arctic, establishing fur-trading posts at Lake Athabasca and Seven Isles.

Bell, John Jay (1871-1934), Scottish writer. He wrote a number of stories and plays, mostly humorous and many of them in Glaswegian dialect. His most famous story is *Woe MacGregor* (1902).

Bell, Patrick (1799-1869), Scottish inventor of a mechanical reaper which came into widespread use in the 1850s. It was gradually replaced by the more practical machine of the American Cyrus McCormick. See also p.388.

Bell, percussion musical instrument, originally of random pitch, but since the 9th century tuned and arranged in series called chimes or carillons. They were first used in Christian churches in the 6th century. The largest bell was cast in Moscow in 1733 and weighed 180 tonnes.

Bell, electric, bell that works using ELECTROMAGNETISM. When the button of an electric doorbell is pressed, a mains or battery current is made to flow through and energize an electromagnet. This pulls a sprung-loaded striker against the bell, but the movement also cuts off the current, so that the striker at once springs back again,

Maurice Béjart, choreographer and founder of the Ballet of the 20th Century in Brussels

Belfast, a scene in the war-torn Northern Ireland capital after terrorist bomb explosions

Belgian sheepdog, native to Groenendael has a long neck ruff and a plumed tail

Alexander Graham Bell inaugurating the New York to Chicago telephone line in 1892

Bella Bella

Bellflower, the drooping bell-shaped flowers bloom in shades of violet and blue

Giovanni Bellini, detail from *Transfiguration*, showing his balance of picture elements

Saul Bellow, who won the 1976 Pulitzer Prize for his novel *Humboldt's Gift*

Belugas are sometimes called sea canaries because of the trilling sounds they make

resuming contact. Quickly repeated movements of this kind account for the ringing sound of the electric bell. See p.873

Bella Bella, Kwakwaka'wakw American Indian tribe of British Columbia. Because of an excellent local harbour, they were among the earliest Alaskan Indians to be visited regularly by European sailors, who described them as a warlike people. About 900 now live in the Milne Bay Sound region of British Columbia.

Bella Coola, the northernmost Salish-speaking tribe of North American Indians, living in British Columbia. They have taken on many of the traits of the Kwakwaka'wakw tribe. Only about 350 survive today.

Belladonna. See **ATROPINE**; **NIGHTSHADE**. **Belladonna lily**, southern African plant that grows from a bulb and is cultivated for its fragrant rose-pink flowers. Family: *Amaryllidaceae*, species *Amaryllis belladonna*.

Bellarmino, Roberto Francesco Romolo, Saint (1542-1621), Italian theologian and ecclesiastic. He was a Jesuit and a prominent figure in the COUNTER-REFORMATION. From 1602 to 1605 he was archbishop of Capua. He was canonized by Pope Pius XI in 1930.

Bellay, Joachim du. See **PLÉIADE**, LA.

Bellbird. See **COTINGA**.

Belleau, Rémi. See **PLÉIADE**, LA.

Belle Dame Sans Merci, La, poem by John Keats, written in 1819 and first published in 1820. It has twelve quatrains, written in the iambic metre. The title is perhaps from the Alain Chartier poem (1424) of the same name.

Belleek ware, pottery from Belleek, Co Fermanagh, Northern Ireland, first made in 1857 by David McBain and Robert Armstrong. It is used for statuary and decorative objects, such as open-work baskets, as well as utilitarian ware. It is characterized by a lustrous white eggshell glaze and the use of modelled shells as ornamentation.

Belle Isle, Strait of, channel in Canada between Newfoundland and St Labrador. It is the northernmost entrance to the Gulf of St Lawrence, and is ice-bound from November to June. Length: 145km (90 miles), width approx 25km (15 miles).

Bellerophon, in Greek legend, the son of Glaucus, King of Corinth and grandson of Sisyphus. Iobates, King of Lycia, sent him to slay the fire-breathing dragon Chimera. Previously Bellerophon had captured and tamed the winged horse Pegasus, and by riding above the dragon he was able to attack and kill it.

Belles-lettres, type of literature that is valued more for its elegant style than for the information it contains. The term comes from the French, meaning "fine letters", and once applied to the whole of literature.

Bellflower, annual, perennial or biennial plant native to northern temperate regions and tropical mountains now widely cultivated. Bellflowers have bell-shaped flowers, alternate leaves and milky sap. There are 250-300 species. Family: *Campanulaceae*, genus *Campanula*.

Belli, Giuseppe Gioacchino, (1791-1863) Italian poet - one of the Italian representatives of Romantic realism. His early poetry was undistinguished but his best, written between 1830 and 1849 and describing daily life in Rome, gained deserved popularity.

Bellini, family of Italian painters, Jacopo and his sons Gentile and Giovanni, who created the VENETIAN SCHOOL of painting. Jacopo (c.1400-c.1470) was a pupil of GENTILE DA FERRARIO. His major surviving works are two sketch books, the source of many ideas used by his sons and by his son-in-law MANTegna. Gentile (c.1429-1507) was famous for his narrative works (eg *The Procession in the Piazza of San Marco* and *The Miracle of the True Cross*) which became the prototype of the genre in Venice. Giovanni (c.1430-1516) was possibly the greatest of Venetian Madonna painters. His early paintings interpreted nature with precise realism. Gradually, however, his composition became more monumental and his handling of light and colour more poetic. He frequently included landscape backgrounds in his portraits (eg, those of the Doges), and in his allegorical paintings and altarpieces (such as that for S. Giobbe) he often used architectural settings, within which the figures were bathed in light. In Padua (1458-60) he was influenced by Mantegna, although his work remained less severe than Mantegna's. He was one of the greatest teachers of his generation and his pupils included Giorgione and Titian. See also pp.1277, 1387.

Bellini, Vincenzo (1801-35), Italian composer of operas, most notably *Norma* and *La Sonnambula* (both in 1831) and *I Puritani* (1835). His characteristically flowing melodies require great vocal skill. The *ASCIANTO* operas were widely popular during the 19th century, and since WWI have come back into favour. See also p.1598.

Bell Island, Canadian island off the SE coast of Newfoundland, in Conception Bay. It was noted for its underwater iron-ore mines, worked from 1895 until 1966. The island is 10km (6 miles) long and 5km (3 miles) wide. Pop. 8,200.

Bello, Andrés (1781-1865), Chilean poet. His *Gramática de la lengua Castellana* (1847), which unified American and European Spanish, reflected his desire for an intellectually independent yet sophisticated Latin America.

Belloe, Joseph Milne Pierre (1870-1953), British author, b. France. A versatile writer, he is remembered chiefly for his light verse, especially *Cautionary Tales* (1908). He wrote several satirical novels in collaboration with G.K. Chesterton. He was a Liberal MP (1906-10).

Bellona, Roman goddess of war. She was an associate of Mars, possibly his sister, wife or daughter. She may have originally been an Asian goddess of war, worshipped in Cappadocia and Phrygia, and introduced to Rome by the dictator Sulla.

Bellotto, Bernardo (1720-80), Italian landscape painter, the nephew and pupil of Canaletto. In his later works his style is more realistic and foreshadows that of the 19th century. His finest paintings are views of Dresden, Königsberg and, especially, Warsaw which he executed for the Polish king.

Bellow, Saul (1915-), US writer, b. Canada. Bellow's work shows an intense, moral preoccupation with the plight of the individual in modern society. A novelist, short story writer and playwright, his first novel, *The Dangling Man*, appeared in 1944. Subsequent novels include *The Adventures of Augie March* (1953), *Herzog* (1964) and *Mr Sammler's Planet* (1970). He was awarded the Nobel Prize for literature in 1976. See also p.1773.

Bellows, George (1882-1925), US illustrator and painter. Influenced by the ASH CAN SCHOOL, he painted many fine portraits, as well as pictures of prize fights, street scenes, prayer meetings and rallies.

Bell-ringing, art of playing bells, probably originating in Asia and by the 8th century also a Christian practice. Apart from the specifically English practice of CHANGE RINGING, the most common forms of bell-ringing are by the carillon and chime. These differ only in size. A chime contains no more than 15 bells (tuned to the intervals of a major scale), whereas a carillon can have as many as 70 bells. Both may be played from a type of keyboard.

Bell Rock. See **INCINERATOR ROCK**.

Bell's palsy, paralysis of the muscles of the face caused by a disorder of the facial nerve. Spontaneous recovery can occur, although the condition may become permanent. It is named after the Scottish physiologist Charles Bell (1774-1842).

Bell Telephone Company, trading company established in 1877 by Alexander Graham Bell in the USA to manufacture the newly invented telephone. Today it is a large, diversified business. See also pp.636-637, 923, 1007.

Belmopan, capital of BELIZE (formerly British Honduras) since 1970, when it replaced the city of Belize as capital. The latter had been largely destroyed by a hurricane in 1961. Belmopan is on the

Belize River, 80km (50 miles) upstream from Belize. When it was incorporated in 1970 its official population was only 274.

Belo Horizonte, city in a Brazil, 354km (220 miles) N of Rio de Janeiro, capital of Minas Gerais state. It was built between 1895-97, and was Brazil's first planned city. Today it is a popular resort and the distribution and processing centre for a prosperous farming and mining region whose mineral deposits include iron ore, manganese and diamonds. Industries: steel, textiles. Pop. (1970) 1,106,722.

Belorussia (Belorusskaja SSR), Soviet w republic in USSR, also called White Russia, bordered by Poland (W), Latvia and Lithuania (N), Russian SSR (E) and the Ukraine (S). It is a low-lying region drained by the Dnieper, Dvina, Beresina and Pripyat rivers. Much of the land is swampy, and peat is a valuable resource. Farmers grow sugar-beet, cereals, flax and potatoes. One-third of the region is forest and there is an important timber industry. Other industries include mining (clay, chalk, rock phosphate and potassium salt), motor vehicles, textiles, chemicals and electrical equipment. The capital is MINSK. Area 207,600sq km (80,155sq miles). Pop. (1976) 9,384,000.

Belsen, site of one of the most notorious of the German concentration camps established by the Nazi government in WWII, at which 30,000 people are estimated to have died. The camp was liberated by the British army in spring 1945.

Belshazzar, described in the Biblical Book of DANIEL as the son of NEBUCHADNEZZAR and last King of BABYLON, although scholars now think that he was not a historic character. William Walton's oratorio, *Belshazzar's Feast*, dramatizes the great feast during which Babylon's downfall was foretold.

Beltane, one of the four principal Celtic feasts, a spring festival held at the beginning of May. It was marked by agricultural fertility rites. Dancers carried burning torches across the fields to invoke the Sun and, to guard against livestock losses, animals were herded between ritual fires.

Beluga, pale Eurasian freshwater sturgeon, especially the giant beluga of the Caspian and Black seas and the River Volga. This fish is prized for its roe, which is used to make caviare, and its air bladder is used in the MINOLASS industry. Length to 8m (26ft), weight to 1,300kg (2,865lb). Family: *Acipenseridae*, species *Huso huso*.

Beluga, or white whale, small, toothed Arctic whale that is milky white when mature. It preys on fish, squids and crustaceans and is valued by Eskimos for its meat, hide and blubber. Length to about 4m (13ft). Species: *Delphinapterus leucas*. See also pp.100-101, 100-101.

Bely, Andrei (1880-1934), Russian poet and novelist, a leading symbolist. His poems are included in collections such as *Gold in Azure* (1904) and *Ashes* (1909). His best-known novels are *The Silver Dove* (1910) and *Petersburg* (1912).

Bemba, Negroid warrior people of NW Zambia, Zaire and Zimbabwe (Rhodesia). Their society is traditionally matrilineal, based on subsistence agriculture, and characterized by an absence of craft skills and material possessions. Many are now migrant labourers in the copper mines.

Bembo, Pietro (1470-1547), Italian Renaissance scholar. His writings, especially *Discussion of the Italian Language* (1525), helped to establish the supremacy of Tuscan as a language over Latin and Dantesque Italian. He also wrote poetic imitations of PETRARCH and stylized prose pieces such as *The People of Asolo* (1505).

Bernalcázar, or **Betalcázar**, Sebastián de (c. 1479-1551), Spanish conquistador. He accompanied Christopher Columbus on his third voyage (1498) and was with Francisco Pizarro during the conquest of Peru (1532). He founded settlements in Colombia while searching for the legendary EL DORADO, and in 1541 became governor of Popayán province.

Benares. See **VARANASI**.

Benaud, Richie (1930-), Australian cricketer. An outstanding all-rounder and

captain of state (NSW) and country (1958-63) teams, he scored 2,201 runs and took 248 wickets in 63 Tests (1952-64). A leg break bowler, aggressive batsman and brilliant fielder, he was an astute captain whose policy of attack rekindled Australia's enthusiasm for the game. **Benavente y Martínez, Jacinto** (1866-1954), Spanish playwright. His plays were most often social satires on the aristocracy (*Genie conocida*, 1896), the middle class (*La casa de los sueños*, 1911) and the peasantry (*Señora ama*, 1908). He won the Nobel Prize in literature in 1922.

Benbecula, island off NW Scotland, in the Outer Hebrides. It is linked to South Uist by bridge and North Uist by causeway. Bonnie Prince Charlie escaped from there in 1746 dressed as Flora MacDonald's maid. Area 93sq km (36sq miles).

Ben Bella, Ahmed (1919-), Algerian statesman. After WWII, he joined the movement for Algerian independence from France. After helping to found the *Front de Libération Nationale* (1954), he was imprisoned (1956-62). Following independence in 1962, he became Algeria's first premier. He was overthrown in a coup in 1965. See also p.1230.

Benbow, John (1653-1702), English admiral. In 1702 he engaged the French in the West Indies and, although the captains of four of his seven vessels were killed, continued fighting for five days until a fatal leg wound forced him to return to Jamaica.

Benchley, Peter (1940-), US author, son of Robert Benchley. A reporter and magazine writer, he wrote *Jaws* (1974), an immensely popular novel about a shark that terrorizes a seaside resort. The film of the book was equally successful.

Benchley, Robert Charles (1889-1945), US humorist and drama critic, renowned for his wit. His books include *Pluck and Luck* (1925) and *From Bed to Worse* (1934).

Benda, Julien (1867-1956), French writer. His most famous work, *La Trahison des Clercs* (*The Treason of the Intellectuals*) was published in 1927.

Bender-Gestalt test, in psychology, test devised by Lauretta Bender to help to diagnose mental and neurological disorders. The patient is told to copy, as accurately as possible, nine geometrical designs. The test indicates the level of development of a child's eye/hand co-ordination and may detect organic brain disorders and personality difficulties.

Bendigo (1811-80), ring name of William Thompson, British prize-fighter. Probably the first "southpaw", he was little more than a middleweight, yet won the championship of England (1839, 1845). He later became an evangelist.

Bendigo, city in central Victoria state, SE Australia. Founded in 1851, when gold was discovered there, it was the centre of the largest goldfield in Victoria. Now a commercial and railway centre for a dairy farming region, it has iron, textile and brick industries. Pop. (1971 prelim.) 32,000.

Bends, or decompression sickness, physical disorder, characterized by pain in the joints, dizziness, nausea and paralysis, caused by the release of nitrogen bubbles into the tissues and blood. This occurs if there is a too rapid return to normal atmospheric pressure after a period of breathing high-pressure air (when the body absorbs more nitrogen). It is an occupational hazard of divers and deep tunnel workers. The treatment requires recompression and then slow decompression. See also pp.484,484.

Bene Baraq, city in W central Israel, suburb of Tel Aviv-Yafo. It was famous for its academy under the direction of Rabbi Akiba. Its industries include textiles and diamond cutting and polishing. Pop. (1972 est.) 72,100.

Benedict, name of fifteen popes and two antipopes, the most notable being Benedict XI (r.1303-04), b. Niccolò Boccasini (c.1240-1304). A member of the Dominican order, he was created cardinal in 1298 and served on missions to England and France. He was noted for his sanctity and administrative abilities. He was beatified

by Pope Clement XII in 1736. Benedict XIII antipope (r.1394-1423), b. Pedro de Luna (1328-1423), was elected antipope mainly because of his promise to end the Great Schism, which he failed to do. Benedict XIV (r.1740-58), b. Prospero Lambertini (1675-1758), sought to improve the lot of all classes of people and to reform the Church. Benedict XV (r.1914-22), b. Giacomo della Chiesa (1854-1922). During WWI he strove for peace among nations. He made changes in the Cuna and revised Canon Law.

Benedict Blacop (c.628-90), English scholar. Five trips to Rome gave him contact with learning and the books to furnish great libraries at the monasteries he founded at Wearmouth (674) and Jarrow (682). He may thus be considered the father of Northumbrian learning. The Venerable Bede was his pupil. See also p.1296.

Benedict, Ruth Fulton (1887-1948), US anthropologist. She conducted extensive fieldwork among the SW Indian tribes of the USA, the Serrano of California and the Canadian Blackfoot. Her best-known work is *Patterns of Culture* (1934), which described cultural behaviour patterns. Other works include *Zuni Mythology* (1935) and *The Chrysanthemum and the Sword: Patterns of Japanese Culture* (1946).

Benedictines, members of a monastic order who follow the Rule laid down by St Benedict of Nursia in the 6th century. The order played a leading role in bringing Christianity and civilization to western Europe in the 7th century and in preserving the traditions of Christianity throughout the Middle Ages. After the Reformation the order was confined to the Roman Catholic Church until its revival in the Church of England in 1914. The centre of the Anglican Benedictine community is Nashdom Abbey in Buckinghamshire, England. See also pp.1268-1269, 1321.

Benedict of Nursia, Saint (c.480-c.547), known mainly through St Gregory's *Dialogues*, lived as an ascetic in a cave at Subiaco, where he acquired a reputation for austerity. A community gradually grew up round him and he established twelve monasteries, each under an abbot appointed by himself. In c.525 he moved to Monte Cassino, where he remained until his death. It was there that he composed his Rule which became the basis of the Benedictine order named after him. Feast: 11 July in the West, 14 March in the East. See also pp.1268-1269, 1321.

Benefit of clergy, legal term for the right claimed by some Christian churches for clerics to be tried in ecclesiastical courts even in civil matters. Today few countries admit such a right. Its scope was limited in England by Henry II, but it was not abolished until 1827.

Bene Israel, Jews of India. Found mostly around Bombay, they are of unknown origin. When rediscovered by Western Jews in the 18th century, they were found to have retained some Jewish rites and festivals but were ignorant of Hebrew and had borrowed many customs and rituals from their Hindu neighbours. In the mid-1970s only about 10,000 of them were left in India, more than half having emigrated to Israel after 1948.

Benelux, customs union of Belgium, The Netherlands and Luxembourg, established in 1948. The earliest "common market" in Europe, it abolished trade restrictions between its members. It also has wider aims - the standardization of prices, wages, taxes and social security - but these have to some extent been merged in the aspirations of the EEC, of which the Benelux countries are also members. See also pp.1742-1743.

Benes, Eduard (1884-1948), Czechoslovak statesman. A disciple of Tomáš Masaryk, he promoted Czech independence during WWI and became the first foreign minister of the new state (1918-35). Benes was President of Czechoslovakia from 1935 to 1938, when he resigned in protest against the German occupation of the Sudetenland. He was re-elected President in 1946, but resigned in 1948 after the Communist takeover.

Benét, Stephen Vincent (1898-1943), US author noted for his poetry and short stories. He won a Pulitzer Prize in 1929 for his epic poem on the American Civil War, *John Brown's Body* (1928).

Benevolence, gifts of money to the Crown expressive of the donors' goodwill. In fact a form of taxation, they were raised often by Edward IV to pay for wars, but were last raised by James I in 1622.

Bengal, former province of India and now a region of the Indian subcontinent that includes West Bengal state in India and Bangladesh. Much of the area lies in the deltas of the Ganges and the Brahmaputra rivers. In AD 750 it was a kingdom, ruled by King Gopala, who founded the Pala dynasty and spread Buddhism throughout the region. The Senas, a Hindu people, followed in the 11th century. The area was re-organized in the 12th century under the Muslim leader, Mohammad Khalji. The Mogul emperor Akbar ruled in the 16th century when Bengal became the richest region in his empire. Conquered by the British in 1757, Bengal became the centre of the British Indian Empire, with Calcutta as the capital city. It was made an autonomous region in 1937 and the present boundaries fixed in 1947. Area 200,575sq km (77,442sq miles).

Bengal, Bay of, NE gulf of the Indian Ocean, bounded by India and Sri Lanka (W), India and Bangladesh (N), Burma (E) and the Indian Ocean (S). Many rivers empty into the Bay, including the Ganges, Brahmaputra, Krishna and Mahanadi.

Benghazi. See BANGHAZI.

Bengisason, Stellan (1952-), Swedish table tennis player. A powerful left-hander, he broke Asian dominance of the sport by winning the 1971 world singles championship, and helped Sweden to win the Swaythling Cup in 1973.

Benguela, port in W Angola on the Atlantic coast, 29km (18 miles) S of Lobito, capital of Benguela province. It is a rail terminus, and a commercial and fishing centre, it exports agricultural products. Founded in 1617, it once played an important part in the slave trade. Pop. (1969 est.) 35,000.

Benguela Current, current in the S hemisphere flowing N in the S Atlantic Ocean along the W coast of southern Africa and merging with the South Equatorial Current at approx. 15° S. It is a cold current produced by the prevailing southerly winds, and its waters are rich in plankton, making it an excellent fishing ground. See also p.235.

Ben-Gurion, David (1886-1973), Israeli politician (Mapai or Labour Party), born in Poland. A leader in the campaign for an independent Jewish state, he was made Israel's first Prime Minister in 1948. He resigned in 1953, but was Prime Minister again from 1955 to 1963. See also pp.1783, 1783.

Ben Hur (1880), novel by US author Lew Wallace. It tells of the persecution, and ultimate conversion to Christianity, of Judah Ben-Hur after he is wrongly accused of the attempted murder of the Roman governor of Judea. It has been made into a film several times, the most notable was produced in 1926, and re-issued in 1931. See also p.1773.

Bénin, independent country in W Africa, formerly the French protectorate of Dahomey. The capital is Porto-Novo. Area 112,622sq km (43,474sq miles). Pop. (1975 est.) 3,112,000. See p.1988.

Benin, kingdom in W Nigeria that flourished 14-17th centuries AD. It is remembered chiefly for its bronze sculptures and wood and ivory carvings, considered among the finest African art. See also pp.1362-1363, 1363, 1529.

Benitoite, glassy, blue to violet mineral, barium titanum silicate, BaTi(SiO₃)₂, found in San Benito, USA. It forms hexagonal system tabular, triangular crystals and is a valuable gem when transparent and without flaws. Hardness 6-6.5; s.g. 3.6.

Benjamin, in the Bible (Genesis), youngest son of Jacob, born to Rachel who died during childbirth. His tribe settled between Judah and Ephraim. According to the New Testament, the apostle Paul descended from this tribe.

Ahmed Ben Bella was the first President of Algeria following independence in 1962.

Benedict XV, whose papacy was concerned with the problems that arose from WWI.

Benedictine nun of the 'black' order whose patroness was the virgin sister of St Benedict.

David Ben-Gurion, first Prime Minister and one of the founders of the State of Israel.

Benjamin, Arthur

Benjamin, Arthur (1893–1960), Australian composer who taught at the Royal College of Music in London. His works include the opera *The Tale of Two Cities* (1957) and the popular orchestral work *Jamaican Rumba*.

Benjamin of Tudela (d.1173), Spanish Jew who travelled from Saragossa, Spain, through Europe as far as China, returning through Egypt and Sicily (1159–73). His account – *Masse'oth Rabbi Binyamin* – was the first description by a European of the Far East.

Benmore dam, earth dam on the Waitaki River, South Island, New Zealand. Completed in 1965, the dam feeds power to the North Island via an underwater cable across Cook Strait approximately 32km (20 miles).

Benn, Anthony Neil Wedgwood (1925–), British Labour politician. He was elected to Parliament in 1950 and in 1963 disclaimed his hereditary peerage in order to remain in the House of Commons. He was Postmaster-General (1964–66) and Minister of Technology (1966–70) and was made Secretary of State for Energy in 1975. By 1980 he was widely recognized as the leading member of the militant left wing of the party.

Benn, Gottfried (1886–1956), German poet, essayist and physician whose work was banned by the Nazis. His poetry, such as *Morgue* (1912), *Flesh* (1917) and *Inexhaustible Tide* (1949), varied from the ecstatic and sensuous to the refined and intellectual.

Bennett, Sir Charles Mollie (1913–), New Zealand soldier. He commanded the Maori Battalion in ww2 and, as High Commissioner for Malaya (1958–61), was the first Maori to serve his government overseas.

Bennett, Air Vice-Marshal Donald Clifford Tyndall (1910–), Australian airman who holds the world long-distance seaplane record (set in 1938) and who made the first non-stop flights from Britain to South Africa and Canada. In ww2 he commanded the RAF Pathfinder Force. **Bennett, Enoch Arpad** (1863–1931), British author. He documented realistically the provincial life of the industrial Midlands, where he was born, in his novels of the 'Five Towns', such as *Anna of the Five Towns* (1902), *The Old Wives' Tale* (1908) and the trilogy *Clayhanger* (1910), *Hilda Lessways* (1911) and *These Twain* (1916).

Bennett, Floyd (1890–1928), us airman who accompanied Richard Byrd on his expedition to Greenland in 1925 and on his flight over the North Pole (9 May 1926), for which he was awarded the Congressional Medal of Honour.

Bennett, Henry Gordon (1887–1962), Australian major-general who commanded the 8th division of the Australian Imperial Force (1940). In 1941 he commanded all Australian forces in Malaya. A year later he escaped from Singapore and was made lieutenant-general.

Bennett, James Gordon (1795–1872), Scottish-born us editor and publisher. He founded the *New York Herald* in 1835. His innovations included telegraphed reports from correspondents.

Bennett, Richard Bedford (1870–1947), Canadian politician. In 1927 he became leader of the Conservative Party. During his time as Prime Minister (1930–35), he advocated preferential tariff agreements within the British Commonwealth. He led the Conservative opposition until his retirement from politics in 1938.

Bennett, Richard Rodney (1936–), British pianist and composer. He has written several operas, including *The Mines of Sulphur* (1965), a ghost story, a horn concerto and various pieces for piano.

Bennett, Tony (1926–), us singer. He has enjoyed popular success for more than 25 years and specializes in ballads. His hits include *Stranger in Paradise* (1954) and *I left my Heart in San Francisco* (1962).

Bennett, Sir William Stenning (1816–75), British pianist and composer. From 1856 to 1866 he was conductor of the Philharmonic Society. In 1856 he was appointed professor of music at Cambridge. His works are rarely performed.

Ben Nevis, mountain in the central Grampian Mountains of w central Scotland, in the Highland Region near Fort William, overlooking Glen Nevis. It is the highest point in Britain, rising to 1,343m (4,406ft).

Bennington, Battle of (16 Aug. 1777) battle in the American War of Independence in which mainly British forces, under Col F Baume, were defeated by American forces under Gen John Stark while they attempted to seize much-needed supplies in Vermont. The battle, the beginning of the defeat of the British was a turning point in the war. See also p.1540.

Benny, Jack (1894–1974), us comedian, real name, Benjamin Kubelsky. He began his career in music hall at the age of 18, using a violin as a comic prop. He appeared in films and in *The Jack Benny Show* on radio (1932–55) and television (1950–65).

Benoi, Alexandre (1870–1960), Russian theatre art director and ballet librettist. With DIAGHILEV he founded the world of art movement and the Diaghilev ballet. He collaborated with STRAVINSKY and FOKINS and was a pioneer of modern ballet.

Benoit, Pierre (1886–1962), French novelist. He wrote novels of adventure and "romantic" love, including *Koenigsmark* (1918), *L'Atlantide* (1919) and *Azelle* (1928). In 1931 he was elected to the French Academy.

Benoni, town in Transvaal, N. South Africa, 32km (20 miles) S of Johannesburg. It is the distribution centre for a gold-mining area. Fierce fighting occurred there in 1922 during the Witwatersrand miners' strike. Industries: iron founding, electrical equipment. Pop. (1970) 149,563.

Benson, Sir Frank Robert (1858–1939), British actor-manager. In 1882 he made his first professional appearance in *Romeo and Juliet*, at the Lyceum Theatre, London. He formed his own company, devoting himself mainly to Shakespearean plays. In 1916 he was knighted on stage at the Drury Lane Theatre, London.

Benson and Hedges Cup, sponsored cricket tournament, held annually in England since 1972. The 17 first-class counties take part together with three minor counties and university sides. They are divided into four zones, in which they play each other once, the top two going into the quarter-finals. The final is played at Lord's in July. All fixtures are one-day matches played for a maximum of 55 overs per innings.

Benthams, George (1800–84), British botanist. His classification of seed-plants provided a foundation for modern systems. With W.J. HOOKER he wrote the multi-volume *Genera Plantarum* (1862–83), a definitive work in its time. Benthams also wrote *Handbook of British Flora* (1858).

Benthams, Jeremy (1748–1832), British philosopher, jurist and social reformer. He trained as a lawyer but never practised. Benthams developed the theory of UTILITARIANISM based on the premise that "the greatest happiness of the greatest number" should be the object of individual and government action. This philosophy was defined in his *Introduction to the Principles of Morals and Legislation* (1789). His followers were responsible for much of England's early reform legislation. See also pp.1886–1887, 1889.

Benthic division, all of the ocean bottom from the high-tide line to the greatest depths. It is divided into two main systems, the littoral and the deep-sea. The littoral system is subdivided into eulittoral and sublittoral zones, and the deep-sea system into the bathyal and abyssal zones.

Benthos, flora and fauna of the deepest ocean. They include sedentary forms such as sponges, creeping creatures such as crabs and snails, and burrowing animals such as worms. See also pp.12–13.

Benti, Brig.-Gen. Tefari (1921–), Ethiopian politician. He is the chairman of the Provisional Military Administrative Council which, after the overthrow of Emperor Haile SELASSIE in 1974, became the ruling body in Ethiopia.

Bentley, Lord William George Frederick Cavendish (1802–48), British politician. He led the Conservative attack on Robert PEEL and the repeal of the Corn Laws. From 1846 to 1847 he was the leader of the Protectionist party in the Commons.

Bentley, Lord William Henry Cavendish (1774–1839), British administrator in India. He was Governor of Madras (1803–07) and in 1827 he became Governor-General of Bengal and then of India (until 1935). He introduced reforms, including the abolition of SUTTAS, and campaigned against the THUGS.

Bentley, Edmund Clerihew (1875–1956), British, journalist and writer, originator of the 'clerihew', a humorous biographical rhyme. He is best remembered for *Trevis Last Case* (1913), perhaps the first "modern" detective novel.

Bentley, John Francis (1839–1902), British church architect who designed in a Gothic style (English Gothic). His best-known work is the Roman Catholic cathedral in Westminster, London.

Bentley, Phyllis Eleanor (1894–), British author who wrote novels set in Yorkshire, including *The Spinner of the Years* (1928), *Freedom Farewell!* (1936) and *Manhood* (1941).

Bentley, Richard (1662–1742), English clergyman and Classical scholar, Master of Trinity College, Cambridge. He was a critic of classical texts and his most notable work was *Dissertation upon the Epistles of Phalaris* (1699).

Bentley, Walter Owen (1888–1971), car designer and manufacturer. He produced a series of stylish and successful sports and racing cars between 1921–31.

Benton, Thomas Hart (1889–1975), us regional painter, best known for his paintings of rural and small-town life and for his many murals, including those for the Whitney Museum of American Art and the New School for Social Research, New York. He taught Jackson POLLOCK.

Ben Yehudah, Eliezer (1858–1922), Hebrew scholar and Zionist, b. Lithuania. He modernized the Hebrew language and encouraged its adoption as the ordinary language of the people.

Benz, Karl (1844–1929), German pioneer of the internal combustion engine. After some success with an earlier two-stroke engine, Benz built a four-stroke in 1885 that was first applied to a tricycle, and achieved great success when installed in a four-wheel vehicle in 1893. Benz was the first to make and sell light, self-propelled vehicles built to a standardized pattern. Hundreds had been built by 1900. See also p.492.

Benzaldehyde, C_6H_5CHO , the simplest of the aromatic chemical compounds in which the aldehyde group, CHO , is attached directly to a benzene ring. It is a colourless liquid having a smell of bitter almonds, it is used as a chemical reagent, flavouring material and for making perfumes and dyes.

Benzedrine. See AMPHETAMINES.

Benzene, colourless, volatile, sweet-smelling inflammable liquid hydrocarbon (C_6H_6), a product of petroleum refining. Benzene is the simplest aromatic hydrocarbon, its molecule is a hexagonal ring of unsaturated carbon atoms (benzene ring). It is a raw material for manufacturing many organic chemicals and is widely used as a solvent. Properties: s.g. 0.879, m.p. 5.5°C (41.9°F); b.p. 80.1°C (176.2°F). See also BENZENE, pp.893, 896, 898.

Benzine, mixture of hydrocarbon compounds obtained as a fraction in the distillation of petroleum. It is an inflammable liquid used as a solvent, motor fuel and for dry cleaning. It should not be confused with BENZENE.

Benzoic acid, white, crystalline weak CARBOXYLIC ACID (C_6H_5COOH) made from toluene. It is used to make dye-stuffs and for preserving fruit juices. Properties: s.g. 1.266 (15°C); m.p. 122.4°C (252.3°F); b.p. 249.9°C (480.2°F).

Benzoin, resinous polymer obtained from asiatic trees or made synthetically. It is used in perfumery and as an antiseptic.

Benzopyrene, or **benzopyrene**, aromatic hydrocarbon, $C_{20}H_{12}$ found in coal tar and cigarette smoke. More than any other

compound it has been implicated as a cause of cancer, its carcinogenic properties having been established during laboratory tests.

Ben-zvi, Itzhak (1884–1963), Israeli statesman. After fleeing his native Russia, he settled in PALESTINE in 1907. Exiled from 1915 to 1918, he worked with DAVID BEN-GURION and other Zionist leaders to create the institutions basic to the formation of the state of Israel, including Histadrut, the leading labour organization, and the Mapai party, the leading political force. He was elected President of Israel in 1952, an office he held until his death. See also p.1782.

Beograd. See BELGRADE.

Beothuk, now-extinct people once inhabiting Newfoundland, perhaps the first American Indians to be seen by white explorers. They were noted for their custom of painting their bodies with red ochre. The few who survived colonization apparently crossed the Belle Isle Strait and intermixed with the Montagnais.

Beowulf (c.8th century), the oldest English epic poem and the most important example of ANGLICAN verse. It tells how the young prince, Beowulf, slays the monster Grendel and his vengeful mother. Fifty years later the aged Beowulf, now King of the Geats, in Sweden, fights and slays a fire-breathing dragon but dies of his wounds. The poem ends with Beowulf's funeral and a lament. The text was transcribed by more than one hand and the many explicitly Christian interpretations were probably added by monks. See also pp.1273, 1296, 1296, 1344.

Béranger, Pierre Jean de (1780–1837), French poet. His lively and satirical poems about everyday life and politics earned him general popularity but also resulted in short spells of imprisonment for his republican sympathies.

Bérard, Christian (1902–49), French neo-Romantic painter and set designer. He is best known for his designs for the BALLET RUSS DE MONTE CARLO company.

Berberia, genus of about 400 species of shrubs native to temperate regions, commonly called barberry. The bark and wood are yellow, and the golden flowers give way to sour blue berries. The sensitive stamens spring erect when touched. It is host for the plant disease rust. Family Berberidaceae.

Berbers, Caucasian Muslim people of N Africa and the Sahara Desert. Some are herdsmen and subsistence farmers, others, like the Tuareg, roam the desert with their great animal herds. The farmers live in independent villages, governed by meetings of male tribesmen. Their remarkably stable culture dates back to before 2400 BC and, after the Arab conquest of the 7th century, there were Berber empires in the 11th and 12th century. Berber languages are spoken by more than 10 million people.

Berceo, Gonzalo de (c.1195–c.1264), earliest-known Spanish poet. He was a BENEDICTINE monk and produced thousands of devotional verses. He also wrote *Milagros de Nuestra Señora*, a collection of poems about the Virgin Mary.

Berchet, Giovanni (1783–1851), Italian poet whose *Lettera semiseria di Grisostomo* (1816) was the leading expression of Italian Romanticism. He published his best-known poems such as *Le fantasie* (1829) in London, where he was a political exile (1821–48).

Berchtesgaden, town in the Bavarian Alps of West Germany, 16km (10 miles) S of Salzburg, Austria. Salt has been mined there since the 12th century. During ww2 Adolf HITLER had a villa there, which was bombed by the Allies in March 1945. Pop. 4,500.

Berchold, Count Leopold von (1863–1942), Austro-Hungarian statesman who, as Foreign Minister (1912–15), sent the ultimatum to Serbia in 1914 after the assassination of Archduke Francis Ferdinand at Sarajevo. This action precipitated ww1. See also pp.1666–1667, 1667.

Berdyaev, Nikolay (1874–1948), Russian theologian and religious philosopher. In his most influential book, *Freedom and the Spirit*, he put an anti-Marxist defence

of the traditional orthodoxy of the Russian church.

Berenzon, Bernard (1865-1959), US art critic, b. Lithuania. He was taken to the USA as a child. An authority on Italian RENAISSANCE art, he published a number of books on the subject. For most of his life he lived in Italy at his home, I Tatti, a gathering place for intellectuals.

Beresford, Jack (1899-1977), British oarsman. Principally a sculler, he competed in five Olympics (1920-36), winning three gold and two silver medals, including the 1920 single sculls. His Henley record is unparalleled, with wins in the five major events, including four in the Diamond Sculls and two in the "Grand" (eights).

Beresford, John (1738-1805), Irish statesman who served in Parliament from 1760 to 1802. As Commissioner of Revenue from 1770, he reformed fiscal collection. He was Prime Minister PITT's chief adviser on Irish matters, helping to bring about the union of Britain and Ireland.

Beresford, William Carr Beresford, Viscount (1768-1854), British general. His career included fighting in Egypt (1801-03) and capturing Cape Colony (1806). He successfully reorganized the Portuguese army in the PENINSULAR WAR.

Berg, Alban (1868-1935), Austrian composer. A student of Arnold Schoenberg, he composed most of his works in a complex, highly individualized style based on Schoenberg's 12-tone technique. His opera *Wozzeck* (1925) is regarded as one of the masterpieces of 20th-century opera. He also composed a violin concerto (1935) and began another opera *Lulu*, which was unfinished at his death. See also TWELVE-TONE MUSIC; WOZZECK, pp.1599, 1754.

Bergama. See PERGAMUM.

Bergamot, herb of the genus *Monarda*, including horsemint and Oswego tea, or the pear-shaped fruit of *Citrus bergamia*, grown in Italy for its oil, which is used in perfumery.

Berganza, Teresa (1936-), Spanish mezzo-soprano. She studied at the Madrid Conservatory, made her debut in Madrid in 1955 and appeared at the Metropolitan Opera in 1967.

Bergen, port in SW Norway on the N Atlantic Ocean; second-largest city in Norway and capital of Hordaland county. Founded in the 11th century, Bergen was Norway's chief city and the residence of several medieval kings. It is now an industrial and cultural centre with a university (1948), a national theatre (1850), several museums and a 13th-century Viking hall (*Haakonshallen*). Industries include shipbuilding, textiles, fish processing and electrical equipment. Pop. 214,000.

Bergius, Friedrich (1884-1949), German chemist who developed a method of treating coal with hydrogen, under high pressure, to produce oil. It became known as the Bergius process, and in 1931 Bergius shared the Nobel Prize in chemistry with Carl Bosch. He also developed a process for converting wood into sugar by hydrolysis.

Bergman, Ingmar (1918-), Swedish stage and film writer-director. With a versatile company of artists and a strong personal vision, he has created dark allegories, sex satires and complex studies of human relationships. His major films include *The Seventh Seal* (1956), *Wild Strawberries* (1957), *The Virgin Spring* (1960), *Persona* (1966), *Scenes from a Marriage* (1974) and *The Magic Flute* (1975). See also p.1761.

Bergman, Ingrid (1915-), Swedish actress whose acclaimed stage performances - *Joan of Lorraine* (1947), *Lilom* (1940) and *Anna Christie* (1941) - led to a long and varied film career in Hollywood. She won Academy Awards for *Gaslight* (1944), *Anastasia* (1956) and *Murder on the Orient Express* (1974).

Bergman, Torbern Olof (1735-1784), Swedish chemist who introduced improvements in chemical analysis, did important research into crystal structure and developed a table of chemical affinity.

Bergmann, Richard (1918-70), Anglo-Austrian table tennis player. Four

times world singles champion (1937, 1939, 1948, 1950), he won Swaythling Cup gold medals with both Austria (1936) and England (1953). He had a fierce competitive temperament, and resisted even the finest attacks with his acrobatic retrieving.

Bergschrund, deep wide crevasse or a series of parallel narrow crevasses in a glacier. It is produced by tension within the ice, often at the point where the moving ice separates from the immobile or apron ice. The formation is more common in old or retreating glaciers. See also pp.224, 224.

Bergson, Henri (1859-1941), French philosopher of evolution. He saw existence as a struggle between man's life-force (*élan vital*) and the material world. Man perceives the material through the use of his intellect whereas the life-force is perceived through intuition. Bergson received the Nobel Prize in literature in 1927. His works include *Time and Free Will* (1889) and the particularly significant *Creative Evolution* (1907).

Beria, Lavrenti Pavlovich (1899-1953), head of the Soviet secret police (NKVD). He took part in Stalin's purges and controlled internal security (1934-53). When Stalin died he was arrested and executed for treason. See also p.1692.

Beriberi, disease caused by a deficiency of vitamin B₁, or thiamine, and other vitamins in the diet. The symptoms include weakness of the limbs, general swelling of the body and gastric disorders. Therapeutic doses of B complex vitamins are the usual treatment. See also pp.1060-1061.

Bering, Vitus Jonasson (1680-1741), Danish navigator who discovered Alaska and gave his name to the Bering Strait and Bering Sea. In 1728 he sailed north from Kamchatka, NE Siberia, through the Bering Strait, but failed to sight land. In 1741 he again set out from Kamchatka towards N America. He sighted Alaska but was shipwrecked on what is now Bering Island.

Beringia, one of many land bridges formed in the last glacial period, when the sea-level was much lower than now. Beringia is thought to have linked Siberia with Alaska, enabling *Homo sapiens sapiens* to reach the Americas. See also p.118.

Bering Sea, northernmost reach of the Pacific Ocean, bounded by Siberia (NW) and Alaska (NE), and separated from the Pacific Ocean by the Aleutian Islands. It is connected to the Arctic Ocean by the Bering Strait. It is ice-bound in winter months. Exploration for Russia by the Danish navigator Vitus Bering in the early 18th century drew great attention to the fur-seal resource. International disagreement concerning the protection of seals resulted in the Bering Sea Controversy in 1886. Agreement was reached in 1893 and seal hunting was regulated. Area approx. 2,292,000 sq km (885,000 sq miles).

Bering Strait, channel N of the Bering Sea separating W Alaska from a Siberia (which were once joined) and connecting the Bering Sea to the Arctic Ocean. It was named after the Danish explorer Vitus BERING who sailed through it in 1728. Width: 85 km (53 miles) at narrowest point.

Berio, Luciano (1925-), Italian composer. He is in the forefront of avant-garde composers and uses electronic and "chance" effects in many of his works, which include *Nones* (1953), *Differences* (1958-60), *Visage* (1961) and *Opera* (1970).

Beriova, Svetlana (1932-), Soviet-born prima ballerina. She joined Sadlers Wells Ballet in the 1952 and has danced both classical and modern roles. One of the most distinguished of modern dancers, her *Ciselle* has won special praise.

Berkeley, Buby (1895-1977), US film choreographer, real name William Berkeley Enos. In 1930 he went to Hollywood to stage dance numbers for the musical *Whoopie*. He is best known for the elaborately planned and extravagant dance sequences in Warner Brothers musicals such as *42nd Street* (1933) and

the series *The Gold Diggers* (1933-37). **Berkeley, George** (1685-1753), Irish philosopher and churchman. He discussed the meaning of "existence" of objects in terms of their ability to be perceived by a mind. He became Bishop of Cloyne in 1734 and wrote extensively on philosophical matters. See also EMPIRICISM, MATERIALISM.

Berkeley, Sir Lennox Randal Francis (1903-), British composer. A pupil of Nadia Boulanger from 1927 to 1933, he was thus little affected by the prevailing influence of folk music on British composers. His *Serenade for Strings and Symphony* (1939-40) bear the mark of STRAVINSKY. His major choral work is the *Stabat Mater* (1946); he also wrote four operas. The most often performed work is the horn trio.

Berkeley, Miles Joseph (1803-89), British botanist who was a leading authority on fungi and plant disease. He recorded more than 6,000 species of fungi, and his *Outlines of British Fungology* (1860) was an important contribution to knowledge of the subject.

Berkelium, radioactive metallic element (Bk), one of the ACTINIDE ELEMENTS. It does not occur in nature and was first made (1949) by alpha particle bombardment of americium-241. Properties: at no. 97, at wt. 243.07, most stable isotope Bk²⁺ (half-life 1.4 × 10¹³ yr).

Berkshire, county in central England, almost entirely within the river basin of the Thames, which marks the northern border. The Berkshire Downs run across the county. It is a fertile area: dairy cattle and poultry are important and barley is the main crop. Industries include nuclear research. The county town is Reading. Area 1,255 sq km (485 sq miles). Pop. (1976) 659,000.

Berlage, Hendrik Petrus (1856-1934), Dutch architect who designed the Amsterdam Stock Exchange (1898-1903), establishing modern architecture in The Netherlands.

Berie, Milton (1908-), US comedian, real name Milton Berlinger. He began his career in music hall and later appeared on Broadway, in films and on television.

Berlin, Irving (1888-), US composer of musicals and more than 800 songs. His successful Broadway musicals include *Annie Get Your Gun* (1946) and *Call Me Madam* (1950). He also composed the scores for the films *Easter Parade* (1948) and *White Christmas* (1954). His most popular songs include *Alexander's Ragtime Band* and *White Christmas*.

Berlin, Sir Isaiah (1909-), British political scientist. He was the Chichele Professor of Social and Political Theory, Oxford (1957-67). From 1966 to 1975 he was President of Wolfson College, Oxford. His *The Hedgehog and the Fox* (1953) is a classic study of politics.

Berlin, city situated within East Germany and divided into two parts, East and West. East Berlin is the capital of the German Democratic Republic (East Germany) and West Berlin is a state and city belonging to the German Federal Republic (West Germany). Berlin rose to prominence in the 18th century as a manufacturing town and became the capital of the newly formed state of Germany in 1871. The city continued to expand and gain importance economically, industrially and culturally, reflecting Prussian pre-eminence in the newly formed state.

In the early 20th century Berlin was the second-largest city in Europe. Virtually destroyed at the end of WW2, the city was divided into four sectors, British, French, US and Soviet. On the formation of East Germany the Soviet sector became East Berlin and the rest West Berlin. East Berlin industries, chemicals, electrical goods and foodstuffs. Pop. (1976 est.) 1,098,000. West Berlin industries electrical goods, engineering and clothing. Pop. (1976) 2,024,000. See also p.2044.

Berlin airlift (1948-49), 15-month operation to supply BERLIN with food and other basic necessities after the USSR closed all road and rail links between the city and West Germany. Britain and the USA flew more than 270,000 flights, delivering

cargo and transporting Berlin's manufactured goods to markets elsewhere. See also p.1687.

Berlin, Congress of (1878), meeting of European powers to revise the Treaty of SAN STEFANO by which Russia had ended the Russo-Turkish war. At the Congress, which was presided over by BISMARCK, Austria-Hungary was given military occupation of BOSNIA-HERZEGOVINA (which had gained independence in the earlier treaty). Bulgaria was divided and Russia's naval expansion limited. See also pp.1560-1561, 1664.

Berlin Wall, heavily fortified and defended wall 49 km (29 miles) long dividing East and West BERLIN. It was built in 1961 by the East Germans to stop a continuing flood of refugees to West Germany. Limited passage across the frontier was again permitted after 1963. See also p.1695.

Berliner, Emilie (1851-1929), US engineer, b. Germany. Among his many inventions were a gramophone (patented in 1887) - which used a flat, spiralled disc record - and a light, rotating-cylinder internal-combustion engine, used later in aeroplanes. See also p.642.

Berlioz, Louis-Hector (1803-69), pre-eminent French Romantic composer noted for innovative, highly progressive orchestral writing, the use of large forces and the emphasis he laid on orchestral colour. His best-known works include the *Symphonie Fantastique* (1830), *Harold in Italy* for viola and orchestra (1834), the operas *Benvenuto Cellini* (1838) and *The Trojans* (1855-58), and the *Requiem* (1837). He also wrote an extremely influential treatise on orchestration (1844). See also ROMANTIC MUSIC; p.1582.

Bernardo, Bartolomé (fl.c. 1474-95), Spanish painter and designer of stained glass said to have introduced oil painting to Spain. His most famous work is in Barcelona Cathedral.

Bermuda, self-governing British colony, formerly Somerset Islands, in the W Atlantic Ocean; consists of approx. 300 islands. The capital is Hamilton on Bermuda Island. Area 52 sq km (20 sq miles). Pop. (1975 est.) 56,000. See p.1988.

Bern (Berne), capital of SWITZERLAND on the River Aare, 95 km (59 miles) SW of Zurich; capital of Bern canton. Founded in 1191 as a military post, it became part of the Swiss Confederation in 1353. Bern was occupied by French troops during the French Revolutionary Wars (1798). It is noted for its Gothic architecture. Industries: precision instruments, chemicals, tourism. Pop. (1976 est.) 162,405. See also p.2147.

Bernadette of Lourdes, Saint (1844-79), full name Marie Bernarde Soubirous. The daughter of a poor French miller, she began to see visions of the Virgin Mary in 1858, who revealed to her the healing shrine of LOURDES. In 1866 she became a member of the Sisters of Charity at Nevers where, in declining health, she spent her last days. See also p.1104.

Bernadotte, Count Folke (1895-1948), Swedish diplomat. In May 1948, as head of the Swedish Red Cross, he was appointed UN mediator to negotiate a truce between the newly created state of Israel and the Arab countries. On 17 Sept., while negotiating a permanent armistice, he was killed by Israeli partisans in Jerusalem.

Bernadotte, Jean Baptiste Jules, Prince (1763-1844), French general and King of Sweden and Norway (1818-44). He was NAPOLEON's deputy in the Italian Campaign of 1797. In 1810 he accepted the title of Crown Prince of Sweden. He finally broke with Napoleon in 1813 at the Battle of Leipzig and thereafter devoted himself entirely to the affairs of Sweden. See also CHARLES XIV, JOHN.

Bernal, John Desmond (1901-71), Irish physicist, remembered for his work in the field of X-ray crystallography, he used the technique to study atomic structures. He was professor of physics, and then of crystallography, at London University between 1938 and 1968.

Bernanos, Georges (1888-1948), French novelist and political essayist. His novels

Bernard, Claude

Sous le Soleil de Satan (1926) and *Diary of a Country Priest* (1937) reflect his ardent Roman Catholicism. His political writings denounced FRANCO's régime in Spain and the Vichy government in France.

Bernard, Claude (1813-78), French physiologist. He defined the role of the PANCREAS in digestion, the glycogenic function of the LIVER and the regulation of blood supply by vasomotor nerves.

Bernard, Émile (1868-1941), French painter. He experimented with POINTILISM and claimed to have developed CLOISONNISM, the style used by GAUGUIN. Bernard was a leader of the SYNTHETIST movement in painting. He was a friend of van GOGH, and of CÉZANNE, who wrote him the famous letter about treating nature in painting "by means of the cylinder, the sphere and the cone".

Bernard, Jean-Jacques (1888-1972), French playwright. *Marine* (1922) is a fine example of his work and his fascination for the drama of the unexpected in which the dialogue does not convey the real feelings of the characters.

Bernard de Ventadour (d.c.1195), Provençal troubadour. His work is executed delicately and simply and with powerful emotion; 45 short love lyrics and 19 tunes still survive. He is known to have travelled in England in 1152-55.

Bernardin de Saint-Pierre, Jacques-Henri (1737-1814), French author who spent three years (1768-71) in Mauritius (then known as Île de France), after which he wrote *Voyage à l'île de France*. An early contributor to the French Romantic movement, his best-known work is *Paul et Virginie* (1788).

Bernard of Clairvaux, Saint (1090-1153), French mystic and religious leader. He was abbot of the Cistercian monastery of Clairvaux from 1115 until his death, and steadfastly refused all offers of higher positions. Under his direction nearly 100 new monasteries were founded. His reputation for miraculous cures made him a renowned and powerful religious influence in France. In 1130 his views were sought during a contested papal election, and afterwards he became an adviser to several popes. He actively fought heresy and advocated the Second Crusade in 1147. Bernard's devotion to the Virgin Mary and the Infant Christ greatly influenced the future of the Roman Catholic Church. He was canonized in 1174.

Bernard of Cluny, Benedictine monk at the Abbey of Cluny, in France, during the 12th century. He wrote many sermons, but his best-known work is the long poem *De Contemptu Mundi*, which criticized some aspects of contemporary monasticism. Many hymns have been based on the poem, including *Jerusalem the Golden* by John Neale.

Bernard of Menthon, Saint (923-1008), Italian Catholic priest who c.962 founded hospices on the alpine peaks Great and Little St Bernard. He is the patron saint of Alpine climbers.

Bern Convention (1887), agreement between various countries (but excluding the USA) that the copyright of a printed work in one of the countries should be effective in any of the others. The USA did not enter into such an agreement until the Universal Copyright Convention of 1952.

Berne. See **BERN**.

Bernese mountain dog, Swiss draught dog (working group) taken to Switzerland 2,000 years ago by Roman soldiers. It has a flat head with a strong muzzle and hanging lips, and a thick, medium-length tail. Its long silky coat is black with brown and white markings. Average size 58.5-70cm (23-27.5in), 23-32kg (50-70lb).

Bernhard of Lippe-Biesterfeld, Prince (1911-), prince consort of The Netherlands, who married Juliana of Orange in 1937 and became prince consort when she became queen in 1948. Interested in animal conservation, he has helped ensure survival of endangered species.

Bernhardt, Sarah (1844-1923), b. Rosine Bernard, French actress of legendary international stature, known as the greatest tragedienne of her day. Her superb portrayals in *King Lear* (1867), *Ruy Blas* (1872), *Phèdre* (1874) and

Hernani (1877) earned her the title "Divine Sarah". She also toured Europe and the USA and managed the Théâtre Sarah Bernhardt in Paris (1899), where she played Hamlet.

Bernicia, Anglo-Saxon kingdom between the Tyne and the Forth, founded by King Ida in the mid-6th century and later joined with DEIRA to form NORTHUMBRIA.

Bernini, Gianlorenzo (1598-1680), Italian architect and sculptor, one of the fathers of Roman BAROQUE. By the age of 22 he had started Rome with his sculpture, eg such psychological portrait studies as the *Vigevano* bust (1617-18) and the *Montoya* (c.1621). He was also a skilful painter. His architecture was splendid in conception, lavish in use of marble and dramatic lighting, and often grand in scale. As the favourite of several popes, he was given unparalleled design opportunities. His large-scale commissions in and around St Peter's include the baldachino (canopy) above the high altar (1633), and the Barberini Palace (1638), the Cathedra Petri (1657-66) and (from 1656 onwards) the great elliptical piazza and enclosing colonnades in front of St Peter's. Other notable works are the fountain in the Piazza Novana (1647-52) and Sant'Andrea del Quirinale (1658-70), which he regarded as his most perfect creation. Bernini, more than any other architect, gave Rome its Baroque character. See also pp 1438-1439.

Bernoulli, Daniel (1700-82), Swiss mathematician and physicist, member of a famous family of mathematicians. His work on hydrodynamics demonstrated that fluid pressure decreases as the velocity of fluid flow increases, this fact has become known as Bernoulli's principle. Bernoulli's equation states that $p + \frac{1}{2}\rho v^2 + \rho gy = \text{constant}$, where p is the pressure, ρ the density, v the velocity, g the acceleration due to gravity and y is the height of the fluid at any point. This equation makes it possible to measure the pressure at two points, as with a MANOMETER or Pitot tube. Bernoulli also attempted the first statement of the KINETIC THEORY of gases. See also p.831.

Bernstein, Leonard (1918-), US conductor, composer and pianist. He was a conductor with the New York Philharmonic (1957-58) and then musical director (1958-69), winning large audiences and world fame mainly through recordings. His compositions include three symphonies, the oratorio *Kaddish* (1963), the *Chichester Psalms* (1965) and the *Mass* (1971), ballets, and music for the shows *Candide* (1956) and *West Side Story* (1957).

Berrigan, Daniel (1921-) and **Philip Francis** (1923-), US political activists dedicated to the peace and civil rights movements. Daniel, a Jesuit, and his brother Philip, a Roman Catholic priest, gained prominence in 1968 by burning government files in protest against the VIETNAM WAR.

Berruete, Alonso (c.1488-1561), Spanish sculptor. He studied in Italy (1504-17) and became the foremost Spanish sculptor, famous for figures in the MANNERIST style.

Berry, small, fleshy fruit containing many seeds. It consists of an outer skin, fleshy middle and an inner membrane enclosing the seeds. Often juicy and edible, a true berry develops from a flower ovary with petals attached underneath (superior ovary). Berries include TOMATO, GRAPE, BANANA and red PEPPER (CAPSICUM). CITRUS fruits are also modified berries. False berries are fruits (such as the cucumber) formed from the matured ovary wall and other flower parts, often the floral tube. See also p.710.

Berry, Chuck (1926-), US rock and blues singer, real name Charles Edward Anderson Berry. A ROCK-AND-ROLL star with hits such as *Maybellene* (1955), *Roll over Beethoven* (1956) and *Sweet Little Sixteen* (1958), he sang music that voiced the frustration of 1950s youth, and many of his songs were subsequently sung by the ROLLING STONES and the BEATLES. He later concentrated on blues.

Berry, Jean de France, Duc de (1340-

1416), French prince and patron of the arts. During the HUNDRED YEARS WAR his heavy taxation to support the wars led to a peasant revolt in 1381. His art treasures included tapestries and illuminated manuscripts. See also pp 1352, 1384.

Berserker, name given to Scandinavian warriors dedicated to the god ODIN, so called because they wore bearskin shirts into battle rather than armour, which contributed to werewolf legends in Europe. Berserkers drove themselves into a martial frenzy and fought ferociously.

Berthelot, Pierre Eugène Marcelin (1827-1907), French chemist. By making in the laboratory some organic compounds, including ethyl alcohol, methyl alcohol, benzene and methane, he showed that the distinction between organic compounds as substances formed only in living things and inorganic compounds was wrong. In the 1860s he did important work in THERMOCHEMISTRY. In 1895 he became Foreign Secretary of France.

Berthier, Louis Alexandre, Prince de Wagram (1753-1815), NAPOLEON's trusted assistant and chief of staff of the Grande Armée, sovereign prince of Neuchâtel. He fought during the American and French revolutions, Napoleon's first reign (when he acquired his titles), and served Louis XVIII until Napoleon's return from Elba.

Berthold (c.1210-72), German FRANCISCAN preacher. He preached throughout Germany, and travelled extensively in Europe. His sermons are a valuable record of aspects of medieval life.

Berthollet, Claude Louis, Comte (1749-1822), French chemist. He discovered the structure of ammonium, showed the bleaching ability of chlorine and predicted the law of mass action, although his views were ignored on this subject.

Bertillon measurement, system of measuring human physical characteristics (eg, length of the middle finger), evolved by Alphonse Bertillon (1853-1914) for criminal identification and now used extensively by physical anthropologists. See also ANTHROPOMETRY, p.648.

Bertolucci, Bernardo (1940-), Italian director. He began working in films as an assistant to director Pier Pasolini in *Accattone* (1961). The first film he directed on his own was *La commare secca* (1962). Others included *La Strada del ragna* (1970) and the controversial *Last Tango in Paris* (1972).

Bertrand, Henri-Gratien, Comte (1773-1844), French general and friend of NAPOLEON Bonaparte. He joined the army as an engineer and met Napoleon in Italy in 1797. In 1804 he became Napoleon's aide-de-camp and accompanied him into exile on Elba and St Helena (1814-15, 1815-21).

Bertrand de Born (c.1140-c.1214), French troubadour and soldier whose poems described (and encouraged) the rebelliousness of the sons of Henry II of England. DANTE, in the *Inferno*, refers to Bertrand's role in the quarrels.

Berwick, James FitzJames, Duke of (1670-1734), illegitimate son of James II of England, was a soldier in the French army. He fought against the Hungarians and Ottoman Turks and in 1706 was made a marshal of France. He fought for Philip V of Spain in the War of the Spanish Succession and captured Barcelona (1714). He was killed at Philippsburg while commanding a French army during the War of the Polish Succession.

Berwickshire, former county in SE Scotland (now part of the BORDERES Region) made up of the Lammermuir Hills (NW), the hilly Lauderdales (W) and the fertile Merse region (SE). Sheep graze on the hills and, on the lower land, farmers grow cereal crops, sugar-beet and potatoes. Fishing is a major industry. The main rivers are the Blackadder, Eye, Whiteadder and Tweed. The administrative centre is Duns Area, 1,184.50 km (457.50 miles). Pop (1971) 20,750.

Beryl, mineral, beryllium silicate. Its crystals are usually hexagonal prisms of the hexagonal system. Gemstone varieties are aquamarine (pale blue-green) from

Brazil, emerald (deep green) from Colombia, and Morganite (pink) from Madagascar. Cut stones have little brilliance, but are valued for their intense colour. Hardness 8, s.g. 2.6-2.8. See also pp.256, 260-261, 261.

Beryllium, strong, light silver-grey metal-lic ALKALINE-EARTH ELEMENT (Be), first isolated in 1828 by Friedrich Wöhler. It occurs in many minerals including aquamarine, emerald and morganite (all forms of BERYL) and is used in alloys that combine lightness with rigidity. Beryllium and its oxide are also used as moderators in nuclear reactors. Properties: at.no. 4; at.wt. 9.01218; s.g. 1.85 (20°C), m.p. 2845°C (2545°F) b.p. 2970°C (5378°F); most common isotope Be⁹ (100%). See also ALKALINE-EARTH ELEMENTS, p.890.

Berzelius, Baron Jöns Jakob (1779-1848), Swedish chemist, one of the founders of modern chemistry. His accomplishments include the discovery of the elements cerium, selenium and thorium, the isolation of the elements silicon, zirconium and titanium, the determination of atomic weights, and the devising of a modern system of chemical symbols. He prepared the first table of atomic weights and he contributed to the founding of the theory of radicals. See also PERIODIC TABLE.

Bea, god of ancient Egypt, in the form of a large-headed dwarf. A god of childbirth and children, he also gave protection from evil spirits.

Beant, Annie (1847-1933), British theosophist and social reformer. A supporter of birth control and free thought, she joined the Theosophical Society in 1889, serving as its president from 1907 until her death. She lived for many years in India, where she established in 1898 the Central Hindu College at Benares. She was later active in the movement for Indian self-government and was president of the Indian National Congress in 1917. See also THEOSOPIHY.

Beant, Sir Walter (1836-1901), British author. His early works, written with James Rice, included the Romantic novels *The Golden Butterfly* (1876) and *The Seamy Side* (1881). His later works commented on contemporary social problems, such as *All Sorts and Conditions of Men* (1882) and *Children of Gibeon* (1886).

Bessarabia, historical region in SW European USSR, now in the Moldavian Republic (Moldavskaja SSR). The capital is Kishin'ov. It is a fertile agricultural region and produces grain, tobacco, sugar-beet and fruit. Greek colonists settled the Black Sea coast in the 7th century BC. By the 7th century Slavs had settled in the region and the Kievan Russians held control during the 9th-11th centuries. It was ceded to Russia by the Turks (1812) and made an autonomous republic in 1917. It renounced Soviet ties in 1918 and declared itself part of Romania, with which it has certain ethnic affinities. After WWI it was annexed to the USSR.

Bessel, Friedrich Wilhelm (1784-1846), German astronomer and mathematician. He devised a system for analysing and reducing astronomical observations, made the first accepted measurements of the distance of a star (61 Cygni) and carried out observations which led him to make predictions (since confirmed) that Sirius and Procyon are binary stars. He devised Bessel functions, a type of mathematical function named after him, after observing perturbations of the planets. See also pp.915, 917.

Bessemer process, first method for mass-producing steel, patented by the British engineer Henry Bessemer in 1856. In a Bessemer converter, cast iron is converted into steel by blowing air through the molten iron until all carbon and silicon are burned out. A little carbon is then added along with other metals to give the desired properties to the steel. The converter is tilted to pour the molten steel. Sir Henry Bessemer (1813-98), son of a French engineer, trained as a designer. He not only made many contributions to iron and steel manufacture, but also was a prolific inventor and improver in many other fields, eg graphite pencils, telephones and

typesetting. See also pp 1397, 1564-1565, 1638-1639

Bessette, Gérard (1920-), Canadian author. A university professor, his novels about French-Canadian culture include *La bagarre* (1958), *Les pédagogues* (1961), and *L'incubation* (1965, tr. 1967, *Incubation*).

Best, Charles Herbert (1899-), Canadian physiologist. He and F. G. BANTING discovered INSULIN in 1921. From 1929-65 he was head of the department of physiology at the University of Toronto and chief of the Banting-Best department of medical research there after Banting's death in 1941. In collaboration with N. B. Taylor, he wrote *The Physiological Basis of Medical Practice* (1936).

Best, George (1946-), British footballer, b. Northern Ireland. He played for Manchester United and Fulham in the English League and for Northern Ireland internationally. He played his first match in the first division at the age of 17. He was a forward noted for his speed, ball control and goal-scoring ability. In 1968 he was the European footballer of the year. In 1977 he began a new football career in the USA.

See GAMBLING

Beta Centauri, Agena, or Hadar, bluish-white giant star in the constellation of CENTAURUS. It has a 9th-magnitude companion. Characteristics: apparent mag. 0.61, absolute mag. 4.3; spectral type B1, distance 391 light years. See also pp 978, 1015, 1020.

Beta Crucis, or Mimosa, blue-white giant star in the constellation of CRUX (the SOUTHERN CROSS). Characteristics: apparent mag. 1.3; absolute mag. 4.7, spectral type B0, distance 489 light years. See also pp 978, 1014, 1020.

Beta-rays, or beta particles, energetic electrons emitted spontaneously by certain radioactive isotopes. Beta decay results from the breakdown of a neutron to a proton, electron and antineutrino. See also RADIOACTIVITY, p.812.

Betatron, type of particle ACCELERATOR consisting of a hollow, evacuated circular ring in which ELECTRONS are confined and accelerated by a rapidly changing magnetic field. When they reach very high energies, of the order of 350 MeV, they are focused magnetically to strike a target. The output beam can be either an electron beam or secondarily-produced X-rays. See also p.819.

Betelgeuse, or Alpha Orionis, red supergiant star and the second-brightest in the constellation of ORION. It is a pulsating variable whose diameter fluctuates between 300 and 400 times that of the Sun. Characteristics: apparent mag. 0.85 (mean); absolute mag. -5.5 (mean); spectral type M2, distance 500 light-years. See also pp 978, 993, 994, 1011, 1018.

Betel palm, or areca, tall slender PALM tree native to the Philippines, planted throughout SE Asia and the Pacific islands. It has small feather-shaped leaves. Its seeds (betel nuts) are chewed as a stimulant or narcotic, they reddened the saliva and gums. Height to 15m (50ft). Family Palmaceae, species *Areca catechu*.

Bethany, (Al-'Azzariyah), village in Jordan, 3km (2 miles) N of Jerusalem, at foot of the Mt of Olives. It is the biblical home of Mary, Martha and Lazarus, and the traditional site of Christ's Ascension and the raising of Lazarus from the dead.

Bethe, Hans Albrecht (1906-), US nuclear physicist, b. Germany. Educated in Germany, he left with the advent of Hitler, going first to Britain and then to the USA. He worked on stellar energy processes and helped to develop the ATOMIC BOMB. He is noted for his theories on atomic properties and was awarded the 1967 Nobel Prize in physics for his work on the origin of solar and stellar energy.

Bethell, Mary Ursula (1874-1945), New Zealand poet. Her most important collection, *From a Garden in the Antipodes* (1929), shows her realism and fascination with religious themes.

Bethlehem (Bayt Lahm), town in Israeli-occupied Jordan (since 1967),

8km (5 miles) SSW of Jerusalem (Yerushalayim). The traditional birthplace of JESUS CHRIST, it was the early home of King David and the site of the biblical Massacre of the Innocents. The Church of the Nativity, built by Constantine in AD 330, is the oldest Christian church still in use. Under the rule of the Ottoman Empire from 1571 until 1916, it was part of the British Palestine mandate until 1948 when it became part of Jordan. Tourism is the main industry. Pop. 16,300.

Bethmann-Hollweg, Theobald von (1856-1921), German statesman. He succeeded AULOW as Chancellor of the German Empire (1909-17). In 1914 he referred to the treaty ensuring Belgian neutrality as a "scrap of paper". Hindenburg and Ludendorff forced him to resign (1917) after he advocated a restriction of submarine warfare and an end to the war. See also p.1666.

Beti, Mongo (1932-), pen-name of the African novelist Alexandre Biyidi. An important figure in the NEGRO movement, he explored modern African life and the effects of colonialism, often through satire. Among his works are *The Poor Christ of Bomba* (1956) and *Mission to Kala* (1958).

Beijerman, Sir John (1906-), English poet. He became Poet Laureate in 1972. His verse, traditional in form, considers the details and oddities of English domestic life. *Summoned by Bells* (1960) is a verse autobiography of his early years. He is also a noted authority on Victorian and Edwardian architecture. Recent books include *A Nip in the Air* (1974) and *A Few Late Chrysanthemums* (1975).

Betony, common name for colourful herbs of the MINT family (Labiatae), including *Stachys grandiflora* and *S. officinalis*. Flowers of this perennial from Asia Minor are white or purple and arranged in showy clusters. Betony grows in damp, shady places.

Bettelheim, Bruno (1903-), US psychologist, b. Vienna. He applied the psychoanalytic approach to emotionally disturbed children, detailing the roles that parents play in the development of their children's personalities. His books include *Love is not Enough* (1950) and *The Empty Fortress* (1967).

Betterton, Thomas (c. 1635-1710), English actor and theatre manager. He was one of the finest actors of the RESTORATION period, his most notable roles being Hamlet and Sir Toby Belch. He also successfully adapted plays and managed his own theatre company in what is now Her Majesty's Theatre, London.

Berti, Ugo (1892-1953), Italian poet and dramatist. He wrote collections of verse including *Il re penseroso* (1922) and many plays including *La padrona* (1927) and *Corruzione al palazzo di giustizia* (1944).

Betting. See GAMBLING

Betty, William Henry West (1791-1874), English actor, known as the Young Roscius. In 1804 he appeared at Covent Garden, London, and for a season had enormous success as a child prodigy, acting in Shakespeare's main tragic roles. He retired in 1808.

BeV, abbreviation for US billion electron volts, a unit of energy equal to a thousand million (10⁹) electron volts.

Bevan, Aneurin (1897-1960), British socialist politician. An active trade unionist, he became a Labour MP in 1929 and gradually assumed leadership of the Labour Party left wing, whose views he expressed in *Tribune* magazine, which he edited (1940-45). He became Minister of Health in 1945 and introduced the National Health Service in 1946. His book, *In Place of Fear*, was published in 1952.

Bevan, Brian (1925-) Australian rugby league player. A winger who forsook his native land to join Warrington, he became the most prolific try-scorer of his time. The "galloping ghost" scored 834 tries, including 72 in the 1952-53 season and seven in a match twice.

Bevatron, particle ACCELERATOR, the proton synchrotron, in which PROTONS are accelerated magnetically to high energies in a circular path, then focused on a target

for "atom smashing" experiments. See also p.819.

Beveridge, William, 1st Baron (1879-1963), British academic and social reformer. He was sub-warden of Toynbee Hall (1903-05) and Director of the Labour Exchanges (1909-16). He was Director of the London School of Economics (1919-37) and Master of University College, Oxford (1937-45). As Chairman of the Committee on Social Insurance and Allied Services (1941-42), he wrote the report which was the basis for the creation of the welfare state after 1945. See also pp 1693, 1677.

Beverley, market town in N Humberside, NE England, 11km (7 miles) N of Hull. It was an important centre of the medieval cloth trade, and has a 13th-century minster. Industries: tanning, agricultural machinery. Pop. (1971 prelim.) 17,100.

Beverly Hills, city on the slopes of the Santa Monica Mts., California, USA, completely surrounded by the city of Los Angeles. It is a fashionable residential area and the home of many film and television stars. Pop. (1970) 33,400.

Bevin, Ernest (1881-1951), British trade unionist and Labour politician. Organizer of the Dockers' Union (1910-21) and General Secretary of the Transport and General Workers' Union (1922-40). Bevin planned the GENERAL STRIKE (1926). He was Minister of Labour and National Service (1940-45), and as Foreign Secretary (1945-51) he assisted in Europe's economic recovery and helped to establish NATO. See also p.1686.

Bewick, Thomas (1753-1828), British wood engraver and illustrator. He revived a method of white-line engraving on wood which restored wood engraving to popularity. His best illustrations were published in natural history books (1784-1804).

Bayazid, name of two Ottoman sultans. Bayazid I (c. 1347-1403), who was sultan 1389-1402, besieged Constantinople for several years but suffered defeat by TAMERLANE at Ankara in 1402, who took him prisoner the same year. Bayazid II (1447-1512), who ruled 1481-1512, fought an intermittent war with the Mamelukes (1485-91) and established the Ottomans as a major naval power, but failed to defeat the SAFAVIDS of Persia. He abdicated in favour of his son Selim.

Beyle, Marie Henri, real name of the French author STENDHAL.

Beyond Good and Evil. See NIETZSCHE

Beirut. See BEIRUT

Beza (de Beze), Theodore de (1519-1605), French theologian. In 1548 he joined CALVIN's Protestant church in GENEVA, acting as Calvin's assistant. He succeeded Calvin in 1564 as leader of the Genevan theocratic community. His editions of the New Testament influenced English versions. See also p.1403.

Bezique, card game for two or more players. Most popular is the two-handed version played with 64 cards from two packs. The game was developed in France and England in the 1860s. The cards in each suit rank ace, 10, king, queen, jack, nine, eight, seven (the twos to the sixes are not used). Each player is dealt eight cards, another card is turned up to establish trumps. A player other than the dealer leads and the others follow. The highest card of the suit led or trump wins the trick. More cards are drawn from the deck and the game continues until all cards have been played.

Bhagavad Gita, "The Song of the Lord", a popular episode in the sixth book of the Hindu epic, the *Mahabharata*. Probably composed shortly before the Christian era, it presents Krishna as the Supreme God who, if worshipped, will save men. The Gita begins with a battle between two related but hostile clans. The archer Arjuna, seeing his relatives in the opposing army, hesitates until Krishna reminds him of his duty to fight. Devotion and faith towards the Lord is the central theme. See also p.1916.

Bhaktapur (Bhadgaon), city in central Nepal, in the Himalayan Mts. It is a Hindu pilgrimage centre with many fine temples, including that of Changu Narayan, a fine

Bethlehem, the Church of the Nativity in the Jordan town now under Israeli occupation

Bethmann-Hollweg, the author of the cynical phrase 'fighting for a scrap of paper'

Sir John Betjeman, who is active in preserving buildings of architectural interest

Aneurin Bevan, who was the architect of the British National Health Service

Vinoba Bhave, the Indian social reformer who championed the cause of the landless poor

Biceps, the muscles with which we associate the idea of manly "strength"

Bichirs live in marshy areas and take in the air they need at the surface of the water

Bicycle: the versatile vehicle of self-transportation and sport

example of Newar religious architecture Pop (1968 est.) 35,500

Bharal, also called blue sheep, is a sheep-like animal that lives in the Himalayas and mountains of Mongolia. It is intermediate between goats and true wild sheep. The pygmy blue sheep was first discovered in 1934. Species *Pseudois nayaur*. See also p.320.

Bharat, Sanskrit name for INDIA, derived from Bhārata, a legendary monarch. See also p.2061

Bhartrhari (c.570-651), Hindu philosopher and poet of noble birth. He is the author of the *Vakyapadiya*, an important study of the philosophy of language. His life was spent struggling against his taste for luxurious living, until he finally became a yogi.

Bhave, Acharya Vinoba (1895-), Indian social reformer, selected by GANDHI to lead the independence movement in 1940. In 1951 he began walking tours urging landowners to give their land to the poor. He walked thousands of miles and his movement (Bhoodan Yagna) obtained 1,700,000ha (4,250,000 acres) of land by 1967.

Bhopal, city in central India, capital of Madhya Pradesh state. Founded in 1728, it is noted for its terraced lakes and ancient mosques. It is a trade centre with food processing, electrical engineering and cotton textile industries. Pop (1970 est.) 326,000.

Bhubaneswar, city in central India, capital of Orissa state. It is famous for its numerous shrines and temples displaying many aspects of Hindu and Buddhist art and architecture. It is an administrative centre and has rolling mills and wire-cable works. Pop 105,500.

Bhumibol (or Phumiphon) Adulyadej (1927-), King of Thailand (1946-). He succeeded to the throne in 1946 but ruled with a regent until 1950 when he became King in his own right, as Rama IX. **Bhutan**, kingdom in the Himalayan Mountains, on the NE border of India and the S border of China. The capital is Thimbu. The economy is based on agriculture, with some craft industries such as metal and leather work. Area 47,000sq km (18,147sq miles). Pop (1976 est.) 1,202,000. See p.1988.

Bhutto, Zulfikar Ali (1928-1979), Pakistani political leader. As leader of the Pakistan People's Party since 1967, he refused to co-operate with the East Pakistani AWAMI LEAGUE, which had won a majority in the Legislature in 1970. After BANGLADESH (East Pakistan) gained independence in the ensuing civil war, Bhutto became President in 1971 of what remained of Pakistan. Under the 1973 Constitution he became Prime Minister. Disorderly elections early in 1977 prompted a military coup. Bhutto was imprisoned and finally hanged on a murder charge. See also p.2116.

Biafra, former state in W Africa, formed from the eastern region of Nigeria, now divided into East-Central, South-Eastern and River states. It was established under Colonel Odumegwu Ojukwu in May 1967, when the Ibos attempted to secede from Nigeria. All economic aid was cut off by Nigeria and a bitter civil war followed in which Biafra lost territory, oil fields, (its main source of income) and many lives. The war ended in January 1970, when Biafra surrendered and was re-incorporated into Nigeria. See also p.211.

Bialik, Hayyim Nahman (1873-1934), Hebrew poet, teacher and translator who worked in the modern Hebrew language to express the feelings of the Jewish people. Born in the Ukraine, he later travelled to Germany, Vienna and finally to Tel Aviv.

Bialystok, city in NE Poland, approx 160km (100 miles) NE of Warsaw (Warsaw), capital of Bialystok province. It is an important transport and industrial centre. Industries include textiles, precision instruments, metal goods and food processing. Pop. (1974) 187,100.

Biard, Pierre (1567-1622), French Jesuit missionary in Canada. He accompanied Père Masse to Acadia in 1611. His colony at St Sauveur was destroyed by Samuel

Argall, acting on a commission from the Governor of Virginia.

Biatlon, sport involving cross-country skiing and target shooting which originated in Scandinavia. Each competitor is required to ski 20km (12.4 miles), stopping four times during the race to fire at fixed targets with a rifle. A miss results in the addition of a time penalty. The competitor with the lowest corrected time wins the contest.

Bibaud, Michel (1782-1857), French-Canadian author. A journalist and editor, he published the first book of poems by a French-Canadian (1830) and wrote a two-volume history of Canada (1837, 1844).

Bibesco, Princess Marthe Lucie (1887-1973), member of the Romanian Royal family (wife of Prince George Valentin Bibesco), who wrote novels under the pen-name Lucile Decaux. She also wrote, in French and under her real name, *The Eight Paradises* (1905), an account of her Asian travels. During war she ran a Red Cross hospital.

Bibiena, Galli da, family of Italian theatre architects and designers: Ferdinando (1657-1743) and Francesco (1659-1739). Ferdinando's son Giuseppe (1696-1757) and his grandson Carlo (1728-87) also produced work in this field in the Baroque style.

Bible, sacred scriptures of Judaism and Christianity. In part a history of the tribes of Israel, it is regarded as a source of divine revelation and of prescriptions and prohibitions for moral living. The OLD TESTAMENT, excluding the APOCRYPHA, is accepted as sacred by both Jews and Christians. The Roman Catholic and Eastern Orthodox Churches accept parts of the Apocrypha as sacred, while Jews and Protestants do not. The NEW TESTAMENT is accepted as sacred only by Christians.

Books of the Bible

Old Testament		
Genesis	2 Chronicles	Daniel
Exodus	Ezra	Hosea
Leviticus	Nehemiah	Joel
Numbers	Esther	Amos
Deuteronomy	Job	Obadiah
Joshua	Psalms	Jonah
Judges	Proverbs	Micha
Ruth	Ecclesiastes	Nahum
1 Samuel	3 of Solomon	Habakkuk
2 Samuel	Isaiah	Zephaniah
1 Kings	Jeremiah	Haggai
2 Kings	Lamentations	Zachariah
1 Chronicles	Ezekiel	Malachi
New Testament		
Matthew	Ephesians	Hebrews
Mark	Philippians	James
Luke	Colossians	1 Peter
John	1 Thessalonians	2 Peter
Acts	2 Thessalonians	1 John
Romans	1 Timothy	2 John
1 Corinthians	2 Timothy	3 John
2 Corinthians	Titus	Jude
Galatians	Philemon	Revelation

Bible societies, Protestant organizations for spreading knowledge of the Bible. An early example was the Bible Society founded in England in 1780 to supply free Bibles to soldiers and sailors. The British and Foreign Bible Society was formed in London in 1804.

Bibliography, system of listing books and articles, described and arranged for easy reference. The Swiss naturalist Konrad von Gesner (1516-65) is credited with the first modern bibliography. *Universal Bibliography* (1545), a listing of European writers and their works in Latin, Greek and Hebrew. For a bibliography of *The Joy of Knowledge Encyclopaedia*, see end of *Fact Index L-Z*.

Bibliothèque Nationale, national library of France, in Paris. One of the oldest existing libraries, its basis was the library of Charles V (1364-80) and was first opened to the public in 1692. It receives a copy of every book published in France.

Bicameral system, legislative system that has two chambers or branches. It has its origins in the House of Commons and House of Lords in the English Parliament.

Usually, members of the lower house are elected by popular vote whereas members of the upper house are appointed, or elected on a different basis.

Bicarbonate of soda, sodium bicarbonate, (NaHCO₃), a white, crystalline salt which decomposes in acid or on heating to release carbon dioxide gas, which explains its use in baking powder. It has a slightly alkaline reaction, hence its other main application as an ingredient of indigestion powder and tablets.

Biceps, large muscle on the front of the upper arm, easily felt when the arm is bent. It contracts to raise the forearm towards the upper arm, and also contracts to turn the turned hand outwards (flexion). See also p.148.

Bichat, Marie François Xavier (1771-1802), French anatomist, pathologist and physiologist. His study and classification of tissues laid the foundations of modern histology.

Bichir, primitive freshwater fish that lives in Africa. It has large horny scales and a row of finlets along its back. A two-part swim bladder enables it to breathe air at the surface of the water. Length 61-91cm (2-3ft). Family Polypteridae, genus *Polypterus*. See also p.330.

Bicycle, first made (1817) by Karl von Drais in Germany and developed as an important means of transport and recreation in many countries. An Englishman, J. Starley, demonstrated the first successful chain drive in 1871. See also p.488.

Bicycle racing, sport involving a variety of events, from the sprint to the internationally known Tour de France (begun in 1903), in which the world's best cyclists compete annually in a road race about 4,800km (3,000 miles) long. The sport has become the accepted national summer sport of France, Belgium and the Netherlands and has increased in popularity in Italy, Spain, Germany and Scandinavia. Now a regular event at the Olympic Games, racing first became popular with the invention of the pneumatic tyre in 1888 by John DUNLOP, a Scottish veterinary surgeon.

Bidaoui, Georges (1899-), French political leader. He is known for his leadership of the underground resistance movement during WWII. Following the war he headed the provisional government in 1946 and was foreign minister in 1947-48 and 1953-54. In 1958 he founded the Christian Democratic Party, which opposed independence for Algeria. See also p.1686.

Biddle, John (1615-62), founder of English UNITARIANISM. His *Twelve Arguments Against the Deity of the Holy Ghost* (1644) denied the Trinitarian doctrine. Biddle was arrested in 1645 and the book publicly burned in 1647.

Biedermeier, phase of German culture and a style of furniture (1816-48), characterized by simplicity and sober realism. Its name was derived from Papa Biedermeier, a humorous fictional character who epitomized middle-class conservatism. Furniture designs were simplified versions of French *shoebox* and *directoire* styles, black lacquer being substituted for the expensive ebony of the originals.

Biel, lake in NW Switzerland, bordering the cantons of Bern and Neuchâtel. It is connected by canals to the lake of Neuchâtel (to the SW) and the River Aare (NE). It contains St Pierre Island, which was the home of Jean-Jacques ROUSSEAU in 1765. Area, 41sq km (16sq miles).

Bielorusia. See BELORUSIA.

Bielostok. See BIALYSTOK.

Bielsko-Biala, city in the province of Katowice, Poland. It has been an important centre of the wool trade since medieval times. The city was formed in 1951 by the merger of two settlements on the River Biala. The chief industry is textiles. Pop. 105,600.

Bien Hoa, manufacturing city in a Vietnam, 32km (20 miles) NNE of Saigon (Ho Chi Minh City). It was once the capital of Cambodia and, more recently, it had a US air force base in the Vietnam War. It is now an industrial city. Pop (1971 est.) 177,500.

Bienne. See BIEN.

Biennial, plant that completes its life cycle in two years, producing flowers and seed during the second year. This distinguishes it from an **ANNUAL**, which germinates, flowers, fruits and dies in one season, and a **PERENNIAL**, which is a plant that lives for three years or more. Some biennial seeds planted in early spring bloom the same year, but most are sown from June to August and bloom the following year. Popular garden biennials include FOXGLOVE, CANTERBURY BELL and WALL-FLOWER.

Bienville, Jean Baptiste Le Moyne, Sieur de (1680-1768), French colonizer of Louisiana, b. Canada. In 1698 he accompanied his brother, Sieur d'Iberville, from Canada to the mouth of the Mississippi River. He founded Mobile (1711) and New Orleans (1718).

Bierbaum, Otto Julius (1865-1910), German poet and novelist. He was co-founder of the art journal *Pan* and the literary journal *Die Insel*. His writings include a collection of lyric verse *Irtingen der Liebe* (1901) and a novel, *Prinz Kuckuck* (3 vols. 1906-07).

Bierce, Ambrose Gwynett (1842-1914), US satirical writer and journalist. He published several collections of short stories, but is best remembered for the collection of epigrammatic definitions, *The Devil's Dictionary* (1906).

Bigamy, according to the law in most countries, the criminal offence of entering into a second marriage when a first marriage is still in lawful existence.

Big-bang theory, postulate that all the matter and energy of the universe was once concentrated in a whole at near infinite density and was subsequently hurled in all directions at great speed by an explosion. Recently discovered microwave cosmic radiation (thought to be a remnant of the big bang) is evidence for this theory. See also p.1830.

Big Ben, bell in the clock tower forming part of the Houses of Parliament at Westminster, London. It was named after Sir Benjamin Hall who was commissioner of works in 1859 when the bell was installed. The name is commonly used to refer to the clock and, by extension, to the tower.

Big Four, name applied to the main WWII Allies: Britain, USA, USSR and China. The term was extended to apply to the leaders of these countries, the US president Franklin D. ROOSEVELT (succeeded by Harry S. TRUMAN in 1944), the British prime minister Winston CHURCHILL, Soviet premier Joseph STALIN and Chinese president CHANG KAI-SHEK. See also p.1687.

Big game hunting. See HUNTING.

Bighorn, or Rocky Mountain sheep, wild SHEEP, native to the mountains of W North America. It has a brown or fawn short-haired coat, the males have long curved horns. Living in herds of about 50, their great climbing ability is aided by elastic food pads. Height: 1m (39in) at the shoulder; weight: to 155kg (340lb). Family Bovidae, species *Ovis canadensis*.

Bignonia, genus of woody climbing vines native to North America and Asia. They have showy, orange or yellow tubular flowers and are often cultivated as ornamental plants. Family Bignoniaceae.

Bihar, state in NE India, bordered by Nepal (to the N), West Bengal (E), Orissa and Madhya Pradesh (S) and Uttar Pradesh (W), the capital is Patna. The area is drained by the River Ganges and is a rich agricultural area. Other products: mica, coal, iron ore. Area: 174,006sq km (67,184sq miles). Pop. 56,387,300.

Bijapur, city in Karnataka state, SW India, capital of the Bijapur district. It was once capital of the Deccan Kingdom of Bijapur and has many famous temples. Industries: textiles, food processing. Pop. (1971 prelim.) 103,300.

Bikila, Abebe (1932-73), Ethiopian road runner. The first man to win two Olympic marathons (1960, 1964), he was virtually unknown when he won in Rome, running in bare feet. In Tokyo, only six weeks after having his appendix removed, he won by more than 4 min. He spent the last years of his life in a wheelchair after a serious car accident in 1969.

Bikini Atoll, group of about 36 islands in the W central Pacific and part of the US-administered Marshall Islands. The USA used the area to conduct atomic weapons tests between 1946 and 1956. The islands were affected by fallout, and although considered safe in 1969, they were evacuated in 1978.

Bilateralism, agreement between two states to pursue common interests jointly. Bilateral agreements are usually such that the value of trade each way is equally beneficial.

Bilbao, capital city of Vizcaya province in N central Spain, on the estuary of the River Nervion, near the Bay of Biscay. It was founded c 1300 and is now one of Spain's most important ports and commercial centres. It is the home of the University of Bilbao (1668). Industries: iron and steel, fishing, shipbuilding, chemicals. Pop. (1970) 410,490.

Bilberry, also called blueberry, blackberry or whortleberry, deciduous evergreen shrub native to W Europe and E North America, which produces a small, dark purple fruit. There are two types: the cultivated high-bush, raised commercially, which grows best in damp, acid soil, and the wild low-bush, which grows best in sandy, acid soil. Family Ericaceae, genus *Vaccinium*.

Bildungsroman, German "educational novel" of which the prototype is GOETHE's *Wilhelm Meister*, in which someone with an artistic temperament is taught by experience how to come to terms with reality. Gottfried KELLER's *Der Grune Heinrich* (1854-55) is the last direct example, and Thomas MANN's *The Magic Mountain* (1924) is a good example of an ironical parody of this traditional form. See also pp.1206-1207.

Bile, bitter yellow, brown or green alkaline fluid, secreted by the LIVER and stored in the GALL BLADDER, which is important in digestion. It enters the duodenum via the bile duct. It has two functions in digestion: the bile salts it contains emulsify fats (allowing their easier absorption) and it neutralizes stomach acids. Bile also contains excreted products, notably CHOLESTEROL and BILIRUBIN. The latter, a bile pigment, is a breakdown product of HAEMOGLOBIN with a green-orange colour. It is this that causes the skin yellowing in JAUNDICE, which can be caused by the inflammation or blockage of the gall bladder. See also pp.161,161.

Bilharzia, bilharziasis, or schistosomiasis, one of the world's most widespread and prevalent tropical diseases, caused by infection by blood (flukes, small flatworms of the genus *Schistosomum*). In many hot countries it affects more than 90% of the inhabitants, and hundreds of millions of people suffer from the disease. Infection comes from drinking or bathing in contaminated water. The worms spend part of their life cycle as parasites in water snails, and the main hope for control of the disease is elimination of the snails. See also pp.16, 1083.

Bilirubin, pigment derived from blood. When red blood cells have reached the end of their useful lives, they are broken down, mainly by the LIVER. Useful materials, such as the haem of HAEMOGLOBIN, are recycled in the body. Among the waste materials is the green-orange pigment bilirubin, which is converted into stercobilin, the colouring matter of faeces. See also pp.1068,1069.

Bilk, Acker (1929-), English traditional jazz clarinetist, real name Bernard Bilk. In 1954 he joined Ken COLVER's jazz band and in 1958 formed his own group - the Paramount Jazz Band. He made various successful records including *Summer Set* (1960) and the solo *Stranger on the Shore* (1962).

Bill, Max (1908-), Swiss sculptor who was also active as a painter, designer and architect. He was influenced by the design principles of the BACHHAUS, where he studied (1927-29). From 1951 he taught at Ulm for six years, exerting great influence on German artists. His writings include essays on Kandinsky, and on mathematical aspects of modern art.

Bill, birds, the horny jaws of BEAR.

Bill, draft of a proposed law. It must be approved by the legislature before it can become law. A bill is drawn up by law-draftsmen in the civil service on the basis of instructions from a minister. Changes may be made to the bill during discussion and scrutiny in the legislature. See also ACT OF PARLIAMENT.

Billiards, game with three balls (two white and one red) played by striking one's own of the two whites against the red, using a long tapering cue, on a table with six pockets. Points are scored in four ways: sinking the white or an opponent's red in a pocket (a "pot"); sinking one's own white off the opponent's or the red (an "in-off"); hitting both the red and the opponent's white with one's own white (a cannon), and by means of penalty points. A variation in the USA uses 15 numbered balls. See pool.

Billingsgate, fish-market in the City of London, on the N bank of the River Thames between London Bridge and the Tower of London. It dates from Saxon times and takes its name from a river gate in the old city wall. The fish-porters are noted for their hats, strengthened with wood, with which they carry heavy loads on their heads.

Billion, in Britain and most countries other than the USA, 1 million million, or 1,000,000,000,000. In the USA and France it is 1 thousand million, or 1,000,000,000. See also p.781.

Billion. See BELITUNG.

Bill of exchange, unconditional written order from one person to another calling on him to pay on demand, or at a specified date, a sum of money to a particular person or to the bearer. A cheque and a postal order are both bills of exchange. See also p.1372.

Bill of Rights (1689), British statute enshrining the constitutional principles won during the GLORIOUS REVOLUTION. It confirmed the abdication of JAMES II, offered the throne to WILLIAM III and MARY II, excluded Roman Catholics from the succession, outlawed certain of James' abuses of the Royal Prerogative, such as his control of the legal system and use of a standing army, set out the subjects' civil and political rights, assured the freedom of speech in Parliament and guaranteed the supremacy of that institution over the Crown. See also pp.1427, 1446.

Bill of sale, formal written document by which the sale or mortgage of goods is recorded, although possession is unaffected.

Billy Budd (1924), novella by Herman MELVILLE, published posthumously (1924), on which Benjamin BRITTEN based his opera (1951). Billy, an innocent young sailor, accidentally kills Claggart, the evil master-at-arms who had persecuted him. Capt. Vere, commander of the ship, sympathizes with Billy but feels he must still hang him. In 1962 Peter USTINOV directed and starred in a film of the book.

Billy the Kid (1859-81), US frontier outlaw, also known as William H. Bonney. Traditionally 21 murders are ascribed to him but there is no reliable evidence for this figure. In 1878 he killed a sheriff and led a gang of cattle rustlers. He was sentenced in 1880. He escaped from jail, but was caught and killed by Sheriff Pat F. Garrett. The one-act ballet *Billy the Kid* (1918) by Eugene Loring has music by Aaron Copland, based on cowboy melodies.

Bimetallic strip, device used in THERMOSTATS and mechanical thermometers. It consists of bonded strips of two metals with dissimilar coefficients of thermal expansion. When heated the bimetallic strip bends because one metal expands more than the other. Thus, reversible, distortion is used to move a dial pointer or to open or close a switch in an electrical circuit.

Bimetallism, policy of defining a country's money in terms of two metals, usually gold and silver, according to a fixed weight ratio. Each metal is accepted for the manufacture of coins, which become legal tender. The system was used in Europe and the USA in the 19th century. Its great drawback was that the market price for

Bighorn, or Rocky Mountain sheep climb easily in the most dangerous of places.

Abebe Bikila, the marathon runner whose life ended tragically in a wheelchair.

Billiards has an obscure origin, it is probably a development of several different games.

Billy the Kid was the subject of a one-act ballet by Eugene Loring.

Binary Star

Bindweed flowers open in the early morning but close again in the later bright sunlight

Hiram Bingham discovered the "lost city" of Machu Picchu in the Andes Mts in 1911

Bingo, 14 million club members spent over £11m a year during the craze of the 1980s

Binoculars, with reflecting prisms, produce a greatly improved stereoscopic effect

the metals kept changing, so that if a metal had a commercial value higher than its face value as money, coins tended to go out of circulation as they were hoarded for their intrinsic value

Binary star, stellar system consisting of two separate stars orbiting around a common centre of gravity. Visual binaries are those whose components can be seen as separate stars with the naked eye or through a telescope. Spectroscopic binaries are visually unresolvable but show redshifts and blueshifts in their spectra as the individual stars move towards or away from the observer

Binary system, in mathematics, number system having a base of 2 (the decimal system has a base of 10), most appropriate to computers since it is simple and corresponds to the open (0), and the closed (1) states of switch, or logic gate, on which computers are based. See also pp.466-467, 781

Binding energy, energy that holds an atomic nucleus together. This amount of energy must be supplied to a nucleus before it will "split" - undergo fission (except during radioactive decay). See also NUCLEAR ENERGY pp.814-815

Bindweed, climbing plant with white or pink trumpet-shaped flowers. Species include *Calystegia sepium*, or hedge bindweed, and *Convolvulus arvensis*, field bindweed. Family Convolvulaceae

Binet, Alfred (1857-1911), French psychologist. He established the first French psychology laboratory in 1889 and the first French psychology journal in 1895. His best-known achievement was devising the first practical intelligence tests 1905-11, which profoundly influenced the assessment of abilities in psychology and education. See also p.1115

Bing, Sir Rudolf (1902-), Austrian-born impresario. In 1933 he went to England and in 1947 founded the Edinburgh Festival. From 1950 to 1972 he was the director of the Metropolitan Opera in New York

Bingham, Hiram (1875-1956), US archaeologist. His discovery in 1911, of the INCA mountain city of MACHU PICCHU in the Peruvian Andes helped historians to unravel the story of Peru before the Spanish conquest. He led many expeditions to South America and wrote *Inca Land* (1922), *Machu Picchu* (1930) and *Lost City of the Incas* (1948). See also pp.1366-1367

Bingo, board game, usually played by a large number of people for cash prizes. Each player purchases one or more boards containing differently-numbered squares, together with some small discs with which to cover the numbers. A "caller" draws numbered balls at random, and the first contestant to cover a straight row of numbers on the board with numbers called is the winner

Binoculars, optical instrument, used with both eyes simultaneously, that produces a magnified image of a distant object or scene. It consists of a pair of identical telescopes, one for each eye, both containing an objective lens and an eye-piece lens and an optical system (usually prisms), to form an upright image. See also p.852

Binomial nomenclature, system of naming organisms by giving them a two-part Latin name. The first part of the name is the GENUS and the second part the SPECIES, eg *Homo sapiens* is the binomial name for human beings. The system was developed by the Swedish botanist CARL LINNAEUS in the 18th century. See also TAXONOMY p.183

Binomial theorem, mathematical rule for expanding (as a series) an algebraic expression of the form $(x+y)^n$, where x and y are monomials and n is a positive integer. Its expansion is

$$(x+y)^n = x^n + nx^{n-1}y + \frac{n(n-1)}{2}x^{n-2}y^2 + \dots + ny^{n-1}x + y^n$$

Binturong, mammal of the civet family, also related to mongooses. It lives in the forests of SE Asia, spending much of its time in trees, eating their fruits and leaves. It has a shaggy black coat and grows to

approx. 1.7m (5.6ft) long, including a bushy prehensile tail of almost half this length. Species *Arctitis binturong*. See also pp.312, 313

Binyon, Robert Laurence (1869-1943), English poet and literary critic. His elegy *For the Fallen*, remembering the dead in WWI, was widely acclaimed, but much of his work was more academic. He also produced a notable translation of DANTE'S *Divine Comedy* in 1933-43

Binzerte. See BIZERTE

Bio-Bio, river in S central Chile, flowing generally NW from the Andes through the provinces of Cautín, Bio-Bio and Concepción. It enters the Pacific Ocean near the city of Concepción. Length: approx. 383km (238 miles)

Biochemical engineering, the production or modification of materials arising from living organisms, often on an industrial scale. Particularly important has been the production of moulds and bacteria as sources of ANTIBIOTICS, VITAMINS and ENZYMES. The many applications of enzymes in the manufacture of food and chemicals is another important aspect of biochemical engineering, as also is the growing "manufacture" of bacteria and yeasts as animal foods.

Biochemistry, science of the chemistry of life. It attempts to use the methods and concepts of organic and physical chemistry to investigate living matter and systems. Biochemists study both the structure and properties of all the constituents of living matter - eg, fats, proteins, enzymes, hormones, vitamins, DNA, cells, membranes, organs etc. - together with the complex reactions and pathways of these in metabolism. See also pp.174-179, 190-191, 906-909

Bio-degradability, property of a substance that enables it to be decomposed by micro-organisms into stable, simple compounds (such as water and carbon dioxide). This property is being designed into products such as plastics to aid refuse disposal

Bio-electricity, electricity originating in plants or animals. Different electrical potentials are built up within the organism by the process of ionic separation across a membrane in association with nerve impulses and muscle contractions. See also pp.127-128, 866, 866-867, 902

Bio-engineering, application of engineering techniques to medical and biological problems. Also, the engineering of devices to aid or replace defective or inadequate body organs, for example, artificial limbs and hearing aids. See also pp.465, 1097

Bio-feedback, from "biological feedback", voluntary control of normally involuntary states using sensitive electronic instruments. People train themselves to control their internal functioning by observing the monitoring signals of the parameters such as their heart rate, blood pressure and brain-wave patterns, and consciously respond to them and eventually control them. The method holds promise for treating headaches, hypertension and other disorders related to the activities of the AUTONOMIC NERVOUS SYSTEM

Biogenesis, long-held principle in biology (originally opposed to the idea of spontaneous generation of life) that maintains that all living organisms derive from parent(s) generally similar to themselves. On the whole, it still holds good despite variations in individuals caused by mutations, hybridization and other genetic effects. See also GENETICS

Biography, literary form which describes the events of a person's life. Any fragment may be biographical, but the first known complete biographies were PLUTARCH'S *Lives* (2nd century). In English literature the first biographical works appeared in the 17th century, notably WALTON'S *Lives* and AUBREY'S *Lives*. The first modern biography was BOSWELL'S *Life of Samuel Johnson* (1791), rich in detail. Since its publication, the biography has become a sophisticated and highly popular form of literature, aiming at a critically balanced assessment of its subject's life

Biological oxygen demand. See BOD

Biological rhythm, regular pattern of changes in metabolism or activity in living things, usually synchronized with daily, monthly, seasonal or annual changes in their environment. Examples of daily, or CIRCADIAN, rhythms are the opening and closing of flowers, feeding cycles of animals during the day or the night, the response of marine organisms to the tides and, in man, changes in body temperature and blood pressure. Monthly changes include the menstrual cycle in women. Annual rhythms include hibernation, migration and reproductive activity. If an organism is isolated from its environment, the rhythms continue as though by a biological clock (as in the phenomenon known as JET LAG). The internal mechanism of these rhythms is not yet fully understood

Biological shield, thick wall containing such materials as concrete, steel, magnetite and lead, used to protect workers in nuclear power stations and radiochemical laboratories from the possible harmful effects of radiation. In remote-handling "caves" the biological shield contains a viewing window approx. 30cm (12in) thick, also with radiation absorbers

Biological warfare, the use of disease microbes and their toxins in warfare. Since WWI the USA, USSR, Britain and other European countries have all maintained costly research programmes for the production of virulent (sometimes hyper-virulent) bacteria (and possibly viruses also) and for the discovery of more effective antidotes to their pathogenic effects. These microbes include plant pathogens for the destruction of food crops. None has yet been used, although US forces employed a variety of biological warfare in Vietnam when they defoliated forests. See also pp.574-575

Biology, science of life and living things. Its branches include botany, zoology, ecology, morphology, physiology, cytology, histology, genetics, taxonomy, embryology and microbiology. These sciences deal with the origin, history, structure, development and function of living things, their relationships to each other and their environment, and the differences between the living and the non-living

Bioluminescence, production of light, without heat, by living organisms. Its biological function is varied in some species, eg fireflies, it is a recognition signal in mating. In others, eg squids, it is a method of diverting predators for protection, and in many deep-sea fish it is simply a form of illumination. The light-emitting substance (luciferin) in most species is an organic molecule that emits light when it is oxidized by molecular oxygen in the presence of an enzyme (luciferase). Each species has different forms of luciferin and luciferase. See also pp.25, 60, 341

Biome, natural and extensive community of animals and plants whose make-up is determined by the type of soil and the climate. There is generally distinctive, dominant vegetation and a characteristic climate and type of animal life. Ecologists divide the earth (including the seas, lakes and rivers) into ten biomes. See also p.293

Biometrics, the study of living organisms as they relate to their environments, synonymous with ecology

Biophysics, study of biological phenomena in terms of the laws and techniques of physics. Subjects studied include the structure and function of biological molecules such as proteins and nucleic acids, the conduction of electricity by nerves, the transport of molecules across cell membranes, muscle contraction (using electron microscopy); energy transformations in living organisms, and the function of hormones in the body (using radioisotopes as tracers)

Biopsy, the removal of a small piece of living tissue from a patient for subsequent laboratory examination to aid in the diagnosis of disease. Most common is the cervix biopsy (smear test) done for the early diagnosis of womb cancer or a pre-cancerous condition. See also p.1079

Bionecology (biological sociology), the study of social forms and behaviour in

terms analogous to the study of organisms and biological processes. Paying special attention to the interactions between man's biological make-up and his social behaviour, it tries to avoid a simplified view of the roles of heredity and environment in human development. See also pp.1124-1147

Biosphere, or zone of life, that portion of the earth from its crust to the surrounding atmosphere, encompassing and including all living organisms, animal and vegetable. It is self-sufficient except for energy and extends a few kilometres above and below sea-level

Biosynthesis, the genetic process in living cells by which complex chemical substances, such as **PROTEINS**, are made from simpler substances. A **GENE**, part of the DNA of the chromosomes of the cell nucleus, "orders" a particular protein to be made. The "order" is a particular molecule of RNA. On the **RIBOSOMES** of the cell, the protein is built up from molecules of **AMINO ACIDS**, in accordance with the specification of the genetic code carried by the RNA. See also pp.176-177, 910-911

Biot, Jean Baptiste (1774-1862), French astronomer, mathematician and physicist who made fundamental discoveries about **POLARIZED LIGHT**. He developed the technique of estimating the concentration of certain organic substances (particularly sugars) by measuring the angle through which they rotate the plane of polarization of light

Biotin, member of the vitamin B complex ($C_{10}H_{16}O_4N_2S$). It is vital to the body, but is needed in only minute quantities, which are synthesized by intestinal bacteria. See also **VITAMIN**

Biotite, common mineral of the mica group. It is a silicate of aluminum, iron, potassium and magnesium. Its colour ranges from greenish-brown to black. Its lustre, monoclinic crystals are opaque to translucent, and cleave to form elastic sheets. It is found in igneous and metamorphic rocks. See also p.259

Birch, any of about 40 species of trees and shrubs native to cooler areas of the Northern Hemisphere. The smooth resinous bark peels off in papery sheets. The double toothed leaves are oval or triangular with blunt bases and are arranged alternately along the branches. The male catkins droop whereas the smaller female catkins stand upright and develop into cone-like clusters with tiny one-seeded nuts. Some well-known species are the grey, sweet and yellow birches. Height up to 30m (98ft). Family *Betulaceae*, genus *Betula*. See also pp.307, 325, 376, 714

Bird, any one of about 8,600 species of feathered vertebrates that occupy every conceivable natural habitat from deserts and tropics to polar wastes. Birds are warm-blooded and have forelimbs modified to wings, hind-limbs for walking and jaws elongated into a toothless beak. They lay eggs in nests, incubate the eggs and care for young. They feed on seeds, nectar, fruit and carrion and hunt live prey ranging from insects to lambs. Sight is the dominant sense with smell the poorest. Size ranges from the bee hummingbird, 6.4cm (2.5in) to the wandering albatross, whose wingspread reaches 3.5m (11.5ft). The 2.4m (8ft) tall ostrich is the largest of living birds, but several extinct flightless birds were even bigger. Of the 27 orders of birds, the perching birds (*Passeriformes*) include more species than all others combined. A bird's body is built primarily for flight, with all its parts modified accordingly. There are several groups of large flightless land birds, including the ostrich, rhea, emu, cassowary, kiwi and penguin. There are also some flightless members of typically flighted groups, such as the rail and the cormorant. Birds are descended from *Thecodonts* (reptiles), and the first fossil bird, *Archaeopteryx*, dates from late Jurassic times. Class *Aves*. See pp.3, 72-85

Bird cherry, small wild cherry tree that grows in most temperate parts of the world, although it was probably originally native to E. Asia. It has small bitter fruit

Family *Rosaceae*, genus *Prunus*. See also p.688

Bird louse, also called chewing louse, any of about 3,000 species of small, flattened insects of the order *Mallophaga* that are distinguished from the sucking lice because they do not suck blood and so are not so harmful as transmitters of disease. Despite their name more than 300 species are parasites of mammals.

Bird migration. See **MIGRATION**

Bird-of-paradise, brightly coloured, ornately plumed, perching bird of N. Australia, New Guinea forests and nearby regions. Most species have stocky bodies, rounded wings, short legs and a squarish tail. The males' plumes are black, orange, red, yellow, blue or green and become erect during elaborate courtship displays and rituals. Length 12.5-100cm (5-40in). Family *Paradisaeidae*

Bird-of-paradise flower, ornamental plant native to Southern Africa. It grows from rhizomes and has stiff, leathery, oblong leaves. The flowers are brilliant orange and blue held in a boat-shaped, green bract. Height, to 1.5m (5ft). Family *Musaceae*; species *Sprekelia reginae*

Bird of prey, bird having a sharp, hooked beak and curved talons with which it captures its prey. Two groups of birds fit this description: the hawks, falcons, eagles, vultures and secretary bird (order *Falconiformes*), and the owls (order *Strigiformes*). See also pp.72-73

Birds, The (414 ac), Greek comedy by *ARISTOPHANES*. Disgusted with their world, a group of men persuade the birds to create a city half-way between heaven and earth in which they will have complete control of gods and men. The play is a satire on men's search for an ideal society.

Birdseye, Clarence (1886-1956), US industrialist and inventor who developed a technique for deep-freezing foods. He began experiments on freezing food in 1917 and marketed frozen fish in 1924. He was a founder of General Foods Corporation, and found new ways of reducing the time to freeze foods.

Birendra Bir Bikram Shah Dev (1945-), King of Nepal. He was educated in India, England, Japan and the US and travelled extensively through Europe, N. and S. America, Asia and Africa. In 1964 he became colonel-in-chief of the Royal Nepalese Army and in 1972 succeeded his father Mahendra to the throne.

Biringuccio, Vannoccio (1480-1539), Italian metallurgist. In 1538 he became director of the papal arsenal. He wrote *De la pyrotechnia*, published posthumously in 1540, the first comprehensive, practical work on metallurgy.

Birkbeck, George (1776-1841), British physician and natural philosopher. As Professor of Philosophy at the Andersonian University in Glasgow (1799-1804), he began classes for workmen which gave rise to the Glasgow Mechanics' Institute. In 1821 he founded a similar college in London, now Birkbeck College.

Birkenhead, Frederick Edwin Smith, 1st Earl of (1872-1930), British Conservative politician. He entered Parliament in 1906 and gained prominence as a defender of *ULSTER* during the Irish Home Rule crisis. As Attorney-General (1915-19) he was responsible for the prosecution of *ROGER CASBMENT*. He later became Lord Chancellor (1919-22).

Birkenhead, town and port in Merseyside, NW England, on the Wirral Peninsula, overlooking the River Mersey and connected to Liverpool by road and railway tunnels. Industries: engineering, shipbuilding, food processing. Pop. 136,000.

Birkett, William Norman, Baron (1883-1962), British lawyer. Called to the Bar in 1913, he gained a brilliant reputation by 1930. He was a judge of the King's Bench (1941-50), a judge at the Nuremberg Trials (1945-46) and a Lord Justice of Appeal (1950-57).

Birmingham, George A. (1865-1950), pseudonym of James Owen Hannay, Irish clergyman and novelist. In 1889 he became a priest and served in Ireland and England. Using his pseudonym he wrote many novels including *Spanish Gold* (1908) and *Wild Justice* (1930).

Birmingham, city in West Midlands Metropolitan County, central England, second largest city in Britain. In the 17th and 18th centuries Birmingham's industrial development and population growth accelerated. James WATT designed and built his steam-engine there. Later it became known for the manufacture of cheap goods ("Brummagem ware"). The Birmingham Repertory Theatre, opened in 1913, has a justly high reputation. An important centre for rail, road and water transport, it has motor-vehicle, locomotive, mechanical and electrical engineering, food processing and metallurgical industries. Pop. 1,013,400.

Birmingham, largest city in Alabama, USA. It was founded in 1871 as a rail junction at the centre of a mineral-rich region. It has a university and three colleges. Industries: iron and steel, metalworking, construction materials and transport equipment. Pop. (1970) 300,910.

Birmingham Riots (July 1791), attacks by "Church and King" mobs on Dissenters and supposed supporters of the *FRENCH REVOLUTION*. The house of the Unitarian Joseph Priestley was sacked.

Birney, (Alfred) Earle (1904-), Canadian poet and novelist. He has tried to work within the Canadian idiom and his collections of verse include *David and Other Poems* (1942), *The Strait of Anian* (1948), *Lee Cod Bell or Stone and False Creek Mouth* (1964).

Birth, the bringing forth of life, partly or fully formed offspring. All mammals, except the echidna and the platypus, some reptiles and sharks, and various insects and other invertebrate animals give birth to live young. All birds, most reptiles, amphibians and fishes, and the majority of invertebrates lay eggs from which the live young are later born, this process being called hatching. See also pp.6-7, 76-77, 168-169.

Birth, breech, also called breech delivery, birth in which the baby presents its buttocks (or breech) and not its head to the birth canal of the mother. See also pp.168-169.

Birth, caesarian, delivery of a baby by a surgical incision made through the abdomen and womb of the mother, named after Julius Caesar, who is reputed to have been born this way. It is carried out for various medical reasons, the mother usually recovers quickly, without complications. See also pp.168-169.

Birth control, or contraception, procedures adopted by men and women to prevent pregnancy. Methods range from the *PILL*, a hormone preparation that alters the sequence of physiological events in a woman's body to prevent her conceiving, through the wearing of contraceptive devices such as the coil (women) and the condom (men), to the unreliable use of spermicidal creams and douches and the almost completely ineffective method of *coitus interruptus*. Contraceptive pills are now being developed for men, and the sterilization of men and women is a growing practice. See also pp.1102-1103.

Birthmark, or naevus, area of pigment, usually red, purple, yellow or brown, that appears on the skin at birth or shortly after. Some birthmarks are caused by concentrations of melanin, others (strawberry marks) by raised blood vessels. Some fade or disappear with maturity.

Birth of a Nation (1915), US film. This US civil war melodrama was directed by D. W. GRIFITH who adapted the script with Frank Woods from Thomas Dixon's novel *The Clansman*. The film incorporated many technical innovations that were widely adopted later, and brought world renown to its star Lillian Gish. Its sympathetic treatment of the early Ku Klux Klan caused Griffith to be characterized as a bigot. See also p.1682.

Birth rate, statistic that gives the number of births in a given area, age group, socio-economic stratum or time period. The most common is the crude birth rate which is the number of births per thousand population per year. See also p.1103.

Birth rites, ceremonies performed at the birth of a child eg, christening. They celebrate a safe birth and stress that the child is

Birch bark is used by the North American Indians to cover the frames of their canoes

Bird of paradise, the male bird has vivid plumes which stand erect during display

Clarence Birdseye, who invented and developed techniques for deep freezing food

Birmingham, the Bull Ring shopping precinct in the heart of Britain's second largest city

Birthstone

Bison, the animal (incorrectly called buffalo) which has been hunted almost to extinction

Bizet's last (and finest) work, *Carmen*, was a failure at its first performance in Paris

Blackberries, popular fruit for jam-making, grow wild in the hedgerows of Britain

Blackbirds are common British birds whose song is distinctive and enchanting

now a member of the society. The ceremonies usually involve relations with the spiritual world and are virtually universal. **Birthstone**, gemstone associated with the month of one's birth and worn as a talisman. January, garnet; February, amethyst; March, bloodstone or aquamarine; April, diamond; May, emerald or agate; June, pearl; July, ruby or onyx; August, sardonyx or alexandrite; September, sapphire; October, opal or beryl; November, topaz; December, turquoise, tourmaline or zircon. See also pp.260-261

Birtwistle, Harrison (1934-), English composer. He has written a wide variety of works that have consolidated his position as a leading composer of the modern school. His works include the instrumental motet *The World is Discovered* (1960), the one act opera *Punch and Judy* (1967) and *Verses for Ensembles* (1970).

Biscay, Bay of, inlet of the Atlantic Ocean, w of France and n of Spain. It is noted for its strong currents and sudden storms, and for its sardine fishing grounds. The chief ports are Bilbao, San Sebastián and Santander in Spain, and Bayonne, La Rochelle and St-Nazaire in France. There is a resort area along the French coast.

Biscuit, crisp, unleavened and often sweet pastry made lightweight by the addition of baking powder or soda, sometimes covered with chocolate or including fruit such as currants.

Biscuit ware, pottery that has been fired in a kiln but not glazed; either the fired piece, yet to be glazed, or a finished product.

Bishop, in Christian churches, the highest order in the ministry. Bishops are distinguished from priests chiefly by their powers to confer holy orders and to administer the rite of CONFIRMATION. They usually exercise pastoral oversight of a DIOCESE. See also APOSTOLIC SUCCESSION.

Bishop, Sir Henry Rowley (1786-1855), English composer and conductor, one of the original members of the Philharmonic Society (1813). Except for *Home Sweet Home*, his music is now mostly forgotten.

Bishop, William Avery "Billy" (1894-1956), Canadian pilot who received the highest awards for bravery in WWII. During WWII he was director of the Royal Canadian Air Force.

Bishops' Wars (1639, 1640), campaigns by CHARLES I of England against the Scots. Charles aimed to strengthen episcopacy by imposing English church ritual on Scotland; the COVENANT of 1638 pledged the Scots to defend PRESBYTERIANISM. By the treaty of Ripon 1640, Charles was forced to pay an indemnity to the invading Scots. See also pp.1421, 1432.

Bishop's-weed. See GROUND ELDER.

Bismarck, Otto von (1815-98), German statesman. He was born into a wealthy Prussian family and in 1862 WILHELM I named him Chancellor of Prussia. Victory in the FRANCO-PRUSSIAN WAR (1870-71) brought the southern German states into the Prussian-led confederation, and in 1871 Wilhelm I was proclaimed German Emperor and Bismarck the first Chancellor of the Empire. In 1882 he formed the TRIPLE ALLIANCE with Austria-Hungary and Italy. Bismarck encouraged industrialization and a paternalist programme of social welfare at home, and colonization overseas. He found it difficult to work with WILHELM II, and in 1890 the "Iron Chancellor" was forced to resign. See also pp.1588-1589, 1660-1661.

Bismarck, German WWII battleship. It was built to raid the Atlantic shipping lanes and was renowned for its firepower. It was sunk at heavy cost by the British on 27 May 1941 off the coast of France, three days after it had sunk the British battleship HMS Hood near Greenland.

Bismarck Archipelago, group of volcanic islands off NE New Guinea, in the W Pacific Ocean. The group comprises many islands, including New Britain and New Ireland. All were once under the administration of Australia, but are now a part of Papua, New Guinea. Pop. approx 200,000.

Bismuth, metallic element (Bi) of group Va of the PERIODIC TABLE, first identified as a separate element in 1753. The chief ores

are bismite (oxide) and bismuthite or bismuth glance (sulphide). To extract the metal, the oxide is reduced with carbon and the sulphide is roasted in the presence of charcoal and metallic iron (to remove the sulphur). Bismuth expands when it solidifies, a property exploited in several bismuth alloys used in making castings. Properties: a.n. 83, a.w. 208.9806, v.g. 9.75 (20°C), m.p. 271.3°C (520°F), b.p. 1560°C (2840°F), most common isotope Bi-209 (100%).

Bison, two species of wild oxen formerly ranging over the grasslands and open woodlands of most of North America and all of Europe. Once numbered in millions, the American bison (sometimes incorrectly called "buffalo") is now almost extinct in the wild. The wisent (European bison) was reduced to two herds by the 18th century. Both species are now found in protected areas. The American species is not as massive or as shaggy as the European. Length: to 3.5m (138in), height to 3m (118in), weight to 1,350kg (2,976lb). Family Bovidae; species American *Bison bison*, wisent *Bison bonasus*. See also BUFFALO; OX; pp.287, 296, 304-305.

Bissau, port town and capital of Guinea-Bissau, W Africa, on the Geba Channel. Established in 1687 by the Portuguese as a slave-trading centre, it became a free port in 1869. Industries: oil processing. Pop. 25,000.

Bitlynia, ancient region of NW Asia Minor. Originally occupied by THRACIANS, it was incorporated into the Persian Empire by CYRUS the Great. After 300 BC it evolved into a strong, independent kingdom. In 74 BC, in accordance with the will of its last king, it became a Roman province.

Bitter Lakes, two lakes in NE Egypt. The Great Bitter Lake and the Little Bitter Lake are connected and crossed by the Suez Canal. They were originally situated in the ancient bed of the Red Sea.

Bitterling, deep-bodied fresh-water fish native to Asia Minor and central Europe. The female deposits her eggs in the mantle cavities of clams and mussels for hatching. Length: to 7.5cm (3in). Family Cyprinidae, species *Rhodeus sericeus*.

Bittern, solitary heron-like wading bird with a characteristic booming call found in marshes around the world. A heavy-bodied bird. It is brownish with streaks and spots which help to hide it in swamps. The female lays 3-6 brownish eggs. Length: 25-90cm (10in-3ft). Family Ardeidae, species *Botaurus stellaris*.

Bittersweet. See NIGHTSHADE.

Bitumen, or asphalt, mixture of hydrocarbons and other organic chemical compounds, occurring naturally, eg in the pitch lakes of Trinidad, or made by distilling tar from coal or wood. Small amounts are made during the refining of petroleum. It is used for roadmaking and for proofing timber against rot. See also pp.440-441, 522-523.

Bivalve, animal that has a shell with two halves or parts hinged together. The term applies to animals of the phylum MOLLUSCA (lamp shells) with dorsal and ventral shells and to a class of molluscs - Pelecypoda or Lamellibranchiata - with left and right shells, eg. clams, cockles, mussels and oysters. Length: 2mm-12m (0.17in-4ft). See also pp.22-23, 26-27.

Biwa-ko, lake in W central Honshu, Japan, and namesake of the Japanese musical instrument whose shape it resembles. It is the largest lake in Japan and yields fresh-water fish. Length: 64km (40 miles), width 3-19km (2-12 miles); depth, 96m (315ft).

Biya, Paul (1933-), Cameroon political figure. He held various government posts (1962-68) and in 1968 was appointed Minister of State and Secretary-General to the Cameroon President, Ahmadou Ahidjo. In 1975 he became Prime Minister of Cameroon.

Bizerte, port in Tunisia, 60km (37 miles) NW of Tunis. Strategically placed at the narrowest part of the Mediterranean Sea, it was a naval station under the French, who fortified the outer harbour and

deepened the channel to Lake Bizerte. It was a German base in WWII and was heavily bombed by the Allies in 1943. In 1963 France evacuated its base there, it is now an international shipyard. Pop. 51,700.

Bizet, Georges (1838-75), French Romantic composer. His opera *Carmen* (1875), although a failure at its first performance, has become one of the most popular. Bizet also composed other operas and orchestral works, including a symphony in C (1855) and the *L'Arlesienne Suites* (1872).

Bjerknes, Vilhelm Frimann Koren (1862-1951), Norwegian physicist who laid the foundation of a revolution in weather forecasting by applying theories of fluid forces and motions to the circulation of the atmosphere with the development of air masses, fronts and cyclones.

Björling, Jussi (1911-60), Swedish tenor who, beginning his career with the Royal Opera, Stockholm (1931-39), sang in most of the world's opera houses. His best-known roles were in Italian and French operas.

Björneborg. See ROU.

Björnson, Bjørnstjerne (1832-1910), Norwegian poet, novelist and dramatist. A great public figure and prolific writer, his works included the novels *Trust* and *Thal* (1858) and *The Heritage of the Kurts* (1844), the plays *Lame Hulda* (1858) and *The Bankrupt* (1874), and *Poems and Songs* (1870). He lectured throughout Europe and was awarded the Nobel Prize in literature in 1903.

Björnsson, Svein (1881-1952), Icelandic statesman. He became Regent of Iceland in 1941 and was elected President when the country was proclaimed a constitutional republic in 1944, a post he held until death.

Black, Davidson (1884-1934), Canadian anthropologist who first discovered the remains of Peking man (*Homo erectus pekinensis*). In 1927, at Chou-k'ou-tien near Peking, he discovered a single tooth belonging to this previously unknown form of early man which he named *Sinanthropus pekinensis*. See also pp.112, 113.

Black, Joseph (1728-99), British chemist and physicist. Rediscovering "fixed air" (carbon dioxide), he found that this gas is produced by respiration, burning of charcoal and FERMENTATION, that it behaves as an ACID, and that it is probably found in the atmosphere. He investigated LATENT HEAT and the concept of SPECIFIC HEAT but was unable to reconcile it with the PHLOGISTON theory. See also pp.774-775, 775.

Black and Tans, special constables (12,000 in all) sent from England to assist the Royal Irish Constabulary in the Irish Civil War (1919-21). Their name derived from the colours of their temporary dress (khaki uniform and black and green belts and caps). See also p.1781.

Blackbeard (d.1718), British pirate, real name Edward Teach, who in 1716 began attacking shipping off the N American coast and in the Caribbean. He was killed when two ships sent by the governor of Virginia attacked his ship, *Queen Anne's Revenge*.

Black Beauty (1877), children's book by Anna Sewall. Despite the sentimentality of this story of a horse passing from owner to owner in 19th-century England, the popularity of the book started a trend in children's literature towards stories about animals.

Black Belt, in judo, grade given to those who have proved certain fighting ability. There are five black-belt ratings, progressing from first to fifth Dan (degree).

Blackberry, or bramble, fruit-bearing bush, native to northern temperate regions. The prickly stems may be erect or trailing, the leaves oval and toothed, and the blossoms white, pink or red. The edible berries are black or dark red. Family Rosaceae, genus *Rubus*. See also PFWBERRY, p.710.

Blackbird, songbird of the THRUSH family, common in gardens and woodland throughout most of Europe, the Near East, Australia and New Zealand. The male has jet-black plumage and a bright orange bill. The female is a dark, ruddy

brown. The blackbird feeds on earthworms and other invertebrates. Length to 25cm (10in). Species *Turdus merula*.

Black body, in physics, an ideal body that absorbs all incident radiation and reflects none. Such a body would look "perfectly" black - hence the name. The study of black bodies has been important in the history of physics. Wien's law, Stefan's law and Planck's law of black body radiation grew out of this study, as did Planck's discoveries in quantum mechanics.

Black bottom, popular US dance of the 1920s. Similar to the CHARLESTON, it was originally danced by southern Blacks at the turn of the 20th century. It became a national craze after Ann Pennington's performance of it in the show *Scandals of 1926*.

Blackbuck, or **Indian antelope**, medium-sized, long-horned ANTELOPE native to the open plains of India. Females and young are fawn coloured and males are dark, becoming almost black at maturity. The underparts are white and there are also patches of white on the muzzle and round the eyes. Only males carry long, spiral horns. Blackbuck are hunted for sport by trained cheetahs. Length to 1.2m (4ft), height to 81cm (32in) at the shoulder. Family Bovidae, species *Antelope cervicapra*. See also p.736.

Blackburn, town in Lancashire, NW England, on the Leeds-Liverpool Canal, 34km (21 miles) NW of Manchester. The area has been a textiles centre since the 17th century and, more recently, has yielded coal. Industries: textiles, electrical equipment. Pop. (1973) 101,670.

Blackcap, perching bird with a black, caplike crown. The European blackcap is a small warbler, *Sylvia atricapilla*. In the USA the chickadee is sometimes called a blackcap. Family Muscicapidae.

Black Country, region in England in the W Midlands, formerly comprised of a Staffordshire and W Warwickshire. The name derives from the smoke and soot of the original heavy industries. It includes the industrial towns of Birmingham, Wolverhampton, West Bromwich and Wednesbury.

Black Death (1348-50), plague, both bubonic and pneumonic, that killed between 25% and 50% of the population of Europe. It was first taken to Mediterranean ports from the Crimea and spread throughout Europe, carried by rats and fleas. It recurred in 1361-63, 1369-71, 1374-75, 1390 and 1400, and reappeared consistently until the 18th century. See also p.1341, 1349.

Black earth, or **chernozem**, type of soil rich in humus and prized for its agricultural qualities such as good structure and high nutrient content. It is mostly found in regions that have hot summers and cold winters.

Blackett, Patrick Maynard Stuart, Baron (1897-1974), English physicist who was awarded the 1948 Nobel Prize in physics for his research on cosmic radiation. He spent 10 years at the Cavendish laboratory developing the Wilson cloud chamber into an instrument for the study of cosmic radiation. He was professor of physics at Manchester University (1937-53) and in 1953 became professor of physics at Imperial College, London.

Blackfeet or **Blackfoot**, nomadic, warlike North American Indian tribes. They are made up of three Algonquian-speaking tribes, the Siksika, or Blackfeet proper, the Kainah, and the Pikuni, or Piegan. Living on the N Great Plains E of the Rockies, they depended largely on the bison (buffalo), which was hunted on horseback. Something of their rich ceremonial culture survives among the 8,850 Blackfeet living today on reservations in Alberta and Montana.

Blackfish, freshwater fish from Siberia and Alaska (*Dallia pectoralis*), or any of a number of dark-coloured marine fishes, including sea basses, or a small toothed whale of the genus *Globicephala*.

Blackfly. See APHIS.

Black Forest (Schwarzwald), mountainous region in Baden-Württemberg state, SW West Germany, between the rivers Rhine and Neckar. It is heavily forested in

the higher areas around the sources of the Danube and the Neckar. The highest peak is Feldberg. Industries: timber, clocks. Area 6,009sq km (2,320sq miles).

Blackfriars Theatre, the name of two separate London theatres built within the boundaries of the old Blackfriars monastery, the second of which was acquired in 1597 by Richard BUNBURY. It was considered the best patronized of pre-Restoration theatres, and was demolished in 1655.

Black Friday (24 Sept. 1869), day of financial panic in the USA. The financiers Jay Gould and James Fisk attempted to corner the gold market and drove the price of gold up. The price fell after the US government sold part of its gold reserve, and many speculators were ruined.

Blackheath, suburb of London whose common was a gathering place for highwaymen in the Middle Ages. From it WAT TYLEA in 1381 and Jack CADE in 1450 launched their attacks on London. See also p.1349.

Black hole, postulated end-product of the total gravitational collapse of a massive star into itself following exhaustion of its nuclear fuel, the matter inside is crushed to unimaginably high density. It is an empty region of distorted space-time that acts as a centre of gravitational attraction, matter is drawn towards it and once inside nothing can escape. Its boundary (the event horizon) is a demarcation line, rather than a material surface. See also pp.859, 988-989, 989.

Black Hole of Calcutta, prison in which about 64 British soldiers were placed by the Nawab Siraj-ad-Dawlah on 20 June 1756. The cell was 5.5 by 4.5m (18 by 15ft) and had only two small windows and many of the soldiers died of suffocation.

Blackjack, gambling card game. Each player gets one card face down and bets that this card plus one or more cards dealt face up will beat the dealer's hand without exceeding 21. An ace counts as 11 or 1, picture cards as 10, and all others at their face value. A score of 21 on the first two cards dealt to a player is called blackjack.

Blackmail, in law, the act of making a demand of someone by threatening unwarranted consequences if the demand is not met. It can involve extortion of money or criminal acts, or anything likely to damage a person's standing.

Blackmail. See NITCHERK ALFRED.

Black market, illegal or profiteering trade in goods whose supply is restricted, eg because of rationing, or in goods subject to a legal price limit. Black markets are common in currency exchange transactions when the official exchange rate is unrealistic.

Blackmore, Richard Doddridge (1825-1900), English novelist and poet. He studied law but gave it up through ill-health and turned to writing. He wrote several novels, the best known of which is *Lorna Doone* (1869), and many volumes of poetry.

Black Mountains, range of mountains in Powys, S Wales, to the E of the River Usk. It forms part of the Brecon Beacons National Park. The highest peak, Waun Fach, is 811m (2,660ft) high.

Black Muslims, US religious movement, officially called the Nation of Islam, founded in Detroit in 1930 by W D Fard, who was succeeded in 1933 by Elijah Muhammad. The Black Muslims adhere strictly to the KORAN's moral codes and maintain their own schools, farms and businesses, living as independently as possible from the larger society. Elijah Muhammad died in 1975 and was succeeded by his son Wallace, who called for radical changes including the welcoming of whites into the movement and association with non-Muslim religious groups.

Blackout, in physiology, the total loss of vision encountered by test pilots and astronauts during rapid acceleration caused by insufficient oxygen supply to the eyes. Blackout is the opposite of *redout*, a reddish haze caused by engorged blood vessels in the eyes encountered at zero-g or negative-g conditions.

Black Pagoda, 13th-century Hindu temple to the sun, in Konarak, India, and the

largest temple in the region. It once had a 60m (200ft) tower, but only the main hall remains.

Black Panthers. See BLACK POWER.

Blackpool, town in Lancashire, England, on the Irish Sea, 24km (15 miles) WNW of Preston. One of Britain's most popular resorts. It has 11km (7 miles) of sandy beaches, a 158m (520ft) tower (built in 1895), many indoor and outdoor entertainments and a promenade which is illuminated every autumn. Industries: confectionery, tourism. Pop. (1973) 150,940.

Black Power, doctrine of radical Black movements in the USA, probably first used by Stokely CARMICHAEL in 1965. Its principal organizations have been SNCC, the BLACK MUSLIMS, the Organization of Afro-American Unity and the Black Panther party. The Black Power movement rejects the policy of non-violent civil disobedience associated with Martin Luther KING and advocates armed preparedness and Black nationalism.

Black Prince (1330-76), eldest son of Edward III of England. He was made Duke of Cornwall (England's first duke) in 1337 and Prince of Wales in 1343. His part in the victory at Crécy (1346) made him a hero, he commanded at the victory of Poitiers (1356).

Black rat snake. See BLACK SNAKE.

Black Sea, inland sea between Europe and Asia, connected to the Aegean Sea by the Bosphorus, the Sea of Marmara and the Dardanelles. It is bordered by the USSR (to the N and E), Turkey (S) and Bulgaria and Romania (W). It receives many rivers, including the Danube, and is a major outlet for Soviet shipping. The Black Sea, which is subject to violent storms in winter, yields large quantities of fish, especially sturgeon. It is almost free of ice except in the remote NW area. It is comprised of two layers of water. The upper layer has lower salinity and supports most of the marine life, the lower layer supports anaerobic bacteria only. Area: 422,170sq km (163,000sq miles).

Black shirts, common name of the members of the *Fasci di combattimento* units of the fascist organization founded in Italy in 1919 by Benito MUSSOLINI. Their uniform included black shirts. It later came to mean any group of militant fascists. See also pp.1674-1675.

Black snake, wide-ranging North American rat snake. A good climber, it is shiny black, sometimes with small, light spots between its scales; it has a paler belly. Length to 2.5m (8.2ft). Family Colubridae; species *Elaphe obsoleta*. See also COLUBRID.

Black spot, any of various fungus diseases that cause black spots of the leaves of plants, particularly members of the rose family. It can be treated or, better, prevented by fungicide sprays. See also ANTHRACNOSE.

Blackstone, Sir William (1723-80), English jurist. As a Fellow of All Souls' College, Oxford, he introduced the first English law course into an English university. His *Commentaries on the Laws of England* (1765-69) is a classic study.

Blackthorn, tree or shrub of the rose family which bears its white flowers early in the year and has small plum-like fruits (sloes) and long black thorns that give it its name. Species *Prunus spinosa*.

Blackwater fever, tropical disease that results from contracting malaria. Red blood cells are destroyed, causing darkened urine and giving rise to fever and jaundice. The patient is put to bed, steroid drugs may be prescribed and blood transfusions may be needed.

Blackwell, Elizabeth (1821-1910), US physician, b. England. In 1847 she began to study medicine at the Geneva Medical College in New York. She graduated in 1849, becoming the first woman doctor in the USA. She established the New York Infirmary (1857), which combined health services and medical training.

Black widow, common name for a small, American SPIDER. It is black and has a red hour-glass-shaped mark on the underside. Its bite is poisonous, though rarely fatal to humans. Several closely related species are found in other parts of the world.

Blackbuck males have spirally twisting horns. They are hunted by trained cheetahs.

Blackpool's 160m (520ft) tower was built in 1895, modelled on the Eiffel Tower in Paris.

Black Power salutes at the 1968 Olympics: a reminder of the political nature of sport.

Black widows, so called because the female sometimes kills the male after mating.

Length 25mm (1in), the male is smaller. Family Therididae, genus *Larodectus*. **Blackwood's Edinburgh Magazine**, Tory journal established by William Blackwood (1776-1834) in 1817 as a rival to the Whig *Edinburgh Review*. Since 1850 it has declined in influence, but it is still published.

Bladder, urinary, large pouch in the lower abdomen in which urine is stored. Urine, a kidney secretion containing waste products and water extracted from the blood, is passed through two narrow tubes (ureters) to the bladder, where it is stored until the pressure becomes too great and nervous impulses signal that the bladder has to be emptied. Urine leaves the bladder through a tube called the URETHRA. See also p.160.

Bladderwort, mat-like, aquatic plant found in bogs and ponds. It has feathery thread-like leaves with small bladders in which insects and other small creatures are trapped and drowned. Upright stems bear purple or dark pink flowers. Family Lentibulariaceae. See also p.371.

Blair, David (1932-76), British ballet dancer. He joined the Sadler's Wells ballet in 1945 and became its principal dancer in 1955. He retired in 1973.

Blair, Eric Arthur, real name of the British author George Orwell.

Blain, Marie-Claire (1939-), Canadian novelist. Her novels, which deal with isolation and lack of love, include *La Belle Béte* (1959), *Tête Blanche* (1960) and *Une maison dans la vie d'Emmanuel* (1964).

Blake, Robert (1599-1657), British admiral. During the Civil War, he destroyed the Royalists' naval power under Prince Rupert. He won a series of encounters during the First Dutch War (1652-54) and annihilated a Spanish treasure fleet at Tenerife (1657).

Blake, William (1757-1827), British poet, painter and engraver. His work is characterized by the prophetic and mystical visions he experienced. *Poetical Sketches* (1783) was followed by *Songs of Innocence* (1789), *The Marriage of Heaven and Hell* (1790) and *Songs of Experience* (1794). His prophetic books, portraying his private mythologies, include *The Book of Urizen* (1794), *The Four Zoas* (1797), *Milton* (1804-08) and *Jerusalem* (1804-20). In addition to his own works, Blake illustrated *The Book of Job* (adapted as a masque for dancing by Ralph Vaughan Williams) and DANTE'S *Divine Comedy*. See also pp.1556-1557.

Blakelock, Ralph Albert (1847-1919), US painter. His works depict the American landscape, especially the West, and the daily life of the American Indian. They include *The Chase* (1879) and *Moonlight* (c.1885).

Blamey, Sir Thomas (1884-1951), Australian general. In 1939 he became commander of Australian forces in the Middle East. In 1942 he was appointed Commander-in-Chief of Allied Land Forces in Australia and in 1945 was present at the Japanese surrender.

Blanc, Louis (1811-82), French socialist and historian, b. Spain. His part in the revolution of 1848 forced him into exile, where he wrote a history of the FRENCH REVOLUTION. He returned to France in 1870 and was elected to the Chamber of Deputies.

Blanc, Mont. See MONT BLANC.

Blanchard, Jean-Pierre (1753-1809), French balloonist. He made the first balloon ascents in England in 1784 and in the US in 1793. In 1785, with the US balloonist John Jeffries, he made the first air crossing of the English Channel.

Blanchflower, Danny (1926-), Irish footballer. An intelligent and subtle wing-half, he captained the famous Spurs "double" side of 1960-61. He won a record 56 international caps for Northern Ireland, many as captain. In 1976 he became manager of Northern Ireland.

Blanching, in gardening, covering of vegetables from light so that they become white. In cooking and food preservation, it is an initial stage of preparation, almonds, for example, are placed in boiling water until the coverings soften and can be

peeled off, vegetables are lightly boiled before freezing so they retain their texture when cooked.

Blankens-Koen, Francis (Fanny) (1918-), South African sportswoman who won nine gold medals in various international events. One of the greatest all-round women athletes, she set world records in sprint events, hurdles, high jump, long jump and pentathlon. She won four gold medals in the 1948 Olympics. **Blank verse**, unrhymed verse, especially iambic pentameter or unrhymed heroic, widely used in English dramatic and epic poetry. Henry Howard, Earl of Surrey, introduced blank verse into England in the 16th century with his translation of Virgil's *Aeneid*. The form was also used by Christopher Marlowe, William Shakespeare, John Milton, William Wordsworth and Alfred Lord Tennyson, among others. **Blanqui, (Louis) Auguste** (1805-81), French socialist leader. He participated in the February Revolution of 1848 and the overthrow of NAPOLEON III in 1870. During one of his many prison terms, he devised the idea of a "dictatorship of the proletariat".

Blarney, village in central County Cork, in SW Ireland. It is noted for its 15th-century castle which contains the Blarney Stone. Those who kiss the stone are supposedly endowed with "the blarney" - fluent persuasive speech. Pop. (1971) 1,128.

Blasco Ibañez, Vicente (1867-1928), Spanish novelist, influenced by ZOLA and MAUPASSANT, whose best works such as *The Cabin* (1898) and *Reeds and Mud* (1902) deal with rural life in Valencia and express his fervent Republican beliefs. *Blood and Sand* (1908) and *The Four Horsemen of the Apocalypse* (1916), a novel, established his international reputation.

Blasis, Carlo (1803-1878), Italian ballet teacher and choreographer. In 1837 he was appointed director of the ballet school at La Scala, Milan. His two textbooks on ballet, *An Elementary Treatise* (1820) and *The Code of Terpsichore* (1830), have remained the backbone of pure traditional and classic dance technique.

Blasphemy, speech or action manifesting contempt for God or religion. Severe penalties were prescribed for it in the Old Testament and also by medieval CANON LAW. The secular statute books of many countries still include laws against blasphemy, perhaps because an attack on religion may imply an attack on the State. It is now commonly regarded as an offence against the religious feelings of society.

Blast furnace, cylindrical smelting furnace, narrower at the top and bottom, used in the extraction of metals, (mainly iron and copper) from their ores. The ore is mixed with coke and a flux. A blast of hot compressed air is piped in at the bottom to force combustion up to temperatures where the reduction of the oxide ore occurs. The molten metal sinks to the bottom and is tapped off. Waste "slag" floats to the top and is piped off. See also pp.387, 395, 396.

Blastula, stage in the development of the embryo in animals. It consists of a hollow cavity (blastocoel) surrounded by one or more spherical layers of cells. Commonly called the hollow ball of cells stage, it occurs at or near the end of cleavage and precedes the gastrulation stage.

Blau Reiter, Der, loosely-organized group of German expressionist painters, formed in 1911, which took its name from a picture painted (1903) by KANDINSKY, one of the group's leading members. Other members included Alexei von Jawlensky, Paul Klee, August Macke and Franz Marc. Influenced by CUBISM, the group, which was the most important manifestation of German modern art before WWI, sought in their paintings to stress inner impulses, which they felt that the impressionists had overlooked.

Blavatsky, Helena Petrovna (1831-91), Russian spiritualist. In 1875, with Colonel Henry Olcott, she founded the THEOSOPHICAL SOCIETY in New York. In 1878 she went to India. She outlined her beliefs in *Isis Unveiled* (1877).

Blanching, process of whitening various

products eg. textiles, wood pulp, flour, straw, petroleum, oil, fats, hair and wood. It was originally achieved by exposure to the sun and soaking in an alkaline solution. It is now done chemically, usually by oxidation using chlorine and its derivatives, but is also achieved by reduction using sulphur dioxide and by adsorption using bone-charcoal.

Bleak House (1853), novel by Charles Dickens. It shows the influence of Wilkie Collins in the mystery and intrigue of its plot. Dickens uses double narrative and extensive symbolism to unite the novel's different themes. Thus satire on the abuses of the Chancery Court focused on the need for law reform.

Bledisloe, Sir Charles Bathurst, Viscount (1867-1958), Governor-General of New Zealand (1930-35) and one of the most respected holders of that office.

Bleeding, loss of blood following a cut or wound to the skin. Menstrual bleeding in women is the monthly shedding of the lining of the uterus. Bleeding can also occur internally and may be revealed by paleness or breathlessness, or blood may be coughed up, vomited or passed in the urine. For centuries the practice of bleeding or blood-letting was used to cure ills. Leeches, whose salivary glands contain an anticoagulant, were used to prevent blood-clotting. See also p.1059.

Blenheim, chief town of Marlborough district, South Island, New Zealand and an important agricultural centre. Industries engineering, furniture. Pop. 15,000.

Blenheim, Battle of (13 Aug. 1704), decisive battle in the War of the Spanish Succession at which the Duke of Marlborough and Eugene of Savoy defeated the French at Blenheim (Blenheim), Bavaria. Vienna was saved and Bavaria taken by the anti-French allies. See also pp.1446-1447.

Blenheim Palace, English country seat of the Dukes of Marlborough, near Woodstock in Oxfordshire. It was built by VANBRUGH and HAWKSMOOR and presented by the nation to the Duke of Marlborough after his victory over the French at BLENHEIM BAVARIA in 1704. See also pp.1431, 1447.

Blenny, marine fish in shallow and offshore waters of all tropical and temperate seas. Often scaleless, with a long dorsal fin, it is olive green with varicoloured markings. Length to 30.5cm (12in). Family Blenniidae. See also p.63.

Blepharitis, inflammation of the border of the eyelid caused by bacteria. It takes the form of white scales and can be accompanied by ulceration and discharge. It is sometimes associated with CONJUNCTIVITIS.

Bleriot, Louis (1872-1936), French aircraft designer and aviator. He was the first man to fly an aircraft across the English Channel (1909). The flight from Calais to Dover took 37 minutes. As a designer Bleriot was responsible for a number of innovations, including a system by which the pilot could operate ailerons by remote control. See also p.514.

Blesbok, small South African antelope which has a large white mark on its face. Both sexes have horns that grow up to 50cm (20in) long. They are raised successfully as livestock. Family Bovidae, species *Damaliscus bles*.

Blesmol, practically blind burrowing rodent found in Africa south of the Sahara. The tunnels which they dig to seek their food - roots, bulbs, tubers and invertebrate animals - include chambers for storage and sleep. Length (excluding tail) to 35cm (13in). Family Bathyergidae, genus *Cryptomys*.

Blessington, Marguerite, Countess of (1789-1849), Irish beauty. She knew the leading figures of the day and established a highly fashionable literary salon in London. She wrote novels and *Conversations with Lord Byron* (1834).

Bleuler, Eugen (1857-1939), Swiss psychiatrist, pioneer in the diagnosis and treatment of psychoses. He coined the term SCHIZOPHRENIA and, unlike his predecessors, attributed the symptoms to psychological, not physiological, origins. See also pp.1110-1111.

Blida, town in N Algeria 16km (10 miles)

SW of Algiers, at the foot of the Atlas Mts. Founded in the 1550s by Andalusians, most of the old town was destroyed by earthquakes in 1825 and 1867. Today it is an administrative and trading centre of a fertile region that produces oranges, flowers and almonds. Pop. 85,700.

Bligh, William (1754-1817), British admiral. He was captain of HMS *Bounty* in 1789 but survived the famous mutiny, sailing nearly 6,440km (4,000 miles) in the ship's longboat. While Governor of New South Wales (1805-08) he was imprisoned by army mutineers led by John MacArthur in the Rum Rebellion of 1808. **Bligh, John** (1914-), Australian poet. In 1945 he published *The Old Pianist*. His collected poems, 1939-75, were published in 1976. He won the Myer award for Australian poetry (1964) and the Patrick White award for Australian literature (1976).

Blight, the yellowing, browning and withering of plant tissues caused by various diseases, alternatively, the diseases themselves. Blights may be caused by micro-organisms, such as bacteria and fungi, or by environmental factors such as drought. Common blights induced by micro-organisms include fire blight, bean blight and late blight. They typically affect leaves more severely than other parts.

Blighy, soldiers' name for Britain or a wound necessitating a return to Britain. It is derived from the Hindi word *bilayan*, meaning "foreign".

Blimp, non-rigid AIRSHIP, it is smaller and lighter than the semi-rigid and the rigid types. They are usually powered by small, light aero-engines and are steerable. Blimps were used during WWI and WWII for antisubmarine warfare and coastal patrol. See also pp.512-513.

Blindfish, or blind cave-fish, freshwater fish found mainly in cave waters of North America. Usually white, some species are blind, others are partly sighted. Length up to 13cm (5in). Family Characidae, species include *Anoptichthys jordanii* and Family Amblyopsidae, species *Amblyopsis spelaeus*.

Blindness, is the inability to perform any work for which eyesight is essential. Blindness occurs most frequently in people more than 55 years old, with the greatest percentage caused by senile cataract (clouding of the lens) and glaucoma (hardening of the eye due to pressure within the eyeball). Other causes of blindness include diseases such as measles or syphilis; diseases such as diabetes, nutritional deficiencies; injuries; and congenital anomalies, which include inherited defects. Blindness as a result of disease and accident as being reduced rapidly with progress in research, early diagnosis and accident prevention.

Blind snake, burrowing, almost sightless, legless reptile with the vestiges of a pelvic girdle. The Typhlopidae (blind snakes) and Leptotyphlopidae (slender blind snakes) are found throughout the world in tropical and temperate areas. Length, up to 30cm (12in). See also p.71.

Blind spot, small area on the retina of the eye where there is no visual reception because of the absence of rods and cones. It is the area where optic nerve processes converge and where blood vessels enter and leave the eye. See also pp.136-137.

Blindworm. See SLOW-WORM.

Blind comparator, instrument for detecting slight differences, such as the position or brightness of a star, by comparing two photographs of the same area of the sky. The photographs are viewed alternately in rapid succession by means of a mechanical device and any difference is observed as a flickering of the image.

Bliss, Sir Arthur (1891-1975), British composer. He was the pupil of STANFORD, VAUGHAN WILLIAMS and HOLST. His works include the *Colour Symphony* (1932), quintets for oboe (1927) and clarinet (1931), a piano concerto (1938), two operas and a number of choral works. They are all written in the ROMANTIC tradition. From 1953 until his death he was MASTER OF THE QUEEN'S MUSIC.

Blister beetle, medium-sized beetle that secretes cantharidin, an irritant which

causes blisters on human skin. Believed to be a diuretic and aphrodisiac, cantharidin was formerly made from the European blister beetle or Spanish fly (*Lytta vesicatoria*). Family Meloidae.

Blitz, the name used by the British to describe the night bombings of British cities by the German Luftwaffe in 1940-41. See also p.1684.

Blitzkrieg, type of fast-moving warfare developed by the Germans during WWII. It means "lightning war", and was used in their invasion of Poland in 1939. Tanks and mechanized troops smashed through enemy lines, often supported by dive-bombers. The British amended the term to BLITZ. See also p.1680.

Bliken, Karen. See DITZEN, ISAK.

BL Lacertae, extraordinary object with a strong infra-red emission, of unknown category, recent indications (as yet unconfirmed) are that it may be a quasar embedded in a normal galaxy. See also p.1005.

Bloch, Ernest (1880-1959), Swiss-born US composer. He was well known for his orchestral compositions, which included *Schelomo* (1916) for cello and orchestra. He also composed concertos, chamber music, an opera, *Macbeth* (1909) and *Sacred Service* (1933).

Bloch, Ernst (1885-1977), German philosopher. A Marxist, he left Nazi Germany in 1933 and wrote most of his major work, *The Hope Principle* (1954-59), in the USA. He returned to East Germany in 1948, where his Marxist revisionism became suspect to Party authorities. Unable to get his works published, he defected to West Germany in 1961.

Bloch, Felix (1905-), Swiss-born US nuclear physicist. From 1934 he was professor of theoretical physics at Stanford University, USA, becoming a naturalized American in 1939. With the US physicist Edward Mills Purcell he shared the 1952 Nobel prize in physics for their separate development of the nuclear induction or nuclear resonance method of measuring the magnetic fields of atomic nuclei.

Bloch, Konrad Emil (1912-), German-born US biochemist. He studied fat metabolism, and in particular the way cholesterol is synthesized in the body. He shared the 1964 Nobel prize for physiology and medicine with Feodor Lynen.

Blockade, military tactic aimed at closing ports to commerce or obstructing communications and movement in and out of a territory.

Blomeert, Abraham (1564-1651), Dutch Mannerist painter of historical and allegorical themes, still lifes and portraits, influenced by the chiaroscuro of Caravaggio. He played an important role in the founding of the Utrecht school.

Bloufontein, city and judicial capital of South Africa, 475km (295 miles) W of Durban, and capital of the Orange Free State province. Dutch farmers settled there in the early 19th century. The modern city is a centre for education, industries, furniture, plastics. Pop. (1970) 148,282.

Blök, Alexander Aleksandrovich (1880-1921), Russian poet, the leading member of the Symbolist school. His most famous early work is *Verses About the Lady Beautiful* (1904). He is best known for his pro-revolutionary epic poem, *The Twelve* (1918).

Blondel, originally called Blondel de Nesle, French minstrel who became a legend. He lived in the late 12th century and is generally associated with Richard I.

Blondin, pseudonym of Jean-François Gravelle (1824-97), French acrobat and tightrope walker. He gained an international reputation by crossing Niagara Falls several times on a tightrope, the first time in 1859. The rope, drawn 160ft above the water, was 1,100ft long.

Blond, Claude Thomas (c.1618-80), Irish adventurer. In 1671 he and three accomplices stole the crown jewels from the Tower of London. He was arrested and imprisoned, but later pardoned by Charles II who visited him in prison.

Blood, fluid tissue circulating in the bodies of animals that transports oxygen, water, nutrients and metabolites. In a healthy

human being, its normal temperature is approx 37°C (98.6°F) and it constitutes about 9% of the body's total weight. By volume, it comprises about 5.5 litres (9.7pt) of which 54% is the yellowish, transparent liquid called plasma and 46% the microscopic cells it contains. See also pp.152-153.

Blood cells comprise red cells (erythrocytes) delivering oxygen to body tissues through their haemoglobin content, white cells (leukocytes) protecting the body from infection and platelets, the blood's vital clotting agents. See also p.152.

Blood clotting, protective physiological mechanism that prevents loss of blood after injury or other causes of haemorrhage. A mesh of tight fibres coagulates at the site of injury through a complex series of chemical reactions; normal clotting takes place within five minutes. See also pp.152,153,156,157,1067.

Blood groups are classified into four major types: A, B, AB or O, according to the blood's basic protein content present in its red cells as agglutinogens A and B. The APTESUS FACTOR (Rh) further classifies groups as Rh-positive or Rh-negative. Group identification is essential before blood transfusion can take place. See also LANDSTEINER pp.152,153,1066.

Bloodhound, hunting dog with long tapered head, loose hanging jowls and ears, and a characteristically wrinkled skin. The body is strong and the legs muscular, and the dog weighs up to 50kg (110lbs). The smooth coat may be black, tan, or red and tan. Height, (at shoulder) up to 69cm (27in). See also HOWARD.

Blood poisoning (septicaemia), the prolonged invasion of the bloodstream by pathogenic bacteria. Such microbes may enter the body through a cut or materialize as toxins produced after an infectious disease. Symptoms include sudden chills and fever, sweating and pains in the joints. ANTIBIOTICS are the normal treatment. See also pp.1060-1061, 1067.

Blood pressure, force exerted on artery walls, is usually taken as two readings: first when the heart is contracting and then when it is at rest between beats. An average young adult's pressure is thus quoted as 120/80mm, the two heights of a SPHYGMOMANOMETER's mercury column the blood can support. See also pp.1066, 1067.

Blood tests, examination of blood, taken usually from a vein in the inner elbow. Tests include blood grouping, counts of red and white cells, detection of abnormal cells such as those indicating a type of cancer, and estimation of the clotting power and the levels of various proteins, including antibodies against disease. See also pp.152,153,166,1088,1098.

Blood transfusion, supplying blood into a patient's circulation, most often to counteract shock caused by loss of blood, which can otherwise prove fatal. The blood group of the donor must be compatible with that of the recipient, to avoid dangerous or even fatal clotting in the recipient's blood vessels. The donor's blood must also be free from agents of disease. See also pp.152,153,1097.

Blood type. See BLOOD GROUPS.

Blood vessels, closed tube-like channels that circulate blood throughout the body. There are three major types of blood vessels: arteries, which carry blood away from the heart, veins, which carry blood towards the heart, and capillaries, the smallest, in which gases and dissolved substances diffuse in and out of the blood. See also pp.152,153,1063,1066,1067.

Blood Wedding, one of three folk tragedies by GARCIA LORCA, it was published in 1933 as *Bodas de Sangre* and followed by *Yerma* (1934) and *La Casa de Bernarda Alba* (1936). *The House of Bernarda Alba*. These three works are filled with the energy of revolt against the middle-class theatre in Madrid at the time.

Bloody Assizes (1685), trials held in the West Country of England following MONMOUTH'S rebellion. Judge JEFFREYS, who presided, conducted the trials with notorious severity and sentenced 200 people to be hanged, about 800 to transportation, and hundreds more to flogging, imprisonment or fines. See also p.1427.

Bloom, Claire (1931-), British actress best known for her role as the ballet dancer in Charlie Chaplin's film, *Lime-light* (1952). In the theatre, she won particular acclaim for her performances in plays by Ibsen and in Tennessee Williams' *A Streetcar Named Desire*.

Bloomer, Amelia Jenks (1818-94), US women's rights campaigner. She published *Lily*, the first US magazine for women. She continued as editor and wrote articles on education, marriage laws and female suffrage. As part of her campaign for the emancipation of women she popularized the full trousers for women that became known as "bloomers".

Bloomsbury Group, intellectuals who met in Bloomsbury, central London, from about 1907. They included the art critics Roger Fry and Clive Bell, novelists E.M. Forster and Virginia Woolf, her husband Leonard, a publisher; economist John Maynard Keynes and biographer Lytton Strachey. The group's attitudes were influenced by the philosopher G.F. Moore, and are contained in his statement that "the rational ultimate end of human progress consists in the pleasures of human intercourse and the enjoyment of beautiful objects".

Blow, John (c.1648-1708), English composer, organist at Westminster Abbey and the Chapel Royal, London. He wrote many anthems, a masque, *Venus and Adonis* (1685), and taught Purcell.

Blowfly. See BLUEBOTTLE.

Blowpipe, or blowgun, accurate weapon consisting of a tube through which a pellet or poisoned dart is ejected by force of breath. It is widely used by people in South and Central America and SE Asia for hunting small game.

Blücher, Gebhard Leberecht von (1762-1819), Prussian field-marshal. He distinguished himself during the NAPOLEONIC WARS, fighting against France (1793-94), and in the campaign of 1805-06. He led the Prussian troops at the battle of Lützen and helped to defeat Napoleon at Leipzig (1813). In 1815 he was defeated at Ligny but arrived at Waterloo in time to secure British victory over Napoleon. See also pp.1552-1553.

Blue, honour conferred on those representing their universities in sporting competitions. These were originally conferred by Oxford and Cambridge whose identifying colours are dark blue and light blue respectively.

Blue baby, child born with a defect of the heart or incompletely expanded lungs, either or both of which causes its blood to be deficient in oxygen. It leads to a bluish skin colour (cyanosis).

Bluebeard, folk tale character, murderer of a succession of wives who became too curious about a locked room in his castle. In the story by Charles Perrault, Bluebeard is a rich nobleman. His wife manages to open the locked door and sees the bodies of several women inside. She is saved from death by the arrival of her brothers who thereupon kill her husband.

Bluebeard's Castle, only opera by Béla Bartók, written in 1911 and produced in Budapest in 1918. It has extraordinary richness and power and is a superb handling of the Bluebeard legend.

Bluebell, spring flowering blue flower, native throughout Europe. It grows from a bulb, especially in woodlands. Height 20-50cm (8-20in). Family Liliaceae, species *Endymion non-scriptus*. See also pp.307,379.

Blueberry. See HERRBERRY.

Bluebottle, black or metallic blue-green fly, slightly larger but similar in habits to the HOUSE FLY. The larvae (maggots) usually feed on carrion and refuse containing meat. Like the greenbottle, it is often also called a blowfly. Family Calliphoridae. Genus *Musca*. Length, 6-11mm (0.23-0.43in).

Bluebuck, another name for the NUBIAN, an Indian antelope.

Bluefields, town in SE Nicaragua, on Bluefields Bay at the mouth of the Escondido River. It is the capital of Zelaya department and Nicaragua's chief port on the Caribbean Sea. Products: bananas, hardwoods, coconuts. Pop. (1970 est.) 23,000.

Bluefish, marine fish found in most tropical and temperate seas. A voracious predator, it travels in large schools. Fished widely for food and sport, it has an elongated blue or green body and a large mouth with sharp, strong teeth. Length to 1.2m (4ft). Family Pomatomidae, species *Pomatomus saltatrix*.

Bluegrass, type of grass that grows in temperate and Arctic regions and is used extensively for food by grazing animals. Family Gramineae, genus *Poa*.

Blue-green algae, unicellular or two-celled plants which live on moist surfaces or on water, they reproduce by spores. Class Cyanophyta. See also ALGAE.

Blue Mountains (Blue Plateau), range in New South Wales, SE Australia, part of the Great Dividing Range and a barrier to westward colonial expansion until 1813. The area is popular with walkers and mountaineers. Height: 610-1,100m (2,000-3,600ft).

Blue Mountain, highest peak in the Blue Mountain range in Jamaica, West Indies, it is 2,253m (7,388ft) high. The range is thickly covered by vegetation and the well-known Blue Mountain coffee is grown on its slopes.

Blue Nile, river in NW Ethiopia, rising near Lake Tana and flowing SE and W into the Sudan. It merges with the White Nile to form the River Nile. Two dams on its course through the Sudan irrigate 400,000 ha (1,000,000 acres) of land. Length approx 1,368km (850 miles).

Blueprint, photographic image on paper with white lines against a blue background, frequently used for engineering drawings. The paper is coated with a solution of ammonium ferric citrate and potassium ferricyanide and exposed to intense light under the sheet of drawings to be copied. The blueprint is "developed" in water. See also p.616.

Blue Rider. See BLAUE REITER, DER.

Blues, musical form used in jazz and related music. It may have developed from Scottish folk tunes, by the early 20th century, in the hands of Negro musicians, such as W.C. Handy it had become a fairly strict harmonic progression, usually over 12 bars. An authentically American Negro form, it was the basis of many songs (often pessimistic) and was used for instrumental improvisation in which the use of "blue notes" (flattened thirds and sevenths) was an important melodic device. The blues and the styles of playing associated with it have influenced much 20th-century music. See also pp.1756-1757.

Bluestocking, pejorative term applied to women with literary pretensions. It dates from the 18th century when a London women's literary circle was attended by Benjamin Stillingfleet, who wore ordinary blue worsted stockings rather than the black silk of evening dress.

Blue whale, the largest animal that has ever lived, now in danger of extinction. Species *Sibbaldus musculus*. See also pp.100,101.

Bluff, southernmost port of South Island, New Zealand. It has a large harbour with automatic loading facilities, and exports wool and fish. Pop. (1972 est.) 3,250.

Bum, Léon (1872-1950), French politician. He served in the Chamber of Deputies (1919-40) as a leader of the Socialist Party. He was Prime Minister (1936-37) and deputy prime minister (1938), leading the opposition to the MUNICH AGREEMENT. Interned by the VICHY GOVERNMENT (1940-45) he was released by the Allies and led the provisional government of 1946-47 before the elections held by the new Fourth Republic.

Bumberg, Baruch Samuel (1925-), US research physician. From 1964 he worked with the American Institute for Cancer Research. He shared the 1975 Nobel Prize in physiology and medicine with Daniel C. Gajdusek for discoveries concerning new mechanisms for the origin and dissemination of infectious diseases.

Blumenbach, Johann Friedrich (1752-1840), German zoologist and anthropologist, often called the "father of physical anthropology". He proposed one of the earliest classifications of man. His study of

Blundell, Sir Edward Denis

cranium measurements led him to propose that there are five families of man - Caucasian, Mongolian, Malayan, Ethiopian and American.

Blundell, Sir Edward Denis (1907-) New Zealand lawyer and diplomat. He was high commissioner for New Zealand in London (1968-72) and in 1972 he was appointed governor-general of New Zealand.

Blunden, Edmund Charles (1896-1974), English poet and author. His poetry, including that written during wartime, is marked by a deep love of the traditions of rural England. His most celebrated work is the prose narrative *Undertones of War* (1928), a classic account of his experiences in WWI. In 1966-68 he was professor of poetry at Oxford.

Blunt, Wilfred Scawen (1840-1922), English poet. He supported Egyptian and Irish nationalism and in 1887 was imprisoned for his political activity in support of Irish independence. His poems include *The Love Sonnets of Proteus* (1875-92).

Boa, constricting snake which gives birth to live young. The boa constrictor (*Constrictor constrictor*) of the American tropics can grow to 3.7m (12ft), although the iridescent rainbow boa, the emerald tree boa and the rosy boa are smaller species. Most boas are tree-dwellers, but the rubber boa of the USA is a burrowing species. Family Boidae. See also pp.3, 69, 315.

BOAC. See BRITISH AIRWAYS.

Boadicea (d. AD 62), British Queen of the Iceni in East Britain. She was the wife of King Prasutagus who, on his death, left his daughters and the Roman emperor as co-heirs. The Romans seized his domain and Boadicea led a revolt against them. Defeated, she took poison. See also pp.123-4, 1235.

Boar, male domestic pig (particularly one that has not been castrated) or, more specifically, the wild pig of Europe, Africa and Asia. In almost all its habitats it is hunted, either for food or merely for sport. The European wild boar is species *Sus scrofa*. See also pp.304, 732.

Boat, vehicle for passenger and freight transport by water. Today the term "boat" is often reserved for a small craft that can easily be taken out of the water; larger vessels are called ships. The first boats, made in prehistoric times, included hollowed-out logs and rafts and boats made from plaited reeds. Among the first maritime peoples were the Phoenicians, who built fleets of galleys for their extensive trading in the Mediterranean and adjoining areas. These galleys, and the later ones of the Greeks and Romans, were propelled by sails, supplemented by oars usually plied by slaves. The later Viking long-boats, also square-sailed, were slimmer and speedier, their oars being plied by strong fighting men. Lateen (triangular) sails were probably imported from the Persian Gulf, and introduced to the west by the empire-building Arabs. Modern boats include sailing vessels, generally used mainly for pleasure, motor-boats and launches. See also LIFE-BOAT, pp.470-473.

Boatbill, or boat-billed heron, nocturnal wading bird of tropical America, related to the night herons but having a much broader bill. Family Ardeidae, species *Cochlearius cochlearius*. See also p.331.

Boat Race, annual rowing contest between Oxford and Cambridge eights, first held in 1829. It is rowed on a 6.8km (4.2-mile) course on the Thames, from Putney to Mortlake. The race, first held on the present course in 1845, takes place in March or April.

Boatswain. See BO'SUN.

Boaz, in the Bible, Bethlehemite related to Naomi's husband Elimelech. He married their daughter-in-law Ruth, inheriting her deceased husband's estates.

Bobadilla, Francisco de (d. 1502), Spanish colonial administrator. He replaced Christopher Columbus as Governor of the West Indies in 1500, sending Columbus back to Spain in chains. He was recalled to Spain in 1502 but died at sea.

Bobcat. See LYNX.

Bobolink, songbird found in Canada and in USA, which winters in South America. Males have a tawny neck, buff back and black underparts in spring. The brown female lays up to seven spotted eggs in a ground nest. Species *Dolichonyx oryzivorus*.

Bobsleigh, long metal sledge for two or four people which is ridden down a steep, twisting ice-covered course in one of the fastest winter sports. Developed in Switzerland in the 19th century, bobsleighbing has been included as an Olympic event since 1924. One of the most famous courses is the CRESTA BLN.

Boccaccio, Giovanni (1313-75), Italian poet. His early work, the *Filocolo* (c. 1340) is sometimes considered the first European novel, but he is best known for the *Decameron* (1348-53), a series of stories of contemporary mores, and for *La Fiammetta*, a romance. He knew and imitated DANTE, and with his friend PETRARCH he is considered to be one of the founders of the Italian RENAISSANCE. See also p.1345.

Boccherini, Luigi (1743-1805), Italian composer. He was an accomplished concert cellist and a prolific composer of chamber music in the emerging classical manner. He wrote over 60 string trios and more than 200 string quartets and quintets.

Boccie. See BOWLS.

Boccioni, Umberto (1882-1916), Italian FUTURIST painter, sculptor and writer, a signatory of the FUTURIST MANIFESTO (1910). His paintings (eg *Street Noises Penetrate into the House*, 1911), and sculpture (eg *Unique Forms of Continuity in Space*, 1913), try to depict complete ranges of sensations and impressions simultaneously. See also p.1657.

Bochum, city in West Germany, 16km (10 miles) E of Essen, in the heart of the industrial Ruhr district. The city, containing a 16th-century church, was once an important producer of coal. Industries: engineering, iron and steel, textiles. Pop (1970 est.) 343,968.

Bock, Hieronymus (c. 1498-1554), German botanist. He constructed a system of plant classification based on physical characteristics. His description of German plants, *Neu Kreuterbuch* (1539), was a great improvement on any of the earlier herbals.

BOD, or biological oxygen demand, chemical test for determining the level of pollution of water by organic matter. Two equal samples of water are taken, and the first is treated chemically to "mop up" any dissolved oxygen. Both samples are then incubated in the dark for some days, after which the second sample is given a similar chemical treatment. This allows the amount of "mopped-up" oxygen to be estimated. The difference between the two estimations represents the amount of oxygen that has been used up by living and dead organic matter in the water during the period of storage. See also pp.545, 760-761.

Bode's law, empirical numerical relationship for the mean distances of the planets from the Sun. It is named after the German astronomer Johann Bode, who popularized it in the late 18th century. If the number 4 is added to 0, 3, 6, 12, 24, 48, 96 and 192, and each sum is divided by 10, the figure arrived at is the mean distance in astronomical units of the planets from the Sun from Mercury to Uranus, including the asteroid belt. The law does not work for Neptune and Pluto.

Boden See. See CONSTANCE, LAKE.

Bodhi Gaya. See BUDDH GAYA.

Bodhidharma (fl. 6th century AD), Indian Buddhist monk who founded, in China, ZEN (or Ch'an) Buddhism.

Bodhisattva, also called bodhisattva and bodhisattva, in HINAYANA BUDDHISM, an individual who is about to reach NIBBANA, such as Gautama prior to his enlightenment. In MAHAYANA BUDDHISM, the term is used to denote an individual on the verge of enlightenment who delays his salvation in order to help mankind. See also pp.1196-1197.

Bodin, Jean (1530-96), French lawyer and political philosopher. In *Six Books of*

the Commonwealth (1576) he treated anarchy as the supreme political evil and order as the supreme human need. He therefore supported absolute monarchy and was an early proponent of the modern notion of unrestricted secular sovereignty residing in the state.

Bodleian Library, large collection of books founded at Oxford University in 1602 by Sir Thomas Bodley (1545-1613), a scholar and diplomat, who donated to it many volumes and manuscripts. The library's collection has more than 2,500,000 volumes and it can accommodate 17,000 readers in the central and dependent libraries.

Bodley, George Frederick (1827-1907), British architect in the GOTHIC REVIVAL manner. He is best-known for his churches, the most famous of which is the chapel of Queen's College, Cambridge.

Bodo, town in N Norway, N of the Arctic Circle, 161km (100 miles) SW of Narvik. It experiences the midnight sun between 1 and 12 July. Industries: copper and marble distribution, fishing. Pop. (1974) 29,123.

Bodoni, Giambattista (1740-1813), Italian printer, one of the originators of the first modern, Roman style typeface. He published editions of HOMER, VIRGIL and HORACE in the new typeface. His editions were considered elegant and imitative of classical styles of writing.

Body snatchers, criminals who stole newly dead bodies to sell to anatomists when there was no legal supply of human corpses for dissection. After the sensational trial (1828-29) of William Burke and William Hare, who murdered people in order to sell the bodies, Britain passed the Anatomy Act in 1832 that permitted medical schools to acquire unclaimed bodies. See also BURKE and HARE.

Boece. See BOETHIUS.

Boehm, or Bohm, Theobald (1794-1881), German flautist, composer and inventor. A flute virtuoso, he devised a new key system that involved blocking the flute holes with keys instead of the fingers. This improved the sound of the instrument and has been universally accepted in the manufacture of modern woodwind instruments. Boehm's system was later used on other woodwind instruments.

Boehme, Jakob (1575-1624), German philosophical mystic. A shoemaker by trade, he began to have mystical experiences in 1600. In his books *The Aurora* (1612) and *The Way to Christ* (1623) he exhorted Christians to make their lives a genuine imitation of Christ's suffering and triumph.

Boeing Airplane Company, formed in 1917 by William Edward Boeing from the Pacific Aero Products Company. The company made several famous military aeroplanes which were used during WWII, but it is most famous for its passenger jets, the first of which is the Boeing 707 of 1957. The large-capacity 747, or jumbo jet, was introduced in 1970. See also p.517.

Boeotia, department in central Greece, on the N shore of the Gulf of Corinth, the capital is Lavádia. Formed in the 7th century BC, the Boeotian League of ancient Greek cities was dominated by Thebes. It was disbanded after 479 BC. Heinrich Schliemann excavated the Treasury of Minyas there in the 19th century. Area 3,211sq km (1,240sq miles). Pop. 114,300.

Boer, also known as Afrikaner, Dutch and French Huguenot settler, who from 1652 settled in the area which is now the Republic of South Africa. Boer means "farmer" in Afrikaans. See also pp.1606-1607, 1620, 1805, 1811.

Boer Wars. See SOUTH AFRICAN WARS.

Boerhaave, Hermann (1668-1738), Dutch physician who introduced the bedside method of teaching. From 1701 he taught medicine at Leiden University and later also taught botany and chemistry. His works included *Institutiones Medicae* (1708).

Boethius (Anicius Manlius Severinus) (c. 480-524), Roman statesman and philosopher under the Emperor Theodoric. He attempted to eliminate governmental

corruption, but was finally imprisoned on a charge of conspiracy. In prison at Pavia, where he was subsequently tortured and executed, he wrote *On the Consolation of Philosophy* (523), a dialogue based on NEO-PLATONIST and ARISTOTELIAN principles, and next to the Bible medieval Europe's most influential book.

Boethius (fl. 2nd century BC), Greek sculptor. Regarded as a member of the Alexandrian school, he is noted for his carvings of children. A bronze statue in the Louvre, of a boy strangling a goose, may be a copy of a sculpture by Boethius, who also worked in silver.

Bog, spongy wet soil consisting of decayed vegetable matter, often called a peat bog. It develops in a depression with little or no drainage, where the water is cold and acidic and almost devoid of oxygen and nitrogen. A bog rarely has standing water like a marsh, but plants such as cranberry and sundew readily grow there.

Bogaerde, Dirk (1921-), British film actor, real name Derek Niven van den Bogaerde. He made his film debut in *Esther Waters* (1947) and after his success in *The Blue Lamp* (1950) became a leading British film star. His later and most notable films include *Victim* (1961), *The Servant* (1963), *Darling* (1965), *Accident* (1967) and *Death in Venice* (1971). He published his autobiography in 1976.

Bogardus, James (1800-74), US architect. He was one of the first to use cast iron in the facades of buildings. In 1848 he built his own factory in New York City to make prefabricated cast iron frames. One of his best known works is the Iron Building in New York City. See also p.1600.

Bogart, Humphrey de Forest (1899-1957), US film actor. He is best known for his portrayal of rather tough, cynical characters. His films include *The Petrified Forest* (1936), *The Maltese Falcon* (1941), *Casablanca* (1942), *The Big Sleep* (1946), *Treasure of the Sierra Madre* (1948), *The African Queen* (1951), for which he won an Academy Award as best actor, and *The Caine Mutiny* (1954).

Bogazköy, in Turkey, the site of the ancient capital, Hattusa, of the HITTITES who flourished in Anatolia and N Syria in the 2nd millennium BC. It remained the capital throughout the history of the Hittite empire, and was destroyed when the empire fell c. 1190 BC.

Bogdanovich, Peter (1939-), US film director and critic. He worked with director Roger Corman on *Wild Angels* (1966) and directed his first film *Tarzan* (1968) with Corman's backing. His other films include *The Last Picture Show* (1971), a nostalgic look at a Texas town in the mid-1950s, *What's Up, Doc?* (1972), *Paper Moon* (1973), *At Long Last Love* (1975) and *Nickelodeon* (1976).

Bog myrtle, or sweet gale, flowering shrub of wetlands. Its aromatic, resinous leaves have been used in medicines. Family Myricaceae, species *Gale Belgica*.

Bogomil, 10th-15th-century heretical Christian sect, founded by Bogomil, a priest. This starkly ascetic group originated in Bulgaria c.950, spread to other Slavic countries and to France, where it influenced the ALBIGENSIAN heresy. Bogomils believed that materialism, or Satan, God's first and fallen son, was uppermost in the world but with the redeeming help of Christ, God's second son, this bondage could be broken and evil destroyed.

Bogota, capital of Colombia in the centre of the country, 483km (300 miles) N of the Equator. It was founded in 1538 by the Spanish near the Chibcha Indians, on a fertile plateau 2,640m (8,663ft) above sea-level. In 1819 it became the capital of Greater Colombia, part of which later became Colombia. Today it is a centre for culture, education and finance. Industries: tobacco, sugar, flour, textiles. Pop. (1976 est.) 3,153,000.

Bohème, La, opera in four acts by Giacomo Puccini, libretto by Giacosa and Illica. It was first produced at Turin in 1896. The story is taken from the novel by Henri Murger, *Scènes de la Vie de Bohème*.

Bohemia, historic region, now forming w Czechoslovakia, its capital is PRAGUE.

Bohemia was first unified in the 10th century and became part of the HOLY ROMAN EMPIRE in 950. It was the centre of several heretical and nationalist revolts, including the HUSSITES, and Protestant opposition to the Emperor in Prague led to the start of the THIRTY YEARS WAR in 1618. Bohemia had become a HAPSBURG possession in 1526, and won its independence from the AUSTRO-HUNGARIAN EMPIRE in 1918 when it became the core of Czechoslovakia. See also pp.1298-1299, 1407, 1560-1561, 1946-1947.

Bohemian school, 14th-century group of artists based in Prague. Their most important achievements lie in panel paintings and frescoes by exponents such as Theodoricus of Prague (fl.1360-80) and the Master of Wittingau (fl.1380-90), who were initially influenced by Italian models but developed a specifically Bohemian soft style. Through Charles IV, King of Bohemia (1346-78) and Holy Roman Emperor (1355-78), they influenced later Gothic art in Germany.

Bohemond I (c.1056-1111), Norman Crusader. In 1096 he joined the First Crusade and played a key role in the capture of Antioch in 1098, of which he became prince in 1099. He was held captive by the Turks (1100-03).

Bohm, Karl (1894-1981), Austrian conductor, famous for his interpretations of MOZART and STRAUSS. In 1921 Bruno WALTER engaged him for the Munich State Opera and in 1934 he became musical director of the Dresden Opera. He was principal conductor of the Vienna Philharmonic Orchestra from 1933.

Bohr, Niels (1922-), Danish physicist. From 1956 he was professor of physics at Copenhagen University. In 1963 he became director of the Nordic Institute for Theoretical Nuclear Physics (NORDITA). With BENJAMIN MOTTELSON (also of NORDITA) and JAMES RAINWATER of the USA he shared the 1975 Nobel Prize in physics for their discovery of the connection between collective motion and particle motion in atomic nuclei.

Bohr, Niels (1885-1962), Danish physicist. He worked with J.J. THOMSON and ERNEST RUTHERFORD in Britain before teaching theoretical physics at the University of Copenhagen. He used the QUANTUM THEORY to explain the spectrum of hydrogen and devised the atomic model that bears his name. He escaped from German-occupied Denmark during WWII and helped to develop the atom bomb in the USA. He later returned to Copenhagen and worked for international co-operation. He was awarded the Nobel Prize for physics in 1922 for his work on atomic structure. See also SU pp.62-63.

Bohun, Humphrey V de (d.1275) and Humphrey VII de (1276-1322), 1st and 3rd earls of Essex. The 1st earl was one of the baronial opponents of HENRY III who drew up the PROVISION OF OXFORD. The 3rd earl was one of the lords ordainers who opposed EDWARD I.

Boiardo, Matteo Maria (1441-94), Italian poet. His incomplete *Orlando innamorato* revived the Italian epic, chiefly by inspiring LUDOVICO ARIOSTO, whereas *Three Books on Love* (1499), for Antonia Caprara, is among the best lyric poetry.

Boil, or furuncle, localized infection of the skin and subcutaneous tissue, often formed around hair follicles on the neck, face or buttocks. Most boils are caused by friction, which irritates the roots of the hair, and the growth of the micro-organism STAPHYLOCOCCUS.

Bollean-Despreaux, Nicolas (1636-1711), French poet and critic. In *L'Art poétique* (1674), he expounded classical standards for poetry, and his criticisms gained him both friends and enemies. He was royal historian to Louis XIV of France in 1677. See also pp.1450-1451.

Boilers, vessel for heating and converting water to steam, an essential part of steam-engines and turbines. It consists of a furnace for burning fuel and a compartment where water is evaporated into steam. See also pp.422-425.

Boiling-point, temperature at which a substance changes phase from a liquid to a vapour or gas. The boiling-point is higher

or lower as the external pressure increases or decreases. It is usually measured at standard pressure (760mm of mercury).

Bolito, Arrigo (1842-1918), Italian composer and librettist. His principal work as a composer was the opera *Mefistofele* (1868, revised 1875), but more significant were the librettos he wrote for VERDI's operas *Otello* and *Falstaff*.

Bolksburg, city of NE South Africa, 24km (15 miles) S of Johannesburg. It was established in 1887 and became an important gold-mining area. Industries: gold, electrical equipment, clay products, food processing. Pop. (1968 est.) 108,800.

Bolas, missile hunting weapon of South American Indians, consisting of two or more stone balls tied to the end of thongs and thrown in such a manner as to entangle the legs of the prey. It is used mainly in the open country of the Patagonian and Pampas zones. See also p.554.

Boldrewood, Rolf (1826-1915), British-born Australian novelist, pseudonym of Thomas Alexander Browne. In Australia he was first a squatter and later an inspector of goldfields. Using his pseudonym he wrote adventure stories including *Robbery Under Arms* (1882) and *The Miner's Right* (1890).

Boleslav, name of five Polish rulers of the PIAST dynasty. Boleslav I (c.966-1025), 'the Mighty' (r.992-1025) and the founder of the Polish monarchy, gained independence from Germany and greatly expanded Polish territory. Boleslav II (1039-81), 'the Generous', ruled as king from 1058 to 1079 until noble opposition forced him to flee to Hungary. Boleslav III (1086-1138), 'the Bold', (r.1102-38) Christianized Pomerania and repulsed an invasion by the Emperor HENRY V but in his division of the country into four separate duchies for his sons created two centuries of internal conflict. Boleslav IV (1127-73), 'the Curly', (r.1146-73) saw his country invaded twice by FREDERICK BARBAROSSA. Boleslav V (1221-79), 'the Chaste', ruled from 1227 to 1279. See also pp.1298-1299.

Bolitus, genus of terrestrial fungi whose spore-bearing parts are tubes instead of the usual gills. There are many species, all of which have a fleshy cap on a central stem and some of which are edible. Many poisonous kinds have red tube mouths. See also p.355.

Boloya, Anne (c.1507-1536), second wife of HENRY VIII and mother of ELIZABETH I who became the king's mistress some time after 1526 and his queen in 1533. Moves to enable Henry to break with Rome and allow his childless marriage to Catherine of Aragon to be annulled were intensified in 1533 when Anne became pregnant and married Henry secretly. Her own failure to produce a male heir led to her trial and execution on charges of adultery and incest. See also p.1404.

Bolingbroke, See HENRY IV (of England). **Bolingbroke, Henry St John, Viscount** (1678-1751), English politician and propagandist. A Tory member of Parliament (1701-14), he became Secretary for War in 1704 under Queen ANNE. His *Idea of a Patriot King* (1749) was thought to have influenced the 'PHILOSOPHERS'.

Bolívar, Simón (1783-1830), Venezuelan soldier and statesman whose experiences in Napoleonic Europe influenced his persistent attempts to free South America of Spanish rule. He achieved no real success, however, until he established an inland base in 1819 from where he succeeded in liberating New Granada (later Colombia) in 1821. The liberation of Venezuela (1821), Ecuador (1822), Peru (1824) and Upper Peru (1825) followed, the latter renaming itself Bolivia in his honour. Despite this complete removal of Spanish hegemony from the continent, his hopes of uniting South America into one continental alliance were dashed by the inevitable rivalry between the new states. See also pp.1562, 1563.

Bolivia, inland nation in W central South America. It has rich mineral deposits, including tin, gold and silver, but it is nevertheless one of the poorest nations of the continent. Sucre is the official capital,

but La Paz is the seat of government. Area: 1,098,581sq km (424,162sq miles). Pop. (1976 est.) 4,687,618. See p.1988.

Böll, Heinrich (1917-), German novelist and short-story writer. His works include *Where Were You, Adam?* (1951), *Acquainted with the Night* (1953), *The Clown* (1963), *Absent Without Leave* (1964) and *Group Portrait with Lady* (1971). A concern for Catholic authenticity and a critical view of German society pervades his stories. He was awarded the Nobel Prize for literature in 1972.

Boll weevil, small black beetle common in the USA. Adults and larvae feed on cotton plants, especially the bolls, and cause serious crop damage. Species *Anthonomus grandis*. See also p.43.

Bollworm, caterpillar found in many areas where cotton is grown. It is cream or slightly pink in colour and feeds mainly on the green cotton bolls. The adult resembles the CLOTHES MOTH. Length: 12mm (0.5in). There are various species.

Bologna, city in N central Italy, at the foot of Apennines, capital of Bologna and Emilia-Romagna province. Originally an Etruscan town, Felina, it was colonized by Rome in the 2nd century BC. It has an 11th-century university, the uncompleted Church of San Petronio (1390), and the Palazzo Comunale (13th, 15th, 16th centuries). Industries: mechanical and electrical engineering, food processing. Pop. (1975 est.) 421,130.

Bolometer, instrument for detecting and measuring electromagnetic radiation such as light and heat. One type uses a thin blackened metal strip whose electrical resistance varies according to the amount of radiation falling on it. Bolometers are often mounted in telescopes to measure the energy given off by stars.

Bolsheviks, MARXISTS led by LENIN who obtained and held power by the RUSSIAN REVOLUTION. Their name ('the majority') distinguished them from the MENSHEVICS ('the minority'), whom they narrowly defeated at the Second Congress of the All-Russian Soviet Democratic Workers' Party in London in 1903. The split, on tactics as much as doctrine, centred on the means of achieving revolution, the Bolsheviks believing it could be obtained only by professional revolutionaries leading the PROLETARIAT, their more liberal Menshevik opponents led by Julius Martov holding a less doctrinaire, more democratic approach which included co-operation with other parties including those in the DUMA. Numerically in a minority in 1917, the Bolsheviks were nevertheless able to overthrow the Provisional government of KERENSKY through their support in the SOVIETS of Moscow and Petrograd led by LEON TROTSKY. See also pp.1676-1677, 1676-1677.

Bolshoi Ballet, one of the world's leading companies which was founded in 1776. Based at the BOLSHOI THEATRE, its choreographers have included Marius PETIPA and Alexander Gorsky and its leading dancers Galina ULANOVA and Mikhail Lavrovsky. **Bolshoi Opera**, leading Russian opera company, founded in 1780 in Moscow. It performs mostly Russian works and a few foreign operas translated into Russian. **Bolshoi Theatre**, home of the BOLSHOI BALLET and Bolshoi Opera. The present building dates from 1856 and seats more than 2,000.

Boht, Robert Oxtom (1924-), British dramatist whose reputation was established with *Flowering Cherry* (1957) and consolidated with *A Man for All Seasons* (1960), about the life of Sir Thomas MORE. Later plays include *Vivat, Vivat Regina!* (1970), about ELIZABETH I, and *State of Revolution* (1977), which explored the politics of LENIN.

Bolton, town in Greater Manchester Metropolitan County, NW England, 18km (11 miles) SW of Manchester. Since the late 18th century it has been a cotton and textile-manufacturing centre. Crompton's SPINNING MULE was invented there in 1779. Other industries: chemicals, textile machinery. Pop. (1971) 154,000.

Boltwood, Bertram Borden (1870-1927), US chemist and physicist who did important research in radioactivity which led to

Niels Bohr, Danish physicist who worked as an adviser on the atom bomb project.

Bolometers convert liquids into vapour to drive engines or for heating systems.

Bolas, the effective hunting weapon used extensively by the Indians of South America.

Boll weevil, the serious pest that infests most of the cotton-growing areas of the USA.

Boltzmann, Ludwig

the development of the theory of isotopes. In 1904 he discovered ionium (a radioactive isotope of thorium). He was professor of radiochemistry at Yale University in the US (1910-27).

Boltzmann, Ludwig (1844-1906), Austrian physicist who made fundamental contributions to the kinetic theory of gases and to statistical mechanics. Using the work of Josef Stefan he also demonstrated the law of radiation from a black body, now known as the Stefan-Boltzmann law. From 1866 he held professorships at the universities of Graz, Vienna, Munich and Leipzig.

Boma, port and city in w Zaire, central Africa, on the estuary of the River Congo. It was founded as a slave-market and is now the commercial centre of central Africa. Products: timber, cocoa, bananas. Pop. (1967 est.) 79,200.

Bomb, projectile filled with an explosive charge exploded by a fuse or by impact, and used as a weapon to cause destruction and death. Originally dropped on attackers from the walls of a castle, bombs are now usually dropped from aircraft. The many specialized types include atomic bombs, high-explosive bombs, smoke bombs to provide a smoke-screen, gas bombs to spread poison gas and fire bombs that scatter burning napalm (a thickened fuel). See also pp.399,434,435, 574,575,580,581.

Bomb, volcanic, piece of solid material, usually cooled lava, ejected by a volcano. Volcanic bombs are usually greater than 32mm (1.3in) in diameter, and may be very large. See also pp.204-205.

Bombardon, term adopted early in the 19th century in Austria for a type of bass tuba, now obsolete. Its fundamental note may be E₂, F or B₂. It had three valves. Today, a related instrument in circular form which fits round a marching player is usually called a helicon.

Bombay, largest city in India and capital of Maharashtra state. It is located on an island off the w coast and as a port it is second only to Calcutta. It was founded in 1534 by the Portuguese, and was ceded to England in 1661 as part of Catherine of Braganza's dowry to Charles II. After 1941, a population boom occurred due to immigration and an increasing birth-rate. The city was enlarged through re-zoning in 1951. It is a cultural, educational, trade and financial centre, the site of the University of Bombay (1857) and the Indian Institute of Technology (1958). Industries: chemicals, textiles. Exports: cotton, manganese. Pop. 5,970,575.

Bomber, aircraft designed to carry bombs and to drop them either on enemy troops or enemy-occupied territory during combat, or in large quantities from a relatively high altitude on the enemy's supply areas or strategically selected railways and roads. The first bombers, including the British de Havilland DH-4 and the German G-IV, appeared towards the end of ww1. In ww2 several four-engine types were developed. They had a greater load-carrying capacity and range combined with higher speed. After ww2 jet bombers were introduced, today these incorporate sophisticated electronic equipment. Modern defence techniques have, however, raised questions on the value of bombers in warfare. See also pp.570-573.

Bomberg, David (1890-1957), British painter of landscapes, figures and still-lives, a leading member of the London Group. His work was influenced both by cubism and expressionism. As a teacher at Borough Polytechnic, London (1946-53), he inspired the Borough Group of young painters.

Bonbois, Camille (1883-1970), French primitive painter. Largely self-taught, he is best known for his street scenes. One of his most famous works is *Before Entering the Ring* (1930-35), now in the Museum of Modern Art in New York.

Bona fide, legal term meaning "in good faith", "without intent to defraud or deceive". It can also be used to mean "genuine", "not assumed".

Bonaparte (Buonaparte), family of Italian origin that lived in Corsica Carlo

(1746-85), a lawyer, and Maria Letizia Ramolino (1750-1836), known as Madame Mère, were parents of a large family whose members were raised to distinction by their second and famous son, NAPOLEON I Joseph (1768-1844), the eldest son, became King of Spain (1808-13). Lucien (1775-1840), the third son (known as Prince Canino) opposed Napoleon's despotic rule and lived in exile in Italy. Maria Anna Elisa (Elisa) (1777-1820) became Duchess of Tuscany. Louis (1778-1846) was created King of Holland in 1806. He married Hortense de Beauharnais and their son became NAPOLEON III Maria Paulina (originally Carlotta, 1780-1825) was first married to General LeClerc and later to Prince Camillo Borghese. Caroline (1782-1839) married Marshal Joachim Murat, who became King of Naples. Jerome Bonaparte (1784-1844), youngest brother of NAPOLEON, was king of Westphalia from 1807 to 1813. He fought in the campaign against Russia and at WATERLOO.

Bonar, Horatius (1808-89), Scottish clergyman and writer of hymns. In 1843 his congregation at Kelso seceded from the established Church and founded the Free Church. His three series of *Hymns of Faith and Hope* (1857-66) include the hymn *I Heard the Voice of Jesus Say*.

Bonar Law, Andrew (1858-1923), British politician, born in Canada. He entered Parliament in 1900 and in 1911 became the first leader of the CONSERVATIVE PARTY to come from a manufacturing background. He was chancellor of the exchequer from 1916 to 1919 and prime minister from 1922 to 1923.

Bonaventure, Saint (c.1217-74), Italian theologian, b. Giovanni di Fidanza. He studied at the University of Paris and was a contemporary of St Thomas Aquinas. He was elected minister-general of the Franciscan Order in 1257 and became Cardinal Bishop of Albano in 1273. He played a prominent part in the Council of Lyons of 1274. His essentially mystical theory of knowledge is set forth in his *Journey of the Soul to God*. See also p.1322.

Bond, Edward (1935-), British playwright. His first successful play *Saved* (1965) was considered controversial for its scenes of violence. His other plays include *Early Morning* (1968), which was heavily censored, *The Pope's Wedding* (1962), *Passion* (1971), *Black Mass* (1971), *Lear* (1972), *The Sea* (1973) and *A-A-men* (1976).

Bond, James, character created by novelist Ian Fleming. A British Secret Service agent, code-named 007, he appeared in 12 best-selling novels from 1953 and later in highly successful films. He was suave and enterprising with a refined taste in food, wine and women.

Bond, William Cranch (1789-1859), American astronomer who discovered Hyperion, Saturn's eighth satellite, and the Crêpe Ring, the faint innermost ring around the planet. Both discoveries were made with the assistance of his son George. He produced a recognizable daguerreotype of the Moon in 1850. See also p.962.

Bondfield, Margaret Grace (1873-1953), English political figure and trade unionist. She was a Labour MP (1923-24; 1926-31). In 1923 she became chairman of the Trades Union Congress (TUC). She was Minister of Labour (1923-31), the first British woman to hold cabinet office.

Bonding, in chemistry, the forces that hold atoms together in molecules. It is electrostatic in nature but takes various forms. Atoms in strong acids, alkalis and their salts are bonded weakly by the donation of electrons by some atoms and their reception by other atoms. This is called ionic bonding, the individual charged atoms being known as ions. Many less reactive compounds are bonded by the sharing of electron pairs, one from each atom, this is called covalent bonding. In a somewhat intermediate form, co-ordinate bonding, both bonding electrons are donated by one of the combining atoms. See pp.892, 893.

Bone, Sir Muirhead (1876-1953), Scottish draughtsman and etcher. His *Portfolio*, a series of etchings (1899), was an immediate success, as were *Glasgow*, *Fifty Drawings* (1911) and *Old Spain* (1936).

Bone. See ANNABA.

Bone, type of connective tissue that forms the skeleton of the body, protects its internal organs, serves as a lever for muscles and stores calcium and phosphorus. Bone is composed of a strong, compact layer of collagen and calcium phosphate and a lighter, porous inner spongy layer containing marrow, in which red and some white blood cells are produced. Most bones are sheathed by the periosteum, a tough protective membrane. See also pp.146, 147, 1070-1071.

Bone china, hard-paste porcelain with a body of kaolin, china stone and bone ash, the standard English porcelain paste since the early 19th century. Josiah Spode is credited with the perfection of bone china, which is valued for its translucency, cheapness of manufacture and suitability for underglaze decoration.

Bonnet, any of about 600 species of plants in the genus *Eupatorium*, found in the USA. It has wrinkled, lance-shaped leaves and small white flowers in flat clusters. Height to 1.8m (6ft). Family Compositae.

Bongo, Omar (1935-), President of Gabon (1967-). He began government service in 1958 and came to hold several cabinet ministries in addition to the presidency.

Bongo, large African antelope of humid forests, both sexes are red-brown with white vertical stripes and carry horns. Height: up to 1.3m (4.2ft). Family Bovidae, species *Taurotragus eurycerus*. See also p.310.

Bongos. See DRUM.

Bonham-Carter, Lady Violet (1887-1969), daughter of Herbert Asquith and Liberal spokesman. President of the LIBERAL PARTY in 1944-45, she twice failed to enter Parliament, at Wells (1945) and at Colne Valley (1951). In 1963 she was the first woman to deliver the Romanes lecture at Oxford.

Bonheur, Rosa (1822-99), French painter and sculptor, acclaimed in her lifetime for her sympathetic and accurate depiction of animals. She exhibited regularly at the Paris Salon from 1841 with animal paintings and later with sculpture. Her best-known works include *The Horse Fair* (1853-55).

Bonhoeffer, Dietrich (1906-45), German theologian. He was a Lutheran pastor and opposed the rise of National Socialism in Germany. Arrested in 1943, he was executed for treason. Among his works, most published posthumously, are *Letters from Prison* (1951) and *Christology* (1966). Bonhoeffer's theology is Christocentric and opposed to reparation of Church and the world. See also pp.1790, 1791.

Boniface, Saint (c.675-754), English missionary. He left England in 716 to convert the pagan Germans. For his success he was rewarded with the Archbishopric of Mainz in 751. In 754, however, he was martyred by pagans in Friesland. He is buried in Fulda and venerated as the Apostle of Germany. See also pp.1268, 1269.

Boniface, name of nine popes, of whom the most notable included Boniface VIII (r.1294-1303), b. Benedetto Caetani c.1235. He faced considerable factional dispute in Rome on his accession, and asserted throughout his reign that the clergy could not be taxed by a secular prince without the consent of the Pope. Boniface IX (r.1389-1404), b. Pietro Tomacelli c.1355. He was elected Pope in Rome during the GREAT SCHISM, and tried to restore the prestige and fortunes of the papacy, but met considerable opposition.

Bonin Islands (Ogasawara-Guntō), group of approximately 30 islands in the w central Pacific Ocean, 966km (600 miles) ssw of Japan and part of the Tokyo prefecture. They were discovered by the Japanese in the 16th century and claimed by Britain in the early 19th century. Area approx 104sq km (40sq miles). Pop. 205.

Bombs, the phases of destruction are blast vacuum pressure, fragmentation and shock.

Joseph Bonaparte, who was placed on the Spanish throne by his brother, the Emperor

Bones form the skeleton of most vertebrates and contain blood forming bone marrow.

Bongo, both the male and female carry large horns that spiral with one complete twist.

Bonington, Richard Parkes (1802-28), English painter who lived and worked mainly in Calais. One of the first artists to break with the Classical tradition of Jacques-Louis David, Bonington was influential with his landscape scenes: views of harbours, beaches and seas, often painted in watercolours - in developing a new French school of ROMANTIC painting. His works include *Normandy Coast* (1824). See also p.1597.

Bonito, speedy streamlined tuna-like fish found in all warm and temperate waters, usually in schools. Bonitos are blue-black and silver and highly valued as food and game fish. The ocean bonito (*Katsuwonus pelamis*) is also called skipjack tuna or bluefin. Family Scombridae. See also pp.340, 341.

Bonjour Tristesse (1954), novel by Françoise SAGAN. Cécile's over-possessiveness towards her father leads her into scheming to prevent his remarriage. She involves her lover and her father's mistress, with tragic consequences.

Bonn, city and capital of West Germany, on the River Rhine, 26km (16 miles) SSE of Cologne. Founded in the 1st century AD as a Roman camp, it was awarded to Prussia by the Congress of Vienna (1815). There is some fine architecture including a Romanesque cathedral and Poppelsdorf Palace. BEETHOVEN was born there. It was chosen as the capital in 1949. Industries: engineering, laboratory equipment. Pop (1976) 283,900.

Bonnard, Pierre (1867-1947), French painter. His early work, mainly of domestic scenes, was in the style of Paul GAUGUIN and Paul SERUSSIER. In the 1890s he was a member of the Nabis. He received favourable reviews for his entries in the Salon des Indépendants, Paris, in 1891, and about a year later for *The Terrace Family*. Other notable works include *Luncheon* (1922) and *Martha in a Red Blouse* (1928).

Bonneville Salt Flats, flat barren saltland in NW Utah, once part of the Pleistocene Lake Bonneville. It is now used for motor-racing and speed trials. Area approx 259sq km (100sq miles).

Bonnie and Clyde, American couple Bonnie Parker and Clyde Barrow, who robbed banks and shops during the Depression era. The story was filmed in 1967 by Arthur Penn. Although his depiction of their violent life and death was considered extreme, the film developed a cult following.

Bunny Prince Charlie. See STUART, CHARLES EDWARD.

Bonsai, Japanese art of dwarfing woody plants and shrubs by pruning and restraining root growth, they are primarily out door plants and occur naturally in cliff areas. This art, which has been practised for centuries in the Orient, is most successful with plants that have a substantial tapering trunk, naturally twisted branches and small leaves. Bonsais can be 5-60cm (2-24in) tall, depending on the plant used. See also p.375.

Bontemps, Arna Wendell (1902-73), US writer. He was identified with the Harlem Renaissance of the 1920s, and wrote extensively on the black experience. He wrote poetry, novels including *God Sends Sunday* (1931) and *Black Thunder* (1935), children's books, biographies and anthologies of black poetry, music, folklore, and slave narratives.

Booby. See GANNET.

Boogie-woogie, type of JAZZ popular in the 1930s. It has a rapid, driving beat, uses blues themes and is generally played on the piano. The melody is played over a consistently repeated bass motif.

Book, nowadays primarily a bound volume of printed pages, but may also be a division within a book (as in the Bible) and a statement of accounts. It must be long enough to be distinguished from a pamphlet and single-minded enough to be distinguished from a journal. The first books, properly called, were the Egyptian writings on papyrus, of which the book of the DEAD is usually considered the first. Roman books were mostly in the form of rolls. In the Middle Ages vellum, a fine parchment from the Middle East, became

the standard material for writing. Modern printed books date from GUTENBERG's invention of movable metal type in 1454. The first printed book was a German Latin Bible of 1455. See also MM pp.204, 214.

Bookbinding, assembling and covering a number of sheets of paper, parchment or vellum to form a book. The craft began when rolls and scrolls were replaced by the codex; the earliest elaborate examples were for use in churches. Modern books are often assembled from folded sections (signatures) generally of 16, 32 or 48 pages, which are then sewn together, trimmed and covered. Commercial binding methods include side-sewing, where a machine drills and sews through the edge of the assembled sections, and perfect binding, where the individual sheets are clamped, glued along the spine, covered and trimmed. See also p.621.

Book-keeping, regular and systematic recording in ledgers of the amounts of money involved in business transactions. These records provide the basis for accountancy, which is the practice of classifying and summarizing transactions and interpreting the results. See also AUDIT.

Booklouse, transparent to white, usually wingless insect found throughout the world. It feeds on moulds in hot, humid dusty places such as shelves, books and behind loose wallpaper. Length to 5mm (0.2in). Order Psocoptera, genus *Liposcelis*.

Book of Changes, ancient Chinese book of wisdom, also known as the *I Ching*. Although the oldest parts of the text are thought to pre-date CONFUCIUS, he is credited with the commentaries which form a part of the collection. See also pp.1258, 1260.

Book of Common Prayer. See COMMON PRAYER, BOOK OF.

Book of Healing, The massive encyclopaedia by AVICENNA (980-1037). It dealt with philosophical and medical matters, including logic, the natural sciences and mathematics.

Book of Hours, book containing the prescribed order of prayers, rites for the canonical hours and readings from the Bible. Such books, developed in the 1300s, were often lavishly decorated by miniaturists and served as status symbols. The most celebrated of these to survive is the *Tres riches heures du duc de Berry* illustrated in part by the LIMBOURG BROTHERS. See also pp.1352, 1353.

Book of Kells, illuminated manuscript of the four gospels in Latin. Probably begun in the late 8th century at the Irish monastery of Iona, it was taken to the monastery of Kells, County Meath, Ireland. Its intricate illumination and superb penmanship have earned it the title of "the most beautiful book in the world." It is now in Trinity College, Dublin. See also pp.1274, 1296.

Book of Martyrs, written in 1563 by John FOXE whilst exiled in Strasbourg and Basel. It is an account of the English Protestant movement since the fourteenth century and its persecution by the Catholics. See also p.1405.

Book of Nonsense (1846), children's book by Edward Lear. It includes jingles, rhymed alphabets, ballads and limericks accompanied by entertaining drawings.

Book of Taliesin, one of the great Welsh poetic works, named after a little-known character who may have been a bard or, according to another theory, a Celtic mythical figure. Although tradition places him in the 6th century, the collection exists only in a 13th-century form.

Book of the Dead, collection of Old Egyptian texts dating from the 16th century BC. The papyrus texts, which have many different versions, were placed in the tombs of the dead in order to help them combat the dangers of the underworld. See also pp.1906, 1908, 1916.

Book of the Dun Cow, Irish manuscript of uncertain age but dating from before 1106. Said to have been first recorded on cow hide, it contains several myths including the *Cattle Raid of Cooley*.

Boole, George (1815-64), English mathematician. Largely self-taught, he

was appointed professor of mathematics of Cork University in 1849. He is remembered for his invention of a set of symbols to represent logical operations. Using symbols he developed a form of algebra (Boolean algebra) in which the symbols can be manipulated with logical consistency. See also p.790.

Boom, floating, breakwater that stills or absorbs the force of waves on the surface of water. A boom may be used across a harbour mouth, to contain oil slicks, or even to harness waves as a source of power for man. See also pp.428, 429.

Boomerang, sharp-edged throwing stick used for hunting, warfare and sport. It is a flat, angled or curved piece of wood shaped aerodynamically so that it flies in an arc or in a circle. These and non-returning boomerangs are used mainly by the ABORIGINES of Australia.

Boomsnake, venomous snake of the savannas of Africa. It is green or brown with a slender body and a small head. Commonly found in a tree or bush, it lies in wait for lizards and small birds often with the front portion of its body extended motionless in mid-air. Length to 1.5m (4.9ft). Species *Dispholidus typus*. See also p.69.

Boone, Daniel (1734-1820), US pioneer. In 1775 he blazed the famous Wilderness Road from Virginia to Kentucky and founded the settlement of Boonsborough. During the American War of Independence he was captured by Shawnee Indians but escaped and reached Boonsborough in time to prevent its capture.

Booster engine, rocket engine which powers a missile or space vehicle in the early stages of its flight and then drops off reducing deadweight. Several booster engines may be attached to the first stage of a launch vehicle for extra power. See also CLUSTER, ROCKET, ROCKET ENGINE.

Boot, Sir Jesse, 1st Baron Trent (1840-1931), British pharmacist, founder of one of the largest retail pharmacists in the world. In 1877 he opened his first chemist shop in Nottingham. By 1883 he had ten shops. In 1892 he began to manufacture drugs on a large scale and by 1931 had more than 1,000 retail outlets.

Bootes, in astronomy, a constellation beside the Great Bear in the northern sky. It contains the bright orange star Arcturus. The name, derived from the Greek, means ox driver, or herdsman. See also pp.1010, 1010.

Booth, Charles (1840-1916), English social reformer who pioneered the method of social survey in his *Life and Labour of the People in London* (1891-1903). He was helped in this work by the English Fabian Beatrice WEAR. He was instrumental in gaining the passage of the Old Age Pensions Act in 1908.

Booth, John Wilkes (1838-65), US actor and assassin of Abraham LINCOLN. He was a Confederate sympathizer. On 14 April 1865 at Ford's Theater in Washington DC he shot Lincoln who died the next day. Booth escaped but was either shot or killed himself two weeks later.

Booth, William (1829-1912), English religious leader, founder and first General (leader) of the SALVATION ARMY. He was a Methodist revivalist preacher from 1852 to 1861. He then started his own revivalist movement, which undertook evangelistic and social work among the poor. It became known as the Salvation Army in 1878 and gradually spread to many countries. In 1912 Booth was succeeded as General by his son William Bramwell Booth.

Boothe, Clare (1903-), US author. She worked as an editor on the magazine *Vogue* and wrote various plays including *The Women* (1936) and *Kiss the Boys Goodbye* (1938). Her novels include *European Spring* (1940).

Boothia Peninsula, virtually uninhabited peninsula in Northwest Territory, Canada. The area was first explored by John Ross, a British explorer, in 1829-33. He also established the original position of the North Magnetic Pole. Area 32,331sq km (12,483sq miles).

Bootlegging, sale of alcoholic drinks in countries or areas where it is prohibited by

Bonitos live in both the Atlantic and Pacific oceans: they feed on squid and small fish.

Bonn, the quiet university town that became the capital of the German Federal Republic.

Boomerangs spin in flight and return because their ends are skewed in opposite directions.

William Booth had experience of human misery when apprenticed to a pawnbroker.

Borage, a medicinal and honey plant which is also used in salads and for flavouring drinks

Sir Robert Laird Borden helped Canada win a more independent role in world affairs

Border terriers are hunting dogs from the border country of northern England

The Battle of Borodino allowed Napoleon to enter Moscow, he retreated in disaster

law, or the sale of alcohol in a way that evades tax. The name is said to derive from the practice of American frontier traders carrying bottles of illicit liquor in the tops of their boots. During prohibition in the USA, many gangster fortunes were made by bootlegging.

Bop. See **BOP**

Borage, hairy annual plant native to Europe. It has rough oblong leaves and drooping clusters of pale blue flowers and is cultivated as a food and flavouring. Height up to 60cm (2ft). Family Boraginaceae, species *Borago officinalis*. See also p.709

Borin, city on the River Viskan, sw Sweden; in Älvsborg county. It was founded in 1632 by Gustavus II and is today a centre for cotton and woollen textiles. Pop. (1970) 73,475

Borates, any salt of boric acid (H_3BO_3) or of more complex oxyacids of boron. Borates are inorganic compounds, many exist as minerals, the most important of which are BORAX, colemanite and kernite - all used as sources of boron compounds.

Borax, the most common BORATE mineral (hydrated sodium borate), used in making glass and as a mild alkali. It is found in large deposits in dried-up alkaline lakes in arid regions as crusts or masses of prismatic crystals (monoclinic system). It may be colourless or white, transparent or opaque.

Bordeaux, port and capital of the Gironde département in sw France, on the River Garonne and serving an area famous for its fine wines and brandies. Once a thriving Roman settlement, it is a good deep-water inland port and has many 18th-century buildings. Industries: shipbuilding, oil refining, flour, textiles, glass. Pop. (1968) 266,700

Borden, Lizzie (1860-1927), American who in 1892 was accused of murdering her father and stepmother, but was acquitted in a sensational trial. Many books were written about the case, and she and her trial have become part of legend.

Borden, Sir Robert Laird (1854-1937), Canadian politician. A successful lawyer, he led the Conservative Party from 1901 and was Prime Minister from 1911 to 1920. Borden worked for civil service reform, public ownership of telephone and telegraph services, and a say in imperial policy-making. He also sought to keep Canada economically independent of the USA.

Border collie, breed of COLLIE, a popular sheepdog that has been used in Britain for about 300 years. It has a narrow tapering head and erect ears that droop forwards at the tips. Its long coat is generally black and white. Height to 51cm (20in) at the shoulder.

Borders, region in se Scotland, formed in 1974 from the former counties of HERKESHIRE, PEBBLES, ROXBURGH and SELKIRK, and a small part of MIDLOTHIAN, bounded by England (s), the North Sea (NE), Lothian (N), Strathclyde (NW) and Dumfries and Galloway (W). The main towns are Hawick and Berwick-on-Tweed. The area was the scene of many battles between the English and the Scots. Area about 4,671sq km (1,803sq miles). Pop. (1975 est.) 99,400

Border terrier, breed of short-haired terrier used in Scotland and northern England to hunt foxes. It has a grey or reddish coat, floppy ears and stands about 30cm (12in) high at the shoulder.

Bordet, Jules Jean Baptiste Vincent (1870-1961), Belgian bacteriologist and immunologist. He was awarded the 1919 Nobel Prize for physiology and medicine for his development of the complement-fixation test, an important method of diagnosis for immunology. He identified the whooping cough bacillus in 1906.

Bordone, Paris (1500-71), Venetian artist who was influenced by TITIAN and GIORGIONE. His most famous work is *A Fishman Consigning a Ring to the Doge* (1540).

Bore, tidal, turbulent, wall-like wave of water that rushes up a narrowing estuary bay or tidal river. It is thought to be caused by a combination of the incoming tidal wave, the slope and shape of the channel

and by the river flow. See also p.237

Boreal forest, wooded zone with a cold dry climate and a poor sandy soil; it consists primarily of conifers and stretches like a broad ribbon across the Northern Hemisphere. Its northern edge is bordered by frozen tundra. See also pp.304, 305

Borg, Bjorn (1956-), Swedish tennis player. Undoubtedly one of the all-time greats, he has an astounding record of success in the game. His major achievement was the winning of five Wimbledon championships in a row between 1976 and 1980, a record broken by his defeat by John McEnroe in 1981. One title which has eluded him is the US Open.

Borges, Jorge Luis (1899-), Argentinian writer, poet and critic educated in Europe until 1921. He is best known for his short stories, which include the collections *El hacedor* (1960) and *Informe sobre Brodie* (1970). They often use intellectual puzzles to dramatize what Borges believes is the extreme difficulty of achieving knowledge. See also p.1774

Borghese, Italian princely family, originally of Siena but later of Rome. Camillo Borghese (1552-1621) became pope as Paul V in 1605. Another Camillo (1775-1832) married Marie Pauline Bonaparte, the sister of NAPOLEON I, and was made governor of Piedmont. The Borghese Palace (1590) is one of Rome's most splendid buildings. The former summer residence, the Villa Borghese, Rome, has a magnificent art collection.

Borgia, family notorious in 15th- and 16th-century Italian politics. The family originated in Spain and went to Rome with the first Borgia pope, Calixtus III (1455-58). His nephew Rodrigo became Pope ALEXANDER VI in 1492 and was the father of Cesare (c.1476-1507) and Lucrezia (1480-1519), both notorious for their ruthless attitude to politics. Cesare was probably the model for MACHIAVELLI's *The Prince*. By alliances with the French, use of papal patronage, strategic marriages and treachery, the family sought to acquire political control over the PAPAL STATES and throughout central Italy. Alexander's death in 1503, Cesare's illness at the same time, and the election of the Borgias' enemy Giuliano della Rovere as Pope JULIUS II conspired to defeat these aspirations.

Boric acid, soft white crystalline solid (H_3BO_3) which occurs naturally in certain volcanic hot springs. It is used as a metalurgical flux, preservative and antiseptic.

Boris, name of three Bulgarian rulers. Boris I (d.907) ruled from 852 to 889, when he abdicated and retired to a monastery. He introduced the Eastern form of Christianity to Bulgaria. Boris II (r.969-72) also abdicated. Boris III (1894-1943) was the Tsar of Bulgaria from 1918 to 1943, after 1938 he established a dictatorship. He sided with the Axis powers in 1941 and died in unknown circumstances.

Boris Godunov (c.1551-1605), Tsar of Russia. The chief minister of IVAN the Terrible, he became regent to Ivan's son FEODOR after Ivan's death and was popularly supposed to have murdered Feodor's brother and heir, Dmitri, in 1591. On Feodor's death in 1598 Boris was elected Tsar and gained recognition of the Russian Orthodox Church as an independent patriarchate. A pretender, the false DMITRI, invaded in 1604 and became Tsar after Boris's death. See also p.1455

Boris Godunov (1874), four-act opera by Modest MUSSORGSKY based on a play by PUSHKIN and the histories of Nikolai KARAMZIN about BORIS GODUNOV and the false DMITRI. It was heavily reworked by Nikolai RIMSKY-KORSAKOV in 1896. See also p.1598

Borling, Norman Ernest (1914-), US agronomist. As a director of the Rockefeller Foundation in Mexico, he led a team of scientists experimenting with the improvement of cereal crops. He was awarded the Nobel Peace Prize in 1970 for his accomplishments in the "GREEN REVOLUTION", developing improved wheat seed, a higher-yielding rice and

better ways of using fertilizer and water.

Borram, Martin Ludwig (1900-45), German National Socialist Party leader. He joined the Nazis in 1925 and was important in the Party hierarchy. In 1941 he succeeded Rudolf HESS as deputy leader. He disappeared in 1945 and was sentenced to death *in absentia* during the NUREMBERG TRIALS. In 1973, after identification of his skeleton, he was formally pronounced dead as a result of suicide in 1945.

Born, Bertrand de. See **BERTRAND DE BORN**

Born, Max (1882-1970), German-born British physicist. He was professor of physics at Göttingen University from 1921 but left Germany in 1933 and went to Britain. He taught natural philosophy at the University of Edinburgh. For his work in QUANTUM MECHANICS, the basis of atomic and nuclear physics, he was awarded the 1954 Nobel Prize in physics, which he shared with Walter BOHR.

Borneo, island in the Malay Archipelago, South-East Asia, 640km (400 miles) E of Singapore. Mostly undeveloped, Borneo is the world's third-largest island, and is divided into four political regions: Sarawak state (W) and Sabah state (N) are Malaysian, Brunei state (NW) is a British protectorate, Kalimantan state (E, central and S) covers 70% of the island and is part of Indonesia. Industries: timber, fishing, oil and coal extraction. Area 743,330sq km (287,000sq miles). Pop. (1971 est.) 6,968,000. See also p.189

Bornholm, Danish island group in the Baltic Sea, near Sweden. Bornholm is the largest island. After Germany's surrender in May 1945, some German forces made a desperate stand there, but Soviet troops forced them to surrender. Industries: farming, fishing, tourism. Exports: granite, kaolin. Pop. (1971) 47,241

Bornite, also called peacock ore, a common copper mineral, copper iron sulphide (Cu_5FeS_4). It generally occurs in masses, sometimes as crystals (cubic system) in intrusive igneous rocks and metamorphic rocks. It is opaque and bronze with an iridescent purple tarnish. Hardness 3, s.g. 5.1

Borno, province in NE Nigeria, SW of Lake Chad, the capital is Maiduguri. From the 14th to the 19th centuries it was the centre of a powerful Muslim empire, which exported slaves and fabrics to N Africa. Industries: agricultural products, mining. Area 105,000sq km (40,500sq miles). Pop. 2,850,000

Borobudur, ruins of a Buddhist monument in Central Java, built under the SAILENDRA dynasty c.AD 800. It comprises the stupa (a relic mound), the mandala (ritual diagrams) and the temple mountain, all forms in Indian GUPTA religious art. See also pp.1197, 1360

Borodin, Alexander Porfiryevich (1833-87), Russian composer and chemist, one of "The Five" group of composers. His most popular works include the tone poem *In the Steppes of Central Asia* (1880) and the *Polevian Dances* from his opera *Prince Igor* (completed after his death by GLAZUNOV and RIMSKY-KORSAKOV). See also pp.1583, 1599

Borodino, Battle of (1812), French victory over the Russians under KUTUZOV about 70 miles W of Moscow. It allowed Napoleon to take the city with ease but heavy casualties on both sides totalled over 75,000. The battle is vividly described in Leo TOLSTOY's *WAR AND PEACE*. See also pp.1552, 1553, 1552-1553

Boron, non-metallic element (symbol B) of group III of the PERIODIC TABLE, first isolated in 1808 by Sir Humphry DAVY. It occurs in several minerals, notably borax and kernite (its chief ore). Amorphous boron, an impure powder, is made by reducing the oxide with magnesium. Pure boron is obtained as a hard crystalline material by decomposing boron trichloride vapour on a hot metal filament. The element is used in semiconductor devices and the stable isotope B^{10} is a good neutron absorber, used in nuclear reactors and particle counters. Properties: at. no. 5, at. wt. 10.81; s.g. 2.34 (cryst.), 2.37 (amorph.), m.p. 2,300°C (4,172°F), b.p. 2,550°C (4,622°F); most common iso-

rope B" (80.22%). See also SU p.136
Borotra, Jean (1898-), French tennis player. Known as the "Bouncing Basque", he was immediately recognizable on court by his blue beret. He reached the Wimbledon singles final five times in the 1920s, winning twice (1924, 1926), and continued to play into his seventies.

Borough, originally, in medieval England, a town which had a charter granting privileges and autonomy, today an urban area granted a charter of incorporation and administered internally. Large metropolitan areas, such as London, may be divided into separate boroughs. See also LOCAL GOVERNMENT.

Borromeo, Charles, Saint (1538-84), Italian church reformer. He was created cardinal by his uncle Pope PIUS IV in 1560 and then appointed Archbishop of Milan. He was largely responsible for the reconvening of the Council of Trent. During the plague of 1576-78 he heroically administered to the needs of the populace.

Borromini, Francesco (1599-1667), Italian architect and sculptor, with BERNINI and Pietro da Cortona, one of the three giants of the BAROQUE style in Rome. His palace and church designs were based on geometric forms (especially ovals and triangles) hitherto not generally used in architecture. Borromini was a dominant influence in Italy and northern Europe; he named his own sources of inspiration as "Nature, Antiquity and Michelangelo". His masterpieces are *S. Carlo alle Quattro Fontane* (1638-41) and *S. Ivo della Sapienza* (1642), both in Rome. See also p.1439.

Borrow, George Henry (1803-81), British author. He travelled widely in England, Europe and Russia. Much of his writing is based on his experiences and on his knowledge of gypsies whom he met on his travels. His best-known works include *The Zincali, or, An Account of the Gypsies of Spain* (1841), *The Bible in Spain* (1843) and *THE ROMANY RYE* (1857).

Borrowdale, valley in the Lake District in Cumbria, NW England. It stretches from Derwent Water and is drained by the River Derwent. The narrow pass at the end is called the Jaws of Borrowdale.

Borstal, British system of rehabilitation for juvenile offenders between the ages of 16 and 21. The idea originated in 1895 with the Gladstone Committee, and the first institution was established at Borstal Prison, Kent, in 1902. Borstals are residential, providing education, vocational training, regular work and group counselling.

Bors, Brian (c.940-1014), King of Munster and Ireland (r.1002-14). He died at the Battle of CLONTARF, in which his forces drove the Norse Vikings from Ireland. See also pp.1314,1314.

Borzoi, keen-sighted speedy hunting dog, also called Russian wolfhound, it has a long narrow head and powerful jaws. The body is deep and streamlined and the legs are long, as is the curved tail. The coat is long and silky and is usually white with darker markings. Height (at shoulder) up to 79cm (31in). See also HOUND.

Borzov, Valeriy (1949-), Russian sprinter. The first European to win the Olympic men's sprint double (1972), he is said to have the ideal characteristics for early training as a sprinter.

Boscan, Juan (c.1495-1542), Catalan lyric poet. He helped to introduce Italian metre and verse forms into Spanish poetry. His poems were published, with those of Garcilaso de la Vega, in 1543. Boscan also translated works from Italian, eg Baldassare CASTIGLIONE's *The Courtier*.

Boscawen, Edward (1711-61), English admiral, sometimes known as "Old Dreadnought". He won renown for his victories against the French at Porto Bello in 1739, Cape Finisterre in 1747 and Lagos Bay in 1759.

Bosch, Hieronymus (c.1450-1516), Flemish painter of weird and fantastic visions with emphasis on the grotesque. His pictures contain many references to folk-legends of his time and frequently combine a number of unrelated incidents. His concern for the depraved state of man is seen in *The Garden of Earthly Delights*,

and his anti-clericalism in *Adoration of the Magi*.

Bosch, Karl (Carl) (1874-1940), German industrial chemist who adapted Fritz HABER's method of synthesizing ammonia to an industrial scale. His work involved finding metallic catalysts that could promote this high-pressure synthesis. His invention of the Bosch process (in which water gas and steam at high temperatures are passed over a catalyst) aided the large-scale preparation of hydrogen. Bosch was awarded the 1931 Nobel Prize in chemistry, with Friedrich BERGHIUS, for his high-pressure techniques.

Bose, Sir Jagadis Chandra (1858-1937), Indian plant physiologist and physicist. He invented highly sensitive instruments capable of detecting tissue responses of plants to external stimuli. His automatic recorder, which regulated extremely slight movements, allowed him to demonstrate apparent feeling in plants and to anticipate parallelism between plant and animal tissue.

Bose, Satyendranath (1894-1974), Indian physicist and mathematician who significantly extended one of Albert EINSTEIN's theories of QUANTUM MECHANICS concerning the gas-like properties of ELECTROMAGNETIC RADIATION. He developed a statistical model for the behaviour of a collection of sub-atomic particles.

Boshier, Derek (1937-), British artist. Prominent in the emergence of POP ART, he became an avant-garde painter in the mid-1960s with his love of vivid optical effects.

Bosnia-Herzegovina, constituent republic of central Yugoslavia drained by the rivers Sava and Neretva, in the Dinaric Alps, comprising the regions of Bosnia in the N and Herzegovina in the S; the capital is Sarajevo. Originally settled by the Serbs, it came under Turkish rule in 1463 and was partly converted to Islam. It declined into a feudal backwater, but after the peasant nationalist revolt of 1875 it came under Hungarian control. It became part of Yugoslavia in 1918 and again in 1946, after a period of German occupation. Products: grain, potatoes, copper, iron, manganese, lignite. Area: 51,129sq km (19,741sq miles). Pop. (1971 prelim.) 3,743,000.

Bosporus (Karadeniz Bogazi), narrow strait joining the Sea of Marmara with the Black Sea, and separating European and Asiatic Turkey. It is an important strategic and commercial waterway, controlled by the Turks since 1452, and re fortified by them after the Montreux Convention of 1936. Length 30km (19 miles).

Bossuet, Jacques Bénigne (1627-1704), French theologian. He was the most respected preacher at the court of LOUIS XIV. His *Politics Drawn from Holy Scripture* was an apology for the DIVINE RIGHT OF KINGS. He vigorously opposed both JANSENIISM and QUIETISM in favour of traditional Catholicism.

Boston, William John ("Billy"), (1935-), British rugby league player. A fast and powerful winger for Wigan and Great Britain (36 Tests, 78 tries), he scored 563 tries in his career, including seven in a match twice.

Boston, Ralph (1939-), American Negro long-jumper. He broke the 25-year-old world record in 1960, shortly before winning the Olympic title. His sixth and last world mark, set in 1965, was 8.35m (27ft 5in).

Boston, seaport city and capital of Massachusetts, USA, at the mouth of the Charles River on Massachusetts Bay. Founded in 1630, it became a Puritan stronghold and the scene of several events that led to the American Revolution. A noted religious and cultural centre, Boston is the home of important educational establishments, including Harvard University and the Massachusetts Institute of Technology. Industries: publishing, shipbuilding, electronics, fishing. Pop. (1970) 641,071.

Boston Tea Party (1773), protest by a group of American colonists, disguised as Indians and led by SAM ADAMS, against the British policy of taxing tea and, more generally, against "taxation without representation". Tea from ships was

thrown into Boston harbour after Governor Thomas Hutchinson had refused to let the ships leave without paying tax. See also pp.1540,1540.

Boston terrier, American dog bred from the English bulldog and the white English terrier. It has a flat square head, a blunt wide muzzle and a short wide-chested body, the tail is short. The smooth coat is usually brindle with a specific pattern of white marks. Height (at shoulder) up to 43cm (17in).

Bo'sun, abbreviation of boatswain, a naval warrant officer who is in charge of anchors and anchor gear, rigging, boats and cargo-handling equipment. He also instructs the ship's crew in the practicalities of seamanship.

Boswell, James (1740-95), Scottish biographer and author. He travelled widely in Europe, meeting VOLTAIRE and Jean-Jacques ROUSSEAU. His works include *Account of Corsica* (1768) and *The Journal of a Tour to the Hebrides* (1785), an account of his travels with Samuel JOHNSON. He was a friend of Johnson and a fellow member of the Literary Club. His *Life of Samuel Johnson* (2 vols, 1791) is regarded as one of the best biographies in English.

Bosworth. See MARKET BOSWORTH.

Botany, the study of plants and plant life, including the classification, structure, physiology, reproduction and evolution of plants. By tradition, the plant kingdom has been studied in two halves: lower (non-flowering) plants, including ALGAE, mosses and FERNS, and higher (seed bearing) plants, including most flowers, trees and shrubs. Botany also studies the importance of plants to man. See also pp.350-382,676-718.

Botany Bay, large, shallow inlet immediately S of Port Jackson, Sydney Harbour, New South Wales, Australia. It was visited in 1700 by Captain James COOK, who named it because of its flora. It is fed by the Georges and Woronora rivers and is about 16km (1 mile) wide at its mouth. A penal colony named Botany Bay was in fact sited at Port Jackson.

Botham, Ian (1955-), English cricketer and great all-rounder. Having resigned the English captaincy in 1981 he went on to play an outstanding role in England's Test victory against Australia, taking the record for achieving 1000 runs and 100 wickets in Test matches faster than anyone previously.

Botfly, any of several families of stout, hairy, black-and-white to grey fly. It is a parasite of livestock, small animals and even human beings. Usually eggs are laid on the host and the larvae cause damage to the host's skin or internal systems. The botfly that attacks deer is possibly the swiftest insect, flying at 80km/h (50mph). Order Diptera, family Oestridae.

Botha, Louis (1862-1919), South African political and military figure. During the SOUTH AFRICAN (BOER) WAR (1899-1902) he was one of the exceptional military commanders. He was Prime Minister of South Africa (1910-19). See also pp.1607-1716.

Bothe, Walther Wilhelm Georg Franz (1891-1957), German physicist. From 1934 he was director of the Max Planck Institute, Heidelberg and in 1946 was professor of physics at the university there. During WWII he worked on Germany's nuclear energy project and built Germany's first cyclotron. He shared the 1954 Nobel Prize in physics with Max BOHRN for his development of the coincidence method, which can detect two particles emitted simultaneously from the same nucleus during radioactive decay.

Bothnia, Gulf of, main arm of the Baltic Sea, N of the Åland Islands, between Sweden (W) and Finland (E). It freezes over for part of the year and has lumber-shipping ports. Length: approx 644km (400 miles).

Bothwell, James Hepburn, 4th Earl of (c.1535-78), Scottish nobleman, third husband of MARY, QUEEN OF SCOTS. He made many enemies in Scotland's turbulent politics but supported the Queen, winning her affection. He was implicated in the murder of LORD DARNLEY.

Francesco Borromini, the 17th-century baroque architect at S Ivo della Sapienza, Rome

Borzoi or Russian wolfhound, the elegant hunting dog (Borzoi: a Russian for swift)

The Boston Tea Party, one incident that led to the American War of Independence

Botfly maggots eat the fluids and tissues of animals and are a pest to human beings

Botocudo

Bottle-nosed whales have only one or two pairs of teeth. They feed on fish and squid.

François Boucher, master of 18th-century French Rococo, painted Chinese Dance.

Nedie Boulanger, French concert organist, in rehearsal with the Boston Symphony.

John and Roy Boulting, who produced and directed many successful British films.

(1567), and subsequently married Mary. Faced by a rebellion of Scottish nobles he fled abroad, and died insane in a Danish prison.

Botocudo, tribe of about 4,000 South American Indians occupying the Rio Pardo region of the Mato Grosso state. They have a custom of wearing large carved wooden plugs in their lips and ears. **Bo tree**, Indian tree regarded as sacred by Buddhists. There is generally one near each temple to commemorate the fact that BUDDHA (Gautama) found enlightenment under a bo tree at Bodhi Gaya. Its long stalked leaves rustle in the slightest breeze. Also called pipal, it is a member of the family Moraceae, genus *Ficus*.

Botswana, republic of central S. Africa, formerly known as Bechuanaland until it gained its independence from Britain in 1966, when it was one of the poorest nations in the world. In the late 1960s valuable mineral deposits were discovered and have contributed greatly to the growth rate of the traditionally agrarian economy. The capital is Gaborone. Area 569,583 sq km (219,916 sq miles). Pop. (1975 est.) 691,000. See p. 1924.

Bottevali, Giovanni (1821-89), Italian composer, conductor and one of the greatest double bass players. He played and conducted in Paris and London, and from 1871 was director of the Parma Conservatory. His compositions include the opera *Cristoforo Colombo* (1847) and the oratorio *Garden of Olives* (1887).

Botticelli, Sandro (c. 1444-1510), Italian painter of the Florentine Renaissance. He was influenced by Piero della Francesca with whom he worked on a series of *Seven Virtues* (1470) and by Filippo Lippi and Verrocchio. In Florence he was patronized by the leading families, including the Medicis, whose portraits he included in *Adoration of the Magi*. In 1481 he assisted in the decoration of the Sistine Chapel. After his return to Florence, he painted a number of mythological pictures, including *Birth of Venus*, *Primavera* and *Pallas and the Centaur* (all now in the Uffizi, Florence). He is renowned for his masterful use of colour, and graceful lines. His themes are considered important in the transition from religious to non-religious subjects. See also pp. 1387-1388, 1913.

Bottle-nosed whale, beaked whale found in Atlantic waters. Length to 13m (40ft). Species: a. Atlantic *Hyperoodon ampullatus*; b. Atlantic *Hyperoodon planifrons*. See also BEAKED WHALE, p. 100.

Bottle, or barrel, tree, tropical and subtropical semi-deciduous tree found in drier parts of Australia. It has a dense crown and a bottle-shaped trunk. Height to 18m (59ft). Lower trunk diameter to 1.8m (6ft). Family Sterculiaceae, species *Brachychiton rupestris*.

Bottling, domestic method of preserving foods such as fruits, jams, pickles and purees by airless sealing in bottles while hot. The term is also used to describe the mechanized or automated bottling of liquid and solid foods on a factory line. See also pp. 748-749.

Botulism, form of food-poisoning caused by a bacterial toxin that interferes with the transmission of nerve impulses, leading to respiratory paralysis and, ultimately, suffocation. Early symptoms include lassitude, vision and speech impairments, difficulty in swallowing, and sometimes nausea and vomiting. Hospitalization is necessary - death can occur within hours. The bacteria can grow only in an oxygen-free atmosphere, such as canned food, and the most frequent source of botulism is imperfectly prepared home-preserved food.

Botvinnik, Mikhail Moiseievich (1911-), Russian chess master. World champion 1948-57, 1958-61 and 1961-63. He retired from world competition in 1963. His game was marked by great depth of strategy and he would often accept positional inferiority for tactical initiative.

Bouake (Bwaka), city in the central Ivory Coast, W. Africa. Now a commercial and communications centre. It was once a meeting point of caravan routes. Gold and

manganese deposits are mined nearby. Products: tobacco, cotton. Pop. 53,000. **Boucher, François** (1703-70), French painter, decorator and engraver. Working in the Rococo style of the Louis XV period he was immensely popular and widely imitated throughout Europe. He painted historical, mythological genre and landscape works, executing more than 1,000 paintings, 10,000 drawings and 180 engravings. Boucher became director of the Gobelins tapestry works in 1755, and was also First Painter to Louis XV.

Boucher de Crèvecœur de Perthes, Jacques (1788-1868), French archaeologist and writer. His discovery in 1837 of PALAEOLITHIC flint artefacts near Abbeville, France, enabled him to demonstrate that man had existed in the PLEISTOCENE period, long before the traditionally accepted limit of 4000 BC.

Boucicault, Dionysius Lardner (c. 1822-90), Irish actor and dramatist who lived in London and New York. He wrote numerous romantic melodramas, including *London Assurance* (1841). In *The Octoroon* (1859) he attempted a serious stage treatment of an American Negro theme, creating a popular standard piece for touring US repertory companies.

Boucicault, Master (fl. late 14th century), Flemish illustrator whose prolific and skillful illuminated manuscripts were influential in the development of Flemish painting.

Boudicca, See BOADICEA.

Boudin, Eugène Louis (1824-98), French landscape painter whose style represents the link between that of COROT and IMPRESSIONISM. He was famous for his pictures of fashionable seaside resorts, eg. *On the Beach at Deauville* (1869). Boudin, who painted out-of-doors, introduced money to this method. He exhibited at the first Impressionist exhibition (1874).

Bougainville, Louis Antoine de (1729-1811), French navigator. An army veteran of the French and Indian wars, in 1763 he joined the navy and commanded the first French naval force to circumnavigate the globe (1766-69), making botanical and astronomical studies. He published an account of the journey in 1771-72. See also p. 1602.

Bougainville, largest of the Solomon Islands group, in the SW Pacific Ocean, E of New Guinea, a territory of Papua New Guinea. Kieta is the chief port. Discovered in 1768 by Louis de Bougainville, the island was under German control from 1884 and then came under Australian administration after 1914, and again in 1945 after the Japanese wartime occupation. Products: coconuts, coffee, cacao. Exports: copra, timber. Area 10,044 sq km (3,880 sq miles). Pop. (1970 est.) 78,000. See also p. 2117.

Bougainvillea, tropical, flowering woody vine often grown as a garden plant in warm climates. Its inconspicuous flowers have showy purple or red bracts. It was named after the French explorer Louis de Bougainville. Family Nyctaginaceae. Species *Bougainvillea spectabilis*.

Boughton, Rutland (1878-1960), British composer. His plan to make Glastonbury the home of an annual festival of his operas failed. *The Immortal Hour* (1913) was a great, although short-lived, success.

Bougie, See BEJAIA.

Bouguer anomaly, the observation that gravity measured on a great rock mass, such as a mountain range, is higher than average. This is due to the gravitational force exerted by the rock mass itself. It is named after its discoverer, the French mathematician Pierre Bouguer (1698-1758). See also pp. 206-207.

Boulanger, Nadia (1887-1979), French music-teacher. She was the foremost teacher of composition of the 20th century and taught such composers as Aaron Copland, Darius Milhaud and Jean Françaix. In the 1930s she became the first woman to conduct the Boston Symphony Orchestra and the New York Philharmonic.

Bowles, group of French games similar to bowls but played with metal bowls usually thrown through the air. Various forms of the game are played in different regions of

France. The *cochonnet* (target ball or jack) is of white painted wood and 25-35mm (1-1.4in) in diameter. The metal bowls, usually steel, are 7-8cm (2.75-3.1in) in diameter and are not biased. The game may be played as singles (3 or 4 bowls each) doubles (3) or trebles (2). The object is to get one's bowls as near to the target ball as possible. The bowls may be thrown high to drop dead (*plomber*), rolled (*rouler*), or thrown to knock away an opponent's bowl (*tirer*).

Boulez, Pierre (1925-), French conductor and composer. His works for voice and orchestra have received much attention, especially *Le Marteau sans maître* (1954) and *Pli selon pli* (1960). Renowned for conducting complex 20th-century works, Boulez became director of the French Institute for Acoustic and Musical Research in 1975.

Boullé or Boulle, André Charles (1642-1732), French cabinetmaker, one of a number of skilled craftsmen maintained in the Louvre Palace by Louis XIV to design furniture and art objects for the court. Boullé created a distinctive MARQUETRY of tortoiseshell and gilded brass, to which he gave his name. Examples of his art exist at Versailles and the Louvre.

Boullé, Pierre (1912-), French novelist. He is best known for *The Bridge on the River Kwai* (1954), drawn from his years in SE Asia, and for *E = mc²* (1957) and *The Planet of the Apes* (1964).

Boult, Sir Adrian (1889-), British conductor, widely known for his interpretation of modern English composers, such as Gustav Holst and Ralph Vaughan Williams. He was musical director and principal conductor of the BBC Symphony Orchestra (1930-50) and principal conductor of the London Philharmonic Orchestra (1950-57).

Boulting brothers, the (1913-), twins John and Roy who worked together as film directors and producers from the late 1940s. Their earlier films included *Brigade Rock* (1946) and *Fame is the Spur* (1946). From 1955 they made realistic satirical comedies such as *Lucky Jim* (1957) and *I'm All Right Jack* (1959).

Boulton, Matthew (1728-1809), British engineer and manufacturer. In 1762 he built the Soho iron works near Birmingham. In 1775 he went into partnership with James Watt and began manufacturing Watt's steam engines on a commercial basis. In 1790 he patented a steam-powered coining press and introduced a new copper coinage into Britain in 1797.

Boumediène, Houari (c. 1925-78), Algerian politician. In the Algerian war for independence from France he commanded guerrilla forces around Oran in 1955-60. He served as Vice-President from the achievement of independence in 1962 to 1965, when he overthrew President Ben Bella, his former ally, and became President and Prime Minister himself. He has maintained a strongly anti-Israel policy.

Bounty Islands, group of approx. 12 small uninhabited islands in the S Pacific Ocean 668km (415 miles) SSE of Dunedin, New Zealand, administered by New Zealand. They were discovered in 1788 by Captain William Bligh the year before the mutiny on his ship *HMS Bounty*.

Bounty, Mutiny on the (28 April 1789), revolt led by the master's mate Fletcher Christian against Lieut. William Bligh of *HMS Bounty* off Tahiti. Christian and nine other mutineers subsequently went on to colonize the island of Pitcairn. See also p. 2121.

Bourbon, House of, European dynastic family, descendants of the CAPETS. The ducal title was created in 1327 and continued until 1527. A cadet branch, the Bourbon-Vendôme line, won the long John of Navarre so that when Henry of Navarre became King of France as HENRY IV in 1589, the Bourbons became France's ruling family until 1789. Two members of the family, Louis XVIII and CHARLES X, ruled from 1814 to 1830.

The Bourbons became the ruling family of Spain in 1700 when PHILIP V, grandson of Louis XIV of France, assumed the throne. His descendants mostly continued

to rule Spain until 1931, when the Second Republic was declared. **JUAN CARLOS I**, a Bourbon, was restored to the Spanish throne in 1975.

Bourbonnais, former province in central France. It was gradually put together by the counts of Bourbon, one of whom married into the family of Louis IX of France, and the throne thus passed into the Bourbon family, in 1589.

Bourgeois Gentilhomme, *Le* (*The Would-be Gentleman*) (1670), satirical comedy by the French dramatist Molière. It follows the progress of M Jourdain, a wealthy social climber whose desire to be considered a gentleman becomes an obsession and, finally, a delusion.

Bourgeois, Léon Victor Auguste (1851-1925), French statesman. He was Prime Minister of France (1895-96) and, as a determined proponent of the LEAGUE OF NATIONS, he represented France there until 1923. He won the Nobel Peace Prize in 1920.

Bourgeoisie, the middle class. The term originally referred to artisans and craftsmen who lived in medieval French towns. Up to the late 18th century it was a propertied but relatively unprivileged class, often of urban merchants and tradesmen, who helped speed the decline of feudalism. Since then it has expanded greatly, and can be divided into the high bourgeoisie (industrialists and financiers) and the petty bourgeoisie (tradesmen, white-collar workers and those in the professions). The name has come to imply an outlook of narrow materialism and impoverished culture. See also pp 1422-1423, 1542-1543, 1564-1565.

Bourguiba, Habib (c.1903-), Tunisian politician, President since 1957. In 1934 he founded the Neo-Destour Party. In 1954 he began the negotiations that culminated in independence in 1956. He became Prime Minister but in 1957 he deposed the bey. In foreign policy he has favoured negotiations between the Arab states and Israel. See also p.2151.

Bourne, William (d.1583), English mathematician and writer on naval subjects. In 1578 his *Inventions or Devices* was published. It contained the first serious discussion of the submarine, a submersible craft to be navigated underwater, there is no evidence that his craft ever sailed. See also pp.478-479.

Bournemouth, town in Hampshire, s England, on the English Channel at the mouth of the River Bourne. A small fishing village until the mid-19th century, it has grown into a popular resort with sandy beaches and fine parks. Pop. (1973) 147,460.

Bournonville, Auguste (1805-79), Danish ballet dancer and choreographer. He went to Paris in 1823 and danced with the Paris Opera Company for two years. After joining the Royal Danish Ballet as director and choreographer in 1830, he stayed with the company after his retirement as a dancer in 1848. He choreographed more than 50 ballets, which combined Romanticism with technical precision. See also pp.1758, 1759.

Bournville, district 6km (4 miles) sw of Birmingham in West Midlands, England. It was built in 1879 by George CADBURY as a garden city for the workers in his chocolate and cocoa factories. As such it is one of the first examples of town planning, and is now owned and managed by the Bournville Village Trust.

Bouts, Dirk (c.1420-75), Dutch painter and pioneer of woodcuts. His individualistic and detailed style is best shown in his altarpiece for St Peter's, Louvain, and in the panels of *Justice of Emperor Otto*.

Bouzouki, musical instrument that is lute-backed, fretted and usually has three double metal strings. Probably of Persian origin, it is played mostly in Greece.

Bovet, Daniele (1907-), Italian pharmacologist. He was awarded the 1957 Nobel Prize for physiology and medicine for his pioneering work on the development of antihistamines and the muscle relaxants used in surgery. He also studied the effects of mental illness on the chemistry of the brain.

Bow, Clara (1905-65), US film star

Known as the "It" girl, she was a vivacious actress who personified the 'flapper' in *Dancing Mothers*, *Mantrap* (1926), *It* (1927) and *The Wild Party* (1929). Her much publicized personal life and her difficulty in adjusting to acting in sound films led to a sharp decline in her popularity.

Bow and arrow, weapon consisting of a length of wood, horn (or today metal) flexed and held in tension by a string, and a flighted pointed shaft which it fires. Probably developed in the Upper Palaeolithic Age about 300,000 years ago, it is still used by some primitive communities for hunting and warfare. See also ARCHERY, pp.113-119, 554-555.

Bow bells, peal of bells in the church of St Mary-le-Bow in the centre of the City of London, England. According to tradition only those who are born within the sound of the bells are true cockneys.

Bowden cable, device for the flexible transmission of small mechanical movements, generally to the controls of a machine. It consists of a strong steel cable (usually multi-stranded and lubricated) in a flexible outer tube, often made in the form of a long coiled spring. The outer tube is anchored at the ends so that the inner cable can move independently. Bowden cables are commonly used for throttle (accelerator), clutch, choke and sometimes brake controls on cars and motor-cycles.

Bowdler, Thomas (1754-1825), English editor, famous for his popular expurgated version of SHAKESPEARE, *The Family Shakespeare* (1818). He also published an expurgated edition of the Old Testament (1823) and Gibbon's *History of the Decline and Fall of the Roman Empire* (1826). The term "bowdlerize", meaning to omit or change indecent sections of a work, is derived from his name.

Bowell, Sir Mackenzie (1823-1917), Prime Minister of Canada (1894-96). As leader of the Conservative Party he defended the Protestant interest. He served as Minister of Customs and colonel of militia before becoming Prime Minister and then leader of the opposition (1896-1906).

Bowen, Elizabeth (1899-1973), British novelist. Her numerous works are noted for their psychological insight into restless, unhappy, and primarily upper-middle-class characters. Her novels include *The Hotel* (1927), *The House at Pans* (1935), *The Heat of the Day* (1949) and *Changing Scenes* (1969).

Bowen, Marjorie (1886-1952), pseudonym of Gabrielle Margaret Vere Long, b. Campbell, British writer of popular historical fiction. Her first novel was published in 1906 and her first best-seller was a romantic novel set in Renaissance Italy, *The Viper of Milan* (1917). *Windfalls* (1923) was also successful. She also used the pen-names Joseph Shearing, George R. Preedy, Robert Page and John Winch, and wrote a large number of historical biographies.

Bowen, Norman Levi (1887-1956), Canadian petrologist and mineralogist. His contributions to the study of the origins, structure and chemistry of rocks were outstanding. His most important book is *The Evolution of Igneous Rocks* (1928). See also pp.208-209.

Bowerbird, forest bird of New Guinea and Australia. The male builds a simple but brightly ornamented bower to attract the female. After mating, the female lays 1-3 eggs in a cup-shaped nest. Adults, mainly terrestrial, have short wings and legs, and variously coloured plumage. Length 24-38 cm (10-15 in). Family Ptilinorhynchidae. See also pp.76, 81, 309.

Bowering, George (1915-), Canadian poet and novelist. His many books of poetry include *Sacks and Stones* (1963), *Two Police Poems* (1968), *Rocky Mountain Foot* (1969), and *The Gangs of Kosmos* (1969). He has also written a novel, *Mirror on the Floor* (1967).

Bowery, The, area of lower Manhattan, New York City, centred round the street of the name. *Bouwene* is Dutch for farm, and in the 17th century the street (then an unmade road) led to the farm of Peter Stuyvesant, governor of New Amsterdam.

Bowie, David (1947-), British pop singer, real name David Jones. Fusing a bizarre theatricality to progressive pop, he graduated to international stardom with his record *Ziggy Stardust* (1972). His subsequent work embraced many styles. He made his film debut in *The Man Who Fell to Earth* (1976).

Bowie, James (c.1796-1836), US frontiersman. He moved to Texas from Louisiana in 1828 and married the daughter of the Mexican Vice-Governor. By 1832 he had joined the US colonists who opposed the Mexican government. He was appointed a colonel in the Texas army in 1835, and was killed at the ALAMO in 1836.

Bowles, William Lisle (1762-1850), English poet and clergyman. His first work *Fourteen Sonnets* (1789) was admired by the poets Samuel Coleridge and William Wordsworth. His later poems included *The Bank of the Nile* (1799) and *St John in Patmos* (1832).

Bowling. See TENPIN BOWLING.

Bowls, game in which a bowl (wood) is delivered underarm to stop as close as possible to a small white ball (jack) at the farthest end of the playing area (rink). A point is scored for each bowl closer the jack than the best opposition bowl. Lawn bowls is played on a level green, in singles, pairs, triples or fours, crown green bowls is played on a green that is raised in the centre, generally as singles but sometimes in pairs. Indoor bowls is played on a matting surface.

Bowen, Sir (Cecil) Maurice (1898-1971), English classical scholar. He was vice-chancellor of Oxford University (1951-54) and wrote many books including *Greek Lyric Poetry* (1936) and *The Greek Experience* (1957).

Bow Street Runners, semi-official police and detective force, organized in London in 1748 by the Bow Street magistrate, Henry Fielding, and later by his half-brother Sir John Fielding. They were assisted by a government grant from 1757 and allowed to extend their activities beyond Westminster and Middlesex.

Box, evergreen tree or shrub found in tropical and temperate regions in Europe, North America and w Asia. The shrub is popular for topiary, and box wood is used for musical instruments. The 100 species include English or common *Buxus sempervirens* and larger *Buxus balcanica* that grows to 24m (80ft). Family Euphorbiaceae.

Box and Cox, two people who alternate in the same place, never meeting, from the old French farce in which two men rent the same room by day and by night respectively. The story was made into a comic opera called *Cox and Box*, by Burnand and Sullivan in 1867.

Boxer, smooth-haired working dog bred originally in Germany. It has a broad head with a deep, short, square muzzle, and its deep-chested body is set on strong, medium-length legs. The tail is commonly docked, and its coat is generally red or brindle, with black and white markings. Height to 61cm (24in) at the shoulder.

Boxer Rebellion (1900), violent Chinese uprising to oust all foreigners from China. Forces led by the secret society of Boxers (Righteous and Harmonious Fists) that attacked Europeans and Chinese Christians besieged Peking's foreign legations enclave for two months. An international expeditionary force put down the uprising. See also p.1623.

Boxing, sport of fist fighting between two men wearing gloves in a roped-in square (ring). Boxers, who are matched according to weight, are classified into eight divisions: flyweight, bantamweight, featherweight, lightweight, welterweight, middleweight, light-heavyweight and heavyweight. Professional bouts can be from 4 to 15 rounds of three minutes duration. A fight is controlled by a referee in the ring and ends when there is a knock-down (where a boxer is unable to get to his feet by the count of ten), or a technical knockout (one fighter is too seriously injured to continue). If both boxers finish the scheduled number of rounds, a decision is generally made by the referee. Under International Rules, this decision

Clara Bow, the wide-eyed 'flapper' with the cupid-bow lips, silent screen star of the 1920s

Bow and arrow; in 16th century England, firearms superseded the bow as a weapon

Bowerbirds plant bright attractive objects to lure the female into the bower for courtship

Boxing, the 'noble art' of attack and defence under the Marquess of Queensbury Rules

Box lacrosse

Robert Boyle, the "natural philosopher" regarded as the father of modern chemistry

Boy Scouts make a promise: obey a law and pursue the skills of outdoor activities

Brachiopoda are often called lampshells as they resemble the early Roman oil lamps

Sir Donald Bradman, the greatest batsman the game of cricket has ever known

is made by three judges outside the ring. **Box lacrosse**, game similar to lacrosse played mainly in Canada. It is played by two teams of six people in a boarded-in area (indoors or outdoors) with maximum dimensions of 61 by 27m (200 by 90ft). The rules are similar to those of (field) lacrosse, except that the ball may be played off the surrounding boards.

Boyacá, Battle of, was fought on 7 Aug 1819 between revolutionary forces (led by Simon BOLÍVAR) and the Spaniards. Bolívar's victory confirmed the independence of Venezuela and Colombia. See also p.1563

Boyar, higher nobility of medieval Russia, originally warriors but increasingly important as great landowners. After long disputes over the respective powers of the boyars and the tsar, the title was abolished in the late 17th century by PETER I. See also pp.1454, 1457

Boyce, William (1710-1779), English composer and organist. He compiled *Cathedral Music* (3 vols, 1760-78), and composed symphonies, overtures and vocal works as well as pieces for the organ. **Boycott, Geoffrey** (1940-), English cricketer. In 1971 he became the first batsman to average over 100 in an English first-class season. In 1977, during the Headingley Test against Australia, he became the 18th player to make 100 first-class centuries and in 1981 he became the highest scoring batsman ever for England.

Boycott, refusal to have dealings with a person, organization or country. The term originated in 1880 when Irish tenant farmers refused to work for, supply or speak with a man named Capt Charles Boycott who was an agent of their landlord.

Boyd, Arthur Merric Bloomfield (1920-), Australian painter and ceramic sculptor. He studied under his grandfather, Arthur Boyd, and began painting landscapes at age 17. His expressionist paintings are evocative of CHAGALL and Stanley SPENCER.

Boydell, Brian Patrick, (1917-), Irish musician and composer. His works show a reaction against the strong influence folk music exerted on his contemporaries. Compositions include *Five Joyce Songs* (1946) and *Meditation and Fugue* (1956). **Boyd Orr, John, 1st Baron** (1880-1971), Scottish nutritionist. In 1936 he published *Food, Health and Income*, a report on income-related diet in Britain which formed the basis for food rationing during WWII. He founded the Imperial Bureau of Animal Nutrition at Aberdeen in 1929 and in 1945 became the first director-general of the UN Food and Agricultural Organization (FAO). He was awarded the Nobel Peace Prize in 1949.

Boyer, Charles, (1899-1978), French actor who went to Hollywood in 1929, and who established a reputation as one of the screen's "great lovers" in a career which included leading roles in *Maverick* (1937), *All This and Heaven Too* (1940) and *Barefoot in the Park* (1968).

Boyle, Charles, 4th Earl of Orrery (1676-1731), Anglo-Irish scholar and soldier. In 1695 he edited a version of the letters of the Greek tyrant Phalaris. These were later proved to be forgeries by the scholar Richard Bentley and were satirized by Jonathan SWIFT in his *Battle of the Books* (1704).

Boyle, Kay (1903-), US author. She spent many years in France and used them as the basis for much of her writing. Her work includes the novels *Plagued by the Nightingale* (1931) and *Gentlemen, I Address You Privately* (1933) and the poems *A Glad Day* (1938) and *American Citizen* (1944).

Boyle, Robert (1627-91), Anglo-Irish scientist, often regarded as the father of modern chemistry. Working at Oxford (1656-68), he made an efficient vacuum pump and used it in 1662 to establish that the volume of a gas is inversely proportional to its pressure at a constant temperature, this relationship is known as Boyle's law. An advocate of experimental methods, he freed chemistry from Aristotelian theory and formulated the chemical definitions of an element and a reac-

tion. He also researched into the calcination of metals, combustion, acids and bases, the nature of colours and the propagation of sound in air. He later worked in London (1688-91) and was a founding Fellow of the ROYAL SOCIETY. See also pp. 482, 774-775, 836-837, 1426, 1437.

Boylston, Zabdiel (1679-1766), US physician who introduced smallpox inoculation into the USA. In 1721, during a smallpox epidemic, he was encouraged by the clergyman Cotton MATHER to introduce the technique. He vaccinated more than 200 patients, nearly all of whom survived. Despite his success, there was a public outcry and his life was threatened.

Boyne, Battle of the (1690), engagement that took place near Drogheda, Ireland, in which the forces of the Protestant WILLIAM III defeated those of the Catholic JAMES II.

Boy Scouts, worldwide organization for boys that stresses outdoor knowledge and good citizenship, founded in Britain in 1908 by Sir Robert BADEN-POWELL. Boy Scouts are divided into community groups called troops, which are subdivided into patrols. Scouts can advance through several grades and earn merit badges for proficiency in various activities, the classes of Scouts are Scout standard, Advanced Scout standard and Chief Scout's award. The Cub Scouts and Venture Scouts are organized within the Scout movement, the first for boys under 12, the second for teenagers. In 1967 the movement was officially renamed the Scout Association. **Brabançonne, La**, Belgian national anthem. Written in 1830, the original words are by Jenneval and the music by François van Campenhout. The Brabançons of the title were renowned warriors in 12th-century Europe.

Brabant, Sir Edward (1839-1914), South African soldier and politician, b. England. He went to the Cape as an ensign in 1855. He was a member of the Assembly between 1873 and 1907. In 1878 he raised a force known as Brabant's Horse and revived it for the SOUTH AFRICAN (BOER) WAR.

Brabant, province of central Belgium, capital, Brussels. Mainly Flemish-speaking, it is densely populated and fertile agricultural region. Industries: chemicals, metallurgy, food processing. Area 3,372sq km (1,302sq miles). Pop. (1970 est.) 2,178,000.

Brabazon of Tara, John Theodore Cuthbert Moore-Brabazon, 1st Baron (1884-1964), British pilot, the first man to hold a pilot's licence. He had a distinguished career in WWII and introduced new methods of aerial photography. In 1940 he was made Minister of Transport.

Brabham, Jack (1926-), Australian racing driver and designer. He won the World Drivers' Championship three times (1959, 1960 and 1966). He was the first driver to win the world championship in his own car (1966), the Brabham, which he raced for the first time in the German grand prix in 1962. He was the first Australian driver to make his name in European racing. He retired in 1970 after racing in 126 grand prix events.

Brace, Charles Loring (1826-90), US social reformer. In 1853 he founded the Children's Aid Society of New York City which pioneered modern child care.

Bracegirdle, Anne (c.1663-1748), English actress. She was trained by Thomas BETTERTON and became the leading actress of her day. She gave her greatest performances in the plays of William SHAKESPEARE and retired in 1707.

Brachiopoda, lamp shells, a phylum of about 260 species of small, bottom-dwelling, marine invertebrates, similar in appearance to bivalve molluscs. They are identified by a shell with two halves, a characteristic lophophore - a tentacled organ for feeding - and a stalk in some species. They live attached to rocks or buried in mud or sand and reproduce sexually. There are 75 genera including *Lingula*, the oldest known animal genus. Most modern brachiopods are less than 5cm (2in) across, but more than 10,000 fossil species have been found and described. See also pp.53, 182.

Brachycephalic. See CEPHALIC INDEX.

Bracken, Thomas (1843-98), New Zealand journalist and poet, b. Ireland. He wrote the national anthem *God Defend New Zealand*.

Bracken, persistent weedy FERN found throughout the world. It has an underground stem that can travel 1.8m (6ft) and sends up fronds that may reach 4.6m (15ft) in some climates. The typical variety is widespread in Britain. Species *Pteridium aquilinum*. See also p.364.

Bracton, Henry de (d.1268), English jurist, whose *De Legibus et Consuetudinibus Angliae* is the best medieval statement of the limited sovereignty of feudal and divine kingship.

Bradbury, Ray Douglas (1920-), US science-fiction writer. His works include the novel *Fahrenheit 451* (1953), the play *The Halloween Tree* (1968), and *The Martian Chronicles* (1950). *The Illustrated Man* (1951) and *The Autumn People* (1965), all short story collections.

Bradford, William (1590-1657), American colonial governor and signatory of the Mayflower Compact. He emigrated to America as one of the PILGRIM FATHERS in the MAYFLOWER in 1620, and was elected Governor of Plymouth Colony in 1621. He helped draw up a body of laws for the colony in 1636, and wrote a *History of Plymouth Plantation, 1620-46*.

Bradford, city in West Yorkshire, N. England, in the Aire Valley, 14km (9 miles) W of Leeds. Since the 14th century it has been a centre for woollen and worsted manufacturing industries, textiles, textile engineering, electrical engineering, motor-cars. Pop. 292,340.

Bradford-on-Avon, town in Wiltshire, SW England, 10km (6 miles) E of Bath. It is noted for its medieval architecture including an 8th-century Saxon church and a 14th-century stone bridge over the River Avon. Industries: wool, rubber processing. Pop. 8,000.

Bradley, Francis Herbert (1846-1924), British philosopher. Bradley's idealism was Hegelian in inspiration. *Appearance and Reality* (1893) contained his famous theory of "the degrees of truth". Dialectical analysis distinguished his *Principles of Logic* (1883).

Bradley, Henry (1845-1923), English philologist and lexicographer. In 1889 he became an editor of the *Oxford English Dictionary* and was its senior editor (1915-23).

Bradley, Omar Nelson (1893-), US general. In WWII he commanded the 2nd Corps in N. Africa and during the invasion of Sicily (1943), and led the 1st Army in the Normandy invasion (1944). After the war he served as Chief of Staff of the US Army (1948-49) and was appointed first chairman of the Joint Chiefs of Staff (1949-53).

Bradman, Sir Donald (1908-), Australian cricketer and sports administrator, regarded as one of the finest batsmen the game has known. His record in Test matches was 6,996 runs in 52 games (average 99.94), including 29 centuries and a highest score of 334 (against England at Leeds in 1930). During his career in first class cricket, playing for Australia, New South Wales and South Australia, he made a total of 28,067 runs (average 95.14), including 117 centuries and a highest score of 452 not out (for New South Wales against Queensland at Sydney, 1929-30). He played for Australia from 1928 to 1948, and was its captain from the 1936-37 season.

Bradshaw, George (1801-53), English printer and the originator of railway guides. In 1839 he published *Bradshaw's Railway Time Tables* which was developed into the series *Bradshaw's Monthly Railway Guide*.

Bradycardia, slow arrhythmic heart rate defined by a pulse of less than 60 beats per minute. It is caused by disturbance of the primary pacemaker and is also common in healthy athletes whose performances are partly related to respiratory variation. See also pp.152-153, 1066-1067.

Bracegirdle Gathering, best known of the HIGHLAND GAMES, a Scottish folk-dance meeting.

Brand, Sir John Henry

Brahma, the divine force believed by Hindus to be the great va soul of the universe

Brahms, romantic composer and third (after Bach and Beethoven) of the three great 'Bs

Brain, the highly complex organ that controls all mental and physical processes

Brakes, whatever their mechanisms, work on the principle of friction between two surfaces

Braga (Bracara Augusta), town in Minho province, nw Portugal, approx 48km (30 miles) nne of Oporto, the capital of Braga district. It was the location of a powerful Episcopal See in the Middle Ages. Industries: engineering, cutlery, guns, jewellery. Pop. 47,000.

Bragança, town in NE Portugal, the capital of Bragança district. It is the seat of the Bragança family, who ruled Portugal from 1640 to 1910. Industries: textiles, hats, chocolate. Pop. 34,000.

Bragança, dynasty that ruled Portugal from 1640 until 1910; a branch of the house ruled as emperors of Brazil from 1822 to 1889. The dynasty was founded by the Duke of Bragança, who ruled as John IV (1640-56). During the NAPOLEONIC WARS, the royal family fled to Brazil, then a Portuguese colony.

Bragg, Sir William Lawrence (1879-1971), English physicist, & Australia. With his father, Sir William Henry, he determined the mathematics involved in X-ray diffraction, showed how to compute X-ray wavelengths, and studied CRYSTAL STRUCTURE by X-ray DIFFRACTION. In 1915, they were jointly awarded the Nobel Prize in physics.

Brabe, Tycho (1546-1601), Danish astronomer. Educated in law at Copenhagen and Leipzig, he became interested in astronomy and devoted himself to improving observational technique. He built an observatory on the island of Hven (1576). The most accurate observer of his time, he discovered a nova (1572) and advanced the solar theory of COPERNICUS. His calculations were used by Johannes KEPLER.

Brahma, creator god in HINDUISM, one of the three gods in the TRIMURTI. Although Brahma is equal to the gods VISHNU and SHIVA, there is only one major temple to him, at Pushkar in India.

Brahman, or **Atman**, in HINDUISM the supreme soul of the universe. The omnipresent Brahman sustains the earth. According to the UPANISHADS, the individual soul is identified with Brahman. Brahman is not God, but rather is *neti, neti*, "not this, not that", or indescribable.

Brahmanas, ancient Hindu writings of the pre-Upanshadic period (c 900-c 700 BC). They interpret the VEDAS and contain social doctrines, instructions for ritual sacrifice as the means of achieving salvation and myths of the Hindu pantheon of gods. See also HINDUISM, UPANISHADS.

Brahman cattle, or **zebu**, many domestic varieties of a species of ox native to India. Tan, grey or black with a hump over the shoulders, brahmans have drooping ears and a large dewlap. Family Bovidae, species *Bos indicus*. See also p 724.

Brahmanism, term used to denote the early phase of HINDUISM. It was characterized by acceptance of the VEDA as divine revelation. The BRAHMANAS, the major text of Brahmanism, are the ritualistic books comprising the greater portion of Vedic literature. They were complemented by the UPANISHADS. In the course of time deities of post-Vedic origin began to be worshipped and the influence of Brahmin priests declined. This led to a newer, popular form of Hinduism which superseded Brahmanism.

Brahmaputra, river in s Asia; it flows e across Tibet into sw China, s into India, wsw across India into Bangladesh where it becomes the River Jamuna, and s to the Bay of Bengal, forming, with the rivers Ganges and Meghna, a vast delta mouth. Length approx 2,900km (1,800 miles).

Brahma Sutra, "Aphorisms about Brahman", sometimes called the Vedanta Sutra, is the root text of the VEDANTA school of HINDU philosophy. Probably composed in the 2nd or 3rd century AD, it includes an interpretation of the UPANISHADS and relates it to the conclusions of other schools.

Brahms, **Johannes** (1833-97), German composer. Encouraged by his friends Robert and Clara SCHUMANN, he began to earn his living as a composer at the age of 30. He followed classical models of form and was a master of contrapuntal HARMONY. He composed in all major musical forms except OPERA. Among his works are the German Requiem (1868), the Variations on a Theme by Paganini (1863), the Violin Concerto in D (1878) and two piano concertos (1858 and 1881). His best-known works include the orchestral Hungarian Dances (1873) and the Lullaby (1868). He wrote four symphonies between 1876 and 1885. See also pp 1582-1583.

Braided stream, network of small, shallow interlacing streams. It forms when a river deposits sediment, causing it to divide up into new channels, which then redevide and rejoin, looking like a braided cord.

Braila, city and port in Romania, 19km (12 miles) s of Galati on the River Danube. It is a major industrial and commercial centre, important for its grain exporting. Industries: food processing, metal products, fishing. Pop. 165,803.

Braille, Louis (1809-52), French inventor of the Braille system of reading for the blind (he was himself blinded at the age of three). A scholar, and later a teacher, at the National Institute of Blind Youth in Paris, Braille developed a system of embossed dots to enable the blind to read by touch. This was first published in 1829, and a more complete form appeared in 1837. There are also Braille codes for music and mathematics. See also p 607.

Brain, Dennis (1921-57), British horn player. He was principal horn player of the Royal Philharmonic and the Philharmonia orchestras. Benjamin BRTEN and Paul HINDMITH composed works for him. He died in a car crash.

Brain, Walter Russell, 1st Baron of Eynsham (1895-1966), English neurologist. He was president of the Royal College of Physicians (1950-57) and in 1960 became president of the Association of British Neurologists. He wrote extensively on neurology and from 1954 was editor of the magazine *Brain*.

Brain, principal structure of the CENTRAL NERVOUS SYSTEM which regulates observable behaviour and governs the organ systems of the body. Weighing approx 1.5kg (3.3lb), the adult human brain is about the size of two clenched fists, most of which consists of two hemispheres known collectively as the cerebrum. Its heavily convoluted surface contains innumerable nerve cells and has areas associated with one or more functions, eg sight or taste. See also pp 112, 114-115, 119, 124-125, 126, 128-131, 140-143.

Brain damage, sometimes caused by external injury or partial asphyxiation, may also be related to delayed or incomplete brain development, brain trauma suffered during or after birth, or psychiatric or social disturbances. It is the possible cause of lack of co-ordination, such as difficulties in muscular control, and diseases such as EPILEPSY. Whether treatment is likely to prove beneficial depends on accurate individual diagnosis. See also pp 1072-1073, 1080, 1106, 1111.

Brain disorders, mental disturbances caused by an impairment of brain tissue function and associated with a deterioration of "thinking" processes. See also MS pp 84, 96-97, 104, 134, 176-177.

Braine, John Gerard (1922-), British novelist. One of the ANGRY YOUNG MEN, his novels include *Room at the Top* (1957), *Life at the Top* (1962), *The Drowning Game* (1968) and *Stay with Me Till Morning* (1970).

Brain storage, in neuropsychology, the capacity of the mind and brain to store information or memories. The term is most often related to physiological theories of changes that take place in the brain during cognitive learning processes. See also pp 132, 133, 1124-1125.

Brain Trust, BBC programme in which a panel of eminent authorities answered listeners' questions on all manner of topics. It began as a radio show (1941-47) and was later revived on TV in the 1950s.

Brantree, town in Essex, s England, on the rivers Bruin and Blackwater, and on the Roman Stane Street. Stones from the road were used in the construction of its 13th-century church. Industries: textiles, plastics. Pop. (1971) 24,839.

Brainwashing, technique of coercive persuasion used to alter a person's basic beliefs and attitudes without his consent. Such techniques involve attempts to render a victim's beliefs so useless that he substitutes new values for his old ones, while specific procedures (including isolation, starvation, physical abuse and threats of death) are designed to make the subject dependent on his captors and receptive to new ideas.

Brain waves, fluctuations in the electrical activity of selected areas of the brain which can be recorded on an electroencephalograph (EEG). Electrodes are placed on the scalp, amplifying their output and recording the resulting patterns which can be used to "read" various states of consciousness.

Brathwaite, Dame Lillian (1873-1948), English actress. Her most famous roles included Florence Lancaster in *The Vortex* (1924), Elizabeth I in *Elizabeth La Femme Sans Homme* (1938) and Abby Brewster in *Arsenic and Old Lace* (1942).

Brathwaite, Warwick (1896-), New Zealand conductor. He conducted the Sadler's Wells Opera Co., London (1932-40 and from 1960), and New Zealand's National Orchestra (1953-54).

Brake, device for slowing the speed of a vehicle by reducing the speed at which the wheels turn. It can be accomplished by mechanical, hydraulic or pneumatic systems that press a non-rotating member into contact with a rotating wheel or shaft, so that friction stops the motion. See also pp 496-497.

Braking, atmospheric, drag exerted on a space vehicle as it re-enters the Earth's atmosphere and encounters increased air density. The friction slows down the vehicle, which must be built to withstand the intense heat created. See also ABLATION, pp 1022-1023.

Braking parachute, or drogue, device used to slow down space vehicles during landing, several are used together. Some high-speed aircraft and even cars, such as "dragsters", also use them to decelerate. See also pp 1022-1023.

Brakpan, town in Transvaal, NE South Africa, 36km (23 miles) e of Johannesburg at an altitude of 1,637m (5,371ft). Industries: gold and coal-mining, electrical engineering. Pop. 64,000.

Bramah, Joseph (1748-1814), British engineer and inventor. He ran a lock-manufacturing shop which became the basis of the machine-tool industry in Britain, furthering the expansion of manufacturing in Britain in the 19th century. His inventions included an almost pick proof lock, a hydraulic press and a numbering machine for the printing trade.

Bramante, Donato (1444-1514), Italian architect. He trained first as a painter but is famous for his buildings, which are distinguished by their Roman grandeur and beauty of proportion. His Roman buildings are classic examples of the High Renaissance style. His plan was the basis for the basilica of St Peter's, Rome. See also pp 1388, 1389.

Bramble. See BLACKBERRY.

Brambling, or brambling-finch, small finch that lives in Europe and Asia. It is bright coloured and resembles a chaffinch. Species, *Fringilla montifringilla*. See also p 304.

Bramwell, George William Wilshe, **Baron** (1808-92), English judge who introduced the term "limited" for companies of limited liability. He helped to draft the Common Law Procedure Act (1852) and was partly responsible for the Companies Act (1862).

Branching, growth extension of vascular plants. A branch develops from the stem and consists of the growth from the previous year (branchlet) and new growth (twig). New twigs are produced during the next season of growth, both from the terminal bud at the end of the twig and from lateral buds in leaf axils along it. See also pp 366, 381.

Brand, Hennig (d.c 1692), German alchemist who in 1669 discovered the element PHOSPHORUS.

Brand, Sir John Henry (1823-88), South African politician. Other forms of his

Brandenburg

Marlon Brando, whose early films had a great influence on acting in Europe and America

Willy Brandt, who resigned when it was found his aide was an East German spy

Brasilia, with its architectural wonders, was created to develop the vast interior of Brazil

Werner von Braun, who said his first V2 worked well but landed on the wrong planet

name are Jan Hendrik Brand and Johannes Henricus Brand. He was elected President of the ORANGE FREE STATE in 1864 and served until his death.

Brandenburg, city and canal port in Potsdam district, central East Germany, on the River Havel, 61km (38 miles) wsw of Berlin, former capital of the old state of the same name, now part of East Germany. The state was founded by the German King Henry I (r 916-36), and later formed the nucleus of the Kingdom of Prussia. Both city and province have Wendish origins. Industries: steel, engineering, chemicals, textiles. Pop (1970 est.) 94,000.

Brandenburg Concertos, six pieces of the CONCERTO GROSSO type by J.S. BACH, dedicated in 1721 to Christian Ludwig, Margrave of BRANDENBURG. All but Nos 3 and 6 have solo parts, all but No. 1 have three movements although the middle movement of No 3 consists of only two chords. They were probably not written as a set. They are often regarded as the finest examples of the BAROQUE concerto. See also pp.1484-1485.

Brandes, Georg Morris Cohen (1842-1927), Danish writer and critic. The radical views expressed in *Main Currents in 19th Century Literature* (1871-87), *Aesthetic Studies* (1868) and *Danish Poets* (1877) aroused hostility among conservative Danes.

Brando, Marlon (1924-), US film star, renowned for his "method" style of acting. His first major film success was in *A Streetcar Named Desire* (1951). Other notable films included *The Wild One* (1954), *On the Waterfront* (1954), *One-Eyed Jacks* (1961), *Munny on the Bounty* (1962), *The Godfather* (1971), *Last Tango in Paris* (1972) and *The Missouri Breaks* (1976).

Brandt, Georg (1694-1768), Swedish chemist who discovered, isolated and named COBALT in 1730. In 1727 he was a research director for the Council of Mines, Stockholm, and later became the warden of the Swedish Mint. He rejected alchemy and discredited many spurious processes for the production of gold.

Brandt, Willy (1913-), German Social Democrat politician. His real name was Karl Herbert Frahm. He fled to Norway and then Sweden during the Nazi era and adopted the name "Willy Brandt". He returned to Germany after WWII and was elected Mayor of West Berlin in 1957. In 1969 he became Chancellor of West Germany. He initiated a programme of co-operation with the Communist bloc nations. In 1971 he was awarded the Nobel Peace Prize. He resigned in 1974 after a close aide was exposed as an East German spy. See also p.1793.

Brandy, any alcoholic spirit made by distilling wine or the fermented juice of a fruit. Armagnac and cognac are famous French wine brandies, with an alcohol content of 42%-44%. Marc is a French brandy distilled from grape mush or pomace. Applejack and calvados are brandies distilled from fermented apple juice. Other well known fruit brandies are kirch (cherries), slivovitz (plums) and peach, apricot, cherry and blackberry brandies. See also pp.702-703.

Brandywine creek, in SE Pennsylvania, USA, scene of a battle (11 Sept 1777) in the American War of Independence in which the American troops under George WASHINGTON were defeated by the British who later marched, under Gen. Howe, into Philadelphia. See also p.1541.

Brangwyn, Sir Frank (1867-1956), Welsh painter and draughtsman. His huge murals, in vivid and brilliantly handled colour, are to be seen in Skinner's Hall, the Royal Exchange and Lloyd's Register (all in London), the Rockefeller Center, New York, Missouri State Capitol and elsewhere. Bruges (his birthplace) and Orange in southern France have museums devoted to his work.

Brant, Joseph (1742-1807), Mohawk Indian chief. He served in the French and Indian War and in Pontiac's Rebellion. He attended an Anglican school for Indians (1761) and became interpreter to a missionary. He was commissioned a cap-

tain in the British army in 1775 and fought on the British side in the American War of Independence. He translated the Book of COMMON PRAYER and the Gospel of St MARK into Mohawk.

Brant, Sebastian (1457-1521), German satirical writer and poet. He is noted for his long moral satire *Das Narrenschiff* (1494), in a verse form which became popular in 16th-century Europe. His other works include several Latin translations and theoretical musings on the lives of the saints.

Brantford, industrial city in SE Ontario, Canada, approx. 96 km (60 miles) SE of Toronto, on the River Grand. It was named after the Mohawk Indian chief Joseph BRANT who established the Six Nations of the Iroquois tribes there in 1784. Pop. 64,000.

Brant goose. See BRENT GOOSE.

Branting, Karl Hjalmar (1860-1925), Swedish politician. He was the first Social Democrat elected to the Riksdag (1896). He was Minister of Finance in 1917 and three times Prime Minister (1920, 1921-23, 1924-25). He was a delegate to the Paris Peace Conference (1919) and shared the Nobel Peace Prize in 1921 with Christian LANGE.

Brantôme, Pierre de Bourdeille, abbé and seigneur de (c.1540-1614), French soldier and chronicler. He fought against the HUGUENOTS in France, for the Spanish in Africa, and accompanied MARY QUEEN OF SCOTS to Scotland. His memoirs were published in 1665-66.

Braque, Georges (1882-1963), French painter, printmaker and sculptor. His early work, during the years 1907-09, foreshadowed CUBISM and had a great influence on early COLLAGE. *Head of a Woman* (1909) and *Violin and Palette* (1909-10) are transitional works between early and analytical Cubism. After WWI his style became less three-dimensional and his colour stronger, as in *The Table* (1918). *Woman with a Mandolin* (1937) typifies his more diverse style of the 1930s and 1940s. See also pp.1656-1657.

Branch, Charles Orwell (1909-76), New Zealand poet. He was a careful, meticulous craftsman, his published volumes include *Disputed Ground* (1948) and *Ambulando* (1964). In 1947 he founded *Landfall*, an influential literary periodical that he edited for many years.

Brasilia, capital city of Brazil and a Federal district, in central Brazil, 933 km (580 miles) NW of Rio de Janeiro (the former capital). Although the city was originally suggested in 1891, building did not start until 1956. The city was laid out in the shape of an aircraft by the Brazilian architect Lucio Costa, and Oscar Niemeyer designed the modernistic public buildings. Inaugurated as the capital in 1960, its economic purpose is to develop the interior of Brazil. Pop. 272,000.

Brasov, city in Brasov district, E central Romania, at the foot of the Transylvanian Alps. It has a 14th-century church and a 15th-16th century citadel. Industries: oil refining, building materials, textiles. Pop. 199,000.

Brass, alloy of copper (55%-95%) and zinc (5%-45%). It is yellowish, malleable and ductile, and can be machined or cast. Its properties can be altered by varying the amounts of copper and zinc, or by adding other metals such as tin. It has many uses, eg in plumbing fixtures, coinage and ornamental metalwork. See also pp.398, 398.

Brass, family of musical wind instruments made of metal and played by means of a cupped or funnel-shaped mouthpiece. The chief brass instruments of a symphony orchestra are the trumpet, French horn, trombone and tuba. Other members of the family include the cornet and the bugle. See also p.1581.

Brass band. See BAND.

Brassic, genus of plants with edible roots or leaves including cabbages, cauliflowers, brussels sprouts (all sub-species of *Brassica oleracea*), turnip (*B. rapa*), swede (*B. napobrassica*). Some, such as broccoli, have edible flowerheads, whereas both the root and leaves of kohlrabi (*B. caulorapa*) may be eaten. The species may vary

considerably in appearance; they are mostly hardy and can withstand cold winters. See also p.284.

Brass rubbing, technique of making reproductions of the designs of flat, brass plaques found on monuments. A sheet of paper is laid over the brass, held in position with adhesive tape and lightly pressed into the outlines of the design. The surface of the paper is rubbed with cobbler's heel ball or wax crayon. The wax adheres to the paper where the brass is raised and smooth, and the engraved areas of the design remain unwarped. Some 7,000 monument brasses survive in British churches, principally in Kent and East Anglia.

Bratby, John (1928-), British painter and novelist, a member of the realist "kitchen sink" school of painting in the 1950s. His best-known novel is *Breakdown* (1960).

Bratislava, city in a central Czechoslovakia, on the River Danube, 48km (30 miles) E of Vienna, capital of Slovak SR. It became part of Hungary after the 13th century and of Czechoslovakia in 1918. It has an important refinery for oil from the USSR. Other industries: shipping and manufacturing. Pop. (1974) 328,765.

Brattain, Walter Houser (1902-), US physicist. From 1929 he worked as a research physicist with the Bell Telephone Laboratories and concentrated on research into solid-state physics. In 1956, with John BARDEEN and William SHOCKLEY, he was awarded the Nobel Prize in physics for research into semiconductivity and the development of the transistor. In 1967 he became professor at Whitman College, Washington.

Brautwitch, Heinrich Alfred Walther von (1881-1948), German field marshal. In 1939 he directed the occupation of Austria, Czechoslovakia and Poland. In 1941 he was relieved of his command by Adolf Hitler.

Braun, Eva (1912-45), mistress of Adolf HITLER. A photographer's assistant, she met Hitler in the early 1930s and lived with him for the rest of their lives. As far as is known, she never exercised any political influence. She and Hitler were married in Berlin the day before they committed suicide together.

Braun, Karl Ferdinand (1850-1918), German physicist. From 1895 he was professor of physics and director of the Physical Institute, Strasbourg. In 1897 he invented the oscilloscope - using a CATHODE RAY TUBE known as the Braun tube, the forerunner of the television tube. In 1909, with Guglielmo MARCONI, he shared the Nobel Prize in physics for the development of wireless telegraphy.

Braun, Wernher von (1912-77), US rocket engineer, b. Germany. By 1937 he was director of a rocket research station at Peenemünde, where he perfected the V-2 rocket missiles in the early 1940s. At the end of WWII he went to the USA, becoming a US citizen in 1955. In 1958 von Braun was largely responsible for launching the first US satellite, *Explorer 1*. He later worked on the development of the Saturn rocket (for the Apollo programme) and was deputy associate administrator of NASA (1970-72).

Braunau, town in N Austria, on the River Inn, approx. 50 km (31 miles) N of Salzburg. It has many old houses and churches and was the birth place of Adolf HITLER. Industries: aluminium processing, wood products. Pop. 16,400.

Brave New World (1932), satirical novel by Aldous HUXLEY. The novel presents a future totalitarian society with technologically developed leisure industries, genetic manipulation and sterile promiscuity.

Brazil, largest country of South America, a former Portuguese colony. Despite large and varied mineral deposits and the vast hardwood forests of the Amazon Basin, Brazil's economic development has been hampered by poor communications, little money and a lack of trained technologists. The largest manufacturing industry is the production of textiles, nearly half the population live off the land. The capital is BRASILIA. Area, 8,511,685sq km (3,286,365sq miles). Pop. (1976 est.) 109,181,000. See p.1992.

Brazil current, warm current in the s Atlantic Ocean, and a branch of the s Equatorial current, which flows southwards along the coast of South America. It forms part of the weak-flowing western boundary of the s Atlantic current gyre.

Brazil nut, seed of an evergreen tree which has leathery leaves and grows to 41m (135ft) tall. Its flowers produce a thick-walled fruit 10–30 cm (4–12 in) in diameter which contain 25–40 large seeds – the Brazil nut. Family Lecythidaceae, species *Bertholletia excelsa*. See also p.711

Brazing, process in which metallic parts are joined by the fusion of alloys that have lower melting points than the parts themselves. The bonding alloy is either pre-placed or fed into the joint as the parts are heated. Brazed joints are very reliable and are used extensively in the aerospace industry. See also p.405

Brazzaville, capital and largest city of the Congo, on the River Congo, below Stanley Pool. It was the former capital of French Equatorial Africa (1910–59). It is a major port, connected by rail to the main Atlantic seaport of Pointe-Noire. Industries: foundries, food processing. Pop 289,700. See also p.2016

Breach of contract, in legal terms, when a party to a CONTRACT fails to perform in accordance with the terms of the contract. When one party breaches a contract, the other has the legal right to treat his own obligation under the contract as discharged. In addition, the innocent party has a right to damages or to demand compensatory action.

Breach of the peace, in law, disrupting public order either by an act of violence or by an act that would provoke violence. Riots and assaults are included in this type of offence.

Bread, staple food made by mixing wheat flour (containing a little yeast, salt and sugar) with water to make a spongy dough, allowing the yeast to ferment carbohydrates in the mixture (thus providing carbon dioxide gas which raises, or leavens, the bread), and finally baking the product to firmness in an oven. The yeast fermentation not only lightens the texture of the bread but also adds to its taste. Bicarbonate of soda (NaHCO_3) may be used instead of yeast. Unleavened bread, favoured in many Asian countries, is flat in shape and heavy-textured by comparison. See also pp.678–679

Breadalbane, John Campbell, 1st Earl of (c.1635–1717), Scottish leader. He assisted MONCK in the restoration of CHARLES II (1660) and helped to negotiate the submission of the Scottish chiefs to the Crown.

Breadfruit, the starchy fruit of a tree of the MULBERRY family native to SE Asia. The pulp is eaten fresh or cooked, or ground up and baked to make a bread. Genus *Artocarpus*. See also p.691

Break-even analysis, in economics, a technique for determining at what point a company's costs equal its revenue.

Breaking and entering, in law, entry by forceable means either into a home or business with intent to commit a crime on the premises.

Breakspear, Nicholas. See ADRIAN (IV)

Brenn, Julian Alexander (1933–), British guitarist and lutanist. He studied at the Royal College of Music 1945–48. An outstanding classical guitarist, he has transcribed lute music for the guitar.

Bream, freshwater fish of E and W Europe. Its stocky body is green-brown and silver, and anglers prize it for its tasty flesh. Length, 30–50 cm (12–20 in); weight, 4–6 kg (9–13 lb). Family Cyprinidae, species *Abramis brama*. See also p.329

Breasley, Scobie (1914–), Australian jockey. He won more than 3,000 races in a career spanning 40 years – 18 of them in Britain, where he was champion jockey four times (1957, 1961, 1962 and 1963). He won four English Classics, including the Derby twice – on *Sania Claus* in 1964 and on *Charlottown* in 1966. He also won Australia's Caulfield Cup five times, the Sydney Cup twice and the French Prix de l'Arc de Triomphe on *Ballymoss* (1958). He retired in 1968 and became a trainer.

Breast, or mammary gland, organ of a female mammal that secretes milk to nourish new-born young. In males the glands are rudimentary and non-functional. The human female breast, which develops during puberty, is made up of about 15–20 irregular-shaped lobes separated by connective and fat tissues. Lactiferous ducts lead from each lobe to the nipple, a small cone-shaped structure in the centre of the breast. See also pp.151–166–167

Breathing, in land animals, the use of the lungs for inhaling and exhaling air during respiration. When man and other mammals breathe, oxygen from the air passes into the blood through tiny air sacs in the lungs, which also remove carbon dioxide from the bloodstream. Respiratory movements of the lungs are partly consciously controlled by the brain but are also under unconscious control. Damage to the part of the brain concerned, the medulla, leads to death by asphyxiation. See also pp.5, 158–159, 356–357

Brébeuf, St Jean de (1593–1649), French missionary in Canada. Ordained a Jesuit in 1623, Brébeuf travelled extensively after 1625 among the Huron Indians of Georgian Bay and Lake Huron. He was tortured to death by the Iroquois. His annual narratives are found in *The Jesuit Relations and Allied Documents* (1896–1901) by R. G. Thwaites.

Breccia, rock formed by the cementation of sharp-angled fragments in a finer matrix of the same or different material. Its origin varies: some is formed under the earth by movements of the crust, some from scree slopes, and some from volcanic material. See also CONGLOMERATE, pp.210–211

Brecht, Bertolt (1898–1956), German dramatist. His notable works include *The Threepenny Opera* (with music by Kurt Weill, 1928), *The Rise and Fall of the City of Mahagonny* (with music by Kurt Weill, 1930), *The Caucasian Chalk Circle* (1st version, with music by Paul Dessau, 1948) and *The Resizable Rise of Arturo Ui* (published posthumously, 1957). After HITLER came to power in Germany in 1933, Brecht lived abroad, first in Scandinavia, then in the USA. In 1947 he returned to Europe, first to Switzerland, then to East Berlin. There he directed the Berliner Ensemble.

Brecknockshire (Breckonshire or Brycheiniog), former county of SW Wales. Mountainous, with the Brecon Beacons reaching almost 886 m (2,906 ft), it is drained by the rivers Usk and Wye. Since 1974 it has been a part of Powys.

Breckonshire. See BRECKNOCKSHIRE

Breda, city in Noord-Brabant province, S Netherlands, 23 km (14 miles) W of Tilburg on the River Merik. Being strategically positioned, it has often changed hands. The Compromise of Breda (1566), for example, concluded a Dutch rebellion against Spanish rule. Industries: engineering, textiles, food processing. Pop 118,594.

Breda, Declaration of (1660), statement made by CHARLES II of England while in exile in Holland, promising religious toleration and an amnesty to former enemies of the Stuarts. He was thereupon invited to take the throne. See also p.1432

Breda, Treaty of (1667), peace agreement which ended the Second Anglo-Dutch War. Britain gave up its claim to the Dutch East Indies but gained control of New York and New Jersey.

Breeder birth. See BIRTH, BREECH

Breeder reactor, nuclear fission reactor in which more fissile material is produced than is consumed in it, surplus high-energy neutrons transmute a "breeding blanket" of nonfissile Uranium-238 into fissile Plutonium-239. See also pp.434–435, 815

Breeding, science of changing or promoting certain GENETIC characteristics in animals or plants through careful selection and combination of the parent stock. Breeding may involve CROSS-BREEDING or INBREEDING to produce the desired characteristics in the offspring. Scientific breeding has resulted in disease-resistant strains

of crops and in animals that give improved food yields. See also pp.178–179, 323, 325, 328–329

Bremen, city in N West Germany, on the River Weser approx. 96 km (60 miles) SW of Hamburg, capital of Bremen state and second-largest port in West Germany. The city suffered severe damage during WWI, but many of its original buildings, including the Gothic city hall, survived. Industries: shipbuilding, electrical equipment, textiles, food processing. Pop (1974) 584,265.

Bremerhaven, seaport city in Bremen state, N West Germany, at the mouth of the River Weser, 56 km (35 miles) N of Bremen. Founded in 1827, it became an important emigrant port in the late 19th and early 20th centuries. Today it is West Germany's largest fishing port. Other industries: shipbuilding, engineering. Pop (1969 est.) 149,250.

Bremsstrahlung, electromagnetic radiation with a continuous range of energies, in the X-RAY wavelength region of the ELECTROMAGNETIC SPECTRUM. It is emitted when high-speed electrons decelerate on passing close to a positively-charged nucleus. It takes its energy from the electron's lost KINETIC ENERGY.

Brendan, Saint (c.484–577), also known as St Brenainn. He was Abbot of Clonfert in County Galway, Ireland. A legend popular in the Middle Ages described his visit to the "northern and western islands", probably the Orkneys and Hebrides or possibly Iceland, Greenland and even North America. In 1977 a group of men sailed a leather boat (of the type used in St Brendan's time) along that route to North America, so proving the possibility of such a journey.

Brendel, Alfred (1931–), Moravia-born pianist. One of the world's most critically acclaimed and widely travelled concert artists, he is especially noted for his interpretation of Beethoven and of Schubert.

Bren gun, air-cooled light MACHINE GUN. It was once highly regarded, issued to nearly all the Allied armies, and is the best-known machine gun of WWI, one of the later models is still in use today. Mounted on a bipod and fed from a 28-round magazine, it is capable of short accurate bursts of fire at a rate of more than 500 rounds per minute. See also p.557

Brennan, Christopher John (1870–1932), Australian poet. Although he wrote lyrical verse, most of his output was abstract and highly symbolic, and dealt with universal, rather than narrowly Australian, themes.

Brenner Pass, lowest of the main Alpine passes, it connects Bolzano in Italy with Innsbruck in Austria; an important Roman invasion route. The first trans-alpine road was built over it in 1772, and a railway in 1867. Height, 1,370 m (4,495 ft), length, 95 km (59 miles).

Brentano, Clemens (1778–1842), German poet, novelist and dramatist. While a student in Heidelberg he founded with his brother-in-law, Achim von Arnim, a school of Romantics devoted to the study of German folklore. *Des Knaben Wunderhorn* (1805–08) and *Godwi* (1801) are among his best works.

Brentano, Franz (1838–1917), German philosopher. He classified psychic phenomena according to "acts" and "intentions". His notion of psychology as an analysis of behaviour is explored in *Psychology from an Empirical Standpoint* (1874) and *Inquiry into Sense Psychology* (1907).

Brentano, Lujo (1844–1931), German political economist. In 1868 he made a thorough study of trade unionism in England and wrote *Die Arbeitergilden der Gegenwart* (1871–72), in which he linked modern trade unions to medieval guilds. From 1871 he was professor at various German and Austrian universities including Munich. He was a pacifist and opposed the rise of German militarism. In 1927 he was awarded the Nobel Peace Prize.

Brent goose, small, dark-coloured wild goose that lives in Europe and North America. It is also called brant goose and is closely related to the barnacle goose.

Bream, the carp-like freshwater fish prized by anglers for their extremely tasty flesh

Scobie Breasley, champion jockey four times and winner of the Derby in 1964 and 1966

Breasts of female mammae secrete milk to nourish the new-born young

Brent geese, the wild sea geese usually found near salt water, do not fly in a V formation

Aristide Briand was a socialist politician who served 11 times as the premier of France.

Bricks used in building must resist fire and frost, and bond well with the mortar.

Bridge of all kinds span obstacles the world over. This is the Clifton Suspension Bridge.

St. Bridget of Kildare, the beautiful woman whose prayer to be ugly was answered.

Species *Branta benicla*. See also pp.325, 333.

Brescia, city in N Italy, in Lombardy region, capital of Brescia province. The city was sacked by ATTILA in 452, and it repeatedly changed rulers, passing to Austria in 1815 and joining Italy in 1860. The city's many art treasures include the Roman bronze *Winged Victory*. It also has the 13th-century Broletto and the Loggia (15th-16th century). A transport and agricultural trade centre, it has iron and steel, aerospace engineering and textile industries. Pop. (1970) 210,000.

Breslau. See WROCLAW.

Brest, city and port in Brittany, w France. An important naval base, the town was severely damaged in WWII. Industries now include shipbuilding and repair, chemical manufacture, and trade in wine, fruit, coal and timber. Pop. (1971 est.) 163,800. See also pp.1490, 1490.

Brest-Litovsk Treaty of (Feb.-March 1918), treaty between Russia and the CENTRAL POWERS that ended WWI for Russia. Under its provisions, the Ukraine and Georgia were made independent, Russian power was reduced in Poland and the Baltic, and much of BELORUSSIA given up to Germany and Austria-Hungary. The treaty, which was declared void later in 1918, was negotiated by TROTSKY for the RUSSIAN BOLSHEVIKS, who had promised to take Russia out of the war at any diplomatic cost. See also p.1676.

Brétigny, Peace of (1360), treaty between England and France during the HUNDRED YEARS WAR. Edward III of England abandoned his claim to the French throne, in return for which his large territorial holdings in sw France were freed from French sovereignty. The treaty, which was never ratified, was followed by the Treaty of Calais, but war was soon resumed. See also p.1346.

Breton, André (1896-1966), French poet and theorist. A founder of the SURREALIST movement, he wrote *Manifeste du surréalisme* (1924) and *Le Surréalisme et la peinture* (1928). His fictional works include a partly autobiographical novel *Nadja* (1928), *Les vases communicants* (1932), *L'Amour fou* (1937) and *Poèmes* (1948), reflect Surrealist theories.

Breton, Celtic language spoken in Brittany, on the nw coast of France. It is a descendant of British, an old Celtic language, and is closely related to Welsh. Its one million users usually also speak French, which is rapidly replacing it.

Bretton Woods Conference, United Nations Monetary and Financial Conference meeting at Bretton Woods, New Hampshire, USA in July 1944. The representatives of the 44 United Nations agreed to establish the International Monetary Fund and the International Bank for Reconstruction and Development, which were ratified by Dec 1945. See also pp.1786, 1868.

Breuer, Josef (1842-1925), Austrian physiologist and associate of Sigmund FREUD. Breuer's discovery that under hypnosis some neurotic patients reveal unconscious feelings and their symptoms disappear became basic to the psychoanalytic movement, and inspired Freud to pursue further his researches into the unconscious.

Breuer, Marcel (1902-), an architect, b Hungary. He studied and taught at the BAUHAUS (1920-28), where he designed his famous tubular steel chair. He designed the UNESCO building in Paris (with Pier Nervi and Bernard Zehrfuss, 1953-58) and the Whitney Museum of American Art in New York City (1966).

Breuil, Henri-Édouard-Prospère (1877-1961), French priest and archaeologist, a notable authority on palaeolithic art. His discovery of cave paintings at Les Eyzies in the Dordogne region of sw France led to the authentication of others at La Mouthe in the same region, and also of those at Altamira in N Spain. See also pp.1156-1157.

Breviary, liturgical book containing prayers, psalms, hymns and scriptural lessons, required to be recited by Roman Catholic priests at specific hours of the day.

Brewer, E. Cobham (1810-97), British

clergyman and writer, whose best known work is his *Dictionary of Phrase and Fable* (1870).

Brewing, the preparation of beer and stout by the alcoholic fermentation by yeast of liquors containing malt and hops. The making of vinegar and acid sauces by a further process of fermentation to yield acetic acid is sometimes also called brewing. In beer brewing, a malt liquor (wort) is made from crushed germinated barley grains. Hops are added to the boiling wort both to impart an attractive, bitter flavour, and also to help to clarify the beer and keep it free from spoilage microbes. The clear, filtered wort is cooled and inoculated with brewer's yeast, which then ferments part of the sugar from the malt to alcohol. See also pp.100-101.

Brewster, Sir David (1781-1868), Scottish physicist who performed significant experiments in OPTICS and POLARIZED LIGHT. He discovered Brewster's law, which relates the polarizing angle (the angle at which light strikes a substance) to the refractive index of the substance.

Brewster, William (1567-1644), English religious leader, signatory of the Mayflower Compact. He withdrew from the Anglican Church in 1606, formed the Separatists and with them fled from persecution in England to Holland, where they became known as Pilgrims. He helped to organize the Pilgrim migration to America and became a leader of the church in PLYMOUTH COLONY.

Brezhnev, Leonid Ilyich (1906-), Soviet political leader. In 1952 he became secretary to the central committee of the Soviet Communist Party. In 1957 he became a member of the presidium (later politburo) of the central committee. He helped to plan the downfall of Nikita KHRUSHCHEV in 1964 and soon emerged as one of the two chief rulers of the USSR sharing power with Alexei KOSYGIN. Brezhnev was named First Secretary and KOSYGIN became Premier. By the late 1960s, Brezhnev was acknowledged as the sole ruler, although KOSYGIN remained as premier. See also p.1693.

Brian Boru. See BORU, BRIAN.

Brian, William Havergal (1876-1972), British composer. Despite poverty and until his last years, an indifferent public, he devoted most of his life to composition. His 33 symphonies make him the most prolific symphonist since Haydn; he also wrote five operas, choral works and more than 100 songs. Most of his music is complex and often requires large groups.

Briand, Aristide (1862-1932), French radical and socialist politician. He was prime minister in 1909-11, 1913, 1915-17, 1921-22, 1925-26 and 1929. In 1904 he founded *L'Humanité* with Jean JAURES. He is best known for his advocacy of international co-operation in the interwar years, one of the fruits of which was the KELLOGG-BRIAND PACT (1928). He shared the Nobel Peace Prize in 1926 with GUSTAV SEIGISMANN.

Briar, wild rose or any other prickly bush of the rose family, also the smoking pipe made from the root of an unrelated plant, the tree heath (genus *Erica*).

Briard, breed of working dog, French in origin, originally used to herd sheep, now used also as a police dog. It has a long, wavy coat of a solid colour, usually black, grey or tawny. Height 22-27in (60-69cm), weight: 70-80lb (32-36kg).

Bribri, Talamancan-speaking tribe of American Indians who live on the border of Costa Rica and Panama. They provide the main link between pre-Columbian and contemporary Indian customs. Pop. approx. 900.

Brick, hardened block of clay used for building and paving. Usually rectangular, bricks are made in standard sizes by machines that either mould bricks or cut off extruded sections of stiff clay which are conveyed into a continuously operating kiln. The first, sun-dried bricks were used in the Tigris-Euphrates basin about 5,000 years ago. Mechanized processes replaced the old hand-moulding methods during the 19th century. See also pp.548-549.

Bride price, recompense made at the time of marriage by the husband or his family to

that of the wife in compensation for her leaving their family. Widespread among African tribes, bride price is usually paid in the form of property, but is sometimes rendered in months or even years of labour by the husband to his wife's family. See also DOWRY.

Brideshead Revisited, novel by Evelyn WAUGH, first published in 1945. Considered by many to be his masterpiece, it traces the effect of declining fortunes on the faith of the various members of a wealthy Roman Catholic family.

Bridge, Frank (1879-1941), British composer and conductor. He was a pupil of STANFORD. His best works were written for voice or chamber groups. He is best remembered by a work of his pupil, BENJAMIN BRITTEN, *Varianans on a Theme of Frank Bridge*.

Bridge, structure providing a continuous passage over a body of water, roadway or valley for man, vehicles, pipelines or power transmission lines. Bridges are prehistoric in origin, the first probably being merely logs over rivers or chasms. Modern bridges take a great variety of forms - movable bridges, pontoon bridges, overpasses, causeways, aqueducts, suspension bridges and cantilever bridges. See also pp.532-533.

Bridge. See AUCTION BRIDGE, CONTRACT BRIDGE.

Bridge, in dentistry, a partial denture held in place by anchorage to adjacent teeth. Depending on the situation it may be permanently installed or removable; anchorages are of various sorts. Usually only one or a few teeth in a series are artificially replaced in this manner. See also p.1100.

Bridge of San Luis Rey, The, novel by Thornton WILDER, first published in 1927. The book tells of five people who plunged to their deaths off a collapsing footbridge in Peru and then skilfully recounts the events leading up to their presence on the bridge. Wilder won one of his three PULITZER PRIZES for this novel.

Bridge on the River Kwai, The (1957), English film. Adapted by Carl Foreman from Pierre BOULLE's novel about prisoners of war building the Burma railway during WWII, it was directed by David LEAN and starred ALIC GUINNESS and Sessue Hayakawa.

Bridges, Calvin Blackman (1889-1938), US geneticist. He helped to prove the chromosomal basis of heredity and sex. His work with Thomas HUNT MORGAN on the fruit fly (*Drosophila*) proved that inheritable variations could be traced to observable changes in the chromosomes. These experiments resulted in the construction of "gene maps", which proved the chromosome theory of heredity.

Bridges, Robert Seymour (1844-1930), British poet. He practised medicine before turning to full-time writing in 1882. Numerous volumes appeared, but worldwide recognition did not come until his *Poetical Works* were published in 1912, the year before he was appointed Poet Laureate. His philosophical poem *The Testament of Beauty* appeared in 1929.

Bridget of Kildare, Saint (c.452-523), also known as St. Brigid, St. Brude or St. Bridget, founder of a great monastery in Kildare. She is one of the patron saints of Ireland. Feast day: 1 Feb.

Bridget of Sweden, Saint (c.1303-1373), one of the great saints of Scandinavia. A noblewoman at court, she became a nun after her husband's death and founded a religious order known as the Brigidines. She went to Rome in 1349 and devoted herself to the reform of religious life in Italy. She is the patron saint of Sweden. Feast 23 July.

Bridgetown, capital and chief port of Barbados. Founded in 1628, it is the seat of the Parliament and has a constituent college of the University of the West Indies. Industries: rum distilling, sugar processing. Pop. (1970 est.) 8,800.

Bridgewater, Francis Egerton, 3rd Duke of (1736-1803), British canal builder. In 1760, with the engineer James BRINDLEY, he built England's first canal from his collieries at Worsley, Lancashire, to Man-

chester and subsequently to Runcorn on the River Mersey.

Bridgman, Percy Williams (1882-1961), US physicist. From 1919 he was a professor at Harvard University. He was awarded the 1946 Nobel Prize in physics for his work in high pressure physics. He is known also for his work on crystal properties and for his writings on the philosophy of science. His books include *The Nature of Modern Physics* (1927), his collected papers were published in 1964.

Bridle, James (1888-1951), Scottish dramatist and doctor, real name Osborne Henry Mavor. His first major London success was *The Anatomist* (1931). His later plays included *Mr Bolfray* (1943), *Daphne Laureola* (1949) and *The Queen's Comedy* (1950). He was one of the founders of the Glasgow Citizens Theatre.

Brie, region in the Marne and Seine-et-Marne départements of N France, E of Paris. This fertile agricultural area, with its large imposing farmhouses, is famous for its vineyards and for Brie cheese.

Brief, in English law, document prepared by a solicitor setting out his client's case for the benefit of counsel. The information contained in the brief will form the basis of the advocate's legal argument and influence his strategy in court.

Brig, two-masted sailing vessel, square-rigged on both masts and with fore-and-aft stay sails. Brigs were used commercially from about 1700 until 1860 as cargo ships and as small, fast warships with about ten guns. They needed large crews. Length 27-30m (90-100ft), displacement; up to 350 tonnes. See also p 473.

Brigantine, sailing ship in use from the 18th-20th century. It has two masts with mainsails and staysails on the mainmast, and a square rig on the foremast. See also p 473.

Briggs, Barry (1934-), New Zealand speedway rider. World champion four times (1957, 1958, 1964, 1966), he accumulated more than 200 points in a record 18 appearances in finals. He went to England at age 17 and rode for Wembleton, New Cross, Southampton and Swindon.

Briggs, Henry (1561-1630), English mathematician who introduced common LOGARITHMS. In 1614, with John NAPIER's agreement, he suggested that Napier's logarithms be altered to a base of 10. In 1624 he published *Arithmetica Logarithmica*. See also pp 788-789.

Bright, Sir Charles Tilston (1832-88), British engineer who helped to develop submarine telegraph cables. In 1856 he became engineer-in-chief of the Atlantic Telegraph Co and in 1858 supervised the laying of the first transatlantic cable from Ireland to Newfoundland. With the engineer Joseph Clark he also invented an asphalt covering for submarine cables.

Bright, John (1811-89), British politician and parliamentary reformer. With Richard CORDEN he founded the ANTI-CORN LAW LEAGUE (1839). A Member of Parliament (1843-57) he lost his seat because of his opposition to the CRIMEAN WAR but was re-elected the following year and sat until 1889. See also pp 1572, 1662.

Bright, Richard (1789-1858), British physician who was the first to describe the kidney disorder sometimes called BRIGHT'S DISEASE. He graduated in Edinburgh in 1813 and became a physician at Guy's Hospital, London, in 1820.

Brightener, substance added to detergents to whiten fabrics. Optical brighteners are left in the fibres where they absorb ultra-violet light. The excited molecules later re-emit a faint blue light, which counteracts the yellowish cast developed by white fabrics. An older method was to use blue dye. See also pp 578-579.

Brighton, resort town in East Sussex, S England, on the English Channel, 80km (50 miles) S of London. Originally a fishing village, it was popularized as a resort by the Prince Regent (GEORGE IV) who had the Royal Pavilion rebuilt there in oriental style (1817), and by Dr Russell, who advocated sea-bathing. It is the seat of the University of Sussex. Industries: food

processing, shoes, paint, tourism. Pop (1971 prelim.) 166,000.

Bright's disease, term, no longer in widespread use, describing any of several kidney diseases characterized by albumin in urine. See also NEPHRITIS, p 1078.

Brill, flatfish similar to and related to the turbot. Species *Scophthalmus rhombus*.

Brillat-Savarin, Jean-Anthelme (1755-1826), French author on gastronomy. He was a member of the National Assembly in the French Revolution and wrote *Physiologie du goût* (1825), an amusing book about eating.

Brindley, James (1716-72), British engineer and pioneer canal-builder who constructed the first economically viable major canal in England, from Worsley, Lancashire to Manchester. He was eventually responsible for a network of about 565km (350 miles) of canals, an advancement which helped to hasten the INDUSTRIAL REVOLUTION. None of his written records or working drawings has survived.

Brinell, Johann August (1849-1925), Swedish metallurgist who devised a safe rapid test to determine the hardness of metals, which was first exhibited in Paris in 1900. It involves the measurement of the indentation made by a hardened steel ball after it has been pressed into the metal with predetermined force. A version of the test is still in use today.

Brisbane, Sir Thomas Makdougall (1773-1860), British astronomer and colonial administrator. He was Governor of New South Wales (1821-25) and helped to develop the colony's economy. He founded observatories in Sydney in 1822 and in Scotland in 1841. Brisbane, Australia, is named after him.

Brisbane, seaport city in N Australia, on the Brisbane River. First settled in 1824, it became capital of Queensland in 1859. It is the location of Parliament House (1869) and the University of Queensland (1909) and is a major shipping and rail centre. Industries: oil refining, shipbuilding, car assembly, railway engineering, chemicals. Pop. (1979 est.) 1,015,200. See also p 1982.

Brisson de Warville, Jacques Pierre (1754-93), French revolutionary. He founded the *Amis des Noirs*, a society for the abolition of slave trade, and edited the paper *Patriote Français*, which became the Girondin publication when he aligned himself with the GIRONDINS. He was executed following the war with Austria.

Bristleworm. See RAGWORM.

Bristol, university city in the county of Avon, England, on the River Avon, 11km (7 miles) from the Bristol Channel. An important seaport since the 12th century, it is the location of BRUNEL's Clifton Suspension Bridge (1864). The main port facilities are now at Avonmouth. Industries: aircraft engineering, chemicals, tobacco, food processing. Pop. (1971) 425,200.

Bristol Channel, inlet of the Atlantic Ocean that extends 137km (85 miles) between S Wales and SW England, narrowing from 69km (43 miles) to 8km (5 miles). Its northern (Welsh) shore is highly industrialized, its southern shore agricultural.

Britain, Ancient, the period of British history from the cutting of the land bridge to Europe in c.5500 BC to the Roman invasion of 55 BC. It covers four ages of social development: MESOLITHIC (middle stone age), NEOLITHIC (new stone age), BRONZE and IRON ages. At the end of the period Britain was culturally and economically greatly inferior to its Roman conquerors. See also pp 1174-1175, 1218, 1219.

Britain, Battle of, (July-Oct 1940), series of air battles fought over Britain during WWII between the German LUFTWAFFE and the ROYAL AIR FORCE (RAF). The Germans hoped to destroy Britain's industry and military installations and shatter civilian morale by bombing, as a prelude to invasion. Although outnumbered, the defending RAF fighter pilots inflicted such heavy losses that the strategy was abandoned. See also pp 1680, 1682.

Britannia, Roman name for the province of Britain before the Saxon period, and later a female personification of Britain or

the British Empire, usually represented on coins as a woman seated on a rock or a globe, with standard, spear, sceptre or trident, and a shield.

Britannia metal, tin alloy used for tableware, similar to pewter but containing approx. 7% antimony, 2% copper but no lead. It is a lustrous, hard, malleable alloy that is easy to cast.

British Airways, company formed in 1974 from the merger of BOAC, BEA and their subsidiary companies. In 1976-77 it flew 30,143 million passenger-km and 716 million freight-tonne-km and employed more than 59,000 people.

British American Tobacco Company, formed in 1902, is today among the largest British-based enterprises. In the mid-1970s it employed more than 230,000 people in various countries and dealt mainly in tobacco, paper and cosmetics.

British Antarctic Territory, British colony in Antarctica comprising the mainland and islands within a triangular area bounded by latitude 60° S and longitudes 20° and 80° W. It includes the South Shetland Islands, South Orkney Islands and Graham Land. Formerly part of the Falkland Islands, the territory became a British Crown colony in 1962, although today Argentina and Chile claim parts of it. There are no permanent settlements, but teams of scientists man the meteorological stations and other establishments of the British Antarctic Survey. Area 1,725,000sq km (666,000sq miles).

British Association for the Advancement of Science, organization founded in 1831 for furthering the sciences and bringing them to the attention of the general public. Each year it holds a conference in a different university town, which is the major gathering where all branches of science are brought together.

British Broadcasting Corporation. See BBC.

British Cameroons, former region of W Africa. Once a German protectorate, it came under the League of Nations in 1922 and then under the United Nations before its northern and southern peoples voted (1961) to join Nigeria and Cameroon.

British Columbia, province of W Canada, on the Pacific coast, bounded by the USA to the N (Alaska) and S. The Rocky Mts run N to S through the province. The many rivers, principal of which is the Fraser, provide abundant hydroelectric power. Three-quarters of the land is forested, making timber an important industry. Mineral deposits include copper, silver, gold, lead, zinc and asbestos. Dairying and fruit growing are the chief farming activities, practised mainly in the S. Industries include fishing, paper making, tourism, transport equipment, chemicals and food processing. The chief cities are Victoria (the capital) and Vancouver.

The region was first sighted by Sir Francis DRAKE in 1578, and George VANCOUVER took possession of the island that bears his name for Britain in 1794. The two areas of Vancouver Island and New Caledonia were united as British Columbia in 1866 and admitted to the Canadian Confederation in 1871. Completion of the CANADIAN PACIFIC RAILWAY in 1885 spurred the development of the province. Area 948,600sq km (366,255sq miles). Pop. (1971) 2,184,621. See also p 1997.

British Commonwealth of Nations. See COMMONWEALTH OF NATIONS; pp 1672-1673.

British Council, organization that promotes the teaching of English overseas and arranges for the exchange of cultural and scientific missions between Britain and other countries. It offers a number of annual postgraduate scholarships for overseas scholars in Britain and maintains numerous libraries abroad. Founded in 1934, it is financed from public funds.

British East Africa, former name of the African countries of Kenya, Tanganyika, Uganda, and Zanzibar (now united with Tanganyika as Tanzania), which were once all united as part of the British Empire.

British Empire, overseas territories ruled by Britain, originating in the activities of

Brig, the speedy, two-masted sailing ship used for carrying cargo and as a warship

Brighton Pavilion, built for the Prince Regent in Italian style with a Chinese interior

Battle of Britain, soldiers inspecting the wreckage of a Messerschmitt 110

British Empire, ruling dignitaries about to mount their state elephant in Delhi 1902

British Empire, Order of the

British Museum, the building opened in 1847 on the site of the old Montagu House

Benjamin Britten, famous for his operas wrote much of his music to interest children

Brittle stars can grow new arms if they lose one through being handled or disturbed

Broadcasting from the BBC's main radio orchestra studio at Pebble Mill, Birmingham

the 16th-century trading companies. The first empire, centred on the N Atlantic, was ended by the independence of the American colonies by 1783. The second empire, won mainly in the 19th century, was more widespread and by 1914 covered about 25% of the land surface of the earth. By 1970 most of the empire had been granted independence. See also relevant articles in history sections.

British Empire, Order of the, military and civil order or knighthood bestowed as a reward for public service to the COMMONWEALTH OF NATIONS. Created in 1917, it has five different classes for men and women. Knights (or Dames) Grand Cross, Knights (or Dames) Commander, Commanders, Officers and Members.

British Expeditionary Force (BEF), the original British Army in both WWI and WWII. The BEF in WWI, under General Sir John French (later Earl of Ypres), originally comprised six divisions but grew into an army of more than one million men, in WWII the 13-division army in France was evacuated from Dunkirk in 1940. See also pp 1668-1671, 1680-1683.

British Film Institute, organization founded in 1933, originally having a strong bias towards educational films. Its Information Department and Book Library now contains one of the largest collections of printed material on films in the world. Its own cinema, the NATIONAL FILM THEATRE, was opened in 1952.

British Guiana. See GUYANA.

British Honduras. See BELIZE.

British Indian Ocean Territory, island colony in Indian Ocean. See MW p.41.

British Isles, group of islands off the NW coast of Europe, made up of the United Kingdom of Great Britain and Northern Ireland, and Eire. It includes England, Scotland and Wales on the island of Great Britain, Northern Ireland and Eire on the island of Ireland, the Isle of Man in the Irish Sea, a self-governing island but part of the UK, and the Channel Islands in the English Channel, which are also self-governing but a dependency of the British Crown. See also pp 2026, 2070, 2112, 2130, 2160, 2170.

British Legion, organization of ex-service men and women for helping disabled and unemployed war veterans, their widows and families. Founded in 1921 by Earl Haig, the Legion adopted the Flanders poppy as its emblem. Each year during the week preceding Remembrance Day (the Sunday nearest to 11 Nov.) millions of artificial poppies (made by disabled Legion members) are sold to commemorate the dead of two world wars and raise funds for the Legion.

British Lion, production-distribution company founded in 1927 and incorporated as British Lion Film Corporation. London Films acquired control of the company in 1946 and Alexander Korda ran the Shepperton studios, although by 1954 losses forced its closure. A new company, British Lion Films Ltd., was formed a year later and was for a time run by Sir Michael Balcon. It was taken over by Barclay Securities in 1972. It merged with EMI in 1976.

British Lions, name of the British Isles Rugby Union team, a touring side composed of players from England, Scotland, Wales and Ireland (joint). Their first tour was in 1888; the name was coined in 1924 from the symbol on the official tie.

British Medical Association (BMA), professional body founded in 1832, two-thirds of all doctors in Britain are members. The BMA was set up originally to advance the medical sciences. Since the establishment of the NATIONAL HEALTH SERVICE in 1948 it has also negotiated over pay and conditions for hospital doctors and general practitioners.

British Museum, established by an Act of Parliament as a storehouse of knowledge for the benefit of the 'learned and curious', was opened in London in 1759. The original collection was purchased (1753) by Sir Hans Sloane. Later additions included the ROSETTA STONE and the ELGIN MARBLES. The Museum's departments include the Museum of Mankind and the Department of Prints and Drawings,

which houses 20,000 drawings by Turner in addition to works by Rembrandt, Rubens, Michelangelo, Durer and others. **British North America Act (1867)**, legislation of the British Parliament that created the Dominion of Canada from the provinces of Nova Scotia, New Brunswick and Canada. The Act provided for a Constitution similar to that of Britain, a bicameral Parliament, the re-establishment of Ontario and Quebec as separate provinces and a legal system for Canada. See also p 2003.

British Petroleum Company, international corporation, based in Britain, that drills for oil and produces petroleum products and chemicals. It employs about 78,000 people throughout the world and was the first company to strike oil in Britain's prospecting area of the North Sea. **British Solomon Islands**, island group in SW Pacific Ocean, 850 km (530 miles) E of New Guinea. The main island is Guadalcanal, which has the capital (Honiara). It was a British Protectorate from 1898 until its independence in 1978. The chief product is copra. Area 29,800 sq km (11,505 sq miles). Pop. (1975 est.) 190,000. See also p.1993.

British Standards Institute (BSI), the recognized body in Britain for the harmonization of technical standards for education and industry. Its scope includes the publication of glossaries of terms, definitions, quantities, units and symbols, test methods and specifications for quality safety, performance and codes of practice. It certifies and approves manufactured products that comply with its standards. **British Steel Corporation**, British company re-nationalized in 1967 from 13 steel companies. It undertakes exploration, mining and processing of more than 90% of the nation's crude iron and steel. See also pp 396-397.

British Summer Time (BST). See SUMMER TIME.

British thermal unit (BTU), the amount of heat energy necessary to raise the temperature of a pound of water from 59°F to 60°F. One BTU is the equivalent of 778.3 foot-pounds, 252 CALORIES or 1,055 joules. It has been largely superseded by the metric system.

British Virgin Islands, British colony in the West Indies; part of the Lesser Antilles group between the Caribbean Sea and the Atlantic Ocean. The colony comprises 36 islands, the chief ones being Tortola, which has the capital (Road Town), Annetta and Virgin Gorda. The main economic activities are tourism, fishing and farming. Area: 155 sq km (60 sq miles). Pop. (1975 est.) 11,000. See also p.1994.

Britain, Vera Mary (c 1893-1970), British writer and lecturer. During WWI she worked as a nurse, and in 1933 wrote *Testament of Youth*, which was based on her war experiences. She toured the USA on several occasions giving lectures.

Brittany (Bretagne), region and former duchy and province in NW France, on the peninsula between the Bay of Biscay and the English Channel. Under Roman rule from 56 BC to the 5th century, it was then settled by Celtic Britons who gave it its name, its language (BRETON) and its distinctive costume and culture. England and France hotly disputed its possession until 1532, when it became part of France. Industries: tourism, farming, fishing.

Britten, Edward Benjamin (1913-76), English composer. Although he wrote in all forms, he is best known for his operas, which rank him among the foremost opera composers of the 20th century. He also wrote numerous songs, many especially for Peter Pears. Britten's operas include *Peter Grimes* (1945), *Albert Herring* (1947), *Let's Make an Opera* (for children, 1949), *Billy Budd* (1951), *A Midsummer Night's Dream* (1960) and *Death in Venice* (1973). Other significant works include the popular *Young Person's Guide to the Orchestra* (1945) and the impressive *War Requiem* (1962). In 1948 he established the music festival held annually at his home town of Aldeburgh, on the Suffolk coast. He was made a peer in 1976. See also pp 1598, 1755.

Brittle star, or serpent star, marine Echinoderm with a small central disc body and long, sinuous arms, these break off easily and are replaced by regeneration. Class Ophiuroidea, genera include the phosphorescent *Amphipholis* and the small *Ophiactis*. See also pp 50-51, 182.

Brno (Brünn), second largest city of Czechoslovakia and capital of central Jiho-moravsky (Moravia) region, 185 km (115 miles) SE of Praha (Prague). Founded in the 10th century; it has a 15th-century cathedral. The ARSENAL was designed there. Industries: armaments, engineering. Pop. 336,000.

Broad, Charles Dunbar (1847-1971), British philosopher. He was a professor at Cambridge from 1933 to 1953 and president of the Society for Psychical Research in 1935. He published *Perception, Physics and Reality* (1914).

Broad bean. See BEAN.

Broadcasting, transmission of sound or images by radio waves to a widely dispersed audience through RADIO or TELEVISION receivers. The British Broadcasting Corporation (BBC), founded in 1922 and given a charter in 1927, enjoyed a monopoly in radio broadcasting in the United Kingdom until the 'private' (unlicensed radio stations operating offshore) forced the introduction of commercial and local radio broadcasts. Television broadcasting in the UK started with the BBC in 1936 from Alexandra Palace, London on one channel, or station, which used 405 lines to build up an image. A second channel (ITV) run by the Independent Television Authority, and later a third (BBC2) were introduced. All three channels may now be received on sets which use 625 lines. Latest advances in broadcasting include stereo radio, simultaneous stereo sound with colour pictures, and quadri-phony. See also pp 638-643.

Broadmoor, village ten miles from Reading in SE Berkshire, England. Since 1863 it has been the site of a special hospital for the criminally insane which, in 1949, was transferred from the control of the Prison Commission to that of the Ministry of Health.

Broads, Norfolk, region of shallow lakes and waterways in E England, connected by the rivers Waveney, Yare and Bure, between Norwich and the coast. It is a resort area and wildlife sanctuary, with 320 km (200 miles) of navigable waterways.

Broadsheet, large sheet of paper printed on one side only. It was the standard method of publishing popular ballads, lampoons and political propaganda in Britain in the 17th and 18th centuries.

Broadway, major thoroughfare of New York City that began as the principal north-south street of the old town. It runs from the southern tip of Manhattan to the northern city limit in the Bronx. In the vicinity of Times Square it contains theatres and cinemas, for which it is known worldwide as the 'show centre' of the USA. See also p.1773.

Broadwood, British family of piano makers, beginning with John (1732-1812). Broadwood is the world's oldest firm of keyboard instrument makers, and in 1911 it patented the bar-less grand piano.

Broccoli, variety of CAULIFLOWER with large, lobed leaves and thick stems. Tiny green, white or purple flower buds 2.3 cm (9 in) compact heads that are eaten. Family Cruciferae; species *Brassica oleracea botrytis*.

Broch, Hermann (1886-1951), Austrian novelist and poet. He emigrated to the USA in 1938 to continue his philosophical and psychological researches. He wrote a play, short stories, and critical essays, but his most important works were the novels *The Sleepwalkers* (1931-32, a trilogy) and *The Death of Virgil* (1945).

Broch, circular stone tower used as a fortified homestead, built in Britain during the early Christian era. There are about 400 brochs in the N and W of Scotland. They were built with a central court, and thick hollow walls containing rooms and a stairway to an upper floor or a roof walk. The most famous and best preserved is the Broch of Mousa, in the Shetland Islands.

Broch, Sir Isaac (1769-1812), English

general Brock was sent to Canada in 1802, and became administrator of Upper Canada in 1811. A brilliant strategist in the war of 1812, he defeated US General William Hull at Detroit and died in the battle at Queenston Heights.

Brock, Sir Thomas (1847-1922), British sculptor, best known for his memorial to Queen Victoria which stands in the Mall, London, outside Buckingham Palace.

Brockes, Barthold Heinrich (1680-1747), German poet, one of the earliest of the German ENLIGHTENMENT. His work includes *Irdisches Vergnügen in Gott* (9 vols, 1721-48) and translations of the English poets James THOMSON and Alexander POPE.

Brocket deer, or cariacu, small DEER ranging from Mexico to Paraguay. Stout with slender limbs and an arched back, they are timid and live alone or in pairs. Length to 91cm (3ft), weight to 21kg (46lb). Family Cervidae, genus *Mazama*, there are ten species. See also p.314.

Brookway, Archibald Fenner, 1st Baron (1888-), British Labour politician. He entered Parliament in 1929 and devoted his career to working for international peace and colonial liberation. He wrote extensively on these subjects.

Brod, Max (1884-1968), Czech novelist, critic and philosopher, important for bringing Franz KAFKA to the attention of the public. He settled in Palestine as a refugee in 1939, and later became director of the Habima Theatre.

Brodie, Sir Israel (1895-1979), Chief Rabbi of the United Hebrew Congregations of the British Commonwealth of Nations (1948-65). He was Senior Jewish Chaplain to the Armed Forces (1944-48). In the 1964 dispute over orthodoxy he championed the conservative viewpoint.

Bruglié, Prince Louis Victor de (1892-), French physicist who put forward the theory that all ELEMENTARY PARTICLES have an associated wave and devised the formula that predicts this wavelength. With ERWIN SCHRÖDINGER he later developed the form of QUANTUM MECHANICS, called WAVE MECHANICS, for which he was awarded the Nobel Prize in physics in 1929. See also pp.813, 815.

Broiler house, also called brooder house, farm-building for intensive stockrearing, particularly of chickens but also of pigs and calves. A typical chick brooder contains tens of thousands of birds. Heating and ventilation are automatically controlled and feeding and removal of wastes are fully mechanized. See also pp.656, 714, 736.

Broken Hill, town in W New South Wales, Australia, in the Main Barrier Range. Founded in 1884, it is a major silver, lead and zinc mining centre. Pop. (1971) 29,743.

Bromberg. See BYDGOSZCZ.

Bromeliad, any of the 1,700 species of the pineapple family. Most are plants native to the tropics and subtropics and, beside the PINEAPPLE itself, include many of the larger EPiphytes of trees of the rain forests. See also pp.380.

Bromfield, Louis (1896-1956), US novelist, playwright and essayist. His early works are the best known and include *The Green Bay Tree* (1924), *Possession* (1925), and *Early Autumn* (1926), which won the Pulitzer Prize in 1927.

Bromide, salt of hydrobromic acid or certain organic compounds containing bromine. The bromides of ammonium, sodium, potassium and certain other metals were once extensively used medically as sedatives. Silver bromide is light-sensitive and is used in photography.

Bromination, introduction of a bromine atom into a chemical compound, either by reaction with an unsaturated molecule or by replacing hydrogen, as in the preparation of bromobenzene from BENZENE. Organic bromides are widely used as intermediates in dye and drug syntheses, alkali metal bromides as sedatives, and silver bromide in photography.

Bromine, volatile liquid element (symbol Br) of the HALOGEN group, first isolated by A.J. Balard in 1826. It is extracted by treating sea-water or natural brines with chlorine. It is a red-brown liquid used in

making a range of commercially useful compounds. Chemically it resembles chlorine but is less reactive. Properties at no. 35, at wt. 79.904, s.g. 3.12, m.p. 7.2°C, (19.04°F), b.p. 58.78°C (137.8°F), the most common isotope is Br⁷⁹ (50.54%). See also pp.846, 889.

Bromine processing, extraction of the halogen element bromine from soluble bromides, especially magnesium bromide found in sea-water. The bromine is displaced by the more active halogen chlorine and is extracted as a by-product from the saline concentrates left after crystallization of the main salt products.

Bronchitis, an inflammation of the bronchial tubes caused most frequently by irritation from chemicals or pollutants, or by a viral infection such as the common cold or influenza. Symptoms include coughing and the expectoration of mucus. It can be acute (sudden and short-lived) or chronic (persistent). In its worst form it may lead to pneumonia, it is the cause of many deaths, particularly of old people each year. See also p.1064.

Bronchus, one of two branches into which the TRACHEA or windpipe divides, with one branch leading to each LUNG. The bronchus divides into smaller and smaller branches, called bronchioles, which extend throughout the lung. These open into the lung's air sacs or ALVEOLI, where air is diffused into the blood. See also p.158.

Bronowski, Jacob (1908-75), British biologist and man of letters. He lectured at many US universities and was made a fellow of Jesus College, Cambridge, in 1967. Among his books are *Science and Human Values* (1958), *Nature and Knowledge* (1969) and three studies of William Blake. His celebrated BBC television series on man's intellectual history was published as *The Ascent of Man* (1973).

Brontë, name of three English novelists: the sisters, Charlotte (1816-55), Emily (1818-48) and Anne (1820-49). They spent most of their lives at Haworth, Yorkshire where their father Patrick was curate. From the earliest the family was beset by poverty and personal unhappiness; their mother died of cancer and two older sisters, Elizabeth and Maria, of tuberculosis; their brother Branwell, a writer and painter, declined into alcoholism and opium addiction. Charlotte's first published novel, *Jane Eyre* (1847), was a great success; her earlier work, *The Professor* (1857), was written in 1846 but rejected. Anne's *Agnes Gray*, reflecting her experience as a governess, and Emily's only novel *Wuthering Heights*, which established her as a writer of major importance, were also published in 1847. Anne's second and last novel *The Tenant of Wildfell Hall* was published in 1848. Only after Charlotte's *Shirley* (1849) had appeared were the identities of the three sisters made public. Before then, in 1848, Branwell and Emily had died and in the following year Anne died. In 1854 Charlotte married, but she died within a year. See also p.1574.

Brontosaurus, DINOSAUR that lived in North America during the Jurassic and early Cretaceous periods. It had a long neck and tail, and a small head with the eyes and nostrils on the top so that it could remain almost completely immersed in water. Length 21m (70ft), weight to 30 tonnes. See also pp.282-283.

Bronx, The, mainland borough of a New York City NE of the River Harlem, connected to the island boroughs of Manhattan and Queens by a network of bridges. Founded in 1641 by Jonas Bronck for the Dutch West India Company, it is now a crowded residential area with 129km (80 miles) of waterfront lined with factories, warehouses and markets. Pop. (1970) 1,472,000.

Bronze, traditionally an alloy of copper and tin containing no more than 13% tin. It is hard and resistant to corrosion, but easy to work. It has long been used in sculpture and in bell-casting. Other metals are often added for specific properties and uses: eg. aluminium in aircraft parts and tubing, silicon in marine hardware and chemical equipment and phosphorus in

springs, gunmetal and electrical parts. See also pp.387, 392-393, 399, 402.

Bronze Age, period between the first introduction of bronze tools and the discovery of iron-working techniques. In Mesopotamia the Bronze Age began c. 3700 BC and lasted until c. 2000 BC. In Britain bronze was used after 2000 BC and iron technology did not become widespread until c. 500 BC. See also pp.392-393, 1160-1163, 1218-1219.

Bronzino, Il (1503-72), Florentine painter, one of the most influential of all MANNERIST portraitists, whose work exemplifies the school's cool elegance and elongation of the human figure. He was court painter to Cosimo I de' Medici, for whom he undertook many court portraits. His work includes *Young Man with the Lute* (1540) and *Ascension* (1552). See also p.1397.

Brook, Peter Stephen Paul (1925-), British director of theatre, opera and film. He directed at COVENT GARDEN (1947-50) and was appointed co-director of the ROYAL SHAKESPEARE COMPANY in 1962, for which he directed *King Lear* (1962) and Peter Weiss's *Marat Sade* (1964). He described his ideas on modern theatre in *The Empty Space* (1968). In 1970 he worked in Paris with the experimental International Centre for Theatre Research.

Brooke, Sir James (1803-68), English soldier who in 1841 became the Rajah of SARAWAK on the island of Borneo. He received the title for helping Rajah Muda Hassim of Borneo crush a rebellion in Sarawak in 1840. He was subsequently appointed governor of Labuan (1847-57) and consul general for Borneo by the British government. He introduced many reforms and was succeeded by his nephew, Charles Anthony Johnson Brooke (1829-1917), who abolished slavery in Sarawak.

Brooke, Rupert Chawner (1887-1915), English poet. His early works, such as *Poems* (1911), were highly patriotic and his personal charm made him almost a contemporary legend. He died on a hospital ship during WWI off the island of Skiros, where he is buried.

Brookeborough, Basil Stanlake Brooke, 1st Viscount (1888-1973), Prime Minister of Northern Ireland (1943-63). He served as Minister of Agriculture for Northern Ireland (1933-41) and Minister of Commerce (1941-45) before becoming Prime Minister. He developed the economy and improved relations with the Republic of Ireland, although he was an uncompromising Unionist.

Brooklands, English motor racing circuit at Weybridge, Surrey, the first specially built for the sport. Scores of car and motorcycle records were set on the track between the time of its opening in 1907 and its closure during WWI.

Brooklyn, borough of New York City and capital of Kings County in SW Long Island. It is connected to Manhattan and Staten Island by bridges, underground railways and ferries. First settled in 1645, it became a borough in 1898. It is the home of Brooklyn College (1930), Prospect Park and Coney Island. Industries: shipbuilding, warehousing, brewing. Area 184sq km (71sq miles). Pop. (1970) 2,601,852.

Brooks, Sir Basil. See BROOKEBOROUGH.

Brooks, Gwendolyn (1917-), US poet. She wrote sensitively of Northern ghetto life, and in 1950 became the first black woman to win the Pulitzer Prize (for *Annie Allen*). Her collected verse was published in *The World of Gwendolyn Brooks* (1971).

Brooks, James (1906-), US painter. He is a leading artist of ACTION PAINTING, whose style is influenced by CUBISM. He was a member of the team that worked on the Federal Art Project during the Depression in the late 1930s.

Brooks, Mel (c. 1926-), US film director and scriptwriter. Formerly a writer for television comedy shows, he made films that combine satire, slapstick and parody in effervescent style. *The Producers* (1968) won an Oscar, and *Blazing Saddles* (1974) and *Silent Movie* (1976) were both highly successful.

Louis Victor de Broglie won a Nobel Prize for discovering the wave nature of the electron.

Brontë Sisters, Anne, Charlotte and Emily from a portrait by their brother Branwell.

Peter Brook with his father Simon, after receiving the OBE at Buckingham Palace.

Brooklyn Bridge, which connects Brooklyn to the island of Manhattan, was opened in 1883.

Brook trout

Broom scatters its pollen by a mechanism triggered by a bee landing on a flower.

Adrien Brouwer, who painted scenes of coarse peasant life in a delicate sensitive way.

Capability Brown laid out the beautiful gardens of the Royal Botanical Society, Kew.

Brownshirts, Hitler's private army which helped him until he liquidated the r leaders.

Brook trout. See **CHAR**

Broom, any of various deciduous shrubs of the **PEA** family. They have yellow, purple or white flowers, usually in clusters. Many belong to the genus *Genista*, which gave its name to the Plantagenet kings of England (from the Latin *Planta genista*), who used the broom as their emblem.

Broom corn. See **SORGHUM**

Broom, David (1940–), British show jumper. World champion in 1970 on *Beethoven*, he won the European title three times, on *Sunsilver* (1961) and *Mister Softee* (1967, 1969). In 1977, on *Phulco*, he created a record by winning the King George V Gold Cup for the fourth time.

Brooklyn, Big Bill (1893–1958), us blues singer, guitarist and songwriter, real name William Lee Conley Broonzy. He composed many classic blues songs, performed at Carnegie Hall in 1938 and toured Europe in 1951.

Brothers Karamazov, The (1879–80), novel by Fyodor Dostoevsky. Its intense psychological drama culminates in the murder by his sons of the father, Fyodor Karamazov, symbolizing man's revolt against his heavenly father.

Brough, Louise (1923–), American tennis player. Expert at the serve-and-volley technique, she won 36 major titles, including four Wimbledon singles (1948, 50, 1955). With Margaret Osborne, she won the us doubles title in a row (1942–50) and 12 times in all.

Brougham, Henry Peter, 1st Baron Brougham and Vaux (1778–1868), Scottish politician. He became MP for Camelford in 1810 and fought for liberal reforms in the House of Commons. As Lord Chancellor (1830–34), he reformed legal procedure and helped pass the REFORM ACT (1832). He was a founder of the University of London (1828) and designed the brougham four-wheeled closed carriage. See also p.487.

Brouwer, Adriaen (c 1606–38), Flemish painter, influential in the development of Dutch and Flemish painting. He is best known for his depictions of peasant life and for his humorous treatment of figures sleeping, drinking, smoking and fighting. A well-known example is *The Smokers*. See also p.1444.

Brown, Sir Arthur Whitten (1886–1948), British aviator. With Sir John Alcock he completed the first non-stop trans-Atlantic flight in 1919.

Brown, Charles Brockden (1771–1810), us author who gained acclaim for his Gothic romances. His best-known novels included *Wieland* (1798), *Ormond* (1799), *Arthur Mervyn* (1799–1800), *Edgar Huntly* (1799), *Clara Howard* (1801) and *Jane Talbot* (1801).

Brown, Dave Australian rugby league player. The "Bradman of football", he was a prolific scorer. A centre for the Kangaroos on the 1933–34 tour of England, he scored 285 points (19 tries, 114 goals), in the 1935 Sydney Premiership he scored 244 points for Eastern Suburbs, including a record 38 tries. He later played for the English Club Warrington.

Brown, Ford Madox (1821–93), English painter, deeply influenced by the PRE-RAPHAELITES, as may be seen in *The Last of England* (1855) and *Work* (1852–63), although he was never a member of the Brotherhood. He was the grandfather of the writer Ford Madox Ford.

Brown, George (1818–80), Canadian journalist and politician, b Scotland. He went to Canada in 1844 and began the Toronto *Globe* newspaper to advocate responsible government. He founded the "Clear Grit" (Liberal) Party and was an MP from 1851 to 1867. He took a prominent part in the conferences that produced Canadian confederation.

Brown, James Nathaniel ("Jimmy") (1936–), us football player. He was considered one of the greatest full-backs in the history of the game. He played for the Cleveland Browns in the National Football League (1957–65) and scored 126 touchdowns. After his retirement he became a film actor.

Brown, Joe E. (1892–1973), us comedian, especially popular during the 1930s

and 1940s as a film comedian. His clown-like features were sometimes referred to in the titles of his films, eg *You Said a Mouthful* (1933) and *Shut my Big Mouth* (1941). His later films include *Some Like it Hot* (1959) and *Comedy of Terrors* (1963).

Brown, John (1800–59), American anti-slavery leader who, with 21 cohorts, took possession of the us arsenal at Harper's Ferry, Virginia. He was captured, tried and hanged. The trial raised North-South tensions on the eve of the Civil War. He is the hero of the song *John Brown's Body*.

Brown, Lancelot "Capability" (1715–83), English landscape gardener who revolutionized garden and parkland layout in the 1700s. He designed or remodelled nearly 150 estates, including gardens at Blenheim and Kew. He worked to achieve casual effects, with scattered groups of trees and gently rolling hills. He earned his nickname from a habit of saying that a place had "capabilities of improvement".

Brown, Robert (1773–1858), Scottish botanist. He went on an expedition to Australia (1801–05), returning to England with valuable botanical collections. He described the flora of Australia in *Prodromus Florae Novae Hollandiae et Insulae Van Diemen* (1810). He is best known for establishing, in *A Brief Account of Microscopical Observations* (1828), that minute particles suspended in a liquid or gas are continuously in motion. This motion has since been called "BROWNIAN MOVEMENT".

Brown, Thomas Alexander. See **BOLDREWOOD**

Brown algae, group of almost exclusively marine ALGAE that includes the kelps, the largest kinds of seaweed, which may grow more than 30m (100ft) long. Division Phaeophyta. See also p.358.

Brown bear. See **BEAR**

Browne, Elliot Martin (1900–), British theatre director, known for his revival of verse drama. His productions include *T.S. Eliot's Murder in the Cathedral* (1935). He revived the York cycle of MYSTERY PLAYS in 1951.

Browne, Robert (c.1550–1633), English religious leader. While young, he tried to form Presbyterian congregations outside the established Church of England. His followers were called **BROWNISTS**. He was imprisoned for this act, and after his release went with his followers to Holland in 1581, where he published what later became the basic tenets of CONGREGATIONALISM. He returned to England via Scotland in 1584, made a submission to the Church of England and spent his last 42 years (1591–1633) as rector of Achurch, Northamptonshire.

Browne, Sir Thomas (1605–82), English author. He studied medicine in England at Oxford University, in Italy and in The Netherlands, and practised in England. His works include *Religio Medici* (1642), *Vulgar Errors* (1646), *Hydrotopia*, *Urn-Burial* (1658) and *The Garden of Cyrus* (1658).

Brownian movement, random, zig-zag movement of particles suspended in a fluid. It is caused by the unequal bombardment of the particles, from different sides, by the molecules of the fluid. It is observable up to a particle size of 3×10^{-6} m. It is named after the botanist Robert Brown, who observed the movement of plant spores floating in water in 1828. See also pp.836, 837.

Browning, Elizabeth Barrett (1806–61), English poet. In 1846 she married Robert Browning, and from 1847 lived in Florence. She began to write verse early in life. *The Battle of Marathon*, her first volume, was published in 1820. *The Seraphim and Other Poems* (1838) and *A Drama of Exile* (1845) established her widespread popularity. *Aurora Leigh* (1857) is considered her last important poem.

Browning, Robert (1812–89), English poet. *Pauline*, his first published poem, appeared anonymously in 1833. Later poems, *My last Duchess* and *Soliloquy of the Spanish Cloister*, both published in *Rells and Pomegranates* (1846) display

his characteristic use of dramatic monologue. In 1846 he married Elizabeth Barrett (BROWNING) and moved to Italy where he lived until she died in 1861. While there he published the volumes *Christmas Eve and Easter Day* (1850) and *Men and Women* (1855). Returning to London, he became popular with *Dramatis Personae* (1864) and *The Ring and the Book* (1868–69), a series of dramatic dialogues that many consider his masterpiece. See also p.1576.

Brownists, followers of Robert Browne (c.1550–1633), an English clergyman who founded the Separatist movement. That movement asserted the authority of the congregation in matters of ecclesiastical organization. It therefore opposed the existing episcopal structure of the Church and the discipline of the ecclesiastical courts. The Brownists moved to Middelburg, Zeeland, in 1581. They were the forerunners of the INDEPENDENTS and the CONGREGATIONALISTS.

Brownshirts, the *Sturm Abteilung*, or SA, Hitler's private army, one of the many to flourish in Weimar Germany. After 1933 it became a source of potential rivalry to Hitler and on 29 June 1934 the SA leaders, including Ernst ROHM, were shot.

Brubeck, David Warren (1920–), us jazz pianist and composer. In 1951 the Dave Brubeck Quartet was formed, consisting of Brubeck, Paul Desmond (alto sax), Joe Morello (drums) and Eugene Wright (bass). The group enjoyed great popularity in the 1960s. Brubeck's compositions include cantatas and orchestral works.

Bruce, Edward (d 1318), Scottish King of Ireland (1315–18). He helped his brother, ROBERT I, become Scotland's king. In Ireland he led the local people against their English overlords, before being killed in battle.

Bruce, James (1730–94), Scottish explorer. In 1770, he reached the source of the Blue Nile and was the first to follow it to its confluence with the White Nile. He also made archaeological discoveries in N Africa, Rhodes, Cyprus and Syria. See also p.1620.

Bruce, Robert (1274–1329), Robert I of Scotland and securer of Scotland's independence from the English. He was crowned at Scone on 27 March 1306, and immediately began a campaign to wrest from EDWARD I those Scottish castles and towns in English hands. Bruce's victory at BANNOCKBURN in 1314 marked the defeat of the English. See also pp.1316–1317.

Bruce, Stanley Melbourne, 1st Viscount, (1883–1967), Australian politician. He entered the Australian legislature in 1918 and was a representative to the LEAGUE OF NATIONS in 1921. He served in W.M. HUGHES' Cabinet (1921–23) as treasurer. He was prime minister (1923–29) and encouraged reforms such as unemployment insurance and health legislation. From 1933–45 he was High Commissioner for Australia in London. In 1947 he became a viscount and was the first Australian to sit in the British House of Lords.

Bruce, Thomas, Earl of Elgin. See **ELGIN MARBLES**

Brucellosis, or undulant fever, infectious disease passed from farm animals to man, often in unpasteurized milk. In man the symptoms include headache, weakness and intermittent fever. Pasteurization of milk, vaccination of young animals and the destruction of infected animals make the disease rare. See also p.1086/1087.

Bruch, Max (1838–1920), German Romantic composer. He composed operas and was a prominent conductor, but he is remembered primarily for three orchestral works – the *Violin Concerto No. 1*, *Scottish Fantasy* for violin and orchestra and the *Kol Nidrei* for cello and orchestra. See also pp.1582, 1582, 1583.

Brucite, mineral form of magnesium hydroxide ($Mg(OH)_2$), derived from periclase. The crystals are either glassy or waxy, can be white, pale green, grey or blue, and occur in fibrous masses or plate aggregates. It is found in SCHISTS, SERPENTINE and METAMORPHIC rocks. It is used to make magnesia refractory materials.

Brücke, Die (1905-1913), first group of German expressionist painters, founded in Dresden by Ernst KIRCHNER. Other members of the group were Karl SCHMIDT-ROTTLUFF, E. NOLDE and Erich Heckel. They thought of their art as a bridge between the contemporary academic style of painting and a freer style. Inspired by MUNCH, van Gogh and GAUGUIN, their work was characterized by linear, rhythmical expression and simplification of colour and form. Their extensive use of woodcut raised it to a significant 20th-century medium. See also pp.1654-1655

Bruckner, Anton (1824-96), Austrian Romantic composer. An intensely pious man, he wrote a great deal of church music - cantatas, masses and a *Te Deum* (1881-84) - and nine symphonies. His compositions are especially noted for their massive scale: the symphonies are lengthy, monumental creations in which the lush Romanticism of Wagner, whom Bruckner admired, is apparent. His use of complex musical form infuses his work, in which folk tunes are often employed. See also p.1241

Bruegel, Pieter the Elder (c.1525-69), last of the early Flemish painters, the most important moralist in the Netherlands after Bosch and one of the greatest landscape painters. When most of his contemporaries were being influenced by Italian painting, Bruegel stayed closer to the Flemish tradition, although transcending it. Using his powers of minute observation, he depicted a world of peasants working and playing in a rural landscape, shown in every season and mood, often his paintings have satirical and allegorical meaning. His best known pictures are *Peasant Wedding* (c.1567) and his series *The Months* (1565). His son, Pieter the Younger (1564-1637), sometimes copied his father's work. Another son, Jan (1568-1625), specialized in highly detailed flower paintings which earned him the nickname "Velvet Bruegel". See also pp.1395, 1395, 1434

Bruges, (Brugge), city in NW Belgium 88km (55 miles) WNW of Brussels; the capital of West Flanders province. Built on a network of canals, it was a great trading centre in the 15th century. Declining after 1500, its trade revived when the Zeebrugge ship canal was opened in 1907. Industries: engineering, brewing, lace, tourism. Pop. (1970 est.) 51,000

Brugge. See BRUGES

Bruhn, Erik (1928-), Danish dancer. He joined the Royal Danish Ballet Company in 1947 and was a guest soloist with many major dance companies in the USA, Europe and Australia.

Bruiise, or contusion, an injury to the deeper parts of the skin and underlying tissues caused by a blow or pressure. Small blood vessels under the surface are ruptured and internal bleeding causes tenderness and discoloration of the skin. Bruising will often accompany a fracture injury.

Brulé, Etienne (c.1592-1633), Canadian explorer. Brulé travelled to Quebec from France with Samuel de Champlain in 1608. In the next 20 years he explored the Great Lakes and Georgian Bay, guiding French expeditions and befriending the Huron Indians who eventually killed and ate him.

Brumel, Valeriy (1942-), Russian athlete. He established a world record in the high jump of 2.30m (7ft 5.75in) in 1963. He won a gold medal in the same event at the 1964 Olympics, but a broken leg in 1965 retarded his career.

Brummell, George Byran ("Beau") (1778-1840), English dandy renowned for his restrained elegant style of dress. He was a friend of the Prince Regent, later George IV, and enjoyed an enormous social success. By 1816 his debts caused him to leave England.

Brundage, Avery (1887-1975), US sportsman, b. Detroit. He was a staunch advocate of keeping "professionalism" out of amateur sports, and served as president of the International Olympic Committee (1952-72).

Brunel, self-governing British protector-

ate in N Borneo, SE Asia, the capital is Bandar Seri Begawan. Recent finds of offshore natural gas and oil are replacing the oil found at Sena in 1929. Products: oil, rubber, timber, rice. Area: 5,765sq km (2,225sq miles). Pop. (1975 est.) 147,000

Brunel, Isambard Kingdom (1806-59), British engineer, son of Sir Marc Brunel. In 1829 he designed the Clifton Suspension Bridge (completed in 1864) and in 1833 he became chief engineer for the Great Western Railway, for whom he designed the Royal Albert Bridge across the River Tamar. He is also famous for his ships: *Great Western* (designed 1837), the first trans-Atlantic wooden steamship, *Great Britain* (1843), the first iron-hulled screw-driven steamship, and *Great Eastern* (1858), a steamship powered by screws and paddles, the largest vessel of its time.

Brunel, Sir Marc Isambard (1769-1849), engineer, b. France. A refugee from the French Revolution, he went to the USA in 1793 and was chief engineer of New York. He went to England in 1799, where he invented machinery for making ships blocks. He was responsible for the construction of the first tunnel under the River Thames (1825-42).

Brunelleschi, Filippo (1377-1446), Florentine architect, first of the great Renaissance architects and a pioneer in the scientific use of perspective. He influenced many later architects, including Michelangelo. In 1420 he began to design the dome of Florence Cathedral, the largest dome since Hagia Sophia, Constantinople. His other works include the Ospedale degli Innocenti (1419-26), the first completed Renaissance building, the Basilica of S. Lorenzo (begun 1421) and the Pazzi Chapel (c.1440), all in Florence. See also pp.1382-1383

Brunfels, Otto (1488-1534), German botanist. His *Herbarium Vivae Eicones* (1530-40) helped to change botany from a lore of medieval herbalism towards a modern science. The text, a record of the properties of plants, was distinguished by accurate descriptions.

Brunhoff, Jean de (1899-1937), French creator of the *Babar* the Elephant books for children. He wrote and illustrated the first story, *The Story of Babar the Little Elephant*, in 1931. Six more books in the series followed. Since 1947 his son Laurent has continued the Babar saga.

Brunn. See BRUNO

Brunner, Sir John Tomlinson (1842-1919), British industrialist. In 1873 he founded, with Ludwig Mond, a chemical firm called Brunner, Mond and Company which was incorporated into Imperial Chemical Industries (ICI) in 1926.

Bruno, Saint (c.1030-1101), German founder of the Carthusian order of monks. He founded the monastery at the Grande Chartreuse in the Alps in 1084, and laid emphasis on austerity and rigid observation of harsh monastic customs. In 1090 he returned to Rome for a short time to be a counsellor to Urban II. See also p.1321

Bruno, Giordano (1548-1600), Italian philosopher. A fierce opponent of dogmatism and a supporter of the relativity of perception, his pantheistic belief in a deity manifest in the cosmos led to his censure for unorthodoxy and his death at the stake. He had a profound influence on Spinoza, Leibniz, Hegel and Schelling.

Brunswick (Braunschweig), city in E West Germany on the River Oker 145km (90 miles) SSE of Hamburg. It is the capital of Lower Saxony state, and is the former capital of the old Duchy of Brunswick that was ruled by the Brunswick-Lüneburg line (later Hanover) until 1884. Industries: food processing, printing, pianos, optical equipment. Pop. 219,000

Brunsa. See BURSA

Brush drawing, in Chinese art, method in which there is no sharp demarcation between calligraphy and drawing. In the Middle Ages it was used for miniatures and for under-drawing of paintings. Dürer's *Praying Hands* was drawn with a fine brush point; Rembrandt used brush drawing to sketch his large compositions, as did Degas and Picasso.

Brussels (Bruxelles), capital of Belgium, 42km (26 miles) S of Antwerp; capital of Brabant province. The main commercial, financial, cultural and administrative centre of Belgium, it is also the headquarters of the European Economic Community (EEC) and of NATO. Two languages are spoken: French and Flemish. Industries: textiles, chemicals, electrical goods, brewing. Pop. (1970 est.) 161,000. See also p.1987

Brussels sprout, member of the CABBAGE family, first grown in Belgium. Stem buds develop into miniature, globular heads that are eaten as a vegetable. Height: 60-90cm (24-36in). Family: Cruciferae. Species: *Brassica oleracea gemmifera*. See also p.684

Brussels, Treaty of (1948), agreement by which Britain, Belgium, The Netherlands, Luxembourg and France established the European Union for co-operation in defence, politics, economics and cultural affairs for 50 years. The defence agreement was merged in NATO in 1950. In 1954, Italy and West Germany joined, the name being changed to the Western European Union.

Brut (c.1200), early Middle English verse history of Britain by Layamon. Based on the works of Geoffrey of Monmouth and Robert Wace, the *Brut* contains the earliest mention in English of King Arthur, King Lear, and Cymbeline (Cunobelinus).

Brutalism, widespread architectural movement which originated in Britain in the 1950s in the work of Alison and Peter Smithson, who coined the phrase "the new brutalism". Setting as their standard the uncompromising simplicity of Mies van der Rohe and Le Corbusier, they emphasized the honest presentation of structural materials in modern building by leaving steel girders exposed and concrete and brick walls undisguised by plaster or stone facing. The Smithsons' school at Hunstanton (1954) was a landmark in the movement.

Brutus, Lucius Junius (fl. late 6th century BC), founder of the Roman Republic. He led the Romans in the expulsion of the last Etruscan king in 509 BC after his kinswoman Lucretia (Lucretia) had been raped by the king's son. He executed his own two sons for plotting to restore the Tarquins.

Brutus, Marcus Junius (c.85-42 BC), Roman republican politician, one of the principal assassins of the dictator Julius Caesar. He sided first with Pompey against Caesar, but Caesar forgave him and made him governor of Cisalpine Gaul in 46 BC and city praetor in 44 BC. After Caesar's murder in 44 BC, he went to Greece where he raised an army. He was defeated at Philippi in 42 BC, by Mark Antony and Octavian (Augustus), and committed suicide. See also p.1231

Bruxelles. See BRUSSELS

Bryant, Sir Arthur (1899-), British historian, author of numerous historical works, including a trilogy on British history between 1793 and 1822: *The Years of Endurance* (1942), *Years of Victory* (1944) and *The Age of Elegance* (1950). He edited Viscount Alanbrooke's diaries in *The Turn of the Tide* (1957) and *Triumph in the West* (1959). Other works include books on Samuel Pepys, Charles II and George V.

Bryhtnoth (d.991), known also as Byrhtnoth, alderman of the East Saxons. He led the Saxon forces against the Danish invaders at the Battle of Maldon, where he was killed. He was buried at Ely.

Brynner, Yul (1915-), US film actor, b. Russia. He made his film debut in *Port of New York* (1949) and had his first major success in the screen musical *The King and I* (1956). His later films include *The Magnificent Seven* (1960).

Bryony, either of two quite unrelated plants, both of which are climbers in hedgerows in Britain, Europe and elsewhere. White bryony, *Bryonia dioica*, is a member of the clematis family, with large hand-shaped leaves. Black bryony, *Tamus communis*, is a member of the yam family and has heart-shaped leaves. See also p.373

Valeriy Brumel, the Russian high jumper who established a record of 2.30m in 1963

Isambard Brunel, whose engineering feats reflect the energy of the Victorian age

Brussels, the Belgian capital which is now the headquarters of the EEC

Yul Brynner, whose greatest success was in the screen musical *The King and I* (1956)

Bryophyte

Bubble chambers enable physicists to photograph the tracks of subatomic particles.

John Buchan had an equal reputation in his lifetime as a creative writer and statesman.

Pearl Buck was brought up in China where her parents were Presbyterian missionaries.

Buddha the Enlightened is thought to have lived in northern India around 400 BC.

Bryophyte, group of small green plants (division Bryophyta) consisting of the mosses and liverworts. Bryophytes grow on damp surfaces exposed to light, including rocks and tree bark, almost everywhere from the Arctic to the Antarctic. See also ALTERNATION OF GENERATIONS, pp 362-363.

Bryozoa, or moss animal, term used to describe members of the phylum invertebrate animals known as Ectoprocta, but formerly also an old name for the phylum Endoprocta.

Brythonic, group of languages belonging to the Celtic subfamily of the Indo-European family of languages. Its two existing members are Welsh and Breton. A third Brythonic language, Cornish, virtually died out in the 18th century although there are still Cornish speakers in Cornwall. The separate languages emerged from an ancient Celtic British root in the 6th century after the Germanic invasions.

Bubble chamber, device for detecting and identifying subatomic particles. It consists of a sealed chamber filled with liquid hydrogen or helium kept just below its boiling point by the high pressure in the chamber. When the pressure is released the boiling point is lowered and a charged particle passing through the superheated liquid leaves a trail of tiny gas bubbles that can be illuminated and photographed before the pressure is restored. If a magnetic field is applied to the chamber, the tracks are curved according to the charge mass and velocity of the particles, which can thus be identified. It was developed by D. GLASER in 1952 from the CLOUD CHAMBER. See also p 810.

Buber, Martin (1878-1965), Jewish philosopher, theologian and political activist. b. Vienna. He was an ardent early Zionist and edited *Der Jude* (1916-24), the leading journal of German-speaking Jewish intellectuals. He defiantly opposed the Nazis in Germany until forced to move to Palestine in 1938. His most important published work is *I and Thou* (1923), on the directness of the relationship between man and God within the traditions of HASIDISM. He has also written on the ideals of the state of Israel.

Bubonic plague. See BLACK DEATH.

Bucaramanga, commercial city in N central Colombia, in the E Andes highlands at an altitude of 1,018m (3,340ft). Crops: coffee, tobacco, cocoa, cotton. Industries: cigars, cigarettes, textiles. Pop. 292,000.

Buccaneer, pirate operating mostly on the SPANISH MAIN in the 16th and 17th centuries. Many buccaneers, such as Henry MORGAN (c 1635-88), were British or French, confined their raids to Spanish property, and often took their booty home to their mother countries. As buccaneers began to attack ships of all nations indiscriminately, they became indistinguishable from ordinary pirates. See also pp 1412-1413, 1612.

Bucephalus, horse of ALEXANDER THE GREAT. When Bucephalus died in 326 BC in India, Alexander had him buried on the banks of the Hydaspes (now Jhelum) River and built the city of Bucephala in his memory. See also pp 1214-1215.

Bucer, Martin (1491-1551), German Protestant reformer who attempted to reconcile the viewpoints of Martin LUTHER and Ulrich ZWINGLI. In 1549 he became Regius professor of divinity at Cambridge University.

Buchan, Alexander (1829-1907), Scottish meteorologist, whose achievements included the collation and analysis of massive quantities of meteorological data. He identified the series (named after him) of nine spells of weather that consistently deviated from the normal between certain dates each year in the period 1857-66.

Buchan, John, 1st Baron Tweedsmuir (1875-1940), British author and statesman. He was famous for his adventure novels, which included *The Thirty-Nine Steps* (1915) and *Sick Heart River* (1941). He also wrote a four-volume history of WWI and biographies of Julius Caesar, Walter Scott and Oliver Cromwell. He served as Governor-General of Canada from 1935 until his death.

Buchanan, Colin Douglas (1907-), British transport expert. He worked (1935-39) at the Ministry of Transport served in the Royal Engineers during WWI, and worked (1946-61) at the Ministry of Town and Country Planning. He was Urban Planning Adviser (1961-63) to the Ministry of Transport, for which he prepared a report called *Traffic in Towns* (1963).

Buchanan, Jack (1891-1957), British comedy actor best known for playing the lead in musical comedies of the 1920s and 1930s. He also appeared in several films, including *The Band Wagon* (1953).

Buchanan, James (1791-1868), 15th president of the USA. A Democrat, he was elected President in 1857, and attempted to maintain a balance between the pro and anti-slavery states. He reluctantly supported the establishment of the federal garrison at Fort Sumter, and civil war broke out shortly after he left office in 1861. See also p 1628.

Buchan Ness, most easterly point of Scotland in Grampian Region, 40km (25 miles) NNE of Aberdeen. Buchan stretches from Fraserburgh to Turnferry, the name is generally used to refer to all the low-lying land of NE Scotland.

Buchara (Bukhara), ancient city in W Uzbekistan, USSR, capital of the Buchara region. Founded in about the 1st century AD, it was conquered by Arabs (7th-9th century), by Turks and Mongols (12th-15th century) and annexed to Russia in 1868. It was included in Uzbekistan in 1924. It is an important Asian trade and cultural centre. Monuments there include the 10th-century mausoleum of Ismail Samani and the Ulughbek (1417-18) Industries: silk and wool processing, rugs, handicrafts, textiles. Pop. (1970) 112,000.

Bucharest (București), capital and largest city of Romania, on the River Dâmbovitza. It became capital in 1862, was occupied by Germany in both world wars and finally by Russia in 1944. The seat of the Patriarch of the Romanian Orthodox Church, it is an industrial, commercial and cultural centre. Pop. (1969 est.) 1,526,000.

Buchenwald, site of a Nazi concentration camp, outside Weimar in Germany. It was notorious especially for the medical experiments conducted on its inmates. It was liberated by the Allies in 1945.

Buchman, Frank Nathan Daniel (1878-1961), US founder of the Moral Re-Armament (MRA) movement. An ordained Lutheran minister, he began propagating his ethical views in 1921 at Hartford, and later at Oxford and Cambridge universities. He was decorated by eight governments for services rendered by his worldwide MRA programme.

Buchner, Eduard (1860-1917), German biochemist. He became professor at Berlin, Breslau and finally at Würzburg having been awarded the Nobel Prize in chemistry in 1907 for his work on fermentation. His work indicated that it was not the actual yeast cells, but rather the enzymes contained within them, that actively caused alcoholic sugar fermentation. He was killed in WWI. See also FERMENTATION.

Buchner, Georg (1813-37), German dramatist. He studied medicine and became involved in politics, fleeing to Zurich where he died. His best-known works are *Danton's Death* (1835), *Woyzeck* (1850), which was used by the composer Alban Berg as the basis for his opera *Woyzeck* (1925), and *Leonce and Lena* (1850).

Buch, Pearl S. (1892-1973), US novelist. She was brought up in China, which she used as the setting for many of her novels. Her first book appeared in 1930. In 1931 *The Good Earth*, a novel about Chinese peasants, was published, it won the Pulitzer Prize in 1932. Her other works include *Sons* (1932), *The Mother* (1934), *A House Divided* (1935) and *Dragon Seed* (1942). In 1938 she was awarded the Nobel Prize in literature.

Buck, Sir Peter (1880-1951), New Zealand Maori leader and anthropologist. He became an MP (1908) and Minister of Maori Affairs (1912), and served as a

medical officer in WWI. Buck's Maori name was Te Rangī Hiroa.

Buckingham, George Villiers, 1st Duke of (1592-1628), English courtier. As JAMES I's favourite from 1614 he became rich and influential, he also dominated Charles I. His missions to Spain and France were disasters, largely because of his incompetence and arrogance. Parliament's two attempts to impeach him (1626, 1628) were blocked by Charles I. His son, the 2nd Duke (1628-87), was educated with Charles I's sons and supported Charles II in the final battle of the Civil War (1651). He was a privy councillor (1660-74) and then a major opposition figure (1675-80). See also CABAL.

Buckingham Palace, London residence of British sovereigns since 1837. Formerly owned by the dukes of Buckingham, it was purchased by George III in 1761 and remodelled into a 600-room palace by John NASH in 1825. Sir Aston Webb redesigned the east front in 1913. The changing of the guard takes place there daily. **Buckinghamshire**, county in SE central England, the chief town is Aylesbury. In the Vale of Aylesbury to the N cereal crops and beans are grown, and livestock and poultry are kept in the S. Beechwood furniture is still made there. Area 1,882sq km (727sq miles). Pop. (1976) 512,000.

Buckle, Henry Thomas (1812-62), English historian. He emphasized the influence of the physical environment on the behaviour of nations. *History of Civilization in England* (2 vols, 1857-61) is his most important work.

Buckthorn, any of several trees or shrubs of the genus *Rhamnus*, family Rhamnaceae. *R. catharticus* is a many-branched shrub with black bark, spine-like branchlets, and oval, toothed leaves. The succulent fruit is used medicinally and the bark is used to produce a yellow dye.

Buckwheat, Asian cereal plant cultivated throughout the world, it is well adapted to cool and areas and is an important animal food and cooking ingredient. Cultivated buckwheat (*Fagopyrum esculentum*) has heart shaped leaves attached to swollen sheaths, white flowers and triangular seeds. Height: up to 1.5m (5ft). Family Polygonaceae.

Bud, in plants, a small swelling or projection consisting of a short stem with overlapping, immature leaves covered by scales. Leaf buds develop into leafy twigs, flower buds develop into blossoms, and mixed buds develop into twigs and flowers, as on apple and lilac trees. A bud at the tip of a twig is a terminal bud and contains the growing point, lateral buds develop in leaf axils along a twig.

Budapest, capital city of Hungary, on the River Danube, created in 1873 by uniting the towns of Buda and Pest on opposite banks of the river. After this it became one of two capitals of the AUSTRO-HUNGARIAN EMPIRE, it made rapid industrial and commercial progress in the early 20th century. It was declared capital of an independent Hungary in 1918, and was seized by the USSR in 1945. Industries: iron and steel, chemicals, textiles. Pop. (1970 prelim.) 1,940,000.

Buddenbrooks (1901), novel by Thomas MANN (with his elder brother Heinrich). Showing the influences of Friedrich Nietzsche and Richard Wagner, the story depicts the decline of a wealthy merchant family caused by an increase in spiritual and artistic refinement.

Buddha, the "Enlightened" or "Awakened One", a person who has come to have knowledge of the truth. Originally describing Gautama, the founder of Buddhism, the term was later used by Mahayana Buddhists to describe a variety of Buddha-figures, which are all manifestations of the Buddha-Nature that pervades the universe. See also pp 1196-1197.

Buddh Gaya (Bodhi Gaya), town in NE India. The Temple of Vishnu there marks the place where, according to tradition, BUDDHA received enlightenment under the sacred Bo tree. Pop. 7,000.

Buddhism, religion founded in India c 528 BC by Gautama Siddhartha, the

BUDHA Buddhism is based on Four Noble Truths: existence is suffering, the cause of suffering is craving and attachment, cessation of suffering is possible through *NIRVANA*: Nirvana is attained through the Eightfold Path, which consists of the right views, resolve, speech, action, livelihood, effort, mindfulness and concentration. The total number of Buddhists in the world in the mid-1970s was estimated at about 220 million. They are concentrated most heavily in Burma, Sri Lanka, Indochina and Japan. See also pp 18, 1197

Budding, or gemmation, method of asexual reproduction that produces a new organism from an outgrowth of the parent. Hydras often bud in spring and summer. A small bulge appears on the parent and grows until it breaks away as a new individual. In cooler weather many hydras reproduce sexually and lay eggs, which hatch only when conditions are again favourable. See also pp 12, 13

Budding, grafting a bud from one woody plant to another in the same or a closely related species. It can be done to improve the quality of the root or stem, to increase hardiness or resistance to disease, or to dwarf the plant. Commonly used in the cultivation of stone fruit trees, budding is most successful when done in the spring. See also p 675

Buddleia, flowering shrub, often conspicuous because of the butterflies attracted to its purple or yellow flowers. Buddleias used to be classified as members of the logania family, native to the tropics, but are now considered to be a separate family.

Budennyi, Semyon Mikhailovich (1883-1973), Soviet marshal (1935-41). He entered the Imperial Russian Cavalry in 1903 and joined the Communists in 1919, organizing the first Red cavalry armies, which in 1920 broke the Polish lines in the Soviet-Polish war. In 1941 he commanded the Soviet forces in the sw sector against the German invasion, but they were heavily defeated and he was replaced.

Budge, Donald (1915-), US tennis player. Regarded by most experts as one of the two greatest players of all time (with NILDEN), he was the first man to complete the "Grand Slam" of the four major singles (Wimbledon, USA, Australia, France) in one year (1938), after which he turned professional. He was triple Wimbledon and US champion in both 1937 and 1938.

Budgerigar, also called parakeet, small brightly coloured seed-eating PARROT native to Australia, and a popular pet. It can be taught to mimic speech. The sexes look alike but the coloration of the cere may differ seasonally. Size 19cm (7.5in) long. Species *Melopsittacus undulatus*. See also pp 303, 319

Budget, annual financial statement "brought down" by the British Chancellor of the Exchequer, usually in the early spring, in which the expected outlays and the proposed means of supplying them are introduced in the House of Commons. The complexity of modern trade and finance has recently forced upon governments the making of two or more budgets in a single year.

Buena Vista, Battle of (Feb. 1847), MEXICAN WAR battle, in which US troops under Zachary TAYLOR were attacked by SANTA ANNA's Mexican army. After an indecisive battle lasting for two days, Santa Anna withdrew, giving the USA control of northern Mexico.

Burema, Maria (1939-), Brazilian tennis player. A majestic, graceful player, she could hit the ball with power. She won three Wimbledon (1959, 1960, 1964) and four US (1959, 1963, 1964, 1966) singles and 11 major doubles titles with a variety of partners.

Buenos Aires, capital of Argentina, on the estuary of the Río de la Plata, 240km (150 miles) from the Atlantic Ocean. The largest city in the Southern Hemisphere, it was originally colonized by Spain in 1536. It then became a separate federal district in 1880. The seat of the national University (1821), it is a political, cultural and commercial centre. Industries: meat

processing, flour milling, textiles, metal works, car assembly, oil refining. Pop. (1975 est.) 2,976,000. See also p. 1974

Buerger's disease (*thromboangiitis obliterans*), inflammation of the arteries and veins that occurs particularly in men between adolescence and middle age. Pain and pallor of the affected part are the usual symptoms and treatment includes exercise of the affected limbs. See also pp 1066-1067

Buffalo Bill, See CODY, WILLIAM
Buffalo, industrial city and port in w New York State, on the e shore of Lake Erie. Settled 1803 by the Holland Land Company, the city's 19th-century industrial growth was due to its being the terminus of the Erie Canal, opened in 1825. It was the scene of the assassination of President McKinley in 1901 at the Pan-American Exposition. Industries include flour milling, motor-cars, chemicals and railway engineering. Pop. (1970) 462,768.

Buffalo, any of several horned mammals and a synonym for the North American ox. The massive ox like Indian or water buffalo (*Bubalus bubalis*) is often domesticated for milk and hides. When wounded, the similar Cape, or African, buffalo (*Synceus caffer*) is regarded as one of the animals most dangerous to man. Height 1.5m (5ft). Family Bovidae. See also ANGA, pp 2, 95, 294, 296, 298, 305

Buffer solution, solution to which a moderate quantity of a strong acid or a strong base can be added without making a significant change in its pH value (acidity or alkalinity). Buffer solutions usually consist of a mixture of a weak acid and one of its salts, a mixture of an acid salt and its normal salt or a mixture of two acid salts.

Buffet, Bernard (1928-) French painter. His most powerful works - harshly realistic still lifes, portraits and landscapes in monochromatic colours, painted in the 1950s and early 1960s - were a visual documentation of the philosophy of EXISTENTIALISM. His later work, the product of highly paid commissions, tends to be largely decorative.

Buffon, Georges-Louis Leclerc, Comte de (1707-88), French naturalist. From 1739, as keeper of the Jardin du Roi (now Jardin des Plantes) in Paris, he began to collect data for the monumental *Histoire naturelle* (44 vols, 1749-1804), a popular compendium of natural history. See also pp 182, 186, 1466, 1476

Bug, any member of the order of insects Hemiptera, although in the USA any insect is commonly called a bug. True bugs are flattened insects which undergo gradual or incomplete metamorphosis, have two pairs of wings and use piercing and sucking mouthparts. Most feed on plant juices - greenish being the best known - although a number attack animals and are important carriers of disease. See also APHID, pp 40, 44, 45

Bug, two rivers in the USSR. The western Bug rises in the Ukraine, flows n and then nw through Poland to join the River Vistula near Warsaw. Length approx 774km (481 miles). The southern Bug rises in the Ukraine and flows s to the Black Sea. Length, approx. 856km (532 miles).

Bug, in espionage (spying), concealed electronic device used to listen in on private conversations. It is a microphone and may be connected to a radio transmitter, tape recorder or telephone link, and may be hidden on a person or in a room. Most bugs are miniaturized, making use of the latest micro-electronic circuits. See also pp 648-649

Bugaku, dances performed in the Japanese Imperial court with traditional exactitude, characterized by movements in ritualized patterns. They were imported from India and China in the 7th century.

Bugatti, Ettore (1881-1947), Italian builder of motor vehicles and racing cars. He established a factory at Molsheim, Germany, in 1909 and there built a successful racer for LE MANS. The Bugatti Royale was one of the largest cars ever made, although production costs limited the total number to six. See also p 495

Buggy, light carriage usually drawn by one horse. Buggies were a common form of transport before the advent of the motor-car, and there were various types. The gig was a two-wheeled, hooded vehicle with front seats for a driver and passenger. Coupés, sometimes called broughams, resembled coaches with the front part removed, the driver sat on an open seat in front of an enclosed passenger section. See also pp 486-487

Bugle, brass wind instrument resembling a small TRUMPET without valves, capable of playing notes of only one harmonic series. Because its penetrating tones carry great distances, it is used for military signalling, as in calls to arms, reveille and retreat.

Bugle, or bugleweed, any of various species of flowering plants of the mint family. The carpet bugle (*Ajuga reptans*) is common in Britain. It has a creeping stem and produces whorls of white or blue flowers.

Buglossa, wild flowering plant of the BORAGE family, with bright purplish-blue flowers. The genus *Echium* includes viper's bugloss, a common meadow plant, and genus *Lithospermum* contains the rarer flower also called blue crowfoot.

Bugs Bunny, cartoon character. Created in 1936 by Chuck Jones and Fritz Freleng, and voiced by Mel Blanc, he starred in numerous hectic cartoon adventures.

Buhl, See BOULE, ANDRÉ CHARLES
Building Society, institution for providing mortgage loans to house-buyers. The money comes from savings invested by the public in deposits and shares. There have been building societies in Britain for more than 200 years, but the great period of their growth has been since WWII. The conduct of the societies is governed by Building Societies Acts and supervised by the Registrar of FRIENDLY SOCIETIES. There are about 330 societies in Britain, but most of the business is controlled by the ten largest firms.

Building techniques, methods of construction influenced by location, which affects climate and local customs, and the available technology. Some techniques still used for small structures are refinements of those used by early man. Walls of timber, mud stone, or mortar made from straw and mud may be used to support a roof. Another method uses supporting poles or columns and non-supporting walls, yet another uses a skeletal framework which is covered with light material. Many large modern buildings have a central supporting column and a light surrounding framework. See also pp 548, 551

Buisson, Ferdinand-Edouard (1841-1932), French educationist. As director of elementary education (1879-96) he helped to re-organize French primary education. He taught at the Sorbonne University (1896-1902) and was a member of the chamber of deputies (1902-14, 1919-23). He was a pacifist and in 1898 helped to found the League of Human Rights, of which he was president (1913-26). In 1927, with Ludwig QUINDE, he was awarded the Nobel Peace Prize.

Bujumbura, formerly Usumbura, capital and chief lake port of Burundi, e central Africa, at s end of Lake Tanganyika. It was the capital of Belgian Ruanda-Urundi after WWI, and remained so after independence in 1962. It is an administrative and commercial centre. Industries: textiles, food processing, tourism. Pop. (1976 est.) 110,000.

Bukavu, formerly Costermansville, port city of e Zaire, at s end of Lake Kivu. Capital of the Kivu region, it is an administrative, agricultural and trade centre. Industries: food processing, brewing, tourism. Pop. (1974) 181,774.

Bukhara, See BUCHARA

Bukharest, See BUCHAREST

Bukharin, Nikolai Ivanovich (1888-

Buenos Aires, the home of one in four Argentinians, means fair winds in Spanish

Buffalo receives much of its power as hydroelectricity from nearby Niagara Falls

Georges Buffon organized the facts of natural history in comprehensible form

Bugles, used mainly for military signalling, sound only notes of the harmonic series

Bukovina

Bulldog, when the animal bites its upper and lower jaws lock tightly together.

Bullfighting has been discouraged without much success by many of the rulers of Spain.

Bullfrogs are heard mainly at night in the spring and summer; the females are silent.

Bumblebees, unlike honey bees, do not die when they sting.

1938), Russian politician. In 1916 he edited the Leninist *Novoy Mir* in New York. After the 1917 revolution he became a leading member of the Comintern and editor of *Pravda*, and in 1924 he was made a member of the Politburo. He opposed agricultural collectivisation and was executed for treason by STALIN in 1938.

Bukovina, historic region in NE Romania, extending into W Ukraine, USSR, the chief city is Chernovtsy. It was originally ceded to Romania by the treaties of Saint-Germain (1919) and Sévres (1920), but the Romanian Peace Treaty of 1947 gave N Bukovina to the Russians. Products: timber, textiles, oil, salt, iron, copper, grain and livestock. Area, 10,440sq km (4,031sq miles).

Bulawayo, city in SW Rhodesia (Zimbabwe) 386km (240 miles) SW of Salisbury. It was founded by the British in 1893, and the Matabele revolt took place there in 1896. It is the second-largest city in the country and a major industrial centre. Industries: textiles, motor vehicles, cement. Pop. 281,000.

Bulb, underground bud consisting of a short stem and enlarged fleshy leaf scales, it produces a plant. Food is stored in the scales which are either layered in a series of rings, as in the onion, or loosely attached to the stem, as in some lilies. Smaller bulbs are produced in the axils of the outer leaf scales. When the offsets are mature they can be planted and will increase in size until capable of producing plants. See also pp 382-383.

Bulb, electric. See LAMP.

Bulbul, any of numerous species of songbirds of Africa and S Asia, where they are kept as cage birds. They are short-necked dull-coloured birds, ranging in size from 15 to 30cm (6-12in). They feed on berries and other fruits and build a grass nest for 3-5 eggs. Family Pycnonotidae, there are about 120 species. See also p.314.

Bulfinch, Thomas (1796-1867), US author who wrote a number of popular works on fable and legend. These include *The Age of Fable* (1855), *The Age of Chivalry* (1858), *Legends of Charlemagne* (1863) and *Oregon and Eldorado* (1866).

Bulgakov, Mikhail Afanasyevich (1891-1940), Russian novelist and dramatist. His most famous novels are *The White Guard* (1925) and *The Master and Margarita*, which he wrote between 1928 and his death.

Bulgaria, Nikolai (1895-1973), Soviet military and political leader. He became Defence Minister (1947-49; 1953-55) and rose from being a Central Committee member to become Premier of the USSR (1948). He was expelled from the Presidium for opposing KHRUSHCHEV in 1958. See also p.1696.

Bulgaria, country in SE Europe on the Balkan peninsula. Since WWII it has been one of the Communist bloc nations under the domination of the Soviet Union. Traditionally it has an agrarian economy, although efforts have been made by the Communist government to stimulate industrialization. Area, 110,911sq km (42,823sq miles). Pop. (1975 est) 8,722,000. See p.1994.

Bulgars, ancient Turkic people originating in the region to the N and E of the Black Sea, which divided c AD 650 into two separate states. The western part moved to present-day Bulgaria, where it was assimilated into the Slavic population and adopted Christianity in 865. The other group moved to the VOLGA region where they set up a Bulgar state. They were converted to ISLAM and ruled by the MUSCOVITES in the 15th century.

Bulge, Battle of the, final German offensive in WWII. The US lines along the borders of France and Germany were thin when the Germans launched an attack on them in Dec. 1944. They pushed the Allies back into Belgium, but the US forces held Bastogne against their attack. A combined Allied counter attack from the NW and from the S led to eventual German defeat (Jan. 1945). See also p.1680.

Bulk modulus, physical constant of solids and fluids that indicates their elastic properties when they are under pressure

over their entire surfaces. The bulk modulus is also called the incompressibility if a solid or a fluid (liquid or gas) has a high bulk modulus, then it is difficult to compress.

Bull, Jacob Martin Luther Olaf (1883-1933), one of Norway's leading poets. His finest collection was *Meiøpe* (1927).

Bull, John (c 1562-1628), English composer and organist, the writer of some 150 pieces for organ and virginals. He became organist of the Chapel Royal in 1591, and later was professor of music at GRESHAM'S COLLEGE. He left England in 1613, and after working in Brussels for some years became organist at Antwerp cathedral, a post he held until his death.

Bull, Papal. See PAPAL BULL.

Bullace, small wild PLUM tree that flowers in hedges and scrubland in Britain from March to mid-May. The bullace fruit or plum is only about 2cm (0.75in) in diameter, purple or yellow in colour, and is borne in small clusters. Species *Prunus instans*.

Bullard, Sir Edward Crisp (1907-), English geophysicist. He is noted for his work in GEOMAGNETISM, especially his theory of the geomagnetic dynamo, based on convective motion in the Earth's core.

Bull-baiting, popular pastime in England (11th-19th centuries) in which dogs were set on a tethered bull. Another version was bull-running, in which a bull was chased from one end of a town to the other by the townspeople with sticks and eventually killed and eaten.

Bulldog, English bull-baiting breed of dog with a distinctive large head, a short upturned muzzle and a projecting lower jaw. The body is large with muscular shoulders, a broad chest and short stout legs, the tail is short. The smooth coat may be white, tan or brindle. Height (at shoulder) up to 38cm (15in).

Bulldozer, tractor fitted with caterpillar tracks and a large vertical blade at the front. It is used for levelling ground, clearing debris and removing boulders. See also pp 458-459.

Buller, Charles (1806-48), British Radical politician. He was secretary to Lord DURHAM on the mission to report on Canada in 1838, and his belief in the need to grant responsible government to the Canadian colonies was influential in producing the radical recommendations of the DURHAM REPORT. See also pp 1610-1611, 1614-1615.

Buller, Sir Redvers Henry (1839-1908), British general. He began his career in China, took part in the Red River expedition against the XIBI rebellion in Canada, and won the Victoria Cross in the ZULU WAR (1879). He was Commander-in-Chief in the SOUTH AFRICAN WAR from 1899-1900.

Bullfighting, sport popular in Latin America and Spain, where it is the national sport. Usually there are six bulls and three matadors who are assigned two bulls each. Each matador has five assistants - two *picadors* (who are mounted on armoured horses) and three *peones* or *banderilleros*. A bullfight starts when the picadors stab the bull four times with their lances to weaken it. The *peones* then plant *banderillas* (barbed sticks) on the withers of the bull. The matador makes several passes with his red cape (*muleta*) before attempting to kill the bull by thrusting a sword into its heart.

Bullfinch, European finch, with a stout, rounded beak. Males have a crimson and grey body and a black head, females have duller colours. Species *Pyrrhula pyrrhula*. Bullfinch is also the name given by horse-riders to a stout, high hedge that is difficult to jump.

Bullfrog, frog found in streams and ponds in the USA, it is green or brown and breeds in the spring. The largest North American frog, it can jump long distances, it gets its name from its loud bass voice. Family Ranidae, genus *Rana*. Length up to 20cm (8in).

Bullion, precious metal such as gold or silver in the form of ingots, plate or coins not in legal use, when valued simply for the weight of metal.

Bull mastiff, English watchdog bred from

the MASTIFF and BULLDOG, with a large head and a broad deep muzzle. The body is compact, the wide-set legs are straight and strong and the tail is tapered and set high. The smooth dense coat is red, tan or brindle. Height (at shoulder) up to 68.5cm (27in).

Bullroarer, flat piece of wood or bone attached to a string which, when swung in the air, produces a roaring sound. It originated in primitive societies.

Bull Run, Virginia, site of two battles in the American Civil War. The first battle (21 July 1861), saw the defeat of the Union troops under McDowell at the hands of the Confederates led by Beauregard and JACKSON, who won his nickname "Stonewall" on this occasion. The second battle (29 Aug to 1 Sept 1862) was also a Confederate victory won by Robert E. LEE. See also pp 1628-1629.

Bull terrier, strongly-built sporting dog once used for bear-baiting, it has a large oval head with small erect ears. The broad-chested body is set on strong big-boned legs and the tail is short. The coloured variety can be any colour, but the "white" is always pure white, often with darker head markings. Height (at shoulder) up to 56cm (22in).

Bulow, Bernhard von, Prince (1849-1929), German statesman and imperial Chancellor from 1900-09. He was a careful conservative in domestic policy, but his aggressiveness in foreign policy left Germany isolated and heightened the tensions leading up to WWII. He lost the favour of the emperor in 1908 and was forced to resign the next year.

Bulow, Friedrich Wilhelm, Freiherr von (1755-1816), Prussian general. In the NAPOLEONIC wars he defeated the French at the battles of Grossbeeren and Dennewitz (1813), and was made a count. He also participated in the victories at LEIPZIG (1813) and WATERLOO (1815).

Bulow, Hans Guido, Freiherr von (1830-94), German pianist and conductor. In 1857 he married LISZT's daughter, Cosima, who later left him for WAGNER. Although highly regarded as a piano virtuoso (he was taught by Liszt) he became best known as a conductor of German music and a champion of BEETHOVEN, Wagner and BRAHMS. He conducted the first performance of several Wagner operas.

Bulrush, grass-like plant of the SEDGE family found in marshes or beside water in Europe, Africa and North America. The common British bulrush, or reed mace, *Typha latifolia*, reaches 1.8-2.1m (6-7ft) and bears both male and female flowers. Family Cyperaceae. See also p.381.

Bultmann, Rudolf (Karl) (1884-), German theologian. He is one of the most controversial and influential New Testament scholars of the 20th century. His EXISTENTIALIST interpretations, which systematically "remove" mythology from the New Testament, are found in *The Theology of the New Testament* (1948-53). See also p.1791.

Bulwer-Lytton. See LYTTON.

Bumblebee, also called humble bee, robust hairy black bee with broad yellow or orange stripes. Two genera, *Bombus* and its parasite *Psithyrus*, occur widely in Britain. *Bombus* live in organized groups in ground or tree nests, where the fertile queen lays her first eggs after the winter hibernation. These become worker bees. Later, the queen lays eggs to produce drones (males) and new queens which develop before the colony dies. The cycle is then repeated. Length up to 2.5cm (1in). Order Hymenoptera, family Apidae. See also p.38.

Bunbury, Grace (1937-), US mezzo-soprano. She studied with Lotte Lehmann and made her debut in Paris in 1960. After many successes in Europe and at the Carnegie Hall, she made her Metropolitan Opera debut in 1965.

Bunbury, port in SW Western Australia, on Geographe Bay at the junction of the Colle and Preston rivers. It is a resort area and a major outlet for the export of timber, farm products, fruit, coal and other minerals. Pop. (1971) 17,762.

Bunche, Ralph Johnson (1904-71), US

statesman and diplomat. He entered the UN in 1947, where he held several posts eg. under-secretary for special political affairs. He helped negotiate a ceasefire in the Arab-Israeli conflict (1949), for which he received the Nobel Peace Prize (1950) - the first black American to do so.

Bundaberg, port in SE Queensland, Australia, on the Burnett River. 322km (200 miles) N of Brisbane. It is the centre of a sugar area - plantations were established there in the 1870s. Industries: sugar refining and distilling, dairying. Pop (1971) 26,570.

Bundesrat, upper house of the West German parliament. It is composed of voting representatives elected by the federal states, and of non-voting West Berliners.

The Bundesrat acts on measures sent from the more powerful **BUNDESTAG**. It was the federal chamber of the German Empire (1871-1918). The upper house of the Austrian Parliament is also known as the Bundesrat. See also **BUNDESTAG**.

Bundestag, lower house of the West German parliament, responsible for initiating legislation, ratifying important treaties and electing the chancellor. With an equal number of representatives from the state parliaments, it elects the federal president. It also includes non-voting members from West Berlin. See also **BUNDESRAT**.

Bunin, Ivan Alekseyevich (1870-1953), Russian writer. He was opposed to the 1917 Revolution and left Russia to settle in France. Influenced by **TURGENEV**, his works lament the passing of the old Russian order. They include the novel *The Village* (1910) and the short story *The Gentleman from San Francisco* (1915). He was awarded the Nobel Prize for literature in 1933.

Bunion, form of **BURSITIS** occurring at the base of the big toe's first joint. The swelling involved becomes covered with thickened skin due to friction, and prolonged pressure on the toe forces it painfully towards its neighbour. It can be treated by surgery.

Bunker Hill, Battle of, battle in the AMERICAN WAR OF INDEPENDENCE that took place on 17 June 1775 on Boston's Charlestown peninsula. The first large-scale battle of the war, it was fought at Bunker Hill on Breed's Hill. Although technically defeated, the Americans won a moral victory by inflicting heavy losses on the British. See also pp 1540-1541.

Bunsen, Robert Wilhelm (1811-99), German chemist, professor at Heidelberg (1852-99). During his early work on arsenic compounds he lost an eye in an explosion and was badly poisoned. He discovered an arsenic poisoning antidote and evolved a method of gas analysis. With his assistant, **GUSTAV KIRCHHOFF**, he used spectroscopy to discover two new elements (caesium and rubidium). He invented various kinds of laboratory equipment, such as the Bunsen cell, a carbon-zinc electric cell. He also improved a gas burner that was later named after him. The Bunsen burner consists of a tube with a variable air inlet that controls the intensity of its smokeless, blue flame.

Bunting, Edward (1773-1843), Irish organist and folksong collector. His great achievement was to collect, in three volumes (1796, 1809 and 1840), uncorrupted harpists' tunes from all over Ireland.

Bunting, FINCH found throughout most of the world. Males of the genus *Passerina* are brightly coloured, whereas the females are smaller and duller. Members of the genus *Emberiza* are larger and dull coloured, although the snow bunting is almost white. Most build cup-shaped nests for their eggs. Family **FRINGILLIDAE**.

Buñuel, Luis (1900-), Spanish filmmaker who has worked mostly outside Spain. His films are concerned with harsh criticism of the Church and social hypocrisies by means of a surrealist comic vision. Among his major works are *Un chien andalou* (1928), *Viridiana* (1961), *Belle de jour* (1966), *The Discreet Charm of the Bourgeoisie* (1972) and *The Phantom of Liberty* (1974). See also **SURREALISM**.

Bunyan, John (1628-88), English preacher and author. During the ENGLISH

CIVIL WAR he was a Parliamentarian soldier. In 1655 he became a Puritan minister, and twice suffered imprisonment for his nonconformist religious activities. His writings were popular and colloquial in style. They included *Grace Abounding* (1666), and *The Pilgrim's Progress* (1678), his best known work. See also p.1532.

Bunyan, Paul, legendary US folk hero, a gigantic lumberjack. Tales about him and his blue ox, Babe, first appeared in the early 20th century lumber camps of the Midwest. He was credited with the creation of the Black Hills and the Grand Canyon.

Bunyoro, former kingdom in Africa, bordering Lake Albert. It was established by northern intruders who subjugated the local Bantu people. It lost territory to Buganda and was absorbed into the British protectorate of Uganda in 1896.

Buoyancy, upward pressure exerted on an object by the fluid in which it is immersed. The object is subjected to pressure from all sides, but the pressure on its lower part is greatest because of the increasing depth of the fluid. The result of all these forces is a force acting upwards, which is equal to the weight of the fluid displaced. See also **ARCHIMIDES PRINCIPLE** pp 830, 838.

Buraydah, town in N central Saudi Arabia, 338km (210 miles) NW of Riyadh (Ar-Riyadh). It is a commercial centre with cattle and camel markets and date palm groves. Pop 50,000.

Burbage, family of Elizabethan actors. James (1531-97) one of the Earl of Leicester's players, leased land for the first English playhouse, the Theatre, in Shoreditch (1576). His son, Richard (c. 1567-1619), has been called the first great English actor. He was the leading tragedian in the King's Men, and first played the title roles in Shakespeare's *Hamlet*, *King Lear*, *Othello* and *Richard III*. In 1598, his brother Cuthbert moved the Theatre to Bankside, and with Shakespeare as partner, founded the famous Globe Theatre. See also pp.1418-1419.

Burbank, Luther (1849-1926), US horticulturalist. He experimented with thousands of varieties of plants and, by means of revolutionary breeding methods, he developed more than 800 new strains of fruits, grains and flowers. His great efforts helped to elevate plant-breeding into a modern science.

Burbot, bottom-dwelling fresh-water cod found in colder waters of Asia, N America and Europe. It is a slender brown fish that spawns in winter. Length to 110cm (38in); weight to 16kg (36lb). Order *Gadiformes*, family *Gadidae*; species *Lota lota*. See also p.63.

Burbridge, Eleanor Margaret (c. 1925-), British astronomer. She was professor of astronomy at the University of California, San Diego, from 1965 until 1972, and director of the Royal Greenwich Observatory (1972-73). She contributed significantly to the study of QUASARS.

Burchfield, Charles Ephraim (1893-1967), US painter. His works merged a realistic and Romantic style with occasional elements of **SURREALISM**. His works include *Night Wind* (1918), *The Four Seasons* (1949-60) and *An April Mood* (1946-55).

Burckhardt, Jacob Christoph (1818-97), Swiss cultural and art historian. He emphasized cultural values, rather than political factors, an attitude influential in the development of the modern approach to history. His chief work was *The Civilization of the Renaissance in Italy* (1860).

Burden of proof, in law, the obligation to provide evidence which the judge or jury could reasonably believe, in the settlement of a case. More generally, it is the obligation to establish the truth of an alleged fact.

Burdett, Sir Francis (1770-1844), British political figure. In 1810 he was imprisoned for defending a radical orator in William Cobbett's *Weekly Register*. In 1820 he was imprisoned again for opposing government action at the PETERLOO MASSACRE. His daughter, Angela Georgina Burdett-Coutts (1814-1906), was a wealthy

philanthropist who spent much of her money on housing and education for the needy in London.

Burdock, oil-yielding weed found throughout Europe, North Africa and North America. It has large basal leaves and thistle-like purple flowerheads covered by stiff, hooked bracts. Common burdock, *Arctium luteum*, is biennial and grows to 0.9m (3ft). Family *Compositae*.

Bureaucracy, the administrative structure of any large organization, public or private. A hierarchic, compartmental administration should be efficient and responsible. In practice it often turns out to be rigid and incompetent, duplicating work and sticking inflexibly to the rules. See also pp.1858-1859.

Burford, Battle of (752), victory of Cuthbert of Wessex over Ethelbert of Mercia. The battle probably secured Wessex's independence from the more powerful Mercian kingdom.

Burgage, tenure of the sovereign's or the lord of the manor's property by a burgess, or freeman of a town, in Britain from Anglo-Saxon times. The payment of rent and not necessarily the owner's favour, secured the tenure. Until the Municipal Corporations Act (1835) it conferred a special electoral **FRANCHISE**.

Burgas, major Black Sea port of SE Bulgaria. Capital of Burgas province, it is a developing resort. Industries: fishing, canning, oil refining, agricultural machinery. Pop (1970 est.) 136,000.

Burgealand, province of a Austria, extending from the River Danube southwards along the W border of Hungary from which it was transferred after WWI. Industries: agriculture, timber, mining. Area 3,965sq km (1,531sq miles). Pop (1971) 272,000.

Burgess, Anthony (John Burgess Wilson) (1917-), English novelist. Malaya, where he lived from 1954 to 1959, is the setting for the trilogy *Time for a Tiger* (1956), *The Enemy in the Blanket* (1958) and *Beds in the East* (1959). In later novels he shows an interest in social trends, linguistic effects and religious symbolism, as in *A Clockwork Orange* (1962), the *Enderby* trilogy (1963-74) and *Abba, Abba* (1977).

Burgh, Hubert de (d. 1243) Justiciar of England (1215-32) and effective ruler of the country during the minority and early reign of HENRY III. His ship led the fleet in England's first great naval victory, over the French near Sandwich, in 1217.

Burgh, former Scottish administrative area, finally abolished in 1975. Royal burghs were incorporated by royal charter and parliamentary burghs elected their own lords. The burgh was the equivalent of the English borough, and was pronounced in the same way.

Burghley, William Cecil, 1st Baron (1520-98), English statesman. He began his career under the Protector SOMERSET and served ELIZABETH I for 40 years, as secretary (1558-72) and lord treasurer (1572-98). He resolutely suppressed all Catholic plots against Elizabeth's rule. See also pp.1408-1409.

Burghmair, Hans, the Elder (1473-1531), German painter and woodcut designer. He was one of the first artists in Germany to be influenced by the Italian RENAISSANCE style. His works include *The Triumphs of the Emperor Maximilian I* (c. 1509) and *The Lovers Surprised by Death* (1510).

Burglar alarm, device that gives warning of an actual or attempted illegal entry to premises. In a typical system electrified metal tape is placed at all doors and other entrances to a building. The tape is in circuit with an electromechanical relay, which trips and so energizes an alarm if any tape is disturbed or broken. Other alarm systems employ photoelectric cells (magic eyes), ultrasonic sensors or laser beams. See also p.463.

Burgos, capital of Burgos province, Old Castile, N Spain, 212km (132 miles) N of Madrid. It has a Gothic cathedral (1221), and is the burial place of El Cid. It is an important trade and tourist centre. Industries: fabrics, soap, furniture, footwear, wine, paper. Pop (1970) 119,215.

Robert Wilhelm Bunsen developed the gas burner which gives a hot smokeless flame.

Bunting, a group of seed-eating birds of the Finch family. This is the Indigo Bunting.

Burbot, the only freshwater member of the cod family. It lives close to the bottom.

Hans Burgkmair the Elder, his design for the portrait of the Emperor Maximilian.

Burgoyne, John

Burgoyne, John (1722-92), British general during the American War of Independence. He served as major-general in Canada (1776) and campaigned in New York State, securing Crown Point and Fort Mifflin. He was finally forced to surrender his troops at Saratoga in October 1777. See also p.1541.

Burgundy, historical region of central France that now includes the départements of Yonne, Côte-d'Or, Saône-et-Loire, Ain, and Nièvre. The region has many Romanesque churches. Dijon is the historical capital. A rich agricultural region, it has long been known for its wine. Burgundy's golden age began in 1364 when John II of France made his son, Philip the Bold, Duke of Burgundy. The succeeding dukes created a state that extended across the Rhine and included the Low Countries. They dominated French politics in the early 15th century. The last reigning duke, Charles the Bold (r.1467-77) failed to have himself crowned king by the Holy Roman Emperor, and Burgundy was dismembered after his death. France annexing the largest part.

Burn. See BOROUGH.

Burial customs, ceremonies performed for the dead. Men have interred corpses for various reasons: to propitiate the gods, to speed the soul of the dead on its transcendent journey, or to honour the dead. The Greeks buried each person with a coin as payment to the ferryman, Charon, for carrying his soul across the river of death. The Western habit of wearing mourning black comes from the Romans. Embalming comes from the Egyptians, who believed that, by preserving the body of a dead person, they helped his soul to live. See also pp.114-115, 1148-1149.

Buriat, region in central Asia inhabited by the Buriat people. It is now part of the USSR, with its capital at Ulan-Ude. Its western boundary is Lake Baikal. The region is mostly steppe-land, its inhabitants raise cattle.

Burke, Edmund (1729-97), British statesman and writer. He played a major part in the reduction of royal influence in the House of Commons. With Charles James Fox he sought better treatment for the Catholics and Americans. He instigated the impeachment of Warren Hastings in an attempt to reform India's government in 1788. Burke believed in liberty based on order, with change being gradual, his horror at the radicalism of the French Revolution is shown in *Reflections on the Revolution in France* (1790). See also pp.1469, 1471.

Burke, Robert O'Hara (1820-61), Irish explorer. With W. J. Wills he led an expedition across Australia from south to north in 1861. Starting in Melbourne, he left most of his party at the River Barcoo, continuing to N. Australia (reached in 1861) with a party of three. On the return trip he and two of his companions died, a fourth (King) was finally rescued.

Burke and Hare, Irish murderers. William Burke helped William Hare, his landlord in Edinburgh, sell the body of a deceased tenant (1827) to anatomists. They then murdered at least 15 people for their bodies. When caught, Hare turned king's evidence and Burke was hanged. See also BODY SNATCHERS.

Burke's Peerage, book produced each year since 1826, proper title *Genealogical and Heraldic History of the Peerage, Baronetage, and Knightage of the United Kingdom*. It lists details of all the British nobility and was first produced by John Burke (1787-1848).

Burlesque, form of literary or dramatic entertainment that achieves its effect by caricature, ridicule and distortion, often of celebrated literary works. The word is derived from the Italian, *buria*, "ridicule". A later American form became generally synonymous with strip shows.

Burlington, **Richard Royle, 3rd Earl of** (1694-1753), English architect. He was an advocate of the PALLADIAN style. His most important building in that style is the Assembly Room at York (1730).

Burma, nation in SE Asia. Although it is rich in natural resources, including gem

stones and teak, many of these have yet to be fully exploited, and the economy is largely agrarian, major cash crops are rubber, tea, tobacco and jute. Area 678,033sq km (261,789sq miles). Pop (1975 est.) 31,240,000. See p.1995.

Burma Road, 1,154km (717 mile) road from Lashio, Burma, to K'un-ming, China, built in 1937-38 to carry supplies when China's seaports were blockaded by Japan. It was used in WWII to carry Allied war supplies but was closed by the Japanese in 1942.

Burmese cat, short-haired domestic cat. It has a well-rounded head, yellow or gold eyes and a coat that may be sable, blue, red or tortoiseshell. The ears are wide-set and the body is muscular. It is related to the Siamese.

Burn, injury produced by fire, steam, chemicals, hot metals, electricity or radiation. Burns are classified according to the depth of the tissue injury. First-degree burns involve only superficial skin damage, second- and third-degree burns go progressively deeper. Treatment includes relief of pain, control of infection and prevention of shock. See also SKIN, SKIN GRAFTING.

Burne-Jones, Sir Edward Coley (1833-98), English painter and designer. Influenced by Dante Gabriel Rossetti and William Morris, he began painting in 1855 and was associated with PRE-RAPHAELITE Romanticism and escapism. An early work is *Merlin and Nimue*, his later, more literary work is typified in *King Cophetua and the Beggar Maid* (1884).

Burnet, perennial plant native to N temperate regions, whose leaves are used to give a cucumber flavour to salads. Long-stemmed pink flowers are borne on tall stalks. Family Rosaceae, genus *Sanguisorba*. See also pp.1667.

Burnet, Gilbert (1643-1715), British churchman and historian. His 3-vol *History of the Reformation in England* (1679-1715), based on original sources, and his *History of His Own Time* (published 1723-24) are invaluable studies of 17th-century Britain.

Burnet, Sir (Frank) Macfarlane (1899-), Australian virologist and immunologist. Burnet proposed that under certain conditions tissues and organs could be successfully transplanted from one animal to another. This idea was called "acquired immunological tolerance". As a result of this discovery he shared the 1960 Nobel Prize in physiology and medicine with Peter Medawar.

Burnett, Frances (1849-1924), US author, b. England, real name Eliza Hodgson. She is most noted for *Little Lord Fauntleroy* (1886), a rags-to-riches tale. She is also remembered for her notable book, *The Secret Garden* (1911).

Burnett, William Riley (1899-), US author. His novels about gangsters and prize-fighters include *Little Caesar* (1929), which was made into a film starring Edward G. Robinson (1930), *Dark Hazard* (1933) and *The Asphalt Jungle* (1949).

Burney, Fanny (1752-1840), English novelist and diarist. Her most successful novel, *Evelina* (1778), was followed by *Camilla* (1796) and *The Wanderer* (1814). Her diaries and letters vividly describe English culture and society from 1768-1840. See also p.1478.

Burnham, Daniel Hudson (1846-1912), US architect and city planner. With his partner John W. Root he was a pioneer in the development of early steel-frame and modern commercial architecture, designing buildings such as the Reliance Building (1890) and the 20-storey Masonic Temple Building (1891), both in Chicago.

Burnham, Forbes (1923-), Prime Minister of Guyana (1964-). Leader of the People's National Congress (1957-). Burnham was chief executive when British Guyana attained independence in 1966 and became a republic (1970). His party increased its majority in 1973.

Burnley, town in Lancashire, NW England, on the Leeds-Liverpool Canal and the River Calder. Industries: coalmining, chemicals, textile machinery, textiles. Pop (1971) 76,500.

Burnout, rocket, the point on a rocket's trajectory at which the fuel supply is exhausted or cut off. In solid fuel rockets, controlled burnout is achieved by lowering the pressure in the combustion chamber or by opening vents to drop the temperature below the combustion point. In liquid fuel rockets the fuel supply is simply turned off. See also p.1022.

Burns, George (1896-), US comedian. With his wife Gracie Allen he starred in music hall, on radio and on television in the *Burns and Allen Show* (1950-58). In 1975 he received an Academy Award for his acting in the film *The Sunshine Boys*.

Burns, John (1858-1943), British Labour politician who was an MP for 26 years (1892-1918). From 1905 he was a cabinet minister and was president of the Board of Trade at the outbreak of WWI, when he resigned.

Burns, Robert (1759-96), Scottish lyric poet. The success of *Poems, Chiefly in the Scottish Dialect* (1786), including *The Holy Fair* and *To a Mouse*, enabled him to move to Edinburgh. Although popular he could not support himself solely on his poems, so he became an excise officer. Scotland's unofficial poet laureate, his best-known works are *Tam o' Shanter* (1790) and the song *Auld Lang Syne*. See also p.1475, 1475.

Burns, Tommy (1881-1955), Canadian boxer, real name Noah Brusso. He claimed the world heavyweight championship in 1906 when he beat Marvin Hart in Los Angeles.

Burns, Edward John (1905-76), British painter. After studying in London he worked in Paris, where the underworld formed the inspiration for much of his painting. His later work, such as *Soldiers and War in the Sun*, was strongly influenced by the Spanish Civil War and WWII.

Bur-reed, marsh plant that has hard, dry, prickly fruits and long grass-like leaves. Genus *Spartanum*. See also p.381.

Burro, small domesticated ass used as a pack animal in SW USA and Mexico, it is a long-eared sturdy animal derived from the Nubian wild ass and may be brown, grey or black. Family Equidae, species *Equus asinus asinus*.

Burroughs, Edgar Rice (1875-1950), US author of adventure novels. A prolific writer, he is noted for the Tarzan books, the first of which was *Tarzan of the Apes* (1914). He also wrote science fiction.

Burroughs, William (1914-), US novelist, regarded as a founder of the BEAT GENERATION. His most notable work, *Naked Lunch* (1959) deals in part with his addiction to heroin. Other works, experimental in style, include *The Ticket That Exploded* (1962) and *The Wild Boys* (1971). See also p.1773.

Burrows, Abe (1910-), US playwright, director and humorist. He appeared on radio and television as well as in theatres and nightclubs. He wrote the Broadway plays *Can Can* (1953) and *Say, Darling* (1958), and received the New York Drama Critics' Award as co-author of *Guys and Dolls* (1950) and *How to Succeed in Business Without Really Trying* (1961), for which he also received the Pulitzer Prize and a Tony Award.

Bursa, formerly Brusa, capital of Bursa province in NW Turkey, 26km (16 miles) SE of the Sea of Marmara. Site of the ancient Bithynian city of Prusa, it became the Ottoman capital (1327-1413). It is an important transport centre. Industries: silk, carpets, tobacco. Pop 318,209.

Bur Sa'id. See PORT SAID.

Bursitis, inflammation of a sac or cavity (bursa) located (usually) near a joint. It is characterized by pain, swelling and difficulty in movement, treatment generally includes rest, heat and mild exercise. "Housemaid's knee" and "tennis elbow" are common forms of bursitis, as is a BURSION. See also pp.1070, 1071.

Burlem, town in Staffordshire, W central England. Incorporated into STROKE-ON-TRENT in 1910, it is in the area known as the Potteries. Josiah Wedgwood was born there in 1730, and the Wedgwood Institute contains a museum. The town's main industry is ceramics.

Bur Sudan. See PORT SUDAN.

Burt, Sir Cyril Lodowic (1883-1971), British psychologist who pioneered the use of psychological testing and the theory of factor analysis for the measurement of intelligence. His intelligence and aptitude tests have been used in education and in the study of juvenile delinquency.

Burton, Beryl (1937-), British amateur cyclist. She dominated British women's cycling until well into her thirties, competing with and regularly beating even male time-trialists. She won five world pursuit titles and two on the road.

Burton, Gary (1943-), US jazz musician. He is a self-taught vibraphone player who developed a unique four-mallet technique. After working with Stan Getz he led his own group and won a Grammy award for the best solo jazz performance of 1972.

Burton, Sir Richard Francis (1821-90), English explorer, writer, linguist and diplomat. In 1853, in disguise, he travelled to Medina and Mecca, being one of the first Europeans to visit those cities. On his second trip to Africa, with John Speke in 1857, he discovered Lake Tanganyika. The author of many books, he was best known for his translation of the *Arabian Nights* (1885-88). See also p.1826.

Burton, Richard (1923-), Welsh actor, real name Richard Jenkins. By the 1950s he had a reputation as a leading Shakespearean actor. He made his film debut in *The Last Days of Dolwyn* (1948). From 1952 he concentrated on cinema, appearing in such films as *The Robe* (1953), *Look Back in Anger* (1959) and *Becket* (1964). He also made a number of films with Elizabeth Taylor, notably *Who's Afraid of Virginia Woolf?* (1966).

Burton, Robert (1577-1640), English author. He wrote a comedy in Latin, *Philosophaster* (1606), but his most famous work is *The Anatomy of Melancholy* (1621), which was written under the pen-name of Democritus Junior. See also ANATOMY OF MELANCHOLY.

Burundi, republic in central Africa. Until 1962 it was, with Rwanda, part of the Belgian League of Nations mandate (Ruanda-Urundi). Most of its people are subsistence farmers. The chief cash crops are coffee, cotton and tea. The capital is Bujumbura. Area: 27,865sq km (10,747sq miles). Pop (1975 est.) 3,400,44. See p.1996.

Bury, Pol (1922-), Belgian painter and sculptor, whose painting was associated first with SURREALISM and later with the free abstraction of the COMMA group. From 1952 onwards he concentrated on sculpture, producing mobiles into which he eventually incorporated small motors. His mobiles, which move almost imperceptibly, give the impression of being both gently humorous and significant.

Bury, town in Greater Manchester Metropolitan County, NW England, on the River Irwell, 16km (10 miles) N of Manchester. Industries: engineering, chemicals, textiles. Pop (1971) 67,800.

Burying beetle, medium-sized BEETLE found in temperate regions. It digs under the carcasses of small animals, burying them, and lays its eggs in them. It is also called carrion beetle. Family Silphidae, genus *Necrophorus*.

Bury St Edmunds, town in West Suffolk on the River Lark, 35km (22 miles) NW of Ipswich. It was named after King Edmund, who was killed by the Danes and buried in the town's abbey in 903. Industries: engineering, brewing, food processing, timber. Pop (1971) 25,600.

Bus, large, public passenger-carrying road vehicle, the name comes from the Latin word omnibus, meaning "for all". A horse-drawn bus service started in Britain in 1829 and motor buses were introduced in the late 19th century. Buses are usually driven by petrol or diesel engines, but have also been run from an overhead electricity supply (a trolleybus).

Buxby, James (1801-71), first British Resident in New Zealand (1833). He was sent from New South Wales to keep law and order but failed for lack of support.

Bushy, Sir Mart (1909-), Scottish foot-

haller and manager. After a fine career as a player Manchester City (Liverpool, Scotland) he became manager of Manchester Utd (1945-69), guiding them to many honours. He served the 1958 Munich air disaster in which most of the famous Busby Babes died to build his third great side, the first English club to win the European Cup (1968).

Busch, family name of two German musicians. Adolf (1890-1957), a violinist and composer of chamber and choral works, founded the Busch String Quartet and the Busch Trio. Fritz (1890-1951) was a conductor, chiefly of operas. He led the Clytemnestra Festival for several years and in 1945 became a conductor of the Metropolitan Opera, New York.

Bush, Alan Dudley (1900-), British composer. His *Dialectic* for string quartet (first performed in 1935) gained him notice. He has written several operas including *Wai Tylor* (1950) and *Men of Blackmoor* (1956), three symphonies, a violin concerto and various choral works. **Bush, Geoffrey** (1920-), British composer. He has written three operas, the most recent of which is *The Equation* (1968), first performed in London in 1968. But he is best known for his chamber works, especially the two song cycles, *Five Spring Songs* (1944) and *Greek Love Songs* (1964).

Bushbaby, primitive squirrel-like PRIMATE of African forests and bushlands. It is usually grey or brown with a white stripe between its large eyes. Also called a GALAGO, it is a gregarious nocturnal tree-dweller which can be domesticated as a pet. Length (excluding tail) to 38cm (15in). Family Lorisidae, genus *Galago*. See also pp 102, 310.

Bush Ballad, early Australian verse celebrating the exploits of convicts, pioneers and bushrangers. It has been called the first true Australian literary form. Frequently sung, bush ballads were transmitted orally and usually have a recurring refrain set to a simple lively rhythm. Well-known ballads such as *The Wild Colonial Boy* and *Botany Bay* have become part of Australian folklore. See PATERSON, Banjo, LAWSON, Henry.

Bushbuck, small, often striped ANTELOPE found in forested or brushy areas of sub-Saharan Africa. Family Bovidae, species *Tragelaphus scriptus*. See also p.310.

Bushcheh (Bushure), city in sw Iran, near the head of the Persian Gulf and 185km (115 miles) sw of Shiraz. Founded in 1736, it was the chief Iranian port until the rise of ABADAN. Imports sugar, steel, cement. Exports carpets, cotton. Pop (1972 est.) 45,000.

Bushel, unit of dry measure equal in volume to eight imperial gallons of water (36.5l), and to four pecks. It is traditionally used to measure grain and fruit. The name comes from a word in Old French for a much smaller measure, 'the amount one can hold in the hand'.

Bushell's case (1670), English legal case which established the immunity of juries from fines for verdicts contrary to the evidence and the direction of the court. Bushell was acquitted on a charge of the non-payment of a fine levied for returning a verdict contrary to the evidence. This case was instrumental in the formulation of the HABEAS CORPUS ACT (1679).

Bushido, the "Way of the Samurai", a moral discipline important in Japan between 1603 and 1868 which arose from a fusion of Confucian ethics and Japanese feudalism. Requiring loyalty, courage, honour, politeness and benevolence, Bushido paralleled European chivalry. Although not a religion, Bushido involved family worship and SHINTO rites.

Bushman, largest EFT VIPER, found in central USA and N South America. It has long fangs and large venom glands, and is pinkish and brown with a diamond pattern. Length up to 3.7m (12ft). Family Viperidae, subfamily Crotalidae.

Bushman, or San, Khoisan-speaking people of southern Africa. Typically, they are short, with a leathery yellowish skin, flat faces and high cheekbones. Until recently they had a hunting and gathering culture, with little regard for material pos-

sessions. About half of them now follow the traditional ways, mostly in the Kalahari region; others have become assimilated into white and Bantu agricultural society as hired labourers. See also pp 121, 123, 1828, 1830.

Bushnell, David, American inventor (c 1742-1824) who in 1776 built the first underwater vessel to be used in war. Called "Bushnell's turtle", it carried two essential features of the modern submarine - a closed hull and screw propulsion - and could be operated by one crew member. See also pp 478, 479.

Bushrangers, bandits who terrorized the Australian outback in the late 18th and 19th centuries. Many were escaped convicts, others were adventurers who after 1850 attacked gold convoys. The gang led by Ned KELLY was wiped out in 1880.

Buskerud, county in SE Norway, bounded by those of Oslo and Telemark; capital Drammen. Industries, farming, forest products, textiles. Area, 14,802sq km (5,765sq miles). Pop 201,400.

Busking, street entertainment of cinema or theatre queues, or passers-by, by dancing, singing, playing musical instruments or performing tricks. The entertainer afterwards begs money from his audience.

Bosoni, Ferruccio Benvenuto (1866-1924). Italian pianist and composer. He was a virtuoso concert pianist in the Liszt tradition and the influence of Liszt shows in his large piano concerto. He wrote several operas, including *Doktor Faust* (1916-24) and *Turandot* (1917).

Bustamante, Sir William Alexander (1884-1977), Prime Minister of Jamaica (1962-67), founder and president of the Jamaica Labour Party (1943). As leader of the opposition (1955-62), he favoured Jamaica's withdrawal from the West Indies Federation. Illness caused him to retire from politics in 1967.

Bustard, large, shy bird found in arid areas of the Eastern Hemisphere. Its plumage is grey, black, brown and white and its neck and legs are long. In appearance it is quite ostrich-like. A swift runner and a strong, though reluctant flier, it feeds on small animals and lays up to five eggs. Family Otididae. Height 1.3m (4.3ft).

Bustle, pad or cushion worn under the back of a woman's skirt to make it stick out behind. The bustle was made of horsehair or stiffened ruffles. Popular in the late 19th century, it later evolved into a flounce of material half way down the back of the skirt.

Butadiene, (1,3-butadiene), (CH₂=CH-CH=CH₂) gaseous flammable hydrocarbon made from butenes or by "cracking" NAPHTHA. It is copolymerized with STYRENE to produce synthetic rubber. Properties: s.g. 0.62, m.p. -108.9°C (-164.0°F), b.p. -4.4°C (24.1°F). See also p.588.

Butane, (C₄H₁₀) gaseous flammable colourless hydrocarbon. It is obtained as a by-product of PETROLEUM refining and from natural gas. It can be liquefied under pressure at normal temperatures, and is used as a fuel gas and in the manufacture of synthetic rubber. Properties: m.p. -138.3°C (-217.0°F); b.p. -0.5°C (31.1°F). See also p.439.

Bute, John Stuart, 3rd Earl of (1713-92), tutor of GEORGE III, who appointed him Prime Minister in 1762. He had great influence over the king during the first five years of his reign (1760-65). He was widely disliked, and although he negotiated the peace that ended the Seven Years War (1756-63), he was unable to establish a stable administration. Having failed to gain parliamentary support, he resigned in 1763. See also pp 1544-1545.

Bute, island off SW Scotland, in the Firth of Clyde and separated from the mainland by the Kyles of Bute. Formerly the chief island of Buteshire, it is now part of the Strathclyde Region. It has important prehistoric and early Christian remains. The principal town, Rothesay, is the main tourist centre. Its mild climate favours agriculture. Area: 119sq km (246sq miles). Pop (1974 est.) 7,956.

Butenandt, Adolf Friedrich Johann (1903-), German biochemist who did important research into sex hormones. In

1931 he isolated the male sex hormone ANDROSTERONE and in 1934 investigated the chemical structure and properties of the female sex hormone PROGESTERONE. For this work he was awarded the 1939 Nobel Prize in chemistry, but had to decline the award because of a Nazi decree prohibiting acceptance.

Butene (butylene), any of three hydrocarbon gases having the general formula C₄H₈: butene-1 [CH₂=CH-CH=CH₂], butene-2 [CH₃-CH=CH-CH₃] and isobutene [(CH₃)₂C=CH₂]. Butene is made from petroleum and used as a starting material for other organic compounds.

Butler, Earls and Dukes of Ormonde. See ORMONDE.

Butler, Josephine Elizabeth, (1828-1906), British social reformer. From 1869 she campaigned against the Contagious Diseases Act, whereby prostitutes in military towns were subject to state or other official control. The Act was repealed in 1886.

Butler, Sir Milo Boughton (1906-79), since 1973 Governor-General of the Bahamas. Before that he was Minister of Labour, Welfare, Agriculture and Fisheries (1968-72) and minister without portfolio (1972-73).

Butler, Nicholas Murray (1862-1947), US educationalist. He was president of Columbia University (1902-45) and helped to establish the Carnegie Endowment for International Peace (becoming its president from 1925 to 1945). With Jane ADDAMS he shared the 1931 Nobel Peace Prize.

Butler, Reginald (1913-), English sculptor and architect. In 1953 he won first prize in the international competition for a monument to *The Unknown Political Prisoner*. Butler was influenced in his early work by CONSTRUCTIVISM, but later evolved a highly sensual language to interpret his delicate figurative sculpture, often of girls.

Butler, Richard Austen, Baron Butler of Saffron Walden (1902-), British politician. He entered Parliament in 1929 as a Conservative and was Minister of Education (1941-45). During this time he was responsible for the Education Act (1944) which provided free primary and secondary education for all. He held major cabinet posts (1951-64), before being named master of Trinity College, Cambridge (1965-1978).

Butler, Samuel (1612-80), English satirical poet. His verse, dating from the 1660s and 1670s, includes *The Elephant on the Moon*, *Characters* and *Hudibras*.

Butler, Samuel, (1835-1902), British satirical writer. His novel *Erwman* (1872), a utopian criticism of contemporary social and economic injustice, made him famous. It was written while he was a sheep farmer (1860-64) in New Zealand. He opposed DARWIN's theory of evolution and expounded his own ideas in several of his works. His autobiographical *The Way of All Flesh* (1903) is a biting attack on Victorian life and his own upbringing.

Butlin, Sir William ("Billy") (1899-), British HOLIDAY CAMP pioneer. Born in Cape Town, he was named William Edmund Heygate Colbourne Butlin. In 1921 he arrived in England from Canada, and in 1936 opened his first holiday camp at Skegness. After WWII he developed a chain of such camps. He was knighted in 1964.

Butlor, Michel (1926-), French novelist. His contributions to the *nouveau roman* or *ANTI-NOVEL* examined the intricacies of human psychology and relationships within a limited framework of action. His novels include *Passage de Milan* (1954), *La Modification* (1957) or *Second Thoughts* (1958) and *Niagara* (1969).

Butt, Dame Clara Ellen (1872-1936), British contralto. One of the best-loved singers of her age, she was especially famous for her singing of Liddell's *Abide With Me*. Elgar wrote the song cycle *Sea Pictures* for her in 1900.

Butt, Isaac (1813-79), Irish political figure. As a Member of Parliament, he demanded land tenure reform and led the Home Rule movement in Parliament in the 1870s until he was supplanted by

Charles Stewart PARNELL. See also IRISH HOME RULE, p.1642.

Butte, isolated, flat-topped, steep-sided hill. It is formed when a remnant of hard rock overlies and protects softer rock underneath from being worn down, while the surrounding areas continue to be eroded. See also pp.223, 228.

Butter, edible fat made from milk by a churning process in which the milk is converted from a water-in-oil emulsion to an oil-in-water emulsion. The fat (oil) globules of the milk coalesce into butter, thus separating out from the more watery whey. To assist this process a "starter" of a bacterial culture may first be added, this helps to coalesce, or ripen, the cream. Commercial butter contains about 80% fat, 1-3% added salt, 1% milk solids and 16% water. See also p.726.

Buttercup, herbaceous flowering plant found throughout the world, the many species vary considerably according to habitat, but usually have yellow or white flowers and deeply-cut leaves. Family Ranunculaceae. See also CROWFOOT, pp.351, 370, 382, 320.

Butterfield, Sir William (1814-1900), British architect who designed in the Gothic style. His best-known works are the chapel at Rugby School and Keble College, Oxford University.

Butterfly, day-flying insect of the order Lepidoptera. The adult has two pairs of membranous scale-covered wings that are often brightly coloured and held erect when at rest. The female lays eggs on a selected food source and the LARVAE (CATERPILLARS) emerge within days or even hours. The larvae have chewing mouth-parts and often do great damage to crops until they reach the "resting phase" of the life cycle, the pupa (chrysalis). Within the pupa the adult (imago) is formed with wings, wing muscles, antennae, a slender body and sucking mouth parts. The adults mate soon after emerging from the chrysalis, and the four-stage life cycle begins again. See also METAMORPHOSIS pp.3, 36, 37, 36, 37, 39, 42, 46-47, 346, 346.

Buttermilk, fermented milk drink originating with the nomads of central ASIA, who often made it in a goatskin bag hung at the door of their tents. Cultured buttermilk is now made by selectively souring skimmed low-fat milk, using a bacterial culture or "starter", and cooling the product to stop fermentation at the desired acidity. See also p.726.

Butterwort, large group of carnivorous bog plants that trap and digest insects in a sticky secretion on their leaves. They bear single white, purple or yellow flowers on a leafless stalk. Family Lentibulariaceae, species *Pinguicula*. See also p.371.

Butterworth, George Samuel Kage (1885-1916), British composer who was killed during WWI at the battle of the Somme. He studied at the Royal College of Music and was active in the revival of English folk song and dance. Among his compositions are *A Shropshire Lad* (1912), an orchestral rhapsody based on Alfred Housman's poetry, and *The Banks of Green Willow* (1913).

Buton, Richard Totten ("Dick") (1929-), US figure-skater. He won the US senior figure skating championship at the age of 16, the world figure-skating title (1948-52) and two Olympic gold medals (1948, 1952).

Buttress, mass of masonry built against a wall to add support or reinforcement. Used since ancient times in Mesopotamia buttresses became increasingly complex and decorative in Christian cathedral architecture.

Butylene, C₄H₈. See BUTENE.

Buxtehude, Diderik (1637-1707), Danish organist and composer known for his organ and church music. While an organist at Lübeck he gave recitals that won him fame. J. S. BACH travelled some 320km (200 miles) on one occasion to hear him.

Buyne, Cyriel (1859-1932), Flemish novelist and playwright who wrote mainly in Flemish. A realist, his first major novel was *The Right of the Strongest* (1893), his plays include *The Paemel Family* (1893). **Buzău**, capital of Buzău district in the

Buzzard

Danube plain of SE Romania, 100km (60 miles) NE of Bucharest. It has been an important trade centre since the 15th century. Industries: metallurgy, plastics, brewing, textiles. Pop. (1971 est.) 71,300. **Bazzard**, slow-flying bird with broad rounded wings, fan-shaped tail, sharp hooked beak and sharp talons. It is an imprecise term applied to many birds of prey and used widely in North America for hawks and vultures. Family Accipitridae. Genus *Buteo*. See also p 345.

Byblos, ancient city of the Phoenicians, now in Lebanon, 27km (17 miles) N of Beirut. Byblos became a centre of Phoenician trade with Egypt in the late 2nd millennium BC, and was particularly known for its papyrus. The Greek word for "book" was derived from its name. In the late 10th century BC the city declined and Hiram I moved the Phoenician capital to Tyre. See also p 1186, 1186.

Bydgoszcz (Bromberg), city in N central Poland, capital of Bydgoszcz province. It was controlled by Prussia from 1772 to 1919. Industries: mechanical engineering, chemicals, textiles, food processing. Pop. (1970) 281,000.

Byelobog, in Slavonic mythology, white god of light and day, the creative force, the god of good, antithetical to Černobog. In popular legends Byelobog was depicted as an old man with a white beard, whose actions were always benevolent.

Byelorussia. See BELORUSSIA.

Byng, John (1704–57), British admiral. In 1756 he was sent to protect Britain's base on the island of Minorca where, believing himself to be outmaneuvered, he failed to drive off a blockading French fleet. He withdrew to Gibraltar, where he was court-martialled, found guilty and shot. **Byng, Julian Hedworth George, 1st Viscount** (1862–1935), British general and Governor-General of Canada (1921–26). He became a Viscount after his defeat of the Germans at Vimy Ridge (1917)—one of the most famous Canadian victories of WWI. In 1918 his army broke the Hindenburg Line. From 1928 to 1931 he was Commissioner of London's Metropolitan Police Force.

Byrd, Richard Evelyn (1888–1957), US rear admiral and the first man to fly over both the North Pole (1926) and the South Pole (1929). In 1927 he flew the first transatlantic air mail from New York to France. He also led five major expeditions to the Antarctic (1928–57), discovering and surveying more than 2,200,000 sq km (845,000 sq miles).

Byrd, William (1543–1623), English composer. He was appointed by Elizabeth I to be joint organist of the Chapel Royal with Thomas Tallis, whom he succeeded in 1585. With Tallis, he was granted England's first monopoly to print music. Byrd was a master of all the musical forms of his day, celebrated for his madrigals and church music. See also p 1393.

Byron, George Gordon Noel Byron, 6th Baron (1788–1824), British poet. He is remembered as much for his flamboyant, romantic life as for his poetry. The handicap of a clubfoot and maltreatment by his mother resulted in an unhappy childhood. *English Bards and Scotch Reviewers* (1809) established his reputation, and in 1812 the first two cantos of *Childe Harold's Pilgrimage* appeared, to widespread acclaim. His dissolute lifestyle and numerous affairs with women excited great popular interest. In 1816, a social outcast, he left England for good. Abroad, Byron wrote *Cantos III and IV of Childe Harold* (1816, 1818) and *Don Juan* (1819–24) an epic satire often regarded as his masterpiece. In 1823 he travelled to Greece to fight for Greek independence against the Turks. See also pp 1549, 1560, 1576.

Bytom, (Beuthen), city in S Poland, 13km (8 miles) NW of Katowice. It was part of Prussia from 1742 but was assigned to Poland by the Potsdam Conference (1945). Industries: metalworking, mining of zinc and lead. Pop. (1970) 187,000.

Byzantine Empire, known also as the Eastern Roman Empire, or Medieval Greek Empire. The history of the Byzantine

Empire spanned the long period from AD 330 when its capital city of Constantinople (Istanbul) was established by the Roman Emperor Constantine the Great (as part of the attempt to modify the structure of the Roman Empire to deal with barbarian invasions), to the year 1453, when the same city was captured by the Ottoman Turks.

Constantinople, a well-fortified city on the Bosphorus, commanded one of the most important routes between the European and Asian continents. The city was the heart of the Byzantine empire: the outer boundaries of which were constantly changing, as the empire annexed foreign territories and was in turn invaded. It generally comprised large parts of Anatolia, or Asia Minor, and the Balkans, as well as (for varying lengths of time during periods of expansion) southern Italy and Ravenna, Greece, Syria, Egypt and portions of Spain and the N African coast. Although the Byzantines referred to themselves as "Romans", their society was made up of many other elements. The traditions of Imperial Rome shaped their governmental institutions, the language and customs of Classical Greece moulded their cultural life, and orthodox Christianity, within which a series of heresies occurred, determined their religion.

The Byzantine state was, in theory, a continuation of the Roman Empire. While the Roman Empire in the W had fallen into decline after the Germanic invasions, the E provinces remained a centralized state. The Emperor Justinian I (r 527–65) reconquered much of the Mediterranean territory of the old Roman Empire and codified Byzantine law. Under the Heraclian emperors (610–717), the empire defeated its Persian enemies, but also faced the rise of Arab power, which continued to threaten its control of the Middle East. During the age of the Iconoclastic Controversy (717–843), the Iconoclast and Monophysite rulers dealt with severe internal crises. The Macedonian epoch (867–1025) is known as the Golden Age of the Byzantine Empire; it was a time of territorial consolidation and cultural flowering. The emperors of the Comnenian and Angelian dynasties (1081–1204) had to deal with the unpredictable and rapacious Crusaders, who besieged and stormed Constantinople in 1204. These crusaders ruled Byzantium during the dominion of the Latin Empire of the East (1204–61). Michael VIII, restorer of the Greek Empire, founded the Palaeologan dynasty (1261–1453). The area of the empire shrank rapidly under the attacks of the Ottoman Turks, who finally took Constantinople itself in 1453. See also pp 1247, 1270–1271, 1276–1277, 1354.

Byzantium, former name of Constantinople, during the Byzantine Empire.

C

C, third letter of the alphabet, derived from the Greek *gamma* and the Semitic *gimel*. It originally had a hard sound (like a *k*), but before *e*, *i* or *y* took on a sibilant sound (like *s*), or had an *h* added to create the *ch* sound. Followed by *a*, *o*, *u* or any consonant (except *h*) *c* normally has a hard sound in English.

Cabal, advisers to Charles II of England in 1667–74. The five members of this group, which is sometimes considered the first cabinet, were Clifford, Arlington, Buckingham, Ashley (later earl of Shaftesbury) and Lauderdale, the first letters of their names spelt "cabal". When it became known that two of them plotted with the king to tolerate Catholicism, the Cabal split up. See also p 1426–1427.

Caballé, Montserrat (1933–), Spanish soprano. She studied at the Liceo Conservatory in Barcelona and made her debut as Mimì in Puccini's *La Bohème* in 1957. She performed at the Metropolitan Opera in 1965, and has appeared in many of the world's leading opera houses.

Caballero, Fernán (1796–1877), Spanish novelist, real name Cecilia Bohí de Faber. She wrote of peasant tales and customs from Andalusia, and inspired the regional school in Spanish literature.

Cabaret, originally the name of any French restaurant where musical theatre, often of a satirical nature, was performed. The term has since been applied to the performances of singers, dancers and comedians who appear in modern nightclubs, either as solo performers or in lavish productions.

Cabaret, musical play with songs by John Kander and Fred Ebb, first produced on Broadway in 1966. Based loosely on Christopher Isherwood's Berlin novels, it is set in pre-Nazi Germany and portrays the decadence of the times. It was made into a highly successful film in 1972.

Cabbage, low, stout vegetable of the genus *Brassica*, first grown domestically in the E Mediterranean about 4,000 years ago and possibly taken to Europe by pre-Christian Celtic warriors. Members of the genus include Brussels sprouts, cauliflowers, broccoli and crops such as kohlrabi, rape and turnips. They are all biennials that produce "heads" one year and flowers the next. The common cabbage (*Brassica oleracea capitata*) is noted for its edible head and large, fleshy leaves. It is grown in a wide range of varieties classifiable by the shape of their heads, their growth cycle or their colour. They grow best in well-fertilized, amply watered soil in regions with a temperate climate. Early varieties develop heads about two months after seedlings have been planted out, whereas late varieties take about four months to mature. Family Cruciferae. See also pp 287, 684, 684.

Cabbage palm, any of several species of PALM whose young leaves are eaten as vegetables. They include cabbage palmetto (*Sabal palmetto*), which grows to 27m (90ft) tall and is native to the SE USA and the West Indies. See also p 286. **Cabbage rose**, flowering perennial cultivated in Europe since medieval times, especially in the Grasse district of France where attar of roses (rosewater) is manufactured from its petals. Family Rosaceae, species *Rosa centifolia*.

Cabbage Tree, largest plant of the LILY family, native to tropical and subtropical parts of the world. Palm-like in appearance, it has bushy crowns of long narrow leathery leaves at the end of its branches which are used for making paper. It produces fragrant cream flowers and white berries, and its decaying leaves are phosphorescent at night. Height to 12m (40ft). Species *Cordyline australis*.

Cabbage white butterfly, BUTTERFLY, the green caterpillar of which is a common pest on plants of the cabbage family. The female adult is almost completely white except for black spots on its wings; the male has no forewing spots. Species *Pieris brassicae*. See also p 42.

Cabala. See KABBALA.

Cabell, James Branch (1879–1958), US author who wrote a long sequence of novels set in an imaginary medieval kingdom called Poiticisme. The best-known is *Jurgen* (1919), others include *The Cream of the Jest* (1917), *Figures of Earth* (1921) and *The Silver Stallion* (1926).

Caber, Tossing the, athletic event popular at Scottish games. Cabers (trimmed tree-trunks) are not of any specified size but all are large and heavy, sometimes weighing 54kg (119lb) and 6m (19ft) long. The athlete holds the caber upright in his hands using his shoulder and head to support it. In a perfect throw ("12 o'clock toss") the caber turns end over end in the air and comes to rest with the top pointing in a straight line away from the competitor.

Cabet, Etienne (1788–1856), French political idealist. Elected to the French assembly (1831) he was convicted for treason because of fiery anti-government speeches. He went into exile in Britain (1834–39), where he developed communist ideas, and later in the USA. His *Voyage en Icarie* (1840) won adherents and several Icarian (utopian) communities were set up in the USA.

Cabeza de Vaca, Alvar Nunez (c 1490–c 1557), Spanish explorer. In 1528 he was shipwrecked off the Texas coast and with three other survivors was the first European to explore the American Southwest. He recorded his explorations in *The Shipwrecked Men* (1542). His *Comentarios* (1555) recounts hardships endured in South America, where he served as governor of the Rio de la Plata region (1542–45).

Cabimas, town in NW Venezuela, on the NE shore of Lake Maracaibo. An important centre for petroleum products, it is situated in the Ambosio oilfields, N of La Salina refinery. Pop. (1970 est.) 147,250.

Cabinet, body of the official advisors of a nation's chief executive, each of whom has the management of a department of state. It derives from Britain in the 18th century, when it slowly evolved from the king's council. In Britain cabinet ministers are chosen by the prime minister, but officially appointed by the Crown. A cabinet minister need not sit in either House of Parliament, but since the government is accountable to Parliament, he usually does. Most present-day cabinets have about 20 members. See also pp 1854, 1858.

Cabinet of Dr Caligari, The (1919), silent film directed by Robert Wiene starring Werner Krauss, Conrad Veidt and Lil Dagover. It was highly influential in the evolution of German expressionism, representing emotional anguish with the aid of bizarre sets, ambiguous story and odd camera angles.

Cabiri, group of deities, protectors of seafarers, usually associated with Thebes and Samothrace. Strange and powerful, they were approached, through oracles' intercession, by Jason, who hoped that they would protect his expedition.

Cable, in civil and mechanical engineering, a rope made by twisting together strands of (usually steel) wire. Cables vary in size from small ones in bowden cables to the massive ones from which the deck of a suspension bridge is hung. Originally, particularly on ships, cables were merely strong ropes, and a cable is a unit of length equal to a tenth of a nautical mile, approx 185m (608ft). In electrical engineering a cable is a conductor consisting of two or more insulated wires, which may be either single or multiple stranded. They also vary greatly in size, from the small cables used for domestic wiring to the large armoured cables of submarine telegraph and telephone lines. This latter use gave rise to the term "cable" for a telegram. In a COAXIAL CABLE one conductor is cylindrical and surrounds the other. See also pp 444, 445, 533, 535, 634–637.

Cable, coaxial. See COAXIAL CABLE.

Cable car, passenger vehicle for ascending and descending mountains, often used as a tourist facility. A car is slung from a trolley pulley running on a steel cable. It is moved along by a steel traction cable, continuously looped around terminal drums which are turned by an electric motor. In the USA a tram "powered" by a moving cable beneath the tracks is called a cable car.

Cabot, family name of two Italian-born British navigators and explorers. The father, John Cabot (c 1450–c 1498), sailed from England in search of a western route to India and landed at Nova Scotia and Newfoundland in 1497. On a second voyage in 1498 it is generally assumed that he reached America, although evidence is scanty. His son, Sebastian (1474–1557), accompanied his father in 1497. He continued to explore the Americas, and in 1509 reached Hudson Bay. He also directed an expedition to Russia. See also pp 1368, 1412, 1412.

Cabral, Luis de Almeida (1929–), West African politician. He founded the African Party for the Independence of Guinea and Cape Verde with his brother Amílcar in 1956 and worked for it until GUINEA-BISSAU became independent in 1974. He then became the country's first president. **Cabral, Pedro Alvares** (c 1467–c 1520), Portuguese navigator who discovered Brazil. In 1500 King Manuel I of Portugal sent him with a fleet of ships to the East

Indies. To avoid the Gulf of Guinea Cabral sailed westwards and reached Brazil, which he claimed for Portugal. **Cabrera Infante, Guillermo** (1929–), Cuban novelist and short-story writer. His novel *Tres tristes tigres* (1967), about Havana nightlife, was a satire on BATISTA's Cuba. His collection of short stories, *Así en la paz como en la guerra* (1960), is also set in the 1950s.

Cabriel, Frances, Saint (1850–1917), US foundress of numerous orphanages, hospitals, schools and convents, b. Italy. She became a nun in 1877. Prioress of an Institute of Missionary Sisters of the Sacred Heart in 1880, and went to the USA in 1889. She founded charitable establishments throughout the USA and Latin America. She was canonized in 1946. Feast 13 Nov.

Cacao. See COCOA.

Caccini, Giulio (c.1550–1618), Italian composer, one of the CAMERATA group of Florence which pioneered OPERA. His opera *Euridice* was the first to be printed (probably in Jan. 1601), and his *Le Nuove Musiche* (1602) was one of the most influential collections of vocal music in the new monodic or homophonic style.

Cachalot. See SPERM-WHALE.

Cacomistle, large-eyed, long-tailed, omnivorous member of the RACCOON family (Procyonidae). It has grey-brown fur with black and white rings on its bushy tail, and is both nocturnal and arboreal. Adult cacomistles grow to 76cm (30in) long. Species *Bassariscus astutus*.

Cactus, any of more than 2,000 species of succulent plants, found particularly in hot desert regions of the Western Hemisphere from Canada to Chile. The roots of the cactus are adapted to absorb moisture from desert terrains and the fleshy, well-developed stems are adapted for water storage. The green stems function as leaves and a waxy coating helps to restrict water evaporation. Cactus stems are usually spiny and cylindrical and often branched. Cactus flowers are usually borne singly and range in colour from white to red, purple and orange. Their height can range from less than 2.5cm (1in) to more than 15m (50ft). Cactu have become popular houseplants. Family Cactaceae. See also XEROPHYTE, p.316.

Cactus moth, small yellow or white moth with dark markings. A member of the Pyralidae family, its orange-red caterpillar destroys cactus plants and was introduced into Australia in 1925 as a biological control against prickly pear. Species *Cactoblastis cactorum*. See also p.346.

Cadbury, George (1839–1922), British manufacturer and social reformer. In 1879 he moved the family cocoa and chocolate factory to Bourneville, where he built a garden village for his employees. Its success influenced the GARDEN CITY movement. He also supported the movement for national insurance and pensions.

Caddisfly, any of several moth-like insects of the order Trichoptera. Adults have long, many-jointed antennae, hold their wings tent-like over the body and usually grow about 25mm (1in) long. Their larvae live in fresh water and are an important fish food. See also pp.9, 37, 324, 328, 329.

Cade, Jack (d.1450), English rebel who led a rising in 1450 in Kent and Sussex (Cade's Rebellion) against HENRY VI. Claiming to be a cousin of the Duke of York, and captain of Kent, he proposed administrative reforms. In May and June he and 40,000 followers marched on London, which they took over for two days. Cade returned to Sussex but was hunted, wounded and captured; he died while being taken back to London.

Cadence, in music, ending of a melodic phrase and/or its accompanying chord progression. In Western classical theory, the main kinds of chordal cadence are perfect (dominant to tonic chords), imperfect (tonic or other chord to dominant), plagal (subdominant to tonic), and interrupted (dominant to chord other than tonic, eg submediant).

Cadenzas, solo passage, usually before the final CADENCE of a musical movement or piece (eg CONCERTO, ARIA), in which an

instrument or voice shows its virtuosity. Many early cadenzas were improvised, in modern performances they are usually written out.

Cadillac, Sieur de, Antoine de la Mothe (1658–1730), French colonial administrator who went to North America in 1683. In 1701 he founded Detroit and served as its commandant (1704–10). Cadillac was governor of Louisiana (1710–16) until he fell into disfavour, he was recalled to Paris and imprisoned in the Bastille.

Cádiz, port in SW Spain, on the Gulf of Cádiz, capital of Cádiz province. Founded in 1100 BC by the Phoenicians, it was successively conquered by the Carthaginians, Romans, Goths and Moors. In 1493 COLUMBUS sailed from Cádiz on his second journey to the New World. It has a 13th-century cathedral, art and archaeological museums and the tomb of composer Manuel de FALLA. Industries: chemicals, paper, textiles, salt, shipbuilding, fishing. Pop. 135,700.

Cadmium, metallic element (symbol Cd) in group IIB of the periodic table, first isolated in 1817 by Friedrich Stromeyer. It is found in greenockite (a sulphide) but is mainly obtained as a by-product in the extraction of zinc and lead. Its main use is as a protective electroplated coating. Chemically it resembles zinc. Properties: at.no. 48, at.wt. 112.4; s.g. 8.65, m.p. 320.9°C (609.6°F), b.p. 765°C (1,409°F), most common isotope Cd¹¹⁴ (28.86%).

Cadmium processing, recovery of the rare metallic element cadmium from zinc and lead ores, in which it occurs as an impurity. It is obtained from the fumes eliminated during the heating of zinc concentrates, from the dust collected from gases from lead-blasting furnaces, and from various purification stages during the electrolytic refining of zinc.

Cadogan, William, 1st Earl (1672–1726), English soldier and diplomat. A close associate of the Duke of MARLBOROUGH, he fought in the War of the Spanish Succession, helped to put down the Jacobite uprising in 1716 and became army commander in 1722. As a diplomat, he helped to arrange the accession of GEORGE I.

Cadre, military term for a nucleus of officers and key enlisted men who train and lead a larger unit. In political and social science, a cadre is the trained and motivated core of a movement or party, the term is also applied to individual members of the group.

Cadwalader (d.1171), Welsh prince, son of King Gruffydd of North Wales (Gwynedd). After having been exiled by his brother Owain to Ireland he returned with an army which mutinied after Cadwalader made peace with his brother. He was blinded by his troops.

Cecilian, underground burrowing amphibian found in central and South America, Asia and Africa. Its worm-like body varies from approx. 18 to 135cm (7–53in) in length and its colour from black to pink. There is a sensory organ between the eyes, which are tiny and often useless. See also pp.3, 64–65.

Cecum, in human beings, the pouch at the beginning of the large intestine. It opens to admit partly digested food from the small intestine and closes to prevent it passing back. The APPENDIX joins the caecum. See also pp.160, 161.

Cedmon (fl.670), earliest-known English poet. According to Bede, he was an illiterate herdsman of Whitby Abbey, Yorkshire, who was commanded in a vision to turn the scriptures into poetry. His only surviving authentic work is probably the brief *Hymn on the Creation*.

Cen, city and port in N France, on the Orne River; capital of Calvados département. Many of its buildings were destroyed in WWII, although the 11th-century Abbaye Aux Hommes (burial place of WILLIAM THE CONQUEROR) survived. The university (founded in 1432) had to be rebuilt. Industries: iron ore mining, textiles, motor vehicles, electronic equipment. Pop. (1968) 110,260.

Caerleon, town on the River Usk in SE Wales, on the outskirts of Newport. In Roman times it was the military fortress of Isca, and there are remains of the amphitheatre, baths and soldiers' quarters.

Caerleon is considered by some people to be CAMELOT. See also p.1318.

Caernarvon, market town in NW Wales, on the Menai Strait, formerly the county town of Caernarvonshire, which became part of Gwynedd in 1974. It has the ruins of a Roman fortress (AD 70–80) and a 13th-century castle built by Edward I in which his son Edward II was born in 1284 and crowned the first Prince of Wales in 1301. The Princes of Wales are now invested there. The principal industry is tourism. Pop. 9,300. See also p.1339.

Caernarvonshire (Caernarfon), former county in N Wales, now part of GWYNEDD. Livestock rearing is the most important activity as much of the terrain is mountainous and therefore agriculturally unproductive. Tourism and slate quarrying are also valuable sources of income.

Caerphilly (Caerffili), market town in Mid Glamorgan, S Wales. It has a Norman castle and was noted for its cheese-making industry (now ceased). It has light industry. Pop. (1971) 40,700.

Caesalpino, Andrea. See CESALPINO, ANDREA.

Caesar, name of classical Roman family of the patrician Julian gens, or clan. The most illustrious representative was Julius CAESAR. The name became the title for the Roman emperor in 27 BC on the accession of Octavius (later AUGUSTUS), who had acquired it by adoption from Julius, in 44 BC. The name was retained by Augustus' successors until the time of HADRIAN, who made Augustus the name for the emperor. Caesar then became the name for the heir apparent. The Russian Tsar and German Kaiser are derived from it.

Caesar, Gaius Julius (100–44 BC), Roman general and statesman. He married Cornelia, daughter of Cinna, an associate of MARIUS, and after the death of SULLA Caesar became military tribune and leader of the popular party against the Senate. As *pomifex maximus* he directed reforms in 63 BC that resulted in the Julian calendar. He formed the first Triumvirate in 60 BC with POMPEY and CRASSUS, and instituted agrarian reforms, created a patrician-plebeian alliance and successfully conquered Gaul for Rome in 58–49 BC. In 54 BC Caesar led a successful military campaign in Britain. He refused Senate demands that he disband his army and engaged in civil war with Pompey, defeating him at Pharsalus in 48 BC. He pursued Pompey to Egypt where he met CLEOPATRA. He returned to Rome in 45 BC using the title of dictator, but refusing that of king. He was assassinated in the Senate on 15 March 44 BC by a conspiracy led by CASSIUS and Marcus BRUTUS, and he bequeathed his wealth and power on his grandnephew Octavian (later AUGUSTUS) who, with Mark ANTONY, avenged his murder. See also pp.1230–1231.

Caesarea, ancient city of Israel, on the Mediterranean Sea, 35km (22 miles) S of Haifa (Hefa). It was a Roman capital of Palestine and the site of St Paul's imprisonment (57–59 AD). In 66 AD it was the scene of a massacre of Jews who demanded Roman citizenship. The Saracens destroyed the city in 1291. It is noted for its Roman theatre.

Caesarean section. See BIRTH, CAESAREAN.

Caesium, rare metallic element (symbol Cs) of the alkali-metal group, discovered in 1860. Caesium has a few commercial uses. Chemically it is an extremely reactive electropositive element. The decay rate of the isotope Cs¹³⁷ is used in defining the second. Properties: at.no. 55, at.wt. 132.9055; s.g. 1.87; m.p. 28.5°C (83.3°F); b.p. 690.0°C (1,274°F); most common isotope Cs¹³³ (100%). See also ALKALI ELEMENTS, ATOMIC CLOCK.

Caffarelli (1710–83), real name Gaetano Majorano, Italian CASTRATO. Although quarrelsome and consistently badly-mannered, he was a superb soprano, widely celebrated in the opera houses of Europe. He amassed a huge fortune that enabled him to purchase a dukedom.

Caffeine (C₈H₁₀N₄O₂), white, bitter ALKALOID that occurs in coffee, tea and other substances such as cola nuts, ilex (holly) plants and cocoa. In beverages it

Cacomistles feed on fruit, mice, lizards, birds and insects, they make a barking sound.

Caddisflies make up a large and important segment of the life of aquatic communities.

Cádiz, a 19th-century print of The Avenue of Poplars in the great Spanish port.

Julius Caesar became established as a military genius in the Gaul campaigns.

Cairn terriers were named for their ability to dig under the heaps of stones called cairns

Cairo, an early 19th-century print of the main square of Africa's most populous city

Calabash gourds' hard, tough outer shell can be used as cooking pots over an open fire

Calination, the heating of solids to a high temperature, is a process of purification

acts as a mild and harmless stimulant although an excess dose can cause insomnia and delirium

Cagaba, or Kágaba, Chibcha-speaking tribe of about 2,000 South American Indians occupying parts of NE Colombia. They are thought to be descendants of the pre-Columbian Tairona. They are noted for their weaving

Cage, John (1912–), controversial US avant-garde composer. Two of his ideas are the concept of "total soundspace" (that all sounds, including noises, and silence, are valid compositional materials) and the use of chance composition. His compositions include *Bacchanale* (1938) and *Sonatas and Interludes* (1946–48) for prepared piano" (modified by fixing objects to the strings). *Imaginary Landscapes* (1951) for 12 randomly-tuned radios, and *Reunion* (1968), electronic sounds created by chess moves on an electronic board. See also p.1755

Cagliari, port in S Sardinia (Sardegna), Italy, capital of Cagliari province and of Sardinia region. Vital naval and air bases at Cagliari were destroyed by Allied bombing during WWII. Historical landmarks include a Roman amphitheatre, the Cathedral of St Cecilia (1257–1312) and a 5th-century church. Industries: ceramics, petrochemicals, textiles, building materials. Pop. (1971) prelim. 231,670

Capriosto, Count Alessandro di (1743–95), Italian freemason and self-styled alchemist. He earned a reputation throughout Europe for his supposed powers of prediction and knowledge of the elixir of youth. In 1789 he was charged with heresy and died in prison

Cagney, James (1899–), US actor. He began his career as an actor and dancer and became a Broadway success in *Maggie the Magnificent* (1929) and in *Penny Arcade* (1930). He made many films and is possibly best known for his gangster role in *Public Enemy* (1931), which launched his film career. He won an Academy Award in 1942 for his portrayal of the US showman George M. Cohan in *Yankee Doodle Dandy*

Capoulauds, also called Hooded Men secret, masked French terrorist organization. Its full name was the Comité Secret d'Action Révolutionnaire (CSAR). It was set up in the 1930s by Henri Dorgeres to support extreme right-wing causes

Caguas, municipality and city in E central Puerto Rico. The products of the municipality, 150sq km (58sq miles) in area include tobacco, fruits and vegetables. The industries of the city, which is the country's largest inland settlement include glass, plastics and electronics. Pop. (1970) Mun. 94,959, city 62,807

Chokoma mounds, large prehistoric American earthworks, situated in Illinois and named after the Cahokia tribe who inhabited the area in ancient times. They are in a group of about 85, the highest at 30.5m (100ft) (Monks' Mound) taking the form of a four-sided pyramid

Caiman, or cayman, any of several species of Central and N and S South American reptiles of the ALLIGATOR family. They include the small, heavily-armoured smooth cayman (*Paleosuchus ingonatus*) and dwarf cayman (*P. palpebrosus*), the spectacled cayman (*Caiman crocodilus*), and the large, fierce black cayman (*Melanosuchus niger*)

Cain, in the Bible (Genesis) first born son of ADAM and EVE and brother of ABEL. Because God accepted Abel's offering in preference to his own, Cain murdered Abel in anger. Driven from the Garden of Eden, he was forced to live in exile with his family

Cain, James Mallahan (1892–1977), US author noted for his realistic novels of crime and violence. These include *The Postman Always Rings Twice* (1934) and *Double Indemnity* (1936). Many of his novels have been made into films

Caine, Sir Thomas Henry Hall (1853–1931), British novelist who lived in the Isle of Man. He was secretary to the poet Dante Gabriel Rossetti and wrote *Recollections of Rossetti* (1882). His novels include *The Deemster* (1887), *The Eternal*

City (1901) and *The Prodigal Son* (1904). **Caine Mutiny, The** (1951), novel by Herman Wouk. It deals with a mutiny against a paranoid captain on a US minesweeper and the subsequent court martial of an officer involved in the mutiny. It was dramatized as *The Caine Mutiny Court Martial* (1954) and made into a film (1954)

Caingang (Kaingang), Ge speaking tribe of about 25,000 South American Indians. They inhabit the states of São Paulo, Santa Catarina and Rio Grande do Sul in BRAZIL

Cainozoic. See CENOZOIC PERIOD

Cairn, rough heap of stones, usually cone-shaped. In the Neolithic and Bronze Ages more complex cairns were built over burial places. Found throughout the world their other uses include landmarks, road markers, makeshift altars (in the Middle Ages) and monuments

Cairngorms, range of mountains in N central Scotland, in Grampian region. The highest peak is Ben Macdui, 1,309m (4,296ft), the second highest point in the British Isles

Cairns, port in Queensland, NE Australia on Trinity Bay. Its proximity to the Great Barrier Reef has made it a popular tourist resort. Its industries include sugar, timber and tobacco. Pop. (1975) 35,200

Cairn terrier, small working dog bred in W Scotland to resemble the terners of Skye and renowned for its hunting of foxes and badgers. Standing about 25cm (10in) high at the shoulder, cairns have small, broad heads, short legs and coats of almost any shade and weigh about 6.5kg (14lb)

Cairo (At-Qahirah), capital city of Egypt and port on the River Nile near the head of the delta. It includes two islands in the Nile, Zamalik and Rawdah, which are linked to the mainland by bridges. Cairo was founded in AD 968 and includes Old Cairo, a Roman fortress city. Built on high ground to avoid the Nile floods, the city became the capital in 969. It is the site of the sphinx and pyramids of Giza dating from 2,500 BC. There are more than 400 museums, temples, palaces and mosques. Industries: textiles, iron and steel, sugar refining. Pop. (1974) 5,715,000

Caisson, watertight structure or chamber used in underwater excavation or construction. It allows men to work underwater and makes it easier to remove excavated material. Caissons are frequently used in building bridges, where they keep out water during the construction of a foundation. They may be open, with "walks" that project above the surface of the water, or closed at the top and submerged (pneumatic caissons), using air pressure to exclude water

Caisson disease. See BENDS

Caithness, former county in NE Scotland, now part of Highland Region, the county town was Wick. It has a rugged moorland terrain and the main occupations are sheep farming and fishing. Area 1,784sq km (686sq miles). Pop. 27,481

Caius, also Gaius, Christian priest in late 3rd century Rome. His reference to the "apostles", cited by the ancient church historian EUSEBIUS, has played an important role in the discussions about the excavations under ST PETER'S Basilica in Rome

Caius, John (1510–73), English physician and anatomist, court physician and president of the College of Physicians. In 1557 he endowed Gonville Hall, Cambridge, re-naming it Gonville and Caius College

Cajal, Santiago Ramon y. See RAMÓN Y CAJAL, SANTIAGO

Calchiquel, major division of the Q'UICHE MAYA Indians, living N and NE of Lake Atitlan and Guatemala City in Central America. Numbering approx. 340,000 and inhabiting villages in the Guatemala highlands, they are renowned weavers and retain many of their ancient traditions

Calceat, a dance popular at the turn of the 20th century. Originated by southern Blacks it is characterized by fanciful strutting. Its name probably comes from the custom of awarding a pastry prize to the performer of the most complex steps

Calobau, Ratu Sir George (1911–), Fijian politician. He was minister for foreign affairs and local government

(1970–71), and minister without portfolio (1971–72). In 1973 he was knighted and made governor-general of Fiji

Calabash gourd, or bottle gourd, fast-growing, tropical annual vine with oval leaves, white flowers and a musky smell. It reaches a length of 9–12m (30–40ft). Its smooth, hard fruit is bottle shaped and grows to 180cm (6ft) long. Species *Lagenaria vulgaris*. See also p.373

Calabria, region in S Italy, including the provinces of Catanzaro, Cosenza and Reggio di Calabria. The capital is Reggio di Calabria. The area was colonized by the Greeks, but its fortunes declined under Roman rule. Economic development has been hampered by rugged terrain, poor communications and the feudal landholding system. Products: grain, citrus fruits, olives, figs, wool, hydro-electric power. Area 15,080sq km (5,822sq miles). Pop. (1971 est.) 1,508,000

Caladium, genus of tropical American plants of the ARUM family. They are cultivated (often as houseplants) for their brilliantly coloured and variegated, triangular or arrow-shaped leaves. These are veined and mottled in various shades of red, green and yellow, and are carried on long stems from underground tubers

Calais, city in N France, on the Strait of Dover. It has been a major commercial centre and port since the Middle Ages. It fell to the English in 1347 and a Rodin monument commemorates the six burghers who offered their lives to save the town. It was returned to the French in 1558. Heavy fighting during WWII destroyed much of its fine architecture. Industries: lace making, chemicals, paper. Pop. 70,000. See also pp.1346, 1410

Calamity Jane (c. 1852–1903), US frontier figure, real name Martha Jane Canary. She worked in mining and railroad camps in the western USA and with the US cavalry as a guide and scout. She was a fine horse woman and expert shot, and featured in various Wild West shows

Calceolaria, genus of shrubby or other herbaceous plants with colourful, slipper-shaped flowers, commonly called slipper-flower. Members of the FICUS family, calceolarias are native to the Andes of Chile and Peru, but are now widespread garden and houseplants

Calciferol (vitamin D₃), fat soluble VITAMIN formed by the action of sunlight on the skin and further converted into compounds necessary for the intestinal uptake of dietary calcium for bone formation. See also pp.146, 147

Calcination, process of heating solids to high temperatures (but not to their fusion point) to remove volatile substances, partially to oxidize them, or to render them friable. Lead, zinc, calcium, copper and iron ores calcine to agglomerated oxides, used as coloured pigments or as intermediates in metal extraction

Calcite, mineral, calcium carbonate (CaCO₃). It is found in many kinds of rock, e.g. limestone. The crystals are in the hexagonal system and vary in form from tabular (rare) to prismatic or needle-like. Calcite may be glassy white and fluoresces red, pink or yellow, hardness 3, s.g. 2.7. A transparent variety is used in optical instruments. See also pp.258–259

Calcium, common metallic element (symbol Ca) of the ALKALINE-EARTH group, first isolated in 1808 by Sir Humphry DAVY. It occurs in many rocks and minerals, notably LIMESTONE and GYPSUM, and in bone. The metal has few commercial applications but its compounds are widely used. Chemically it is a reactive element, combining readily with oxygen, nitrogen and other non-metals. Properties: at no 20, at wt 40.08, s.g. 1.55, m.p. 839°C (1,542°F), b.p. 1,487°C (2,709°F), most common isotope Ca⁴⁰ (96.95 per cent)

Calcium bicarbonate, salt that is responsible for temporary HARDNESS of water, i.e. the hardness removed when the water is heated. Insoluble calcium carbonate then precipitates from the water (forming a "fur" inside pipes and kettles), as it does also when water drips inside caves. STALAGMITES and STALACTITES are thus formed. See also pp.218–219

Calcium carbide, CaC₂, chemical made by

heating coke and lime in a furnace. It is used mainly for the manufacture of acetic (ethanoic) acid and acetaldehyde (ethanal). It reacts with water to release the gas ACETYLENE , which burns with a luminous flame, for this reason it was once much used in carriage and engine lamps. **Calcium carbonate**, CaCO_3 , white compound, insoluble in water, that occurs naturally as marble, chalk, limestone, calcite, "kettle fur", etc. It is used in the manufacture of cement and lime, and as a constituent of antacids and dentifrices. Properties: s.g. 2.7-2.93 (calcite), decomposes at 825°C ($1,517^\circ\text{F}$).

Calcium oxide, CaO , quicklime or unslaked lime, a white solid used industrially mainly for making bleaching powder, caustic soda, mortar and cement, and in the recovery of ammonia from the ammonia-soda process. It reacts with water to form calcium hydroxide, or slaked lime, Ca(OH)_2 , much used in laboratories for the detection of carbon dioxide gas, CO_2 . Calcium oxide was used in the 19th century for producing limelight illumination, an incandescence that occurs when coal-gas is burned in air against a block of quicklime.

Calcium sulphate, CaSO_4 , chemical that occurs naturally as the mineral ANHYDRATE. The hydrated form, $\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$, is the mineral GYPSUM, which, when heated, loses water to form the half-hydrate $2\text{CaSO}_4 \cdot \text{H}_2\text{O}$, or PLASTER OF PARIS. This, when mixed with water, quickly sets hard to a crystalline form of the hydrate. See also pp.218-219.

Calculating machines. See COMPUTER. **Calculus**, branch of higher mathematics involving the operations of differentiation and integration. It has two branches: differential calculus and integral calculus, both concerned with the limiting values of a function as the increment of a variable tends to zero. Differential calculus enables the calculation of the rate at which one quantity changes with respect to another. It is used in finding slopes of curves, velocities, accelerations, etc. Integral calculus is used in finding the areas enclosed by curves and in solving related problems. See also pp.792-793.

Calcutta, city in E India, on the Hooghly River; capital of West Bengal state, second largest city and chief port in India. Founded c.1690 by the EAST INDIA COMPANY, it was the capital of India under the British from 1772 until 1912. It has a university (1857), an Indian Museum, and the Maidan, a large riverside park which is one of the more attractive parts of a city that suffers much overcrowding and poverty. The major industrial and transport centre of E India, Calcutta is one of the world's largest jute-milling centres. Its other industries include electrical equipment, cotton textiles and food processing. Pop. 3,148,746. See also p.1699.

Calcutta Cup, trophy awarded to the winner of the annual England-Scotland rugby union international. If a draw results, the holder retains the cup. It was given in 1878 by the Calcutta (India) club. England (1951-63) holds record tenure. **Caldecott, Randolph** (1846-186), English illustrator. His illustrations of Washington Irving's books enjoyed enormous popularity. He also illustrated a series of 16 children's books in colour including *The House that Jack Built* and *John Gilpin* (1878).

Calder, Alexander (1898-1976), US sculptor, creator of the mobile, a delicate, colourful, kinetic sculpture with parts that move either by motors or air currents. In Paris in the 1930s Calder was influenced by Joan Miro and Piet Mondrian and broke new ground with his "stabiles", wire figure sculptures that did not move. These led to the development of the mobile, a famous example of which is *125 at Kennedy Airport*, N.Y.

Calder, Peter Ritchie-Calder, Baron Ritchie, (1906-), British author, scientific, social and political journalist and broadcaster. Originally a newspaper reporter (1922-41) he went on to work for many other publications and gained a reputation as a popularizer of scientific subjects. He has worked in several universities and has

had a distinguished career in international relations, working for UNISCO, who and other UNITED NATIONS organisations.

Calder Hall, English nuclear power station in Cumbria. The world's first commercially operating nuclear reactor, work started on it in 1953 and it opened in October 1956. It is gas-cooled and uses a graphite moderator. It is called a "Magnox" station because the natural uranium fuel rods are encased in a magnesium alloy.

Caldera, large shallow crater formed when a volcano subsides due to the migration of the MAGMA under the earth's crust. The caldera of an extinct volcano, if fed by floodwater, rain or springs, can become a crater lake. See also p.204.

Calderón de la Barca, Pedro (1600-81), Spanish dramatist and priest. In 1635 he became court playwright to Philip IV and wrote for the court, church and public theatre. His *Autos sacramentales*, religious dramas for the festival of Corpus Christi, are among his finest works. His best-known plays include *La vida es sueño* (c.1638) (Life is a dream) and *El alcalde de Zalamea* (c.1640) (The Mayor of Zalamea).

Calderón, Ventura García. See GARCÍA, CALDERÓN, VENTURA.

Caldwell, Erskine (1903-), US author, noted for his humorous novels and short stories dealing with the impoverished country people of the southern states of the USA. Some of his best-known works are *Tobacco Road* (1932) and *God's Little Acre* (1933).

Caldwell, Zoe (1933-), Australian-born actress. She starred in many plays at the Shakespeare Theatre at Stratford-on-Avon in England, and in 1966 made her Broadway debut in *Slapstick*, for which she won the New York Drama Critics' Award. In 1968 she won the award again for her role in *The Prime of Miss Jean Brodie*.

Caldy Island (Ynys Byr), island 3.6km (2.3 miles) off the SW coast of Wales, in Carmarthen Bay. It is owned and inhabited by Cistercian monks. Area: 200 hectares (500 acres).

Caledonia, ancient Roman name for northern Britain, now used poetically for the Highlands or for the whole of Scotland. It was invaded by the Roman general ADRIANUS in AD 82. The word was first used in the writings of Lucan in the 1st century AD. **Caledonian Canal**, waterway running SW to NE across Scotland, through the Great Glen from Loch Linnhe to the Moray Firth. A series of canals link lochs Lochy, Oich, Eha and Ness. Length: 97km (60 miles).

Calendar, way of reckoning time for regulating religious, commercial and civil life, and for dating events in the past and future. Calendars have been in use since the earliest times. The Ancient Egyptians had a system based on the movement of the star Sirius and on the seasons. Calendars are based on natural and astronomical regularities: the tides and seasons, the movements of the Sun and Earth and the phases of the Moon. The basic units are the day, month and year. The Earth turns once a day on its axis, the Moon goes round the Earth once a lunar or synodic month (29.53059 days), the Earth takes one year to complete a revolution round the Sun - reckoned as a TROPICAL YEAR this is 365.242199 days. The main difficulty in compiling a calendar is that the month is not an exact number of days and the year not an exact number of months. For convenience, months and days are assigned a whole number of days, and extra days (called intercalations) are added at intervals to compensate. In the modern Gregorian calendar an extra day (29 Feb.) is added every four years (leap years). The Gregorian or New Style calendar was based on the Julian or Old Style solar calendar. This was introduced by Julius Caesar in the 1st century BC and was developed from an earlier Roman moon-based calendar. See also pp.1964-1965.

Calgary, city in Alberta, Canada, at the confluence of the Bow and Elbow rivers. It was founded in 1875 as a post of the Royal Canadian Mounted Police. It is

noted for the Calgary Stampede, an annual rodeo. An industrial and commercial centre, it has a university (1945) and its industries include flour milling, lumber, brick, cement and oil refining. Pop. (1974) 403,320.

Call, city in W Colombia on the River Cali, founded in 1536. It was damaged in 1885 by an earthquake. The Cauca Valley Authority was established in 1954 to develop land reclamation, electric power and control flooding. The city has an old aqueduct, a cathedral and two universities. Industries: tourism, tobacco, textiles, paper. Pop. 898,253.

Calibration, testing of scientific instruments for the purpose of affixing measuring scales. For example, thermometers are calibrated in degrees of Fahrenheit, Celsius or Kelvin, and pressure gauges are calibrated in lb/sq ft or kg/sq m. All calibrations are based on fundamental standard units of length, temperature, etc., most particularly the SI, or International System, of units.

Calico, plain woven cotton cloth, often white but also dyed and block-printed. It is named after its place of origin, Calicut, India. It became a general term for Oriental plain weave cottons. Calico was the staple textile product of the early industrial revolution in England.

California, state in W USA on the Pacific coast, the largest state by population and the third largest in area. There are Coast Ranges running N to S, paralleled by the high Sierra Nevada in the N, between which lies the fertile Central Valley, drained by the Sacramento and San Joaquin rivers. In the SE is a broad desert area. With an all-year growing season and vast irrigation projects, the state is the leading producer of many crops, including a wide variety of fruit and vegetables. Poultry and dairy produce are also important, as is the fishing industry. Forests covering about 40% of the land support an important timber industry. Mineral deposits include oil and natural gas, and a variety of ores valuable in manufacturing, which is the largest sector of the economy. Industries include aircraft, aerospace equipment, electronic components, missiles, motor vehicles, communications equipment, chemical and petroleum products, cement and paper. Tourism is also an important industry. The capital is Sacramento, and the major cities are Los Angeles, San Francisco, Oakland and San Diego. The Spaniards explored the coast in 1542, but the first settlement was in 1769, when Spaniards from Mexico founded a Franciscan mission at San Diego. The area became part of Mexico, then a Spanish colony, and government land grants were used to establish huge cattle ranches. Settlers came from the USA and in 1846, early in the Mexican War (1846-48), US forces occupied California, which was ceded to the USA at the war's end. After gold was discovered in 1848, the GOLD RUSH swelled the population from 15,000 to 250,000 in four years. In 1850 California joined the Union. Since the turn of the century, the discovery of oil and the development of service industries have attracted more and more settlers to California. Area: 411,013sq km (158,693sq miles). Pop. (1975 est.) 21,185,000.

California, Lower. See BAJA CALIFORNIA. **California Current**, Pacific Ocean current that flows S along the W coast of North America. It is part of a clockwise current of the entire N Pacific, and carries cool water from the Aleutian current. See also p.235.

Californian poppy, plant native to the western seaboard of the USA, having a glossy red or orange flower 5cm (2in) or more in diameter. It grows up to 1m (3.2ft) tall. It was brought into general cultivation as a result of the work of David Douglas (1798-1834). Family Papaveraceae, species *Eschscholzia californica*. **California redwood**, *Sequoia sempervirens*, conifer related to the swamp cypresses that grows to a height of more than 100m (330ft) and is thus one of the tallest of all trees. Its close relative, also from California, is the less common big tree or wellingtonia (*Sequoiadendron giganteum*).

Calcutta, a peaceful oasis in this desperately populous city is the Jain Temple of Badri Das

Alexander Calder's work reflects the vision of an artist who was originally an eng near

Calder Hall, England, the world's first commercially operating nuclear power station

California homes nestle in the wooded slopes of Hollywood, Los Angeles' famous suburb

Californium

Maria Callas, the world famous soprano whose life and art were filled with drama

Calvin (right) and **Luther** the two great rights of the reformation in 18th century Europe

Cams transform rotary or oscillating motion into linear or other motions by direct contact

teum), which is the heaviest tree in the Western world. Sequoias live to be more than 4,000 years old. See also p.368

Californium, radioactive metallic element (symbol Cf) of the actinide group, first made in 1950 at the University of California, Berkeley, by alpha-particle bombardment of Curium 242. Properties: at no 98, most stable isotope Cf²⁵¹ (half-life 800 yr)

Caligula, **Gaius Caesar** (AD 12-41), Roman emperor (r AD 37-41), great-nephew of Tiberius. The Senate and army made him emperor, but he became mentally disturbed, and his reign was cruel and absurd. Soldiers of his bodyguard killed him and made **CLAUDIUS** emperor. See also p.1232

Caliph, leader of the Muslim community. After the death of **MOHAMMED**, **ABU BAKR** was chosen to be his caliph (successor). Later the caliphate moved often, and was controlled by the dominant dynasty within Islam at the time. The title remained with the Ottoman sultans (1517-1924), after which it was abolished. See also pp.1278-1279, 1282-1283

Calixtus, name of three popes. **Calixtus I** (r 217-22) a former slave, was attacked for his leniency towards sinners, but formed the Church's doctrine of penance. **Calixtus II** (r 1119-24), a Burgundian, engaged in conflicts with the Holy Roman Emperor over lay investiture, and came to a compromise with him on the issue in the Concordat of Worms in 1122. **Calixtus III** (r 1455-58), b. Alfonso de Borgia (1378-1458), a Spaniard, proclaimed an abortive crusade in 1455 and, by favouring members of his own family, established the influence of the Borgias.

Callaghan, Leonard James (1912-), British Labour politician. He entered Parliament as member for Cardiff South in 1945 and sat for Cardiff South-east from 1950. He was elected leader of the Labour Party and was Prime Minister from 1976-79. He is the only Prime Minister in British history to have held all three of the major offices of state: Chancellor of the Exchequer (1964-67), Home Secretary (1967-70) and Foreign Secretary (1974-76). Following the Labour defeat in 1979 he resigned as party leader.

Callaghan, Morley Edward (1903-), Canadian author. He was a friend of Ernest Hemingway (who encouraged him to write) and later met Scott Fitzgerald in Paris. His first novel was *Strange Fugitive* (1928). Later novels included *More Joy in Heaven* (1937), *The Loved and the Lost* (1951) and *That Summer in Paris* (1963).

Calla lily, flowering plant of the ARUM family (Araceae) native to South Africa. It has brilliant white flowers and arrow-shaped leaves, and is a popular houseplant. It grows to a height of 90cm (3ft) or more. Genus *Zantedeschia*. See also LILY

Callao, city on the central west coast of Peru, approx. 13km (8 miles) w of Lima, it is Peru's chief port. Founded in 1537 by Francisco Pizarro, the original city was destroyed by a tidal wave and earthquake in 1746. Today it is a commercial centre, with flour milling, brewing and sugar refining industries. Pop (1970 est.) 335,400

Callard, Sir Jack (1913-), British industrialist. He joined ICI in 1935 and was chairman of the company 1971-75. In 1971 he also became a member of the Royal Institution and a fellow of the Royal Society of Arts.

Callas, Maria (1923-77), Greek soprano. She studied at the Athens Conservatory and made her debut in Verona in 1947. Her successes at La Scala Opera House, Milan, from 1951, and at Covent Garden from 1952, established her reputation as a leading singing actress. She made her Metropolitan Opera debut in 1956 in *Norma*. Noted for her stormy personality, she made few appearances after 1960.

Callistrates (5th century BC) Greek architect. With the architect Ictinus, he designed and directed the building of the **PARTHENON** at Athens (447-438 BC). He also designed the Temple of Athena Nike. See also p.1212

Calligrammes, collection of poems by Guillaume Apollinaire (1880-1918)

written during 1913-16, published in 1918. The poems are experimental, often lack conventional punctuation, and sometimes use pictorial typography, eg. in *Il Pleut* the printed letters trickle down the page like water.

Callimachus (c.300-240 BC) Greek poet, the most important of the Hellenistic period. Among his best-known works were the *Aetia*, or *Causae*, a discussion of the origins of myths, legends, and rituals, and the *Lock of Berenice*, a celebration of the Egyptian Queen Berenice.

Calliope, Greek muse of epic poetry. One of the nine daughters of Zeus and Mnemosyne, she had two daughters by Apollo, and was the mother of ORPHEUS.

Callisthenes of Olynthus (c.360-c.328 BC), Greek philosopher and historian. He was a nephew of Aristotle and accompanied Alexander the Great into Asia as historian. He later criticized Alexander, was accused of plotting against him, and died in prison. His works include a history of Greece from 386-355.

Callisto, satellite of Jupiter; one of the satellites first seen by Galileo. Its diameter is 5,720km (3,553 miles), its mean distance from the planet 1,070,000km (665,000 miles), and its mean sidereal period 16.75 days. See pp.964, 964.

Call Me Madam, musical play with songs by Irving Berlin and book by Russell Crouse and Howard Lindsay, first produced on Broadway in 1950, starring Ethel Merman.

Call of the Wild, *The* (1903), novel by Jack London. It tells of a dog, Buck, and his conflicts with man and nature as he journeys farther and farther north. When its last master is killed, Buck responds in the call of nature and joins a wolf pack.

Callot, Jacques (1592-1635), French engraver and master of the technique of etching, a form of print-making that he learned in Italy and later popularized in France. His work ranges from battles, crowd scenes and court festivities to grotesque portrait figures, but he is best known for his *Les Grandes Misères de La Guerre* (1633), illustrating the brutalities of the THIRTY YEAR WAR.

Calomel, mercurous chloride, Hg₂Cl₂, chemical used in medicine as a purgative. Its use has declined as it may dissociate into mercury and the poisonous mercuric chloride, corrosive sublimate HgCl₂.

Caloocan, city in Luzon, the Philippines. Incorporated in 1963, it is actually part of Greater Manila and its primary function is that of a dormitory suburb. It is now developing its own industries. Pop (1975) 364,126.

Calorie, measure of heat energy: the amount of heat required to raise one gram of water one degree Celsius between the temperatures of 14.5 and 15.5 °C. In the SI system the calorie is replaced by the JOULE (1 calorie = 4.1855 joules). The large or kilocalorie (Cal) is used in nutritional studies. See also p.843

Calorimeter, apparatus used for experiments involving heat measurements, typically having a conducting container, thermally insulated, and means of supplying heat and measuring temperature. There are many types, each designed for a special purpose, eg. measurement of specific heat capacities, latent heats, heats of reaction and heats of formation.

Calumet, or **peace pipe**, ceremonial tobacco-pipe of American Indians, smoked on ceremonial occasions or as a devotional exercise. The pipe was symbolically decorated, and the smoke was considered a medium of communication with the spirit world.

Calvados, apple brandy made in the Calvados département of NE France. The health-giving qualities of this liqueur are particularly acclaimed. Cider and the cheeses of CAMBERT and Pont l'Évêque are also produced in this region.

Calvary, place where Jesus was crucified. It was called Calvary by St Luke, St John, St Matthew and St Mark refer to it as Golgotha. Calvary has most often been located near the Church of the Holy Sepulchre in Jerusalem, but a small hill called 'Gordon's Calvary' has also been proposed as the site.

Calvert, Edward (1799-1883), British painter and engraver. His work is marked by sensitivity and rich detail. His works include the engravings *The Return Home*, *The Ploughman* and *The Bride*, all of which were produced from the 1820s onwards.

Calvin, John (Jean) (1509-64), French theologian of the Reformation. He first prepared for a career in the Catholic Church but then turned to the study of classics. Around 1533 he became a protestant and began work on his *Institutes of the Christian Religion*. In this work he presented the basics of what came to be known as Calvinism. To avoid persecution, he went in 1536 to stay in Geneva, where he advanced the Reformation. See also pp.1403, 1450.

Calvin, Melvin (1911-), US chemist who did fundamental research into the mechanism of PHOTOSYNTHESIS, for which he was awarded the 1961 Nobel Prize in chemistry.

Calvinism, doctrines and attitudes derived from or strongly influenced by the Protestant theologian John Calvin (1509-64), as expounded in his *Institutes of the Christian Religion* and propagated by the Churches (Reformed and Presbyterian) established in his tradition. Rejecting papal authority and relying on the Bible as the source of religious truth, Calvinism stresses the utter sovereignty of God and the PREDESTINATION of every person either to election to bliss in harmony with God or to damnation in separation from Him. It politically subordinates State to Church and cultivates austere morality, family piety, business enterprise, education and science.

The development of these doctrines, particularly predestination and the rejection of CONSUBSTANTIATION in its eucharistic teaching, caused a split in Protestantism between the LUTHERAN CHURCH and what became the Reformed and PRESBYTERIAN CHURCHES. The influence of Calvinism spread rapidly. Important Calvinist leaders include John Knox (1505-72) in Scotland and Jonathan Edwards (1703-58) in North America. See also pp.1403, 1450.

Calvinistic Methodist Church, religious group, originally followers of George Whitefield (an English preacher), and Welsh preachers in the 18th century. In 1795 formal secession from the Church of England was considered, and in 1811 the Calvinistic Methodist Connection was officially recognized and ordinations begun. Their Confession of Faith in 44 articles was published in 1823, and a ministerial training college was opened in Bala in 1837. Constitutionally, the Church combines features of PRESBYTERIANISM and CONGREGATIONALISM.

Calypso, folksong that originated in the West Indies, sung on plantations by African slaves. It is highly rhythmic and the words are often improvised. Calypso carnivals are held regularly in the Caribbean. A commercialized form was widely popular in English-speaking countries after WWII.

Cam, mechanical device consisting of an eccentric projection on a rotating shaft, shaped so as to give some desired reciprocating linear motion to another component. Cams are used in many different kinds of machinery, eg. car engines. See also p.446.

Camagüey, city in central Cuba, capital of Camagüey province. It is an important commercial and transport centre, with industries based on agriculture and cattle rearing, including meat-packing and dairy-food processing. Pop (1970) 197,720.

Camargo, Marie-Anne (1710-70), French ballerina. She revolutionized ballet, being one of the first to shorten her skirts and remove the heels of her shoes. See also p.1483.

Camberwell, municipality in s Victoria, Australia. It is a residential suburb of Melbourne, situated 8km (5 miles) E of the main city. Pop (1976) 98,227.

Cambium, continuous layer of actively dividing cells, responsible for the growth in diameter of woody plant stems and

roots. After division, one cell remains part of the cambial layer whereas the other becomes a water-conducting XYLEM element or a food-conducting PHLOEM factor. See also pp 374, 374

Cambodia, nation in SE Asia on the Indochina peninsula, formerly the Khmer Republic. Much of the country is in the basin of the Mekong River and more than half the cultivated land is devoted to the growing of rice. The main cash crops are rubber, pepper, maize, soya beans, cotton and bananas. Industry is conducted on a small scale and is mainly concerned with food processing and timber. Cambodia has felt the effects of the recent war in SE Asia and now has a communist government. The capital is Phnom Penh. Area: 181,035sq km (69,898sq miles). Pop. (1975 est.) 8,110,000. See also pp 1779, 1996-1997

Cambray, town and port in N France on the Escaut River, 55km (34 miles) SE of Lille. It was ruled by the bishops of the HOLY ROMAN EMPIRE until taken by Spain in the 16th century and France in 1678. The Germans occupied the town during both World Wars (on 20 Nov 1917 tanks were first used in warfare at a battle at Cambray). It has long been known for its textiles and gave its name to cambric. Pop. (1968) 37,532

Cambrian period, the earliest period of the PALAEZOIC ERA, lasting from about 570 million to 500 million years ago. The earliest geological period, its rocks contain a large variety of fossils, including all the animal phyla with the exception of the vertebrates. At that time the animals lived in the seas, while the land was barren. The commonest animal forms were trilobites, brachiopods, sponges and snails. Plant life consisted mainly of seaweeds. See also pp 184, 185, 262-269

Cambridge, city in Cambridgeshire, E England, on the River Cam, 77km (48 miles) NE of London. It was an important medieval river port. It is noted for the 12th century CAMBRIDGE UNIVERSITY which has many buildings of historic and architectural interest. Industries: precision engineering, printing and publishing, food processing. Pop. (1970) 100,361

Cambridge, city in a Massachusetts USA, on the Charles River. It has Harvard University (1636), Radcliffe College (1879) and the Massachusetts Institute of Technology. Industries include printing and publishing, and electronic and scientific instruments. Pop. (1970) 100,360. See also p 1539

Cambridgeshire and Isle of Ely, former county in E central England, since 1974 part of the new county of Cambridgeshire. The area is mostly fenland with chalk hills to the S and is drained by the Ouse and Nene rivers and their tributaries. Agriculture is most important: the area produces wheat, barley and oats, and there is some market gardening.

Cambridge University, founded in 1209 (with claims for an earlier origin), is one of the oldest scholarly establishments in England. It has 26 colleges, the oldest Peterhouse (1284) and the most recently-founded Robinson (1977), it also includes several non-collegiate and post-graduate institutions. A centre of Renaissance learning and theological debate in the Reformation, it now has faculties for studying almost every discipline. In this century it has excelled in scientific research. Until 1948 it elected two members of Parliament.

Cambyses II (d 522 BC), King of Persia, son of CYRUS the Great. His main achievement was the conquest of Egypt. His other campaigns failed and he died in Syria. See also p 1192

Camden, William (1551-1623), English antiquary. As headmaster of Westminster School he encouraged the revival of Anglo-Saxon scholarship. His chief works are *Britannia* (1586) and *Annales rerum Anglicarum et Hibernicarum regnante Elizabetha*.

Camden Society, historical society founded in Britain in 1838 to further research, named after the Elizabethan antiquary William CAMDEN. Its chief contribution has been the publication of many

documents of historical importance.

Camden Town Group, informal group of young British painters who, after 1905, met in the studio of Walter Sickert. The group was only formally named in 1911. Influenced by the French post-impressionists their main subject was urban life. Its members included Harold Gilman, Robert Bevan and Charles Ginner.

Camel, large, hump-backed, UNGULATE mammal of the family Camelidae. There are two species - the two-humped Bactrian of central Asia and the single-humped Arabian camel. Its broad, padded feet, load-bearing capacity and supreme adaptability to local climatic conditions (eg, its ability to go for long periods without water) make the camel a useful desert animal. Genus *Camelus*. See also pp 94, 287, 318, 319

Camellia, genus of evergreen trees or shrubs of the family Theaceae, native to E Asia (especially Japan) and popular as a garden plant. It has oval, dark green leaves and waxy, rose-like flowers which may be pink, red, white or variegated. *Camellia japonica* is the most common species.

Camelot, in English mythology, the seat of King ARTHUR's court. Its site is not known, although many people believe it was at Cadbury Castle, Somerset. See also pp 1154-1155

Camembert, soft cheese made from whole cow's milk. After inoculation with a penicillium mould the milk is curdled and portions are set on straw mats to drain. The cheese is named after the village of Camembert in Normandy, NE France, where it was traditionally made. Normandy cheeses have been famous since the 12th century.

Cameo, relief carving, usually on stratified gemstones or semi-precious stones, such as onyx, sardonyx, or agate, or on shell. The decoration, often a portrait head, is generally cut on the light-coloured vein, the dark vein being left as a background. Cameos were common among the Ancient Egyptians, Greeks and Etruscans, whose carved stone seals bearing the mystic symbol of the scarab beetle were the origin of the cameo. Interest in cameos revived during the Renaissance and continues to the present.

Camera, apparatus for taking photographs, consisting essentially of a light-tight box in which photographic film is positioned. When a shutter is briefly opened light from the scene outside is focused by a lens system on to the film. The amount of light falling on the film is controlled by the shutter speed, often variable, and by the diameter of the lens aperture, which can also often be varied using an adjustable diaphragm. Many cameras also have a rangefinder, enabling a focused image to be produced for a given object distance, and a built-in exposure meter, used to determine correct combination of shutter speed and aperture for the prevailing light conditions. See also pp 462, 463, 628-629, 630-631, 630

Camera lucida, apparatus for drawing and copying in perspective, developed in 1812 by W. H. Wollaston. A prism is set between the draftsman's eye and the paper in such a way that light is reflected from the object he is copying to form an image on the paper.

Camera obscura, optical device consisting of a darkened room into which an inverted image is thrown through a convex lens. A portable version of this was used by 17th- and 18th-century artists to trace scenes from nature. By the 19th century it had become a box, fitted with a lens and mirror and placed on a tripod. It eventually developed into the modern camera.

Cameron, Julia Margaret (1815-79), British pioneer photographer. In 1863 she began to take photographs of her friends including many leading figures of the day - Robert Brownning, Charles Darwin, Henry Wadsworth Longfellow and Ellen Terry. Her works are imaginative, perceptive and superbly composed.

Cameron, Richard (c 1648-80), Scottish Covenanter. A Presbyterian convert, he preached in Scotland, then fled to Rotter-

dam in 1679, returning to Scotland soon afterwards to continue preaching. He opposed the Stuarts for what he saw as their usurping of Christ's prerogatives and was killed by dragoons at Ayrsmoss. The CAMERONIANS are named after him.

Cameronianism, numerically small but historically important Presbyterian communion in Scotland. They fought for religious liberty against the Stuarts and became (1743) the Reformed Presbytery under John MACMILLAN, a group which refused to recognize or participate in civil government in any way. Despite a majority of the group merging with the Church of Scotland in 1929, a minority still formed a synod in the Scottish lowlands about 600 strong in 1960.

Cameroun, republic in W Africa, extending from the Gulf of Guinea to Lake Chad, with a diverse population that includes more than 200 ethnic groups. It is a country of rain forest (S) and savanna (N). Most of its inhabitants are subsistence farmers. Coffee, cocoa and bauxite are exported. It became independent in 1961. The capital is Yaoundé. Area: 475,441sq km (183,568sq miles). Pop. (1975 est.) 6,398,000. See p 1997

Camisards, French Protestants of the Cévennes region who rebelled against LOUIS XIV in 1702. Although few in number, they were at first successful under their leader, Jean Cavalier, but by 1705 their revolt had all but ended.

Camões, Luís Vaz de (c 1524-80), Portuguese poet. A courtier and soldier, he served in North Africa, where he lost an eye, and in India (1553-70). In 1572 he published *Os Lusíadas*, which soon became Portugal's national epic. He also wrote love lyrics and a few comic dramas.

Camomile, or **chamomile**, low-growing yellow or white herb of the genus *Anthemis* and family Asteraceae. Several species are cultivated as ground cover; the flowers of the perennial European camomile (*Anthemis nobilis*) can be used to make a medicinal tea.

Camouflage, technique used to conceal military personnel and equipment from observation by disguising them or making them blend with their natural surroundings. For example, nets are used to break up angular silhouettes and desert tanks are painted the colour of sand. Many animals and insects have natural camouflage, either to conceal them from their prey or to protect them from predators. The CHAMELEON, which changes colour at will, is the most versatile exponent.

Camp, Holiday. See HOLIDAY CAMP

Campa, ARAWAK-speaking tribe of about 25,000 South American Indians. They inhabit the headwaters of the rivers Ucayali, Urubamba and Apurimac in PERU.

Campagna di Roma, lowland region 2,070sq km (800sq miles) in area, surrounding the city of Rome, central Italy. Although archaeological evidence shows the region to have been popular in Roman times, it was abandoned as marsh land in the Middle Ages. It was reclaimed in the 19th century and used for crop growing.

Campaign for Nuclear Disarmament (CND), mass-protest movement in Britain. It was founded by its president, Bertrand RUSSELL and Canon John Collins in 1958. It organized an annual Easter march between the atomic research centre at ALDERMASTON, Berkshire, and Trafalgar Square, London. In members and activity it has declined from its 1960 peak, when it influenced the LABOUR PARTY conference to pass a resolution in favour of unilateral disarmament. See also p 1689

Campana, Dino (1885-1932), Italian poet. He was emotionally unstable and published only one collection, *Canti orfici* (1914), whose spiritual and symbolic qualities considerably influenced later modern Italian poetry. *Inedite* (1941-42) a supplementary work, was not published until after his death.

Campanella, Tommaso (1568-1639), Italian philosopher and poet. A heterodox Dominican, he was active against the Spanish domination of south Italy. His most famous work is the utopian *The City*

Companella, Tommaso

Cambridge, England, Clare College, one of the many historic university buildings

Camels can change their body temperature by as much as 6°C (11°F) without harm

Camera lucida, where the observer sees a reflected image on his drawing paper

Julia Margaret Cameron produced photographic portraits of leading Victorians

Campania

Campaniles are the tall towers built to hold bells that summon worshippers to church

of the Sun (1602). He spent 26 years in prison.

Campania, region of sw Italy on the Tyrrhenian Sea, including the provinces of Avellino, Benevento, Caserta, Napoli and Salerno, the capital is Naples (Napoli). Settled by the Greeks and Etruscans, it prospered under Roman rule in the 4th century BC. It was conquered by Goths, Byzantines, Lombards and Normans and became part of Italy in 1860. It is a mountainous area with fertile plains. Products, wheat, corn, potatoes, fruit, nuts, tobacco, hemp, flowers, wine, fish, timber. Area, 13,595sq km (5,249sq miles). Pop 5,132,860.

Campanile, Italian term for a bell tower, often free-standing. Bell-towers originated in the 6th century and were the first church spires in Europe. A notable example is the campanile in Piazza San Marco, Venice.

Campanulaceae, the bellflower family of herbaceous flowering plants. There are about 300 species, including HAREBELL, CANTERBURY BELL, Coventry bell, peach bellflower and clustered bellflower. These and many other bellflowers are cultivated extensively for their delicate blossoms, often a pale or purplish blue in colour. Rampion is a bellflower cultivated for its leaves and root, which are used in salads.

Campbell, Sir Colin. See CLYDE, COLIN CAMPBELL, 1ST BARON.

Campbell, Colin (c 1673-1729), Scottish architect who contributed to the English revival of PALLADIAN architecture by compiling a book of engravings of classical architecture, notably that of Inigo Jones, in England (*Viridius Britannicus*). His major buildings include Mereworth Castle, Kent (1723), Houghton Hall, Norfolk (1722-26) and the remodelling of Burlington House, London (1717).

Campbell, David (1915-), Australian poet. He published selected poems from 1942 to 1968, and was the editor of *Modern Australian Poetry* (1970).

Campbell, Donald Malcolm (1921-67), British land and water speed record-holder. Son of Sir Malcolm Campbell, he set six new records on water, attaining 444.7km/h (276.3mph) in 1964. Also in 1964 he set a new land speed record of 648.72km/h (403.1mph). He was killed trying to set a new water speed record when his boat *Bluebird* sank.

Campbell, Sir Malcolm (1885-1948), British high-speed champion of both cars and speed-boats. In 1935 he became the first man to reach a land speed of 483km/h (300mph), which he accomplished in *Bluebird* at the Bonneville Salt Flats in the USA. He also set a speedboat record of 227km/h (141mph), on Conston Water, Lancs. He was knighted in 1931.

Campbell, Mrs Patrick (1865-1940), British actress, born Beatrice Stella Tanner. She was a fine actress, her first major role being the lead in *The Second Mrs Tanqueray* (1893). She had a close platonic relationship with the playwright George Bernard Shaw, who wrote the part of Eliza Doolittle in *Pygmalion* (1914) especially for her.

Campbell, Robert (1808-94), Scottish-born Canadian fur trader and explorer. He worked for the HUDSON'S BAY COMPANY exploring the Yukon River and established posts at Fort Frances (1843), Pelly Banks (1844) and Fort Selkirk (1848).

Campbell, Roy (1901-57), South African poet. With William Plomer he founded *Voorlag*, a short-lived literary magazine, then left for Europe where he fought for Gen. Franco in the Spanish Civil War. He later settled in Britain and was acknowledged as South Africa's leading poet. His important poems include *The Flaming Terrapin* and *The Wayzgoose*.

Campbell, Thomas (1777-1844), Scottish poet who is best remembered for his war songs, such as *Ye Manners of England*, *Hohenlinden* and *The Battle of the Balm*, and for the ballad *Lord Ullin's Daughter*. His poetry includes *The Pleasures of Hope* (1799), *Gerrude of Wyoming* (1809) and *Theodoric* (1824).

Campbell-Bannerman, Sir Henry (1836-1908), British politician. He entered Parliament in 1868, and held

minor posts until he became secretary of state for war in 1886. In 1901 he denounced British policy against the Boers in South Africa. As prime minister (1905-08) and leader of the Liberal Party he formed a strong reforming government before ill-health forced his retirement.

Campedown, Battle of (1797), naval battle fought off the coast of Holland in which a British fleet under the command of Admiral Adam Duncan defeated the Dutch.

Campbor, C₁₀H₁₆O, organic chemical compound the molecule of which has a complex ring structure. It has a strong odour, which also occurs in the wood and leaves of the camphor tree, *Cinnamomum camphora*, native to Taiwan. Camphor is used in medicine for liniments, in the polymer industry as a plasticizer and as an ingredient of mothballs.

Campi, family of Italian painters, the most notable of whom was Giulio (c.1502-c.1572). Influenced by Giulio Romano and Pordenone, he studied the works of RAPHAEL and painted many fine altarpieces and frescoes in Cremona, eg *Madonna appearing to Francesco and Bianca Sforza* (1540).

Campinas, city in s Brazil, 109km (68 miles) NW of São Paulo. A major centre of coffee production in the 19th century, it is now the processing and distribution centre for the mixed agriculture of the surrounding region. Industries: agricultural and railway equipment. Pop. (1970) 328,629.

Camping, leisure activity in which individuals or groups live in tents. Originally used by the military to accommodate troops, it has gained universal appeal as an inexpensive form of holiday-making, and the production and selling of camping equipment is a major business. Campsites vary from an isolated field to planned areas with modern facilities. See also CARAVAN.

Campion, Saint Edmund (1540-81), one of the Forty Martyrs of England and Wales canonized in 1970. He was ordained deacon in the Church of England in 1569, but became a Roman Catholic in 1571 and subsequently joined the Jesuit Order. He spent some years on the European continent and taught in Prague until 1580, when he returned to England as a Jesuit missionary. In 1581 he published his pamphlet *Decem Rainones* defending the Roman Catholic position against Protestantism. He was charged with treason and executed at Tyburn in 1581. Feast, 1st December.

Campion, Thomas (1567-1620), English physician, poet and composer. He published a book of Latin epigrams, *Poemata* (1595), a treatise on *The Art of English Poetrie* (1602), and four books of *Aynes* complete with music. He also wrote masques for the court of JAMES I.

Campion, annual, biennial or perennial garden plant of the CARYOPHYLLACEAE family (Caryophyllaceae), found throughout the world and comprising about 500 species. It has red, white or pink flowers. The wild flower *CATCHFLY* is also a campion. Genus *Silene*. See also p.189.

Campobello, island in sw New Brunswick, Canada, at the entrance of Passamaquoddy Bay, just off the coast of Maine, USA, to which it is connected by the Roosevelt Memorial Bridge (1962). Pres. Franklin D. Roosevelt had a summer home there. Area: 696 hectares (1,720 acres).

Campodeid (campodeiform larva), type of beetle larva that is a slim, actively moving insect resembling a silverfish and not at all like the more worm-like beetle larvae. Like them and all other beetle larvae, however, campodeids eventually pupate and metamorphose into adult beetles. See also p.36.

Campoli, Alfredo (1906-), British violinist, b. Italy. He won many prizes before he was 20 years old. In 1950 he made an extensive concert tour of Australia and New Zealand.

Campa, André (1660-1744), French composer. He held musical posts at Notre-Dame cathedral, Paris (1694-1700), and the Chapel Royal (1722-44). Highly esteemed for lively dramatic com-

positions, he wrote more than 40 stage works, most of them opera-ballets.

Camps, Professor Francis Edward (1905-72), British pathologist who became interested in forensic medicine, particularly poisons and drugs, in the 1930s. He built up a renowned department of forensic medicine at the London Hospital Medical College, and was a founder of the British Association of Forensic Medicine, serving as its president from 1958-60. His fame rests on his association with many criminal cases.

Camus, Albert (1913-60), French novelist, playwright and essayist. During WWII he was one of the leaders of the French Resistance. His outlook is humanitarian yet he sees man's condition as absurd. He achieved recognition with his first novel *The Stranger* (1942). His writings also include the novels *The Plague* (1947) and *The Fall* (1956), and the essay *The Rebel* (1951). He was awarded the 1957 Nobel Prize in literature.

Camus, Marcel (1912-), French film director. His films are often shot in colourful locations, such as Brazil for *Os Bandeirantes* (1960) and Cambodia for *L'Oiseau de Paradis* (1962). The celebrated *Orfeu Negro* (1959) portrayed Brazilian carnival scenes in a spectacular manner.

Canaan, historical region of Palestine and W Syria, Phoenician after 1200 BC, with a Semitic population and culture. It had vigorous trade and became extremely prosperous, before being subjugated by the Israelites on their return from Egypt (who regarded Canaan as the Promised Land). Biblical Hebrew has historical links with the area.

Canada, nation in N America, the second-largest country in the world in terms of area, occupying most of the N half of the continent, and bounded by the Atlantic, Arctic and Pacific oceans, and the USA. A member of the COMMONWEALTH OF NATIONS, it acknowledges the British monarch as head of state, and has a federal system of government, with Ottawa the capital. A country of great contrasts, it has the lofty Rockies in the W, vast rolling prairies, the forest of the CANADIAN SHIELD and the icefields of the Arctic. Timber is of great economic importance and Canada's mineral deposits are some of the richest in the world, including gold, silver, nickel, zinc and lead. It has outfields in the central plains. The prairies yield much wheat, and cattle are also raised there. Area: 9,976,139sq km (3,851,809sq miles). Pop. (1975 est.) 22,831,000. See pp.1997-2004.

Canada East, official title of LOWER CANADA after the creation of a single British province of Canada in 1841. In 1867 the region became known as QUEBEC, when Canada was federated as a group of states. See also p.1614.

Canada goose, bird native to North America where it is migratory. It has been successfully introduced into Europe and has a distinctive long black neck and white cheek pouches. It nests on the banks of streams and on tundra. Length: 58-109cm (22-43in); weight: 3-6.5kg (6.6-14lb). Family: Anatidae; species *Branta canadensis*.

Canada West, official title of UPPER CANADA, after the creation of a single British province of Canada in 1841. In 1867 the region became known as ONTARIO, when Canada was federated as a group of states. See also p.1614.

Canadian fivepins, version of TENPIN BOWLING that originated in Toronto in 1909. Played on a tenpin alley, 18m (60ft) long, it has a ball 13cm (5in) in diameter without fingerholes and five squat pins arranged in a triangular shape. Pins vary in value and a strike (when all five pins are knocked down with the first ball) is worth 15 points.

Canadian football. See FOOTBALL.

Canadian Pacific Railway, privately owned railway system in Canada. It stretches from St John, New Brunswick, to Vancouver, British Columbia. It was begun in 1872 and, after long delays caused by a political scandal, the main line from Montreal to the Pacific

Camphor trees grow in the Far East. The camphor is removed by steaming

Albert Camus considered suicide to be "the one truly serious philosophical problem"

Canada geese are the common wild geese of North America. They fly south for winter

coast was completed in 1885. See also p.1615

Canadian Shield, or Laurentian Highlands, great plateau of Canada, roughly outlining the Hudson Bay, extends from Mackenzie River Basin to through s Ontario and s Quebec (including the Great Lakes region of central North America), and to the Labrador Sea. It is an area of extensive forests (s) and tundra (N) and is largely undeveloped.

Canal, artificial waterway constructed for irrigation, drainage, navigation or in conjunction with hydroelectric dams. Many canals serve multiple purposes. Canals were known 4,000 years ago in Ancient Mesopotamia. The longest canal able to accommodate large ships today connects the Baltic and White seas in the USSR and is 227km (141 miles) long. The heyday of canal building and use in England was the late 18th and early 19th century. See also pp.530, 538-539

Canal du Midi, artificial waterway in s France, linking Toulouse and Sete. It was built in 1666-92 to carry oncoming ships between the Atlantic Ocean and the Mediterranean Sea. It runs for 250km (155 miles) through rugged terrain, and includes 106 locks, one tunnel and three major aqueducts. It is now used only for barge traffic. See also p.538

Canaletto (Giovanni Antonio Canal) (1697-1768), Italian painter of the Venetian school, famous for his views of Venice. His work was very popular in the 1720s and 30s, especially with visiting English collectors. In 1746 he went to England, where he painted many London scenes. Canaletto's treatment of landscape - the shimmering effect of light touching water, sky and buildings - have influenced painters and illustrators to the present day.

Canal Zone, the area astride the Panama Canal. The name is also sometimes given to the region occupied by the Suez Canal. See p.2005

Canaries Current, cold current of the N Atlantic Ocean; flows SW from Spain along the NW coast of Africa. It joins with the North Equatorial current at approx. 20° N. See also p.235

Canary, popular cage-bird that lives wild in the Azores, Canary and Madeira islands. These yellowish finches feed on fruit, seeds and insects, and lay spotted greenish-blue eggs in cup-shaped nests. The pure yellow varieties have been domesticated since the 16th century, although they are difficult to breed in captivity. Family Fringillidae, species *Serinus canarius*.

Canary Islands, group of islands in the N Atlantic Ocean, approx. 113km (70 miles) off the NW coast of Africa. They constitute two provinces of Spain, Las Palmas and Santa Cruz de Tenerife. The main cities are Santa Cruz de Tenerife and Las Palmas de Gran Canaria. The islands are mountainous and the climate warm, with little rainfall. Irrigation allows the cultivation of sugar cane, bananas, fruits, tobacco, nuts and vegetables. Fishing and tourism are important industries. Area 7,273sq km (2,808sq miles). Pop. (1974 est.) 1,275,643.

Canasta, card game for two to six players. The game, a version of *rumor*, is generally played by two sets of partners using two standard packs of cards and four jokers. The object is to accumulate sets of like-numbered cards. Seven cards or more of one number is called a canasta. The cards have different point values, and 3,000 points is usually the total needed to win. **Canberra**, capital city of Australia, in Australian Capital Territory, s Australia, 249km (155 miles) SW of Sydney, on the Molonglo River. Settled c. 1824, it was chosen in 1908 as the new site for Australia's capital, succeeding Melbourne. The transfer of all governmental agencies was not, however, complete until after WWII. The city has the Australian National University (1946), Royal Australian Mint (1965), The Royal Military College, Stromlo Observatory and other scientific institutions. Most of the residents are employed by the federal government. Pop. (1980) 226,000.

Canberra bomber, English two-seater, twin-engined jet fighter-bomber. The prototype first flew in May 1949 and was in service by late 1950. It soon saw active service in the Korean War. Many variants, eg for training, were developed, but by the 1970s it was being phased out. Altogether 925 were built by English Electric, BAC and other manufacturers.

Cancon (also called *chahut*), saucy French dance usually in quick 4/4 time, performed with much high-kicking by women in frilly skirts. Popular in the 1830s as a Parisian show dance, it was used by J. OFFENBACH in his operetta *Orpheus in the Underworld* and later depicted by TOULOUSE-LAUTREC in many famous paintings and lithographs.

Cancer, the unchecked production of abnormal cells in the body which leads to the growth of malignant tissues and possibly death unless diagnosed at an early stage. Treatment can consist of surgery, chemical therapy or radiation and classification is by the type of tissue affected - the most prevalent being *CARCINOMA* and *SARCOMA* - and the type of cell from which it is derived. Cancer can attack almost any organ and, whereas no specific cause has been fully determined, environmental factors and irritants such as cigarette smoking may play a large part in causing it. See also pp.1062, 1063, 1063, 1065, 1089, 1095

Cancer, Tropic of, parallel of latitude, approx. 23.5° N of the equator which marks the northern boundary of the tropics. It indicates the farthest northern position at which the sun appears directly overhead at noon. The sun is vertical over the Tropic of Cancer on about 21 June, which is the summer solstice in the Northern Hemisphere.

Cancer, in astrology, a sign of the zodiac, symbolised by a crab. It is the sun-sign for those born between 23 June and 23 July. A feminine sign, its element is water and its ruling planet is the Moon. The crab symbolism is Babylonian in origin.

Cancer, or the Crab, northern constellation between Gemini and Leo. It contains two open clusters, M44, the Praesepe or Beehive Nebula (NGC 2632), and M67 (NGC 2692). The brightest star is Beta Cancer. See also p.1011

Cancer Ward (1968), novel by Soviet author Alexander SOLZHENITSYN, who suffered from cancer throughout his prison sentence. The author examines the reactions of several men, particularly Kostogotov and Rusanov, faced with the prospect of imminent death from cancer.

Candela, or new international candle, standard unit of luminous intensity defined as the luminous intensity of a blackbody of surface area 1/60sq cm at the temperature of solidification of platinum (1,772°C) and at atmospheric pressure. Symbol cd.

Candela, Félix (1910-), Spanish architect and engineer who settled in Mexico (1939), where he developed the use of shell vaulting. Using thin curved planes of concrete, he created roofs of great elegance and lightness which allowed him to cover large buildings economically. The Church of the Miraculous Virgin, Mexico (1953) is a fine example of his style.

Candelabra tree. See *EUPHORBIA*.

Candida. See *CYRIL*.

Candide (1759), short novel by VOLTAIRE. A farcical satire on contemporary complacency, it deals with the series of misfortunes encountered by Candide, who had been taught that "all is for the best in this the best of all possible worlds". After a series of swift moving, disastrous and violent adventures, Candide and his entourage become disillusioned and decide to take no further part in the world beyond cultivating their garden.

Candidiasis, also known as moniliasis, it is an infectious disease caused by the fungus *Candida albicans*. It may occur in the mouth or vagina, where it is known as *THRUSH*, and also in the lungs, intestinal tract, skin or nails.

Candle, column (usually cylindrical) of wax or tallow surrounding a fibrous wick used as a light source. Candles were known to the ancient Egyptians, who used tallow wax. Later the more pleasant-

smelling beeswax and spermaceti were used. Modern candles are generally made of a mixture of paraffin wax and stearic acid with a little added beeswax. In physics, candle is the name given to a unit of luminous intensity.

Candlefish. See *BULACHON*.

Candlemas (2 Feb.), Christian festival commemorating the Purification of the Blessed Virgin and the Presentation of Christ in the Temple. In the Roman Catholic church it is the day when the candles are blessed. Its name derives from the procession of candles symbolizing the entry of Christ - in Simeon's words "a light to lighten the gentiles" (Luke 2:32) - into the temple.

Candytuft, any of several species of annual and perennial plants native to Spain and popular in temperate climates as garden flowers. They have large, dome-like clusters of white, red or violet flowers. Height to 30cm (12in). Family *Cruciferae*, genus *Iberis*.

Cane, term applied to the stems of stalks of a wide variety of plants. Certain species of bamboo and reed are referred to commonly as "cane", although in botany the name should be properly restricted to members of the palm family known as rattans. See also p.381

Cane. See *KHANIA*.

Canidae, family of mammals whose members include dogs, wolves, jackals, coyotes and foxes, all belonging to the genus *Canis* and sharing features suited to their natural hunting lives. The dog is the oldest domesticated animal. See also pp.98, 299, 302, 303, 304, 305

Canine, any one of four sharp "stabbing" teeth in the frontal dentition of most mammals. In human beings they are also called eye teeth. See *TEETH*.

Canis Major, or the Great Dog, southern constellation situated s of Monoceros. It contains the bright open cluster M41 (NGC 2287). The brightest star is Alpha Canis Majoris or Sirius, the brightest star in the sky, also called the Dog star. See also p.1014

Canker, disease involving areas of dying plant tissue which attacks fruit or forest trees. It can be caused by various agents but most commonly by fungi such as *Nectria galligena*, which attacks apple and pear trees.

Canker, ulcerous sore, usually occurring on the inner surface of the lips or around the mouth. Causes may include injury, allergy or hormonal reaction, although the cause of most cankers is still unknown. They usually heal spontaneously.

Canna, or Indian shot, flowering plant native to tropical America and Asia. It is raised as an ornamental plant, and has large red, pink, yellow or white flowers and large, broad leaves. Height 60-240cm (2-8ft). Among the 50 species is *Canna indica*. Family *Cannaceae*.

Cannabis, resin from the leaves or stem of the Indian hemp plant, *Cannabis sativa*. It is taken as a psychotropic drug in many parts of the world, being either smoked or eaten under such names as hashish, marijuana, bang, kif and ghanga, when it produces a narcotic effect allied with a feeling of well-being and perhaps mild hallucinations. There is no evidence to show that it is harmfully addictive in the way of "hard" drugs such as heroin. See also p.1081

Cannae, ancient town in s Italy, on the Ofanto River, in Bari province. In 216 BC Hannibal led the Carthaginians to a crushing defeat of the Romans at the Battle of Cannae.

Cannel coal, variety of coal formed from organic matter rich in spores and algae. It contains a high percentage of the lighter hydrocarbons and burns easily, and is thus a good domestic coal. Unlike other coals, which appear banded, cannel coal is without any visible structure. See also p.314

Cannery Row (1944), novel by John Steinbeck. A return to the style of *Tortilla Flat* (1935), it is the whimsical story of six happy-go-lucky idlers in Monterey, California, who set out to catch frogs for a lonely but sympathetic biologist called "Doc". There are portraits of other local

Canals, artificial waterways created mostly to connect natural oceans, rivers and lakes

Canaletto received many commissions for paintings from English tourists in Venice

Canaries became popular cage-birds when introduced to Europe in the 16th century

Candytuft blooms in shades ranging from white to violet. There are about 30 species

characters

Cannes, resort in s.e. France on the French Riviera, 29km (18 miles) sw of Nice. The old part of the city has a 16th-17th century church. An international film festival is held there each spring. Industries: tourism, flowers. Pop. 67,000.

Cannibalism, the practice of eating human flesh as food or for ritual purposes. It was once widespread but is now almost extinct, although the practice still exists in remote parts of New Guinea. People were eaten to satisfy vengeance or as a supposed means of acquiring their strength and powers. See also MAGIC.

Canning, Charles John, Earl (1812-62), British politician, the son of George Canning. As governor-general of India (1856-58) he repressed the INDIAN MUTINY, and followed a policy of conciliation towards the Indians that earned him the nickname "Clemency Canning". He was viceroy of India (1858-62). See also pp 1618-1619.

Canning, George (1770-1827), English politician. He was foreign minister (1807-09) and supported the PENINSULAR WAR but resigned after a duel with Viscount CASTLEREAGH. He was president of the Board of Control for India (1816-20) and later served a second term as foreign minister (1822-27). He was a Tory and supported free trade; he opposed the HOLY ALLIANCE. He became prime minister four months before his death. See also pp 1662-1663.

Canning, Stratford, Viscount Stratford de Redcliffe (1786-1880), British politician and diplomat, cousin of George Canning. He was a member of Parliament from 1828 to 1841. Most of his diplomatic career was in Turkey, where he conducted negotiations in the CRIMEAN WAR.

Canning, method of preserving food by sealing it under hygienic conditions into cans made from tin-plated steel sheet. Any bacteria present in the food are killed, either by dry heat or by steam heat - a temperature of about 100°C being necessary for fruit, and somewhat higher temperatures for meat and vegetables. Once a can is sealed it must remain airtight to prevent infection by bacteria, particularly those that cause FOOD POISONING. See also pp 748-749.

Canning Basin (Desert Basin), and region of Western Australia, approx. 145km (90 miles) n.w. of Perth. Area: approx. 118,000sq km (200,000sq miles).

Cannizzaro, Stanislao (1826-1910), Italian chemist who showed how to determine atomic weights using Avogadro's law, and distinguished between molecular and atomic weights. In the early 1850s he discovered the Cannizzaro reaction for obtaining alcohols from aldehydes.

Cannon, artillery piece consisting of a metal tube, used to aim and fire missiles propelled by the explosion of gunpowder in the closed end of the cylinder. Cannon, first used in the 14th century, were originally made of bronze or iron. Major improvements in the 19th century included the introduction of steel barrels, more powerful chemical propellants, breech-loading mechanisms and standardized parts. By WWI recoil devices were employed to absorb the shock of firing. See also pp 395, 560, 561, 567.

Cano, Alonso (1601-67), Spanish architect, sculptor and court painter. Called the "Spanish Michelangelo" because of his versatility, he executed both the sculpture and paintings for his monumental altarpieces. His Virgin sculptures are among his best works, including *Maternity of Mary* (1638-44) in multi-coloured wood. **Cano, Juan Sebastian del** (c. 1476-1526), Spanish navigator who was first to circumnavigate the globe. He commanded one of the five vessels in Ferdinand MAGELLAN's voyage of discovery and assumed control in 1521 after Magellan's death, returning to Spain in 1522. See also p 1368.

Canoë, light shallow-draft boat, with a curved bow-shaped hull, propelled by one or more paddles. Primitive types were dug out of logs or made of skin or bark stretched over wooden frames. Modern types are made of wood, metal, fibreglass or plastic. Canoes can also be double-

hulled, fitted with a sail or equipped with an outigger. See also CORACLE, KAYAK.

Canoeing, boating sport popular in Europe and N. America. It includes many different types of events for one or more people. The sport began in England in 1865 when John MacGregor, a lawyer, founded The Royal Canoe Club. It became a part of the Olympics in 1936. **Canon**, in music, form of COUNTERPOINT using strict imitation all the voices or parts have the same melody, starting at different times, at the same or different pitches. A round, or perpetual canon, can be repeated endlessly. In a crab canon, the 1st part is performed backwards to make the 2nd part. The earliest written canon, *Sumer Is Icomen In*, dates from 13th-century England.

Canon, in Christian Churches, a term with several meanings. (1) title of secular clergy belonging to a cathedral or collegiate church and usually responsible for the maintenance of its services, fabric etc.; (2) the most solemn part of the Roman MASS, which includes the prayer of consecration; (3) rules and regulations pertaining to ecclesiastical discipline (see CANON LAW); (4) CANON OF SCRIPTURE. **Canonical hours**, in the Roman Catholic Church, periods set aside each day for devotion. They are matins and lauds, prime, terce, sext, none, vespers and compline.

Canonization, in the Roman Catholic Church, creation of one of its members as a saint. Today the results of an investigation into a candidate's life and virtues are submitted to the Congregation for the Causes of Saints, and after their findings are ratified by the pope the candidate is beatified. Proof of further miracles is required before full canonization.

Canon Law, in the Roman Catholic, Anglican and Orthodox churches, a body of ecclesiastical laws relating to faith, morals and discipline. Based partly on custom and partly on regulations laid down by church councils (ecumenical or local), popes or bishops, it grew up gradually and was codified from time to time. The most recent compilation in the Roman Catholic Church is the *Codex Iuris Canonici*, issued in 1917, and a revision (begun in 1963) was still in progress in the mid-1970s. In the post-Reformation Church of England the main body of canonical legislation was long contained in the *Book of Canons*, first issued in 1604, but it was replaced by a new code promulgated in two parts in 1964 and 1969.

Canon of Scripture, collection of books of the Old and New Testaments, believed by Christians to be inspired and to contain divine revelation, as distinct from other religious writings not included in the Bible. The concept of a canon of Scripture dates back to the OLD TESTAMENT times, when Judaism gradually accepted certain books as canonical. The definition of the NEW TESTAMENT canon was a slow process culminating in the Council of TRENT's dogmatic pronouncement of 1547. The principle that only the Church has the right to declare a book canonical is recognized by all the major Christian Churches. See also APOCRYPHA.

Canopus, or Alpha Canine, yellowish super-giant in the constellation of Canine, the second brightest star visible from earth. Its characteristics are apparent mag. -0.7, absolute mag. -4.7, spectral type FO, distance 196 light-years. See also pp 978, 1014, 1020-1021.

Canova, Antonio (1757-1822), Italian sculptor. A foremost Neo-Classical artist, his works include *Eurydice* (1773), *Orpheus* (1776), *Venus Victrix* (1803-07) and *A Cupid and Psyche* group. He went to Paris in the early 1800s to sculpt a bust of Napoleon from life. He also executed a number of other Napoleonic statues. **Canaloup**, trailing annual vine derived from the musk melon and native to s. Asia. It has roundish, hairy leaves and small, yellow flowers. The musky fruit is round, with yellow, white or red flesh. Family Cucurbitaceae; species *Cucumis melo cantalupensis*. See also pp 689, 689.

Canzoni, musical work consisting of vocal solos and choruses, often with passages of

RECITATIVE, and accompanied by an orchestra. It was a popular form in the 17th and 18th centuries, when Alessandro Scarlatti and J. S. Bach wrote numerous cantatas, both secular and religious.

Canterbury, city in Kent, s.e. England, on the Great Ouse River, 80km (50 miles) s.e. of London. The present cathedral, built in the 11th-15th centuries, replaced a St Augustine Abbey and an earlier cathedral that was burned. It is the seat of the archbishop and primate of the Anglican Church. The murder of Thomas à BECKET took place in the cathedral in 1170 and is commemorated by a tablet. After Becket's canonization, Canterbury became a major pilgrimage centre. CHAUCER'S CANTERBURY TALES (14th century) describe the pilgrims. The city is the home of the University of Kent (1964). Tourism is a major industry. Pop. 33,000.

Canterbury, municipality in New South Wales, s.e. Australia. It is a suburb of Sydney situated 13km (8 miles) w.s.w. of the city centre. It is a manufacturing centre for knitted goods. Pop. (1971) 130,334.

Canterbury, New Zealand's third largest district, occupying a central South Island. The CANTERBURY PLAINS, descending s.e. from the SOUTHERN ALPS, include some of New Zealand's richest farmland. Chief towns: CHRISTCHURCH, TIMARU, ASHBURTON, RANGIORA. Area: 43,467sq km (16,769sq miles).

Canterbury bell, biennial bellflower of the family CAMPANULACEAE, and native to s. Europe. It is widely cultivated as a garden plant and grows up to 1m (3 ft) tall. Its large spikes of upright, cup-shaped, pink, blue or white flowers appear in late spring and early summer. Species *Campanula medium*.

Canterbury Bight, wide inlet of the Pacific Ocean, on the s. central coast of South Island, New Zealand, s. of the Banks Peninsula. Width 185km (115 miles).

Canterbury Plains, grassland district of South Island, New Zealand, famous for the fat lambs (for meat) reared there. Area: approx. 25,900sq km (10,000sq miles).

Canterbury Tales (c. 1385-1400), collection of narrative poems by Geoffrey CHAUCER, each told by one of a party of pilgrims to Canterbury. They range from the courtly *The Knight's Tale* to the bawdy *The Miller's Tale*, from the charming *The Nun's Priest's Tale* to the exuberant characterizations in *The Wife of Bath's Tale*. See also pp 1348-1349.

Cantharides, also called cantharis or cantharidin, drug obtained from the dried bodies of the cantharis, or Spanish fly (*Lytta vesicatoria*), a species of blister beetle. The drug was used to cause blisters and as an aphrodisiac.

Cantilever bridge, type of bridge in which the main span gets its support by being "built in" at each end, unlike a beam bridge. It does not rely on the intrinsic strength of the material forming the span. See also pp 534-535.

Cantinflas (1911-), Mexican film comedian, real name Mario Moreno. His urchin characterizations and his comic interpretations of Romeo and D'Artagnan made him famous. He portrayed Paspartout in *Around the World in 80 Days* (1956).

Canton, city in central Ohio, USA, 32km (20 miles) s.e. of Akron. It was the home of President William McKinley, whose

grave is in the National McKinley Memorial Industries. iron and steel, roller bearings, machinery, office equipment. Pop. (1970) 110,053.

Canton, one of the units of government and administration that make up the Swiss Confederation or Switzerland. Each canton sends two members to the Council of State which, with the National Council, forms the country's federal parliament. See also p. 2147.

Canton and Enderbury, two coral islands in the western Pacific Ocean. Claimed by both the USA and Britain in the 1930s, Canton atoll was the subject of an agreement by both powers in which they established a joint administration for the atoll and nearby Enderbury Island until 1989.

Cantor, Eddie (1892-1964), us comedian and singer, real name Edward Israel Iskowitz, noted for his large mobile eyes. He appeared in Ziegfeld's "Follies" (1916-19), and in the musicals *Kid Boots* (1923-26) and *Roman Scandals* (1933). He also appeared in films and on radio and television.

Cantor, Georg (1845-1918), German mathematician, b. Russia. Obtaining his PhD in Göttingen, he later became professor at Halle. His work on the concept of infinity led to a highly original theory of sets for series of integers.

Cantor, solo singer who performs in religious services. Anglican and Roman Catholic cantors intone the opening words of hymns, responses and psalms. In the Jewish religion, they recite the scriptures by cantillation.

Cantos, unfinished poetic work by Ezra POUND. Complex, erudite but sometimes obscure, *The Cantos* is epic in scope, sweeping through the history of civilization (especially China, Renaissance Italy and the USA). It ranges from the intensely lyrical and personal to the public and didactic. See also p. 1773.

Canute, or Cnut, name of two kings of Denmark and England. Canute I (904-1035) began his conquest of England with his father SWEN in 1013, and was accepted as sole ruler of the country in 1016. He became king of Denmark in 1018, and led several expeditions to Norway. He established a code of laws, and upheld the traditional Anglo-Saxon society and Church. His son Canute II (1019-42), also known as Hardicanute, became King of Denmark in 1035 and of England in 1040, after he had driven out his brother HAROLD HAREFOOT. See also p. 1289.

Canyon, deep, narrow depression in the Earth's crust. Land canyons are the result of erosion by rivers of comparatively recent origin flowing through arid terrain. Marine canyons may be formed when a river-bed and the surrounding terrain is submerged or by turbulence produced by deep water currents. See also pp 238, 239, 223.

Cape, Robert (1913-54), us photographer, b. Hungary. He specialized in taking pictures of war victims and made his name during the SPANISH CIVIL WAR. **Capeblanca, José Raul** (1888-1942), Cuban chess player. He was the champion of Cuba at the age of 12 and became world champion in 1921 when he defeated Emanuel Lasker, retaining the title until 1927.

Capacitance, property of an electrical circuit or component that allows it to store charge. It is measured in farads (a capacitance that requires a charge of 1 coulomb to raise its potential by 1 volt). See also CAPACITOR, p. 880.

Capacitor, also called a condenser, electrical circuit component that has CAPACITANCE. Used principally in AC circuits, there are various types, such as parallel plate condensers and electrolytic capacitors. See p. 880.

Cape Barren Island, 34km (21 miles) off the NE coast of Tasmania, Australia, is the second largest of the Furneaux Group. The main industry is tin mining. Area, 943sq km (364sq miles). Pop. 164.

Cape Breton Island, rocky island in N.S. Nova Scotia, Canada, separated from the mainland by the Strait of Canso. It has the Cape Breton Highlands National Park,

numerous summer resorts and North Barren, at 537m (1,747ft) the highest peak in Nova Scotia. Industries: timber, fishing, coal mining. Pop. 167,000

Cape Buffalo. See **BUFFALO**

Cape Canaveral, low sandy promontory in s Florida, USA, extending into the Atlantic Ocean. It is the site of NASA's John F. Kennedy Space Centre, which since 1950 has been the main US launch site for space flights and long-range missiles

Cape Coast, city in s Ghana, w Africa, 120km (75 miles) w of Accra, on the Gulf of Guinea; capital of Central Region. Settled in 1610 by the Portuguese, it was the capital of the GOLD COAST until succeeded by Accra in 1877. Fishing is the chief industry. Pop. 51,800

Cape Cod, hook-shaped sandy peninsula in s Massachusetts, USA. Of glacial origin, it extends into the Atlantic Ocean, forming Cape Cod Bay. It was originally a centre for fishing, whaling and salt extraction, but tourism is now the major industry

Cape Colony, British colony in South Africa, around the CAPE OF GOOD HOPE, founded in 1806 after the area had been captured from the Dutch. The Boers left the colony in the GREAT TREK of 1835. The colony became a province of the Union of South Africa in 1910. See also pp 1606-1607, 2134-2139

Cape Coloured, or simply **Coloured**, legal class of South African citizens of mixed racial origin. They are placed on a separate electoral roll and elect four Whites to the national House of Assembly. They have also their own Coloured Persons Representative Council. Since 1958 the South African government has included a Department of Coloured Affairs. See also pp 2134, 2138

Cape Horn, southernmost point of South America in s Chile. It was sighted by Francis Drake in 1578, and first founded in 1616 by Cornelis van Schouten. It is noted for its severe storms

Capek, Karel (1890-1938), Czech novelist, playwright and essayist. Most of his works portrayed man's struggle against fate, especially in a scientific world. His writings included *R.U.R.*, a play about robots (1920), and the novel *War with the Newts* (1936)

Capella, or **Alpha Aurigae**, spectroscopic binary star in the constellation of Auriga, both components are yellow giants. Its characteristics are: apparent mag. +0.09 (combined), absolute mag. -0.6 (Capella A), 0.37 (Capella B), spectral type G8 (Capella A), G0 (Capella B), distance 45 light-years. See also pp 978, 1012, 1018-1019

Cape of Good Hope, peninsula lying 48km (30 miles) s of Cape Town, Africa. The first European to sail around it was Bartolomeu Diaz in 1488 who, according to tradition, named it *Cabo da Boa Esperança*. The Cape sea route between India and Europe was established by Vasco da Gama in 1497-99. See also p 1368

Cape Province, formerly Cape Colony, province in South Africa, bordered by the Indian Ocean (se) and the Atlantic Ocean (w), the capital is Cape Town. A colony was first established by the Dutch in 1652. Slaves were imported from 1658 onwards, but slavery was abolished in 1833 by the British. Diamonds were discovered there in 1867. The colony became a province of the Union of South Africa in 1910. Industries: wine, diamonds, wool, asbestos. Area: 721,005sq km (278,380sq miles). Pop. 6,199,634. See pp 1606-1607, 1610, 1737, 2134-2139

Caper, flower bud, generally pickled in vinegar, of a shrub native to Sicily and other Mediterranean countries, used as a condiment and to make sauces. Family: cruciferae, species *Capparis spinosa*

Capercaillie, largest grouse of Eurasian evergreen forests and a prized game bird. The male is mostly black and the smaller brownish female lays up to 8 eggs in a ground nest. Length: to 86cm (34in). Species *Tetrao urogallus*. See also p.304

Cape St Vincent, promontory of sw Portugal. A battle was fought off the cape in 1797, in which the English, under Jervis and Nelson, defeated the Spanish fleet which was trying to raise a blockade on the

ports of France. See also p.1554

Capet, surname given to King Hugh of France (r.987-96) and his descendants, to whom the throne was passed in direct line until 1328. The Capetians gradually extended their rule from the two counties of Paris and Orleans to the whole of France. Philip II Augustus (r.1180-1223) dispossessed the English king of Normandy, Anjou and Maine. See also p.1336, 1336

Cape Town, city in South Africa, at the foot of Table Mountain; the legislative capital of South Africa and the capital of Cape province. Places of interest include the Union Parliament, a 17th-century castle and the National Historic Museum. It has the University of Cape Town and the University College Western Cape, for Coloureds. Industries: clothing, engineering equipment, motor vehicles. Pop. 818,100

Cape Verde Islands, republic in the s Atlantic Ocean. It is made up of about 15 volcanic islands divided into two groups, the Windward Islands to the n and the Leeward Islands. The capital is Praia on São Tiago island in the Leewards. The economy is based on the production of coffee, tobacco, sugar cane, oranges and groundnuts and the mining of salt and coal. An overseas province of Portugal, the islands became independent in 1975. Area: 4,033sq km (1,557sq miles). Pop. (1975 est.) 294,000. See also p.2005

Cape York, peninsula in Australia forming the n section of Queensland. The northernmost point is Cape York on the Torres Strait. Length: 725km (450 miles)

Capillary, movement of a liquid in a narrow opening caused by the surface tension between the liquid and the surrounding material. This is most often seen in a vertical narrow glass capillary tube but also occurs in various directions - as when a sponge or blotting paper soaks up water.

Capillary, microscopic blood-vessel connecting arteries and veins and situated close to living body cells. Oxygen and other nutrients in the blood are passed to these cells through the thin capillary walls at the same time as carbon dioxide and other waste matter is diffused back into the blood in the capillaries. See also p.152

Capillary constant, measure of surface tension defined, for two immiscible fluids in contact, by $2T/g(D-d)$, where T is the surface tension for the interface, g is the acceleration due to gravity and D and d are the densities of the fluids. Usually one of these is air. The capillary constant is equal to the rise of a liquid in a capillary tube multiplied by the radius of the tube. See also p.839

Capital, in architecture, the wide piece of masonry at the top of a column. In classical architecture, the design of the capital is characteristic of the order to which it belongs.

Capital, in economics, different forms of wealth. It ranges from business assets such as buildings, machinery and stock, to a person's invested savings. Fixed capital refers to such things as buildings, tools and equipment, working capital includes raw materials, stock and cash.

Capital gain, the difference between the buying price for a CAPITAL asset and the price received when selling it at a profit. Long-term capital gains, where the asset has been held for longer than a certain period, are generally taxed less heavily than short-term capital gains.

Capitalism, economic system in which property and the means of production are privately owned. Its development in modern times dates from the INDUSTRIAL REVOLUTION, which saw the rise to prominence of industrialists and financiers. Capitalism embraces the notions of freedom of choice, the profit motive, individual enterprise and efficiency through competition. In practice, however, governments actively participate in economic regulation under a capitalist system, although to a much lesser extent than under COMMUNISM or SOCIALISM

Capital offence, criminal act that is punishable by death. In some countries

murder carries the death penalty but death for a crime such as treason is more usual. See also CAPITAL PUNISHMENT, p.1135

Capital punishment, the punishing of a criminal offence by death. Most ancient societies inflicted the death penalty, using methods such as decapitation, drowning, boiling in oil, flaying alive and burning (thus last being practised in Europe until the 18th century). In the Middle Ages crimes against state and church carried the death penalty and in early 19th-century Britain more than 220 crimes, such as sheep-stealing, the coining of false money and picking pockets, were still capital offences. In the 20th century the usual methods of execution have been by hanging, electrocution or firing squad. The death penalty is now abolished in many countries, although in most it can be enforced for exceptional crimes such as treason. Some states in the USA prescribe death for rape, armed robbery and kidnapping. Britain abolished capital punishment (except for treason) in the 1960s, as did some Commonwealth countries; in 1972 the US Supreme Court declared capital punishment as it was then being applied to be unconstitutional. Those that campaigned against capital punishment stressed the primitive nature of the practice, its ineffectiveness as a deterrent and its complete finality, which means that any miscarriage of justice could not be rectified

Capitol, building in WASHINGTON, DC, in which the US Congress convenes. The original architect was William Thornton and in 1793 George Washington laid the cornerstone. In 1814 it was burned to the ground by the British. The central section of the modern building covers 1.4 hectares (3.5 acres), and the dome reaches a height of 88m (288ft)

Capone, Alphonse (1899-1947), Italian-born US gangster of the PROHIBITION era. He grew up in Brooklyn, New York City, and was bodyguard to the gang leader Johnny Torio from whom he inherited a vast crime empire. He was eventually convicted of income tax evasion (1931) and imprisoned.

Capote, Truman (1924-), US author. His first novel, *Other Voices, Other Rooms*, appeared in 1948. Other works include a novella, *Breakfast at Tiffany's* (1958), *The Grass Harp* (1951) and *In Cold Blood* (1966), with which Capote stated he had introduced a new literary genre, the non-fiction novel

Cap, Al (1909-), US cartoonist, born Alfred Caplin. He gained worldwide popularity with *Li'l Abner*, a full-billy character around whom a cartoon strip was built (1934). He scripted the film *Li'l Abner* (1940) and wrote books from the cartoon strip such as *Fearless Fosdick* (1956) and *The Hardhat's Bedtime Story Book* (1971)

Cap, Andy, cartoon character invented in 1957 by Reg Smythe, featured each day in the British newspaper the *Daily Mirror*. Andy is a cloth-capped northern Englishman with a liking for beer and an aversion to work. He spends much of his time trying to avoid the demands of his long-suffering wife, Flo.

Cappadocia, ancient plateau region of Asia Minor. Cuneiform tablets found at Kültepe indicate that the region traded with ASSYRIA before 1800 BC. It was part of the PERSIAN EMPIRE from the 6th century. After a brief period of semi-independence (3rd century BC), it was allied to Rome and was finally annexed by the emperor TIBERIUS in AD 17

Capra, Frank (1897-), Italian-born US film director. He was noted for his comedies which included *Platinum Blonde* (1931), *It Happened One Night* (1934) and *You Can't Take It With You* (1938). During WW2 he directed propaganda films. Post-war films included *A Hole in the Head* (1959) and *A Pocketful of Miracles* (1961).

Capri, island in the Bay of Naples, s Italy. A popular Roman resort, the Roman Emperor Augustus lived there, and it has the remains of Tiberius' palace. It passed from French to British rule several times

during the Napoleonic Wars, and was returned to the Kingdom of the Two Sicilies in 1813. It has the ruins of two medieval castles, the Villa San Michele and The Blue Grotto, a famous cave on the coast. Industries: tourism, fishing. Area: 10sq km (4sq miles). Pop. (1971 prelim.) 8,000

Capricorn, in astrology, a sign of the zodiac, symbolized by a goat. It is the sun-sign for those born between 23 December and 19 January. A feminine sign, its element is Earth and its ruling planet is Saturn. The goat symbol probably derives from PAN

Capricorn, Tropic of, parallel of latitude, approx. 23° s of the equator which marks the southern boundary of the TROPICS. It indicates the farthest southern position at which the sun appears directly overhead at noon. The sun is vertical over the Tropic of Capricorn on about 22 December, which is the summer solstice in the Southern Hemisphere

Capricornus, or the **Sea Goat**, southern constellation on the ecliptic between Sagittarius and Aquarius. Known as Capricorn for astrological purposes, this constellation contains the faint globular cluster M30 (NGC 7099), and a double star visible to the naked eye, Alpha or Al Giedi. See also pp 1016, 1894

Caprimulgiformes, order of birds whose best-known representatives are the NIGHTJARS, nocturnal, wide-mouthed, insect-eaters with an incessant, distinctive call. Other families include the South American OULIDAE, the only bird to navigate its flight by echo-location. Like bats, it can fly in the pitch-dark caves in which it lives. An Australian family, the owlet nightjars, provide some evidence of a link with the owls. See also p.73

Caprivi Strip, narrow strip of land in NE Namibia (South-West Africa), bounded by Botswana (s) and Zambia and Angola (n). It was named after the German Chancellor Leo von Caprivi, who obtained the region from the British, and thereby gained access to the Zambezi River. It is an extremely arid region, but some farming is carried out in the easternmost section of the strip, where the Zambezi River is used for irrigation. Length 483km (300 miles); width, 64km (40 miles)

Caprinae culture, MESOLITHIC culture (c 8th-3rd centuries BC) of inland N Africa. Its most characteristic sites are in the salt-lake region of present-day southern Tunisia, the best of them being Jabal al-Maqta, near Qafsa. It was a post-glacial culture, distinguished by the variety of its microlithic (tiny-flaked-blade) tools and its development of geometrically shaped tools. Probable rock paintings of the culture survive

Capricorn. See **PEPPER**

Capsule, space, that part of a spacecraft that carries the payload, which may be a crew of astronauts or a variety of scientific instruments. A space capsule is designed to withstand extremes of temperature and pressure, shocks and vibration during acceleration, spinning or tumbling, radiation and meteoric impacts, while maintaining a stable environment for the payload. Some of the features that help to achieve these ends are an ABLATION heat shield for re-entering the atmosphere, slow, continuous rotation to reduce exposure to the Sun, and highly reflecting exteriors. The capsule of a manned spacecraft contains the flight controls, and television cameras and instruments for monitoring the activities of the crew and controlling their environment. See also pp 1024, 1026-1039

Captain Beefheart (1941-), stage name of Don Van Vliet, US singer and leader of The Magic Band. They made their first recording *Diddy Wah Diddy* in 1966, but Beefheart is known better for several LPs including *Safe as Milk* (1967), *Trout Mask Replica* (1969) and *Clear Spot* (1973)

Capuchin, small diurnal monkey found in South and Central America, a popular pet in Europe and the USA. It is generally brown or black and is a tree-dweller with a furry prehensile tail. Omnivorous, but preferring fruit, it may grow to 55cm (22in) with a tail of the same length

Capuchins

Family Cebidae See also p.314

Capuchin, Roman Catholic religious order, founded by Matteo da Bassi in 1525 as an offshoot of the FRANCISCAN Order. Its official title is Order of Friars Minor of St Francis Capuchin (O.F.M. Cap.). The Capuchins are so called because of the pointed owl (*capuche*) which forms part of their habit. They re-emphasized the Franciscan ideals of poverty and austerity and played an important role in the COUNTER-REFORMATION, particularly through their missionary activities.

Capybara, largest living rodent, native to Central and South America, it is semi-aquatic with webbed feet, a large, nearly hairless, body, short legs and a tiny tail. Length: 1.2m (4ft). Species *Hydrochoerus hydrochoerus*. See also pp 92, 314

Car. See MOTOR CAR

Caracal, also called Persian lynx, short-haired carnivore of the cat family Felidae, native to Africa and parts of Asia and India. Mainly nocturnal, it is quick and agile and has a slender red body and long pointed ears with black tufts. Length 1m (3.3ft). Species *Lynx caracal*. See also pp 98-99

Caracalla, Marcus Aurelius Antoninus (AD 188-217), Roman emperor (211-17). His name came from the fact that he wore a Gallic tunic (*caracalla*). He resented sharing rule with his brother, Geta, whom he murdered along with many of Geta's supporters (212). He erected the Baths of Caracalla. Maximus killed him in Asia and succeeded him as emperor.

Caracara, comparatively slow-moving ground-dwelling bird of prey of the falcon family that lives on the grasslands of South America. It feeds on insects, carrion and birds eggs. See also p.301

Caracas, capital city of Venezuela, on the Guare River. The city was under Spanish rule until 1821. It was the birthplace of Simón Bolívar, the leader of the revolt against Spain. The city grew after 1930, encouraged by the exploitation of oil. It has the Central University of Venezuela (1725) and a colonial cathedral (1614). Industries: motor vehicles, oil, brewing, rubber. Pop. (1976 est.) 2,576,000.

Caractacus (d.c. AD 54), British chieftain who led the tribes of SE Britain against the Romans (43-51). He was defeated and sent to Rome, but so impressed Emperor Claudius that he released him. See also p.1234

Carat, unit of weight used for gemstones. Traditionally it varied from country to country, perhaps because of its method of origin the name carat derives from that of the seeds of the Mediterranean locust tree, which were once used to weigh gemstones. By 1913 the carat was fixed internationally at 200 milligrams. The carat measure of gold alloys (usually gold-silver or gold-copper) indicates the number of parts of gold in 24 parts. Thus 22-carat gold contains 22 parts of gold in 24 parts of the alloy. See also p.261

Caravaggio, Michelangelo Merisi da (1573-1610), Italian painter. A powerful innovator, he worked directly on canvas from live models, in contrast to the current practice and idealized Renaissance style. He also made original use of dramatic chiaroscuro effects. Many earlier works, such as *The Fortune Teller*, are genre pieces, but in later years he mainly produced portraits and religious paintings, such as *The Martyrdom of St Matthew*. Caravaggio influenced many painters, including REMBRANDT. See also pp.1435, 1439, 1443, 1444-1445, 1530-1531

Caravan, vehicle used as a mobile home. Gypsy caravans were traditionally horse-drawn, large-wheeled wagons with a barrel-shaped roof. They were known for their colourful decorations, and caravans of similar design are still used in parts of Ireland. Small-wheeled lightweight metal caravans towed by a car or motorized caravans are now widely used by holiday-makers as a more comfortable alternative to camping.

Caravel, small sailing ship, two- or three-masted, with square and lateen sails and a high bow and stern. It originated in the Mediterranean but was

adapted by Portuguese mariners of the 15th century for voyages of exploration along the African coast. Columbus's caravels were *NINA* and *PINTA*.

Caraway, biennial herb native to Eurasia and cultivated for its small, brown seed-like fruits that are used for flavouring foods. It has feathery leaves and white flowers. Family Umbelliferae; species *Curum carvi*. See also pp.706, 707

Carbide, inorganic compound of carbon and a more electropositive element. BORON and SILICON both form extremely hard carbides which are used as abrasives. Many TRANSITION METALS also form carbides, in which the carbon atoms occupy interstitial positions in the metal lattice. Some electropositive metals form ionic carbon compounds, the best-known is CALCIUM CARBIDE (CaC_2), which reacts with water to give ACETYLENE.

Carbine, short-barrelled RIFLE originally introduced at the end of the 16th century for use by cavalry. By WWII the term was used for a short-range automatic infantry weapon (such as the Sten gun). See also p.556

Carbohydrate, organic compound of carbon, hydrogen and oxygen and a constituent of many kinds of foods. The simplest carbohydrates are the sugars, usually with five or six carbon atoms in each molecule. Glucose and fructose are naturally occurring sugars, they have the same formula, $C_6H_{12}O_6$, but different structures. One molecule of each combines with the loss of water to make cane sugar (sucrose, $C_{12}H_{22}O_{11}$), which also occurs naturally in sugarcane and sugar-beet. Starch and cellulose are carbohydrates consisting of hundreds of glucose molecules linked together. See also saccharide, p.906, 906

Carbolic acid. See PHENOL

Carbon, common non-metallic element (symbol C) of group IV of the periodic table. There are two crystalline allotropes, GRAPHITE, a soft black solid, and DIAMOND, the hardest naturally occurring material known (used for gems). Various amorphous (non-crystalline) forms of carbon also exist, such as soot and lampblack. Industrial diamonds are used in rock drills and in cutting and polishing tools. Graphite is a lubricant and is also used in making electrodes, crucibles and pencils. Amorphous carbon has many uses, for example as pigment for inks and a filler for rubber for vehicle tyres. Carbon forms a vast number of compounds with hydrogen (hydrocarbons) - the subject of ORGANIC CHEMISTRY - and other non-metals. Properties: at no. 6; at. wt. 12.011; s.g. 1.9-2.3 (graphite), 3.15-3.53 (diamond), m.p. approx. 3,550°C (6,422°F), sublimates at 3,367°C (6,093°F), most common isotope C^{12} (98.89 per cent). See also pp.890, 896, 906

Carbon-13, one of the seven isotopes of carbon, the only one other than the common isotope carbon-12 that is stable. Carbon-13 (at wt. 13) occurs naturally in very minute quantities.

Carbon-14, the most important radioisotope of carbon, the isotope detected and measured in CARBON DATING. It is formed on Earth when cosmic rays from outer space hit nitrogen atoms in the upper atmosphere. This transmutes the nitrogen into carbon-14, which then breaks down again into nitrogen, the half-life of carbon-14 is 5,730 years.

Carbonari, members of an early 19th-century Italian secret society advocating liberal, nationalist reforms. They were opposed to conservative regimes imposed on Italy after the Council of Vienna (1815) and were a model for Giuseppe MAZZINI's Young Italy Movement.

Carbonates, salts of CARBONIC ACID, which is formed when carbon dioxide (CO_2) dissolves in water. Carbonic acid is an extremely weak acid and both it and many of its salts are unstable, decomposing readily to release carbon dioxide. Nevertheless, large parts of the Earth's crust are made up of carbonates. CHALK and LIMESTONE are examples of calcium carbonate, MAGNESITE is a magnesium carbonate and DOLOMITE a magnesium-calcium carbonate. Seashells are also calcium carbonate.

See also pp.26, 27, 218-219

Carbon black, form of the element CARBON made by heating or burning hydrocarbon gases in a restricted supply of air. The product contains a little hydrogen, oxygen and sulphur as well as carbon. Carbon black is used to reinforce rubber (for vehicle tyres) and other materials, and in various dark pigments for paint and inks.

Carbon cycle, circulation of carbon in the biosphere. It is a complex cycle of events in which the most important are the taking up of carbon dioxide by green plants from the atmosphere during PHOTOSYNTHESIS, and the return of carbon dioxide to the atmosphere by the respiration and eventual decomposition of animals which eat the plants. See also p.907

Carbon dating (radiocarbon dating), method of determining the age of organic materials by measuring the amount of radioactive decay of an isotope of carbon, carbon-14, or C^{14} . This radio-isotope decays to form nitrogen, its half-life being about 5,730 years. When a living organism dies, it ceases to take carbon dioxide into its body, so that the amount of carbon-14 it contains is fixed as a known quantity relative to its total weight. Over the centuries, this quantity diminishes in accordance with radioactive decay, and refined chemical and physical analysis is used to determine the exact amount remaining, and from this the age of a specimen is deduced. See also p.269

Carbon dioxide, colourless odourless gas (CO_2) that occurs in the atmosphere (0.03 per cent) and as a product of the combustion of fossil fuels and in metabolic processes. In its solid form (dry ice) it is used in refrigeration; as a gas it is used in carbonated beverages, as a fire extinguisher and to provide an inert atmosphere for welding. Properties: density 1.527 (air = 1), m.p. (5.2 atm) -56.6°C (-69.9°F), sublimates -78.5°C (-109.5°F). See also pp.844, 894, 907-909

Carbon dwarf star, very "late" type of red dwarf star belonging to either of two spectral classes designated N and R. The absorption lines in the spectra of these stars are due chiefly to carbon compounds and their surface temperatures range downwards from about 2600°K to 1700°K. See also p.978

Carbon fibre, fibrous form of carbon made by heating textile fibres to high temperatures. The result is fibres (typically 0.001cm in diameter) which are, weight for weight, some of the strongest of all fibres. They are too short to be woven into a super-strong yarn. Instead they are incorporated into plastics, ceramics and glass, which give the materials great strength and resistance to breakage. See also p.403

Carbonic acid, H_2CO_3 , extremely weak acid formed when carbon dioxide (CO_2) dissolves in water. Its salts, the CARBONATES, are of great importance in nature both in rock formations and in the shells of various animals. See also pp.218, 220

Carboniferous Period, fifth geologic division of the PALAEZOIC ERA, lasting from 345 to 280 million years ago. It is often called the "Age of Coal" because of its extensive swampy forests of conifers and tree ferns that turned into most of today's coal deposits. Amphibians flourished, marine life abounded in warm shallow inland seas, and the first reptiles appeared. See also pp.268-269, 414, 415

Carbon microphone. See MICROPHONE

Carbon monoxide, colourless, odourless, poisonous gas (CO) formed during the incomplete combustion of fossil fuels, occurring for example in coal gas and the exhaust gases of internal-combustion engines. Carbon monoxide poisons by starving the body of vital oxygen with which it combines to form the more stable carbon dioxide. It is used in PRODUCER GAS, metallurgy and the manufacture of chemicals. Properties: density 0.968 (air = 1); m.p. 205°C (-337°F); b.p. -191.5°C (-312.7°F).

Carbon tetrachloride (tetrachloromethane), colourless non-inflammable liquid with a characteristic odour (CCl_4), prepared by the chlorination of methane or

the catalytic reaction of carbon disulphide and chlorine. It is used as a refrigerant, insecticide, degreaser and dry-cleaning fluid. Properties: s.g. 1.59; m.p. -23°C (-9.4°F), b.p. 76.8°C (170.2°F). See also p.905

Carborundum, originally a trade name for silicon carbide (SiC) abrasives and refractories prepared by heating silica (SiO_2) with carbon in an electric furnace. It is used in grinding wheels, grinding papers, abrasive grains and powders, valve-grinding compounds, and in refractory bricks and blocks. Nearly as hard as diamond, it oxidizes slowly at temperatures above 1,000°C (1,832°F).

Carboxylic acid, member of a class of organic chemical compounds containing the group $-COOH$. The commonest example is acetic (ethanoic) acid, CH_3COOH , which is present in vinegar. These acids are weakly acidic, forming salts with bases and esters with alcohols. Esters of high-molecular weight carboxylic acids, such as stearic, lauric and oleic acids, are present in animal and vegetable fats, for this reason carboxylic acids are often called fatty acids. The systematic names are formed using the suffix *-oic*. See also FATTY ACIDS

Carbuncle, large localized inflammation of the subcutaneous tissue. It is an aggregation of adjacent boils, or furuncles. Carbuncles most commonly appear on the neck and may need no treatment, even though they are extremely painful.

Carburetor, the mixing of air and fuel vapour in the correct proportions for an internal combustion engine. In a petrol engine air sucked into the cylinders passes through the CARBURETTOR, creating a partial vacuum which draws petrol in through a jet. The resulting air/petrol mixture rapidly burns in the cylinders and the expansion of the gases produced provides the power. In broad terms, the speed of the engine regulates the amount of air - and hence the amount of petrol - drawn into the carburetor. A throttle valve, controlled by the accelerator pedal, determines how much fuel mixture reaches the cylinders, and thus controls the engine's speed. The choke is an air-restricting device used by the driver when starting the engine from cold to enable him to feed the engine with a mixture richer in petrol. See also pp.426, 427, 496-497

Carburetor, component of petrol-powered internal-combustion engines, used to vaporize and mix fuel with air in the correct proportion for proper combustion. Generally steady speed requires a ratio of 15:1 air to fuel. Richer ratios of 10:1 air to fuel are necessary for starting cold engines. Efficient CARBURATION is essential for smooth running and efficient engine performance. See also p.427

Carchemish, ancient city on the River EUPHRATES, near Jarabulus, Syria. It was the centre of an important kingdom in the 9th century BC, and was the scene of a decisive defeat of the Egyptians by the Babylonians in 605 BC. The British Museum carried out excavations there in 1878-81 and 1911-14. See also pp.1181, 1184

Cardiogenes, external substance or agent that causes CANCER, including chemicals, radiation and some viruses. Many different chemical carcinogens have been found to cause cancer in animals, but more research is needed to confirm their ability to cause cancer in man. It is thought that carcinogenic hydrocarbons in tobacco smoke cause lung cancer. See also pp.1063, 1065, 1089

Carcinoma, one of the two major forms of CANCER, the other is sarcoma. It is a malignant growth of epithelial cells which can invade surrounding tissues. See also pp.1063, 1065, 1089

Cardamom, pungent spice made from seeds of a plant of the ginger family (Zingiberaceae), often mixed with TURMERIC to make a type of curry. Species *Elettaria cardamomum*. See also p.706

Cardano, Girolamo (1501-76), Italian mathematician and physician. His books on mathematics were influential. *De Subtilitate Rerum* (1550) summarized existing scientific beliefs.

Cardew, Cornelius (1936-), British

avant-garde composer. He studied at the Royal Academy of Music and between 1958 and 1960 studied electronic music and collaborated with STOCKHAUSEN. He has composed for orchestra and piano. **Cardew, Michael** (1901–), British potter. A pupil of Bernard Leach from 1923–26, he had a pottery at Winchcombe, Gloucestershire, until 1939. He then worked in Ghana (1942–48) and Nigeria (1951–65), and then returned to his pottery at Wenford Bridge, Cornwall.

Card games, leisure or gambling activities in which one or more players employ a regulated number of playing cards. Cards are reputed to date from the Chinese T'ANG DYNASTY and were known in Europe by the 13th century, when they were used for divination as much as for gaming. There are four principal kinds, each with many variants. Games featuring bidding and the trumping of tricks – such as BRIDGE, WHIST and BEZIQUE – demand of players concentration, wit, shrewdness and good manners; the latter quality being essential for *roccca*, the patriarch of gambling games, in which the cards' values are determined by pattern and stakes are raised by bluff. Of less intensity are the variants, GUN RUMMY and CANASTA, whereas PATIENCE is a singular pursuit, as its alternative name, SOLITAIRE, suggests. **Cardiac cycle**, process by which the HEART pumps blood. Blood enters the heart while it is relaxed, filling the atria and ventricles. Contraction of the ventricles forces blood out of the heart and, at the end of the contraction, the ventricles again relax and the heart starts to fill again, ready for the next cycle. See also pp. 152–153.

Cardiff (Caerdydd), capital of Wales and a major port in S Glamorgan, on the River Severn estuary at the mouth of the rivers Taff, Rhymney and Ely. The construction of docks in 1839 led to the rapid growth of Cardiff and, until the beginning of the 20th century, it was a major coal exporting centre. It is the seat of the University College of South Wales and Monmouthshire, and has an 11th-century castle. Industries shipbuilding and repairing, steel, engineering, chemicals, food processing. Pop. 287,000.

Cardigan, James Thomas Brudenell, 7th Earl of (1797–1868), British cavalry officer who led the disastrous charge of the Light Brigade (1854) at the Battle of BALAKLAVA in the CRIMEAN WAR.

Cardiganshire (Ceredigion), former county in W Wales, since 1974 it has been part of Dyfed. It is an area of moorland with fertile valleys and a narrow coastal plain along Cardigan Bay. The county town was Cardigan but Aberystwyth is the most important town.

Cardigan Welsh corgi, guard and cattle dog, it has a wide flat head with a tapered muzzle, a long strong body, short bowed legs and a long fox-brush tail. The smooth, moderately long coat may be red, sable or black with white markings. Height 30.5cm (12in); weight: up to 12kg (26lb).

Cardinal, highest rank in the hierarchy of the Roman Catholic Church after the POPE. Some cardinals are heads of departments of the Roman CURIA, whereas others are PRIMATEs of national churches or other senior bishops. They are nominated by the pope, whom they advise and assist in the performance of his duties. On the death of a pope they meet in a secret conclave to elect his successor, a privilege which has been exclusively theirs since 1179. They are collectively called the Sacred College of Cardinals.

Cardinal number, number expressing the content of a set but not the order of its members. For example, six is a cardinal number in "six books". Two sets have the same cardinal number if their members can be put in one-to-one correspondence – a concept that allows the idea of cardinal numbers of infinite sets. The set of integers is said to have cardinal number \aleph_0 (aleph-null). The set of all real numbers cannot be put into one-to-one correspondence with aleph-null and is a "larger" infinite set. See also ORDINAL NUMBER p.790.

Cardoon, vegetable, the parts eaten being the crisp inner leaves, stalks and main

roots. It is a perennial herb native to the Mediterranean which, since its introduction to South America, has spread widely across the pampas. Family Compositae, species *Cynara cardunculus*.

Carducci, name of two Italian painters who settled in Spain in 1585. Bartolomeo (1560–1608) painted frescoes in the library of the ESCORIAL and altarpieces in the Church of San Felipe el Real, introducing the BAROQUE style to Spain. His brother Vincenzo (c.1576–1638) painted *The Martyrdom of St Andrew* in Toledo cathedral and a series of paintings for El Pualar monastery. He also wrote *De las Excelencias de la Pinnura* (1633).

Carducci, Giosuè (1835–1907), Italian poet who was professor of literature at Bologna University (1860–1904). He was a patriot and advocated a return to Classical and Renaissance literary values in *Inno a Saffo* (1865), and *Odi Barbare* (1887–1889), and in his critical works. He was awarded the Nobel prize in literature in 1906. See also pp. 1576–1577.

Cardus, Sir Neville (1889–1975), noted British music critic and writer on cricket. He joined the *Manchester Guardian* in 1917 and was later appointed its chief music critic. He wrote for the *Sydney Morning Herald* from 1941 to 1947. He was knighted in 1967.

Caretaker, The, second full-length play by the British dramatist Harold PINTER. It was first performed in 1960 and it established his reputation; it was later made into a film.

Carew, Thomas (c.1595–c.1639), English poet. His poetry was largely influenced by Ben Jonson and John Donne, to whom he wrote an elegy. His work includes the largely licentious *A Rapture* and the masque *Coelum Britannicum* (1634).

Carey, Henry (c.1687–1743), English dramatist and song writer, best known for his ballad *Sally in our Alley*. In 1713 he published his first collection of poems and later wrote many songs, burlesques and comic dramas.

Carey Street, former location of the Bankruptcy Court in London, which was housed in the Thomas More building of the Royal Courts of Justice. "To be in Carey Street" means, in popular usage, to be in straitened circumstances.

Cargill, William Walter (1784–1860), Scottish-born New Zealand settler who founded OTAGO in 1848. He was elected superintendent of Otago in 1852. INVERCARGILL is named after him.

Cargo cult, mainly Melanesian religious and political movement where local people have been suddenly confronted by white civilization. They expect their ancestors to return in planes or ships laden with modern goods and to free them from white control and the need to work. As part of the cult they prepare runways and landing areas for the expected cargoes.

Carib, major language group of warlike American Indians (from whom the word "carnibal" is derived). They entered the Caribbean region as relatively late arrivals from N South America. About 500 Caribs still live on the island of Dominica, 5,000 migrated to the eastern coast of Central America, notably around Honduras, where their descendants still live.

Caribbean Sea, extension of the N Atlantic Ocean, bounded by South America (S), Central America (W) and the West Indies (N and E), linked to the Gulf of Mexico by the Yucatan Channel and to the Pacific Ocean by the Panama Canal. The major rivers flowing into it are the Magdalena and Atrato from Columbia, and the San Juan Grande and Coco from Nicaragua.

The Caribbean was discovered by Christopher Columbus in 1492 and was named after the Carib Indians. Thereafter it lay on the route of many Spanish expeditions and was later notorious for piracy, particularly after other European powers had established colonies on the islands of the West Indies. With the opening of the Panama Canal in 1914 its strategic importance increased. Area, 2,718,208sq km (1,049,500sq miles).

Caribou. See REINDEER.

Caricature (from the Italian "caricare", to

load or surcharge), a painting or drawing in which a person is presented in a comic, often ridiculous, light by the distortion or exaggeration of his most obvious features. Caricature may be used to interpret the personality and character of a person, event or age, eg the crowd figures in a ROWLANDSON illustration. The word and genre first appeared in the late 16th century. BERNINI was an excellent caricaturist. HOGARTH attempted to distinguish between depicting character (his forte) and comic likeness, but the two traditions merged. DAUMIER, the 19th-century French artist was a particularly skilful political caricaturist. In the 20th century many popular graphic artists have combined caricature with social and political satire, and today most political "cartoons" in newspapers and periodicals are caricatures.

Caries, decay of teeth or, less commonly, of bones. Tooth decay is caused principally by bacteria living in the mouth. Some feed on food sugars, producing an acid which eats through the hard, outer layers of the teeth, permitting infection with decay bacteria. Brushing the teeth prevents this decay by removing from the teeth a composite plaque of food and bacteria. See also pp. 1100–1101.

Carinatae, old term for all birds except ratites (ostriches, emus and their relatives). The name refers to the keeled (carinated) breastbone of nearly all birds. See also pp. 72–73.

Carinthia (Kärnten), province in S Austria, on the border with Italy and Yugoslavia. Originally inhabited by Celts, it was taken by the HAPSBURGs in 1276, and became part of the Austrian crown lands in 1335. It has several summer resorts. Klagenfurt is the capital. Agriculture is based on rye, oats and livestock raising, and the chief industries are zinc, iron and lead mining. Pop. (1971) 526,000.

Carisbrooke Castle, castle on the ISLE of WIGHT, built on the site of a 3rd-century Roman fort. It shows three main building periods – Roman, Norman and Elizabethan. CHARLES I was imprisoned in it by the Parliamentarians in 1647–48.

Carissimi, Giacomo (1605–74), Italian composer, the teacher of A. SCARLATTI. He wrote chamber CANTATAS, but was important especially as one of the early writers of ORATORIOS, of which *Jephtha* is the best known.

Carl XVI Gustaf (1946–), King of Sweden since September 1973, when he succeeded his grandfather Gustaf VI Adolf. He immediately renounced all (except purely formal) powers of monarchy, a renunciation incorporated in Sweden's 1975 constitution. In June 1976, he married Silvia Sommerlath, the daughter of a West German businessman.

Carleton, Guy, 1st Baron Dorchester (1724–1808), British soldier and colonial administrator. He served in North America during the SEVEN YEARS WAR, and became lieutenant governor of Quebec in 1766 and governor in 1768. His policies were confirmed by the Quebec Act passed by the British Parliament in 1774. He became British military commander in Canada in 1775 and, after initial setbacks, defeated the US forces during the Quebec campaign (1775–76). He was made a baron and was governor-in-chief of British North America (1786–96).

Carlevaris, Luca (1663–1731), Italian painter and engraver. He was the first notable painter of Venetian views, a precursor of CANALETTO and GUARDI.

Carlile, Wilson (1847–1942), clergyman of the Church of England who founded the CHURCH ARMY in 1882. A successful businessman before becoming a priest, he combined his work for the Church Army with several parochial appointments.

Carlisle, city in Cumbria, NW England, on the River Eden, 13km (8 miles) from its mouth on the Solway Firth. Mary Queen of Scots was imprisoned there in 1568. An important rail centre, its industries include agricultural engineering, textiles, food processing. Pop. (1971) 71,497.

Carlists, Spanish faction that favoured the royal claims of Don Carlos (1788–1855) and his successors. They were beaten in

Card games, international bridge competitions are followed with great enthusiasm

Giosuè Carducci, the Italian poet who rebelled against the Romanticism of his age

Caricature, drawing of Victor Hugo in which the size of the head is greatly exaggerated

Caries, lack of oral hygiene may cause tooth decay from destructive bacteria

Carlos I

Carmen; an original costume and set design for the fourth act of Bizet's opera (1875)

Carnivores prey mainly on herbivores and help to preserve the balance of nature

Lazare Carnot; Napoleon said to him "Mon-sieur Carnot, I have known you too late"

Carnot cycle, which proves theoretically the impossibility of perpetual motion

the civil war (1834-39), but Carlist sentiments persisted and they seized considerable territory in N Spain in 1873. That uprising was defeated in 1876, but the Carlists, mainly conservative and nationalist, survive to the present.

Carlos I, King of Portugal. See **CHARLES I** (CARLOS).

Carlos, Juan. See **JUAN CARLOS**.

Carlos, kings of Spain. See **CHARLES, KINGS OF SPAIN**.

Carlos, Don, tragedy by Friedrich von SCHILLER (1787) and opera by Giuseppe VERDI (1867). Don Carlos (1545-68), son of Philip II of Spain, had fits of insanity and was jailed for planning to murder his father. Schiller portrayed him as a champion of liberty in love with his stepmother, and the play formed the basis for Verdi's opera.

Carlow, market town in SW Republic of Ireland, at the confluence of the Barrow and Burren rivers; county town of Carlow County. It has the ruins of a 12th-century castle. Industries: food processing, brewing. Pop 9,400.

Carlbad. See **KARLOVY VARY**.

Carlson, Chester (1906-68), US physicist, inventor of XEROGRAPHY (1938). He patented it in 1940, but had great difficulty in convincing anyone of its commercial value. Finally, in 1947, he signed an agreement with the Haloid Company (now the Xerox Corporation). His royalties made him a multi-millionaire.

Carlson, Otto Gustaf (1897-1948), Swedish artist, a pioneer of avant-garde painting in Sweden. He worked in Paris (1924) under LÉGER and was later influenced by MONDRIAN. From 1931 to 1944 he abandoned painting for art criticism.

Carlyle, Thomas (1795-1881), Scottish philosopher, critic and historian. His most successful work, *Sartor Resartus* (1836), combined philosophy and autobiography. His histories include *The French Revolution* (three vols 1837), and a study of Frederick II of Prussia (six vols 1858-65). He studied Goethe and the German Romantics. He was anti-democratic in his political thought and expressed his preference for strong heroes or leaders in a series of lectures *On Heroes, Hero Worship and the Heroic in History* (1841).

Carman, William Bliss (1861-1929), Canadian poet. He settled in New York, USA, in 1890 and with the poet Richard Hovey produced the series *Songs from Vagabondia* (1894-1901). His later poetry included *The Pipes of Pan* (5 vols 1905), and *Far Horizons* (1925).

Carmanthen (Caerfyrddin), market town in SW Wales, on the River Towy, 13 km (8 miles) from Carmarthen Bay on the Bristol Channel. It is the administrative centre for Dyfed and was formerly the county town of Carmarthenshire. Pop. 13,000.

Carmarthenshire (Sirgacferdyddin), former county in SW Wales, since 1974 it has been part of Dyfed, the largest of the former Welsh counties. It is a hilly area and dairy farming is the chief occupation. The county town was Carmarthen.

Carmel, Mount, mountain ridge in NW Israel extending 24 km (15 miles) from the Esdraelon plain to the Mediterranean Sea at Haifa (Hefa). It is associated with the prophets Elijah and Elisha. In 1931-32 archaeologists discovered there the remains of a type of Neanderthal Man, previously unknown. See also p. 115.

Carmelites, common name for members of the Order of Our Lady of Mount Carmel, founded by St BRATHOLD in Palestine about 1154. An order of Carmelite sisters was founded in 1452. The Carmelites devote themselves to contemplation and missionary work.

Carmen (1875), opera in four acts by Georges BIZET, with French libretto by Henri Meilhac and Ludovic Halévy after Prosper Mérimée's novel. Carmen (mezzo-soprano), a *femme fatale*, induces Don José (tenor), a corporal of the guard, to join the gypsy smugglers, then deserts him for the toreador Escamillo (baritone) and is killed by Don José. See also p. 1599.

Carmichael, Hoagy (1899-), US popular composer. He wrote many songs that have become "standards", among

them *Stardust* (dedicated to Bix BEARMERBECKE) and *Two Sleepy People*; he received an Oscar for *In the Cool, Cool, Cool of the Evening*. He has written film scores, made recordings and appeared on radio and television programmes.

Carmichael, Stokely (1942-), West Indian-born US black activist and leader in the BLACK POWER movement. He was chairman of a civil rights group, the Student Nonviolent Co-ordinating Committee in 1966 and in 1967 joined the more militant Black Panther party. He served as its prime minister until 1969. He left the Panthers as a protest against their association with white radicals and lived in self-imposed exile in Africa.

Carmine Burana, collection of popular 13th century Latin poems from a Bavarian monastery, the lyrics were set to music by Carl ORFF in 1935-36. Probably composed by minstrels and students, many of the poems tell of gambling and drinking, but some have moral or religious themes.

Carnac, village in Brittany, NW France. It is noted for its Megalithic monuments, in particular its menhirs (standing stones), which extend along the coast in 11 parallel rows and probably antedate the Druids. The village also has the remains of a Gallo-Roman villa.

Carnap, Rudolph (1891-1970), German philosopher. He was a member of the VIENNA CIRCLE and is often considered to be a founder of LOGICAL POSITIVISM. He went to the US from Europe in 1936. He wrote extensively on the theory of probability, theory of knowledge, mathematical logic and the philosophy of science.

Carnarvon. See **CAERNARVON**.

Carnarvonshire. See **CAERNARVONSHIRE**.

Carnation, slender-stemmed herbaceous plant native to Europe. It has narrow leaves, characteristic swollen stem joints, and produces several dense blooms with serrated (pinked) petals which range from white to yellow, pink and red. Family Caryophyllaceae; species *Dianthus caryophyllus*.

Carné, Marcel (1909-), French film director. He is best known for his work with screenwriter Jacques PRÉVERT, as in *Quai des Brumes* (1938), *Le Jour se Lève* (1939), *Les Enfants du Paradis* (1943) and *Les Jeunes Loups* (1968), all of which show careful attention to atmosphere and detail.

Carnegie, Andrew (1835-1919), Scottish-born US industrialist and philanthropist. He began as a telegraph operator with the Pennsylvania Railroad (1853-65) but foresaw the demand for iron and steel and started the Keystone Bridge Company. From 1873 he concentrated on steel and by 1901, when his Carnegie Steel Company was sold, it was producing 25% of US steel. He endowed 2,800 libraries and donated more than \$350,000,000 to various foundations. See also p. 1630.

Carnegie Hall, New York concert hall named after Andrew Carnegie, its principal benefactor, and opened in 1891. It has excellent acoustics and until the Lincoln Center opened in 1962 it was the best concert hall in New York.

Carnegie Trust. See **CARNIGIE, ANDREW**.

Carniola, administrative unit of the Austrian empire. Once part of the Roman province of Pannonia, Carniola was occupied during the 6th century by the Slovenes. It belonged to Ottokar II of Bohemia (1269-1276), and passed to the Hapsburgs in 1335. In 1918 most of the region was awarded to Yugoslavia.

Carnival, celebration, usually of a religious nature, with parades, masques, pageants and other forms of revelry with origins in pre-Christian fertility rites. It often occurs in conjunction with a religious feast. The term also refers generally to a local festival or bazaar.

Carnivore, any member of the order of flesh-eating mammals. Weasels, martens, minks and the wolverine make up the largest family. The cats are the most specialized killers among the carnivores; dogs, bears and raccoons are much less exclusively meat eaters, and civets, mongooses and their relatives also have a mixed diet. Related to the civets, but in a separate family, are the hyenas, large

dog-like scavengers. More distantly related to living land carnivores are the seals, sea lions and walrus; they evolved from the ancient land carnivores which also gave rise to early weasel-like or civet-like forms. Other extinct carnivores include the sabretooth cats, which died out during the Pliocene Epoch about 2 million years ago. See also pp. 98-99.

Carnot, Lazare Nicolas Marguerite (1753-1823), French general whose brilliant planning was largely responsible for French victories during the REVOLUTIONARY WARS. In 1800 he became minister of war and served under NAPOLEON Bonaparte.

Carnot, Nicolas Léonard Sadi (1796-1832), French army officer and engineer. His major work, *Reflexions sur la puissance motrice du feu* (1824), provided the first theoretical background to the steam engine and introduced the concepts of reversible cycles and the second law of thermodynamics. His work was ignored until it was quoted and extended by the railway engineer Emile Clapeyron in 1834. See also pp. 844-845.

Carnot cycle, in thermodynamics, a cycle of events that demonstrates the impossibility of total efficiency in heat engines. It was named after Nicholas Carnot (1796-1832). In brief, the Carnot cycle shows how an engine can never convert all the heat energy supplied to it from its burning fuel into mechanical energy. Some heat energy always remains unused in a "cold sink" which in, say, an internal combustion engine, can be thought of as the engine itself; more properly, the cold sink is the entire universe. See also p. 844.

Carnotite, secondary vanadate mineral, potassium uranium vanadate $[K_2(UO_2)_2(VO_4)_2 \cdot nH_2O]$, an ore of uranium and radium, important for atomic energy. It occurs in the Colorado Plateau, Australia, and Congo as yellow-green crusts or cavity fillings in sandstone and in fossilized wood. It is finely crystalline (monoclinic), dull or earthy, s.g. 3-5.

Caro, Anthony (1924-), British sculptor, whose open-form painted "structures", which he evolved after a visit to the USA in 1959, go beyond pure constructivism in their expressiveness. He was an assistant to Henry MOORE (1951-53), then taught at St Martin's School of Art (1953-64) and at Bennington Coll., Vermont, USA (1963-65). Both as teacher and practising sculptor Caro has been a major influence on recent English sculptors.

Carob tree, plant of the eastern Mediterranean. It belongs to the pea family (LEGUMINOSAE) and bears typically leguminous fruits - long juicy pods which have been used as food for people and animals. Species *Ceratonia siliqua*.

Carol, name of two kings of Romania. Carol I (1838-1914) was a prince of the HOBENZOLLERN dynasty, Prince of Romania (1866-81) and Romania's first king (1881-1914). During the RUSSO-TURKISH WAR (1877-78) he sided with Russia and at the BERLIN CONGRESS (1878) won independence for Romania. By 1913 he had made Romania the strongest Balkan power. His grand-nephew, Carol II (1893-1953), also became king (1930-40). In 1938 he assumed dictatorial powers in a struggle against the Fascist monarch but was later deposed. See also pp. 1664-1665, 1664-1665, 1675.

Carol, traditional English song usually of religious joy, especially associated with Christmas. Earliest examples date from the 14th century.

Carolan. See **O'CAROLAN, TURLUOH**.

Carollina, municipality and town in NW Puerto Rico, 18 km (11 miles) SSE of San Juan. It is a market centre for tobacco and sugar, its industries include textiles. Pop (1970): mun. 107,600, town 94,300.

Carolina. See **NORTH CAROLINA**, **SOUTH CAROLINA**.

Caroline Islands, archipelago of more than 600 volcanic islands, coral islets and reefs in the W Pacific Ocean, N of the equator, part of the US Trust Territory of the Pacific Islands since 1947. The larger

islands include Palau, Ponape, Truk and Yap. Copra is the chief export. Area 1,130sq km (450sq miles). Pop. 67,000. **Caroline of Ansbach** (1683-1737), wife of GEORGE II of England. After George II became king in 1727 she helped keep Robert WALPOLE in power and exerted considerable political influence.

Caroline of Brunswick (1768-1821), wife of GEORGE IV of England. They separated in 1796 but on George's accession in 1820 she claimed her rank of queen. A divorce bill was introduced but Caroline won public sympathy and retained her title, but was prevented from attending the coronation.

Carolingian minuscule, script devised in the reign of Charlemagne (8th to 9th centuries) that gained general acceptance throughout Latin-speaking Europe. It evolved over the centuries and by the 13th was known as Gothic script. See also pp 611, 611.

Carolingians, Frankish dynasty in early medieval Europe. Founded in the 7th century by Pepin of Landen, they rose to power over the Franks as major domos (mayors of the palace) under the weak kingship of the later MEROVINGIANS. In 732 Pepin's great-grandson CHARLES MARTEL defeated the Muslims at POitiers; in 751 Charles's son PEPIN THE SHORT deposed the last Merovingian and became King of the Franks. The dynasty reached its peak under Pepin's son CHARLEMAGNE, who united the Frankish dominions and was crowned as HOLY ROMAN EMPEROR by the pope in 800. The Treaty of Verdun (843) divided the empire into three parts: an east part (Germany), a west part (France) and a central part including Italy. Each part was ruled by one of Charlemagne's grandsons: Charles the Bald in the west, Louis the German in the east, and Lothair I, inheriting the title of emperor, in the centre. The Carolingian era saw the rise of FEUDALISM in west Europe and, under Charlemagne, a temporary revival of learning known as the Carolingian Renaissance. See also pp 1286-1287, 1294, 1295.

Carossa, Hans (1878-1956), German novelist and doctor. In *Doctor Burger's Fate* (1913) and *Der Arzt Gion* (1932), he attempted to reconcile a visionary faith in life with his knowledge of medicine. His autobiographical work, influenced in style and philosophy by GOETHE, expressed his quest for a harmonious existence.

Carotene, plant pigment that is converted to vitamin A by the liver. It occurs in various fruits and vegetables (such as carrots).

Carotenoid, one of a group of fat-soluble plant pigments ranging in colour from yellow to red. Carotenoids also occur in some animal fats. They include isomers of CAROTENE, a pigment that is converted in the liver into vitamin A, necessary for normal vision and healthy skin.

Carothers, Wallace Hume (1896-1937), US chemist who discovered the synthetic polyamide fibre now called NYLON. See also pp 590-591.

Carp, freshwater fish farmed in Japan, native to temperate waters and those warmed by hot springs. It is brown or golden and has four fleshy mouth whiskers. The mirror carp has only a few scales and the leather carp has none. Length to 1m (3.2ft). Family Cyprinidae, species *Cyprinus carpio*. See also pp 329, 740-741.

Carpaccio, Vittore (c 1460-1525), Venetian painter, who was influenced by Giovanni BELLINI and possibly by GIOCONDO. A story-teller of great inventiveness, he related the incidents in his many narrative paintings to backgrounds of an idealized Venice. He did this with exceptional success in his cycle of scenes from the legend of St Ursula (Accademia, Venice). Always a popular painter, and one whose work has gained critical interest in recent times, Carpaccio's range of subjects varied from religious paintings, eg *The Presentation of Christ in the Temple*, to the enchanting *Two Venetian Ladies* (Correr Museum, Venice), said to be a painting of two courtesans. See also p 1269.

Carpathian Mountains, range in central and east Europe, extending from central Czechoslovakia north to the Polish-

Czechoslovakian border. The north Carpathians (Beskids and Tatra) run east along the border and south through Ukraine, USSR, the south Carpathians (Transylvanian Alps) extend south to the Danube River. The highest peak is Gerlachovka, 2,655m (8,711ft). It is a sparsely populated area except for the valleys in the south. Industries: timber, mining, tourism. Length 1,530km (950 miles).

Carpentier, Jean Baptiste (1827-75), French sculptor and painter. His individual and realistic approach to sculpture was in contrast to the pseudo-Classicism of his time. His most famous work is *The Dance* (1869), a group sculpture for the Paris Opéra.

Carpentaria, Gulf of, large inlet of the Arafura Sea, indenting the north coast of Australia, bounded by Arnhem Land (west) and Cape York Peninsula (east). Area 310,800sq km (120,000sq miles).

Carpentier, Alejo (1904-), Cuban novelist and musicologist. In *La musica en Cuba* (1946), he captured the flavour of Afro-Cuban music. His novels, structured around myths, are concerned with the conflict between the sophisticated and the primitive, as in *Los pasos perdidos* (1953).

Carpentier, Georges (1894-1975), French boxer, world light-heavyweight champion (1920-22). He lost a heavyweight championship fight to Jack Dempsey (1921) in Jersey City, USA, in the sport's first million-dollar gate. It was the first time a commentary of a championship was broadcast by radio.

Carpentry, craft of cutting, shaping and joining wood. Today the term is generally applied to the bulkier type of woodwork for structural and functional purposes; house construction and its associated woodwork such as rafters, joists, roofs, floors, gates and moulds for concrete are examples of work classed as carpentry. The basic tools of carpentry are the saw, chisel and plane (for cutting and shaping) and the drill, hammer and nails (for joining). Although a carpenter sometimes works from detailed plans, his technique is largely freehand: essential dimensions of a mould, for example, are maintained but the external appearance is unimportant. Joinery and cabinet-making are more specialized types of carpentry. They concern the finer, more precise and visually attractive woodwork: a joiner specializes in making articles such as staircases, shelves, doors, windows and cupboards; a cabinet-maker makes furniture. See also pp 404-405, 548-549.

Carpet, floor-covering of soft and durable fabric. Carpets are made from a variety of materials, including wool, cotton and synthetic fibres, synthetics being used in more than 80% of the carpets manufactured today. Most carpets are produced by weaving, tufting, knitting or electrostatic flocking. Pile carpets, in which the cut ends of threads form the upper surface (pile), are woven on power looms using one of four main types of weave: Wilton, Axminster, Velvet, and Chenille. The pattern of a woven carpet is produced by the various colours of the threads. In tufting, which can produce up to 670sq m (800sq yd) per day on one machine, pile yarn is stitched to a previously made backing, often of jute; the carpet can then be printed or dyed. In electrostatic flocking, chopped fibres are "glued" to a backing fabric.

Carpethaggers, term used after the US Civil War to refer to Northern whites affiliated with the Republican Party who went to the South to participate in its reconstruction. The name referred to the carpet-bag in which many of them carried their belongings. Their opportunism made the phrase a term of abuse. See also p 1630.

Carpet sweeper, hand-operated device for the removal of surface dirt from rugs and carpets invented by Melville Reuben Bussell (1843-89) and patented in 1876. It consists of a long-handled metal or wooden case on wheels. The case contains a cylindrical brush and two pans. When the brush rotates, picking up dirt, which drops into the pans.

Carpì, Ugo da (c 1479-c 1525), Italian designer of woodcuts. He introduced the CHIAROSCURO technique, which requires the use of several blocks, inked separately, to superimpose colours in printing, achieving a three-dimensional effect.

Carpini, Giovanni da Pian del (c 1180-1252), Italian traveller and churchman. He was sent by Pope INNOCENT IV to the Mongol court in 1245, and on his return to Italy wrote a history of the Mongols in which he discredited many of the contemporary rumours concerning Mongol atrocities. He was then made Archbishop of Antivari.

Carr, Edwin (1926-), New Zealand composer. He has studied with Carl ORFF and Benjamin Frankel and his compositions include an opera, *Nastarya* (1972), a symphony (1952), song cycles, concertos and ballet music.

Carrà, Carlo (1881-1966), Italian painter, a founder of FUTURISM, whose early work is in that style. After WWI he was influenced by the "metaphysical" style of CHIRICO and from the 1920s he worked in a more naturalistic style, apparently inspired by the paintings of GIOTTO.

Carracci, family of three painters from Bologna who founded the Carracci Academy, one of the most important 16th-century schools of painting. They revolted against the MANNERISM of the time and sought a more naturalistic style akin to the masters of the High Renaissance. Lodovico (1555-1619) specialized in large altarpieces, eg *The Bargellini Madonna* (1588). Agostino (1557-1602) whose masterpieces include *The Last Communion of St Jerome* (c 1594), was also an important art theorist and famous engraver. Annibale (1560-1609), the greatest artist of the three, painted the frescoes in the Farnese Palace, Rome. These were a prelude to the BAROQUE style of RUBENS and BERNINI.

Carrack, small wooden sailing ship first used in the Middle Ages and characterized by one or two large square-rigged main masts, one or two smaller lateen mizzen or rear masts, and a rear rudder. One example was the SANTA MARIA used by Christopher Columbus on his voyage to America. See also LATEEN; RIG, p 472.

Carrel, Alexis (1873-1944), French surgeon who was awarded the 1912 Nobel Prize in physiology and medicine for his development of a surgical technique for stitching together blood vessels end-to-end. He also contributed to tissue culture research. See also p 1145.

Carrera brothers, José Miguel (1785-1821), Juan José and Luis, Chilean independence leaders and political rivals of Bernardo O'Higgins. José became effectively the president of Chile in 1811 and again in 1814. All three were executed by the Spanish when they reconquered the country, José in 1821 and his brothers in 1818.

Carrero Blanco, Luis (1903-73), Spanish admiral and political figure. He fought with the Nationalists in the SPANISH CIVIL WAR and became closely associated with the FRANCISCO FRANCO regime. He was vice-premier (1967-73). In 1973 he was named premier and was expected to succeed Franco but was assassinated, apparently by Basque nationalists.

Carriage, horse-drawn passenger-carrying vehicle. The Romans were the first to develop a practical four-wheeled carriage but it was in the 19th century - with the great advances in road building that carriages became popular. A wide variety of designs appeared, ranging from the purely functional to the magnificent and luxurious carriages of the wealthy. Carriages declined in popularity after WWI with the introduction of MOTOR CARS. See also COACH, pp 486-487.

Carrier, apparently healthy person who harbours a disease which, while it does not affect him, can be transmitted to other people. Carriers are difficult to detect and are often unaware of the infection they carry.

Carrier, Jean Baptiste (1756-94), extreme Jacobin in the FRENCH REVOLU-

Carp are an ideal species of fish for farming in artificial freshwater ponds.

Vittore Carpaccio, a detail from his portrait of a young man in a red beret.

Georges Carpentier's contest with Jack Dempsey was the first to be broadcast.

Carracci Academy included the painter Ludovico, this is his Annunciation.

Carthusian vocation makes severe tests of physics and psychological endurance

Henri Cartier-Bresson produced photographs of great merit using 35mm cameras

Cartilage plays an important and continuing role in the formation of the body skeleton

Cartoons were originally the sketches for paintings, frescoes and tapestries

tion His contribution to the Terror was to introduce the drowning of political opponents. He was executed in the Thermidorian reaction

Carrier, Roch (1937-), Canadian novelist. His realistic, often violent, novels of Quebec life include *La Guerre*, *Yes Sir* (1968), *Florabe où es-tu?* (1969) and *Hier par là, le soleil* (1970)

Carrier wave, high frequency electromagnetic wave which carries information signals from a radio or television transmitter. The fixed wavelength and frequency of the transmitter's wave is the signal, or channel, to which a receiver must be tuned in order to receive its broadcast. To prevent interference, transmitter carrier waves are separated by clean channels of 10 kHz frequency. See also p.638

Carroll, Sir James (1853-1926), New Zealand politician. Elected to parliament in 1887, he was Minister of Maori Affairs from 1899 to 1912, in which time he was twice acting Prime Minister

Carroll, Lewis (1832-98), British mathematician, photographer and writer, real name Charles Lutwidge Dodgson. He is especially remembered for *Alice's Adventures in Wonderland* (1865) and its sequel, *Through the Looking Glass* (1872), which have attracted much serious scholarly criticism as well as being popular children's classics.

Carroll, Paul Vincent (1900-68), Irish dramatist. His best-known play was *Shadow and Substance* (1937), first performed at the Abbey Theatre, Dublin. His other plays include *Things That Are Caesar's* (1932), *The White Steed* (1939), *The Strains*, *My Lord, Are False* (1942) and *The Wayward Saint* (1955)

Carrouade, short-barrelled CANNON that fired iron balls weighing up to 31kg (68lb). Invented in 1759 by Sir Robert Melville, it was used in the British, French and US navies between 1779 and 1850 and proved to be extremely effective at short ranges, especially fired over the stern of a ship. See also p.565

Carrot, herbaceous, generally biennial, root vegetable native to Afghanistan and cultivated widely as a food crop. The edible orange taproot is the plant's store of food for the following year. The plant is topped by delicate fern-like leaves and white or pink flower clusters. The carrot family, *UMBELLIFERAE*. Species *Daucus carota*. See also p.685

Carse of Gowrie, fertile low-lying plain 24km (15 miles) long in the Perth and Kinross and Dundee City districts, Tayside region, Scotland, bordering the Firth of Tay. It is one of the country's most productive agricultural areas.

Carson, Edward Heary (1854-1935), British political figure. He was an MP (1892-1921), and fought against home rule for Ireland. He organized the paramilitary Ulster Volunteers (1912-13) and forced the Government to keep most of Ulster in Britain. He served in the war cabinet during WWI and became an appeal judge (1921-29). See also p.1643

Carson, Kit (1809-68), US guide and soldier. He originally lived as a trapper and hunter but achieved fame for his work as a guide for John C. FRÉMONT's expeditions (1842-46). In 1854 he became US Indian agent at Taos, New Mexico, and in 1861 became a colonel in the US army, fighting against Confederate and Indian forces. In 1864 he became superintendent of Indian affairs for Colorado Territory.

Carson, Rachel Louise (1907-1964), US biologist and science writer. She is best known for her widely popular and influential books on pollution, wild life and the sea. Her works include *The Sea Around Us* (1951), which won a National Book Award, *Silent Spring* (1962), about the dangers of pollution, *Under the Sea Wind* (1941) and *The Edge of the Sea* (1955).

Carson City, capital city of Nevada, USA, 50km (30 miles) S of Reno. The city grew rapidly after silver was discovered in the Comstock Lode in 1859. It was named after Kit CARSON. Gambling is the main industry. Pop. (1970) 15,468.

Cartagena, city and port in NW Colombia, on the Bay of Cartagena in the Caribbean Sea. It was an important city under the

Spanish in the 17th century, and is today the principal oil port of Colombia. There is a university (founded in 1824). Industries: oil refining, sugar, tobacco, hides, textiles, tourism. Pop. (1975) 292,512.

Cartago, city in central Costa Rica, at the foot of the volcano Irazú 23km (14 miles) SE of San José, capital of Cartago province. It served as the capital of Costa Rica until independence was won from Spain in 1823. Industries: coffee production, livestock raising. Pop. 22,000.

Carte, Richard D'Oyly (1844-1901), British impresario and producer of the operas of Sir William S. GILBERT and Sir Arthur SULLIVAN. He founded the Savoy Theatre in London (1881) - the first to be lighted electrically - especially for staging Gilbert and Sullivan's works.

Cartel, formal agreement among the producers of a particular product to fix the price and divide the market among themselves. Such an arrangement usually results in higher prices for consumers and extra profits for the producers. Cartels are illegal in many countries.

Cartier, Elizabeth (1717-1806), British poet, one of the BLUESTOCKINGS. Her poems were published in two major collections (1738, 1762); she also translated (1758) works of the Greek stoic philosopher EPICURE.

Cartier, Elliott Cook Jr (1908-), US composer, widely regarded as the leading modern American composer. His works, notable for their elaborate counterpoint and use of tempo as an aspect of form, include a piano (1946) and cello (1948) sonata, *Variations* (1953-55) and a concerto (1970) for orchestra, and three string quartets (1951, 1959 and 1973). He received a Pulitzer Prize for his second string quartet in 1960.

Cartier, Howard (1873-1939), British Egyptologist. He discovered the tombs of Hatshepsut and Thutmose IV in the valley of the kings in Luxor, Egypt, and supervised excavations for Lord Carnarvon. He helped find the tomb of TUTANKHAMEN in 1922. See also HC1 p.22.

Cartier, James Earl (1924-), US politician and 39th president. He graduated from the US Naval Academy and served in the navy until 1953. He then devoted himself to managing his family's extensive peanut farms. He was a senator for the state of Georgia (1962-66) and governor of the state (1971-74). He was elected President as the DEMOCRATIC candidate in 1976, when he defeated the Republican incumbent, Gerald FORD. He failed to be re-elected for a second term in office, suffering a crushing defeat in the 1980 elections by Republican Ronald Reagan.

Cartesian co-ordinate system, system in which the position of a point is specified by its distances from intersecting lines (the axes). In the simplest type - RECTANGULAR CO-ORDINATES in two dimensions - two axes are used at right angles: the y-axis and the x-axis. The position of a point is then given by a pair of numbers (x,y). The abscissa, x, is the point's distance from the y-axis, measured along the x-axis and the ordinate, y, is the distance from the x-axis. The axes in such a system need not be at right angles. Three axes represent three dimensions. See also p.784.

Cartesian philosophy, doctrine of the 17th century French philosopher René DESCARTES. Cartesians agreed with Descartes that all human knowledge could be established with mathematical certainty on the basis of indubitable first truths. The thinking self alone, working on its own clear and distinct ideas, could establish the reality of the world. Matter (extended substance) and mind (thinking substance) constituted the fullness of reality, while the former, always in motion, was the sole object of scientific study. See also RATIONALISM, p.1884.

Carthage, ancient port in N Africa, on a peninsula in the Bay of Tunis. It was founded in the 9th century BC by Phoenician colonists who fought the Punic Wars against Rome. Carthage was destroyed during the Third Punic War 149-146 BC, but was rebuilt by Caesar in 29 BC. It was the capital of the Vandals (439-553 AD), and was destroyed by the Arabs in 698.

Today a small town surrounds the ancient remains. See also pp.1187,1222,1224-1225. **Carthusians**, monastic order founded by St BRUNO in 1084 at the Grande Chartreuse monastery near Grenoble, France. A mainly contemplative order, the monks are vowed to silence and solitude. The order includes nuns. See also p.1321.

Cartier, Sir George Etienne (1814-73), Prime Minister of Canada who did much to encourage French Canadians to accept federation at the Quebec conference in 1864. He represented Montreal in the Legislative Assembly (1848-73) and was prime minister jointly with John A. MACDONALD (1858-62).

Cartier, Jacques (1491-1557), French explorer who discovered the St Lawrence River. He made three Canadian voyages, primarily looking for the NORTHWEST PASSAGE and for natural resources. On his first voyage in 1534 he discovered the Magdalen Islands and Prince Edward Island and explored the Gulf of St Lawrence. In 1535-36 he sailed up the St Lawrence River to the site of Montreal. His explorations formed the chief basis for later French claims on Canada. See also pp.1614, 1614.

Cartier-Bresson, Henri (1908-), French photojournalist. His photographs reflect the modern world and have won international acclaim for their superb composition and sense of timing. His many books include *The Decisive Moment* (1952), *The World of Henri Cartier-Bresson* (1968) and *About Russia* (1974).

Cartilage, flexible supporting tissue of the body. It has a tensile strength and consistency enabling it to bear weight although comparatively elastic. In man, the nose, ears and windpipe are made of cartilaginous tissue. See also pp.146-147.

Cartography, the science of making maps, representing all or a part of the earth's surface to a specified scale. Maps are usually printed on a flat surface using various kinds of projections. The most common type is topographical, it indicates hills and valleys with contour lines. Relief maps, usually used in civil engineering planning, are the clearest method of demonstrating the three-dimensional nature of the terrain. See also p.242.

Cartoon, term with two meanings. In its original sense it described a preparatory drawing for a tapestry, painting, fresco or stained-glass window. The design may be drawn in chalk, charcoal, colourwash or pencil. Italian Renaissance painters made very thorough cartoons, famous examples of which are RAPHAEL's cartoons for the Sistine Chapel (seven of which are in the Victoria and Albert Museum). The use of the word "cartoon" for a humorous drawing is derived from a 19th-century competition for fresco designs for Parliament parodied in *Punch* magazine.

Cartidge, case of a bullet or shell, containing the explosive and the detonator. In small arms the term is used for a complete round of AMMUNITION, including the bullet or shot. See also p.557.

Cartwright, Edmund (1743-1823), British inventor. Originally a clergyman, Cartwright invented the power loom (patented 1785) after visiting Sir Richard ARKWRIGHT's cotton spinning mill, although it was not used commercially until early in the following century. He also invented a wool-combing machine (patented 1789) and an alcohol engine (1797).

Cartwright, John (1740-1824), British radical reformer. He was the brother of Edmund CARTWRIGHT, and came to prominence with his pamphlets in favour of American independence. He wrote on many topics, including the abolition of slavery and the need for parliamentary reform. See also p.1640.

Casero, Enrico (1873-1921), Italian tenor, one of the most famous and widely-acclaimed opera singers of all time. He made his debut in Naples in 1894, his fame began in 1902 when he sang at Monte Carlo. In 1903 he sang in Verdi's *Rigoletto* at the Metropolitan Opera in the USA, where he centred his career for the next 17 years. He also appeared in the leading European opera houses and made many recordings.

Carver, George Washington (1864-1943), US agricultural chemist and experimenter, best known for his scientific research on the peanut, from which he derived more than 300 products. His primary intent was to aid impoverished farmers of the American South.

Carver, Robert (b. 1487), Scottish composer. Although little is known about his life, seven pieces of his music are known to have survived. These are five masses and two motets, which show highly accomplished polyphonic writing.

Cary, Arthur Joyce Lancel (1888-1957), British novelist. At the age of 16 he studied art in Edinburgh and Paris, and from 1909-12 he studied law at Oxford University. His experiences in colonial political service in Nigeria (1914-20) are reflected in *Mister Johnson* (1939). He also wrote two trilogies, the first of which contains *The Horse's Mouth* (1944), his best-known novel.

Casablanca, city in W Morocco, on the Atlantic coast. The site was resettled in 1515 by the Portuguese after their destruction of the previous town of Anfa. An earthquake damaged the city in 1755 and it was rebuilt in its present form by Muhammad XVI two years later. Today it is a thriving commercial centre, exporting phosphates and importing petroleum products. Local industries include textiles, glass and bricks. Pop. 1,395,000.

Casablanca Conference (Jan. 1943), meeting of the US president Franklin D. Roosevelt and British prime minister Winston Churchill at Casablanca, Morocco. The Allied leaders pledged to fight the Axis powers until they won an unconditional surrender. See also pp. 1680-1683.

Casals, Pablo (Pau) (1876-1973), Spanish cellist and conductor. He organized his own orchestra in Barcelona in 1919, directed the Prades Music Festivals in southern France from 1950, and organized the annual Casals Festival in Puerto Rico from 1957. His virtuoso playing influenced many other cellists.

Cassanova de Selinatti, Giovanni Giacomo (Jacopo) (1725-98), Italian adventurer. From 1750 he travelled through Europe leading a dissolute existence. In 1755 he was imprisoned in Venice but made a daring escape to Paris, where he amassed a fortune and mixed with the leading men and women of the day. After 1785 he became a librarian. He is remembered for his memoirs, which were not published in unexpurgated form until 1960.

Cascade Range, mountains in W USA, extending from NE California N across Oregon and Washington into Canada. The Cascade Tunnel, at 13 km (8 miles) the longest rail tunnel in the USA, passes through them. Crater Lake National Park is in the Cascades. The highest peak is Mt Rainier, 4,395 m (14,410 ft).

Cascarilla, vegetable extract used as a laxative. It is obtained from the bark of *Croton elaterii*, a shrub of the spurge family native to the West Indies.

Caselin, principal protein in milk, containing 0.71% phosphorus, 0.72% sulphur and about 15 amino acids. It constitutes about 80% of the proteins in cow's milk and about 40% in human milk. Obtained from milk by the addition of either acid or rennet, casein is used to make plastics, paper coatings, adhesives, paints, textile sizing, and animal feed.

Casella, Alfredo (1883-1947), Italian composer, teacher, pianist and conductor. His compositions, conservative in style, include three operas, two symphonies, the mass *Missa Solemnis* (1944), piano and ballet music and songs.

Cassamatt, Sir Roger David (1864-1916), Irish humanitarian and patriot. While a British consul (1895-1912) he exposed the brutal exploitation of Congolese rubber-gatherers by agents of the Belgian king. For this and for similar exposures in S America, he received a British knighthood. But in WWI he sought aid in the USA and then in Germany for an Irish uprising, and was executed for treason by the British. To blacken his name, British agents revealed his diaries which showed him to be homosexual. The authenticity of these

diaries has sometimes been questioned.

Caserta, city in Campania, SW Italy; capital of Caserta province. The surrender of German forces in Italy was signed there in 1945. It has the "Versailles of Naples", and a Bourbon royal palace (1752). An agricultural trade centre, it has manufacturing and food processing industries. Pop. 59,000.

Casey, Richard Gardiner, Lord (1890-1965-69), Governor-General of Australia (1965-69). He held many cabinet posts - including federal treasurer (1935-39), minister for external affairs (1951-60) - and was also minister to the USA (1940-42), minister of state resident in the Middle East (1942-43) and Governor of Bengal (1944-46).

Cash crop, agricultural crop cultivated for its commercial value, as opposed to one grown for subsistence or for use on the farm. Fruit, vegetables, maize and olives for oil are examples of cash crops in European farming. Hay, in contrast, is generally grown as feed for animals. See also pp. 652-653.

Cashew, evergreen shrub or tree grown in the tropics, chiefly important for its nuts. It is used for making boxes and boats, and as charcoal, and it produces a gum similar to gum arabic. Height to 12 m (39 ft). Family Anacardiaceae, species *Anacardium occidentale*. See also pp. 710-711, 711.

Cash flow, money going into a business (earnings) and money going out (expenditure or costs). The amount of incoming funds compared with outgoing funds determines how much ready cash a company has for its day-to-day operations.

Cashmere, the woolly hair of a goat native to Kashmir, India. It was first used there to make the cashmere shawls that became famous throughout the world. The warm but lightweight wool was later woven into textiles for coats and sweaters.

Casket Letters, letters and sonnets given in evidence at the inquiries of York and Westminster in 1568 into the murder of Lord Darnley. They were submitted by the Earl of Moray, regent of Scotland, who claimed that they were found in a casket of the Earl of Bothwell, husband of Mary Queen of Scots. They apparently proved the complicity of Mary in the murder, but the originals were lost in 1584.

Caslavka, Vera (1942-), Czechoslovak gymnast. She enraptured millions by winning four Olympic gold medals in 1968. It was the climax of a career in which she won seven Olympic, four world and 11 European titles.

Caslon, William (1692-1766), English printer and typefounder. In 1716 he began work in London as an engraver of guns but soon started his own typefoundry. He developed a distinctive typeface which became popular throughout Europe. Although it lost favour during the 1800s, Caslon's typeface was revived and is still used in book printing.

Caspian Sea, shallow salt lake mostly in the USSR, s edge forms the N border of Iran; the world's largest inland body of water. The water level fluctuates as a result of evaporation and the fluctuating volume of its tributaries. It is fed mainly by the Volga River but also receives the Ural, Emba, Kura and Terek rivers, there is no outlet. The chief USSR ports are Baku, an oil-shipping centre, and Astrakhan. An important trade route for centuries, the Caspian Sea was part of a medieval Mongol-Baltic route for goods from Asia. It still has important fisheries and sealeries. Area, 393,896 sq km (152,083 sq miles).

Cassandra, in Classical mythology, a Trojan skilled in the art of prophecy, but condemned by Apollo never to be taken seriously. Her warning that the Greeks would capture Troy went unheeded. She was raped by the Greek Ajax the lesser, carried off by Agamemnon, and murdered by Clytemnestra and Aegisthus.

Cassatt, Mary (1845-1926), US-born painter and printmaker, who lived in Paris, where she was influenced by Degas and the Impressionists. Her finest paintings include *The Bath* (1892). She also made many fine dry point and aquatint studies of domestic life, and a series of

Japanese-influenced colour prints.

Cassava, also called manioc, a TAPIOCA plant native to Brazil. It is a tall woody shrub with small clustered flowers. A valuable cereal substitute is obtained by processing the tuberous roots. Height up to 2.7 m (9 ft). Family Euphorbiaceae, species *Manihot utilisima*. See also pp. 682-683, 754-755.

Cassavetes, John (1929-), US film actor and director. As an actor he appeared in *A Man is Ten Feet Tall* (1957), *The Dirty Dozen* (1967) and *Rosemary's Baby* (1968). His first independent production *Shadows* (1960) greatly influenced other low-budget film makers. Other productions included *Faces* (1968) and *Minnie and Moskowitz* (1971).

Cassell, see KASSEL.

Cassia, sweet aromatic spice derived from the bark of a cinnamon plant, *Cinnamomum cassia*, found in Asia. Ground cassia is red-brown in colour and is used to produce drugs, liqueurs and incense. Cassia is also the name of a large genus of leguminous plants, from which SENNA and other medicinal substances are obtained.

Cassini, René (1687-), French statesman. He was a professor of international law in Paris and in 1924 joined the French delegation to the League of Nations. In 1946 he became a member, and later chairman, of the United Nations Human Rights Commission and helped to found UNESCO. From 1965 he was president of the Council of Europe. He was awarded the 1968 Nobel Peace Prize.

Cassini, Giovanni Domenico (1625-1712), Italian-born French astronomer. He is chiefly remembered for being the first to detect, in 1675, the dark cleft between Saturn's two outer rings known as Cassini's Division. He also discovered four of Saturn's moons. See also pp. 916-962, 962.

Cassino, town in the Lazio region, central Italy, on the River Rapido. Formerly known as San Germano, it was a medieval centre of arts and learning. During WWI it was the scene of fierce fighting in 1944 when the Germans attempted to halt the Allied advance on Rome. They failed and the town and nearby Benedictine abbey of Monte Cassino were destroyed. Today it is an agricultural and commercial centre and manufactures toys. Pop. 25,000.

Cassiodorus, Flavius Magnus Aurelius (c. 490-c. 585), Roman writer and statesman. He served under Theodoric and Athalaric, and founded several monasteries. His major work, a history of the Goths, has been lost.

Cassiopeia, northern circumpolar constellation in the Milky Way N of Andromeda and characterized by the W shape of its five brightest stars. In addition to several clusters and variables, Cassiopeia contains two radio sources: Cassiopeia A, the remains of a SUPERNOVA of 1700, and Cassiopeia B, the remnant of Tycho Brahe's supernova of 1572. See also p. 1012.

Cassirer, Ernst (1874-1945), German philosopher. Strongly influenced by Immanuel Kant, he is particularly known for his study of cultural values. His works include *The Philosophy of Symbolic Forms* (1923-29), *Language and Myth* (1925), *An Essay of Man* (1944), and *The Myth of the State* (1946).

Cassiterite, translucent black, yellow or white mineral, tin oxide (SnO₂), the major ore of tin. It occurs in PLACER DEPOSITS, chiefly in the Malay peninsula and in pegmatites and other intrusive igneous rocks. It occurs as short tetragonal prismatic crystals, or masses and radiating fibres. Hardness 6-7, s.g. 7. See also p. 258.

Cassius Longinus, Gaius (d. 42 BC), Roman general who led the plot to assassinate Julius Caesar. He sided with Pompey during the war against Caesar but was pardoned in 48 BC after Caesar defeated Pompey at Pharsalus (48 BC). After the assassination of Caesar in 44 BC he left for Sicily. In 42 BC he and Marcus Brutus fought against Mark Antony and Octavian (Augustus) at Philippi. Cassius, thinking the battle was lost, committed suicide.

Cassivellaunus (1st century BC), British chieftain. He ruled north of the River

Casablanca, Moorish town and Sultan's palace with the European city in the distance.

Pablo Casals was one of the great virtuosos of the cello and also a noted conductor.

Roger Casement, the Irish patriot, sought German support for Irish independence.

Mary Cassatt's paintings of motherhood made her a popular painter.

Casson, Sir Hugh

Cassowaries can fatally injure a man with a blow from their powerful sharp claws

Castagnettes are named from the Spanish for chestnuts, which they resemble in shape

Castles reflect the state of almost constant war that prevailed in feudal Europe

Cats, animals that vary in size from the lion to rare small wild species

Thames and fought Julius CAESAR in the invasion of 54 BC, but was defeated and forced to pay tribute

Casson, Sir Hugh (1910–), British architect. Director of Architecture (1948–51) at the Festival of Britain, he was knighted in 1952. He was Professor of Interior Design at the Royal College of Art from 1953 to 1975.

Casson, Sir Lewis (1875–1969), British actor and manager. In 1908 he joined the Gaiety Theatre, Manchester, and was its director (1911–14). From 1922 he concentrated mainly on the production of plays by George Bernard Shaw and Shakespeare. He continued acting, however, and gave notable performances in *The Linden Tree* (1947) and *Eight in the Shade* (1949). He often worked with his wife Dame Sybil THORNDIKE.

Casowary, powerful flightless bird of rain forests in Australia and Malaysia. It has coarse black plumage, a horny crest on its brightly coloured head, large feet and sharp claws. The male incubates the eggs in a nest on the forest floor. Height, to 1.6m (65in). Family Casuaridae, species *Casuarus casuarus*. See also pp. 72–73

Castagno, Andrea del (c.1423–57), Florentine painter. He was first influenced by MASACCIO, then by DONATELLO and UCCIELLO. He was noted for his realistic figure drawing, which greatly influenced later Florentines, including LEONARDO DA VINCI and MICHELANGELO. Castagno's masterpiece is his *Last Supper*, a fresco of enormous power.

Castanets, percussion instrument consisting of two pairs of hinged hardwood shells, usually held in the hands, which produce clicking sounds. They are used in orchestral music and percussion bands, but principally in Spanish dancing.

Caste, formal, rigid system of social stratification based on factors beyond individual control (eg race, sex or religious heritage), and sanctioned by tradition. This kind of system is called ascriptive because the individual is born into his or her position and cannot change it. See also STRATIFICATION pp. 1842, 1848

Castel Gandolfo, town on Lake Albano in Roma province, Latium, central Italy. It became a realm of the Holy See in 1608. It is the summer residence of the Pope and the Villa Barberini houses the Vatican observatory. Fishing is the main occupation. Pop. 5,000.

Castelnuovo-Tedesco, Mario (1895–1968), Italian composer who emigrated to the USA in 1939. He composed many works including songs, operas, chamber music and solo piano and guitar music. One of his most popular works is the *Guitar Concerto in D* (1939).

Castelo-Branco, Camilo (1825–90), Portuguese novelist and short story writer. His works are realistically romantic and include the novel *Fatal Love* (1862) and the short stories *Novelas do Minho* (1875–77).

Castiglione, Baldassare (1478–1529), Italian Renaissance diplomat and writer. As a diplomat he served in Rome at the court of URBANO (1507–13) and with the papal court. He subsequently served as papal nuncio to CHARLES V in Spain. He produced a famous work on court etiquette, *IL CORTIGIANO* (1528). See also p. 1392

Castile, region and former kingdom in central Spain, traditionally comprising Old Castile (N) and New Castile (S). The name is said to derive from the many castles built during the Christian reconquest of the area from the MOORS in the 8th century. Old Castile was originally part of the kingdom of LEON and did not become part of Castile proper until 1230. The Castilian kings were responsible for the capture of New Castile from the MOORS at this time. Queen ISABELLA established the union with ARAUCON in 1479 and in the 16th century Castile became the most influential power in Spain and the core of the Spanish monarchy. Today the region remains underdeveloped with few traditional industries surviving.

Castilho, António Feliciano de (1800–75), Portuguese poet, who was blind from

the age of six. He was initially a ROMANTIC, in poems such as *A Noite do Castelo* (1836) and *Os Círculos do Bardo* (1838), but later repudiated Romanticism in the *Revista Universal Lusitana* (1842).

Castings, metal, forming metal objects by pouring molten metal into moulds of specified shapes and allowing it to solidify. Most castings are made by pouring metal into sand or clay moulds. Specialized processes, such as plastic moulding, composite moulding, *core-sand* (or lost-wax process), and die casting give greater dimensional accuracy, smoother surfaces and finer detail. See also pp. 392, 408

Cast iron, general term applied to various grades of iron, especially grey iron and pig iron (directly out of a blast furnace). It includes a wide range of iron-carbon-silicon alloys containing from 1.7 to 4.5 per cent carbon with varying amounts of other elements. Grey iron (so-called because its fracture looks greyish) is the most widely used for casting vehicle engines, machinery parts and many other products. See also pp. 389, 394–400

Cast-iron plant. See *ASpidistra*

Castle, fortified residence of a king or noble in the Middle Ages, often providing a centre of refuge for people living in the surrounding area. Built of wood or masonry, located on a site dominating its environment and often surrounded by a water-filled moat, castles were enclosed by high walls protecting those inside from attack. Turrets were usually found at the angles of the walls and occasionally interspersed along the exterior walls. The walls were built thick enough to withstand bombardment and wide enough at the top to allow the defenders to manoeuvre behind the protection afforded by the parapets that capped them. Inside the walls were the living quarters, the stables, the arsenal and the storage space for the daily provisions. See also p. 1339

Castle, The (1926), novel by Franz KAFKA. The central character, K, attempts to take up a job in a strange village where he alone is convinced he has been appointed. The castle, evil and inexplicable, dominates the story by creating uncertainty and fear in this world of unreality.

Castlemaine, Lady. See CLEVELAND, DUCHESS OF

Castlemaine, town in Central Victoria, Australia. It was the site of an early gold mine (1851). Industries: iron, textiles. Pop. 7,000.

Castlereagh, Robert Stewart, 2nd Viscount (1769–1822), British politician. He was Chief Secretary of Ireland (1799–1801) and helped secure the passage of the Act of Union with Britain in 1800. As British War Secretary (1805–06, 1807–09) he vigorously opposed NAPOLEON but resigned after a duel with George CANNING. Castlereagh was a brilliant Foreign Secretary (1812–22), backing WELLINGTON in war and helping to secure long-term peace in Europe at the Congress of Vienna (1814–15). See also pp. 1558, 1559, 1662

Castletown, urban district and historic capital of the Isle of Man, on Castletown Bay. The old House of Keys, seat of the Manx parliament until 26 Nov. 1874 (when it was removed to Douglas) is in this area. Pop. (1971 prelim.) 2,820.

Castor and Pollux, in Classical mythology, the youthful, athletic and inseparable twin sons of LEA. They were invoked by sailors seeking favourable winds. Zeus, father of Pollux, transformed them into the Gemini constellation after Castor, who was mortal, died and Pollux refused to be parted from him.

Castoreum. See CASTOR

Castor oil, viscous yellow oil, sometimes used as a laxative or as an industrial lubricant. It is obtained from the seeds of the CASTOR PLANT.

Castor plant, also called castor bean, plant that in hot countries grows into a tree, but which remains a bushy herb in temperate climates. It belongs to the spurge family and bears pods containing castor beans, the source of castor oil. See also p. 713.

Castration, removal of the sexual glands from an animal or human being – the testes in a male, the ovaries in a female. In

human beings it has been a form of punishment, a way of sexually incapacitating slaves to produce eunuchs or artificially creating soprano voices (see CASTRATO) and as a way of stopping the spread of cancerous growths. It can make livestock animals tamer and improve the quality of their meat. In pets it prevents breeding.

Castrato, voice of the soprano register. Produced in adult males by castration during boyhood, it was in vogue in the 17th and 18th centuries. The most famous castrato was FARINELLI. See COUNTER TENOR, FALSETTO

Castries, port and capital of Saint Lucia in the Windward Islands. It was founded in 1650 by the French. It has the Church of the Immaculate Conception. Exports include sugar, bananas and citrus fruits. Pop. 5,000. See also p. 2127

Castro Alves, Antônio de (1847–71), Brazilian poet whose verse, devoted to the issues of slavery and social justice, earned him the title of "the poet of the slaves". He is most famous for *Gonzaga, or the Revolution at Minas* (1875), *Voices of Africa* (1880) and *The Slaves* (1883).

Castro, Fidel (1926–), Cuban revolutionary leader and prime minister (1959–) in 1953 he was sentenced to 15 years' imprisonment after an unsuccessful coup against BATISTA's regime. Two years later he was granted an amnesty and began, in Mexico, his association with Che GUEVARA. In 1959, barely two years after Castro's return to Cuba, his guerrilla forces deposed Batista and he became *de facto* ruler. He collectivized agriculture, dispossessed foreign companies and established close connections with communist countries. In 1961 he declared himself a Marxist-Leninist, aligning his country with the Third World nations. See also pp. 1739, 1740, 1741, 20, 7

Cat, carnivorous, often solitary, mainly nocturnal mammal of the family Felidae, ranging in size from the rare Siberian tiger to the domestic cat. It has specialized teeth and claws for hunting, a keen sense of smell, acute hearing, highly sensitive vision, and it balances well with its long tail (only the manx cat has no tail at all). Cats walk on their toes and all have fully retractile claws, except for the cheetah which needs greater purchase on the ground to run at high speeds. The lineage of the Felidae is one of the most easily traced to prehistoric ancestors, among them the sabre-toothed cats. One of the first animals to be domesticated by man, cats have appeared frequently in myth and religion. Today there are many domestic breeds, all popular as pets. British and American short-haired breeds include Siamese, Burmese, Abyssinian, Rex and Manx, the Persian varieties are long-haired. Most common domestic cats are a mixture of breeds. Order Carnivora. See also pp. 98, 99

Catabolism (also spelled katabolism), metabolic process in living things. Complex substances are chemically changed into waste products with simpler compositions during the release of energy. It is the opposite of anabolism, in which complex substances are formed from simpler ones and energy is stored. See also METABOLISM

Catacombs, early Christian (and some Jewish) subterranean cemeteries, often used as refuges from persecution and as shrines. The extensive catacombs of Rome are the best-known, but remains of others have been found elsewhere in Europe, N Africa and Syria. Built between the 1st and 5th centuries, those in Rome are a complex of galleries as deep as 8m (25ft) below ground-level with burial niches, vaults and rooms along the sides covered with inscribed tablets.

Catalepsy, abnormal condition in which parts of the body remain in any position in which they are placed. Causes may be organic, psychological or the result of hypnosis.

Catalonia (Cataluña), region in NE Spain extending from the French border to the Mediterranean Sea, it includes Barcelona, Gerona, Lérida and Tarragona provinces. United with Aragón in 1137, it kept its own laws and language. It became an important medieval trading centre, but

declined after the union of Castile and Aragón in 1479. During the 20th century it has been a centre for anarchist movements. During the Spanish Civil War Barcelona was a Loyalist capital, but the region fell to Franco in 1939, since when there has been a separatist movement. Products: grain, fruit, olive oil, wool, wine. Area: 31,932sq km (12,329sq miles). Pop. (1970) 5,122,500.

Catalpa, ornamental tree found in North America and the West Indies. It has large heart-shaped leaves, showy white or purple flowers and bean-like fruit pods containing many seeds. Common catalpa (*Catalpa bignonioides*) is also called the Indian bean. Height: up to 18m (60ft). Family Bignoniaceae.

Catalyst, chemical compound that accelerates or inhibits the rate of a chemical reaction without itself being consumed. Many industrial processes rely on catalysts. Inhibitors are commonly antioxidants, often used to prevent degradation of organic compounds, especially in air. Metals or their compounds catalyze by adsorbing gases to their surface, forming intermediates that then readily react to form the desired product while regenerating the original catalytic surface. Development of life forms is impossible without catalysts, since many specific-acting enzymes select and follow only one of a large number of metabolic pathways, acting much faster than nonbiological catalysts. See also pp 901, 908.

Catamaran, swift, bridged-over, twin-hulled boat, powered by sails or engine, popular in sports. Originally, a raft of Indian and Indonesian waters developed for cargo carrying and for long voyages by Melanesians and Polynesians. The design has great stability and was adopted in the 1870s by western boatbuilders.

Catamaran racing. See YACHT RACING.
Catania, port in E Sicily, Italy, at the foot of Mount Etna, capital of Catania province. Ancient Catania was founded by Greeks in 729 BC, and repeatedly invaded. It suffered a devastating volcanic eruption in 1669 and an earthquake in 1693, after which it was rebuilt. It has Greek and Roman ruins, a Norman Cathedral (1091), and the first Sicilian university (1444). Industries: chemicals, cement, textiles. Pop. (1968) 409,000.

Catalepsy, temporary loss of muscular control, without loss of consciousness. It is sometimes confused with CATAPLEXY.
Catapult, device for hurling projectiles. Originally a handheld hunting weapon, it had developed into a massive war machine by Roman times. It is now used to launch aircraft from ships. See also pp 560, 568.

Cataract, opacity in the lens of an eye. It is usually caused by degenerative changes in old age or by a condition such as diabetes. Symptom is a gradual but painless loss of vision. The cataract may be removed by surgery and corrective lenses are sometimes prescribed. See also p.137.

Cataract, in physical geography, term usually applied to that section of a rapidly flowing river where the running water falls suddenly in a sheer drop. When the drop is less steep, the fall is known as a cascade.

Catarrh, imprecise term that often indicates quite unrelated events in the body, such as "bronchial catarrh" and "stomach catarrh". It generally refers to the copious discharge of mucus from mucous membranes, particularly of the nose, following irritation or infection such as the common cold. See also p.1064.

Catarrhini, old name for the Old World MONKEYS, indicating their downward-pointing nostrils, contrasting with the forward-pointing nostrils of the New World monkeys, or PLATYRRHINI. See also p.108.

Catch 22 (1961), novel by Joseph HELLER. Set in a US airbase during WWII, its farcical humour blackly contrasts with the realism of the fighting, high-lighting the meaninglessness and absurdity of the war.
Catcher in the Rye (1951), novel by J. D. SALINGER. It deals with several days in the life of Holden Caulfield, a teenage boy who is disillusioned by the hypocrisy and "phoniness" of the adult world.

Catchfly, another name for several species of CAMOTON found throughout Europe and W Asia; especially the red catchfly (*Lycopus viscaria*). It has red flowers and a sticky hairy stem which is said to protect the plant against ants and other insects. Family Caryophyllaceae, genus *Silene*.

Catchpole, Kenneth Williams (1939-), Australian rugby union footballer. He played more than 20 games for the Wallabies in the 1960s and was regarded as one of the world's best half-backs. He had great agility and gave his back line speedy service from scrums and lineouts.

Catechism, a manual of instruction in Church teachings intended for use by candidates in preparation of membership of a Church or for instruction of baptized members. It is frequently in the form of questions and answers.

Catechol, organic chemical compound, dihydroxybenzene, $C_6H_4(OH)_2$. It forms clear aqueous solutions which soon turn brown because, under the influence of light, they react strongly with oxygen. For these reasons catechol is used to protect stored materials against oxidation, and in photographic developers. It also has uses in making dyes. See also p.896.

Catechu, extract of any of several acacia plants, particularly *Acacia catechu* from Malaysia. It is a brown or blackish brittle substance containing tannins, used in medicine to combat diarrhoea and in dyeing and tanning.

Caterpillar, worm-like larva of a butterfly or moth, it has a segmented body, short antennae, simple eyes, three pairs of true legs and chewing mouthparts. Nearly all caterpillars feed voraciously on plants and thus constitute a serious danger to crops, they sometimes need to be controlled. See also pp.42, 42, 666-667.

Caterpillar tractor. See TRACTORS.

Catesby, Robert (1573-1605), English Roman Catholic conspirator. He took part in Essex's rebellion against ELIZABETH I (1601) and in the RYE HOUSE PLOT (1603). He was the chief organizer of the GUNPOWDER PLOT (1605) and was killed while resisting arrest.

Catfish, any member of a large family of slow-swimming scaleless fish found in tropical and subtropical waters, it has fleshy "whiskers" on the upper jaw, sometimes with venomous spines. Most species live in fresh water and some may be farmed. Length: up to 3.3m (10ft). Order Siluriformes. See also pp.3, 57, 62-63, 740-741.

Cathars. See ALBIGÈNSES.

Catharsis, in psychology, expression of repressed feelings during the treatment of neurotic disorders. Sigmund FREUD and Josef ABRAHAM pioneered the "Cathartic Method", in which hypnotized patients were encouraged to remember and tell about repressed experiences. Freud later abandoned hypnosis, but retained the basic form of psychoanalytic treatment.

Cathay, medieval and poetic name for China, taken to Europe by Marco Polo's writings and early missionaries. It is probably derived from the Khitai, a mongolian people of S Manchuria. It generally refers to China N of the Yangtze River.

Cathedral (from Greek *kathēdra*, a throne or seat), the main church of a bishop's province, the church containing his throne. The plan of a cathedral, as with most churches, usually follows the shape of a cross. The longest arm of the cross is the nave, the two lateral arms form the left and right transepts, and the top arm of the cross (usually the eastern arm) contains the choir and terminates in a circular or polygonal recess known as an apse. Many of the greatest cathedrals date from the Middle Ages and the ROMANESQUE and GOTHIC periods in architecture. Some of the finest English examples, such as Canterbury, Durham, Ely, Lincoln, Peterborough and York, combine Romanesque and Gothic features. Salisbury is wholly Gothic, while the BAROQUE St Paul's London, replaced a NORMAN building. The greatest French Gothic cathedrals include those at Amiens, Bourges, Chartres, Reims, Strasbourg and Notre Dame, Paris. Beauvais, with its choir rising 48m (157ft) is the highest of all cathedrals. Italian cathedrals,

magnificent in materials and workmanship, include Florence, Milan, Pisa and Siena. St Mark's, Venice, is a magnificent BYZANTINE example. Spanish cathedrals often combine Romanesque, French, German and Moorish features. Barcelona, Burgos, Córdoba and Toledo are notable examples. Seville Cathedral is the largest medieval church in Europe. In Germany, Cologne, Freiburg, Mainz and Speyer are of particular interest. In Latin America, cathedrals are often of Portuguese or Spanish RENAISSANCE and BAROQUE origin. The Episcopal Cathedral of St John the Divine in New York is the world's largest Gothic cathedral.

Catherine I (1684-1727), Empress of Russia (1725-27). She was born a peasant but became the mistress of Prince Menshikov and later of Peter I whom she married in 1712. She was crowned in 1724 and during her reign the Supreme Privy Council was established.

Catherine II, the Great (1729-96), Empress of Russia (1762-96), b. Germany. She married Peter III in 1745 and in 1762 organized a rebellion ending in his assassination. She began as an "enlightened autocrat", with ambitious plans for reform, but few were carried out. She became rigidly conservative after the Pugachev peasant revolt (1773-74) and FRENCH REVOLUTION, and gave the nobility absolute power over the peasants (1785). She increased Russia's territory and international prestige but was a notorious libertine. See also pp.1456-1457.

Catherine de' Medici (1519-89), Queen of France, wife of HENRY II, daughter of Lorenzo de' MEDICI. She exerted considerable influence over her sons, CHARLES IX and HENRY III. Her tolerance of the Protestant Huguenots gave way in the 1560s to dependence on the Roman Catholic ultra party, whose growing power she failed to control. See also p.1406.

Catherine of Aragon (1485-1536), Spanish-born first queen of HENRY VIII of England, whom she married in 1509. Their only living child was a daughter (later MARY I). Henry used her former marriage to his brother Arthur as an excuse to end the marriage, and it was annulled in 1533. See also p.1404.

Catherine of Braganza (1638-1705), Queen of England, wife of CHARLES II. She was the daughter of the King of Portugal, and married Charles in 1662. England was given Tangier and Bombay as part of her dowry. Her Catholic faith made her unpopular and she returned to Portugal in 1692.

Catherine of Siena, Saint (1347-80), Italian Catholic nun. She joined the Third Order of St Dominic at the age of 16 and for three years devoted herself to contemplation, the service of the sick and the conversion of sinners. In 1376 she went to AVIGNON to persuade Pope GREGORY XI to return to Rome. She was canonized in 1461 and declared a Doctor of the Church in 1970. Feast: 29 (formerly 30) April.

Catherine of Valois (1401-37), French queen, daughter of CHARLES VI. In 1420 she became Queen of England upon her marriage to HENRY V. Their son, the future Henry VI, was born in 1421. In 1422 Henry V died, and she later married Owen Tudor. Their son Edmund, Duke of Richmond, was the father of HENRY VII, the first Tudor king of England.

Catheter, long, slim, hollow surgical instrument for insertion into narrow passages of the body, including the URETHRA, where it is employed for such purposes as obtaining a specimen (BIOPSY) from the bladder, and to wash it out.

Cathode, negative electrode of an electrolytic cell or ELECTRON TUBE. It is the electrode from which electrons enter a system. See ELECTROLYSIS, p.902.

Cathode rays, radiation emitted by the cathode of a thermionic electron tube containing a gas at low pressure. The rays were identified in 1897 by J. J. THOMSON as streams of charged elementary particles having extremely low mass, later called electrons. Some electrons are emitted because the cathode is heated, but most because of collisions between the cathode positive ions formed in the tube. See also

Catamarans, twin-hulled boats, are often made with a third hull - the trimaran.

Caterpillars are the second stage in the life cycle of the moth and the butterfly.

Catfish, considered a delicacy by some, include species that can "walk" on land.

Cathedrals, the bishop's official seat, were usually built with a cross-shaped floor plan.

Cathode ray tube

George Catlin's books and paintings provide detailed knowledge of American Indians

Cattle which need to thrive in hot regions are often bred with the Brahman, native of India

Caustic soda: plant for the large-scale commercial production of this valuable alkali

Cavalier spaniels are descended from the dogs used to flush out birds for falconing

CATHODE-RAY TUBE, pp 812-813, 868

Cathode ray tube, evacuated electron tube used for television picture tubes, oscilloscopes and display screens in radar sets and computers. An electron gun shoots a beam of electrons, focused by a grid. The electrons strike a fluorescent screen and produce a spot of light. In a television tube, an electrostatic or magnetic field deflects the beam so that it scans a number of lines on the screen, controlled by the incoming picture signals. See also pp 468-469, 640-641, 644, 647

Catholic Apostolic Church (Irvingites), Christian religious body which originated in Britain in the 1830s. It owed its origin partly to the teaching of the Scottish minister Edward DAVEN (1792-1834) and partly to a revivalist circle which had gathered around Henry Drummond (1786-1860) in London. The members of the group believed in the imminent SECOND COMING of Christ, in preparation of which they re-established the primitive offices of the Church: those of apostles, prophets, evangelists, pastors and teachers. They no longer have much influence in Britain but still command a number of adherents in the USA and in Germany

Catholic Church, in Christian usage, a term with several connotations. (1) the Universal Church, as distinct from local churches; (2) the Church holding "orthodox" doctrines, defined by St VINCENT OF LÉRINS as doctrines which have been held "everywhere, always, and by all" - in this sense the term is used to distinguish the Church from heretical bodies; (3) the undivided Church before the GREAT SCHISM of East and West in 1054, after which the Western Church called itself "Catholic"; the Eastern Church preferring the term "Orthodox" to describe itself; (4) since the REFORMATION the term has usually been used to denote the ROMAN CATHOLIC CHURCH, although the ANGLICAN COMMUNION and the OLD CATHOLIC CHURCHES use it to cover themselves as well as the Roman Catholic Church and ORTHODOX CHURCHES, these being the branches of Christendom possessing the historic episcopate (see APOSTOLIC SUCCESSION)

Catholic Emancipation, Act of (1829), measure by which the statutes barring Roman Catholics in Britain from holding civil office or sitting in Parliament were repealed. The concession was wrung from the Duke of WELLINGTON's government by a mass campaign of the Irish peasantry led by Daniel O'CONNELL and the Catholic Association. Catholics remained barred from holding commissions in the services. The Act's passing split the TORY Party and led to the fall of Britain's last Tory government. See also pp 1642-1643

Catiline, or **Catulus**, **Lucius Sergius** (c 108-62 BC), Roman political figure. He was made praetor in 68 BC and governor of Africa in 67 BC. In 63 BC, in an attempt to obtain the consulship, he conspired against CICERO, who accused him in the Senate. Catiline escaped but died in battle at PISTONA, in Tuscany

Catlin, George (1796-1872), US painter, whose pictures of Indian life are valuable both to art and to history. His work, painted in the 1830s, shows 45 different tribal groups

Catnip, also called catnip, an aromatic herb of the mint family Labiatae. It was introduced from Europe to the USA where it now grows wild. Cats are attracted and excited by the aroma of this plant. Height up to 91cm (36in). Species *Nepeta cataria*. **Cat on a Hot Tin Roof** (1955), drama by Tennessee WILLIAMS. A Mississippi Delta family is brought together to celebrate Big Daddy's 65th birthday and vie for possession of his plantation on his death. It won WILLIAMS his second Pulitzer Prize and was made into a successful film (1958)

Cato the Elder, Marcus Porcius (234-149 BC), Roman statesman, orator and writer. He was an officer in the Second PUNIC WAR. From 204 BC he held many important posts in Rome. In 184 he was appointed censor (magistrate) and worked to restore the old ideals of Rome - courage, honesty and simple living. He urged the destruction of Carthage and lived to see the Third Punic War begin. His *De Agricultura*

(c 160 BC), is the earliest fully extant Latin literary work. But only fragments of his *Origines* remain

Cato the Younger, Marcus Porcius Cato Uticensis (95-46 BC), Roman patriot; great-grandson of CATO THE ELDER. He supported republican government and his opposition to Julius CAESAR led to the foundation of the first triumvirate. He became military tribune of Macedonia in 67 and quaestor in 65; he was made tribune in 62 and praetor in 54. He favoured POMPEY against Caesar in 49 and, after Pompey's defeat, committed suicide. **Cats, Jacob** (1577-1660), Dutch poet, also known as Father Cats. He was a successful lawyer and diplomat but is best known for his emblem books - illustrated moralistic poems based on Biblical and classical sources

Catskill Mountains, plateau of the Appalachian system in SE New York State, USA, on the W bank of the Hudson River. The highest peak is Slide Mountain, 1,282m (4,204ft). It is an area of forests and lakes, and is a popular resort area for the New York City metropolitan area

Cattle, large ruminant mammals of the family Bovidae, including all the varieties of modern domestic cattle (*Bos taurus*), the Brahman (*Bos indicus*) and crosses of these two species. The family also includes the wild or domesticated YAK, the wild GAUR, the wild BANTENG and the KOUPREY. A number of different terms are used to indicate the sex and age of domestic cattle. The male is born as a bull calf and becomes a bull if left intact; if it is castrated it becomes a steer, also called a bullock or an ox if used as a draught animal. The female is a heifer calf, growing to become a heifer and, after calving, a cow. Horns, sometimes appearing only on the male, are permanent, hollow and unbranched. Domestic cattle are raised for meat, milk and other dairy products. Leather, glue, gelatin and fertilizers are made from the carcasses. Oxen are still used as work animals. See also pp 94-95, 294, 722-725, 730-731

Catullus, Gaius Valerius (c 84-c 54 BC), Roman lyric poet. He is best known for his short love lyrics, the most famous of which refer to Lesbia, depicting the Roman woman, Clodia, with whom Catullus was in love. His longer works are the poems *Atis* and *The Marriage of Peleus and Thetis*

Catuvellauni, BELGIC tribe of ancient Britain, led by King CASIBELLAUNUS. They originally lived just N of the River Thames, with headquarters at Wheathampstead, but after being defeated by the Romans at the River Stour in 55 BC, they expanded to the NW and moved their capital to VERULAMUM (St Albans). They were an agricultural people

Caucasian, one of the major human racial groupings. Physical characteristics include light skin, narrow, high-bridged noses, hair varying between straight and curly, heavy body hair and a high incidence of the Rh-negative blood type. Since AD 1500, Caucasoids have spread from their European, Near Eastern and North African homelands, displacing aboriginal populations in many parts of the world. See also p 120

Caucasian Chalk Circle, The, play by Bertolt BRECHT with music by P Dessau. Written in 1943-44, it was first performed in Nourse Little Theatre, Northfield, USA, in 1948. The German premiere was in Berlin in 1954. It is partly based on the 13th century parable *The Chalk Circle* by Li Hsing Tao

Caucasus (Bo'zoy Kavkaz), mountain system and region in SE European USSR, extending from the mouth of the Kuban River on the Black Sea SE to the Apsheron Peninsula on the Caspian Sea. The system includes two major regions, the N CAUCASIA (steppes) and Transcaucasia, and it forms a natural barrier between Asia and Europe. There are deposits of oil, iron and manganese, and cotton, fruit and cereal crops are grown. The highest peak is Mt Elbrus, 5,637m (18,493ft). Length: 1,210km (750 miles)

Cauchy, Augustin-Louis, Baron (1789-

1857), French mathematician noted for his work on the theory of substitution groups. He was a member of the Académie des Sciences and in 1816 won the Grand Prix of the Institut de France for a paper that has become a classic in HYDRODYNAMICS

Caucus, private meeting of members of a political party to discuss issues, tactics and inform the leadership of rank-and-file feeling. In parliamentary democracies the term refers to the party's members in Parliament

Caudillo, type of political leader prevalent in Latin America during the 19th century (Spanish, *chief*). A civilian who rode on horseback, he was supported by a paramilitary force. The aim of the caudillo band was to gain wealth, the tactic usually violence. Some caudillos dominated only small areas; others an entire nation

Caulfield, Patrick (1936-), British painter, whose work has been influenced by US painters such as ROY LICHTENSTEIN and by the art and architecture of the 1930s. He often uses popular illustrations and images, which he treats in a PAINTERLY - rather than a literary - manner

Caulfield, municipality in S Victoria, SE Australia. It is a suburb of Melbourne, situated 10km (6 miles) SE of the main city, and has given its name to one of the highlights of the Australian horse-racing calendar, the Caulfield cup. Pop. (1976) 83,750

Cauliflower, form of CABBAGE with a short thick stem, large lobed leaves and edible white or purplish flower clusters that form tightly compressed heads. Family Brassicaceae, species *Brassica oleracea*. See also pp 684-685

Causalgia, sensation of burning pain, which may be real or imagined, usually felt in the palms of the hands or the soles of the feet. The causalgia syndrome is usually seen after nerve damage and is associated with changes in the vasomotor system and in the skin of the affected parts

Caustic soda, sodium hydroxide (NaOH), a strong ALKALI prepared industrially by the electrolysis of brine (salt solution). It is used in many industries on a large scale, eg in soap-making to saponify fats and in bauxite processing in the manufacture of ALUMINIUM. Petroleum refining, plastics manufacture and dye-making also use caustic soda. It is a white solid that burns the skin, with a slippery feel because it absorbs moisture from the air. It also absorbs atmospheric carbon dioxide, so forming a crust of sodium carbonate. See also p 580

Cavafy, Constantine (1863-1933), Egyptian-born Greek poet, real name Konstantinos Pétros Kaváfis. Most of his poetry was written after his 40th year; it expressed his sceptical opposition to traditional values such as Christianity

Cavalcanti, Guido (c 1253-1300), Italian lyric poet. He was a personal friend of DANTE ALIGHIERI and is mentioned in the *Inferno* and in the dedication of the *Vita Nuova*. Although he was a philosopher and treated love as an impersonal principle, he was nevertheless often personal and expressive in his poetry. His most famous poem is *Donna mi prega*

Cavalier (from the French *chevalier*, meaning *horseman*), name adopted by the Royalists during the English Civil War of the 1640s (in opposition to the Parliamentarian ROUNDHEADS). The court party retained the name after the restoration of the Stuart monarchy in 1660, whence the name CAVALIER PARLIAMENT (1661-79). By the end of the 17th century the name for the court party had become TORY. See also pp 1422-1423

Cavalier King Charles spaniel, small hunting dog descended from the toy spaniel that was popular during the reign of Charles II; it has a flat head with a short tapered muzzle, wide-set ears and eyes and a square deep-chested body. The coat is long and silky and is black and tan or solid red. Height: 30.5 cm (12in) (at the shoulder), weight: 4.5-8kg (10-18lb)

Cavalier Parliament, (1661-79), so-called for its fervent royalism when it was first called to create the institutions of the Restoration monarchy. The longer it sat

the more critical its members became of CHARLES II. The king eventually dissolved it in Feb. 1679. See also pp. 1423, 1426, 1426.

Cavalleria Rusticana (1890), one-act opera by Pietro Mascagni, Italian libretto based on Giovanni Verga's play *Santuzza* (soprano), rejected by Turiddu (tenor), tells Alfio (baritone) that his wife Lola (mezzo-soprano) is Turiddu's lover. Alfio and Turiddu duel and Turiddu is killed.

Cavalli, Francesco (1602-76), Italian composer. Successively chorister, organist and choirmaster at St Mark's, Venice, he became highly esteemed, especially for his more than 40 operas, which had rare verve and brilliance.

Cavallini, Pietro (c. 1250-c. 1330), Italian painter whose work reflects the movement away from the flat Byzantine style and into the three-dimensional and naturalistic.

Cavalry, mounted troops. It was used by most ancient civilizations from the time of the Egyptians, the first use of cavalry in Europe dates from the invasions of the Huns, Magyars and Mongols. The last prominent use of cavalry occurred in the AMERICAN CIVIL WAR.

Cavan, county in N Republic of Ireland, drained by the Erne and Annalee rivers. It is a hilly and infertile area with many bogs and lakes. Pastoral agriculture is the main occupation. Cavan is the county town. Area, 1,890sq km (730sq miles). Pop. (1971) 52,700.

Cave, Edward (1691-1754), English printer and publisher who produced the first modern English magazine. He wrote and published *The Gentleman's Magazine* (1731-1907), a collection of news and political essays. One of his contributors was Samuel Johnson.

Cave, natural underground cavity. There are several kinds of cave, including coastal caves, formed by wave erosion, ice caves, formed in glaciers, and lava caves. By far the largest caves are, however, formed in carbonate rocks such as limestone. Such rocks are impervious but dissolve in underground streams or ground water formed by rain. See also pp. 218, 219, 225, 230-231.

Caveat Emptor, legal term meaning "let the buyer beware." When a customer purchases goods he should examine them before agreeing to buy, otherwise he does so at his own risk unless the item is covered by warranty, guarantee or a legal requirement (such as the Sale of Goods Act in Britain).

Cave fish. See BLIND FISH.

Cavell, Edith (1865-1915), British nurse. She established modern nursing in Belgium but was arrested by the Germans and executed by a firing squad for aiding and sheltering Allied soldiers during WWI.

Cavendish, Lord Frederick Charles (1836-82), British Liberal politician. He was made chief secretary for Ireland in 1882, but the day after arriving in Dublin on 5 May 1882, was assassinated by Irish nationalists in Phoenix Park.

Cavendish, Henry (1731-1810), British physicist and chemist. He discovered hydrogen and the composition of water, determined the composition of air, and estimated the earth's mass and density by a method now known as the Cavendish experiment. He also discovered nitric acid, the specific gravity of carbon dioxide and hydrogen, and stated the inverse square law for the interaction of charged particles. The Cavendish Laboratory at CAMBRIDGE UNIVERSITY is named after him. See also pp. 824, 824.

Cavendish, Thomas (1560-92), English navigator. In 1585 he took part in Sir Richard GREENVILLE's expedition to Virginia, North America. In 1586 he sailed from Plymouth on a voyage around the world. He crossed from W Africa to South America and continued via the Philippines, East Indies and the Cape of Good Hope, returning to England in 1588. See also p. 1413.

Caviare, the roe of a sturgeon which, when salted and seasoned, is considered to be a great delicacy. The roe is extracted from the fish before it can spawn. See also p. 344.

Cavour, Camillo Benso, Conte di (1810-61), Piedmontese statesman and nationalist who was instrumental in uniting Italy under Savoy rule. From 1852 he was prime minister under VICTOR EMANUEL II. From 1856 he engineered Italian liberation from Austria with French aid, then expelled the French with the help of Giuseppe GARIBOLDI, and finally neutralised Garibaldi's influence. This led to the formation of the kingdom of Italy in 1861. See also pp. 1588, 1589.

Cavy, also called wild guinea-pig, South American rodent from which domestic guinea-pigs are descended; it is a small dark plant eater which emerges at dawn or dusk to feed. Caves live in burrows and often form large colonies for protection. Family Caviidae, species *Cavia aperea*. See also pp. 301, 301.

Cawdor, village in Highlands Region, NE Scotland. Its castle is the reputed scene of Prince Macbeth's murder of King Duncan in 1040. Pop. (1961) 849.

Cawley, Evonne (née Goolagong), (1951-), Australian tennis player. She won the French (1971) and British (1971 and 1980) and Australian (1974, 1975, 1976, and 1977) women's singles championships. She was the first Australian Aborigine to represent Australia in tennis.

Cawnpore. See KANPUR.

Cawthron Institute, in Nelson, New Zealand, is a leading centre for research into crops, insect pests and soils.

Caston, William (c. 1422-91), the first English printer. Following a period in Cologne (1470-72), where he learned printing, he set up his own printing press in 1476 at Westminster. He published more than 100 items, many of them his own translations from French, Latin and Dutch. His books, carefully edited, are fine examples of superb craftsmanship. See also p. 1376.

Cayapa, Chichu language tribe of about 2,000 South American Indians in the coastal lowlands of Manabí province, Ecuador. Along with the Colorado, they are among the last few surviving aboriginal groups in Ecuador.

Cayenne, capital city of French Guiana, NW South America, on an island in the Cayenne River. It was founded by the French in 1643. Its Pasteur Institute (1940) specializes in the study of tropical diseases. Timber, rum and gold are exported. Pop. (1967) 19,700. See also p. 2043.

Cayenne pepper, hot spicy condiment made from the dried fruits of the sweet pepper plant, a variety of *Capiscum annum*, native to Mexico and Central America. The plant may be successfully grown in greenhouses in more moderate climates. See also pp. 684, 685.

Cayley, Arthur (1821-95), British mathematician, famous for founding the British school of pure mathematics. He held the Sadlerian chair of pure mathematics at Cambridge University and published many papers on the subject, including the theory of matrices and the theory of invariants.

Cayley, Sir George (1773-1857), British inventor who founded the science of aerodynamics. He built the first glider to carry a man successfully and developed the basic form of the early aeroplane. He also invented a caterpillar tractor and founded London's Regent Polytechnic.

Cayman. See CAIMAN.

Cayman Islands, British islands in the West Indies belonging to the Greater Antilles group of islands, approx. 325km (200 miles) NW of Jamaica, in the Caribbean Sea, includes Grand Cayman, Little Cayman and Cayman Brac. The islands were discovered by Columbus in 1503 and colonized c. 1734. The capital is Georgeown on Grand Cayman. Industries: tourism, turtle and shark fishing, timber, coconuts, shipbuilding. Area, 200sq km (125sq miles). Pop. (1974) 11,363.

CBI, Confederation of British Industry, an organization founded in Aug. 1965 to promote the prosperity and interests of British industry. It is financed by subscription, and more than 1,400 employers' associations, 85 national associations and 10,000 companies are affiliated to it. The

CBI advises and negotiates directly with the Government and the TUC.

CBS (Columbia Broadcasting System), US communications corporation. It operates the largest broadcasting network in the USA. CBS and its subsidiaries make records, musical instruments and toys, produce educational films, and publish books and magazines.

Ceausescu, Nicolae (1918-), Romanian politician. He became a member of the politburo (1955), general secretary of the Romanian Communist Party (1965) and head of state (1967). He has aimed at fostering Romanian nationalism, achieving greater independence from the USSR and encouraging trade with the West. Cebu, province in central Philippines, made up of the Visayan group of islands including Cebu, Camotes, Bantayan and other smaller ones. Cebu is by far the largest island - 224km (139 miles) in length and up to 32km (20 miles) wide. A mountain range extends N-S the length of the island. The island was discovered in 1521 by Ferdinand MAGELLAN, and is the oldest Spanish settlement in the Philippines (1565). The capital is the city of Cebu, which is an important port and trading centre for the islands. Products: rice, corn, coconuts, tobacco, coal. Area (island) 4,421sq km (1,707sq miles). Pop. (1970) 1,632,642.

Cebus. See CAPUCHIN MONKEY.

Cecil, Edgar Algernon Robert, 1st Viscount Cecil of Chelwood (1864-1958), British statesman. He was a Conservative member of Parliament (1906-23) and held the posts of under-secretary in 1915, minister of blockade in 1916 and assistant secretary of state in 1918. He helped draft the LEAGUE OF NATIONS covenant and was president of the League of Nations union (1923-45). He won the 1937 Nobel Peace Prize. His works include *The Way of Peace* (1928) and *A Real Peace* (1941).

Cecil, Robert, 1st Earl of Salisbury (1563-1612), English statesman, son of BURGHLEY. He became secretary of state to ELIZABETH I on his father's retirement in 1596, and after negotiating the accession of JAMES I, served the new king as well. He was known for his financial skill, and became lord treasurer in 1608. He built Hatfield House in Hertfordshire. See also pp. 1414, 1415, 1420.

Cecilia, Salma, (2nd or 3rd century), patroness of music. According to legend she converted her pagan husband, Valentin, and his brother, Tiburtius, to Christianity. One of the most venerated martyrs in the early Roman Church, she is buried in the church named after her in Trastevere in Rome. Feast 22 Nov.

Cecrops, in Greek mythology, the founder of Athens. He had a man's body and a snake's tail, and became the first king of ATTICA. Cecrops brought 12 Greek cities under his control, made ATHENA the patron deity, and acknowledged ZEUS as the supreme god.

Cedar, evergreen tree native to the Mediterranean and Asia, but found in warm temperate regions throughout the world, it has clustered needle-like leaves, long cones and fragrant, durable wood. It is a popular ornamental tree. Height 30-55m (98-180ft). Family Pinaceae, genus *Cedrus*.

Celadon, semi-transparent bluish or greyish-green glazes used in Chinese and Korean porcelain. Celadon wares were first produced in Chekiang province, China, during the Sung dynasty (10th-13th centuries). The most popular celadons are the Sung Lung-ch'uan wares, which continued to be made into the Ming dynasty (1368-1644).

Celan, Paul (1920-70), German-Jewish poet, one of the leading post-war poets. He was influenced by EXPRESSIONISM and SURREALISM. His poetry includes *Poppy and Memory* (1952) and *From Step to Step* (1955).

Celandine, herb common to Britain and the USA, it has serrated leaves, yellow flowers and narrow seed pods. Its yellow sap was once thought to have the power to cure warts. Family Papaveraceae, species *Chelidonium majus*.

Henry Cavendish, who discovered water to be a mixture of hydrogen and oxygen (H₂O).

Cavies are South American rodents, the best known of which are the guinea-pigs.

Evonne Cawley, Wimbledon champion and first Aborigine to represent Australia.

Celandine is a member of the poppy family once thought to have medicinal properties.

Celebes, or Sulawesi Island

Celesta; the small piano-like instrument that produces tinkling notes from steel bars.

Cells, the basic units of all living things, grow, reproduce and eventually die

Cellos, tuned an octave below the viola, have a rich, mellow and somewhat mournful tone

Cement, known to the Romans, was a lost art until its rediscovery in the 18th century

Celebes, or Sulawesi Island, largest island in Indonesia, s of Borneo. It is irregular in shape, consisting of four peninsulas separated by the Tomini (nw), Tolo (se) and Bom (s) gulfs. The island is mountainous, having many volcanoes, and is almost entirely covered by forest. There is some farming in the few inland valleys, although fishing is the main occupation. The largest city is Makassar. Area 189,034sq km (72,986sq miles). Pop. (1970 est.) 8,925,000.

Celeriac, or knob celery, variety of CELERY with a swollen, underground stem that is cooked and eaten.

Celery, biennial plant native to the Mediterranean and widely cultivated for its long stalks used as a vegetable or salad. Its fruits are used as food flavouring and in medicine. It has white flowers. Family Umbelliferae; species *Apium graveolens*. See also pp 685 686, 706, 709

Celesta, or celeste, percussion instrument played by keyboard, with a range of four octaves. Like the GLOCKENSPIEL it consists of steel bars that are struck. Invented by Auguste Mustel in Paris (1886), its clear, tinkling tones were used by TCHAIKOVSKY for the "Dance of the Sugar Plum Fairy" in the *Nutcracker Suite* (1892).

Celestial body, any object, including the Sun, Moon, planets, asteroids, comets, stars, galaxies, nebulae and interstellar dust, to be found in space.

Celestial equator, great circle on the CELESTIAL SPHERE, lying midway between the celestial poles in the same plane as the earth's equator.

Celestial mechanics, branch of ASTRONOMY concerned with the relative motions of CELESTIAL BODIES that are associated in systems, such as the Solar System or a binary star system, by gravitational fields. Introduced by Isaac Newton in the 17th century on the basis of his law of gravitation and KEPLER's laws of planetary motion, celestial mechanics, rather than general RELATIVITY, is usually sufficient to calculate the various factors determining the motion of planets, satellites, comets, stars and galaxies around a centre of gravitational attraction.

Celestial meridian, circle on the CELESTIAL SPHERE passing through the CELESTIAL POLES, the ZENITH and the NADIR and crossing the horizon at the N and S points.

Celestial poles, two diametrically opposite points at which the extension of the earth's axis meets the CELESTIAL SPHERE. The celestial sphere rotates about a line through the celestial poles.

Celestial sphere, imaginary sphere of infinite radius used to define the positions of celestial bodies as seen from Earth, at the centre of the sphere. The sphere rotates, once in 24 hours, about a line that is an extension of the earth's axis. The position of a celestial body is the point at which a radial line through it meets the surface of the sphere. The position is defined in terms of coordinates, such as declination and right ascension or altitude and azimuth, which refer to great circles on the sphere, such as the CELESTIAL EQUATOR or the ecliptic.

Celestine, name of five popes. Celestine I (r 422-432), was involved in the NESTORIAN controversy, in which he vigorously asserted the authority of his see. Celestine II (r 1143-44) was a former student of ABELARD and a learned scholar, but held papal office for only six months. Celestine III (r 1191-98) was a skilled diplomat, although he could only temporize in his relations with a recalcitrant Europe. Celestine IV (r 1241) was the first pope to be elected by a conclave, but he died less than three weeks later. Celestine V (St Celestine) (r 1294), an ascetic who founded a group of hermits, was in his 80s when elected after a two-year papal vacancy. A weak administrator, he resigned after five months - the first pope to do so. He was canonized in 1313. Feast 19 May.

Celestite, mineral, strontium sulphate (SrSO_4), with distinctive pale blue or white, glassy orthorhombic crystals, sometimes occurring in fibrous masses. It is found chiefly in sedimentary rocks and also as gangue material in ore veins. There

are deposits in Britain, Sicily and the USA. It is an important source of strontium and some of its compounds.

Céline, Louis-Ferdinand (1894-1961), pen-name of Louis-Ferdinand Destouches, French novelist. His works are noted for their cynical and pessimistic misanthropy. Céline's novels include *Journey to the End of the Night* (1932), *Death on the Installment Plan* (1936) and the trilogy *Rigodon* (1969).

Cell, smallest unit of life that can exist and sustain life independently; all living things are made up of one or more cells, most of which consist of a membrane surrounding jelly-like cytoplasm with a central nucleus. The nucleus is the main structure in which genetic information is stored. Animal cells vary widely in shape. In the liver they are polyhedral and in bone they are spiky. Usually they reproduce, grow and metabolize within their membrane. Blue-green algae and bacteria cells do not have nuclei, instead, they have large chromosomes floating in the cytoplasm. See also p 174 177, 180 181

Cell, electrochemical, device from which electricity is obtained due to a chemical reaction. A cell consists of two electrodes (a positive anode and a negative cathode) immersed in a solution (electrolyte). The chemical reaction takes place between the electrolyte and one of the electrodes. In a primary cell, current is produced from an irreversible chemical reaction, and the chemicals must be renewed at intervals. In a secondary cell (battery), the chemical reaction is reversible and the cell can be charged by passing a current through it. See also p 902.

Cell division, process by which living cells reproduce and thereby allow an organism to grow. The methods of its division include nuclear division (occurring by mitosis and meiosis) the fission of cytoplasm (cytokinesis). See also p 174

Cellini, Benvenuto (1500-71), Florentine sculptor, goldsmith and adventurer best known for his *Autobiography* (1558-62), an entertaining and informative record of life in Renaissance Italy. As an artist, Cellini was profoundly influenced by MICHELANGELO. Between 1537 and 1545 he twice visited the court of Francis I of France, for whom he made a famous gold salt-celler (1540) and the bronze *Nymph of Fontainebleau* (1543). See also pp 1397-1399, 1399

Cello, or violoncello, member of the violin family of musical instruments, with a soft, mellow tone, one octave below the viola, and a range of 24 octaves. It has four strings and is played with a bow, the seated player supports it with his knees. Developed in the 16th century by the AMATI family, the cello has had many famous players, the most important of the 20th century including Pablo CASALS and Mstislav ROSTROPOVICH. See also pp 1580-1581, 1580-1581

Cellophane, flexible, transparent film made of regenerated CELLULOSE and used mostly as a wrapping material. It is made by dissolving wood-pulp or other plant material in an alkali, to which carbon disulphide is added to form viscose. This is then forced through a narrow slit into a dilute acid where it precipitates as a film of a simpler form of cellulose.

Cell potential, the potential difference between the electrodes of an electric cell. It depends on the internal resistance (r) of the cell and the external resistance (R) through which the current flows. It is given by the formula $ER/(r+R)$, where E is the ELECTROMOTIVE FORCE (emf) on open circuit. See also pp 868-869, 902

Celluloid, hard, synthetic plastic invented in 1869 and made by mixing cellulose nitrate with pigments and fillers in a solution of camphor and alcohol. It was the first important plastic, replacing expensive natural materials in a wide range of domestic uses. It is highly inflammable and has been superseded by other plastics. See also p 589

Cellulose, polysaccharide carbohydrate that is the structural constituent of plant cells and fibres [$(\text{C}_6\text{H}_{10}\text{O}_5)_n$]. Consisting of parallel unbranched chains of glucose units cross-linked together into a stable

structure, it forms the basic material of the paper and textile industries. It is most easily obtained in the pure form by treating cotton with alkalis and acids. Its uses include paper, rayon, plastics and explosives. See also pp 356, 589-595, 906, 910.

Cellulose nitrate, also called nitrocellulose or guncotton, an organic compound made by reacting the natural polymer cellulose with nitric acid. It was chiefly used in the 19th and 20th centuries (together with camphor) to make celluloid - one of the first plastics - or as a propellant explosive (called cordite in Britain). See also pp 557, 582

Celcius, Anders (1701-44), Swedish astronomer who invented the Celsius or centigrade scale in 1742. He also published a collection of 316 observations of the Aurora Borealis in 1733 made by himself and other astronomers.

Celcius, temperature scale established in 1742 by the Swedish astronomer Anders CELCIUS. On such a scale the difference between the reference temperatures of the freezing and boiling points of water is divided into 100 degrees, hence it is commonly called the centigrade scale. To convert a temperature from degrees Celsius to degrees Fahrenheit, multiply by 9/5 and add 32.

Celsus, Aulus Cornelius (fl AD 14) Roman encyclopaedist, author of a comprehensive work covering several topics. Only the section dealing with medicine survived. *De re medica*, consisting of eight books, is the most complete Roman medical text extant. Most of what is known about Hellenistic medical practices is based on Celsus' description.

Celt, someone who speaks a CELTIC LANGUAGE or is descended from a Celtic language area. After 2000 ac, the early Celts spread from a France and w Germany over much of w Europe, including Britain. They developed a village-based, hierarchical society headed by nobles and by priests called druids, and elaborate, decorative styles of art. Conquered first by the Romans, the Celts were then pushed into "fringe" regions by Germanic peoples. But their culture remained vigorous, and the Celtic churches were important in the early spread of Christianity in N Europe.

Celtic fields, general name in Britain for the traces of ancient fields, generally rectangular and about 0.2-0.6 hectares (0.5-1.5 acres) in area. Although all such fields are called Celtic, the system is probably pre-Celtic in origin, dating from c 1500 ac. Most are from the Roman and Anglo-Saxon periods (c 500 ac-AD500).

Celtic languages, group of languages spoken in parts of Britain, Ireland and France, forming a subdivision of the Indo-European family. There are two branches: Brythonic, which includes Welsh, Breton and the virtually extinct Cornish, and Goidelic, including Gaelic and Manx, which died out only recently. The Celtic languages were dominant in Britain until the 5th century AD. See also p 1878

Cement, manufactured powder that hardens after mixing with water, used in building as an adhesive binding material. It is made by heating a mixture of limestone and clay, grinding it, and adding gypsum. This process of making portland cement was patented in 1824 by Joseph Aspdin, an English bricklayer, although natural cement had been known since Greek and Roman times. See also CONCRETE, pp 534, 553

Cementite, hard iron-carbon compound (Fe_3C) present as a major component of steel. The first of all steel-making processes, practised in the Hittite civilization of the 2nd millennium ac, is the cementite process, the ancient smiths beat carbon from hot wood ashes into wrought iron, so forming cementite. See also p 396

Cendrars, Blaise (1887-1961), French author, real name Frédéric Sauer. He wrote a number of books based on his frequent trips abroad. His novels *L'Or* (1925), *Moravagine* (1926) and *Dan Yack* (1927-29) also dealt with the theme of existential man.

Cenotaph, originally a Greek word meaning "empty tomb", a monument in memory of a person buried elsewhere. Though often found in churches and cathedrals, such as Westminster Abbey, London, and Santa Croce, Florence, the term is commonly reserved for national war memorials, eg the London Cenotaph, Whitehall, by Sir Edwin Lutyens (1920). **Cenozoic Era**, most recent major division of geological time, beginning about 65 million years ago and extending up to the present. It is subdivided into the TERTIARY and QUATERNARY periods in North America, and the Paleogene and Neogene periods in Europe. It is the period during which the modern world with its present geographical features and plants and animals developed. See also pp.185, 286-287, 1928, 1941.

Censor, magistrate of ancient Rome. Two censors were elected for 18-month terms to take the census, supervise public works, finance and morals, and fill senate vacancies. The office lasted from 443 bc to 22 bc.

Censorship, system whereby a government-appointed body or official claims the right to protect the public interest by influencing the release of any item of mass communication, such as books, newspapers, films and plays. Censorship most often involves two broad categories - politics and sex. Material may be censored before publication or it may be seized by the authorities or a performance banned. **Census**, survey conducted by a government to collect facts about the society it governs. In addition to ascertaining up-to-date population counts, most censuses seek information about marital status, age and sex, numbers of children, occupation, education, housing and annual income. Such information helps a government to formulate policy.

Centaurs, in Greek mythology, a creature half-human and half-horse, one of a warlike and sensual race of mountain-dwellers, sometimes associated with Dionysus or Eros. See also p.1900.

Centaurus, or the **Centaur**, brilliant southern constellation situated N of Crux. It contains the Sun's nearest stellar neighbours, Alpha Centauri, or Rigil Kent, and its companion, Proxima Centauri. Beta Centauri is also very bright. Also to be found in this region of the sky are the brilliant GLOBULAR CLUSTER Omega (NGC 5139), and the radio galaxy Centaurus A (NGC 5128). See also pp.1014-1015, 1020-102.

Centaur, any plant of the genus *Centaurium* (or *Centaurea*) of the GENTIAN family (Gentianaceae). Garden varieties are small plants with flat clusters of reddish flowers. The name originates in Greek legend, the centaur Chiron having discovered curative properties in the plants. **Centigrade**. See CELSIUS.

Centipede, common name for many arthropods of the class Chilopoda. Found in warm and temperate regions, they have flattened, segmented bodies. Most centipedes have about 70 legs (35 pairs, one pair per segment), rather than 100 as their name suggests. Many tropical species are 15-30cm (6-12in) long, temperate ones are about 2.5cm (1in). They eat small insects and other invertebrates. See also pp.34, 306, 311.

Cento. See CENTRAL TREATY ORGANIZATION.

Central African Empire, formerly the Central African Republic (until 1976), a landlocked nation that for the most part consists of a plateau covered with savanna. Most of the people are subsistence farmers. Important crops, and chief exports, are coffee and cotton. Development of the economy is hampered by poor communications. The capital is Bangui. Area: 624,977sq km (241,304sq miles). Pop. (1975 est.) 1,800,000. See also p.2005.

Central Criminal Court, housed in the Old Bailey whose sessions it replaced in 1834 with the Central Criminal Court Act while continuing to try the same offences. The 1834 act was repealed with the Administration of Justice Act (1964) under which the Central Criminal Court had

jurisdiction to try all offences committed in Greater London. In 1971, as a result of the Courts Act, the Central Criminal Court became a CROWN COURT.

Central heating, method of heating the rooms in a home using only one centralized heating unit. In its original form, central heating made use of a boiler that supplied steam or hot water which flowed through pipes to heat radiators. The term has been extended to include electric heating systems, such as those using underfloor heating elements or individual storage, convector or radiant-type heaters. Electricity, oil or gas may also be used to fuel a boiler for generating hot air that is ducted to various rooms.

Central Intelligence Agency. See CIA.

Central nervous system (CNS), division of the nervous system comprising the brain and spinal cord (protected by the skull and spinal column), as opposed to the peripheral system of nerves extending from them. See also pp.126-127.

Central Powers, WWI alliance of Germany, Austria-Hungary, Bulgaria and Turkey so-called because they were opposed to the W by Britain, France and Belgium (and later, the USA) and to the S by Russia (joined later by Serbia).

Central Treaty Organization (CENTO), defensive alliance signed by Iraq, Turkey, Iran, Britain and Pakistan. Originally known as the BAHADAD PACT, the organization was formed in 1955 largely as an anti-communist body and with its support. When Iraq left in 1959 the present name was adopted, and its headquarters were shifted from Baghdad to Ankara.

Centre of gravity, point in or near an object or system of objects through which passes the resultant force of all the gravitational forces acting on each particle of the object or system. It is the point at which the weight of the object may be considered to act. In a uniform gravitational field it is the same as the CENTRE OF MASS. See also pp.206, 822.

Centre of mass, point in or near an object or system of objects such that, when it moves, the acceleration of this point multiplied by the total mass of the system equals the total resultant force acting on it. Isaac Newton first verified his law of gravitation by assuming that respective masses of the Earth and Moon were located at their centres. See also CENTRE OF GRAVITY.

Centrifugal force. See CENTRIFUGAL FORCE.

Centrifuge, mechanical device, usually a rapidly spun container, used in many laboratory and industrial processes to separate substances of varying density. Examples of its use include the removal of water (in a washing machine), and the separation of cream from milk, red blood cells from plasma, and sugar from syrup. See also p.828.

Centriole, dense body consisting of micro-tubules near the nucleus of a cell. It occurs in all cells except those of ANGIOSPERMS and the sperm cells of ferns and gymnosperms. During cell division centrioles reproduce before the rest of the cell and move to each pole to form the spindle. See also p.175.

Centripetal force, in circular or curved motion, the force acting on a body pushing it towards the centre of the circular path. On a planet orbiting the Sun it is gravitational, on an electron orbiting a nucleus it is electrical, on a ball twirled on a string it is mechanical. In accordance with NEWTON'S LAWS, the reaction to this, the CENTRIFUGAL FORCE, is equal in magnitude and opposite in direction. See also p.828.

Centurion, military officer of ancient Rome. The LEGION was divided into ten cohorts each comprising six centuries of 100 men, commanded by a centurion. Centurions were usually foot-soldiers who had risen from the ranks, and were well paid to maintain discipline.

Ceorl, in Anglo-Saxon England, a middle-order free peasant with a WERGILD of 200s. They farmed small holdings of varying sizes. Although personally free they had various obligations, military service, payment of church dues and royal taxes, and attendance at the local court or moot. With their decline after the Norman inva-

sion, "churl" became a derogatory term. **Cephalic index**, measurement of the head, used in PHYSICAL ANTHROPOLOGY. The maximum width of the skull is divided by the maximum length and the result expressed as a percentage. The classifications are dolichocephalic (long headed, less than 75%), mesocephalic, or mesaticephalic (median, 75-80%), brachycephalic (broad headed, more than 80%). See also p.122.

Cephalochordates, lancelets or Amphioxus, small marine animals that look and swim rather like fish but have no head or paired fins. They are related to vertebrates, having a NOTOCHORD throughout their lives. Their method of filter-feeding is, however, much more like that of many animals without backbones. Lancelets inhabit shallow, temperate and tropical sea-water. See also CHORDATE; pp.54-55.

Cephalonia, largest of the IONIAN Islands, off the W coast of Greece. It has a largely mountainous terrain rising to Mt Ainos 1,628m (5,341ft) in the SE. Manufactured goods include lace and basketwork and, although agriculture is limited, fruit and cotton are produced and currants are exported through the main port of Argostolion. Area: 780sq km (300sq miles). Pop. (1971) 31,787.

Cephalopoda, highest class of predatory marine molluscs including the squid, NAUTILUS, OCTOPUS and CUTTLERFISH. Each has eight or more arms surrounding the mouth, which has a parrot-like beak. The nervous system is well developed, permitting great speed and alertness, the large eyes have an image-forming ability equal to that of vertebrates. Most can squirt an inky fluid to alarm attackers. Cephalopods move by squirting water from their mantle edge. Their heavily-yolked eggs develop into larval young that resemble the adults. Members of this class vary dramatically in size from 4cm (1.5in) to the giant squid, which may reach 20m (65ft). There are over 600 species. See also pp.24-25, 746-747.

Cephalosporins, group of ANTIBIOTIC drugs derived from fungi of the genus *Cephalosporium*. Related to PENICILLIN, they act against a wide variety of BACTERIA by preventing cell-wall synthesis. Cephalosporins are useful for treating patients who are allergic to penicillin and for infections caused by penicillin-resistant pathogens. See also p.1093.

Cepheid variable, type of regular pulsating variable star whose maximum luminosity is directly proportional to the time between one maximum brightness and the next. Such stars, whose prototype is Delta Cephei in the northern constellation of Cepheus, are generally extremely regular in their light variations, thus allowing their distances to be very accurately measured. Classical Cepheids, of POPULATION I, have periods of one to 50 days. Their discovery in external GALAXIES has been a major aid in determining intergalactic distances. See also pp.979, 992, 1000-1001, 1003.

Ceramics, in art, objects shaped out of moistened clay and then baked. EARTHENWARE, TERRA-COTTA, brick, tile, FAIENCE, MAJOLICA, STONEWARE and PORCELAIN are all ceramics.

The clay may be shaped by hand, using a coil or slab technique, a mould or a potter's wheel. Ceramic ware may be ornamented with clay inlays, by relief modelling on the surface, or by incised, stamped or impressed designs. A creamy mixture of clay and water (slip) can be used to coat the ware before firing. Ceramic ware is baked in a kiln until it has hardened into its "biscuit" stage. Glaze, thin transparent oil pigment, is then applied to the clay surface and fused to it during firing, to make the pottery non-porous and to give it a smooth, colourful, decorative surface.

The ancient Egypt and neolithic communities of Europe were familiar with terra-cotta vessels. The Egyptians developed a FAIENCE with a glaze, and the Mesopotamians and Persians used architectural tiles with coloured glazes. The Greeks developed red, black, and white glazed decorated pottery; the Romans

Centipedes have a pair of poison claws with which they kill their prey

Centre of gravity: the lower this is in an object or vehicle, the greater its stability

Centrifuges separate liquids of different densities or solids suspended in the liquid

Ceramics form an important material source of domestic and industrial products

Cerberus

Cerebellum, the part of the brain that controls the positions and movements of the body.

Ceres, the Roman goddess of agriculture after whom the largest asteroid was named.

Cetaceans are the aquatic mammals which include whales, dolphins and porpoises.

Paul Cézanne's paintings had a greater depth of feeling than the Impressionists.

used relief decoration on theirs. In Spain, LUTTREWARE, the first sophisticated ceramics of the modern era, was produced by the Moors. Italian majolica, Dutch DELFT ware, German MEISSEN, and English WEDGWOOD were further refinements of the product. Chinese porcelain dates from the Tang dynasty, and Chinese stoneware can be dated from c 2000 BC. See also pp 546-547.

Cerberus, in Greek mythology, a three-headed dog who guarded the entrance to HADES. See also p.1900

Cercopitheciine. See BARBON

Cereal, any grain of the grass family (Gramineae) grown as a food crop. Wheat, corn, rye, oats and barley are grown in temperate regions but rice, millet, sorghum and maize require more tropical climates. The discovery of cereal cultivation (ie farming) was the basis of civilization and cereals developed over the years into high-yielding strains, remain the world's most important food source. See also pp 380, 676-677

Cerebellum, part of the brain, often known as the "little brain", located at the base of the CEREBRUM. It co-ordinates voluntary muscular activity and regulates muscle tone for proper posture and balance. It also modifies CEREBRAL CORTIX activity. See also pp 128-129

Cerebral cortex, outer layer of the brain, most highly developed in human beings, which suggests that it governs the higher nerve activity usually termed the human intellect. The cortex has intricate connections with most other neural structures in the body. See also pp 128, 129.

Cerebral haemorrhage, rupture of a blood vessel in the BRAIN usually caused by ARTERIOSCLEROSIS, less often by injury or disease. Symptoms are headache, vomiting, then coma. A major haemorrhage is fatal, recovery from a minor haemorrhage may take months. See also p.1072

Cerebral hemispheres, the two lateral halves of the CEREBRUM, the largest parts of the BRAIN and sites of higher thought. Due to the crossing-over of nerve fibres from one cerebral hemisphere to another, the right side controls most of the movements and sensation on the left side of the body, and vice versa. Damage to the cerebral hemispheres often produces personality changes. See also pp 128-131

Cerebral palsy, disease caused by damage to the BRAIN. The damage may result from disease or injury before birth, from difficulties during childbirth or, in later life, from infection, circulatory diseases or head injury. Symptoms include spastic movements of the arms and legs, and sometimes convulsions and impaired speech and hearing. Signs of mental abnormality that often accompany the disease may reflect difficulty in communication rather than mental retardation.

Cerebrospinal fluid, fluid found in the space between the arachnoid and the pia-mater layers of the MENINGES, the membranes that protect the brain and spinal cord from shocks. The fluid acts as a protective cushion. A sample of the fluid can aid diagnosis of diseases affecting the meninges. See also p.126

Cerebrum, the major part of the BRAIN. It is divided into two dome-shaped hemispheres, each of which has four lobes. Each hemisphere is made up of an outer greyish layer (grey matter) known as the CEREBRAL CORTIX; cortical white matter, made up of nerve fibres; and grey basal ganglia that are connected with other areas of the cerebrum and other parts of the brain. See also p.128

Cerenkov, or Cherenkov, radiation, light emitted when energetic particles travel through a transparent medium of fairly high refractive index (such as water) at a speed higher than the velocity of light in that medium. It is analogous to the sonic boom in sound, and a cone of light is emitted trailing the path of the particle. See also pp 856-857

Ceres, largest of the asteroids or minor planets. It was the first to be sighted, in 1801 by Giuseppe PIAZZI. It has a diameter of between 1,000 and 1,200km (600-750 miles) and its mean distance from the Sun is 413,400,000km (256,762,000 miles). It

has a mean sidereal period of 4.6 years. See also pp 954, 955

Cereus, genus of CACTUS native to the West Indies and a South America. Its stems are long, cylindrical and ribbed, and may be tree-like or trailing. Height, to 12m (39ft). There are about 25 species. Family Cactaceae, genus *Cereus*.

Cerium, soft, ductile, iron-grey metallic element (symbol Ce) of the LANTHANIDE group, first isolated in 1803. The chief ore is monazite. It is used in alloys, eg lighter flints, in catalysts and as the core of carbon electrodes in arc lamps. Properties: at.no 58, at.wt 140.120, s.g. 6.7; m.p. 798°C (1,468°F); b.p. 3,257°C (5,895°F). The most common isotope is Ce¹⁴⁰ (88.48%).

Cermet, strong heat-resistant combination of ceramic material and powdered metal, produced by powder metallurgy and used in the manufacturing of drilling tools, heat shields and turbine blades. **CERN** (European Council for Nuclear Research), nuclear research centre sited on the Franco-Swiss border w of Geneva. It was founded in 1954 as an intergovernmental organization, and its activities are now sponsored by 13 European countries. It is the principal European centre for research into high-energy nuclear physics. See also pp 819-847

Cernan, Eugene Andrew (1934-) US astronaut who made three space flights. The first was in GEMINI 9 (1966) and the second in APOLLO 10 (1969). Finally in 1972 as commander of Apollo 17 he landed on the moon with Ronald EVANS, making extensive explorations and collecting samples. See also pp 530-531

Certiorari, legal document issued by a superior court for the review of a decision by a lower court, particularly ones that have no regular means of appeal.

Ceruminous gland, part of the ear that produces the yellow wax (cerumen) that helps to protect the sensitive external ear canal. Too much wax can be produced by the glands, blocking the canal; the wax has then to be softened and removed by syringing with warm water. See also pp 138-139

Cervantes, Miguel de (1547-1616), Spanish novelist, poet and dramatist. He joined the army in 1570 and was wounded in the Battle of Lepanto in 1571. While returning to Spain in 1575, he was captured and kept as a slave in Algiers. He was ransomed in 1580 and settled in Madrid. Cervantes' works include *Don Quixote de la Mancha* (1605, 1615) and *Novelas Ejemplares* (1613).

Cervix, neck of the womb (uterus), it is the narrow part leading from the vagina into the womb. Cancer of the cervix is one of the commonest cancers found in women. Most often found amongst middle-aged women with several children, it can be successfully treated if detected at an early stage through a cervical smear. See also pp 164, 165, 1089

Césaire, Aimé (1913-), West Indian poet b Martinique. He writes in French and introduced the term NEGRIOTÉ in his *Return to My Native Land* (1939). He has also held a number of government positions in Martinique.

Cesalpino, Andrea (1519-1603), Italian physiologist and botanist. His *De plantis* (1583) was one of the first attempts to classify plants according to their flowers and fruits and was based on a comparative study of his own large collection.

César (Baldacchini) (1921-), French sculptor. Working in metal and scrap from refuse dumps, he used these *objets trouvés* in abstract compositions and in witty sculptures of birds and human beings.

Céspedes, Carlos Manuel de (1819-74), lawyer and Cuban revolutionary. He issued the first proclamation of independence from Spanish rule (*El Grito de Yara*) and led the armed revolt that began the Ten Years War (1868-78).

Cessna Aircraft Company, US industry with international sales and distribution of aircraft, mainly light passenger planes. Cessna also produces fluid power systems and defence products.

Cestodes, TAPEWORMS that are inner parasites of man and animals. Usually they live in the intestines, holding on to its

lining by terminal hooks. They have no mouths and absorb their food through the body wall from their hosts. They are HERMAPHRODITE, one segment fertilizing another. Ripe segments drop off and are voided by the host after which, to survive, they usually need to be eaten by a second host. For this reason their life cycles are often complex. See also pp 17, 1061

Cetacea, order of aquatic mammals found in all oceans and some rivers. The larger cetaceans are called WHALES, the smaller ones are known as PORPOISES or DOLPHINS. Cetaceans are streamlined, with a pair of front flippers and horizontal tail flukes. Their bodies are insulated by a thick layer of blubber. Length: from 1.5m (4.9ft) to more than 30m (100ft), weight: from 36kg (80lb) to 100 tonnes. See also pp 87, 89, 100-101

Cetewayo, or Cishwayo (c.1826-84), King of the Zulus (1873-79). British demands for him to disarm led to the ZULU WAR (1879), in which he was defeated. He lost the loyalty of his subjects, and was forced into exile.

Cetus, constellation of the equatorial zone adjacent to the constellations ARIES, PISCES and TAURUS. It contains the binary star MIRA Ceti which, in the early 17th century, was the first variable star to be recognized, its magnitude varies from 1.7 to 10. See also pp 1016, 1017.

Ceuta, city in NW Africa on the Strait of Gibraltar. Built by the Phoenicians, it was in turn held by the Carthaginians, Romans, Vandals, Byzantines, Arabs and Portuguese. It has been a territory of Spain since 1580 and is part of Cadix province. It forms one of the PILLARS of HEBRAICA. Today, it is an important refuelling port, and has shipping, fishing and food processing industries. Pop. (1970) 67,187.

Cévennes, mountain range in S France w of the Rhône Valley and bordering the Massif Central; extending SW from St Etienne to the Canal du Midi. Cévennes was once known for its breeding of silkworms, but the silk manufacturing industry has declined and coal mining and sheep rearing are now the main occupations. The highest peak is Mont Mézenc, 1,754m (5,755ft).

Ceylon. See SRI LANKA

Cézanne, Paul (1839-1906), French painter. A friend of PUSSELL, by whom he was influenced, Cézanne exhibited at the first Impressionist show in 1874. *House of the Hanged Man* (1873-74) is characteristic of his Impressionist period. He later developed away from IMPRESSIONISM in favour of a deeper, more analytical approach using colour to model and express form, which he depicted in geometric terms - cubes, cones and cylinders. Figure paintings, eg *The Card Players* (1890-92), *Madame Cézanne* (c.1885) and *The Bathers* (1895-1905), as well as landscapes, eg *Mont Sainte-Victoire* (1904-06), and still-lives were painted on this principle. Cézanne ranks as one of the great influences in modern art especially CUBISM. See also POST-IMPRESSIONISM, pp.1596-1597, 1656.

CG. See CHORIONIC GONADOTROPIN

CGS system, system of metric units based on the centimeter, gramme and second. The dyne is the unit of force, the erg the unit of energy. It has been largely superseded by the SI and MKS systems. See also p.783

Chaadayeve, Piotr Yakovlevich (1794-1856) Russian philosopher. His idealistic philosophy stressed the importance of unity at all levels, the immortality of egoism, the idea of Russia's divine mission and the importance of Christianity for understanding history. An aristocratic army officer in his early years, he travelled in Europe (1823-26) and in 1829 began writing eight *Philosophical Letters* expressing his views.

Chabanel, Noël (1613-49), French Jesuit missionary who worked among the Huron Indians in North America and was captured and killed by Iroquois. He was canonized in 1930. Feast: 26 Sept. or (among the Jesuits) 19 Oct.

Chablis, name of a French wine of distinc-

tion produced near the village of Chablis, Burgundy. Pale greenish-gold in colour, it has a clean dry taste. Chablis Grand Cru is produced in limited quantities from vineyards only 155sq km (60sq miles) in area. Although the name is often used for more inferior wines, true Chablis is at its best after about ten years.

Chabrier, Alexis Emmanuel (1841-94), French composer of orchestral and piano works, most notably *España* (1883) and *Joyeuse Marche* (1888) for orchestra and the opera *Le Roi malgré lui* (1887). His music had considerable influence on such French composers as Ravel and Satie. See also p.1578.

Chacabuco, Battle of (12 Feb. 1817), first major engagement in the Chilean War of Independence, after SAN MARTIN crossed the Andes from Argentina to Chile. The royalists suffered heavy losses and withdrew from the Santiago area. See also p.1563.

Cha-cha, dance popular in the 1950s. It has a 4/4 rhythm and its basic movements are similar to those of the MAMBO. It allows the dancers to improvise freely.

Chacma. See BABOON.

Chaco, extensive lowland plain in central S America, that has three principle divisions: Chaco Boreal in N Paraguay and S Bolivia, Chaco Central in NE Argentina and Chaco Austral in central W Argentina. The area is sparsely inhabited. Industries: timber, cotton, cattle grazing, oil prospecting, tannin extraction. Area 777,000sq km (300,000sq miles).

Chaconne, dance popular in 17th-century Europe and often included in baroque dance surtts. A moderately slow dance in 3/4 time, it was a series of variations on a GROUND BASS usually of eight bars. The operas of LULLY customarily ended with a chaconne and J.S. Bach used the dance in his *Violin Suite in D minor*. THE PASSACAGLIA is a very similar form.

Chaco War, (1932-35), conflict between Paraguay and Bolivia over possession of the CHACO. Bolivia, landlocked since the War of the Pacific, sought a route to the sea via the Rio de la Plata. Most of the disputed territory was ceded to Paraguay in 1938.

Chad, Saint. See CHADDA, SAINT.

Chad (Tchad), lake in N central Africa, mainly in the Republic of Chad, partly in Nigeria, Cameroon and Niger. The chief tributary is the Chari River, the lake has no outlet. Depending on the season, the area of the surface varies from approx. 10,000-26,000sq km (3,850-10,000sq miles). Max. depth: 7.6m (25ft). See also p.1931.

Chad, landlocked republic in N central Africa formerly a French colony that gained its independence in 1960. The N half of the country is desert, uninhabited by nomads. In the S the land is farmed, the chief crop, and chief export, being cotton. Cattle are raised near Lake Chad. The capital is Ndjamena. Area: 1,284,000sq km (495,752sq miles). Pop. (1975 est.) 4,030,000. See also p.2005.

Chadwick, Sir Edwin (1800-90), British sanitation reformer. He was a pupil of Jeremy BENTHAM, and pioneered the introduction of modern urban drainage systems with his book *The Sanitary Conditions of the Labouring Population* (1842). He was influential in the passing of the Public Health Act of 1848 and the setting up of a new drinking water system in London. See also p.1572.

Chadwick, Florence May (1918-), US swimmer. In 1950 and 1951 she was the first woman to swim the English Channel both ways. She broke the time record for swimming the Catalina Channel, the Straits of Gibraltar, the Dardanelles and the Hellespont.

Chadwick, Sir James (1891-1974), British physicist. In 1932 he discovered the neutron by bombarding beryllium with alpha particles. He examined the change of these materials into different chemical elements. This work on NUCLEAR STRUCTURE led him to discover the neutron and determine its mass. For that work he was awarded the 1935 Nobel Prize in physics.

Chadwick, Lynn (1914-), British sculptor. He emerged in the 1950s as a leader

among the group of British sculptors whose linear constructions were in direct contrast to the monumental style of Henry MOORE.

Chaetognaths, arrow worms, a phylum of small marine animals not at all closely related to any other group. They are between 3mm and 10cm (1-4in) long, and have narrow bodies, with bristly jaws for seizing their prey (small crustaceans of the PLANKTON). Although invertebrate animals, they swim like fishes by means of fins. They are HERMAPHRODITES. Some species are useful indicator organisms for marine biologists because they are sensitive to the temperature, salinity and depth of the water in which they live.

Chaetopoda, obsolete term for most of the classes of ANNELID worms.

Chafers, any of a large number of beetles, particularly of the SCARAB family (Scarabaeidae), that feed on the leaves of plants. They include shrew leaf chafers and rose chafers. See also p.44.

Chaffinch, small songbird common throughout Europe. It generally perches on low trees, bushes and fences near houses, feeding on plants and insects. The blue and buff colours and pink breast belong to the male only, although the drab female shares his white markings. In winter flocks consisting solely of males can be seen. Family Fringillidae, species *Fringilla coelebs*.

Chagall, Marc (1887-), Russian-French painter. His paintings, with their dreamlike imagery - poetic evocations of Russian village life and Jewish tradition - considerably influenced the SURREALISTS. His work ranged from ceramics and mosaics to tapestry and theatre design. It included stained-glass windows for Hadassah-Hebrew Medical Centre, Jerusalem (1962), murals for the Metropolitan Opera House, New York (1966), and mosaics and tapestries for the Knesset in Jerusalem (1969) and Nice University (1968).

Chagas' disease, infectious disease transmitted by a protozoan parasite, *Trypanosoma cruzi*, in insect faeces, primarily in South America. Swelling at entry point, fever and malaise are early symptoms, heart damage is typical of the chronic form. See also p.1083.

Chain, Sir Ernest Boris (1906-79), British biochemist, b. Germany. Leaving Germany in 1933, he went to England to conduct research at Cambridge and Oxford universities. He shared the 1945 Nobel Prize in physiology and medicine with Howard FLOREY and Alexander FLEMING for the isolation and development of penicillin as an antibiotic. He also studied spreading factor, an enzyme that aids the dispersal of fluids in tissue. See also p.1092.

Chainmail, form of ARMOUR, consisting of small metal rings which either interlock or are sewn onto a backing cloth. Flexible, relatively light and easy to manufacture, chainmail garments were extensively used in the early Middle Ages. The hauberks (mailed tunics) worn by Norman knights and their foes at the Battle of Hastings were typical. From the 13th century chainmail was gradually superseded by the stronger plate armour. See also pp.555, 1301.

Chain reaction, self-sustaining molecular or nuclear reaction in which one reaction is the cause of a second, the second of a third and so on. The initial conditions are often critical, eg in a nuclear chain reaction the quantity of fissionable material must exceed the CRITICAL MASS. See also pp.434-435, 814-815.

Chaitanya (Caitanya) (1485-1533), Hindu mystic and theistic reformer, worshipped as the incarnation of Krishna. Moved by a religious experience at Bodhi-Gaya calling him to a life of total commitment, he founded a cult devoted to the worship of the God Vishnu in his form as Krishna and played an important part in the Vishnuism (Vaishnavism) movement in Bengal. His cult was characterized by the performance of chanting and eurythmic movements and for its emphasis on equality of treatment to all castes. Temples were built after his death at the tradi-

tional site of Vishnuism at Brindaban, which he visited and which is still the site of pilgrimages and festivals.

Chaka or Shaka (d.1828), chief of the Zulus (1800-28). He raised a large army and extended his control over many neighbouring tribes, subjugating all of what is now Natal. He later became insane and was murdered by his half-brother. **Chalcantite**, mineral which consists mainly of hydrated copper sulphate ($\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$), although it is rarely used as a source of copper. It occurs as greenish-blue triclinic crystals or as fibrous veins or stalactites. It is soluble in water and has a nauseating taste. Hardness 2.5, s.g. 2.25.

Chalcedon, Council of, meeting of all the bishops of the Christian Church, held in 451 in the city of Chalcedon in Asia Minor. It was convoked by the Emperor Marcian to settle controversial theological questions relating to CHRISTOLOGY. It reaffirmed the doctrine of two natures (divine and human) in Christ and condemned NESTORIANISM.

Chalcedony, fine-grained variety of quartz used by gem engravers and as ornaments when cut and polished. It is waxy, lustrous and there are white, grey, blue and brown varieties. It is often coloured by artificial methods. Other varieties contain impurities giving a distinctive appearance, eg AGATE (coloured bands), ALLODONTONE (dark green with red flecks), CARNELIAN (dark red) and ONYX (striped). See also p.260.

Chalcid, any member of the insect superfamily Chalcidoidea, related to bees, ants and ichneumon flies (order Hymenoptera). Many are predators on or parasites of other insects. Like some other hymenopterans, some chalcids are so small as to be hyperparasites - parasites of parasites. **Chalcocite**, dark grey, metallic, soft mineral, copper sulphide (Cu_2S); one of the chalcocite group. It is a major ore of copper, found mainly in sulphur deposits. The crystals occur in orthorhombic granular masses, or rarely in prismatic form. Hardness 2.5 to 3.0; s.g. 5.7.

Chalcolithic Age, period in which man discovered how to extract copper by heating its ore with charcoal. This art was known in the Middle East before 3500 BC. A subsequent important development was the alloying of copper with tin to produce bronze. See also BRONZE AGE, p.392.

Chalcopyrite, or copper pyrites, opaque, brass-coloured, metallic, brittle mineral, copper iron sulphide (CuFeS_2); the most important copper ore. It is found in sulphide veins and in igneous and contact metamorphic rocks. The crystals are tetragonal but often occur in masses. Hardness 3.5-4; s.g. 4.2. See also p.256.

Chaldaea. See BABYLONIA.

Chaleur Bay, inlet of the Gulf of St Lawrence in SE Quebec, Canada. It was discovered in 1534 by Jacques Cartier. It is a noted fishing ground for herring, cod, mackerel and salmon. Length: approx 137km (85 miles).

Chaliapin, Fyodor Ivanovich (1873-1938), Russian operatic bass of international fame. He made his debut at La Scala in Milan in 1901 and at the Metropolitan Opera, New York, in 1907. His differences with the Soviet government caused him to leave Russia in 1921, when he joined the Metropolitan. He was particularly noted for his role in Mussorgsky's opera *Boris Godunov*.

Chalice, in Christian Churches, cup used at celebrations of the EUCHARIST to hold the consecrated wine. Chalices are usually made of precious metals and consist of a bowl with a stem.

Chalk, mineral, mainly calcium carbonate (CaCO_3), formed from the shells of minute marine organisms. It varies in properties and appearance, pure forms, such as calcite, contain up to 99% calcium carbonate. It is used in making putty, plaster and cement, and harder forms are occasionally used for building. Blackboard chalk is calcium sulphate.

Challenger Expedition (1872-76), British expedition for oceanic research whose findings laid the foundations of the science of oceanography. HMS *Challenger*,

Lynn Chadwick's early sculpture included Calder-like 'mobiles': this is *The Seasons*.

Chainmail, worn extensively in the Middle Ages, was also used by Roman soldiers.

Chain reaction, self-sustaining, explosive process following "splitting" of an atom.

Fyodor Chaliapin, the great Russian bass, as he appeared as Varlaam in *Boris Godunov*.

Neville Chamberlain; his illusions that Hitler's demands were limited were shattered.

Chameleons of the larger species are known to catch small birds with their long tongues

Chamois are widely hunted for their meat but they are amazingly agile and evasive.

Philippe de Champaigne's portrait of Cardinal Richelieu, with typical gravity and realism

a steam corvette of 2,306 tonnes, was commanded by George Nares and had a staff of six naturalists headed by Professor Charles Wyville Thompson. The expedition travelled nearly 128,000km (69,000 nautical miles) and made studies of the life, water and beds of the Atlantic, Pacific and Indian oceans. See also pp.482-483

Challis, James (1803-82), British scientist who aimed to co-ordinate all the known facts of science in one general theory of physical action. He was Cambridge Plinian professor of astronomy and experimental philosophy and director of the Cambridge Observatory from 1836. Most famous for his unconscious discovery of Neptune in 1845, he also invented the meteoroscope (1848) and the transit reducer (1849).

Chalybes, ancient people of NE Asia Minor, who lived on the SE shore of the Black Sea. Described by Aeschylus and Strabo to whom they were semi-legendary, the Chalybes were miners and metal workers. Early iron workings, attributed to the Chalybes, have been found in the mountains above Trebizond.

Cham, Malayo-Polynesian people, inhabiting central Vietnam and Cambodia; descendants of the inhabitants of the ancient kingdom of Champa. Their society is based on agriculture, the main crops being rice and millet.

Chamberlain, Arthur Neville (1869-1940), British politician, son of Joseph Chamberlain and half-brother of Austen Chamberlain. He turned from business to local politics in 1911 and in 1915 became mayor of Birmingham. In 1918 he was elected to Parliament as a Conservative. He was chancellor of the exchequer (1923-24) and minister of health (1924-29). At the latter office he distinguished himself by a thorough reform of the social services which brought about a simplification of local government. As prime minister (1937-40) he conducted the policy of appeasement and signed the MUNICH AGREEMENT in 1938. German successes at the beginning of WWII led to criticism of his leadership and he resigned in May, 1940. See also p.1678

Chamberlain, Houston Stewart (1855-1927), Anglo-German author. He settled in Germany in 1907, married Richard Wagner's daughter and became a German citizen. Much of his writing, particularly *The Foundations of the Nineteenth Century* (1911), argued for a uniquely pure and superior "Teutonic race", a theme that later appeared in NAZI propaganda.

Chamberlain, Joseph (1836-1914), British politician. After being elected to Parliament (1876) he served as Liberal president of the Board of Trade (1880-85) and president of the Local Government Board (1886) but resigned (1886) and joined the Liberal-Unionists. As colonial secretary (1895-1903), in the Conservative Liberal-Unionist government (1895-1906), Chamberlain advocated both social reform and a vigorous colonial policy. See also p.1660

Chamberlain, Sir Joseph Austen (1863-1937), British political figure. He entered Parliament in 1892 and was postmaster general (1902), chancellor of the exchequer (1903-05, 1919-21), secretary of state for India (1915-17), lord privy seal (1921-22), Conservative Party leader (1921-22), foreign secretary (1924-29) and first lord of the admiralty (1931). As foreign secretary he was one of the main architects of the Locarno Pact of 1925 by which France, Germany and Belgium accepted their existing frontiers and Britain and France agreed to guarantee these frontiers. He received the 1925 Nobel Peace Prize (with Charles G. Dawes) for his work on the pact.

Chamberlain, Owen (1920-), US physicist. After working on the development of the ATOM BOMB between 1942 and 1946 he became professor of physics at the University of California, Berkeley. With Emilio Segrè, using the bevatron particle accelerator, he confirmed the existence of the antiproton and was awarded the Nobel Prize in physics in 1959

Chamberlain, Thomas Chrowder (1843-1928), US geologist who founded

the *Journal of Geology* in 1894. His research into the causes of glaciers and into atmospheric composition led him to formulate, with Forest Moulton, the PLANETESIMAL HYPOTHESIS of the origin of the solar system. See also pp.924-925

Chamberlain's Men, Elizabethan company of actors, formed in 1594; it included William SHAKESPEARE and Richard BURGAGE. The Lord Chamberlain, Henry Carey, was their patron, succeeded by his son Richard in 1596. They acted at Court and in the Inns and theatres of London. In 1599 they gained a part share in the GLOBE THEATRE, where they performed the works of Shakespeare and other dramatists. They became the King's Men in 1603

Chamberlain, Lord, head of a sovereign's household. The first Lord Chamberlain was appointed in 1360 and until the 20th century the office had political importance. Its incumbent taking part in government business. During the reign of George II the Lord Chamberlain took over the licensing of all plays presented in Britain. Confirmed by an Act of 1844, this function was abolished in 1968

Chamberlain, Lord Great, officer in the English parliamentary system. In the 11th century the Lord Great Chamberlain was the chief finance officer of the Crown. By the 12th century his functions were mainly ceremonial, but developed with the growth of the parliamentary system itself to comprise the government of the Palace of Westminster and of the House of Lords during parliamentary sessions.

Chamber music, instrumental music for two or more instruments, each taking one part. Two to eight instruments is the usual number, and the string quartet (for two violins, viola and cello) the most common arrangement. The term dates from the 17th century and was applied to music suitable for intimate surroundings which was played privately in the homes of wealthy patrons. See also pp.1484, 1580

Chamber of Commerce, local association of companies formed to improve their community and promote their commercial interests. The first Chamber of Commerce was formed in Marseille in 1599, and they spread rapidly throughout Europe and to the USA. The International Chamber of Commerce was founded in 1920 and advises governments on economic issues

Chambers, Ephraim (c.1680-1740), English encyclopaedist, founder of modern encyclopaedias. In 1728 he published his comprehensive *Cyclopaedia*, which later influenced the production of the French *Encyclopédie* (1751-71) and the first *Encyclopaedia Britannica* (1768-71). See also p.622

Chambers, Sir William (1726-96) British architect, b. Sweden. In opposition to the light and gracious style of his contemporary Robert ADAM, his work was robustly Classical. He designed Somerset House, London (1776-86), and Duddingston House, Edinburgh (1762-64).

Chambly, town in a Quebec, Canada, 23km (14 miles) E of Montreal. It is the site of a French fort dating from 1665. It was the headquarters for the British generals Carleton and Burgoyne 1776-77. Industries: paper, canned food, chemicals. Pop. 11,400

Chameleleon, arboreal LIZARD, found chiefly in Madagascar, Africa and Asia, best known for its ability to change colour. The compressed body has a curled, prehensile tail and bulging eyes that move independently. Length, 17-60cm (7-24in). Family Chamaeleonidae, genus *Chamaeleo*; there are 80 species. See also pp.67, 71

Chaminade, Cécile Louise Stephanie (1857-1944) French concert pianist and composer. Her most successful compositions are small-scale works, including songs and piano pieces

Chamois, nimble, goat-like RUMINANT that lives in mountain ranges of Europe and Asia. It has coarse, reddish-brown fur with black tail and horns. Its skin is made into the familiar polishing chamois leather. Length up to 1.3m (50in), weight: 25-50kg (55-110lb). Family Bovidae, species *Rupicapra rupicapra*.

Chamorro, indigenous people of Guam,

of mixed Spanish and Filipino descent, most are Roman Catholics. Their livelihood is based on agriculture, with crops including rice, tobacco and copra.

Champagne, district in NE France, made up of the Aube, Marne, Haute-Marne and Ardennes départements. The major city is Reims, where the early French kings were crowned. Trade fairs in the 11th to 13th centuries made the district a centre of European trade and commerce. There was heavy fighting there during WWII along the Marne River. It is a rather arid region but it produces all world's champagne.

Champagne, sparkling wine, usually white, produced in CHAMPAIGN. Wine is bottled before fermentation ends, and a secondary fermentation produces carbon dioxide under pressure. When the bottle is opened, the gas escapes as bubbles. See also pp.694-699

Champagne Philippe de (1602-74), French painter, b. Brussels. He worked in Paris with ROUSSEAU on the Luxembourg Palace. In 1628 he became artist to Queen Marie de' Medici, and did many portraits and religious paintings for her and Cardinal RICHELIEU. From 1643 he was involved with JACQUINOT and produced religious paintings characterized by a serene realism. His best-known works include portraits and frescoes at Vincennes and in the Tuileries

Champlain, Samuel de (1567-1635), French explorer, founder of New France (Canada). In 1603 he went on an expedition to the Gulf of St Lawrence, where he explored the St Lawrence River. He later (1604-07) led settlers to Port Royal (now Annapolis Royal, Nova Scotia) and explored the Atlantic coast from Nova Scotia to Massachusetts Bay and beyond. Champlain founded Quebec in 1608 and explored northern New York state, where he discovered Lake Champlain in 1609. He also explored the Ottawa River in 1613 and the Great Lakes in 1615. See also p.1538

Champlain, lake on the border of New York State and Vermont, USA, and extending into Quebec, Canada. Linked to the Hudson River by the Champlain division of the Barge Canal, it serves as a link in the Hudson St Lawrence waterway. Discovered by Samuel de Champlain in 1609 it was the scene of many battles in the French and Indian wars and the American Revolution, and the defeat of the British by Thomas MacDonough in the War of 1812. Today it is a popular resort area with swimming, fishing, boating and winter sports facilities. Area: 1,101sq km (425sq miles)

Champlain, Jean François (1790-1832), French Egyptologist. He was curator of Egyptian antiquities for the Louvre and is generally considered the creator of Egyptology. He helped to decode the Rosetta Stone, the key to all Egyptian hieroglyphics

Chanay, centre of the Cuismancu Empire in central Peru that lasted from c.1000-1476, when it was conquered by the Incas. Located in the Chanay, Ancon, Huaura and Chillón valleys the Chanay people built impressive cities and were expert weavers and woodworkers.

Chancellor, Richard (d.1556), English navigator. In 1553 he commanded a ship on an expedition to find a north-east passage to Asia, and reached Moscow. By his negotiations with Ivan the Terrible he laid the foundations for English trade with Russia. See also p.1412

Chancellor, Lord High, head of the British legal system. The medieval chancellor was the king's chief minister, who sat in both the CURIA REGIS and the Court of EXCHEQUER. He travelled with the king and all petitions for the king were seen by him. He was the keeper of the GREAT SEAL. Of all the posts in the medieval household, the chancellorship alone has retained its political importance. The office is still of cabinet rank

Chancellor of the Duchy of Lancaster, office deriving from the 14th century, when the duchy was made a county palatine (1351) with its own courts free of royal jurisdiction. Its rights passed to the crown in 1399. The office is now used to accom-

moderate a cabinet minister without portfolio

Chancellor of the Exchequer, minister responsible for the national finances in Britain. The office evolved from the 13th-century clerk of the Court of EXCHEQUER, assistant to the CHANCELLOR, who, as administration became more complex, withdrew from the Exchequer, leaving the clerk to acquire special responsibility for finance. Until the mid-19th century the office was departmentally inferior to the first lord of the treasury. Since GLADSTONE's tenure of the office in 1850s, however, it has been a major office of state with cabinet rank.

Chancellorsville, Battle of (2-4 May, 1863), American Civil War defeat for the Unionists after the Confederate commander Robert E. Lee sent "Stonewall" JACKSON to surprise the Union rear. JACKSON was accidentally killed by a Confederate patrol. See also pp.1628-1629

Chancery, Court of, court developed in the 15th century for the Lord Chancellor to deal with petitions, passed on from the king-in-council, from aggrieved persons for redress when no remedy was available in the common law courts. By the middle of the 17th century Chancery had become a second system of law (equity) rather than a reforming agency. By the Supreme Court of Judicature Act of 1925 the court of Chancery was merged into the High Court, of which it is now known as the Chancery Division.

Chand, Prem (1880-1936), pen-name of Dhanpat Rai Schriyastava, an Indian novelist and short-story writer. Until 1914 he wrote in Urdu and is credited with having given the Urdu short story its form, after which he wrote in Hindi. Chand wrote more than 250 short stories and 12 novels in Hindi, his last novel, *Godan* (*The Gift of a Cow*; 1936), is generally regarded as his best.

Chandelle, in aviation, an abrupt climbing turn in which an aircraft uses its momentum to gain altitude and change direction at once. See also pp.518-519

Chandigarh, city in NW India, at the foot of the Siwalik Hills, capital of Punjab and Haryana states. It is one of India's planned cities, designed by Le CORBUSIER and built in the 1950s. It has the Punjab University (1947) and the garden of Punjura, a replica of Srinagar's Shalimar gardens. Pop. 257,000.

Chandler, Raymond Thornton (1888-1959), US author. His detective fiction, featuring the tough private eye Philip Marlowe, includes *The Big Sleep* (1939). *Farewell, My Lovely* (1940) and *The Long Goodbye* (1953), all of which were made into films.

Chandragupta (Chandragupta), (c.321-297 BC), founder of the MAURYA Empire, the first great empire of India. He seized the throne of Magadha kingdom from the Nanda dynasty and extended their territories to include much of N India and parts of Afghanistan. See also p.1194

Chandra Gupta, name of two Indian emperors of the GUPTA dynasty. Chandragupta I (c.320-330), the founder of the dynasty, ruled all Bihar and part of Bengal. Chandra Gupta II (c.375-415), the third and greatest Gupta, expanded the empire and codified its laws. He presided over a period of peaceful prosperity and cultural achievement.

Chanel, Gabrielle (Coco) (c.1883-1971), French fashion designer. She revolutionized women's fashion beginning in the 1920s with a straight, simple, uncorseted line, many elements of her designs were borrowed from men's clothing. She is associated with short hair, costume jewelry, the Chanel suit, jersey dresses, bell-bottom trousers, trench coats and Chanel No.5 perfume.

Chang Chih-tung (1837-1909), traditional Confucian scholar who became one of the key modernizers and regional leaders in China. As a governor in the 1880s, he helped build modern armed forces and military academies and organized industrial development by establishing modern iron and steel works.

Changchun. See Hsinking

Chang Heng (AD 78-139), Chinese scientist and poet. He designed astronomical and weather instruments and wrote *Two Capitals*, which compared the imperial cities of the HAN DYNASTY. See also pp.1251, 1257

Chang O, in Chinese mythology, the beautiful Moon goddess. Her festival was celebrated on the 15th day of the eighth lunar month. According to one legend, she fled to the Moon to avoid punishment after she stole the drug of immortality. **Change-ringing**, art of bell-ringing which was developed in England in the 17th century. "Peals" or sets of from four to 12 bells, tuned to notes of the diatonic scale (usually in the major), are rung in different sequences, with no repetition; each new sequence is a "change". The bells are attached to bellropes and are swung full circle, being struck by internal clappers.

Channel Islands, group of islands at the swend of the English Channel, approx. 16km (10 miles) off the W coast of France. Part of the United Kingdom, the main islands are Jersey, Guernsey, Alderney and Sark. The chief towns are St Helier on Jersey and St Peter Port on Guernsey. The islands have a warm, sunny climate and fertile soil so the major industries are tourism and agriculture, in particular the raising of dairy cattle. Dairy produce is exported along with spring vegetables and fruit. Area: 194sq km (75sq miles). Pop. (1975 est.) 128,000. See also p.2006

Channel swimming. See SWIMMING

Channel Tunnel, any of several schemes to link Britain and France by a tunnel under the English Channel. The first was proposed in 1802 by a French engineer; no work began until the late 19th century when a short tunnel was started but soon abandoned for political reasons. In 1973 another project was started but this was also discontinued (in 1975) due to increasing costs. Further proposals for the project were put forward in 1981. See also p.531

Chanson de Roland, French epic by an unknown author of the late 11th century. It describes the defeat of Charlemagne's rearguard at Roncesvalles Pass in the Pyrenees on 15 August 778. As in the typical CHANSONS DE GESTES (songs of deeds), the poem alters historical fact to develop the personal and tragic elements of a situation. See also p.1344

Chansons de geste, French epic poems of the period between the 11th and 14th centuries, generally dealing with the campaigns of Charlemagne and his lieutenants. These anonymously written narratives describe imaginary events in the lives of Guillaume of Orange, Girart de Roussillon, Roland and other historical figures of the period.

Chant, unaccompanied liturgical music. The Anglican chant developed from the earlier Gregorian tones, which were melody formulas defining only pitch relationships. After the Reformation harmonies were added and note values designated to English texts of the psalms. The chant is adjustable in length to fit the different psalm verses by repeating one note for any number of words.

Chanterelle, medium-sized, edible, fleshy, terrestrial MUSHROOM, which has long been highly prized. It occurs in beech and oakwoods in autumn. It has a bright yellow, funnel-shaped cap with prominent gills continuing down the stem. Family: Cantharellaceae; species: *Cantharellus cibarius*.

Chantilly, town N of Paris celebrated for its picturesque racecourse. It is the venue of the Prix du Jockey-Club, (the French Derby). The town is also famous for its 14th-century chateau and for its lace. Pop. (1968) 10,156

Chantrey, Sir Francis Legatt (1781-1841), British painter and sculptor. His early work included painted portraits but after 1804 he concentrated exclusively on sculpture. Famous for his portrait busts, his output was prolific and included a marble bust of Sir Walter Scott (1820) at Abbotsford and the statue of William Pitt in Hanover Square, London.

Chantry, in the Roman Catholic Church, the office or the benefice maintained to celebrate MASS for the repose of the souls

of the founder and his friends. The term is also used to denote the chapels in which such masses were said. Chantries originated in the Middle Ages but it was not until the 14th and 15th centuries that they became widespread. They were suppressed in England during the Reformation.

Chanukah. See HANUKKAH

Chanute, Octave (1832-1910), US airman who greatly aided the invention and development of the aeroplane. Trained as an engineer, he built railways before turning to aviation. Chanute organized a glider camp from which he and his associates made about 2,000 glides in machines which he had designed.

Chao Kuang-yin (927-976), founder of the Chinese Sung dynasty (960-1279). He was a scholarly general who eliminated regional military control, established a paid army and laid the basis for three centuries of cultural advance in China.

Chao Meng-fu (1254-1322), Chinese painter, calligrapher, and descendant of the Imperial family of the Sung dynasty. His paintings of landscapes and horses are well known, and his calligraphy is considered among the best.

Chaos, in Greek cosmology, the gaping space that preceded creation, also associated with the lowest region of the underworld, TARTARUS. The term is now used to denote utter confusion or disorder.

Chapais, Sir Joseph Amable Thomas (1858-1946), Canadian historian and politician. Editor of *Le Courier du Canada* (1884-1901), he served in Maurice Duplessis' cabinet and the Senate. Chapais wrote extensively about Jean Talon, Gen. Montcalm, and the history of NEW FRANCE; he was president of the Royal Society of Canada in 1923.

Chapbook, cheap and popular pamphlet, forerunner of the inexpensive book or magazine. Chapbooks were sold by a chapman (pedlar) between the 15th and 18th centuries, and contained popular fiction, newsletters, comics and easy-to-read Bible stories, all written in the vernacular. **Chapel Royal**, clergy, choir and organist that perform church services for English royalty. Dating from the early 12th century, it was an integral part of the court. In its heyday, the 16th and 17th centuries, it included the most celebrated composers of the age, such as William BYRD and Henry PURCELL.

Chaplin, Sir Charles Edward Spencer ("Charlie") (1889-1977), British actor and film-maker, considered by many to be the greatest comedian of the silent film era. In his short films such as *The Immigrant* (1917) and *A Dog's Life* (1918) he developed his famous role - a jaunty, wistful and often pathetic soul in baggy trousers, bowler hat and a moustache. His major films included *The Kid* (1920), *The Gold Rush* (1924), *City Lights* (1931), *Modern Times* (1936), *The Great Dictator* (1940), *Monsieur Verdoux* (1947) and *Limelight* (1952). He was attacked for his politics and in 1952 left the USA to live in Switzerland. See also pp.1682, 1683, 1683

Chapman, George (c.1560-1634), English poet, dramatist and translator. He completed Christopher Marlowe's unfinished poem *Hero and Leander* (1598). His works include the poem *The Shadow of Night* (1594), the plays *The Blind Beggar of Alexandria* (1598) and *Bussy D'Ambois* (1604), and famous translations of Homer's *Iliad* (1611) and *Odyssey* (1614-15).

Chapman, Herbert (1873-1934), Yorkshire-born football manager. An unremarkable player, he became a skilful, innovative manager. In the 1920s he made an ordinary Huddersfield team League champions, then created the great Arsenal side of the 1930s, devising the third-back game and W-formation.

Chappe, Claude (1763-1805), French engineer who, with his brother, Ignace, invented a SEMAPHORE telegraph in 1791. During the French Revolutionary Wars they used their telegraphs on towers to relay information about the state of the war between France and Austria, this method being much faster than other

Chandigarh, where traditional Indian life contrasts with the architecture of Le Corbusier

Chanson de Roland, best known of the epic poems of the barons in medieval France

Channel Islands, the harbour at St Helier, Jersey, where French is the official language

Charlie Chaplin lived in the USA for more than 40 years, never becoming a US citizen

existing forms of communication. See also p 634

Chappell, name of three brothers who played cricket for Australia. Ian (1943-) appeared for South Australia and was a forceful batsman. He captained Australia (1971-75), creating a team of much talent. He played in 75 Test matches, scoring 5,345 runs at an average of 42.42 (1970-81). Greg (1948-) a tall, elegant batsman played for South Australia, Somerset and Queensland. He succeeded his brother as Australia's captain in 1975. He played in 67 Tests (1970-81), scoring 5,719 runs at an average of 54.99. Trevor (1952-) played in 3 Tests, scoring 79 runs.

Char, name of several species of freshwater game fish belonging to the genus *Salvelinus* of the salmon family (Salmonidae). There are various European kinds; North American species include the brook, or speckled, trout and the Dolly Varden. See also p 742

Charadriiformes, varied order of birds, many of which are shore dwellers, that live in most areas of the world. They include gulls, terns and auks, gulls, plovers, curlews, snipe and phalaropes, and the South American jacanas and sheathbills. See also p 73

Charbonneau, Jean (1875-1960) Canadian poet. He wrote imaginative poetry in French which included *Les blessures* (1912), *L'age de sang* (1921), and *Sur la borne pensive* (1952). In his work he moved away from the patriotic themes of earlier French-Canadian verse to follow the French Parnassians' principle of art for art's sake.

Charcoal, porous form of CARBON, made traditionally by heating wood in the absence of air, and used in western Europe until late medieval times for smelting iron ore. Today charcoal is chiefly used for its absorptive properties, to decolorize food liquids such as syrups, and to separate one chemical from another. Artists also used charcoal sticks for sketching.

Charcot, Jean-Martin (1825-93), French physician, known as the "father of neurology". He made classical studies of hypnosis and hysteria and taught Pierre JAMET and Sigmund FREUD. His work centred on discovering how behavioural symptoms of patients related to diseases of the nervous system. See also p 1109

Chardin, Jean-Baptiste Siméon (1699-1779), French painter, a great master of genre and still life. His most choice of subject matter and understated brilliance were overshadowed in that age of BOUCHER and FRAGONARD but his still lifes and his pictures of kitchen maids at work greatly influenced many 19th-century painters, especially MANET. See also pp 1480, 1481

Charge, in law, a formal complaint, information or indictment filed against the accused. It is the basic document of any court case. A judge's instruction to the jury is also known as a charge.

Chargé d'affaires, diplomatic representative who works in an embassy or consulate. The post is of lesser status than that of an AMBASSADOR, who is the personal representative of a sovereign or other head of state. A chargé d'affaires is accredited to the government department that deals with foreign affairs (in Britain the Foreign Office).

Charge, electric, quantity of electricity. The crackle of freshly-laundried nylon and dry hair being brushed are everyday examples of electric charge and discharge. The ancient Greeks also knew the phenomenon, as the crackle of fur rubbed with amber; their word for amber, *elektron*, was adapted for the whole of a branch of physics, electricity. Electric charges are either positive or negative. They can be stored on insulated metal spheres (as in Van de Graaf machines), on insulated plates (as in capacitors and condensers) and in chemical solutions (as in electric batteries). See also pp 792-793, 902-3

Charge of the Light Brigade (25 Oct. 1854), British cavalry charge in the CRIMEAN WAR, one of the most notorious mistakes in British military history. It

stemmed from Lord Lucan's misreading of an ambiguous order by the British commander Lord RAGLAN. As a result Lord Cardigan led the unsupported Light Brigade (at a steady trot rather than a charge) straight at a battery of some 30 Russian guns. More than 600 men took part, and nearly half of them were killed, wounded or captured.

Charing Cross, district within the city of Westminster, London, lying around the mainline railway station of the same name. Although the present stone cross is modern it marks one of the resting-places of the coffin of EDWARD I's queen, ELEANOR, on its journey to Westminster Abbey.

Chariot, light, two- or four-wheeled vehicle drawn by two or more horses harnessed side by side. The body of a chariot was a small floor-space, with a waist-high guard in front and at the sides. Scythes sometimes projected from the wheels. First employed in warfare c.1700 BC by the HITTITES who invaded Egypt, it spread throughout Europe and Asia because it provided a stable and mobile platform for a warrior. By the beginning of the Christian era, its disadvantages on rough ground made it practically obsolete in war, although it was used for racing by the Romans. See also p 470.

Charity Commission, British organization established in 1837 to give administrative and legal advice to the trustees of charities and to investigate possible abuses in such trusts. The Charities Act of 1960 recognized the need to bring the Commission up to date in giving it wider powers and relating its work more closely to that of the welfare services.

Charlemagne (742-814), King of the Franks, (768-814) and Holy Roman Emperor (800-14). The eldest son of PEPIN the Short, he inherited Neustria, the NW half of the Frankish kingdom, in 768 and annexed the remainder on his brother Carloman's death in 771. Responding to Lombard threats against the papacy, he led two armies into Italy and took the Lombard throne in 773. He undertook a long (772-804) and brutal conquest of Saxony which he forcibly converted to Christianity. He also annexed Bavaria in 788 and defeated the Avars of the middle Danube (791-96, 804). After regular campaigns against the Muslims, he had established the Spanish march in N Spain by 811. He was crowned Emperor of the West by Pope Leo II in 800, thus reviving the concept of the Roman Empire, and completing the West's split with the Byzantine Empire. A man of great forcefulness, he initiated the intellectual awakening of the Carolingian Renaissance. He set up a strong central authority and kept control of his lands by means of regular visits by his officials, but the empire lacked sufficient coherence to maintain its unity after his death. See also pp 1286-1287, 1292-1293

Charlemagne Prize, annual award made by the city of Aachen to someone who makes a major contribution to the cause of European unity and co-operation. It was first awarded in 1950, in 1963 Edward HEATH was the recipient.

Charleroi, town in SW Belgium on the River Sambre, 50km (31 miles) S of Brussels. The medieval village of Charinov, it was renamed after Charles II of Spain. A commercial and transport centre, its industries include steel, glass, chemicals and food processing. It is also a centre of coal and iron ore mining. Pop. (1969 est.) 23,900

Charles I (1600-49), King of England, Scotland and Ireland (r.1625-49). Charles was the second son of JAMES I of England and became heir apparent on the death of his brother Henry in 1612. He inherited his father's reluctance on the counsel of the unpopular Buckingham, and was attacked for his marriage in 1625 to the Catholic HENRIETTA MARIA. Charles' unpopular foreign policy and his literal interpretation of the DIVINE RIGHT OF KINGS made him mistrust Parliament, and led him to rule without it for 11 years (1629-40) and to resort to feudal impositions to raise revenue. The attempt of his

minister LAUD to impose High Church liturgy on Scotland led to a rebellion in that country in 1639 which necessitated the recall of Parliament. Charles allowed Parliament to impeach Laud and to execute his chief adviser STRAFFORD in 1641, but he attempted a coup against the Commons in 1642 when he tried to arrest the five leading members of his opposition. The incident was the trigger for English Civil War. Charles took command of the royalist army and made his headquarters in Oxford. Following his defeat at NASEBY in 1645, Charles surrendered and was imprisoned by the parliamentary army which tried to establish a constitutional monarchy. Disputes over its form, and plots by Charles, led in Dec. 1648 to a purge of Parliament of all but those most hostile to Charles; he was tried for treason, although he refused to recognize the court, and he was executed on 30 Jan. 1649. See also pp 1420-1422.

Charles II (1630-85), King of England, Scotland and Ireland (r.1660-85). When his father CHARLES I was defeated in 1646 he fled to France where Thomas HONNOR acted as his tutor. He was crowned King of Scots in 1651, but after the failure of his Scottish uprising in that year he again went into exile in France and Holland. He issued a declaration at BRUXELLES in 1660 that included an indemnity for all those involved in the civil wars, and he was invited to return to the throne the same year. His reign was marked by his attempts to manoeuvre towards a more autocratic monarchy and to introduce greater religious toleration. Initially he relied on the advice of the Earl of CLARENDON; in the late 1670s his harmonious relationship with Parliament broke up as fears arose that he sympathized with Roman Catholicism. Parliamentary opposition reached a peak during the RISH PLOT and Exclusion Crisis of 1679-81, when attempts were made to exclude Charles's brother, the Catholic Duke of York (later JAMES II) from the succession. Charles survived the crisis and in the last years of his reign rooted out much of the opposition in the boroughs. Although Charles had many mistresses, and was known as the Merry Monarch, he had no legitimate children. He was a patron of the arts and incorporated the ROYAL SOCIETY in 1662. See also pp 1426-1428, 1432

Charles, Prince of Wales (1948-) eldest son of ELIZABETH II, heir to the British throne. He was educated at Cambridge University (1967-70) and trained as an air force pilot before becoming a naval officer in 1971. He was invested with the title Prince of Wales in 1969. He married Lady Diana Spencer in 1981.

Charles, name of seven Holy Roman emperors. For Charles I see CHARLEMAGNE. Charles II (823-77), the Bald, became King of the West Franks in 843 and Emperor in 875. He signed the Treaty of VERDUN in 843. Charles III (839-88), the Fat, became Emperor in 881, King of the East Franks in 882 and of the West Franks in 884. Charles IV (1316-78) became King of Bohemia in 1346 and Emperor in 1355. He opposed papal influence in the election of emperors and promoted the independence of BOHEMIA. Charles V (1500-58), the greatest of the Hapsburg kings, was King of Spain 1516-56 and Emperor 1519-56, and also controlled The Netherlands, Sicily and Naples and Spanish America. He was constantly thwarted in his attempts to unify his empire by his rivalry with the VALOIS kings of France, and by the emergence of the REFORMATION in the 1520s. He became leader of the Catholic cause, but after constant opposition within the empire, he abdicated his various thrones in the mid-1550s and retired to the monastery of Yuste in Spain. Charles VI (1685-1740) became Emperor in 1711, and was the last direct Hapsburg emperor. His claim to the Spanish throne was supported by England in the War of the SPANISH SUCCESSION, in which he won The Netherlands. Charles VII (1697-1745) became Emperor in 1742, but his throne was disputed in the War of the AUSTRIAN SUCCESSION.

Charles I (1887-1922), Austrian emperor

(r.1916-18), and King (as Charles IV) of Hungary (r.1916-18), the last Hapsburg ruler. When Hungary and Czechoslovakia declared their independence in 1918, Charles was forced into exile in Switzerland. In 1921 he twice attempted unsuccessfully to regain the Hungarian throne. Charles, name of ten kings of France. For Charles I, see CHARLEMAGNE; for Charles II (the Bald) and III (the Fat), see CHARLES (Holy Roman emperors). Charles III (879-929), known as Charles the Simple (r.893-922), ceded Normandy to the Norsemen in 911 and gained Lorraine. Charles IV (1294-1328), Charles the Fair, succeeded to the throne in 1322, and was the last king of the CAPET family. He won part of Guienne (AQUITAINE) from England in 1327. Charles V (1338-80), who came to the throne in 1364, was called the Wise, and regained much territory lost to the English in the HUNDRED YEARS WAR; he built a strong army and navy, as well as increasing royal control of taxation and patronizing the arts. His son Charles VI (1368-1422), known as Charles the Well-Beloved or Charles the Mad, was under the unpopular influence of his uncle until 1388 and from 1392 suffered from bouts of insanity. Following the invasions of HENRY V of England, Charles was compelled by the Treaty of TROYES (1420) to recognize Henry as his successor. Nevertheless, Charles's son, Charles VII (1403-61), took the title of king on his father's death and ruled S of the Loire. He was prompted to oppose the English by JOAN OF ARC in 1429. He signed the Treaty of ARRAS in 1435 and won PARIS the next year. By 1453 he finally secured the complete withdrawal of English troops from France thus ending the Hundred Years War. Charles VIII (1470-98) came to the throne in 1483. He invaded Italy in 1494 to capture Naples but was driven out of Naples the next year. This expedition was important in introducing the Italian Renaissance to France. Charles IX (1550-74) became king at the age of 10, under the regency of his mother Catherine de' MEDICI. After he fell under the influence of the HUGUENOT leader COLIGNY in 1571, Catherine forced Charles to instigate the MASSACRE OF ST. BARTHOLOMEW in 1572. Charles X (1757-1836) fled France in 1789, went into the Austrian Netherlands, Turin, Prussia and Russia, and finally went into exile in England until 1814. After the assassination of Louis XVIII in 1824 Charles succeeded to the throne. In 1830 he abolished the liberal chamber of deputies and restricted press freedom. He was forced to abdicate in the ensuing JULY REVOLUTION.

Charles, name of three kings of Naples. Charles I (1226-85) was made King of Naples and Sicily by the pope in 1246 in return for political support. The SICILIAN VESPERS rebellion of 1282 was supported by the ARAGON king who captured his son Charles II (1254-1309) shortly before his father's death. After his release, Charles restored peace to Sicily in 1302. Charles III (1345-86) became King of Naples in 1381 and Hungary in 1385.

Charles I (Carlos) (1889-1908), King of Portugal (1889-1908). Unable to compete with British and German expansion in Africa, Charles was criticized at home for his weak attitude to the Portuguese empire. After a revolt in 1906, he ruled arbitrarily. In another subsequent revolt Charles and the heir apparent were both assassinated.

Charles, name of four kings of Spain. For Charles I, see CHARLES V, Holy Roman Emperor. Charles II (1661-1700), the last Spanish Hapsburg, came to the throne in 1665 and was mentally incompetent. His death led to the War of the SPANISH SUCCESSION. Charles III (1716-88) inherited the Spanish throne in 1759. He won Louisiana from the French in 1763, and was considered one of Europe's great "enlightened despots". Charles IV (1748-1819), his son, succeeded him. By an alliance with France in 1796 Spain became involved in war with England. Occupation by French troops in 1808 was met by a popular Spanish uprising and Charles was forced to abdicate. He spent

the rest of his life in exile. See also pp. 1459, 1553.

Charles, name of 16 kings of Sweden, the first six of whom may be legendary. The first of whom it is possible to speak with confidence was Charles VII (c. 1161-67), who was murdered by Erik Jedvardson, a rival for the throne. Charles VIII reigned with two short intervals from 1448 to 1470. In 1449-50 he was also King of Norway. Charles IX (r. 1604-11) restored the Protestant faith to Sweden while ruling as regent before his accession. He began the long war with Poland in 1600 and the war with Denmark in 1611. Charles X Gustav (r. 1654-60) became king on the abdication of his cousin Christina. He invaded and conquered Poland in 1655-56 and won back lands of southern Sweden from Denmark by the Treaty of Roskilde (1658). His son, Charles XI (r. 1660-97), greatly increased the power of the monarchy and centralized the Swedish nation state. He expanded the navy and the army, forced the nobility to surrender lands to the crown, and in 1693 was granted near-absolute power. Charles XII (r. 1697-1718) was called the "Alexander of the North" and the "Madman of the North". He spent much of his reign at war against Russia, Denmark and Poland. He was killed in the invasion of Norway at the siege of Fredrikshald. Charles XIII (r. 1809-18) presided over the union of Sweden and Norway in 1814. In 1809 he was forced to give up Finland and the Åland Islands to Russia. Charles XIV John (r. 1818-44), French-born, served in the army during the French revolution and in Napoleon's diplomatic service. Charles XV (r. 1859-72) granted the country a two-chamber parliament and did much to reform the legal system. See also CARL XVI GUSTAF.

Charles, five dukes of Lorraine. Charles I (953-c.992) disputed with Hugh Capet for the French throne. Charles II (1365-1431) united Bar and Lorraine. Charles III (1543-1608), who became duke in 1545, took the Catholic side in the French Wars of Religion. His war (1592-94) with Henry IV ended after Henry's conversion to Catholicism. Charles IV (1604-75) succeeded to the duchy in 1624. He lost and regained the duchy several times during the thirty years war and was finally removed by Louis XIV in 1670. Charles V (1643-90) was also refused the duchy in 1675 by Louis. He fought for the Holy Roman Emperor and the Dutch against France, but failed to regain Lorraine.

Charles, Bob (1936-), New Zealand professional golfer. One of the finest left-handers in the world, he has won the British Open (1963) and Canadian Open (1968) championships and many other titles.

Charles, Jacques (1746-1823), French physicist, inventor and mathematician who was the first to use a hydrogen balloon. He discovered the law relating the expansion of a gas to its temperature rise. GAY-LUSSAC published Charles's work 15 years later and the law is known both as CHARLES'S LAW and as GAY-LUSSAC'S LAW.

Charles, John (1930-), Welsh footballer known as "the gentle giant". A world-class centre-forward or centre-half, he was at 18 Wales's youngest international. He was with Leeds United until 1957, when he went to Juventus (Turin, Italy) to win fame and honours. He also played for Roma and Cardiff City.

Charles, Ray (1932-), US singer and pianist, full name Ray Charles Robinson. Blind since the age of six, he played and sang with various bands until his first hit recording *I Got a Woman* (1955), which launched him to stardom. He has recorded many albums.

Charles, Thomas (1755-1814), Welsh churchman and educator. He was ordained to the Anglican priesthood in 1780 but became a Methodist in 1784. In 1785 he established the first of many Welsh language schools. In 1806 he published the first Welsh bible and his biblical dictionary appeared between 1805 and 1811, with his Welsh catechism.

Charles Albert (1798-1849), King of

Sardinia-Piedmont (1831-49). He was a liberal reformist, opposed Austria and sought Italian liberation, but after defeat in a war against Austria (1848-49), he abdicated in favour of his son, VICTOR EMANUEL II, and went to Portugal in exile. See also p. 1586.

Charles Augustus (1757-1828), Duke of Saxe-Weimar-Eisenach (1775-1828). He fought against Napoleon I and was an important member of the Congress of Vienna. He was the patron of SCHILLER and GOETHE.

Charles Edward Stuart. See STUART, CHARLES EDWARD.

Charles Emmanuel IV (1751-1819), King of Sardinia-Piedmont (r. 1796-1802). Forced to cede his mainland possessions to France (1798), he abdicated in favour of his brother, VICTOR EMANUEL I.

Charles Emmanuel I (1562-1630), who became duke in 1580, constantly varied his allegiance between France and Spain in an attempt to capture Geneva and Saluzzo, but had little success. Charles Emmanuel II (1634-75) became duke at the age of four. His mother, a sister of the French king, acted as regent, and throughout his reign Savoy was closely tied to French policy. Charles Emmanuel III (1701-73) also became King of Sardinia in 1730. He sided with France and Spain in the War of the Polish Succession and against Spain in the War of the Austrian Succession.

Charles' law, in physics, states that the volume of a gas at constant pressure is directly proportional to its temperature. This phenomenon was discovered by the French scientist Jacques Charles about 1787. The law is a special case of the IDEAL GAS LAW. See also pp. 836-837.

Charles Martel (c. 688-741), Frankish ruler, grandfather of CHARLEMAGNE. Upon the death of his father in 714, he seized control of the Frankish kingdoms of Austrasia and Neustria. He later conquered Burgundy, Aquitaine and Provence and subjugated many German tribes of the Rhine. In 732 at Poitiers he halted the advance of the Muslims from Spain. See also p. 1286.

Charles the Bold (1433-77), last reigning Duke of Burgundy (r. 1467-77). He was allied with England by marriage and was ruler of the Low Countries, Luxembourg, Burgundy and Franche-Comté. He seized Nancy in 1475, and subsequently attacked the Swiss, who killed him in 1477. Burgundy's resistance to France ended with his death.

Charleston, capital of West Virginia, USA, on the Kanawha River. The city grew around Fort Lee (1788), home of Daniel Boone. It is an important trade and transport centre for the highly industrialized Kanawha Valley. Industries: chemicals, glass, metallurgy, timber, oil, coal. Pop. (1970) 71,505.

Charleston, port in SE South Carolina, USA. Founded in 1680 by William Sayle, it soon became and remained the major seaport of the state and a leading centre of wealth and culture in the state. The South Carolina Ordinance of Secession was signed there in 1860 and the firing on Fort Sumter was the first engagement of the AMERICAN CIVIL WAR. It has many fine colonial buildings and the Fort Sumter National Monument. Industries: paper, textiles, chemicals, steel. Pop. (1970) 66,945.

Charleston, popular dance of the 1920s. Originated in the USA by southern Blacks around the turn of the 20th century, it was used in music hall and musical shows. It was a precursor of the jitterbug.

Charles Town, town in NE West Virginia, USA. John Brown was executed there in 1859. The chief industry is limestone quarrying. Pop. (1970) 3,023.

Charlevoix, Pierre François Xavier de (1682-1761), Canadian historian and explorer, b. France. He canoeed up the St Lawrence River in 1720 to the Great Lakes, and eventually reached New Orleans.

Charley's Aunt (1892), three-act farce by Brandon Thomas. After its London première (1892) it ran for a record 1,466

performances. It is frequently revived. **Charlock**, yellow-flowered, troublesome weed of the MUSTARD family common in Europe. Species *Sinapis arvensis*.

Charlotte, largest city in North Carolina, USA. It has two universities and three colleges, and was the birthplace of President James K. Polk. It is the distribution centre for the Carolina manufacturing belt. Industries: mechanical engineering, chemicals, textiles, food processing. Pop. (1970) 241,178.

Charlotte Amalie, port and capital of the Virgin Islands of the USA, on St Thomas Island. It was a Danish colonial centre, reflected in its architecture, and an important trading centre in the American Civil War. Pop. (1970) 12,372.

Charlottetown, capital and port of Prince Edward Island, Canada. Founded by the French in 1720, it has the University of Prince Edward Island (1969). Industries: food processing, fishing, tourism. Pop. (1970) 24,100.

Charlton, Robert ("Bobby") (1937-), British footballer who played for Manchester United and England. He won 106 caps between 1957 and 1970.

Charwood Forest, upland region in NW Leicestershire, England. The area is largely barren, with patches of woodland and bracken. In the past it has been extensively quarried for roadstone. The highest point is Barden Hill, which rises to 278m (912ft).

Charolais, creamy white breed of BEAF CATTLE, originally developed in France. The breed's great size and the speed with which the calves develop has made it popular for cross-breeding purposes. See also pp. 724, 725.

Charon, in Greek mythology, boatman of the Lower World who ferried the souls of the dead across the River STYX to HADES. The fare was a bronze coin called an obolus, which was placed under the corpse's tongue during the burial service. **Charpentier, Gustave** (1860-1956), French composer. He was taught by Jules MASSENET and his best-known compositions are the opera *Louise* (1900) and *Impressions Fausse* (1895).

Charrois, Pierre (1541-1603), French philosopher. His principal book, *De la sagesse*, was published in 1601. In this three-volume work inspired by MONTAIGNE, whom he met in 1589, he contrasted inadequate rational knowledge with true knowledge acquired by divine revelation.

Charter, document which grants specified rights to an individual or a corporation. The term implies the existence of a sovereign power which surrenders its sovereignty in a specific area. Medieval kings, for example, often gave a town a charter which freed it from some feudal dues and gave its citizens certain rights. MAGNA CARTA is one of the best-known charters. See also p. 1126.

Chartier, Alain (c. 1390-1440), French poet, prose-writer and diplomat. His prose work *Le Quadrilogue invectif* (1422) was an analysis of the social and political climate of his day, but he is best known for his ballades and rondeaux. *La Belle Dame sans merci* (1424) was widely influential.

Chartism, British working-class movement 1838-48. Combining the discontent of the industrial workers in a period of depression with the demands of radical artisans, the movement was united under the People's Charter, drawn up in 1838 by William Lovett, which demanded electoral reform including universal male suffrage. As well as local riots and strikes, the Chartists organized three mass petitions (1839, 1842, 1848), but after a period of national organization led by the Irishman Feargus O'Connor, the movement became quiescent until 1848 when it briefly revived in the wake of the European revolutions of that year. See also pp. 1571, 1640.

Chartres, town in NW France, on the Eure River, 80km (50 miles) SW of Paris, capital of Eure-et-Loir département. An 11th-century, wooden-roofed Basilica stood on the site now occupied by the 12th-13th century Gothic Cathedral of Notre Dame,

whose stained glass and sculptures make it one of Europe's finest cathedrals. Industries: brewing, leather, agricultural equipment, radio and television parts. Pop. 34,000. See pp. 1332, 1334.

Chartreuse, La Grande, mother house of the CARthusian ORDER, situated in the Dauphine Alps in SE France. The present monastery on the site dates from the 17th century and has housed Carthusian monks since then, except for an interval of 38 years between 1903 and 1941. Chartreuse liqueur originated there.

Charybdis, in Greek mythology, a female monster in the Straits of Messina who lay opposite SCYLLA. Daughter of POSEIDON and GAIA, Charybdis had stolen HERCULES' cattle, for which ZEUS hurled her into the sea. She created a whirlpool which swallowed up many ships, but both JASON and ODYSSEUS escaped.

Chase, Stuart (1888-), US economist. He was investigator for the Federal Trade Commission (1917-22) and consultant to the Labor Bureau (1922-39). He founded the Consumers' Union and wrote *Tragedy of Waste* (1925), *Your Money's Worth* (1927), *A New Deal* (1932) and *Rich Land Poor Land* (1936).

Chasing, in metalwork technique used to define forms of design and to heighten relief. The design is traced onto the surface and adjacent areas are hammered from the front with punches of varying shapes. Flat chasing, with small blunt tools, was popular in 18th-century European silverwork, producing low-relief ornamentation.

Chasuble, outermost vestment worn by Christian clergy in celebrating the EUCHARIST. It is used universally in the Roman Catholic Churches and widely by High Church Anglican priests and in the Lutheran Churches of Scandinavia. Its equivalent in the Eastern Orthodox Church is the phelonion.

Chat, any of several birds of the WARBLER group, including the North American yellow-breasted chat (*Icteria virens*) known for its mimicking ability, and the red-breasted chat (*Granatellus venustus*) of Central America.

Château, fortified residence that was the French equivalent of the English castle in medieval times. In the 15th century changes in methods of warfare and in the feudal system made the heavily fortified château obsolete. Lightly fortified, luxurious country houses, such as Amboise, Blois, Chambord and Chenonceaux, mark the transition between medieval fortress and country mansion.

Chateaubriand, François-René Vicomte de (1768-1848), French writer and diplomat whose works contributed to the growth of French ROMANTICISM. *The Genius of Christianity* (1802) was a reaction to ENLIGHTENMENT attacks on Catholicism and established his literary reputation. *Atala* (1801) and *René* (1805) are tragic love stories set in the American wilderness where he had travelled before the Revolution broke out and he had returned to France to fight with the émigré army. He lived in England between 1793 and 1800. After 1803 he held important diplomatic posts for both Napoleon and the Bourbons and was minister of foreign affairs (1823-24). In 1830 he resigned from politics and spent his last years with Mme de Staël working on his *Mémoires* from *Beyond the Grave*, which were published in 1849-50.

Château Galliard, 12th-century French ruin on a rock above the River Seine at Les Andelys, 32km (20 miles) SE of Rouen. It was built in 1196-98 by RICHARD I of England to defend Rouen and his Norman territories from French attack.

Châteauguy, Battle of (1813), engagement in the war of 1812, in which 4,000 US soldiers under Gen. Wade Hampton unsuccessfully attacked 1,600 Canadian Indian troops under Lieut.-Col. Charles de Salaberry who were defending the approaches to Montreal.

Chateauperron Culture, the first of the Upper Paleolithic cultures, flourishing in Chateauperron in the Périgord region of central France in about 35,000 BC. Responsible for the earliest known blade

Chatham, William Pitt, 1st Earl of

culture, its people produced knives made of flint blades with one straight razor-like edge, arrows, javelin points and scrapers.

Chatham, William Pitt, 1st Earl of (1708–78), English statesman also known as William Pitt the Elder. He became known in Parliament after 1735 for his speeches advocating that England should concentrate on commerce and colonial development. He became secretary of state in 1756 following a crisis in the seven years war, and the next year headed a coalition with the Duke of Newcastle. He subsidized Frederick the Great, expanded the navy and continually harassed the French. His main effort was devoted to the successful capture of much of India and Canada. He resigned in 1761 when George III refused to declare war on Spain, and opposed the Treaty of Paris as inadequate. He denounced the prosecution of Wilkes in 1763 and attacked the Stamp Act in 1765. He was created Earl of Chatham in 1766 and nominally headed a ministry in 1766–68, but it was weak and divided, partly on account of his physical and mental illnesses. He retired from active politics in 1768 but continued to argue for any peace settlement with the American colonies short of granting independence. See also p.1544.

Chattanooga, city in SE Tennessee, on the Tennessee River. It was an important strategic centre in the American Civil War. The Battle of Chattanooga (Nov. 1863) was an important Union victory for the troops of Sherman. Since 1935 it has been the headquarters of the Tennessee Valley Authority Industries: iron and steel, food processing, synthetic fibres, tourism. Pop. (1970) 119,082. See also p.1629.

Chatterji, Benkim Chandra (1838–94), Indian author who created an Indian school of prose-writing on the European model. He wrote several popular novels and in 1872 began a newspaper advocating Hindu nationalism, for which he is considered a leading spokesman.

Chatterton, Thomas (1752–70), English poet and forger of antiquities. He wrote comic operas and poems such as *Bristow Tragedy* and *Mystic Song*, supposedly composed by Thomas Rowley an imaginary 15th-century monk. See also p.148.

Chaucer, Geoffrey (1345–1400), the greatest English medieval poet. He was the son of a wine merchant and served at court and on diplomatic missions before being appointed controller of customs in London (1374–86). His writings are remarkable for their range, narrative sense, power of characterization and humour. They include *The Book of the Duchess*, (1369), *The House of Fame*, (c.1375), *The Parliament of Fowls*, (c.1385), *Troilus and Criseyde*, (c.1385) and *The Canterbury Tales* (c.1385–1400). See also pp.1348–1349.

Choudhury, Niral Chandra (1897–), Indian author, editor and journalist. His work includes *The Autobiography of an Unknown Indian* (1951), *A Passage to England* (1959), which was written after a visit to England in 1955, and *Continents of Fire* (1963).

Chaudière, river in S Quebec, Canada. It rises in Lac Mégantic and flows N to the St Lawrence River, opposite Quebec. There is a hydroelectric power plant at Chaudière Falls. Length: 193km (120 miles).

Chaubmooga, Asian tree of the genus *Hydnocarpus* whose seeds contain chaubmooga oil. For centuries the oil was the only treatment for leprosy, but it has now been superseded by dithionodiphenylsulphone drugs.

Chausson, Ernest Amédée (1855–99), French composer whose orchestral, chamber, and operatic works combined elements of romanticism and impressionism. His best-known works are *Poème* (1896) for violin and orchestra and *Symphony in B flat* (c.1890).

Chauvinism, term first used to describe intense admiration for Napoleon I, after Nicolas Chauvin, a soldier in Napoleon's armies. The term was soon applied to any exclusive and exaggerated nationalist sentiments, in the 1960s was used to

describe men unsympathetic to the idea of female equality.

Chavez, Carlos (1899–), Mexican composer and conductor. He used elements of Mexican Indian music in works such as *Sinfonia Indica* (1936) and *Xochipilli Macuilxochitl* (1940), and later works include his Sixth Symphony (1964) and *Invenio* (1965) for string trio. **Chavin**, one of the earliest prehistoric culture periods in Peru, lasting from c.1000 to c.200 BC. Named after the Chavin de Huántar in Peru, the people of the culture developed excellent stone sculpture, the earliest goldwork yet found in the Americas and some ceramics that, whether judged by technological or aesthetic standards, were remarkable. See also pp.1178–1179.

Chayefsky, Paddy (1923–), US writer active in the theatre, television and films. He received Oscars for his screenplays for *Marty* (1955), *The Hospital* (1971) and *Network* (1976).

Chesapeake, street running from St Paul's Cathedral to Poultry in the City of London, England. In the 13th century it was the site of a "cheap", a permanent fair and market.

Checkers. See **draughts**.

Cheddar, village in Somerset, SW England. It is located in a dairy farming region and is noted for its cheese, a type now also produced in many other places. The nearby Cheddar Gorge is a popular tourist attraction. Pop. 3,000.

Cheese, food made by curdling milk and then processing the curd. Generally cows' milk is used, although cheese can also be made from the milk of goats, sheep and even yaks. Blue cheeses such as Stilton and Gorgonzola are made by piercing the curd with needles, which allows air to react with a fungus previously introduced, this produces the blue veins, odour and tangy taste. Roquefort and Camembert are made using the spores of *Penicillium* species of fungus. See also pp.723–727.

Cheetah, or hunting leopard, spotted large cat found in hot, arid areas of Africa, the Middle East and India. A long-legged animal with blunt, non-retractable claws, it has a tawny brown coat with round black spots. Capable of running at more than 95km/h (60mph), it hunts gazelles and antelopes by sight. Length: body 140–150cm (55–59in); tail 75–80cm (29.6–31.5in); weight 60kg (132lb). Family Felidae; subfamily Acinonychinae; species *Acinonyx jubatus*. See also pp.98, 318–319.

Chelomancy. See **palmyrism**.

Cheka, early secret police of Soviet Russia. Formed in 1917, soon after the Bolshevik take-over, it had a wide-ranging role during the next four years of civil war. The ferocious reign of terror implemented by its director, F.E. Dzerzhinsky, alienated many local Bolshevik organizations, however, and it was disbanded in 1922, to be replaced by the GPU. See also p.1677.

Chelke, Sir John (1514–57), English classicist and professor of Greek at Cambridge. Tutor to Edward VI and secretary to Lady Jane Grey, he was imprisoned by Mary I.

Chekhov, Anton Pavlovich (1860–1904), Russian dramatist who worked closely with Konstantin Stanislavsky at the Moscow Art Theatre and whose chief works, *The Seagull* (1896), *Uncle Vanya* (1897), *The Three Sisters* (1901) and *The Cherry Orchard* (1903), display a deep understanding of human nature and a fine blend of the comic and the tragic. Detailed and realistic portraits of provincial life, their main action invariably takes place off-stage and their characters reveal as much by what they leave unsaid as by the subtleties of their dialogue. See also pp.1577, 1577.

Chengkong (Zhejiang), province in E China, on the E China Sea including the Chusan archipelago, capital is Hangzhou (Hangzhou). It was the royal capital under the Southern Sung dynasty in the 12th and 13th centuries. Agriculture is important in the N plain region where cotton, wheat and hemp are produced. Industries: fish-

ing, cotton textiles, rice, tea and silk. Area: 101,830sq km (39,300sq miles). Pop. approx. 31 million.

Chelation, chemical reaction in which a certain type of organic compound, termed a chelating agent, combines with a metal ion by forming co-ordinate bonds with two or more atoms of the organic compound. Tartaric acid (CH(OH)COOH)₂ and ethylenediamine (CH₂NH₂)₂ are chelating agents. See also p.897.

Chellean, name formerly given to the early stone age industry characterized by crude hand-axes, originally found near Chelles, France, but now more usually known as **Acheulean**. Today the term more commonly refers to the genus of man whose complete skull was found in Olduvai Gorge, Tanzania, by Louis Leakey in 1960. He classified it as belonging to *Homo erectus* and dated it as being slightly more than half a million years old. The find seems to suggest Chellean Man was a direct ancestor of *Australopithecus*. See also pp.112–114, 112–114, 119.

Chelon, town in a Poland from where the town was declared a republic in 1944 and the site of two WWII German extermination camps where between 100,000 and 300,000 were killed. Industries: smelting, brewing. Pop. (1974 est.) 44,000.

Chelmsford, Frederick John Napier Thesiger, 1st Viscount (1868–1933), British colonial administrator who helped to prepare the Montagu-Chelmsford Report (1918) which advocated a measure of self-rule for India.

Chelmsford, county town of Essex, SE England, 48km (30 miles) NE of London. A market town for the surrounding agricultural area and a dormitory town for people who work in London, its industries include electronics, electrical and farm machinery. Pop. (1971 est.) 58,300.

Chelonis, order of reptiles that includes tortoises and turtles. This ancient group has flourished since the Triassic period, more than 200 million years ago and before the dinosaurs. All chelonis live inside large shells, those of most tortoises being calcareous whereas those of turtles are mainly leathery. Turtles, including the small terrapins, have webbed feet or flippers. See also pp.66–70.

Chelsea Pensioners, old soldiers who live in the Royal Hospital, Chelsea, which was founded in 1682 by Charles II and designed by Sir Christopher Wren. To qualify for residency single men must hold either a long service or disability army pension. Easily recognized by their scarlet uniforms, there are about 500 Chelsea Pensioners.

Cheltenham, soft-paste porcelain produced at the Chelsea factory, London, between about 1745 and 1770, after which the firm transferred to Derby. The earliest examples were primarily utilitarian pieces such as cups and teapots. From 1750, the *maison* and *seigneur* influence was felt. Other items were "Chelsea toys", small bottles and boxes.

Chemical balance, apparatus for making accurate weighings, often to within a tenth of a milligramme (0.0001g). Early types of chemical balances were merely finely made beam balances. As the importance of accuracy increased, designers had to introduce some form of damping to shorten the time the balance took to oscillate to a stop when it was nearly counterpoised. Often this takes the form of air-damping, in which air is compressed between a "piston" and a surrounding cylinder to slow the balance. The latest types of single-beam balances are fully automatic. See also pp.451, 904.

Chemical bonds, several mechanisms that hold together atoms to form molecules. There are several types which arise either from the attraction of unlike charges or by forming stable configurations through electron-sharing. The number of bonds an atom can form depends upon its valency. The main types are ionic, covalent, metallic and hydrogen bonds. See also pp.891–893, 910–911.

Chemical engineering, the application of engineering principles to the making of

chemical products on an industrial scale. Unit processes of chemical engineering include oxidation and reduction, nitration and sulphonation, electrolysis, polymerization, ion exchange and fermentation. See also pp.440–441, 578–586.

Chemical equation, set of symbols used to represent a chemical reaction. Equations show how atoms are rearranged as a result of a reaction: eg $2H_2 + O_2 \rightarrow 2H_2O$ represents the formation of water from hydrogen and oxygen. An arrow (\rightarrow) shows the direction of a reaction, (\rightleftharpoons) is a reversible reaction and (\uparrow) represents the liberation of a gas. See also pp.892–893.

Chemical equilibrium, condition of balance in a reversible reaction, when two opposing reactions proceed at constant equal rates with no net change in the system. The initial rate of the reactions falls off as the concentrations of reactants decrease and the build-up of products causes the rate of the reverse reaction to increase. See also p.838.

Chemical kinetics, branch of chemistry concerned with the measurement and study of reaction rates and their dependence on factors such as concentration, temperature and pressure.

Chemical reaction, any change or process in which one or more chemical substances are converted into other substances. Reactions involve the breaking and formation of chemical bonds. There are several kinds of reaction mechanism of which endothermic, exothermic, replacement, combination, decomposition and oxidation reactions are examples. **Chemical stabilizer**, compound added during manufacturing processes to prevent chemical reactions that would otherwise interfere with the desired end product. The term is most often employed in the plastics and rubber industries. See also pp.54–55.

Chemical symbols, symbols standing for chemical elements, consisting of the capital letters of their English or Latin names, eg H for hydrogen, K for potassium (*kali*), or a capital letter with a small letter, eg Cl for chlorine. Small superscripts denote either an ion, eg Na⁺ (the sodium ion) or the atomic weight, eg He⁴. Symbols may be combined to give the chemical formulas of molecules, with small subscripts indicating the number of atoms involved; for example, H₂O is the formula for water (whose molecules each contain two hydrogen atoms combined with one oxygen atom). The system was devised in part in 1813 by J.J. Berzelius. See also pp.888–891.

Chemical warfare, employment of chemical weapons such as poison and nerve gases, defoliants and herbicides, over large areas. The term can also be extended to include smoke bombs, incendiaries and flame-throwers, which were first used in the 5th century BC. See also pp.574–575.

Chemin de Fer, card game, version of *Backgammon* that differs from the original game in that the bank moves from player to player in rotation.

Chemistry, branch of physical science concerned with the properties, structure and composition of substances and their reactions with one another. Today it is a vast body of knowledge with a number of subdivisions. The major division is between inorganic and organic chemistry. **Physical chemistry** deals with the physical properties of substances such as their magnetic behaviour. Its subdivisions include electrochemistry, thermodynamics and chemical kinetics. See also pp.886–891.

Chemistry, colour. See **colour chemistry**. **Chemistry, inorganic**, the science that deals with the preparation, properties and reactions of all the chemical elements and their compounds except those of carbon. This definition needs the minor proviso that such simple carbon compounds as carbonates, carbides and carbon oxides come within the province of inorganic chemistry. The historic separation from organic chemistry is, in any case, a false one, because many "inorganic" com-

pounds are found in living organisms, one example being the common salt (NaCl) in human blood. In education and industry, however, the distinction is frequently still made. See also pp.886-905

Chemistry, organic, the science of the reactions of carbon compounds. Because of its unique ability to bond repeatedly with itself to form chains and rings of atoms (silicon is the only other element that has this property to any degree), carbon is able to form compounds of extreme complexity. For this reason it is predominantly the element of life, forming the "backbone" structures of such compounds as proteins, fats and carbohydrates. Organic chemistry also deals with an immense variety of smaller molecules, including those of industrial compounds such as plastics, rubbers, dyes, drugs and solvents. See also pp.580-581, 584-585, 588-589, 886-887, 906-910, 1092-1093

Chemnitz. See KARL-MARK-STADT
Chemotherapy, treatment of a disease by drugs that kill or impair disease-producing organisms in the body without damaging the patient. The concept of specific drug treatment was first introduced in the early 1900s by German bacteriologist Paul EHRLICH. See also p.1092

Chemulpo. See MCHON
Chengdu (Chengtu), city in sw China, on the River Min, 274km (170 miles) nw of Chungking (Chongqing); capital of Sweshwan (Sichuan) province. It was the capital of the Shu Han dynasty in the 3rd century AD. Today it is an agricultural trading centre and has iron-mining, food processing, machinery and chemical industries. Pop: 2,000,000

Chengtu. See CHENODU
Chénier, André Marie de (1762-94), French-born French poet. He was secretary to the French ambassador in London (1787-90) but returned to Paris and was guillotined for his anti-Jacobin attitudes. His work, which included *Bucoliques*, showed a love of ancient Greece and influenced the NEO-CLASSICISTS. Nearly all his work was published posthumously between 1795 and 1819

Chennault, Claire Lee (1890-1958), US general. He served in WWI, then trained pilots until his retirement in 1937. He was adviser to CHIANG KAI-SHEK in 1937 and formed the Flying Tigers, a volunteer air corps set up to aid the Nationalist forces. He was made major-general in 1943

Chenopod, any plant of the goosefoot family, including many weeds (such as *Chenopodium*) and a number of useful plants such as beet, spinach and quinoa.
Ch'en Yi (1901-72), Chinese communist general and administrator. He joined the Communist Party in the 1920s, rising to command the New Fourth Army. A close associate of Chou En-lai, he was mayor of Shanghai (1949-58) and subsequently Foreign Minister until 1966

Cheops, or Khufu, ancient king of Egypt (c.2600 BC) who is remembered for his tomb, the Great Pyramid at Giza, near Cairo. The largest and most famous of the pyramids, it is about 146m (480ft) high and 236.2m (776ft) square. It is made up of 2.3 million limestone blocks each weighing 2.5 tonnes, and all fitted together with astonishing precision. The pyramid was one of the SEVEN WONDERS OF THE WORLD. See also p.1167

Cheque, authorization to a bank from one of its depositors to pay or transfer money from his account to another named person or another bank account; it is a form of BILL OF EXCHANGE. Often (although not necessarily) written on a standard form, a cheque must bear the date and the drawer's signature, it is not valid until that date but may be drawn upon up to six months afterwards. If it is "crossed" with two parallel lines and marked "Co." it is not negotiable, ie it can be paid only into the account named on the cheque. See also BANKING, pp.1860-1861

Chequers, Tudor mansion and estate near Wendover, Buckinghamshire, in s central England. It has been the official country residence of British prime ministers since 1921, when it was donated to the nation by Viscount Lee of Fareham

Cheret, Jules (1836-1932), French painter and lithographer. He was a master of POSTER art and introduced colour LITHOGRAPHY into France in the 1860s

Chéri (1920), novel by COLLETTE, which describes a love-affair between an older woman and a beautiful but selfish young man, Chéri. It is notable for its refined sensuality and delicate descriptions of changing moods. A sequel, *La Fin de Chéri*, was published in 1926

Cherimoya, tree and its fruit native to Central and South America and cultivated in California. The tree grows up to 9m (30ft) tall and produces yellow flowers. Its large, pale-green fruit contains a few black seeds in a delicious white pulp. Species *Annona cherimola*. See also p.691

Cherkassky, Shura (1911-), Russian-born pianist, who emigrated to the USA in 1922. He is a regular performer at the Salzburg festival

Chernov, Viktor (1876-1952), Russian revolutionary, one of the founders of the Socialist Revolutionary Party. In 1917 he was minister of agriculture in the KRAMSKY government and briefly headed the constitutional assembly of 1918. He was an anti-Bolshevik and tried to establish a moderate government in the city of Samara (now Kuibyshev). He went into exile in 1920. See also pp.1676-1677

Chernozem, humus-rich type of dark soil typical of the grasslands of the steppes of Eurasia and the prairies of North America. See pp.660-661

Cherokee, largest tribe of Indians in the SE USA, members of the great Iroquoian language family. They migrated south into the Appalachian region of Tennessee, Georgia and the Carolinas. The Cherokee sided with the British during the American War of Independence. When gold was discovered on their land in Georgia in the 1830s, they were forced to move west over the tragic Trail of Tears (1838) further reducing their population by one quarter. Today some 47,000 Cherokee descendants live in Oklahoma and about 3,000 remain in North Carolina

Cherry, widely-grown fruit tree of temperate regions, probably native to W Asia and Europe. Various types of cherry trees are grown for their edible fruit - round yellow, red or almost black with a single round stone. Sweet cherries are eaten fresh, and all varieties can be canned or frozen. Cherry wood is used in making furniture. Height to 30m (100ft). Family Rosaceae, genus *Prunus*; there are about 50 species. See also p.688

Cherry laurel, any of several evergreen shrubs native to SE Europe and grown ornamentally in various parts of the world. They have glossy leaves and white flowers. Height to 5.4m (18ft). Family Rosaceae; species *Prunus laurocerasus*

Cherry Orchard, *The* (1904), four-act drama, last and best-known play by Anton CHAIKOV. A bankrupt family, symbol of decaying tsarist society, fails to save its estate as their cherry orchard is cleared for commercial housing by the new owner, Lopakhin, enterprising son of a serf

Chert, impure, brittle type of flint. A cryptocrystalline variety of SILICA, its colour can be white, yellow, grey or brown. It occurs mainly in limestone and DOLOMITE although its origin is unknown

Cherubini, Maria Luigi Carlo Zenobio Salvatore (1760-1842), Italian composer, living in Paris from 1788 and director of the Conservatoire from 1822. He was a master of COUNTERPOINT and a prolific writer of OPERA, notably *Medée* (1797), and church music

Chervil, annual herb of the PARSLEY family, native to Eurasia; it is cultivated for its aromatic leaves which are used for food flavouring. Height to 61cm (24in). Family Umbelliferae, species *Anthriscus cerefolium*. See also pp.708, 709

Cherwell, river in central England. It rises in Northamptonshire and flows s through Oxfordshire to join the Thames at Oxford. Length: 48km (30 miles)

Chesapeake Bay, inlet of the Atlantic Ocean in Virginia (S) and Maryland (N), USA, at the mouth of the Susquehanna River, it is linked to the Delaware River by the Chesapeake and Delaware Canal

The first permanent English settlement in what was later to be the USA was on Chesapeake Bay, at Jamestown, Virginia, in 1607. In 1608 John Smith explored and charted the bay. Length: 311km (193 miles), width: 5-40km (3-25 miles)

Chesapeake Bay retriever, US sporting dog. Its colour ranges from dark brown to light tan. Its webbed feet and oily coat make it an excellent retriever in icy water. It was bred to retrieve ducks. Height: to 61cm (2ft); weight: to 29kg (65lb)

Cheshire, county in NW England, bounded by Wales (W) and Greater Manchester and Merseyside (N); drained by the Mersey, Weaver and Dee rivers. Chester is the county town. It is an important dairy farming and industrial region, being particularly noted for its cheese. Other industries include salt mining, chemicals, textiles, railway machinery and oil refining. Area: 2,629sq km (1,015sq miles). Pop (1971) 1,542,624

Cheshire Archers, royal bodyguard in England from at least the reign of EDWARD III. At the end of the 14th century, when in RICHARD II's army of retainers, they adopted his badge of the white hart

Chess Bank, shingle bank extending 14km (9 miles) along the coast of Dorset, S England, from Abbotsbury to Portland, separated from the mainland by the Fleet inlet. It is a prime example of a srr.

Chessant, Charles Waddell (1858-1932), US lawyer and writer. He had an active law career and also wrote many stories and novels about Black culture. These included *The Confused Woman* (1899) and *The Colonel's Dream* (1905)

Chess, universal board game, analogous to war, played on a 64-square chequered board, two-players starting with 16 pieces each, white or black, set out along the back two ranks. With the black corner square to his left, white's pieces are set out: rook, knight, bishop, queen, king, bishop, knight, rook. Black's pieces align directly opposite. Pawns stand on the 2nd rank. White enjoys first move, then players move alternately on the rank (horizontal), file (vertical), or diagonal according to their pieces: rooks in a straight line on rank or file, bishops along a diagonal, queen on file, rank, or diagonal, knight 1 square along rank or file plus 1 diagonal from its point of origin, king 1 square. A pawn moves 1 square on its file except when capturing, then it moves 1 square diagonally. Only pawns cannot move backwards. Any piece can capture a hostile piece by occupying its square, the captured piece being removed from the board. The object is to put the opposing king in a position of checkmate. If the king's capture is threatened, he is in "check" and the threat must be relieved, if this is impossible, the king is in "checkmate" and the game completed. At international level, there are individual and team world championships

Chess. See THORAX

Chester, city and county district in Cheshire, NW England. The city, on the River Dee, was a Roman garrison town and has been of strategic importance throughout British history. It was a major port until the Dee became silted and Liverpool's port facilities were expanded. Chester is the only English town with a complete city wall. The county district was created in 1974 under the Local Government Act (1972). Area: 448sq km (173sq miles). Pop. (1974 est.) 117,300

Chesterfield, city and county district in Derbyshire, N England. It is on the River Rother and is famous for its 14th-century cathedral, which has a twisted spire. The county district was created in 1974 under the Local Government Act (1972). Area: 66sq km (25sq miles). Pop. (1974 est.) 95,000

Chesterfield Inlet, inlet of the Hudson Bay in North-West Territories, Canada, which extends inland into Baker Lake. Length: 225km (140 miles)

Chester Plays, The, medieval cycle of 25 plays, one of four such outstanding N English cycles of MYSTERY PLAYS. They outline the message of the Bible, from the Creation to the Day of Judgement, and were probably first compiled around 1325

Cherry trees produce beautiful clusters of white and pink blossoms in the spring

The Chess Orchard, considered a comedy, deals with the passing of the old order

Chess, the "royal game", is thought to have originated in India around the 7th century

Chester, "The Rows", 16th and 17th-century double-tier shops, unique to the town

Chesterton, Gilbert Keith

Chevron deer, or mouse deer, are reddish brown with pale spots and irregular stripes.

Chicago's lake-side position gives it a very varied and changeable climate.

Chickadee is the American name for the little bird known in Britain as the willow tit.

Chicory root, roasted and ground, is often used to adulterate or to substitute for coffee.

but greatly revised towards the end of the 15th century. The cycle took three days to perform in its entirety. The last stage performance was in 1575, but they were adapted for British television in 1976.

Chesterton, Gilbert Keith (1874–1936), British essayist, novelist and poet. His *Father Brown* stories, concerning the detective work of a worldly-wise priest, first appeared in 1911. He also wrote essays on social and political themes. His novels include *The Napoleon of Notting Hill* (1904) and *The Man who was Thursday* (1908). He became a Catholic in 1922 and published *St Francis of Assisi* (1923) and *St Thomas Aquinas* (1933).

Chestnut, deciduous tree native to temperate areas of the Northern Hemisphere. It has lance-shaped leaves and furrowed bark. Male flowers hang in long catkins, females are solitary or clustered at base of catkins. The prickly husked fruits open to reveal two to three edible nuts. Family Fagaceae, genus *Castanea*; there are four species. See also HORSE CHESTNUT; WATER CHESTNUT.

Chevalier, Albert (1862–1923), British music-hall entertainer. From 1891 he appeared as a music-hall singer and was particularly well-known for his cockney costermonger ballads, most of which he wrote himself. His best-known compositions include *My Old Dutch* and *Knocked 'Em in the Old Kent Road*.

Chevalier, Maurice (1888–1972), French singer and actor. A star of the French music-halls, he first appeared in London in *Hullo, America* (1919). His manner was breezy and casual and he usually wore a jauntily tipped straw hat to sing songs such as *Louise* and *Mimi*. Among his latest films were the musicals *Gigi* (1958), *Can-Can* (1960), and *Fanny* (1961).

Cheviot Hills, range running 56km (35 miles) SW to NE along the England-Scotland border. Sheep farming is the chief occupation of the region. Since WWII much of it has been re-forested and it is now a National Park area. The highest point is The Cheviot in Northumberland, rising to 816m (2,676ft).

Chevreul, Michel-Eugène (1786–1889), French chemist and proponent of theories on colour that influenced the painter DELACROIX and the NRO-IMPRESSIONISTS. He studied the properties of animal fats and helped to develop the commercial manufacture of soap.

Chevron deer, or mouse deer, small, even-toed, hoofed mammal from central Africa and SE Asia. Resembling deer (but not a true deer), it has a small, hornless head, a pointed snout and slim legs. The males have small upper tusks. Chevrons are the world's smallest RUMINANTS. Length 1m (3ft); height: 30cm (1ft) at the shoulder. Family Tragulidae, genera *Hymoschus* and *Tragulus*; there are four species. See also pp. 95, 310.

Chevy Chase, Ballad of, English ballad, printed in Capell's *Prolusions* (1760), thought to date from the 15th century. It describes the rivalry between both England and Scotland and the Percy and Douglas families, which culminated in a fierce battle.

Chewing gum, confection originally from the CHICLE, a gummy latex exuded from the central American SAPOTILLA tree. It is now usually made from synthetic substances.

Cheyenne, large Algonquian-speaking North American Indian tribe whose home was originally in Minnesota but who spread into Dakota and areas of the Arkansas and Platte rivers. In the mid-18th century they allied with the Arapaho and in the mid-19th century split evenly into the northern and southern Cheyenne. The northern Cheyenne live in Montana, numbering about 2,000, the southern group settled in Oklahoma, where approx. 3,500 Cheyenne-Arapaho live.

Chien, city in W Taiwan. It is a commercial and transportation centre, serving the surrounding agricultural region, which produces rice, vegetables and timber. It also houses the headquarters of the local irrigation scheme. Pop. (1970) 238,713.

Chiang Ch'ing (c. 1914–), the third wife of MAO TSE-TUNG. A former Shanghai

actress, she joined Mao in Yenan during the war against Japan. She emerged from relative obscurity in the 1960s to become a high-ranking party official and the leader of the CULTURAL REVOLUTION. After Mao's death she was accused and convicted of treason and sentenced to imprisonment. See also p. 1697.

Chiang Kai-shek (1887–1975), Chinese politician. After training in a Japanese military academy (1909) he joined the Chinese KUOMINTANG (Nationalist Party), and succeeded SUN YAT-SEN as its leader in 1925 and in 1927 violently purged the ranks of MAO's Communist followers, although Chiang managed to maintain some unity leadership had led to civil war. His international status rose during WWII when he led the fight against Japan, and he was elected president of China in 1948. By 1949 Communist victories drove his government to TAIWAN, where he accepted US aid and launched a series of attacks on mainland China. See also pp. 1696–1697, 1726, 2014, 2149.

Chiang Kai-shek, Madame (c. 1897–), Chinese politician. A member of the prominent SOONG family, she married CHIANG KAI-SHEK in 1927 and was active in the KUOMINTANG after 1940, especially in attempting to secure foreign support for its war against the Communists.

Chiang Mai, city in N Thailand, near the Burmese border. It is the commercial, cultural and religious centre of the northern region. It has air, rail and road links with the capital and is an export point for local produce. The city's own manufactures include pottery, silk and wooden articles. Pop. (1970) 89,272.

Chiaroscuro, (from Italian "light-dark"), term for the opposition of light and dark in painting and drawing. REMBRANDT and CARAVAGGIO were masters of the dramatic use of chiaroscuro.

Chialite, variety of andalusite, aluminum silicate (Al₂O₃SiO₃), found in metamorphic rocks. It has elongated prismatic crystals, which in cross-section show a black cross on a grey ground. Hardness 7.5; s.g. 3.1–3.2.

Chiba, city in Japan, on Tokyo Bay, central Honshu Island, capital of Chiba prefecture. It has an 8th-century Buddhist temple and a university (1949). Industries: textiles, paper. Pop. (1970) 482,100.

Chicago, city in NE Illinois, on the SW shore of Lake Michigan; the second largest city in the USA. It is the major industrial, commercial, cultural and shipping centre of the Midwest. In the late 1700s it was a trading post and then became Fort Dearborn military post (1803). With the construction of the Erie Canal and railways, and the opening up of the prairies, Chicago attracted settlers and industry. It became a noted cultural centre in the late 19th and early 20th centuries with the establishment of the Chicago Symphony Orchestra (1891) and several literary magazines. It also achieved notoriety in the 1920s as the home of gangsters, in particular AL CAPONE. It has many colleges and universities, the largest rail terminal in the world and the busiest airport (O'Hare). Industries: steel, chemicals, machinery, food processing, metal working. Pop. 3,173,000. See also pp. 527.

Chicago School, architects led by Louis SULLIVAN whose steel-framed, multi-storied commercial buildings, erected after the 1871 Chicago fire, established the principles of SKYSCRAPER construction. See also pp. 1630, 1658.

Chich. See CHICOPHA.

Chichén Itzá, chief city and shrine of the TOLTAC and MAYA peoples in Yucatan, Mexico, between the 11th and the 13th centuries AD. Remains include temple-pyramids, court for ball games and a sacrificial well. After 1200 Chichén Itzá lost its pre-eminence to nearby Mayapan. See also pp. 1364, 1364.

Chichester, county town of West Sussex, England, 26km (16 miles) S of Portsmouth. It is a market centre for the agriculture and livestock of the surrounding region and has a sheltered harbour. There are Roman remains, a Norman cathedral and a modern theatre. Pop. 21,547.

Chickadee, any of several North American birds whose calls resemble a whistled "chuck-a-dee". Chickadees are small and plump, with short rounded wings, stubby bills, dark caps and bibs and light cheeks. The typical black-capped chickadee (*Parus atricapillus*) of a North America is an active, easily tamed bird that feeds on seeds and insects. Family Paridae.

Chickasaw, Muskogean-speaking American Indians who originated in Mississippi-Tennessee around the present site of Memphis and whose economy was based on intensive maize cultivation. Along with the Choctaw, Creek, Cherokee and Seminole peoples they were recognized as the Five Civilized Tribes by the US government who in 1786 established the Ohio as their northern boundary by the Hopewell Treaty. In the 1830s the Chickasaws were forcibly resettled in Indian Territory (the present Oklahoma) when their numbers were about 5,000. Today their population is about 9,000.

Chicken. See POULTRY.

Chickpox, or varicella, contagious disease which most often attacks children and usually lasts for about a fortnight. Early symptoms include a mild headache and high temperature which are followed within a day by red skin marks which develop into blisters. Recovery is rapid, with little or no scarring. Antihistamine may relieve itching. See also p. 1075.

Chickpea, also called dwarf pea, garbanzo, chick and gram, bushy annual plant cultivated from antiquity in S Europe and Asia for its pea-like seeds. It is now also grown widely in the Western Hemisphere. The seeds are eaten boiled or roasted. Family Leguminosae; species *Cicer arietinum*. See also p. 681.

Chickweed, common name for a spreading annual plant native to Europe and naturalized throughout temperate regions of the world. Its drooping stems grow to about 30cm (12in) long. It has opposite oblong leaves and small white flowers. Family Caryophyllaceae; species *Stellaria media*.

Chichayo, city in NW Peru, capital of Lambayeque department, in the coastal desert area between the Andes and the Pacific Ocean. It has a university (1962) and an agricultural college (1963). Industries: cotton, leather goods, brewing, rice, sugar cane, soap. Pop. (1972) 187,809.

Chicle, natural gum, available in reddish-brown pieces and consisting of the coagulated milky juice of the SAPOTILLA (*Achras zapota*). Chicle became the chief ingredient of CHWING GUM by the end of the 19th century but in the 1940s it began to be replaced by synthetic and now has little commercial value.

Chicory, perennial weedy plant whose leaves are cooked and eaten, or served raw in salads. The fleshy roots are dried and ground for mixing with or used as a substitute for coffee. Chicory has bright blue, daisy-like flowers. Height: 1.5m (5ft). Family Compositae; species *Chicorium intybus*. See also pp. 684, 684, 686, 686.

Chidley Cape, headland at the N tip of Labrador, a Canada, on Killiney Island on the S side of the entrance to the Hudson Strait.

Chiefdom societies, in anthropology, type of social system more complex and hierarchical than tribes, but less static than kingdoms. See also pp. 1830–1831.

Chief justice, presiding judge of the US SUPREME COURT who is appointed by the President. He administers the presidential inaugural oath and under the American Constitution is responsible for presiding at the impeachment of a president.

Ch'ien Lung (r. 1735–96), title of the MANCHU emperor of China, Hung-li (1711–99), during his reign. He increased China to its greatest size under the Manchus by taking Tibet and other regions. He was a patron of the arts and had some contact with European traders but refused to expand diplomatic ties with Britain in 1793. In his time, he was a powerful and influential monarch. Recently, historians have concluded that despite his contemporary success, he left the empire seriously weakened, and unable to withstand

the European incursions of the 19th century. See also pp.1498-1499

Chiffchaff, greenish-brown warbler of the family Sylviidae, named after its distinctive two-note call. It hunts insects in trees, and nests near the ground. This sky bird is a summer visitor to Britain. Length 11cm (4.5in). Species *Phylloscopus collybita*. See also p.76.

Chifley, Joseph Benedict (1885-1951), Labor Australian Prime Minister (1945-49). A former locomotive driver, he became defence minister (1929-31) then Federal Treasurer (1941-45). He increased federal involvement in education and welfare but failed to nationalize the Australian banking system.

Chigger, also called harvest mite or red bug, tiny, red larva of some kinds of mites found worldwide. Adults lay eggs on plants and hatched larvae find a host, animal or human, on whom their bites cause a severe rash and itching. Length, 0.1-1.6mm (0.004-0.06in). Order Acarina; family Trombidulidae.

Chignecto Bay, inlet at the N end of the Bay of Fundy between New Brunswick and Nova Scotia, Canada. It is noted for its extremely high tides rising to 15m (50ft). Fundy National Park is on the N shore. Length 80km (50 miles).

Chihuahua, largest state in Mexico, on the N Mexican plateau. The climate and terrain vary from cool mountains (w) to arid desert (e). The city of Chihuahua, the state capital has a Spanish colonial cathedral and is a famous breeding centre for the miniature Mexican dogs named after the city. Industries: zinc, lead, silver, gold-mining, forestry, livestock raising, tourism, cotton, oats, potatoes, fruit. Area (state) 247,086sq km (95,400sq miles). Pop. (state) 1,730,012; (city) (1975) 346,003.

Chihuahua, tiny dog (toy group) probably first bred in Central America. It has large, wide-set eyes and large erect ears. The long, sickle-shaped tail is held in a loop over the back. There are two types of coat - short-haired and long-haired - which may be any colour. Average size: 12.7cm (5in) at the shoulder; weight: up to 2.7kg (6lb).

Chikamatsu Monzaemon (1653-1724), Japanese dramatist. He wrote mainly for the puppet theatre and produced more than 150 plays. Most of his writings were historical romances and domestic tragedies, including *The Love Suicides at Amijima* (1720) and *The Battles of Coxinga* (1715), based on actual events.

Chills, soreness and swelling caused by cold, most often affected areas are toes, fingers and ears. Itching or "burning" sensations may occur. It accompanies poor circulation, and relief is usually gained by warming exercise.

Child. See pp.170-173

Childbirth, the birth of a baby. After about 280 days following fertilization of an ovum (conception), the regular contractions of a woman's womb tell her that the baby is about to be born. Labour takes place in three stages. First the neck of the womb dilates, or opens, to let the baby's head pass through. Then the baby passes through the birth canal to the outside - it is born. The third and final stage of birth is the expulsion of the placenta, or after-birth. See pp.168-169.

Childe, Vere Gordon (1892-1957), Australian prehistorian. His study of the cultures of the western world in the second and third millennia BC led to *The Danube in Prehistory* (1929). Other influential works include *Man Makes Himself* (1936) and *The Dawn of European Civilization* (1925).

Childe Harold's Pilgrimage (1812-18), autobiographical, romantic poem by Lord Byron, divided into four cantos, in Spenserian stanzas. The poem tells of a young man's disillusionment with his easy life and his wanderings through Europe.

Childe Roland, character in a poem by Robert Browning, *Childe Roland to the Dark Tower Came*, published in 1855. "Childe" is a medieval title meaning a young nobleman. The hero of the poem, Childe Roland, is in quest of a dark tower that many others have failed to find.

Children's Crusade (1212), movement to regain the Holy Land, preached by two boys. Thousands of French children and many adult vagabonds went to Marseille. They were offered free transport to Palestine, but were sold as slaves in Africa instead. Although the movement ended in disaster, it renewed religious fervour.

Chile, republic extending 2,450km (7,740 miles) along the Pacific coast of South America with a landscape dominated by the Andes Mts. In 1973, the Marxist president, ALLENDE, was overthrown by a military junta. The economy is based on mineral deposits. Copper accounts for 80% of exports and other minerals include nitrates, iron, gold, silver and manganese. The forests are also of economic importance and timber, pulp and paper are exported. The capital is Santiago. Area: 756,945sq km (292,256sq miles). Pop. (1975 est.) 10,253,000. See pp.2006-2007.

Chili, or **chilli**, hot red pepper grown commercially in Mexico and the SW USA. CAYENNE PEPPER comes from the same plant. It is an annual with oval leaves and white or greenish-white flowers that produce seedpods. When dried, the pods are ground into the condiment. Height 2-2.5m (6-8ft). Family Solanaceae, species *Capsicum frutescens*. See also pp.706-707.

Chillida, Eduardo (1924-), Spanish sculptor in iron and granite. His work, abstract compositions in smooth angular strips and in rows of block shapes joined together, has a monumental, open quality. **Chilopoda**, centipedes, an order of arthropod animals that have long, flat, segmented bodies, each bearing one pair of legs (the total number of legs being much less than 100, despite the name). The head has a large pair of claws with which the centipede seizes its prey and injects it with venom. See also pp.34, 306, 311.

Chilperic, name of two MEROVINGIAN kings. Chilperic I (539-84) inherited the West Frankish kingdom on the death of CLOTAIR I (561). Civil wars failed to gain him the whole Frankish realm. Chilperic II (c.675-721) became king of the West Franks in 715, of the whole kingdom in 719.

Chiltern Hills, range of chalk hills in a central England, extending Ns from the Goring Gap in the Thames Valley to the East Anglian Heights. A local furniture industry is centred on High Wycombe. The highest point is Cuscombe Hill, 260m (852ft). Length, 89km (55 miles).

Chiltern Hundreds, obsolete administrative district in Buckinghamshire. The stewardship of the district is still a nominal salaried office under the Crown and therefore incompatible with a parliamentary seat. MPs who wish to resign therefore apply for it.

Chinang, city in N Taiwan on the East China Sea. An important commercial centre, it is also a natural port and the country's principal naval base. Its industries include fishing and shipbuilding. Pop. (1970) 324,040.

Chimaera, also called ghost shark, cartilaginous deep-sea fish with a long poisonous dorsal spine and a slender tail. Some species have an elongated snout. An oil, derived from its liver, is used as a lubricant in precision equipment. Length 2m (80in). Families Chimaeridae, Collorhynchidae and Rhinochimaeridae.

Chimborazo, highest mountain in Ecuador. An inactive volcano, its peak is always snow-capped. Explored in 1802 by Alexander von HUMBOLDT, it was first scaled in 1880 by the British mountaineer Edward Whymper. Height: 6,267m (20,561ft).

Chimbote, port on the coast of W central Peru, approx. 400km (250 miles) NNW of Lima. It suffered severe damage in an earthquake in 1970. Industries: steel, fishing, fish meal. Pop. (1969 est.) 97,100.

Chimera, in Greek mythology, beast that was part dragon, part lion and part goat. He was the son of TYFO and ECHIDNA and the brother of CERBERUS, HYDRA and the SPHINX. He was slain by BELLEROPHON, with the aid of the flying horse, PEGASUS. **Chimpanzee**, gregarious, intelligent great

ape of tropical Africa. Chimpanzees are mostly black and powerfully built. A smaller chimpanzee of the Congo region is sometimes classified as a separate species. Chimpanzees often nest in trees but most of their time is spent on the ground searching for fruit and nuts. They are communicative and, in controlled situations, have learned a limited human vocabulary in sign language. Height: approx. 1.3m (4.5ft), weight: approx. 68kg (150lb). Species *Pan troglodytes*, Congo *Pan paniscus*. Family Pongidae. See also PRIMATES, pp.106-107, 107, 1876.

China, large pre-Columbian kingdom of South American Indians in N Peru. Its centre and capital was the great city of Chan Chan near modern Trujillo, with a population of more than 100,000 inhabitants. From AD 1200 to 1465, when it was conquered by the INCA, Chimu was the largest and most important pre-Inca kingdom. It is noted for ceramics, weaving and goldwork. See also pp.1365-1366.

China, People's Republic of, nation of Asia, also known as Communist China; the third largest and most populous country in the world. It has a communist government. Occupying one-fifth of the area of Asia, it has large mineral deposits including coal, oil, iron ore, tin, tungsten, aluminium, manganese and mercury. Under the communist government a series of five-year plans have aimed at increasing industrial development. Iron and steel manufacture is the most important heavy industry. The manufacture of machinery and tools and textiles is also important. The rural population is organized into communes which farm the land in common. China is the world's leading producer of rice and third-largest producer of wheat. The capital is Peking (Beijing). Area: 9,597,700 sq km (3,704,000sq miles). Pop. (1981 est.) 952,000,000. See pp.2007-2014.

China, Republic of, official name of Taiwan. See p.2149.

China clay. See KAOLIN.

China stone, partially decomposed granite, frequently used as a flux to produce vitrification and translucency, or mixed with silica and lime to form a glaze in the manufacture of PORCELAIN.

Chinchilla, genus of small, soft-furred rodent native to South America. Chinchillas were hunted almost to extinction. They are now bred in captivity for their fur, the most expensive of all animal furs, which is long and close-textured and soft to the touch. 23-38cm (9-15in), weight, 450-900g (1-2lb). Family Chinchillidae.

Chindits, popular name for special force troops from the 3rd Indian Division, guerrillas who were commanded by Brigadier ORDE WINGATE in the 1943-45 Burma campaign. They were also known as "Wingate's raiders" and managed in part to implement his idea of causing confusion behind Japanese front lines. The name most probably comes from Chinthe, a beast of Burmese mythology.

Chindwin, river in W Burma. A major tributary of the Irrawaddy, it rises in the hills of N Burma and flows generally S along the border with India to join the Irrawaddy at Myingyan. It is navigable for 644km (400 miles). Length: approx. 840km (520 miles).

Ch'in dynasty (221-207 BC), ruling Chinese house whose main achievement was the establishment of a unified sovereign state which survived as an empire until 1911. Originating in NW China, the Ch'in led by SHIH HUANG TI conquered the feuding states of the CHOU dynasty and maintained an effective administration along feudal lines to govern their vast territory. Two dynasties with the name "Chin" ruled from 265 to 419 and from 1122 to 1234 AD. See also pp.1256-1257, 1256-1257, 2012.

Chinese checkers, board game, similar to draughts. The object is to move a set of pegs or marbles on a star-shaped board to the opposite corner. The pieces may advance by jumping over others but, unlike draughts, no pieces are taken off the board. The first player to fill the corner opposite his starting point is the winner. **Chinese lantern plant**, or **winter cherry**,

Chinese lantern plant

Chihuahuas, the tiniest of all dogs, are a pure American breed, probably from Mexico

Childbirth, two happy mothers whose infants arrived in the first minutes of the new year

Chinchilla, over a hundred of their paws are required to make one full length coat

Chinese checkers, a board game not actually from China that became popular in the 1930s

Ch'ing dynasty

Chios has been occupied by Romans, Persians, Genoese, Turks and Germans

Chital or axis deer is reddish fawn coloured with numbers of white spots on its sides

Chitons cur up tightly when they are dislodged from the rocks on which they live

Chives are used in many ways to flavour food. They contain large quantities of vitamin C

perennial plant native to Japan and widely cultivated in gardens. The creeping stems bear large, long-stalked leaves and small white flowers, these produce a red berry surrounded by a papery, lantern-like red calyx. Height up to 61cm (2ft). Family Solanaceae. species *Physalis alkekengi*. **Ch'ing dynasty** (1644-1912), also known as the Manchu dynasty, the last dynasty of imperial China. The Manchus were a tribe from MANCHURIA who, by capturing Peking in 1644, established control over the whole country. Their rule was consolidated by K'ANG HSI and for a long time they retained their cultural identity, encouraging the development of the arts, in particular the production of porcelain which was popular in 18th-century Europe. In the 20th century the dynasty's failure to deal adequately with Western imperialism and to institute reforms led to its overthrow by nationalists led by SUN YAT-SEN. See also pp.1498-1501, 1622-1623.

Chingola, city in central Zambia. Its main activity is the provision of administrative and governmental services to the nearby copper-mining community of Nchanga. Pop. (1972 est.) 214,000.

Chimamp'o. See NAMP'O.

Chinnery, Ernest William Pearson (1887-), Australian anthropologist. He was adviser to the Australian government on Native Affairs (1937-47), and explored previously unknown areas of New Guinea.

Chinoiserie, European style of furniture and decorative art that reflected fanciful and poetic notions of China, based on imports of Chinese ceramics, textiles and travellers' tales.

Chinook, or Flathead (from their custom of deforming infants' heads as a sign of free birth), American Indians living along the Pacific coast from the Columbia River to The Dalles, Oregon. Although numbering fewer than 1,000, the Chinook travelled widely and their language was used by many Indians and whites during the settlement of the West. They have now fused with the Chedatis Indians.

Chinook, warm, dry wind experienced on the eastern side of the Rocky Mountains in Canada and the USA. It blows commonly during the winter and spring, and its warming effect can allow grazing of cattle during the winter. See also pp.247-248.

Chinquapi, US variety of CHESTNUT. **Chios** (Khos), island in the Aegean Sea, W of Turkey, in the Aegean Sea. It was first colonized by the Ionians and then occupied by the Persians, 494-479 BC. It joined the Delian League in 478 BC. It flourished under the Romans and the Byzantines, then passed to the Genoese, Ottomans and finally to Greece in 1912. It is reputed to be the birthplace of Homer. Products: figs, olives, marble. Area 906sq km (350sq miles). Pop. (1971) 53,942.

Chipboard, man-made constructional material, an artificial wood made in sheets from small chips of wood embedded in a thermosetting plastic resin. It can be sawn, planed and drilled like natural wood and can be fixed using nails or screws. It is commonly used, sometimes surfaced with a veneer of hardwood or plastics, for making furniture and covering floors.

Chipewyan, Fort, fur-trading post in NW Alberta, Canada, on NW Lake Athabasca. The original fort was established in 1788 on SW Lake Athabasca by Alexander Mackenzie as the headquarters for his expeditions to the Arctic and Pacific oceans. This was later abandoned, and the modern post was established in 1821 by the North West Company.

Chipmunk, small, ground-dwelling squirrel native to North America and Asia. It carries food (nuts, berries, seeds) in cheek pouches and stores it underground. Most chipmunks are brown with one or more black-bordered, light stripes. Active tree-climbers in summer, they sleep for much of the winter. Length 13-15cm (5-6in) excluding the tail. Family Sciuridae, genera *Eutamias* and *Tamias*.

Chippendale, Thomas (c.1718-79), British furniture designer. Although he was one of the great English craftsmen, much of his fame rested upon the wide circulation of his *The Gentleman and Cabinet-Maker's Directory* (1754-62), a trade catalogue illustrating the designs of his factory. Many of Chippendale's finest pieces were marquetry and inlaid items in the Neo-Classical vein.

Chippewa. See OJIBWA.

Chirico, Giorgio de (1888-1978), Greek-born Italian painter, founder of the quasi-surrealist "metaphysical painting" movement, who painted still lifes and empty, dream-like landscapes in exaggerated perspective. In the 1930s he repudiated all modern art in favour of paintings in the style of the Old Masters. See also p.1684.

Chiron, in Greek mythology, wisest and most famous of the CENTAURS. He taught many of the lesser gods and heroes, including ACHILLES and ASKLEPIUS, and was accidentally killed by HERCULES with a poisoned arrow. He was placed among the stars by ZEUS.

Chiropodist, medical practitioner who specializes in treating minor disorders of the feet and hands. Typical conditions treated by a chiropodist include ATHLETE'S FOOT and CORNS.

Chiropactic, non-orthodox medical practice based on the theory that the nervous system integrates all of the body's functions, including defence against disease. With any "nerve interference", caused, for example, by a slightly misplaced vertebra, there is decreased resistance to disease and pain. Chiropactors aim to remove nerve interference by manipulations of the affected musculo-skeletal parts, particularly in the spinal region.

Chiropiers. See BAT.

Chisolm, Jesse (c.1806-68), US trader. In 1866 he drove a wagon train through Indian territory, now Oklahoma, from Texas to Kansas. The route he took became the Chisolm Trail, over which Texas longhorn cattle were driven to railheads in Kansas.

Chital, or axis deer, comparatively common diurnal deer of India and Sri Lanka. Its coat is red and brown, irregularly but profusely spotted with white throughout the year. Herds of 100 or more may be seen in the wild. Height 91cm (3ft) at the shoulder. Family Cervidae, species *Axis axis*.

Chitin, hard, tough substance that occurs widely in nature, particularly in the hard shells (exoskeletons) of arthropod animals such as shrimps, crabs, insects, spiders and their relatives. The walls of hyphae - the microscopic tubes of fungi - are also composed of chitin, although this is not identical with animal chitin. Chemically chitin is, like cellulose, a natural polymer. More specifically it is a polymer of N-acetyl-glucosamine, a derivative of the sugar glucose.

Chiton, or coat-of-mail shell, MOLLUSC that lives attached to or creeping on rocks along marine shores. Bilaterally symmetrical, its upper surface has eight overlapping shells. Underneath is a large fleshy foot, a degenerate head with mouth, gills and a mantle. Length: to 33cm (13in). Class Amphineura; order Polyplacophora; family Chitonidae. See also p.20.

Chitral, town, district and former state in the North-western Frontier Province, Pakistan. The district is bordered by Afghanistan (W) and the Hindu Kush (W). Cereals and fruits are grown and there are mineral deposits, although these are thought too inaccessible to be mined commercially. District area: 14,833sq km (5,727sq miles). Pop. (est.) 159,000.

Chittagong, principal port and capital of Chittagong division, Bangladesh, S Asia, on the Karnaphuli River near the Bay of Bengal. Under Mogul rule in the 17th century, it was ceded to the East India Company in 1760. Its port facilities were damaged in the war in 1971 between India and Pakistan. Industries: jute, tea, oil, engineering. Pop. 889,760.

Chivalry, code of ethics and behaviour for knights in Western Europe between about the 11th and the 14th centuries. The term comes from the French word for knight-hood, *chevalerie*. Combining Christian virtues with armed prowess, a knight was

expected to show courage, piety, honour, adventure, devotion to a lady of his choice, loyalty, generosity, honesty and skilled in courtly love. Although a combination of these virtues was probably rare in reality, the literature of the Middle Ages abounds with embodiments of the ideal. See also pp.1338-1339, 1339.

Chives, perennial herb whose long hollow leaves have an onion-like flavour and are used as a seasoning. The flowers grow in rose-purple clusters. Family Liliaceae, species *Allium schoenoprasum*.

Chladni, Ernst Florens Friedrich (1756-1827), German physicist who made studies of sound, particularly the way in which it vibrates metal plates and diaphragms. Patterns produced in fine powders on sound-vibrated plates are called Chladni's figures.

Chlamydomonas, microscopic, single-celled green ALGA that can be so common in ponds as to turn the water bright green. The cell of *Chlamydomonas* is only about 20 microns (20 millionths of a metre) across and has two flagella, which the cell beats to swim. It is thus one of the great group of algae known as FLAGELLATES.

Chloral hydrate, drug that in therapeutic doses produces natural-like sleep but with repeated use becomes addictive. Mixed with alcohol or taken in large doses it is dangerous and can result in death.

Chlorate, salt of chloric acid, containing the ion ClO₃⁻. Chlorate salts are good oxidizing agents and are a useful source of oxygen, which they give off when heated. Sodium and potassium chlorates are used in explosives and also as weedkillers. They are manufactured by electrolysis.

Chlorella, microscopic, single-celled green ALGA occurring singly or in masses in fresh water and on damp soil, and as a symbiotic partner in the bodies of many small water animals including the green hydra and the fresh-water sponge (which it turns green). This alga is easy to grow, reproduces quickly and is rich in proteins and vitamins, for these reasons it has been used as plant protein for animal foods.

Chloride, salt of HYDROCHLORIC ACID or some organic compounds containing chlorine. The best-known example is common table salt, sodium chloride (NaCl). Most chlorides are soluble in water, except mercurous and silver chlorides.

Chlorine, common non-metallic element (symbol Cl) in the HALOGEN group, first discovered in 1774 by the Swedish chemist K. W. Scheele. It occurs in common salt (NaCl), carnallite and sylvite. It is a greenish-yellow gas extracted by the electrolysis of brine and is widely used in purifying drinking water, bleaching wood pulp and in the manufacture of a vast range of compounds. Chemically it is a reactive element, and combines with most metals. Properties at wt. 35.453; s.g. 1.56 (-33.6°C); m.p. 100.98°C (-149.76°F); b.p. -34.6°C (-30.28°F). The most common isotope is Cl³⁵ (75.53%). See also pp.893, 902, 903.

Chloroform (trichloromethane), colourless, volatile, sweet-smelling liquid (CHCl₃) prepared by the chlorination of methane or of acetone or ethanol in an alkaline solution. It is used in the manufacture of fluorocarbons, for insect bites and as a solvent. Properties s.g. 1.48 at 20°C (68°F), m.p. -62°C (-79°F), b.p. 61.2°C (142.2°F). See also p.898.

Chloromycetin, trade name for the antibiotic drug chloramphenicol, originally found as a metabolic product of the bacterium *Sireptomyces venezuelae*. Now synthesized chemically, it is used to control various bacteria.

Chlorophyll, group of green pigments present in the CHLOROPLASTS of plants that absorb light for PHOTOSYNTHESIS. There are five types: chlorophyll a (C₅₅H₇₂O₅N₄Mg) is present in all photosynthetic plants except bacteria, chlorophyll b (C₅₅H₇₀O₅N₄Mg) occurs in higher plants and green algae, and chlorophylls c, d and e present in some algae. It has a similar structure to HAEMOGLOBIN, with a magnesium atom replacing an iron atom. See also pp.356-357, 909.

Chloroplast, microscopic green structure

within a plant cell in which PHOTOSYNTHESIS takes place. The chloroplast is enclosed in an external unit membrane and contains internal membranes. The pigments providing the green colour (chlorophyll a and chlorophyll b) absorb the light energy that is converted to chemical energy. See also CHLOROPHYLL.

Chloroquine, synthetic drug used mainly to treat MALARIA and HEPATITIS. It can have marked side-effects, such as blurred vision.

Chlorpromazine, synthetic drug, first developed as an anti-nauseant but subsequently found to calm the central nervous system. An important and potent tranquillizer, it is used under close medical supervision in the treatment of psychoses and cases of severe anxiety or other mental illnesses. See also pp. 1109, 1116.

Chonichthyes, sub-class of fish that includes the CROSSOPTERYGI (COELACANTH) and DIPNOI (LUNGFISH). Common during the Devonian period (395-345 million years ago), most members of this group are now extinct. They have bony skeletons, paired fins and well-developed air bladders. Class Osteichthyes.

Chocolate. See COCOA.

Chodowiecki, Daniel Nikolaus (1726-1801). German painter, engraver and book illustrator. He achieved great popularity with his etchings and vignettes, and in 1797 became the director of the Berlin Academy of Art.

Choir, group of singers. The earliest choirs were ecclesiastical and originally sang the plainsong in church services. After the development of polyphonic composition, some 16th century works, especially those of GAMBELL, required multiple choirs and as many as 40 parts. The beginnings of opera marked the development of the secular choir, or chorus.

Choking, restricted breathing caused by an obstruction in the throat or a ligature round the neck (strangulation).

Chola, medieval dynasty of s India. The Cholas established a kingdom around Tenjore in the 2nd century AD, but did not rise to prominence until the 9th century. They replaced the PALLAVAS on the coast of s India in 888, and between 985 and 1024 established an empire that included Ceylon, Bengal, parts of Sumatra and Malaya. The dynasty declined and ended in 1279. The Cholas brought a great period of Hindu culture to s India. See also pp. 1252, 1253.

Cholecystitis, inflammation of the GALL BLADDER, most often associated with GALLSTONES. In mild forms it produces indigestion, sometimes with nausea and vomiting, after eating fried or greasy foods. More severe attacks, which are accompanied by sharp pain, usually require surgery. See also p. 1068.

Cholera, acute infectious disease caused by the bacterium *Vibrio cholerae* and occurring in epidemic form in tropical and subtropical areas with poor sanitation and hygiene. It is generally contracted by eating food or drinking water contaminated by the faeces of infected people. Cholera produces almost continuous watery diarrhoea often accompanied by vomiting and muscle cramp, and leads to severe dehydration. Untreated it can be fatal, but proper care, including fluid replacement and antibiotics, can result in a high recovery rate. See also p. 1083, 1085.

Cholesterol, white, fatty STEROID (C₂₇H₄₆O), found in the tissues of vertebrates. It occurs in large concentrations in the brain, spinal cord and liver. It is synthesized in the liver, intestines and skin and is an intermediate in the synthesis of vitamin D and many hormones. GALLSTONES are composed mainly of cholesterol. A diet rich in animal products may produce an excess of cholesterol which possibly contributes to heart disease. See also pp. 906-907.

Choline, sometimes classified as a B vitamin. It is necessary for the synthesis of ACETYLCHOLINE and fatty acids by the liver. Its dietary sources are egg yolk and some vegetable oils. It can be synthesized in the body from the amino acid serine.

Cholinesterase, enzyme that breaks down and inactivates the nerve transmitter ACE-

TYLCHOLINE at the nerve synapse. See also p. 119.

Chomo Lhari, peak in the Himalayas on Bhutan's NW border with China. Sacred to people of Tibet, the mountain was first scaled in 1937 by Lt-Col. F. Spencer Chapman and the Sherpa Pasang Dawa Lama. Height: 7,314m (23,997ft).

Chomsky, Avram Noam (1928-), US linguist. His book *Syntactic Structures* (1965) and other writings have revolutionized modern linguistic theory. His ideas have also had considerable impact on psychologists concerned with language acquisition. Chomsky believes that the human capacity for language is partially innate, in contrast to the concept of BEHAVIOURISM. See also LINGUISTICS, pp. 1126-1127.

Chondrichthyes, class of cartilaginous fish including ELASMOBRANCHI (SHARK, RAY and SKATE) and HOLOCEPHALI (chimaera). These marine fish have cartilaginous skeletons, a well-developed lower jaw, paired fins, separate gill openings, no air bladder, bony teeth and plate-like (placoid) scales. Chondrichthyes evolved during the late DEVONIAN period. See also pp. 56, 276.

Ch'ongjin, city of NW North Korea on the Sea of Japan. From 1910 to 1945 it was controlled by the Japanese, who developed the Musan iron mines during the 1930s. The city was severely damaged during the Korean War. Industries: iron, steel, sardines. Pop. 265,000.

Ch'ongju, city in central South Korea, 113km (70 miles) SSE of Seoul. It is a market centre for the surrounding agricultural region. Industries: rice, tobacco, cotton, textiles. Pop. (1970) 143,944.

Chongqing. See CHUNGKING.

Chonju, city in SW South Korea. Situated in an area of high population and intensive agricultural production, it serves as a transportation centre. Industries include food processing and textiles. Pop. (1970) 257,530.

Chonos Islands (Archipiélago de los Chonos), large island chain off the s coast of Chile. They are sparsely inhabited by the Chonos Indians. Length: approx. 209km (130 miles).

Chopin, Frédéric François (1810-49), Polish-French composer for the piano. He studied in Warsaw and moved to Paris in 1831. He later became a close friend of George Sand and Eugène DELACROIX. Although he wrote two piano concertos and three piano sonatas, Chopin's best-known works are numerous short solo pieces - ballades, études, nocturnes, waltzes, preludes, impromptus. His Polish background and the stirring of Polish nationalism at the time inspired a large number of mazurkas and polonaises. See also p. 583.

Chopper culture, early PALAEOLITHIC culture widely distributed in the Eastern Hemisphere and particularly associated with PEKING MAN, the best site being at Choukounen, near Peking. It is marked by the use of circular flint discs and pebbles whose circumference is flaked to a sharp, cutting edge.

Choral music, music for several voices, originally religious, such as CANTATAS and ORATORIOS. The foremost composer of cantatas was BACH, of oratorios HANDEL. Secular choral works range from MADRIGALS to large works such as ELGAR's *Dream of Gerontius* (1900).

Chordata, name of a large phylum of VERTEBRATES and some marine invertebrates, all of which at some stage in their lives have rod-like, cartilaginous supporting structures called NOTOCHORDS. Other shared features are gill slits, a hollow nerve cord along the back, a bilaterally symmetrical body and segmented muscles and nerves. Invertebrate chordates are subdivided into three subphyla. Urochordata-TUNICATES or SEPIQUITS; Cephalochordata-AMPHIOXUS and Hemichordata. Vertebrates have notochords surrounded by bony or cartilaginous vertebrae (spinal columns). See also pp. 5, 54, 55.

Chorea, any of several diseases involving involuntary jerking movements of parts of the body. One type, Sydenham's chorea, or St Vitus's dance, occurs in children

(more often in girls) and is marked by irregular muscular movements and abrupt jerks. Often accompanied by an emotional disorder, it usually subsides in a few weeks. It may be associated with rheumatic fever. Another form of chorea, Huntington's disease, is a rare hereditary complaint that starts in early middle life with lack of muscular co-ordination and progresses with emotional outbursts and mental deterioration, and ends in death.

Chorion, outermost of three protective membranes of the embryonic system of birds, reptiles or mammals, or of the insect egg. In birds it is the most lining between the shell and allantois (organ for respiration and discharge of carbon dioxide). It contributes to placenta formation in placental mammals, and the embryo receives nourishment, oxygen and water through it.

Chorioid gonadotropin (CG), HORMONE produced by the placenta in the womb of a pregnant woman and present in her urine. The detection of this hormone is the basis of most methods of pregnancy testing. See also p. 166.

Chorus, term derived from the Greek *choros*, meaning those who danced and chanted comments on the action in Greek drama. In modern usage a chorus is a group of singers (as distinct from soloists). Major works with parts for a chorus include CANTATAS, OPERAS and ORATORIOS. A CHORUS is also a type of chorus.

Chorzow, city in a Poland, formerly known as Krolewska Huta. Situated in the Katowice mining and industrial region, it has iron and steel foundries and chemical plants. Pop. (1974) 154,500.

Chou dynasty (c. 1030-221 bc), Chinese dynasty responsible for the creation of much of the Chinese society and culture. It overthrew the SHANG DYNASTY, after the Chou people had moved out of their homelands N of the HWANG-HO river. Chinese civilization spread under the Chou to most parts of modern China, but the dynasty never established effective control over the regions. CONFUCIUS and LAO TZE achieved the greatest of the many cultural glories of Chou China. See also pp. 1256-1257.

Chou En-lai (1898-1976), Chinese politician. He was educated in Japan and Europe and worked for the nationalist KUOMINTANG (1924-27), after which he joined the Communist Party. He participated in the LONG MARCH, and acted as second-in-command to MAO TSE-TUNG. He negotiated the eventual Communist victory, and became prime minister (1949-76) and foreign minister (1949-58). He was the country's chief international spokesman until his death. See also pp. 1726-1727.

Chough, bird of the crow family, slightly larger than a jackdaw and also having black plumage, but easily distinguished by its bright red, slender, curved beak and red legs. It is a rare bird of mountains and rocky shores of Europe. The Alpine chough *Pyrrhocorax graculus*, inhabits inland mountains, is smaller, and has a yellow bill. Family Corvidae.

Choukoutien, archaeological site near Peking, China, where the remains of Peking man, *Sinanthropus pekinensis*, were found in 1927-37. The caves where they were found show the earliest known use of fire. See also pp. 112-113, 112.

Chou-shan. See CHUSHAN.

Chow-chow, ancient Chinese breed of dog (originally raised for meat), introduced to the West in 1780. The only dog with a blue-black tongue, it has a massive head with a short, broad muzzle and full, hanging lips. The dense, coarse coat forms a ruff round the neck. Average size, 45.5-51cm (18-20in) height at the shoulder, weight: 23-27kg (50-60lb).

Chrétien de Troyes (fl. 1165-80), romance writer of northern France, noted for his tales of King Arthur and his knights, which influenced both Geoffrey CHAUCER and Thomas MALORY. He wrote at least six romances, including *Lancelot*, *Yvain* and *Perceval*. Although deriving his subject-matter from popular legend and history, his contributions to romance literature include elaboration of plot struc-

Cholesterol formed by an excessively rich diet is thought to contribute to heart disease.

Chondrichthyes is the class of fish whose skeletons are made of cartilage.

Chopin's music is closely related to the nature of the piano as an expressive instrument.

Chow-chow, the strong Chinese dog introduced to the west in the 18th century.

Christianity. Jesus prepares his disciples for what is to come at The Last Supper (Holbein)

Agatha Christie's play *The Mousetrap* in 1978 entered its 25th year in London's West End

A Christmas Carol, Dickens' popular moral tale and a regular seasonal favourite

Christmas Island, where the third of Britain's hydrogen bombs was tested on 19 June 1967

ture and character development
Christ. See **JESUS CHRIST**

Christadelphians (Christ's brethren). Christian sect founded in America in 1848 by John Thomas (1805-71). Christadelphians hold the Bible to be inspired and infallible, administer baptism by immersion, reject the doctrine of the TRINITY, and believe in the second coming of Christ in glory to set up the kingdom of God on earth. They have no clergy.
Christchurch, city in a South Island, New Zealand, on the Banks Peninsula, main town of CANTERBURY. It was founded in 1850 as a Church of England settlement Canterbury College (1873), now the University of Canterbury, and its School of Art (1882) are there. Industries: fertilizers, rubber, woolen goods, electrical goods, furniture. Pop. (1979 est.) 327,300.

Christening. See **BAPTISM**

Christian, name of ten kings of Denmark and Norway. Christian I (1426-81) became King of Denmark in 1448 and of Norway in 1450. He controlled Sweden 1457-64. Christian II (1481-1559), the Cruel, came to the throne in 1513. He ruled Sweden in 1520-23 and was driven out of Denmark in 1523 by the nobility, who resisted his reforms. Christian III (1503-59) was elected king of Denmark and Norway in 1534. He established LUTHERANISM and weakened the HANSEATIC LEAGUE. Christian IV (1577-1648) became king in 1588. He invaded Germany in the THIRTY YEARS WAR in 1625 with little success. Christian V (1646-99) became king in 1670 and was made absolute monarch by his minister Griffenfeld. Christian VI (1699-1746) was crowned in 1730. Christian VII (1749-1808), who came to the throne in 1766, was mentally ill and his doctor, Struensee, controlled the government from 1770-1772. Liberal reforms were begun during his reign. Christian VIII (1786-1848) was elected King of Norway in 1814 but expelled the same year for refusing a union with Sweden. He became King of Denmark 1839-48. Christian IX (1818-1906) became King of Denmark in 1863. He lost Schleswig-Holstein to Prussia and Austria in 1864. Christian X (1870-1947) was king of Denmark (1912-47) and of Iceland (1912-44). He led Danish resistance to the Nazi occupation at the time of the Second World War.

Christian, name by which a follower of JESUS CHRIST is known. The major Christian Churches regard affirmation of belief in the divinity of Christ as the minimum requirement for being called Christian. This definition excludes religious bodies such as the UNITARIANS. In modern popular usage, however, the term has tended to lose all credal significance and has come to imply only that which is morally noble (eg a Christian deed).

Christian Action, group founded in 1946 by Canon John Collins in London to work for radical political and social reforms on the basis of Christian principles. It has campaigned for causes such as European union, racial equality, nuclear disarmament and the abolition of capital punishment. It is also active in social welfare work such as providing homes to needy families.

Christian Democrats, centrist political parties in several Roman Catholic countries of Europe and in West Germany. They share allegiance to the doctrine of Christianity and an antipathy to the goals of SOCIALISM and COMMUNISM. They uphold the specifically Roman Catholic political position of the defence of confessional schools and strong opposition to divorce and abortion. Their origin lies in the Roman Catholic revival and quarrel with LIBERALISM in the second half of the 19th century, although all have long since broken their ties with ULTRAMONTANISM. All of them have, in the pursuit of electoral success, acknowledged the necessity for schemes of social welfare.

Since the end of WWII the most successful Christian Democratic parties have been those of West Germany and Italy. The first chancellor of the reformed West German Republic was Konrad ADENAUER,

the leader of the Christian Democratic Union. He remained chancellor until 1963 and was followed by two more Christian Democrats, Ludwig ERHARD (until 1966) and Kurt-Georg KIESINGER (until 1969). It is indicative of the modern latitude of Christian Democratic parties that Erhard was a Protestant. The first post-war leader in Italy was Alcide de Gasperi, whose Christian Democratic party remained an important force in Italian politics, often holding office in coalition with smaller parties. In Switzerland there is an official Christian Democratic party but Belgium and Luxembourg the equivalent parties are called the Christian Social parties. Austria, despite an overwhelmingly Roman Catholic population, has since the war been dominated by the left, the Christian Socialists, however, are in fact a centrist party. France has never had a Christian Democratic party, although the Popular Republican Movement has similar policies.

Christian Democracy has spread beyond the borders of Europe, for instance to Chile, where a Christian Democratic party took office in 1964.

Christianity, religion based on faith in JESUS CHRIST as the Son of God. The essence of the orthodox Christian faith is summarized in the Apostles' and Nicene Creeds which affirm belief in the TRINITY and in Christ's INCARNATION, atoning death on the cross, RESURRECTION and ASCENSION. The moral teachings of Jesus, centred on love of God and of one's neighbour, are contained in the NEW TESTAMENT, particularly in passages such as the SERMON ON THE MOUNT. The first major schism in Christianity took place in 1054 when the eastern and western churches separated. The next occurred at the time of the 16th century REFORMATION, when western Christendom split into PROTESTANTISM and ROMAN CATHOLICISM. Further divisions among Protestants occurred in succeeding centuries, but in recent times the ECUMENICAL MOVEMENT, which aims at the reunion of all Christians, has been gaining strength. Christianity has exercised a powerful influence on many aspects of world history, political, social and cultural. The number of Christians in the world in the mid-1970s was estimated at more than a thousand million. See also pp 1244-1245, 1268-1269, 1616-1617, 1790-1791, 1912-1913.

Christian Science, religious movement founded by the American Mary Baker Eddy (1821-1910). Its followers believe that the physical and moral problems of mankind can be solved solely by means of prayer. Instruction is based on the Bible and Mrs Eddy's book *Science and Health with Key to the Scriptures*. Divine Mind is used as a synonym for God, and man, as the "image and likeness of God", is regarded as the complete and flawless manifestation of this Mind.

Christian Socialism, movement to ally the working class and the Church to combat the alleged evils of CAPITALISM. It was begun in England in the late 1840s, principally by Frederick DENISON MAURICE and Charles KINGSLEY. They wrote pamphlets, encouraged the foundation of working men's associations and founded a working men's college in 1854. The movement spread to the USA in the 1880s. The Society of Christian Socialists was founded there in 1889. In the twentieth century Christian Socialism lost much of its organizational strength, but found new, powerful advocacy in the writings of theologians such as Reinhold Niebuhr and Paul Tillich.

Christie, Dame Agatha (1891-1976), British author, a prolific and popular writer of detective stories. Her novels include *The Mysterious Affair at Styles* (1920), which introduced her most famous character, the Belgian detective Hercule Poirot, *The Murder of Roger Ackroyd* (1926), *Murder at the Vicarage* (1930), *Murder on the Orient Express* (1934), *And Then There Were None* (1940), and *Curtain* (1975). She also wrote plays, including *The Mousetrap* (1952), which held a world record for the longest continuous run at one theatre.

Christie, John (1882-1962), founder of the GLYNDEBOURNE opera. A member of a family of organ-makers and married to the soprano Audrey Mildmay, he built a small opera hall on his Sussex estate where, since 1934, world-class opera has been staged.

Christie's, popular name for Christie, Manson & Woods Ltd, a leading British fine arts auctioneers. The firm which was founded by James Christie in 1766, has its head office in London.

Christina (1626-89), Queen of Sweden (1632-54). After the regency of OXENSTIERNA (1632-44) she ruled eccentrically, giving away Crown lands. She attracted foreign scholars, including DESCARTES, to her court. She abdicated in 1654 and travelled widely, trying unsuccessfully to obtain the crown of Poland on John Casimir's abdication in 1667.

Christmas, feast in celebration of the birth of Jesus Christ. The observance of the feast does not seem to have become general in Christendom until the 4th century. The exact date of Christ's birth is unknown, but the feast has traditionally been celebrated in the West on 25 December. This date was probably chosen to oppose the pagan feast of the birth of the Roman god, Mithras, the "Sun of Righteousness", whose observance had spread to other parts of western Christendom. In the East the closely related feast of the EPIPHANY (6 January) was originally the more important but by the late 4th century it was linked with the birth of Christ. By the middle of the 5th century most Eastern Churches had adopted 25 December as the date for Christmas, but some have continued to observe it on 6 January. The feast is also celebrated socially as a season of joy lasting several days and as an occasion for the exchange of greetings and presents.

Christmas Carol, A (1843), short novel by Charles DICKENS. Ebenezer Scrooge, a miser who believes Christmas to be an unnecessary festival, is converted to generosity and benevolence by frightening visions of his past, present and future.

Christmas Island, largest atoll in the Pacific Ocean, part of the Gilbert and Ellice Islands. It was charted by Capt James Cook in 1777 and annexed to Britain in 1888. It was the site of nuclear tests by Britain (1956-62) and the USA (1962). Sovereignty is claimed by both Britain and the USA. Area: 575sq km (222sq miles). Pop. (1968) 367.

Christmas Island, island in the Indian Ocean, 320km (200 miles) S of Java. Once under British domination, it was annexed to Australia in 1958. It has important lime phosphate deposits. Area: 135sq km (52sq miles). Pop. (1975 est.) 3,000. See also p 2014.

Christmas rose. See **HELLEBORE**

Christoff, Boris (1919-), Bulgarian bass. Since making his opera debut in 1946 (Rome) he has sung with great success in all the major opera houses. He is particularly noted for the authority of his interpretation of Russian songs and of such roles as Boris Godunov and Ivan the Terrible.

Christology, doctrines relating to the person of Christ and, in particular, to the union in Him of the divine and human natures. Most of the theological controversies in the first centuries of Christendom centred on Christology and were debated at several ecumenical councils. See also ARIANISM; CHALCEDON, COUNCIL OF; COPTIC CHURCH; MONOPHYTISM; MONOTHEISM; NESTORIANISM; NICAEA, COUNCILS OF; NICENE CREED.

Christophe, Henri (1767-1820), Haitian revolutionary leader, president (1806-11) and king (1811-20). Born a free black on the island of Grenada, he participated in the armed struggle against the French in Haiti and fought a civil war with the partisans of the mulatto Pétion. Christophe ordered the construction of the citadel of La Ferrière, a fort overlooking Cap-Haïtien, the building of which cost many Haitian lives.

Christophers, Saint patron of ferrymen and travellers. There are many legends about this early martyr, who probably died

during DECIUS' persecution, c.250. According to one legend, he carried travellers across a river as a work of charity, and on one occasion Christ in the form of a child was among his passengers. His feast, 25 July, was omitted from the Roman Catholic calendar of 1969 and is no longer officially recognized, but it may be observed locally.

Christus, Petrus (c.1422-1473), Flemish painter whose works resemble those of Jan van Eyck, by whom he was influenced. Christus is best known for his success in depicting perspective. His sensitive portraits and religious subjects, include *Lamentation* and *Portrait of a Lady*.

Chromatic, in music, term used in melodic and harmonic analysis to refer to notes which do not occur in the scale of the key of the passage. Such notes are marked with accidentals and hence the chords in which they occur are also termed chromatic. Use of the term depends on the definition of the key of the passage.

Chromatography, techniques of chemical analysis by which substances are separated from one another, identified and measured. It is used extensively in organic chemistry and biochemistry. The various methods all rely on a principle of partition: components of a mixture separate as they flow at different speeds along a surface or column of specially chosen material, and are carried in a fluid (gas or liquid) called the eluent. The name chromatography comes from early methods of identifying separated components by their colour, but many colourless compounds are now identified using the technique. See also pp.898, 901, 905.

Chromite, black metallic mineral, ferrous chromic oxide ($\text{FeO} \cdot \text{Cr}_2\text{O}_3$), the only important ore of chromium. It separates from magma when igneous rocks first form. It occurs as octahedral crystals and as granular masses. Chromite is weakly magnetic and opaque; hardness 5.5; s.g. 4.6. See also p.410.

Chromium, metallic element (Cr) of the first transition series, first isolated in 1797. Chief ore is chromite ($\text{FeO} \cdot \text{Cr}_2\text{O}_3$). Chromium is a dull grey metal but takes a high polish and is extensively used as an electroplated coating. It is also an ingredient of many special steels. Properties at no. 24, at wt. 51.996, s.g. 7.19; m.p. 1,890°C (3,434°F), b.p. 2,482°C (4,500°F), most common isotope Cr^{52} (83.76 per cent). See also TRANSITION ELEMENTS.

Chromosomal aberration, any abnormality in the chromosomes of a cell, such as a variation in the normal number or a change in the normal arrangement of the genetic material, which may produce an unexpected characteristic. Down's syndrome (mongolism), for example, is associated with an extra chromosome. Some malformations have been associated with the absence of sections of certain chromosomes.

Chromosome, microscopic thread-like bodies, usually in the cell nucleus, that carry the genetic code for an organism. Each species of plant or animal usually has a characteristic number of chromosomes made up of units called GENES. See also HEREDITY, DNA, pp.176-177.

Chromosphere, region of the Sun's atmosphere closest to the solar surface or PHOTOSPHERE, extending upward for some 6,000km (3,700 miles) and increasing in temperature from 6,000°C to more than 50,000°C. The chromosphere merges into the tenuous CORONA and is the source of many solar phenomena, including flares, prominences and spicules. See also pp.974-975.

Chronicles, two historical books of the Old Testament. They trace the history of ISRAEL and JUDAH from the CREATION to the return from Exile under CYRUS (538 BC).

Chronometer, instrument for accurately measuring time, an essential navigational aid for ships before the advent of radio. The ATOMIC CLOCK is the most precise instrument to date, it is used for measuring time scientifically. See also p.453.

Chrysalis, intermediate or pupal stage in the life cycle of all insects that undergo complete metamorphosis. The chrysalis is

usually covered with a hard case, but some pupae, such as that of the silk moth, spin a silk cocoon around themselves. Within the chrysalis feeding and locomotion stop and the final stages of the development take place. See also LEPIDOPTERA, p.42.

Chrysanthemum, large genus of annual and perennial plants native to temperate Eurasia and now widely cultivated. Centuries of selective breeding have modified the original plain daisy-like flowers, and most species have large white, yellow, bronze, pink or red flower-heads. Family Compositae.

Chrysler, Walter Percy (1875-1940), an industrialist. He began his career as a railway machinist, by 1912 he was in the car industry, first as manager then as president of General Motors Corporation. From 1925 he was president of the Chrysler Corporation, producing not only Chrysler cars but also Dodge, Plymouth and Dart vehicles. From 1935 he was chairman of the corporation.

Chrysotile. See OLIVINE.

Chrysophyte. See GOLDEN-BROWN ALGAE.

Chrysostom, Saint John. See JOHN CHRYSOSTOM, SAINT.

Chrysotile, fibrous serpentine mineral, from which comes most of the world's supply of ASBESTOS. Serpentine are hydrated magnesium silicates ($3\text{MgO} \cdot 2\text{SiO}_2 \cdot 2\text{H}_2\text{O}$). The variety called chrysotile has crystalline, tubular fibres that are particularly suitable for spinning and weaving into heat-resistant fabrics.

Chuang Chou, or Chuang Tze (c.369-c.286 BC), Chinese philosopher. His book of paradoxical anecdotes, known as the *Chuang Tze*, is a fundamental work of Taoism and stresses the relativity of all human ideas.

Chuang Tze-tung (1942-), Chinese table tennis player. He dominated the sport, winning world singles titles in 1961, 1963 and 1965 and sharing in China's Swaythling Cup victories of those years. He won a fourth team gold medal in 1971.

Chuang Tze. See CHUANG CHOU.

Chub, fresh-water carp found in flowing waters. It has a large head, wide mouth and is grey-brown. Length 10-60cm (4-25in). Family Cyprinidae. Chub is also the name of a marine fish of warm seas - oval-shaped with a small mouth and bright colours. Family Kyphosidae. See also p.743.

Chubb crater, officially known as Le Cratère du Nouveau-Québec, ancient meteor crater situated between Hudson and Ungava bays in Quebec, Canada. It measures 3.2km (2 miles) in diameter and is 411m (1,350ft) deep.

Chu-Chin-Chow, musical tale of the East, based loosely on the story of Ali Baba. The music was written by Frederick Norton. It was first performed in London in 1916 and had unparalleled success, running for 2,238 consecutive performances.

Chugach Mountains, range in Alaska, extending from Cook Inlet to the St Elias Mountains. It has the Chugach National Forest. The highest peak is Mt Marcus Baker, 4,039m (13,250ft). Length approx. 450km (280 miles).

Chu-jan (fl. mid-10th century), Chinese painter who, like his master TUNG YUAN, specialized in landscapes. A Buddhist monk at the court of the Sung emperor, Chu-jan painted (often on a monumental scale) misty scenes of towering mountains surrounded by smaller hills.

Chukchi, a people who inhabit the Chukchi Peninsula in NE Russia. They are divided into the semi-nomadic reindeer herders of the tundra and the fishing communities on the coast, which also mine coal and ores of tin, tungsten, mercury and gold.

Chulalongkorn, Somdech Phra Paraminda Maha (1853-1910), King of Siam as Rama V (1868-1910). He abolished slavery and modernized the courts, built railways and advanced education and technology. He visited Europe in 1897 and 1907 and appointed many Europeans to government posts. He was frequently in conflict with the French in neighbouring Indochina.

Ch'unch'ôn, city in N South Korea, on the Pukhan River, 72km (45 miles) NE of Seoul (Soul). It is a market town for an

agricultural region producing rice, millet and soybeans. Industries: textiles and tungsten and mica mining. Pop. 122,700.

Chung, Raymond Arthur (1918-), president of GUYANA. The son of a Chinese farmer, he studied law and became a judge of the High Court in 1962. He was elected the first president of the republic of Guyana in 1970.

Ch'ung-ch'ing. See CHUNGKING.

Chungking (Chongqing, or Ch'ung ch'ing), city in S China, on the YANGTZE (Changjiang) river. It was the headquarters of the ancient Kingdom of Pa, which was overtaken by the Chin dynasty in the 3rd century BC. It was the wartime capital of China (1937-45) after Nanking (Nanjing) was besieged during the Japanese invasion. It is a transport and shipping centre with chemicals, steel, iron, silk, cotton textiles and plastics industries. Pop. 2,300,000.

Chuquibambata, town in N Chile, on the W slopes of the Andes Mountains. It has one of world's largest copper mines. Pop. 27,800. See also p.2006.

Chur, town in a Switzerland, 119km (74 miles) SE of Zürich on the River Plessur, capital of Grisons canton. It has many buildings of historic interest including an 8th-century church, the Renaissance episcopal palace and the Rhaetian museum of folklore. Industries: tourism, woodworking, textiles, beer, chocolate. Pop. (1970) 31,193.

Church, Richard (1893-1972), English author who wrote poetry, novels, essays and children's stories. His best-known work includes his three-volume autobiography *Over the Bridge* (1955), which won the Sunday Times prize for literature, *Golden Sovereign* (1957) and *The Voyage Home* (1964).

Church, in theology, the community of Christian believers, in architecture, the building in which Christians worship. The characteristics of the Church as a community have been described in the NICENE CREED as one, holy, catholic (in the sense of universal) and apostolic. In the 20th century the SCUMENICAL MOVEMENT has been trying to restore the Church unity.

Church Army, Anglican organization of lay volunteers, founded in London in 1882 by Wilson CARLILE, a clergyman. Modelled on the SALVATION ARMY, its activities include evangelism as well as social welfare work among the poor, the lonely, the elderly and the handicapped.

Church Assembly. See GENERAL SYNOD.

Church Commissioners, body consisting of the archbishops and bishops of England and representatives of priests and laity which manages the estates and revenues of the Church of England. The Church Commissioners also have the responsibility for the periodical review and reorganization of the legal structure of PARISHES and RURAL DEANERIES.

Church Congress, unofficial gathering of Anglican churchmen in England held at regular intervals between 1861 and 1938. It declined because of the emergence of other avenues of expression of church life such as the Church Assembly, established in 1920, and the General Synod which superseded it in 1970.

Churchill, Charles (1731-64), British poet and satirist. His works include *Rosciad* (1761), which made him famous, *The Prophecy of Famine* (1763), a political satire, and *An Epistle to William Hogarth* (1763).

Churchill, Clive (1927-), Australian rugby league player. He was a spirited, controversial fullback, 32 of whose 34 appearances for Australia (1948-56) were consecutive. He was a rugged, feared tackler and an inspiring captain, later a respected coach.

Churchill, John. See MARLBOROUGH, JOHN C., DUKE OF.

Churchill, Lord Randolph Henry Spencer (1849-95), British political figure, father of Winston Churchill. He entered Parliament in 1874 as a Conservative and was secretary of state for India (1885-86) and chancellor of the exchequer (1886). He resigned from office in 1886 but stayed in the Commons and attacked GLADSTONE's plans for Irish Home Rule.

Chromatography is a process for separating and analysing mixtures of substances

Chromium plating car bumpers, the chromium polishes well and resists corrosion

Chromosomal aberration, mongolism is associated with an extra chromosome

Chronometer, John Harrison's timepiece (1757) was left unaffected by ships' motion

Churchill, Sarah Jennings

Winston Churchill, great wartime leader and the personification of resistance to fascism

Church of England, Whitchurch's edition of the first Book of Common Prayer (1549)

Cicadas can be religious symbols, are eaten for food and, in some places, kept as pets

Cicero's oratory entailed a study of speech rhythms appealing to an audience

Churchill, Sarah Jennings, Duchess of Marlborough. See MARLBOROUGH, Sarah Jennings, Churchill, Duchess of **Churchill, Sir Winston Leonard Spencer** (1874-1965), British statesman, son of Lord Randolph Churchill. As a reporter in the SOUTH AFRICAN (Boer) WAR he was captured in 1899 but escaped. He was elected to Parliament in 1900 as a Conservative, but joined the Liberals in 1904. As home secretary (1910-11) he introduced important pension Acts, but suppressed labour unrest. He was first lord of the admiralty (1911-15), minister of munitions (1917-18), secretary of state for war and for air (1919-21) and colonial secretary (1921-22). He was chancellor of the exchequer (1924-29) and was out of office 1929-39, but spoke constantly against the rising threat of Nazi Germany. He was first lord of the admiralty (1939-40), and acted as prime minister and minister of defence in the War Cabinet (1940-45). His inspiring oratory made him a great war leader. He established close contact with US president F. D. ROOSEVELT, and was principal architect of the grand alliance of Britain, the USA and the USSR. He was prime minister again 1951-55, after which he retired from politics. He wrote extensively, his major works being *The World Crisis* (1923-31), *The Second World War* (1948-54) and *The History of the English-Speaking Peoples* (1956-58). He was awarded the Nobel Prize in literature in 1953. See also pp 1693, 1700-1701, 1716-1719.

Churchill Peaks, twin peaks of Mt McKinley in a central Alaska, USA. Height (N peak) 5,934m (19,470ft), (S peak) 6,194m (20,320ft). The S peak is the highest point of North America.

Churchill River, river rising in NW Saskatchewan, Canada, flows from Methy Lake through several lakes into the Hudson Bay at Churchill, NB Manitoba. It was once a fur-trade route. There is a hydroelectric power plant on its upper course. Length 1,610km (1,000 miles).

Churchill River, river in Newfoundland, Canada, rises as the Ashuanipi River in SW Labrador and flows through a series of lakes to the Atlantic Ocean near Rigolet. Formerly known as the Hamilton River, it was renamed in 1965 after Sir Winston Churchill. There is a large hydroelectric power station at Churchill Falls. Length 965km (600 miles).

Church of Christ Scientist. See CHRISTIAN SCIENCE.

Church of England, name by which the Christian Church in England, established by law in the sixteenth century, is known. Although closely interwoven with the state the Church in England before that date was not a national church but gave fundamental allegiance to Rome. However, during the REFORMATION, a period of turmoil and controversy spanning several reigns, it declared itself independent of papal jurisdiction and finally adopted the Elizabethan Settlement which, while espousing Protestantism, aimed at preserving religious unity by shaping a national Church acceptable to all persons of moderate theological views. This middle course found expression in the doctrinal formulation known as the Thirty-nine ARTICLES (1571). The liturgy of the Church of England is contained in the BOOK OF COMMON PRAYER of 1662, but since the 1960s alternative forms of worship have been coming into use. The sovereign bears the title Supreme Governor of the Church of England, and formally nominates the bishops, but this does not confer on the sovereign any spiritual powers. The Church is episcopally governed, but priests and laity share in all major decisions by virtue of their representation in the General Synod. Territorially the Church is divided into the two provinces of CANTERBURY and YORK, the archbishop of Canterbury being the Primate of All England. The overseas expansion of the Church of England during the period of the growth of the British Empire resulted in the gradual development of the worldwide ANGLICAN COMMUNION. The Church of England is the only part of the Anglican Communion still

established by law as an official state church.

Church of Ireland, name by which the Anglican Church in Ireland is known. It claims to be the heir to the ancient Church of the land. At the time of the REFORMATION it ended papal jurisdiction and introduced doctrinal and disciplinary reforms similar to those in the CHURCH OF ENGLAND. It is territorially divided into two provinces, ARMAGH and DUBLIN. The Archbishop of Armagh bears the title 'Primate of All Ireland', while the Archbishop of Dublin is styled 'Primate of Ireland'. The Church of Ireland was the legally established Church of the land until 1869.

Church of Scotland, name by which the reformed Church of Scotland, established by law, is known. After a period of turmoil during the REFORMATION, when it went through several changes, the Presbyterian system was finally established in the Church of Scotland by 1690. The character of the Church has been greatly influenced by John KNOX, who led the Calvinist party in the Scottish Reformation. The doctrinal position of the Church is based on the SCOTTISH CONFESSION of 1560, drawn up largely by Knox, and the Westminster Confession of 1643 which superseded it. Highest authority of the Church of Scotland resides in the General Assembly, presided over by a moderator, who is elected annually. The spiritual independence of the Church was recognized by an Act of Parliament in 1921 although this did not affect its status as the established Church in Scotland. See also CALVIN, PRESBYTERIAN CHURCH, pp 1432-1433.

Churi. See CEORU.

Churriguera, family of Spanish architects after whom the "Churrigueresque" style of Spanish BAROQUE is named. Chief among them were the brothers José (1665-1725), Joaquín (1674-1724) and Alberto (1676-1750), whose masterpieces are in Salamanca. The style, characterized by twisted columns and ornate stucco decoration, reached its greatest extremes in Spanish Mexico.

Chushan (Chou-shan or Zhoushan), group of islands in a China, off the NW coast of Chekiang (Zhejiang) province, in the East China Sea at the entrance to Hangchow (Hangzhou) Bay, includes main island of Chushan and approx. 100 smaller ones. It is in one of China's richest fishing grounds.

Chu Ta (Pa-ta Shan-jen) (1626-1705), Chinese ink-painter and Buddhist monk. He was famous for his eccentricity, which is reflected in his paintings - small studies of birds, fishes, and animals, often misshapen and touched with human qualities, and landscapes with an air of mystery.

Chu Teh (1886-1976), Chinese Communist military leader. In 1911 he helped overthrow the MANCHUS. He joined with MAO TSE-TUNG in 1928 to form the Fourth Red Army and establish a base in Kiangsi. He was a key leader during the LONG MARCH (1934-35) and the military planner for the final Communist victory in China. He served as deputy chairman of the government until 1959 and then as chairman of the National People's Congress. **Chuvash** (Chuvash ASSR), autonomous republic in a central European USSR. It is a region of forested steppe with most of the population engaged in agriculture, producing cereals, potatoes and fruit. Timber is also important. Oil and gas refining industries have been developed recently. Area: 18,301sq km (7,066sq miles). Pop (1970) 1,224,000.

Ch'u Yuan (c 343-c 289 BC), Chinese poet. His great poem *On Encouraging Sorrow*, is allegorical, moving from an account of the disappointments in his personal life to a mythical search for the perfect wife. He is regarded as the father of Chinese poetry.

Clyle, fine emulsion of neutral fats found in LYMPH vessels in the intestine. It results from the absorption of fats during DIGESTION. After absorption it travels through the lymphatic system and enters the blood via the thoracic duct in the neck.

Cyme, mixture of partly digested food

and digestive juices. It passes from the stomach into the small intestine and is a pulpy mush. See also DIGESTION, DIGESTIVE SYSTEM, p. 160.

Chymotrypsin, substance produced in the body that aids in the digestion of food. Chymotrypsin is an ENZYME which breaks down proteins. It is made in the small intestine, by complex chemical reactions, from chymotrypsinogen. Thus, together with other digestive substances, is secreted by the pancreas through the pancreatic duct into the duodenum which lies between the stomach and the small intestine. The secretion is controlled partly by the vagus nerve and partly by hormones which are released automatically when food enters the duodenum. See also TRYPSIN.

Chymotrypsinogen. See CHYMOTRYPSIN. **CIA** (Central Intelligence Agency), US government agency set up in 1947 to report information from abroad to the US president on questions of national security and to co-ordinate the various intelligence operations of government departments. It is responsible to the National Security Council but does not have to account for its budget. The CIA became increasingly drawn into direct intervention in the internal politics of foreign countries, and investigating security matters within the USA itself, and was subjected to heavy criticism in the 1960s and 1970s.

Ciano, Galeazzo, Conte di Cortellazzo (1903-44), Italian statesman and Fascist leader. In 1922 he took part in the Fascist March on Rome and in 1930 married Benito MUSSOLINI's daughter Edda. He became Foreign Minister in 1936 and was instrumental in Italy's entry into WWII (1940). Axis defeats led to conflict with Mussolini on foreign policy and in 1943 he was among those who forced Mussolini's resignation. He was later executed for treason.

Ciba Geigy, international industrial corporation, based in Switzerland. It manufactures dyestuffs, chemicals, plastics and pharmaceuticals, and in the mid-1970s employed about 80,000 people.

Cibber, Colley (1671-1757), English actor-manager, dramatist and poet laureate. His first play *Love's Last Shift* (1696) began the fashion for sentimental comedy. Other successful plays included *The Careless Husband* (1704) and *The Non-Juror* (1717). He wrote a famous autobiography, *An Apology for the Life of Mr Colley Cibber, Comedian* (1740).

Cicada, also called 17-year locust or dog-day cicada, large, fly-like insect found in most parts of the world. It makes a loud sound by the vibration of a pair of plates on its abdomen. Females lay eggs in tree twigs, often causing damage to the twigs. The dog-day cicada appears annually in summer. The 17-year locust, or periodical cicada, appears every 13-17 years. Cicada larvae spend up to 17 years in the ground feeding on roots and live only a week as winged adults. Length up to 50mm (2in).

Cicero, Marcus Tullius, or Tully (106-43 BC), Roman politician, philosopher and orator. A leader of the senate, he exposed CATILINE's conspiracy and prosecuted his supporters. He opposed Julius CAESAR but took no part in his assassination. He criticised Mark ANTONY in the senate and when OCTAVIAN came to power, Antony persuaded him to have Cicero executed. Among Cicero's greatest speeches were *Orations Against Catiline* and the *Philippics*. He also wrote a number of books on rhetoric and philosophical works including *De Amicitia* and *De Officiis*.

Cichlid, any of a family of tropical freshwater fish related to PERCHES, found mainly in South America, Africa and southern Asia. Cichlids are popular aquarium fish because of their brilliant colours. Many are mouth breeders, the female harbouring the unfertilized eggs inside her mouth. Family Cichlidae. See also pp 60, 61, 63.

Ciconiiformes, order of about 100 species of wading birds, including flamingos, herons, ibises, storks and spoonbills. They have long legs and necks and are found worldwide, except in polar regions.

CID (Criminal Investigation Department), branch of the London Metropolitan Police dealing with the prevention and investigation of crime, and with the preparation of information on criminal trends. It was established in 1878 and today has a force numbering approximately 1,600, all of whom are recruited from the uniformed branch (CID officers do not wear uniform, but operate instead in so-called plain clothes). The headquarters are at NEW SCOTLAND YARD, but officers may operate from local stations within the Metropolitan District. On request, the CID also offers advice and assistance to provincial forces.

Cid, Rodrigo Díaz de Vivar, "El Cid" (c. 1043-99), Spanish national hero in the wars against the Moors. He was a knight in the service of the king of Castile, but was banished in 1081 and joined the Moorish king of Saragossa. He conquered Valencia in 1094 and ruled it until his death, but the Moors took the kingdom in 1102. His various exploits have been romanticized in Spanish legend. See also p. 1304.

Cider, fermented apple juice. In the USA, unfermented apple juice is sometimes marketed as non-alcoholic cider. In the manufacture of alcoholic apple cider the fruit is crushed to a pomace which is squeezed to express the juice, about 50 litres (11 gals) being obtained from 100kg (220lb) of apples, and the juice is fermented in wooden vats or casks. For sweet ciders FERMENTATION is stopped after about three weeks, for dry ciders it is allowed to go to completion. For still ciders the carbon dioxide made by the yeast is allowed to escape; for fizzy ciders the gas is retained (champagne process) or the cider is carbonated before bottling. Perry is a similar type of drink, but uses pears in place of apples. See also pp. 698-703.

Cienfuegos, port on the S coast of W central Cuba, on Cienfuegos Bay. It is a market centre for a region producing sugar cane, coffee, tobacco and rice. Exports: sugar, rum. Pop. (1970) 85,248.

Cierva, Juan de la (1896-1936), Spanish engineer who in 1923 invented the *autogyro*, an aircraft which gets most of its lift from a freely rotating (unpowered) horizontal rotor. See also p. 520.

Cigar, small, tight roll of cured tobacco leaves prepared for smoking. Selected leaves are bound together to form a filler, then more leaves are wound round as an outer wrapper. When Christopher Columbus and his crews landed in the West Indies in 1492 they discovered the local inhabitants smoking crude cigars in ritual rites. As a result, cigars became established in Spain as a luxury product by about 1600 but were not widely smoked elsewhere until the 19th century.

Cigarette cards, small, rectangular, illustrated cards enclosed by the manufacturers in packets of CIGARETTES. They were common in Britain until WWI and depicted a variety of subjects from film stars to wildlife, usually in colour. They were issued in sets, with one or two in each packet, and the aim was to complete favourite sets. Early cards and complete sets are now collectors' items, and some rare examples command high prices.

Cigarettes, convenient form of smoking tobacco which first became popular in Britain after the Crimean War, when soldiers became familiar with the Turkish variety. In 1976 some 130,600 million cigarettes were sold in Britain alone. The consequences to the nation's health have since the 1950s become notorious. Manufacture today starts with shredding and blending of tobacco leaf, mostly the Virginian variety, that has been matured and cured for up to two months. The subsequent packing, cutting to length, wrapping into foil, boxing and cartoning is all done by machines.

Cilea, Francesco (1866-1950), Italian composer. He is best known for several charming operas, especially *L'Arlésiana* (1897), in which Enrico CARUSO scored his first major success, and *Adriana Lecouvreur* (1902), which was internationally popular.

Cilia, protruding hair-like filaments characteristic of the group of single-celled pro-

tozoan animals called Ciliata. The animals beat the cilia rhythmically to move through the water in which they live, a typical example is *Paramecium*. See also pp. 10-11.

Ciliate, one of a large class of protozoa found in fresh water, characterized by hair-like cilia used for locomotion and food collecting. Subclasses include the Holotrichs, with cilia over the entire body (*Paramecium*); Spirotrichs, with fused cilia around the mouth (*Stentor*); and Peritrichs, with cilia around the mouth and possessing a stalk for attachment (*Vorticella*). See also p. 10.

Cilicia, ancient region of SE Asia Minor, (now in Turkey), between the Taurus Mts and the Mediterranean Sea. Its chief city was Tarsus. The region was dominated by the Assyrians and Persians before being hellenized in the 4th century BC. It was conquered by Rome in 67 BC, and was invaded by the Arabs in the 8th century AD. An Armenian state was set up there in 1080 and the region fell to the Turks in 1375.

Cima, Giovanni Battista (c. 1460-1518), called Cima da Conegliano, Italian painter of the Venetian School, best known for his half-length Madonnas. He also painted mythological scenes.

Cimabue, Giovanni, 13th-century Florentine painter, an important transitional link between the rigid Byzantine style of painting and the greater realism of the 14th-century Florentine School. His best-known work is *Madonna and Child Enthroned* (Uffizi Gallery, Florence). Much of Cimabue's work has been spoilt by time or accident. The frescoes at the Church of St Francis, Assisi, and the mosaic at Pisa Cathedral are in poor condition and the great *Crucifixion* at S. Croce, Florence, was damaged in the flood of 1966. Cimabue is said to have been the teacher of Giotto. See also pp. 1351, 1351.

Cimarosa, Domenico (1749-1801), Italian composer, chiefly of operas, of which he wrote more than 60. His first, *Le Stravaganze del Conte*, was performed at Naples in 1772. He also wrote seven CANTATAS and six ORATORIOS.

Cimon (d. 449 BC), Athenian statesman and general. His numerous military and political successes made him leader of the aristocrats opposing PERICLES and later PERICLES. His greatest military success was the destruction of a Persian fleet c. 468 BC. See also p. 1204.

Cinchona, genus of evergreen trees native to the Andes and grown in South America, Indonesia and Zaire. The dried bark of the trees is a source of QUININE and other medicinal products. Family Rubiaceae. See also pp. 1090, 1091.

Cincinnati, city and port of entry in SW Ohio, USA, on the Ohio River; third largest city in Ohio. Originally named Losantiville, it grew around Fort Washington, established in 1789 by the US government to quell Indian attacks. Development was spurred by the steamboat trade on the Ohio River and the completion of the Miami and Erie Canal in 1832, making the city a shipping centre for farm produce. In order to compete with the growing cities of Chicago and St Louis, Cincinnati built its own railway in 1880, connecting with Chattanooga, Tennessee, and it is still the only US city to own and lease its own railway. In 1925 a city manager was appointed and a city council was established to counter widespread corruption in politics. The city has a university (1819) and several other colleges. Industries: machine tools, soap products, brewing, meat packing, aircraft engines, metal goods. Pop. (1973) 426,245.

Cincinnatus Lucius Quinctius (c. 519-438 BC), legendary Roman hero. Consul in 460, he was named dictator by the Senate in 458. A farmer, he left his land, defeated the Aequians in 16 days and then renounced his post to return to his farm. According to legend he was recalled to the dictatorship in 439 to defeat the traitor Spurius Melius.

Cinder cone, conical hill or mountain composed largely of unconsolidated material, mostly ash ejected by a volcano.

It is characteristic of volcanoes that produce large amounts of gas and ash rather than lava. The coarser the ejected material, the steeper the sides of the cone. See also pp. 204-205.

Cinderella, folk-tale of international derivation. More than 500 versions of the story are known in Europe alone. All the variations involve a youngest daughter, Cinderella, who is badly treated by a jealous stepmother and stepsisters, however, she is helped by a fairy godmother, and finally gets married to a rich prince.

Cine camera, apparatus that takes a number of consecutive still photographs or frames, on film, at the rate of about 24 frames per second. The illusion of motion is created when the developed film is projected on to a screen. If the motor of the cine camera is speeded up so that more frames are shot each second, the resulting film projected at normal speed is in slow motion. Conversely, a slowed-down cine camera produces speeded-up action. Big-screen cine cameras use 70mm cine film, most professional cameras 35mm, and some smaller cameras 16mm or 8mm. See also CINEMA, CINEMATOGRAPHY, pp. 632-633.

Cinema, motion pictures as an industry and artistic pursuit. For much of its history it has been dominated commercially by the USA. Public showings of (silent) moving pictures began in the 1890s, but not until *The Jazz Singer* (1927) was speech heard in a full-length film. By then the cinema was big business with mass appeal, and before long pure entertainment was being produced very largely by a cluster of Hollywood companies. In Germany and Russia, meanwhile, startling technical innovations showed the creative possibilities of the medium. The 1930s, which saw the widespread introduction of colour and the lavish musical with elaborate sets and squads of pretty dancers, concluded with *Gone with the Wind* (1939), a huge money-spinner with lasting appeal. The growth of television in the USA in the 1940s (a decade later in Europe) profoundly altered film economics. With the decline of Hollywood came the rise of the independent producer and director. Films now were fewer but more spectacular, with a multiplicity of stars, and backed by international finance. In Europe after WWI film-makers explored social and psychological themes with often disturbing candour, and although the British cinema flourished in the 1950s and early 1960s with well-produced comedies and studies of working class life, it suffered thereafter for want of finance. See also ANIMATION, CINE CAMERA, CINEMATOGRAPHY, DOCUMENTARY FILM, pp. 1682-1683, 1752-1753, 1760-1761.

Cinemascope, wide-screen cinema projection system (using an anamorphic lens originally invented by the French physicist Henri Chrétien), developed from 1952 at the studios of Twentieth Century-Fox in the USA.

Cinematography, technique of taking and projecting cine film motion pictures (movies), the basis of the CINEMA industry. Based on experiments and inventions of the 1880s and 1890s (by such people as Thomas Edison in the USA and the LUMIERE brothers in France), cinematography was applied professionally to the taking and showing of films soon after the turn of the century. Sound films were introduced with the making of *The Jazz Singer* in 1927 and cinematography became a popular hobby for amateurs from the 1930s onwards. For technical details of cinematography, see pp. 632-633.

Cinema-verité, style of film-making first practised by Dziga Vertov in the 1920s, but which became popular in the 1960s. It attempted to record truthful action within a documentary-like style and avoid the distance between audience and subject imposed by traditional camera work. It represented a conscious rejection of the conventions of Hollywood narration. The style was used both in dramas, particularly by TRUFFAUT and GODARD, and in documentaries which often contained direct and explicit content that was politi-

Ciliates, the class of protozoa which use numerous hair-like cilia for propulsion

Giovanni Cimabue, a detail from the great Crucifixion at S. Croce, Florence

Cinderella, the universal heroine who triumphs over the jealousy of her ugly sisters

Cinema, Al Jolson as he appeared in the first "talking" picture, *The Jazz Singer*

Circe surrounded her palace with the men she had changed magically into animals

Circuit breakers protect an electrical circuit from damage due to sudden overloads

Cistercians expanded their order in the 12th century under St Bernard's influence

Citizen Kane, highly acclaimed film which caused a great scandal when it was released

cal, both in its inference and its presentation

Cinemascope, motion picture wide-screen system. Invented in the 1950s by Fred Waller, it used three electronically synchronized cameras and projectors to shoot the film on a large screen which partly surrounded the audience. It was later abandoned for a single-lens system. See also MOTION PICTURE, WIDE SCREEN

Cineraria, or florist's cineraria, perennial hothouse plant native to the Canary Islands. It has heart-shaped leaves and large clusters of white, pink, blue or purple daisy-like flowers. Family Compositae, species *Senecio cruentus*

Cinnabar, deep red, brilliant-to-dull mineral, mercuric sulphide (HgS), the major ore of mercury, found in hydrothermal veins (formed by water at high temperature) and volcanic deposits. It occurs in the rhombohedral crystal system as hexagonal crystals, often twinned, and as granular masses. The ore is reduced to mercury by roasting. Hardness 2-2.5; s.g. 8.1.

Cinnamon, light-brown spice made from the dried inner bark of the cinnamon tree. Its delicate aroma and sweet flavour make it a common ingredient in baked foods, and was once extremely expensive. It was also used for religious rites and witchcraft. The tree is a bushy evergreen native to India and Burma and now cultivated in the West Indies and South America. Family Lauraceae, species *Cinnamomum zeylanicum*. See also pp 706, 707

Cino de Pistoia (c.1270-c.1336), Italian jurist and poet. He was a friend of his younger contemporary PETRARCH, on whom his lyric verse dealing with loneliness and love had a great influence

Cinquefoil, any of various annual and perennial plants and shrubs of the rose family, native to the temperate and cold regions of the world. The leaves are composed of three leaflets, and the small white, yellow or red flowers have five petals. Family Rosaceae, genus *Potentilla*

Cinque Ports, association of certain ports (originally five) in SE England, with special privileges granted in return for responsibility for defending the coast. The grouping of Dover, Hastings, Hythe, Romney and Sandwich began under the Anglo-Saxons and was expanded by the Norman kings. The association, to which Winchelsea and Rye were added in the 12th century, reached its height during the first half of the HUNDRED YEARS WAR, after which the influence of the ports declined

Circadian rhythm, aspect of body function that varies regularly in a cycle lasting about 24 hours. Examples are waking and sleeping, and variations in temperature, blood pressure, pulse rate, glandular secretions, blood-sugar levels and the rate of growth of body cells. See also p.1107, BIOLOGICAL RHYTHM, JET LAG

Circassians, Muslim people native to the Caucasus Mts. During the 19th century, they unsuccessfully resisted the Russian government's take-over of the Caucasus. They often figure in Russian literature, such as in Mikhail Lermontov's *Hero of our Times* (1840)

Circe, in Greek mythology, seductive but baleful enchantress whose spells could change men into animals. Mistress of the island of Aea, she kept Odysseus with her for a year, changing his men into swine until, protected by Hermes, he forced her to transform them back again

Circuit, electric, system of electric conductors and appliances or electronic components connected together so that they form a continuously conducting path. In modern electronic devices, circuits are often printed in copper on to a plastic card (a printed circuit) to which the transistors, capacitors and other components are soldered. Smaller devices use INTEGRATED CIRCUITS, in which a chip of semiconductor is treated in such a way that it consists of a number of components connected together. See also pp 872, 878-884

Circuit breaker, automatic switch in an electrical circuit that functions like a FUSE, disconnecting the circuit if abnormal conditions, such as overloads, occur. It is not destroyed in operation and can be

re-closed (re-set). Circuit breakers on transmission lines are controlled by precise relays that locate failures and cause only the needed breakers to operate, thus isolating a specific section. See also p.868

Circular motion, in physics, any type of movement that can be related to or analysed in terms of the motion of an object around a circle. See pp 828-829

Circulation, See CIRCULATORY SYSTEM

Circulation, atmospheric, flow of the atmosphere around the earth. It is caused by temperature differences in the atmosphere and the rotation of the earth, which transfers heat from warm zones (the tropics) to cooler zones (towards the poles). The poleward circulation due to heat transference, usually called convection, gives rise to large-scale eddies such as CYCLONES and ANTICYCLONES, low-pressure troughs and high-pressure ridges. The eddies also take part in the longitudinal atmospheric circulation around the earth, with the earth's rotation maintaining easterly winds towards the equator and westerlies towards the poles. Narrow JET STREAMS blow swiftly over middle latitudes, usually horizontally east in the STRATOSPHERE, and move farther towards the poles during the summer. See also p.248

Circulatory system, the means by which oxygen and products of digested food are carried to the body's tissues and carbon dioxide and other waste products are removed from them. It consists of BLOOD VESSELS that carry the BLOOD, propelled by the pumping action of the HEART. Mammals, birds and some reptiles have two circulatory systems: the pulmonary (lung) and the systemic (body). Blood travels to the lungs, picks up OXYGEN and gives off CARBON DIOXIDE, then flows into the HEART which pumps it into the AORTA, which branches into arteries and capillaries. The blood picks up waste products in the capillaries, which join to form veins leading back to the heart. It is then pumped back to the lungs and the entire cycle is repeated. See also pp 152-153

Circumcision, operation of cutting away the whole or part of the foreskin of the penis or removal of the clitoris, which is sometimes called excision. Male circumcision is done for sanitary reasons or as a ritual among ethnic groups, where it often signifies the formal introduction of a man into his group or the achievement of status; female circumcision is intended to reduce sexual pleasure. See also PUBERTY RITUALS

Circumcision, Feast of the, in the Christian liturgical calendar, the commemoration of the circumcision of Christ, based on the account in Luke 2:21. The feast is traditionally kept on the eighth day after Christmas - 1 Jan.

Circumference, distance round the boundary of a plane geometric figure, nearly always applied to a circle, for which it has the value $2\pi r$, where r is the radius. See also p.794

Circumnavigation, process of navigating round something, usually with reference to sailing round the world. This was first accomplished by a Spanish expedition commanded by the Portuguese navigator, Ferdinand MAGELLAN (1519-22). Magellan discovered and sailed the length of the strait at the tip of South America that bears his name, and crossed the Pacific. One ship, the *Victoria*, out of the original five, completed the round voyage to Spain, but Magellan himself was killed en route. See also p.1368

Circumstantial evidence, in law, indirect evidence arrived at by providing proof of other events and supporting facts related to an issue. An example is the discovery of a defendant's fingerprints at the scene of a crime

Circus, form of entertainment featuring trained animals, acrobats and clowns, usually performed by travelling companies in outdoor tents or "big tops". Circuses originated in the Roman arena, where chariot races and gladiatorial battles took place. The first modern circus was staged in London in 1768 by Philip Astley, and today the circus is a popular entertain-

ment that attracts large crowds. In the USA circuses are often associated with the name Phineas T. BARNUM (1810-91)

Circus Maximus (c.6th century BC), oldest and largest of the Roman stadia used for horse and chariot races, now no longer standing. According to tradition it was erected by Tarquin I, the first Etruscan king of Rome, substantially rebuilt by Julius Caesar and enlarged by later emperors. At its greatest it was 610m (2,000ft) long and 190m (623ft) wide, and is said to have seated 230,000

Cire perdue, literally "lost wax", method of casting metal objects - usually bronzes - used at least since classical antiquity. First, the object is moulded in clay or plaster in roughly the desired shape but slightly smaller. This core is covered in wax not more than a 1/2 inch in thickness, and further modelling is undertaken. Straws of wax pipes are fitted to admit the molten metal and release hot gases. The whole is then covered in a heat proof mould, the wax melted away and the metal poured into the space it occupied. The other method of hollow casting, SANDCASTING, is most often used in industrial processes. See also p.393

Cirl bunting, small seed-eating bird with a brown back and yellow underparts, originally a Mediterranean species. Length 15cm (6in). See also BUNTING

Cirque, or corrie, bowl-shaped, steep-sided hollow in rock formed through erosion by ice. It is typical of a glaciated mountain region. The eroded area is usually cut by repeated freezing and thawing, or it may result from glacial movement. After a glacier has retreated, many cirques become round lakes fed by water from the melting glacier. See also pp.224-225

Cirrhosis, degenerative disease in which bands of fibrous tissue form in organs, usually the LIVER. The liver becomes hard, blood-flow through it is impaired and some cells die. Blood vessels may rupture and the liver is unable to detoxify harmful material, leading to serious and often fatal consequences. It is usually associated with ALCOHOLISM but may be caused by poor diet, viral hepatitis or rare disorders. Generally weakness and a loss of appetite are followed by jaundice, tendency to bleed and, in women, failure to menstruate. Early treatment can arrest its development. See also pp.1069, 1081

Cirripedia, class of invertebrate animals, including the shell-backed BARNACLE and some non-shelled members. They are a subclass of CRUSTACEA.

Cisalpine Republic, state established in northern Italy by NAPOLEON in 1797. It was the first unification of the northern states in modern Italian history. It became the Italian Republic in 1802 and the Kingdom of Italy in 1805

Cistercians, religious order of monks founded by St Robert of Molesme in 1098, based on ideals of strict and primitive Benedictinism. A cloistered community dedicated to contemplation, the Cistercians were noted agricultural pioneers. In the 17th century came the Strict Observance reform, whose supporters are popularly known as TRAPPISTS. See also pp.1321, 1321

Cithaeron (Kithairón), mountain range in central Greece, bounded by Boeotia (N) and Attica (S), rising to 1,400m (4,620ft). It was sacred to Dionysus and the Muses in Greek legend. Length 16km (10 miles)

Cithara, Cithern. See CITHERN

Citizen Kane, US film (1941). Written, produced and directed by Orson Welles from Herman J. Mankiewicz's screenplay and photographed by Gregg Toland. This film described the career of a newspaper tycoon markedly similar to William Randolph Hearst. It starred Welles, Everett Sloane, Joseph Cotton and Agnes Moorehead. Inventive and unorthodox, it remains one of the most powerful films in cinematic history. See also p.1760

Citizen of the World, satirical essays by Oliver GOLDSMITH, which established his name when they appeared as the *Chinese Letters in The Public Ledger* in 1760-61. They were published as a collection under their new name in 1762

Citlaltépetl (in Spanish, Orizaba), inactive volcanic peak in a Mexico, 97km (60 miles) E of Puebla. It is the highest point in Mexico, rising to a height of 5,700m (18,701ft).

Citric acid, colourless crystalline solid ($C_6H_8O_7$) with a sour taste. It is found in a free form in citrus fruits such as lemons and limes, and is used for flavouring, in effervescent salts, and as a mordant in dyeing. Properties: s.g. 1.54, m.p. 153°C (307.4°F). See also p 908.

Citric acid cycle, or **Krebs cycle**, also called tricarboxylic acid cycle, biochemical pathway by which most living organisms obtain much of their energy from their food. It is also the process of cell respiration which releases the carbon dioxide breathed out by plants and animals. It comprises a cycle of complex chemical reactions, many of which release energy in the form of ATP (adenosine triphosphate) which provides chemical energy for metabolic reactions. See also pp 909-909.

Citrine, semi-precious stone, a glassy wine-yellow variety of QUARTZ. It is translucent and has an appearance similar to TOPAZ. It is also known as false topaz or topaz quartz.

Citron, evergreen shrub or small tree of the RUTACEAE family, native to Asia. It has short spines and oval leaves. The large oblong fruit is lemon yellow and its fragrant rind is often candied. Height: up to 3.5m (11.5ft). Family Rutaceae; species *Citron medica*. See also p 690.

Citrus, important group of trees and shrubs of the genus *Citrus* in the rutaceae family. They include GRAPEFRUIT, KUMQUAT, LEMON, LIME, ORANGE, TANGERINE and UGLI. Native to subtropical regions, they are widely cultivated wherever there is plenty of sun and moisture. The stems are usually thorny, the leaves bright green, shiny and pointed. The flowers are usually white, waxy and fragrant. The fruit is usually ovoid with a thick, aromatic rind. The inside of the fruit is pulpy and juicy and is divided into segments that contain the seeds. Most citrus fruits contain significant amounts of vitamin C. Family Rutaceae. See also p 688.

Cittern, musical instrument popular in western Europe in the 16th to 18th centuries. A shallow flat-backed instrument, its four pairs of wire strings were normally plucked with the fingers.

City, any urban complex larger or more important than a town. In Britain the word is not used to denote any particular form of government, but is applied to all towns that have cathedrals, the title of city has also been granted to other large towns by royal charter. In the USA the term has a precise meaning, and is applied to any incorporated municipality. Cities have been central to social, cultural and political development since earliest times, and city life has increasingly become divorced from the countryside since the Industrial Revolution.

City, The. See LONDON.

City of God, The, religious and philosophical work by ST AUGUSTINE OF HIPPO. Begun about two years after the Visigoths sacked Rome in 410 and completed in 426, it was a reply to charges that the influence of Christianity had caused the fall of the city. It elaborates a Christian philosophy of history from the fall of Adam to the end of time. History is viewed as the development of two opposing powers, the city of God and the city of the world, the latter being a place of conflict and confusion. All mankind must eventually belong to one or other of these cities. After the Last Judgement the city of God becomes heaven and the city of the world hell.

City-state, self-governing political unit comprising an independent city and its adjacent hinterland. Historically, city-states have occurred when economic conditions favoured the creation of towns. Other influences have been the combination of geographical features (eg poor land communications) or political factors (eg no strong central government) that permitted the existence of many small autonomous states, as in classical Greece and renaissance Italy. Many, like ancient

Athens and medieval Florence, flourished as commercial and cultural centres. See also pp 1202, 1206, 1850, 1856.

City Temple, London, United Reformed church, the major Nonconformist church in London. It was founded some time before 1640 when the first known pastor was Dr Thomas Goodwin, chaplain to Oliver Cromwell. It was moved to Holborn in 1874. In 1941 it was burned down, and was rebuilt in 1958.

Ciudad Bolívar, city and port in a Venezuela, capital of Bolívar state, on the River Orinoco. It was founded in 1764 as Angostura. It has the longest suspension bridge in South America, the Angostura, which is 712m (2,336ft) long. Industries: wood products, leather. Pop. (1971) 103,728.

Ciudad Guayana. See SANTO TOMÉ DE GUAYANA.

Ciudad Juárez, city in Chihuahua state, N Mexico, on the Rio Bravo del Norte (Rio Grande), on the border of Mexico and the USA. It is connected by bridges to El Paso, Texas, USA. It has the church of the Mission of Our Lady of Guadalupe (1659). The city was named after Mexico's President Benito Juárez (1888). Today it is a commercial centre and has processing industries for the surrounding cotton-growing region. Industries: textiles, food processing. Pop. (1975) 520,500.

Ciudad Ojeda (Lagunillas), city in NW Venezuela, on the NE shore of Lake Maracaibo. Situated N of the Lagunillas oil field, the city is an important oil centre. Pop. (1971) 83,083.

Ciudad Rodrigo, town in Spain, scene of two battles during the Napoleonic Wars. In 1810 Marshal NEY took the town for the French after a long siege; WELLINGTON's army recaptured it for the anti-French coalition in 1812.

Ciudad Trujillo. See SANTO DOMINGO.

Civet, or **civet cat**, small, nocturnal, carnivorous animal, related to the genet and mongoose, found in Africa, Asia and Europe. It has a small head and narrow body set on long legs and its coat is a brindled grey-yellow with black markings. There are about 20 species including the forest-dwelling African civet (*Civettus civetta*). The substance known as civet (musk) is a fatty secretion from the animal's scent glands and was once used as a base for perfumes. Length (overall) 53cm (21in) to 150cm (59in). Family Viverridae. See also pp 311, 586.

Civetone, chemical compound smelling strongly of musk, obtained from the perianal glands of civets and used in perfumery. Chemically it is a ketone, containing the group $-C=O$. See also p 586.

Civil action, in law, suit in which a plaintiff sues a defendant for breach of a law relating to their mutual affairs. A typical example is breach of CONTRACT. Civil actions are different from criminal ones, in which the Crown takes the role of prosecutor.

Civil aviation, term used to describe the whole of the aircraft industry excluding military applications. It includes the design and manufacture of passenger and freight aircraft and the organization and running of airlines. See also AIRPORT, AIR-TRAFFIC CONTROL, pp 514-521, 526-527.

Civil defence, non-military organization for maintaining the necessities of life in a national emergency. The British Civil Defence during WWII had 1.8 million workers, mostly voluntary, employed in firefighting, ambulance services and rescue parties and organized by local authorities and industries. The Civil Defence was abolished in 1945 but set up again three years later. Its chief concern then was the organization of resources after possible nuclear attack. Ten civil defence regions were set up in England and one in Wales to create effective chains of command in the event of the breakdown of central government, and local authorities were empowered to set up civil defence organizations. This Civil Defence Corps was abolished in 1968, since then local authorities have been voted an annual budget (£14.5 million in 1976) to extend their services to prepare for war

emergencies. Most of the Civil Defence Act was repealed in 1976.

Civil disobedience, passive resistance to law or authority, usually associated with an act of conscience. The term originated with Henry Thoreau's essay *Resistance to Civil Government* (1849), in which he argued that disobeying a law is preferable to disobeying one's own conscience. It was practised in India by the supporters of Mahatma K. Gandhi and in the USA by the followers of Martin Luther King, Jr.

Civil engineering, field of engineering that deals with the creation, improvement and protection of the communal environment. Civil engineers provide facilities for living, industry and transportation, including large buildings, roads, bridges, canals, airports, water-supply systems, dams, harbours, docks, aqueducts, tunnels and other constructions. Civil engineering requires a thorough knowledge of surveying, construction, material properties, soil properties and hydraulics. Important divisions of the field are architectural, irrigation, transportation, soil and foundation, geodetic, hydraulic and coastal and ocean engineering. See also pp 550, 522-542.

Civil law, legal system derived from ROMAN LAW. It is different from COMMON LAW, the system generally adhered to in England and some other English-speaking countries. Civil law is based on a system of codes, the most famous of which is the CODE NAPOLEON (1804), and decisions are precisely worked out from general basic principles *a priori* - ie, the civil law judge follows the evidence and is bound by the conditions of the written law and not by previous judicial interpretation. Civil law influences common law in jurisprudence and in admiralty, testamentary and domestic relations, it is also the basis for the system of equity. It is prevalent in continental Europe and in Louisiana (USA), Quebec Province (Canada), and Latin America. See also p 1870.

Civil liberties, basic rights that every citizen possesses and governments must respect in a democracy. In some countries, the courts ensure freedom from government control or restraint, except as the public good may require. See also CIVIL RIGHTS AND LIBERTIES.

Civil List, annual grant of money voted by Parliament to supply the expenses of the royal establishment in Britain. The money comes from the Consolidated Fund. The list has its origin in the parliamentary grant made to WILLIAM III in 1698 to supplement his hereditary revenues. It got its name, early in the 18th century, from the practice of charging the salaries of judges and government officers to the list, a practice which was abandoned in 1831. It now defrays no governmental expenses. The amount voted may differ each year, as may the specific appropriations to the several members of the royal family. Since 1975 the sum has been reviewed annually and in 1980 was about £3,317,300.

Civil List pensions, money rewards given by the British Crown, originally to people out of the CIVIL LIST. In the 18th century they were part of the patronage system used by the Crown to secure political support. In 1782 the award of secret pensions was made illegal. In 1831 the maximum sum available for pensions was set at £75,000. When Queen Victoria came to the throne pensions were separated from the Civil List and the Crown was directed to award them to major contributors to the arts and sciences.

Civil rights, certain rights conferred legally upon the individual by the state, therefore varying from country to country. In Anglo-Saxon democracies such rights include, in the absence of special disqualifications, trial by jury, HABEAS CORPUS and the right to vote. The modern use of the phrase is principally American and refers, not so much to relations between the state and the individual as to relations between individuals, both men and women and in particular Blacks and Whites. The recent history of the Civil Rights movement in the USA dates from the Supreme Court decision against

Citrus, thorny evergreen trees producing a variety of fruit and fragrant white blossom

Civil aviation, a converted de Havilland bomber flew the first scheduled air service

Civil engineering changes natural landscapes into modern man-made environment

Civil rights, demonstrators picket the White House during the protests of the 1960s

Civil Service

René Clair, French film director who is one of the outstanding figures of the cinema

Clams, numerous species of molluscs whose two shells close tightly together

Clarinets developed into their modern form around the middle of the last century

Arthur Clarke, the science fiction writer whose *The Sentinel* inspired the film 2001

segregation in schools (1954), a decision which President EISENHOWER used federal troops to enforce in Little Rock, Arkansas, in 1957. The Civil Rights Act of 1957 established the Civil Rights Commission, whose duty it is to see that no person is deprived of the vote by poll taxes, literacy tests or any other means. The 1964 Civil Rights Act prohibits discrimination on the ground of race in employment and housing. It is similar in intent to the British RACE RELATIONS ACT. See also PETITION OF RIGHT, BILL OF RIGHTS, p.1849

Civil Service, administrative establishment for carrying on the work of government in a country. In Britain the origin of the Civil Service is the personal household of the medieval monarchy. The modern service was developed in the years 1780 to 1830 and by the acts of 1855 and 1870. It was then that it became civil, not political. It also became permanent, its personnel not changing with a change of monarch or ministers. As the Crown moved out of active politics to become a constitutional monarchy, so the Crown's administrative servants abandoned their political roles to become a constitutional bureaucracy. By a series of acts the holding of a non-ministerial, salaried office under the Crown became incompatible with a seat in Parliament. At the same time the weight of parliamentary business became too heavy for ministers to attend to both policy-making and administration of the day-to-day affairs of their departments. The TREASURY got its first permanent secretary in 1805, the colonial office a permanent official in 1825. Originally the service was housed in Whitehall, London. That remains its centre, but the service has now grown so vast that it is housed throughout the country.

Civil war, war between political factions or regions within the same country, nation or state to decide which of them shall exercise powers of government over the whole. See also AMERICAN CIVIL WAR, ENGLISH CIVIL WAR, SPANISH CIVIL WAR. **Civitavecchia**, town in Roma province, Latium, w central Italy, on the Tyrrhenian Sea, chief port for Rome. It was sacked by the Saracens in 828. The construction of its citadel was supervised by MICHELANGELO. It has an arsenal built by BERNINI (1508). Main industry: building materials. Pop. (1971 est.) 48,500.

Cizek, Franz (1865–1947), Czechoslovakian art teacher, famous for his methods of teaching children. In 1893 he started a school for juveniles at which children were encouraged to draw whatever they wished. Their work was exhibited abroad. **Clackmannanshire**, former county in central Scotland, now part of Central Region. It was the smallest county in Scotland, lying between the Ochil Hills (N) and the River Forth (SW). The county town was Alloa. Industries: coal-mining, woollens, brewing. Area: 142sq km (55sq miles).

Clacton-on-Sea, town in Essex, England, 21km (13 miles) SE of Colchester, mainly known as a seaside resort. An important Palaeolithic stone-working site has been found there, the earliest such in Britain. Pop. (1971 est.) 38,000.

Cladocelache, extinct SHARK of the Devonian Period (350 million years ago), exemplary among backboned animals in showing an early but complete development of jaws, teeth and paired fins.

Clair, René (1898–), French filmmaker. His early work was influenced by Surrealism but his later films concentrated more on complex characterization. His films include *The Italian Straw Hat* (1927), *A nous la Liberté!* (1931), *The Flame of New Orleans* (1940), *Les belles de nuit* (1952) and *Les Fêtes Galantes* (1965). See also pp 1760–1761.

Clairvoyance, supernatural or extra-sensory power to see objects or witness events removed in time and space from the observer, a form of extra-sensory perception. Clairvoyant-like experiences may be induced with drugs. See also PARAPSYCHOLOGY; PRECOGNITION, p.1892.

Clam, bivalve mollusc found mainly in marine waters. It is usually partially buried in sand or mud with the two parts of

its shell slightly open for feeding. With a large foot for burrowing, its soft, flat body lies between two muscles for opening and closing the shells. A fleshy part called the mantle, lies next to the shells. Clams feed on PLANKTON. Class Pelecypoda. See also pp.26, 182.

Clan, unilineal descent group, in which KINSHIP is recognized either through the male line (patrilineal) or through the female line (matrilineal). A notable example is the Highland clans of Scotland, which stress mutual obligations and duties. See also MATRIARCHY, PATRIARCHY, p.1834.

Clapham Junction, railway station in south London, serving passengers in the commuter belt south of the capital. It is one of the world's busiest stations, more than 2,500 trains pass through it each day.

Clapham Sect, group of Evangelical reformers in Britain in the years c 1790–c 1830. Their name derived from the meetings in Clapham of William WILBERFORCE and his friends. Originally known as the "Saints", they were especially influential in prison reform and the abolition of slavery. See also pp.1493, 1613.

Clapton, Eric (1945–), British rock guitarist much admired for his virtuosity. He has played in several groups, notably Cream (1966–68) and Derek and the Dominos (1970–72). His records include *Wheels of Fire* (1968) and *Layla* (1970).

Clare, Saint (1194–1253), Italian nun, founder with St FRANCIS OF ASSISI of the Franciscan nuns (1215). They were also called Poor Clares. A strict order which placed special emphasis on the vow of poverty, it spread throughout Europe in the 13th and 14th centuries. She was canonized in 1255. Feast: 12 Aug.

Clare, John (1793–1864), British nature poet. The son of a labourer, his poetry is notable for its descriptions of nature and the countryside. His works include *Poems Descriptive of Rural Life and Scenery* (1820), *The Village Minstrel* (1821), *The Shepherd's Calendar* (1827) and *The Rural Muse* (1835). He was declared insane in 1837.

Clare, county in w Republic of Ireland, in Munster province, on the w coast between Galway Bay and the River Shannon estuary. The area is hilly and infertile. The chief crops are oats and potatoes, sheep, cattle, pigs and poultry are raised, and fishing is important. Ennis is the county town. Area: 3,188sq km (1,231sq miles). Pop. 75,000.

Clare Island, small island off the w coast of the Republic of Ireland, at the mouth of Clew Bay. It is noted for the ruins of a 13th-century abbey and 16th-century castle. Area: 16sq km (6sq miles). Pop. (1971) 168.

Clarence, Dukes of, English peers. The title was first granted in 1362 to Lionel (1338–68), third son of Edward II. Other holders include Thomas, second son of Henry IV, George (1449–78), third son of Richard of York, William IV (1765–1837) before his accession, and Prince Albert (1864–92).

Clarence, George Plantagenet, Duke of (1449–78), Irish-born younger brother of EDWARD IV of England. He joined his father-in-law, the Earl of WARWICK, in revolt against Edward (1469–70) but in 1471 rejoined his brother. In 1478 he was accused of treason and secretly executed in the Tower of London.

Clarendon, Edward Hyde, 1st Earl of (1609–74), English statesman and historian. He was initially critical of CHARLES I, but became a leading royal adviser in 1641 and negotiated the RESTORATION in 1660. As CHARLES II's chief minister, his caution made him unpopular. He was forced into exile in 1667, where he wrote his *History of the Rebellion* about the English Civil War. See also p.1426.

Clarendon, George William Frederick Villiers, 4th Earl of (1800–70), British statesman and diplomat. He was Lord-Lieutenant of Ireland (1847–52) during the famine, and Foreign Secretary 1855–58, 1865–66 and 1868–70.

Clarendon, Constitutions of (1164), 16

articles issued by HENRY II of England to limit the temporal and judicial powers of the Church. The most controversial article was the one requiring members of the clergy who had been convicted in church courts to be surrendered to secular courts for punishment. Thomas à BECKET initially accepted the articles, but repudiated them after the Pope criticized them. See also pp.1328, 1329.

Clarendon Code, four English statutes passed (1661–65) under CHARLES II's minister CLARENDON (but opposed by him) to strengthen the Church of England. Nonconformists were hampered by restrictions on the size of their gatherings and the movement of their ministers. Municipal and church officers were required to be professed Anglicans, and all ministers were forced to use the Book of Common Prayer.

Claret, red table wine of Bordeaux, France. The name is sometimes loosely applied to dry red wines produced in other countries, but genuine claret comes from the districts of Graves, Médoc, Pomerol and St-Émilion, and should be 5 to 25 years old or more.

Clarinet, single-reed woodwind musical instrument with a cylindrical tube. It is commonly pitched in Bb (also Ab), with the alto clarinet in F or Eb, and has a range of 3½ octaves. The clarinet dates from about 1700 and quickly found a place in the orchestra. It has been popular in jazz since around 1920. See also p.1581.

Clark, Alvan Graham (1832–97), US astronomer who in 1863 helped to build the 66cm (26in) telescope at Washington DC, and with it discovered the white dwarf star that is a companion of Sirius, and various double stars. See also pp.921, 981.

Clark, Desmond (1916–), British archaeologist. He conducted many excavations in S and E Africa, studying the development of early man, and proposed that there was more than one line of *Australopithecus*. His publications include *The Prehistory of Africa* (1970). See also p.111.

Clark, Jim (1936–68), Scottish racing driver. Greatly respected by his contemporaries, he was world champion for Lotus in 1963 (winning seven grands prix) and 1965 (winning six, including the Indianapolis). He won his record 25th grand prix in 1968 but in April of that year was fatally injured in a race at Hockenheim, West Germany.

Clark, Sir Kenneth McKenzie (1903–), British art historian. He was a professor at Oxford University, director of the NATIONAL GALLERY in London (1934–45) and chairman of the ARTS COUNCIL of Great Britain (1953–60). His writings include *Leonardo da Vinci* (1939), *Rembrandt and the Italian Renaissance* (1966) and *The Romantic Rebellion* (1973).

Clark, Mark Wayne (1896–), US general. He graduated from WEST POINT in 1917 and fought in France in WWI. During WWII he commanded the US ground forces in Europe in 1942 and the fifth Army in 1943 during the Italian campaign. He led the US forces in occupied Austria and became supreme commander of the UN forces in Korea in 1952. He retired in 1953, after the Korean War.

Clark, Sir Wilfred Edward, Le Gros (1895–1971), British anatomist. His studies of the development of human anatomy have led him to propose a theory of human evolution in his *The Antecedents of Man* (1959), in which he specified the evolutionary trends of primates. See also p.111.

Clarke, Arthur Charles (1917–), British science-fiction writer. He is noted for the scientific background in his works, which include *Childhood's End* (1953), *A Fall of Moondust* (1961), and *Voices from the Sky* (1965). Stanley KUBRICK's film 2001: A Space Odyssey (1969) was based on his short story *The Sentinel*.

Clarke, Don (1933–), New Zealand rugby player. He was a renowned goal-kicker and one of the greatest fullbacks in the history of the game. He played nearly 100 matches for the All Blacks and in 226 first-class games scored more than 1,800 points, of which 781 were for his country.

Clarke, Sir Ellis (1917–), President of TRINIDAD AND TOBAGO after independence was granted in 1976. He had previously been Governor General.

Clarke, Jeremiah (c 1673–1707), English organist and composer. He was organist at St Paul's cathedral and the chapel royal and choirmaster at St Paul's. He wrote choral and church music, but is best known for *The Prince of Denmark's March*, a harpsichord piece long known as *Trumpet Voluntaries* and ascribed to Henry Purcell.

Clarke, Kenneth Spearman, "Kenny" (1914–), US jazz drummer, bandleader and composer. He played with Dizzy Gillespie, Sidney Bechet, and Red Allen in the 1940s and helped develop the bebop jazz style. In 1952 he founded the Modern Jazz Quartet with John Lewis.

Clarke, Marcus Andrew Hislop (1846–81), Australian novelist. He left London for Australia at the age of 17 and worked as a journalist. His best-known work *For the Term of his Natural Life* (1874), about convicts in Tasmania.

Clarkin, genus of annual plants related to evening primrose and native to W North America. They have purple or rose-pink flowers. Family: Onagraceae.

Clarkson, Thomas (1760–1846), British deacon and campaigner against slavery. Working with William Wilberforce and other abolitionists, he devoted his life to securing abolition and its enforcement. He published a history of the trade in 1808.

Class, term used to mean a section of society supposedly classifiable by virtue of the similar economic status of the members who compose it. The notion of class – in its simplest form including three groups, lower, middle and upper – first became widely used in the early 19th century in response to the Industrial Revolution's making distinct the hostile interests of capital and labour. It gradually replaced the earlier notion of "interest" which supposed a society divided vertically by economic sector: agriculture, trade, commerce – not horizontally by economic status. In a biological context, a class refers to a group of animals or plants that is larger than an order, but smaller than a phylum.

Classical, term for the arts and literature of ancient Greece and Rome. These are distinguished by the emphasis on simplicity, harmony and good proportion, in contrast to the values of ROMANTICISM. The classical style of Rome was revived in RENAISSANCE Italy and it influenced the development of the arts, especially architecture, until the 18th century when CLASSICISM grew out of the rediscovery of ancient Greece. In music, classical properly refers to music of 1600–1900, noted for its formal clarity and the development of the SONATA form.

Classical revival, art and architecture in the style of the Ancient Greeks and Romans. In general, the style reflects a simplicity, harmony and balance. The Italian RENAISSANCE and the NEO-CLASSICAL style of the early 19th century are examples of classical revivals.

Classics, The, generic term applied to celebrated horse races. The five English classics are the 2 000 and 1 000 Guineas run at Newmarket in April or May, the DERBY and OAKS at Epsom in June, and the ST Leger at Doncaster in September. Entries are for 3-year-olds only, and the 1 000 Guineas and the Oaks are further restricted to fillies. Ireland has equivalent classics, the USA three and France 17.

Classification, biological, or taxonomy, organization of plants and animals into categories based on similarities of appearance, structure or evolution. The categories ranging from the most inclusive to the most exclusive are kingdom, phylum, class, order, family, genus, species and sometimes variety. There are also subphyla, subfamilies, etc., in some categories. Ancient and extinct animals and plants are included in detailed classifications. See also pp. 2–3, 36–37, 56–57, 72–73, 86–87, 183, 192.

Classification, Dewey, See DEWEY DECIMAL CLASSIFICATION.

Claude, Albert (1899–), US cellist.

gust, b. Belgium. He shared the 1974 Nobel Prize in physiology and medicine with Christian R. de Duve and George J. Palade for his pioneering use of the electron microscope to study the detailed anatomy of the cell. He also pioneered the use of the centrifuge to separate various cell components. See also pp. 174–175.

Claudel, Paul (1868–1955), French poet and dramatist. His conversion to Roman Catholicism in 1886 influenced his works, most of which are a form of proselytizing. They include the play *L'annonce faite à Marie* (1912; trans. *Tidings brought to Mary*) and the poetry *Cinq grandes odes* (1910; *Five Noble Odes*) and *Poèmes de guerre* 1914–1916 (1922).

Claude Lorrain (1600–82), French painter, real name Claude Gellée. He settled in Rome in 1627, and produced many idealized landscapes within the classical tradition. Towards the end of his career he concentrated on problems of space and light. He also made many paintings of harbours, often in late evening light. TURNER greatly admired his work.

Claudius (or Claudius) Claudianus (d. c 400), one of the great Latin poets, he probably came to Rome from Alexandria. His early poems were in Greek. Several of his epics and official eulogies survive.

Claudius I (101–AD 54), Roman emperor (r. 41–54), nephew of Tiberius, the first emperor chosen by the army. He had military successes in Germany, conquered Britain in 43 and built both the harbour at OSTIA at the mouth of the Tiber and the Claudian aqueduct. AGRIPPINA, his fourth wife, poisoned him and made her son NERO emperor. See also pp. 1232, 1234, 1237.

Claudius II Gothicus Marcus Aurelius (244–70), Roman emperor (r. 268–70). He decisively defeated the barbarian invaders of Italy in 268 and the Gothic invaders of the Balkans in 269; he was given the title Gothicus ("Conqueror of the Goths").

Clauserwitz, Carl von (1780–1831), Prussian soldier and military theorist. He served in the Napoleonic Wars against France, and wrote on the theory of large-scale warfare in *On War* which was published a year after his death. His best-known theory is that war is simply an extension of politics by other means.

Clausius, Rudolf Julius Emanuel (1822–88), German physicist. He is regarded as the founder of THERMODYNAMICS and, using the work of the physicist Nicholas CARNOT, was the first to formulate the second law of thermodynamics. He also introduced the concept of ENTROPY. See also pp. 844–845.

Claverhouse, John Graham, 1st Viscount Dundee (c 1649–89), Scottish soldier, known as "Bonnie Dundee", he distinguished himself serving WILLIAM OF ORANGE, CHARLES II and JAMES II. He was killed fighting for James against William and Mary.

Claves, Cuban musical instrument consisting of two round hardwood sticks beaten together to produce a percussion accompaniment for popular tunes.

Clavichord, earliest stringed musical instrument with mechanical action controlled by a keyboard. Possibly originating in the 13th century, it was used extensively from the 16th to 18th centuries. The clavichord has a soft, delicate, expressive tone. It was superseded by the HARPICHOORD and then by the PIANO.

Clavicle, or collarbone, thin, slightly curved bone attached by ligaments to the top of the STERNUM (breast bone). The clavicle and shoulder-blade make up the SHOULDER GIRDLE, linking the arms to the axis of the body.

Clavier, general term for stringed musical instruments played with a keyboard, such as the harpsichord, clavichord and later the piano.

Clay, Cassius. See ALI MUHAMMAD.

Clay, Frederick Fines (1838–89), British composer. He was famous in his time as the composer of stage music and light songs such as *She wandered down the mountainside* and *The Sands of Dee*.

Clay, Lucius Dubignon (1897–1978), US general. He was commander of US forces in Europe and military governor of the US

Zone in Germany 1947–49, and successfully organized the BERLIN AIRLIFT.

Clay, group of aluminum silicate rocks of various compositions, including kaolinite and halloysite, usually mixed with some quartz, calcite or gypsum. It is formed by the weathering of surface granite or the chemical decomposition of feldspar. Soft when wet, it hardens on firing and is used to make pottery, stoneware, tiles, bricks and moulds, and as a filler for paper, rubber and paint. In developing countries it is used to clad the walls of simple buildings and to make pavements for threshing cereals. See also pp. 210, 546.

Clayhanger, the first of a trilogy of novels by Arnold Bennett, published in 1910, the others being *Hilda Lessways* (1911) and *These Twain* (1916). Like the best of his work, it presents a picture of provincial life in the "Five Towns" pottery district of Staffordshire.

Clay pigeon shooting, sport in which spinning, saucer-shaped targets, propelled into the air from a mechanised trap, are fired at with 12-bore shotguns. The black target, approx. 11 cm (4.25 in) in diameter, simulates the flight of pigeons, which were first used when the sport began in London about 1790. The modern version dates from 1880. Two types, trench and skeet, are contested to Olympic and world championship class. Trench, or down the line, has squads of five alternating at fixed firing positions; skeet, invented by an American in 1932, positions shooters round an arc to fire at targets coming from high and low traps.

Clayton, Jack (1921–), British film director and producer. His first feature film, *Room at the Top* (1958), was outstanding for its picture of provincial life in Britain. His other films include *The Pumpkin Eater* (1964), *Our Mother's House* (1967) and *The Great Gatsby* (1974).

Clayton, Philip Thomas Bayard "Lubbs" (1885–1972), Church of England chaplain who founded an interdenominational association for Christian social service called The H. The name is signaller's jargon for the letters TH, the initials of Talbot House, which was the original soldiers' club set up in the Flemish town of Poperinghe in 1915.

Clean Air Act (1956), British Act of Parliament which banned the production of large quantities of smoke. It required furnaces to be equipped against the emission of smoke, dust and grit. It also empowered local authorities to create smokeless zones.

Cleanthes (fl 3rd century BC), Greek philosopher. A disciple of ZENO OF CITIUM, he was the second Master of the stoics. Of the fragments of his works that survive, the principal one is the philosophical poem *Hymn to Zeus*. Cleanthes stressed the religious aspect of Stoicism.

Clearing house, institution established by businesses engaged in similar activities to facilitate transactions among them. Bank clearing houses, for example, and in the exchange of cheques, drafts, notes, etc. without the actual transfer of cash. In industry or trade, a clearing house is a building in which the products of two or more companies are combined for distribution or sale.

Cleavage, in embryology, progressive series of cell divisions that transform a fertilized egg into the earliest embryonic stage of BLASTULA. The egg is divided into blastomeres (smaller cells), each containing a diploid number of chromosomes. In mammals, the second division is generally at right angles to the first and the third at right angles to the previous two.

Clee Hills, range of hills in Salop, W central England, extending 23 km (14 miles) N from Ludlow. The highest point is Brown Clee Hill, which rises to a height of 546 m (1 792 ft).

Cleft palate, congenital deformity in which there is an opening in the palate (roof of the mouth) causing direct communication between the nasal and mouth cavities. It is often associated with HARTER and makes normal speech difficult. Usual treatment includes surgical correction of the deformity, followed by speech and dental care and speech therapy if neces-

Kenny Clarke, the American jazz drummer, founded the Modern Jazz Quartet in 1952

Claude Lorrain, his harbour scene depicting *The Embarkation of the Queen of Sheba*

Claudius I, whose style of government was alternately humane and vindictive

Clavicle, or collar bone, which, with the shoulder blade, makes up the shoulder joint

Cleistogamous flower

Cleopatra, representing the goddess of love on a bas-relief at the Temple of Hathor

James Clerk Maxwell, who predicted the existence of electromagnetic (radio) waves

Cleveland, Ohio; a view of the heavy industrial area of the city known as the "Flats"

Click-beetles turned on their backs, flick into the air, landing (hopefully) on their feet

sary See also p.1101

Cleistogamous flower, small, closed self-fertilizing flower. Cleistogamous fertilization takes place within a flower that does not open, and enables seed production in the absence of normal cross-pollination. Sweet violet, oxalis and impatiens are examples of such flowers.

Cleland, John (1709-89), British novelist. Frequently destitute, he wrote *Fanny Hill* (1748-49) to save himself from starving. His other works include the novel *Memoirs of a Coxcomb* (1751) and the play *Titus Vespasian* (1755).

Clematis, genus of about 400 species of perennial, mostly climbing shrubs found worldwide. Many have attractive deep blue, violet, white, pink or red flowers or flower clusters. The leaves are usually compound. Well-known species are woodbine and old-man's-beard. Family Ranunculaceae.

Clemente, Georges (1841-1929), French politician, nicknamed "the Tiger". He served in the Chamber of Deputies from 1876 to 1893. After ten years of journalism he returned to the Senate in 1902 and was twice premier (1906-09, 1917-20). He led the French delegation at the PARIS PEACE CONFERENCE at the end of WWI. See also p.1672.

Clement, Samuel Longhorne. See Twain, Mark.

Clement, name of 14 popes, of whom the most notable include St Clement I (c AD 88-c 97). He suffered martyrdom for refusing to pledge allegiance to the Roman emperor Clement III (r 1187-91) born as Paolo Scolari, preached the Third Crusade in 1187. Clement IV (r 1265-68), a Frenchman, stressed papal authority against the Hohenstaufen emperors and attacked corruption. Clement V (r 1305-14), born as Bertrand de Got in 1260, lived in France throughout his pontificate, moving to Avignon in 1309. The papacy became subject to the French crown during his time. Clement VI (r 1342-52) was another Frenchman, Pierre Roger (c.1291-1352), who enhanced the papal court at Avignon. Clement VII (r 1523-34), a Florentine, born as Giuliano de' Medici in 1478, did little to combat Protestantism that emerged in the Empire in the 1520s. He was a patron of Michelangelo and Raphael. Clement VIII (r 1592-1605), born as Ippolito Aldobrandini in 1536, allied the papacy with France and was noted for his piety and concern for the poor. Clement XI (r 1700-21), born as Giovanni Francesco Albani (1649-1721) had to deal with Jansenism, and was known for his intellectual ability. Clement XIV (r 1769-74), born as Giovanni Vincenzo Antonio Ganganeli (1705-74), was forced by political alliances to suppress the Jesuits.

Clement, name of three Antipopes. Clement III (r 1080-1100) (Guibert of Ravenna), was a supporter of the Holy Roman Emperor Henry IV, who proclaimed himself pope after the existing pope Gregory VII had excommunicated Henry in 1080. Guibert was crowned pope in Rome in 1084. Clement VII was antipope 1378-94. He was elected pope by the college of cardinals immediately after they had elected Urban VI. He went to Avignon, initiating the Great Schism. He was recognized by several countries, including France, but failed to win general support. Clement VIII was elected pope in Spain in 1423. Backed by King Alfonso of Aragon, he opposed Martin V, the Roman pope. However, after the reconciliation of Alfonso and Martin in 1429 he abdicated and his cardinals recognised Martin, thus ending the Great Schism.

Clement, René (1913-), French film director. His two best films, *La Bataille du Rail* (1946) and *Les Jeux Interdits* (1952), are war stories in which he used non-professional actors. His later work, which was less well received, includes *Gervaise*, an adaptation of Zola's *L'Assommoir*, and *Is Paris Burning?* (1965).

Clementi, Muzio (1752-1832), Italian pianist and composer who settled in England. He was an accomplished piano virtuoso whose development of early techniques earned him the sobriquet

'father of the piano'. His compositions include many sonatas and the instructional pieces, *Gradus ad Parnassum* (1817). See also p.1485.

Clement of Alexandria, St (c 150-c 215), Greek church father, full name was Titus Flavius Clemens. He studied in Alexandria, where he founded a school that became a centre of learning. Several of his writings have survived, including *Exhortation to the Greeks* and *The Tutor*.

Clements, Sir John Selby (1910-), British actor and director. His first stage appearance was in 1930. He is noted for his revivals of 17th- and 18th-century comedies.

Cleon (d.422 BC), Athenian politician. In 429 BC, after the death of Pericles, he spurned Sparta's peace proposals and successfully continued the Peloponnesian War. An unprincipled demagogue and inconsistent soldier, he was killed in action against the Spartans at Amphipolis.

Cleopatra (69-30 BC), Queen of Egypt (51-30 BC). In 48 BC, with the aid of Julius Caesar, she overthrew her husband, brother and co-ruler Ptolemy XIII. She became Caesar's mistress, but returned to Egypt after his assassination in 44 BC. In 41 BC she won Mark Antony's love and they were married in 37 BC. Octavian Caesar (later Augustus) determined to destroy them and in 31 BC their fleet was defeated at Actium. They fled and Antony killed himself; Cleopatra surrendered and, after she failed to win Octavian's affections, killed herself with an asp. See also p.1231.

Cleopatra's Needle, Egyptian obelisk that stands on the Thames Embankment in London. Nearly 21m (70ft) tall and weighing about 180 tonnes, it is one of a pair erected by King Thutmose III in Egypt in the 15th century BC. The other one now stands in New York's Central Park. Both are made of red granite and were acquired separately in the 1800s.

Clepsydra. See CLOCKS.

Clerestory, in church architecture, row of windows in an upper storey of a nave, particularly above the roof level of any aisles along the sides of the nave.

Clergy Reserves, income from land grants to support Protestant churches in Canada.

The Canadian Constitutional Act (1791) set aside one-seventh of the Crown lands in Canada for the support of Protestant churches. The reserves, dominated by the Church of England, became a source of religious and political dispute until 1854, when the lands were secularized.

Clerihew, short verse describing the character or life work of a famous person, named after Edmund Clerihew Bentley (1875-1956). Sometimes witty, sometimes nonsensical, a clerihew is usually written in two rhymed couplets in which each line is often longer than the preceding one, eg

John Stuart Mill
By a mighty effort of will
Overcame his natural bonhomie
And wrote *Principles of Political Economy*

Clerk, Sir Dugald (1854-1932), Scottish engineer. He invented the Clerk cycle or two-stroke internal-combustion engine (patented 1881), much used on lightweight motorcycles. Director of engineering research for the British Admiralty 1916, he wrote *The Gas, Petrol, and Oil Engine* (2 vols, 1909 and 1913).

Clerke, Agnes Mary (1842-1907), British astronomer and scientific writer, b. Ireland. She worked in Italy from 1867 to 1877 and received the Actonian Prize in 1893. Her books include *A Popular History of Astronomy in the 19th Century* (1885), *The System of the Stars* (1890) and *Problems in Astrophysics* (1903).

Clerk Maxwell, James (1831-79), Scottish theoretical physicist who in 1865 predicted the existence of radio waves and other then undiscovered forms of electromagnetic waves. His theories were published as *Treatise on Electricity and Magnetism* (1873). See also p.638.

Clermont-Ferrand, city in a central France; capital of Puy-de-Dôme département, formed by the union of the towns of Clermont and Montferrand (1731). It was

the scene of the Church Council (1095) that initiated the First Crusade. It has a university (1854) and a Gothic cathedral. Industries: rubber goods, textiles. Pop (1971 est.) 160,800.

Clermont-Ganneau, Charles (1846-1923), French archaeologist. He excavated many biblical sites, and improved modern knowledge of several ancient Middle Eastern languages.

Cleveland, Barbara Villiers, Duchess of (1641-1709), wife of Roger Palmer, Earl of Castlemaine. The favourite mistress of Charles II (1660-74), she wielded considerable political influence. In 1670 she was created Duchess of Cleveland.

Cleveland, Stephen Grover (1837-1908), US President in 1885-89 and 1893-97. He rose to national prominence as the reforming Democratic mayor of Buffalo (1881-82) and governor of New York (1883-84). In his second term as president he repealed the Sherman Silver Purchase Act of 1890 and used troops to break the Chicago Pullman strike.

Cleveland, county in NE England, created by the Local Government Act of 1972, which became effective in 1974. It is made up of parts of the former counties of Durham and Yorkshire, and the county boroughs of Hartlepool and Teeside. Area: 583sq km (225sq miles). Pop (1976) 467,900.

Cleveland, city and port of entry in NE Ohio, USA, at the mouth of the Cuyahoga River on Lake Erie, largest city in Ohio. It is a leading port for ore and Great Lakes shipping. It is one of the leading iron and steel centres in the USA. Founded in 1796 by Moses Cleaveland, it grew rapidly with the opening of the Ohio and Erie Canal and the arrival of the railway in 1851. John D. Rockefeller founded the Standard Oil Company there in 1870. NASA maintains a research centre there. Industries: chemicals, oil refining, food processing, engineering. Pop. (1973) 678,615.

Cleveland bay, breed of light horse developed in the Cleveland district of Yorkshire, England, for riding, driving and farm use. It is large for a light horse, and its colour is bay, with black legs. To qualify for entry in the stud-book, it must stand at least 1.6m (5.3ft) at the shoulder.

Cleveland Hills, range of hills on the border of Cleveland and northern Yorkshire, N England. They are part of the North York Moors National Park and rise to 427m (1,400ft).

Cleves, Duchy of, former state lying on both sides of the River Rhine, bordering The Netherlands. It figured prominently in German history until it passed to the electors of Brandenburg in 1614.

Click-beetle, or **skipjack**, or **snapping beetle**, any of a group of beetles that turn over by snapping their bodies and throwing themselves into the air. They make an audible click in the process. Their long, cylindrical larvae are called wireworms.

Click language, unusual language unique to parts of southern Africa, found chiefly in the Khoisan group. A clicking sound is made by a sudden intake of air and the action of the tongue on the roof of the mouth. The sound functions as a consonant, and is also found in some languages of the Bantu group.

Clifden, Irish town and port, in Galway on the W coast. Alcock and Brown landed nearby on 15 June 1919, at the end of the first non-stop Atlantic flight.

Cliff, geological formation consisting of a steep slope, sometimes of exposed rock. Cliffs can be nearly vertical or even overhanging. They may result from the exposure of rock strata due to geological faults (see ESCARPMENT) or, as in the case of shore-line cliffs, they may be caused by water and weather erosion.

Cliff dwellers. See PUEBLO INDIANS.

Clifford, Hubert John (1904-), Australian-born composer. He was a professor at the Royal Academy of Music, London, for many years and his compositions include *A Kentish Suite* (1935), scores for films and four sketches for Shakespeare's *As You Like It*.

Clifford, William Kingdon (1845-79), British mathematician and philosopher. His theory about biquaternions

generalised Sir W. R. HAMILTON's theory of quaternions, linking them with more general associative algebras. His book *On the Space-Theory of Matter* (1870) anticipated Einsteinian relativity with the idea that energy and matter are different kinds of space curve.

Climate, weather conditions of a place or region prevailing over a long time. The major factors influencing climate are surface and atmospheric temperatures, the movements of air masses in the atmosphere, incoming and outgoing radiation and the cycle and transportation of moisture both vertically and horizontally. Climates are defined on different scales, ranging from microclimates which cover the broad climatic zones of the globe, down to microclimates which refer to the conditions in a small area such as a wood or a field. See also pp 254-255.

Climatology, scientific study of the earth's climates. Physical climatology investigates relationships between temperature, pressure, winds, precipitation and other weather phenomena. Regional climatology considers latitude and other geographical factors, eg the influence of large land masses in the climatic study of a particular place or region. See also pp 254-255.

Climatron, greenhouse in the Missouri Botanical Garden, St Louis, USA. It is the world's first greenhouse to provide a scientifically controlled environment exactly simulating the natural conditions of tropical and sub-tropical plants. Covering 0.3 hectares (0.7 acres), the climatron consists of a geodesic dome lined with clear plastic. Planned by Fritz W. Went, the climatron was built in 1960.

Climbing mouse, nocturnal rodent found in damp grassland, reedbeds and bushy regions south of the Sahara, and always near water. Its tail is partly prehensile, and it feeds on fruit, insects, small reptiles and eggs. Length of body: to 10cm (3.9in), tail length: to 11.7cm (4.6in). Family Muridae, genus *Dendromys*.

Climbing perch, tropical fresh water fish found in SE Asia. Not a true perch, it is popular in aquariums. It is grey-brown or green and uses extended gill covers to "walk" on land for short distances. Length: to 25.4cm (10in). Family Anabantidae, species *Anabas testudineus*.

Clinical psychology, field of psychology concerned with diagnosis and treatment of behavioural disorders. The term also refers to a method of investigating behaviour pioneered by Jean PIAGET. Methods of treatment include BEHAVIOUR THERAPY and PERSONALITY CHANGE. Clinical psychologists may work with psychiatrists.

Clink, district in Southwark, London. In the 13th century there was a prison for heretics at Clink, and today *clink* is a slang term for jail.

Clint, naturally occurring block of limestone produced by rain-water erosion of the surface of limestone features. See also p.218.

Clinton, Sir Henry (c.1738-95), British general. Sent to the American colonies in 1775, he became commander-in-chief in 1778 and in 1780 captured Charleston and the southern army. He resigned his post in 1781. From 1794 he served as governor of Gibraltar.

Clipper, commercial sailing vessel used during the mid-19th century. Built primarily for speed, clippers had a long slim hull, generally three masts and many square-rigged sails. One of the fastest, the American *Flying Cloud*, sailed from New York to San Francisco via Cape Horn in only 89 days. The *Cutty Sark* is a clipper preserved in a dry-dock at Greenwich, London. See also p.473.

Clive, Robert, Baron Clive of Plassey (1725-74), British soldier and colonial administrator. He went to India as an official of the British East India Company (1743) and successfully resisted growing French power in India with his capture of ARCOT (1751). By taking Calcutta and defeating the pro-French Nawab of Bengal at PLASSEY in 1757 he effectively assured British control of northern India, and was Governor of Bengal 1757-60 and

1765-67. He was acquitted of embezzling state funds in 1773. See also p.1495.

Cliveden, the Astor family's seat in Kent, meeting place of the "Cliveden set" in the 1930s, which included Lady Astor, Geoffrey Dawson, editor of *The Times* and J.L. Garvin, editor of the *Observer*. Garvin's pro-German views have been held partly responsible for the policy of APPEASEMENT.

Clochemerie (1934), novel by the French author Gabriel Chevallier (1895-). A great popular success, this comic novel portrays events in a Beaujolais village between WWI and WWII. It uses caricature and maintains a broad view of all its characters, at the same time providing an excellent documentary picture of village life.

Clocks, instruments for measuring time. The earliest timekeeping instruments had no moving parts, being designed to measure the positions of the Sun, Moon and stars in their cyclic movements. Examples include neolithic stone columns, ancient Egyptian shadow clocks and their modern descendant the sundial. The ancient Egyptians also used water clocks, which are pottery bowls bearing graduated time-marks from which water slowly leaked. Candle clocks and sand-glasses (hourglasses) were later types of non-mechanical clocks. The first mechanical clocks were probably falling-weight clocks. The central feature of these and all other mechanical clocks is the escapement mechanism, which enables a clock to tick off time at discrete intervals. This movement is transmitted through a series of gears to the hands which are pushed forward a small distance with every escapement movement. Various types of escapement mechanism were developed, culminating in the lever escapement of the 19th century. Motive power for mechanical clocks has been provided variously by falling weights, pendulums and coiled springs. In many modern wristwatches the coiled spring is wound continually by the natural wrist movements. Other modern clocks include those powered by electric motors, and those using an electronically oscillated quartz crystal as the basis of the time-division. The latter are accurate, but even more accurate are atomic clocks, which rely upon the natural oscillations of atoms - usually those of the metal caesium - and which measure time to an accuracy of thousandths of a second per year. See also pp 450, 452-453, 772-773, 774, 781, 828, 854.

Cloete, Stuart (1897-1976), South African author born in Paris. Educated in Lancing College, Sussex, he later joined the Coldstream Guards and served in WWI. He is best known for his novel on the GREAT TIEK, *Turning Wheels* (1937). He has also written a number of short stories.

Cloisonné, enamelling technique in which the design is constructed out of wires soldered to a plate, and the cells (cloisons) thus formed are filled with coloured enamel paste which, when fired, develops translucency and brilliant colours. The technique was developed in Mycenaean Greece, but reached its first full flowering in Byzantine art of the 10th and 11th centuries. Byzantine and Islamic cloisonné work was imported into Mongol China, where the technique was adopted and flourished in the Ming and Ching dynasties. It was also adopted in Japan, where the best examples are of the 18th and 19th centuries. See also ENAMEL.

Cloisonnism, also known as synthetism, style of painting evolved by Emile BERNARD, and Paul GAUGUIN. Named after its resemblance to cloisonné enamels, it uses strong, flat forms outlined in black or blue and vividly painted.

Cloister, covered arcade around a quadrangle, usually connecting a monastic church to the domestic buildings of a monastery. Notable examples are at Salisbury Cathedral, England, and St John Lateran, Rome.

Clone, set of organisms obtained from a single original parent through some form of ASEXUAL REPRODUCTION, such as MITOSIS in micro-organisms, vegetative propagation in plants or PARTHENOGENESIS in animals. Clones are genetically identical, and so cloning is often used in plant propaga-

tion to produce new plants from parents with desirable qualities, eg high yield. See also p.674.

Clontarf, suburb of DUBLIN in a Republic of Ireland. On 23 April 1014 a battle at Clontarf ended in a decisive victory for Irish forces under Brian BORU over the Norse and their allies, effectively ending Norse rule in Ireland. See also p.1314.

Closed-circuit television, television system in which the television camera, receiver and associated controls are most often directly linked by cables. It has many applications, eg monitoring machinery, watching customers in shops, surveillance of military installations or hospital patients, in education, etc. Cable television is an extended form of closed-circuit television. See also pp 640-641.

Closed shop, place of work at which employees (usually excluding management staff) are required to be members of one or more trade unions as a condition of employment. There are two types of closed shop. In a "pre-entry" closed shop all employees must in principle belong to the designated union(s). In a "post-entry" closed shop, those who are already employed when a closed shop agreement is negotiated are exempted from union membership if they do not wish to join, whereas all new employees must join the relevant union(s). In countries where closed shops are legal, there are usually exemptions allowing employees in a closed shop not to join a union if they have conscientious or religious objections.

Closet dramas, genre of play, usually in verse, designed to be read rather than produced on stage. Some, however, have been performed successfully - eg Tennyson's *Becket* (1893), which Henry IRVING produced with much acclaim.

Clotar, name of two Merovingian kings of the FRANKS. Clotar I (c.497-561) ruled the NW Frankish lands after the death of Clovis in 511 and the whole kingdom after 558. Clotar II ruled the whole of the kingdom from 613 until his death in 629. See also pp 1270-1271.

Cloth. See TEXTILES.

Clothes moth, three species of small moth whose larvae (caterpillars) attack woollen fabrics and furs. The most destructive is the case-making *Tinea pellionella*, which builds and lives in a small portable case. Wingspan: 1.2cm (0.5in). Family Tineidae.

Clotho, in Greek mythology, one of the three FATES, who controlled men's lives. She was the spinner of the thread of life. She restored to life Pelops who had been killed by his father, Tantalus, to feed the gods at a banquet.

Cloud, visible mass of tiny water droplets or ice particles in the atmosphere, formed by the condensation of water vapour around condensation nuclei, which are usually dust particles. This happens when the temperature falls below a critical level called the DEW-POINT. Clouds are classified in many groups by meteorologists according to their appearance and formation. See also pp 250-251.

Cloud chamber, instrument for detecting and identifying charged particles, invented in the 1890s by C. T. R. WILSON to study ALPHA PARTICLES or protons. The principle is the same as the BUBBLE CHAMBER, except that the liquefied gas is replaced by air supersaturated with water or alcohol vapour, and the tracks left are droplets which form around the ionizing particle. They are deflected by a magnetic field and photographed for analysis. In the diffusion cloud chamber, which operates continuously, the air is supersaturated with vapour introduced at the top of the chamber. A large temperature difference is maintained between the top and bottom of the chamber. The air vapour cools as it diffuses towards the bottom, becoming supersaturated, and allowing tracks to form. See also p.810.

Cloud cover, or **cloudiness**, the proportion of the sky covered by clouds, usually measured in terms of tenths of total sky. The weather is called "clear" when the sky is less than three-tenths clouded.

Clouded leopard, small, rare cat found in forests of India, SE Asia, Sumatra and

Climbing perch use their extended gill covers to "walk" on land for short distances.

Clippers were the extremely fast and attractive sailing ships of the last century.

Cloisters at Salisbury Cathedral, England around which the main buildings are ranged.

Clouds, these high-altitude cirrus clouds are composed almost exclusively of ice crystals.

Clouds, The

Cloud seeding is an attempt to produce rain artificially in arid areas

Jean Clouet's detailed portraits provide a visual record of court life, this is Francis I

Clutch, the coupling device by which rotating parts may be connected or disconnected.

Clydesdale, the magnificent working horse that has a distinctive high trotting action

Borneo. A nocturnal prowler, its coat is ochre-yellow marked with dark stripes and spots. It is an expert climber and has the longest canine teeth of any cat. Length: body 75-105cm (29-41in); tail 61-90cm (27.5-35.4in); weight: 16-23kg (35-50lb). Family Felidae; species *Leo nebulosa*.

Clouds, The (423 BC), Greek comedy by ARISTOPHANES. A satire on the Sophists and SOCRATES, there has been much controversy over whether the portrayal of Socrates is an accurate one.

Cloud seeding, addition of materials to clouds to alter their natural development and initiate or increase the PRECIPITATION, or rain. Granulated solid carbon dioxide and fine silver iodide crystals have been used. These are seeded into the clouds from aircraft, flares or exploding rockets and the particles act as nuclei for the condensation of water droplets. Mixed results have been obtained from many cloud-seeding experiments, and the technique is not yet under predictable control.

Clouet, Jean (c.1485-c.1540), French painter in the court of Francis I. The oil portraits and striking crayon sketches attributed to him demonstrate great ability in rendering detail.

Clough, Arthur Hugh (1819-61), British poet. He was a fellow of Oriel College, Oxford, (1841-48). His first published poem, *The Bothie of Toper-na-Vuoelich*, a narrative written in hexameters, appeared in 1848. In 1849 he published *Ambarvalia*, a collection of early lyric poems. His best-known poem is *Say not the Struggle Naught Availeth*.

Clouzot, Henri-Georges (1907-77), French film director renowned for the technical brilliance of the thrillers which he both wrote and directed. These include *Quai des Orfèvres* (1947), *The Wages of Fear* (1953) and *Les Diaboliques* (1955). He also made *Le Mystère Picasso* (1956), a study of the artist at work.

Clove, tall, aromatic, evergreen tree native to the Moluccan Islands. The small purple flowers appear in clusters; the dried flower buds are the cloves widely used in cooking as a flavouring. Oil of cloves is distilled from the stems. Height to 12m (40ft). Family Myrtaceae; species *Eugenia caryophyllata*.

Clover, low-growing annual, biennial and perennial plants, native to temperate and warm regions of the N Hemisphere. The leaves have three leaflets, occasionally four, and the dense flower clusters are white, red, purple, pink or yellow. These plants restore nitrogen to the soil. Family Leguminosae; genus *Trifolium*.

Clovis I, or Chlodowech (465-511), King of the Franks. Clovis invoked the aid of Christianity during a battle near Cologne in 497 and, after his victory, he and his troops were baptized. By the time of his death he controlled most of Gaul, and had firmly established MEROVINGIAN power in Europe. See also pp.1268, 1271.

Clown, comic character who entertains by jokes and tricks in the theatre or circus. Many of Shakespeare's plays include such a character (eg, Touchstone in *As You Like It*), who is descended from the Old Vice of medieval liturgical plays. The modern circus or pantomime clown originated with Joseph GRIMALDI (1779-1837) and developed from the tradition of the COMEDIE DELL' ARTE.

Clownfish, marine fish, often called anemone-fish, damselfish or clown triggerfish. Found in shallow Indo-Pacific waters it is orange, brown or yellow, sometimes with white stripes. Length: up to 8cm (3in). Family Pomacentridae; species *Amphiprion percula*. See also p.60.

Club, hand weapon for belabouring enemies and lawbreakers. A rough wooden club, made out of the branch of a tree, or the base of a young tree trunk with branches removed, was the earliest form. Since then the basic concept has undergone many refinements and variations - such as the fearsome Scots knobkerrie of the Middle Ages, equipped with metal spikes, and the various forms of truncheons and batons used by modern police forces. Pairs of Indian clubs, made out of polished wood, are used for exercising.

Club, association of people for various purposes, eg common interests such as sports, hobbies, arts and politics, or simply for social reasons. London is noted for its many clubs, which grew out of its 18th-century coffee-houses and taverns. Until recently clubs have largely excluded women and minority groups. This is changing under pressure of anti-discriminatory legislation.

Club-foot, congenital deformity in which the foot twists inward and downward. It may be corrected by enclosing the foot in a cast in the normal position or by surgical intervention. In a few cases club-foot occurs after birth as the result of neurological or muscular disease.

Club moss, any of about 200 species of small evergreen seedless plants which, unlike the more primitive true mosses, have specialized tissues for transporting water, food and minerals. They are related to ferns and horsetails. The stems of some species are erect, whereas those of others creep along the ground and bear erect branches. Family Lycopodiaceae.

Clubroot, disease of cabbages, cauliflowers, turnips and related plants of the mustard family, characterized by club-like swellings of the roots. It is caused by the fungus *Plasmodiophora brassicae*, and can be avoided by using disease-free and resistant plants and uncontaminated soils.

Cluj, city NW central Romania, on the River Someşul in Transylvania; capital of Cluj district. It was founded in the 12th century by German colonists. Formerly part of Austria-Hungary, it became a Romanian city in 1920. It is noted for its 14th-century Gothic church and botanical gardens. Industries: chemicals, textiles. Pop. (1974) 218,703.

Clumber spaniel, slow-working fender and breeder of retrieving dog developed in England by the Duke of Newcastle at Clumber Park. A sedate, heavy-looking dog, it has a massive head with upper lips overhanging the lower jaw. The long, low body is set on short, heavy legs. Average size: about 46cm (18in) high at the shoulder, weight 25-31kg (55-70lb).

Cluniac Order. See CLUNY, ORDER OF CLUNY, Order of, religious order founded by William the Pious, Duke of Aquitaine, in 910 at the Monastery of Cluny near Mâcon, France. It was known from its beginning for its high standards, reflected in strict observance of the Benedictine rule and emphasis on dignified worship, a personal spiritual life and sound economics. Its influence spread throughout southern France and Italy, reaching its climax in the 12th century. The monastery at Cluny survived until 1790. See also pp.1269, 1269, 1288, 1320, 1321.

Cluster, galaxy. See GALAXY CLUSTER. **Cluster, rocket,** group of identical rocket engines bolted together to give increased thrust. Not only can more power be obtained than is technologically feasible in a single engine, there is a margin of safety if one engine fails. There are difficulties in simultaneous ignition and the engine nozzles must be carefully arranged to avoid overheating.

Cluster, stellar, any of innumerable collections of gravitationally associated stars occurring within galaxies. Stellar clusters are of two main types: OPEN CLUSTERS, (or galactic clusters) and GLOBULAR CLUSTERS. Open clusters, usually found in the spiral arms of galaxies, consist of up to several thousand young stars belonging to POPULATION I, globular clusters, which are much more concentrated, are found in the halo surrounding the centres of galaxies and consist of old POPULATION II stars. See also pp.996-997.

Clutch, any device placed between the rotating parts of an engine or motor and the drive-shaft to facilitate their quick connection or disconnection. In a car, for example, temporary disengagement of the engine is essential during gear-changes. The clutch usually consists of a pair of friction plates, although there are fluid clutches as well. See also p.496.

Clutch, electromagnetic, device that uses magnetic attraction to connect two rotating shafts. Some forms are disc clutches with energized coils and magnetic clutch

plates. Eddy current clutches induce rotational movement in the shaft to be engaged and rotated. Hysteresis clutches also transmit rotation without slip. Other electromagnetic clutches employ magnetic metal particles, either flowing dryly or suspended in a liquid, to induce torque. See also p.875.

Clutha River, river of South Island New Zealand rises in Lake Wanaka flows SE to the Pacific Ocean. There is a hydroelectric power station at Luggate. Length 138km (210 miles).

Clutnam, George (1866-1951), Australian-born composer, pianist and critic. He composed mainly for the stage - *A Summer Night* (1910), *Kong Harlekin* (1912) - and came to concentrate mainly on musical comedy. His biggest success was *Lilac Time* (1923).

Clwyd, county in N Wales, formed in 1974 from the former counties of Flintshire, part of Denbigh and the NE corner of Merioneth, borders on the Irish Sea, Cheshire, Salop, Powys and Gwynedd, drained chiefly by the Dee, Conway and Clwyd rivers. The Vale of Clwyd is a rich agricultural region. Mold is the main town. Industries: coal-mining, iron and steel, tourism, chemicals, quarrying. Area 2,426sq km (937sq miles). Pop. (1975 est.) 374,800.

Clyde, 1st Baron, Colin Campbell (1792-1863), British soldier. In a long career he fought in the PENINSULAR WAR, the CRIMEAN WAR and in India, where he commanded the Army during the INDIAN MUTINY.

Clyde, river in SW Scotland; rises in the southern uplands, flows N, then NW, passing over the Falls of Clyde, which provide hydroelectric power, near Lanark and widening into the Firth of Clyde at Dumbarton. It is noted for its shipbuilding yards below Glasgow. Length: 170km (106 miles).

Clyde, Firth of, estuary of the River Clyde in SW Scotland, extending W and S from Dumbarton to Ailsa Craig. It contains the Bute, Arran and Cumbrae islands, and is a popular area for tourists. Length 104km (65 miles).

Clydebank, town in Strathclyde Region, W central Scotland, on the N bank of the River Clyde, part of the Glasgow conurbation. It has important shipyards. Pop. (1971) 48,300.

Clydesdale, breed of draught horse developed in the valley of the River Clyde in Scotland, from Flemish and English horses. A massive horse with distinctive style and action, it has characteristic flowing, long hair below the knee and hock called "feathers". The Clydesdale is coloured bay or brown with white marks. Height: 163-173cm (64-68in) at the shoulder, weight 770-860kg (1,700-1,900lb).

Clymes, John Robert (1869-1949), pioneer of the British Labour movement. Born at Oldham, he started work in a cotton mill at the age of 10. He educated himself and became prominent in local politics before entering Parliament in 1910. He was Lord Privy Seal in the first Labour cabinet and Home Secretary 1929-31.

Clytemnestra, in Greek legend, the unfaithful wife of AGAMEMNON, King of Mycenae, and mother of his son ORESTES. On Agamemnon's return from TROY he was murdered by Clytemnestra and her lover Aegisthus, who usurped the throne until Orestes returned to exact vengeance. **CND.** See CAMPAIGN FOR NUCLEAR DISARMAMENT.

Cnidaria, phylum of marine invertebrates, having about 9,000 species, including corals, jellyfish and sea anemones.

Cnidus (Cnidos), ancient Greek city of Caria, on the Resadiye Peninsula, SW Turkey. It was a member of the Dorian Hexapolis but was conquered by the Persians in 540 BC. It was the home of a famous statue of Aphrodite by Praxiteles. **CNS.** See CENTRAL NERVOUS SYSTEM.

Cnol. See CANUTE.

Coach, horse-drawn, generally four-wheeled vehicle for carrying passengers. The term is also applied to a motor vehicle for passengers, generally more luxuriously appointed than a bus, and to a passenger-

carrying railway vehicle. See also pp 486-487, 500-501, 509

Coaching, guidance in the development of technique and skills, usually related to sports but applicable to other fields, eg acting. The coach helps athletes reach and maintain fitness, corrects faults, improves skills and instils confidence. Both team and individual sports employ coaches to dictate strategy. Coaching of adults has grown in importance with the growth of professionalism and the "professional approach" in amateur sport.

Coal, blackish fuel composed of petrified vegetable matter. In the Carboniferous and Tertiary periods vegetation in swamp regions subsided to form peat bogs. Sedimentary deposits covered the bogs and applied pressure which, as it (and the consequent heat) increased, produced lignite, then bituminous coal and finally anthracite. Coal is classified by its fixed carbon content and by its volatile components. Lignite (brown coal), which has a low carbon content, is a poorer fuel than anthracite, which has a high one. Most coal seams are inter-stratified with shales, clays, sandstones and sometimes limestones. See also pp 264-265, 414-415, 418-419, 436-437, 442, 443, 444, 765, 766

Coalbrookdale, village in Salop, w central England, on the River Severn. It was at Coalbrookdale that, in 1711, Abraham DARBY first smelted pig iron using coke, producing a good-quality cast iron suitable for forging. In 1779 the first cast-iron bridge was constructed there over the Severn. It is still used as a footbridge. See also pp 394, 394, 532

Coal gas, fuel once supplied to most homes and factories but now largely replaced by the safer and more calorific natural gas (mostly methane). Coal gas is made by heating coal to about 900°C (1,650°F) in a closed retort and collecting the volatile matter; coke remains as a residue. Coal tar is condensed out and other valuable materials are removed by dissolving them out with water. The remaining mixture of gases, containing methane, carbon monoxide and hydrogen together with nitrogen and small amounts of other gases, is coal gas. See also p 443

Coal-mining, process of removing coal from the ground, by an excavation or mine. Two principal systems are used: strip mining (also called surface, open-pit or open-cast mining), a form of quarrying used when the seam of coal is near the surface, and underground (deep) mining in which the seam is reached through shafts or tunnels. Power machines such as drills, cutters and hydraulic jacks have replaced traditional hand tools. In long wall mining, an early underground method developed at the end of the 17th century, a section of coal sometimes 180m (600ft) long is worked at once. In other underground methods the seam is broken up by explosive charges or by machines. About 3,000 million tonnes of coal are mined annually. See also pp 414-418

Coal tar, volatile by-product of the destructive distillation of bituminous coal during the manufacture of coke. Coal tar is important for its organic chemical constituents which are extracted by further distillation. Such chemicals (called coal tar crudes) include xylene, toluene, naphthalene and phenanthrene, they are the basic ingredients from which many products such as explosives, dyes, drugs and perfumes are synthesized. See also p 896

Coastal Command, shore based patrol group operated jointly by the Royal Navy and the Royal Air Force during WWII. Formed in 1939, the command provided air support for British convoys, effected aerial bombardment of enemy shipping and monitored the enemy's movements at sea. It operated over British coastal waters, the North Sea, the North Atlantic and the Mediterranean Sea from stations around the British Isles, one in Gibraltar and one in Iceland.

Coast guard, organization assisting ships and people in danger on the coasts. The British coast guard was set up in 1822, originally intended to prevent smuggling

and came under the ADMIRALTY in 1856. It is now financed by the Department of Trade, and its members work to prevent accidents and assist those in difficulty.

Coasting, spacecraft, period of unpowered flight, when the spacecraft moves under momentum. For trips to the Moon or planets, this period is considerably longer than the powered-flight, or burning period, which gives it the impulse for coasting. During the coasting period the craft is affected only by gravitational forces.

Coast Mts, mountain range in British Columbia, Canada, an extension of the Cascade Range, running parallel to the Pacific Coast. The highest peak is Mt Waddington, 4,042m (13,260ft). One of Canada's largest hydroelectric power stations is at Kemano. Length, approx 1,600km (1,000 miles).

Coast Ranges, mountain ranges parallel to the Pacific coast of North America, extending from s California, n through Oregon and Washington into British Columbia, Canada, and Alaska. They are composed of folded and sometimes faulted sedimentary rocks. In some valleys in the s grapes, fruit and vegetables are grown, in the n timber is important, in particular redwood, spruce and Douglas fir trees.

Coates, Eric (1886-1958), British composer. In 1912 he became leader of the Queen's Hall Orchestra under Sir Henry Wood. From 1918 he devoted himself largely to his own compositions, which included *London Suite* (1933), *Four Centuries* (1941) and the theme for the film *The Dam Busters* (1954).

Coates, Joseph Gordon (1878-1943), New Zealand politician and Prime Minister (1925-28). He led the agrarian Reform Party and served as minister in the United Reform coalition (1931-35) but his policies, in the depth of depression, satisfied few. He later served in the War Cabinet (1940-43).

Coati, or coati-mundi, three species of racoon-like rodents of the SW USA and South America. Most have long, slender reddish-brown to black bodies with tapering snouts and long ringed tails. Head and body length 67cm (26in), weight 11.3kg (25lb). Family Procyonidae, genus *Nasua*. See also p 314

Coat-of-mail shell. See CHITON

Coats Land, region in ANTARCTICA discovered by the Scottish explorer William Bruce in 1904. It is the site of a British research station. Argentina, Britain and Norway claim different parts of it.

Coaxial cable, a device for the simultaneous transmission of multiple radio television and telephone signals, particularly at high frequencies. It consists of an insulated wire surrounded by a copper tube. A simple cable may house 20 or more coaxials held together by an insulated covering. See also pp 636-637

Cobalt, metallic element (symbol Co) in the first transition series, discovered in c 1735. It is found in cobaltite (CoAsS) and smaltite, but most is obtained as a by-product during the processing of other ores. It is used in high-temperature steels, and as a ferromagnetic constituent in some alloys. Co⁶⁰ (half life 5.26yr) is an artificial isotope used as a source of gamma rays in radiotherapy tracer studies, etc. Properties at no 27 at wt 58.9332, s.g. 8.9, m.p. 1,495°C (2,723°F), b.p. 2,870°C (5,198°F), most common isotope Co⁵⁹ (100%). See also p 890

Cobb, John Rhodes (1899-1952), British racing driver. He enjoyed a successful racing career, and established new land speed records in his twin-engined Railton Mobil in 1938 and again in 1939. In 1947 he attained a speed of 634km/h (394mph), a record which remained unbeaten until 1964. He died while attempting a water speed record on Loch Ness, Scotland.

Cobb, Tyrus Raymond (1886-1961), US baseball player. The game's greatest hitter and base-stealer, Cobb played for the Detroit Tigers (1905-26) and the Philadelphia Athletics (1927-28), compiling a record 4,191 hits and 892 stolen bases. In 1936 was elected the first member of

the Baseball Hall of Fame.

Cobbett, William (1763-1835), British political essayist and reformer. From a poor farming background, Cobbett joined the army and in 1792 was forced to flee to the US after denouncing army injustices. He returned to England and edited the *Political Register* (1802) which from 1804 was the leading voice for social and parliamentary reform despite repressive measures such as the GAGGING ACTS (1817). He became deeply concerned with the rural effects of industrialization as shown in his *Rural Rides* (1830). See also pp 1465, 1570, 1640

Cobden, Richard (1804-65), British Radical politician. He led the campaign for the repeal of the CORN LAWS and was an MP in 1841-57 and 1859-65 was the chief spokesman for the 'Manchester School' of laissez-faire manufacturers and economists. His belief in free trade and international co-operation led him to oppose Britain's participation in the CRIMEAN WAR, opposition that led to his defeat at the 1857 elections. He negotiated the 1860 reciprocal trading agreement with France. See also pp 1572, 1662

Cobden-Sanderson, Thomas James (1840-1922), British bookbinder and printer. He trained as a barrister but influenced by William MORRIS, turned to bookbinding in 1883 and established the Doves bindery where he printed the Doves Bible (1901-05).

Cobham, Sir Alan John (1894-1973), British aviator who pioneered the technique of refuelling in the air. A Londoner, Cobham served with distinction in WWI in the Royal Flying Corps. He later became a civil airline pilot and took part in inaugural flights to various parts of the world. In the 1930s he became celebrated for his 'flying circus', a team of talented pilots who gave exhibitions of stunt flying.

Cobham, Viscount (1919-), Governor-General of New Zealand (1957-62), who helped to establish the Outward Bound movement in New Zealand. He was also vice-captain of the MCC team that toured there in 1935 and 1936.

CUBOL (Common Business Orientated Language), COMPUER LANGUAGE first developed for business use in 1954. Revised and improved since then, it is widely used.

Coburn, Charles (1852-1945), British music-hall star, real name Colin Whetton McCallum. His best-known songs include *Two Lovely Black Eyes* (1886) and *The Man Who Broke the Bank at Monte Carlo* and he appeared in many films including *Say it with Flowers* (1934).

Cobourg Peninsula, peninsula in n Northern Territory, Australia, e of Melville Island and n of the Van Diemen Gulf. Width 32km (20 miles). Length 80km (50 miles).

Cobra, any of several highly poisonous snakes in the family Elapidae, including MAMBA, CORAL SNAKE, Kraits and true cobras. It can expand its neck ribs to form a characteristic hood. Found primarily in Africa and Asia, they are the favourite of snake charmers and feed on rats, toads and small birds. The king cobra (*Ophiophagus hannah*) reaches 5.5m (18ft) in length, and is the largest venomous snake in the world. The Indian cobra, *Naja naja*, with the spectacle-like markings on its hood, frequents houses at night to search for rats. It kills several thousand humans annually. Some African species have forward-facing fangs and can spit venom into a victim's eyes from more than 2m (7ft), causing temporary or permanent blindness. See also pp 67, 69

Cobra, international art group that existed in Europe from 1948 to 1951. It took its name from the initials of Copenhagen, Brussels and Amsterdam, where the original members of the group were living. These included Karel Appel, the Belg. painter Corneille (1922-) and Asger JORN. Cobra artists work testified to their interest in folk and primitive art and spontaneous expression.

Coburg, town in Bavaria, West Germany, on the River Elz, capital of the state of Saxe-Coburg Gotha (1826-1918) and

Coalbrookdale, where the Darby family virtually started the industrial Revolution.

Coal-mining, stripped to the west in the heat of a deep mine near Dover in Kent.

Coaxial cables, in which several channels of information are transmitted via one cable.

William Cobbett, who led a crusade against the devastating effects of industrialization.

Coca

Cockatoos are the spectacular, mainly white parrots from Australia and SW Asia

Sir John Cockcroft, joint Nobel Prize winner for his work in the study of atomic nuclei

Cocker spaniel, the popular English sporting dog descended from breeds native to Spain

Cockroach, sometimes shortened to "roach" is a corruption of the Spanish cucaracha

home town of Prince ALBERT, husband of Queen VICTORIA. Martin LUTHER lived in the town's castle in 1530. Today the chief industries are glass and ceramics. Pop. (1970) 42,619.

Coca, shrub native to Colombia and Peru which contains the ALKALOID drug COCAINE, used as a local anaesthetic. Local Indians chew the leaves for pleasure, to quell hunger and to stimulate the nervous system. The plant has yellow-white flowers growing in clusters, and red berries. Height about 2.4m (8ft). Species *Erythroxylon coca*.

Coca-Cola, trade name of the world's largest-selling soft drink. The first bottle of Coca-Cola was produced in the USA in 1886, and today it is sold to almost every part of the world. With headquarters in Atlanta, the Coca-Cola Company in the mid-1970s employed about 30,000 workers and its sales were worth about \$2,870 million annually.

Cocaine, white crystalline ALKALOID extracted from the leaves of the coca plant. It is used as a drug, with stimulant and hallucinatory effects. It is psychologically habit-forming, but increasing doses are not needed, as the body does not develop tolerance to it. Habitual use results in physical and nervous deterioration, and subsequent withdrawal results in severe depression. See also p.1080.

Coccidioidomycosis, infection caused by a fungus (*Coccidioides immitis*) that produces cough, fever and aches, in more severe cases abscesses form under the skin. It often disappears spontaneously, but if the infection spreads, and is untreated, death can result. It occurs mainly in SW USA and South America.

Coccolith, any microscopic, single-celled flagellate of the Coccolithophorida, a class of ALGAE of the phylum Chrysophyta. The cell is covered with round, chalky platelets only one or two thousandths of a millimetre in diameter. Many limestone and chalk cliffs are made up entirely of the remains of such platelets. See also p.239.

Coccyx, triangular bone at the lower end of the vertebral column. It is formed by the fusion of three to five small VERTEBRAE. See also p.146.

Cochabamba, city in W central Bolivia, 230km (143 miles) SE of La Paz, second largest city of Bolivia and capital of Cochabamba department. The city has a cathedral and a university. The chief industry is oil refining, and the city is a commercial centre for the surrounding area, where cereal crops and fruit are grown and cattle are raised. Pop. (1975) 184,341.

Cochet, Henri (1901-), French tennis player. A member of the squad that won the Davis Cup for France (1928-31), he was an instinctive genius, a master of the volley and half-volley. He won the Wimbledon singles in 1927 and 1929, the US title in 1928 and the French singles in 1922, 1926, 1928, 1930, 1932.

Cochin, port in Kerala state, SW India, on the Malabar coast. It was the earliest European settlement in India, dating from 1502 when Vasco da GAMA established a Portuguese trading post there. It has a naval base, fishing and paper industries and exports coconut products such as coir. Pop. (1971) 438,420.

Cochin China (Cochinchina), historical region in Vietnam, South-East Asia, including the greater part of South Vietnam; bounded by Cambodia (NW), the Annam region of Vietnam (NE), the South China Sea (SE) and the Gulf of Siam (SW). This flat alluvial plain of the Mekong River delta is one of the world's foremost rice-producing areas. It was ceded by Annam to France in 1862 under the terms of the Treaty of Saigon, and became part of French Indochina in 1887. It was incorporated into Vietnam in 1949, and became part of South Vietnam in 1954.

Cochineal, crimson dye produced from the pulverised dried bodies of certain female scale insects. These soft-bodied, cactus-eating insects are found in Mexico and Central America. The dye is still used in cosmetics and foodstuffs although in most applications it is being replaced by

aniline dyes. Length, 3mm (0.1in). Species: *Dactylopius coccus*. See also p.584.

Cochlea, cavity filled with fluid in the inner EAR. It has the shape of a coiled shell and its nerve cells transmit impulses to the BRAIN as a result of sound vibrations entering the ear, thus giving hearing. See also pp.138-139.

Cochran, Sir Charles Blake (1872-1951), British theatrical producer, the leading impresario of the 1920s and 1930s. He was noted for a series of spectacular revues which he produced at the London Pavilion between 1918 and 1931. He also produced some of Noel COWARD's work, including *Bitter Sweet* (1929) and *Cavalcade* (1931).

Cockatiel, small Australian PARROT, with a yellow, crested head and a long tail. Family Psittacidae; species *Nymphicus hollandicus*. See also pp.303, 319.

Cockatoo, large PARROT with a long, erectile crest. Cockatoos live mainly in Australia, SW Asia and nearby islands. Most are mainly white, tinged with pink or yellow. They spend most of their time in tree-tops feeding on fruit and seeds. Females lay 1-4 white eggs in a tree hole nest. Length, 38cm (15in). Family Psittacidae.

Cockburn, Henry Thomas, Lord Cockburn (1779-1854), Scottish judge. In 1830 he was made Solicitor-General for Scotland and in 1837 became a Lord of the Judiciary. He supported parliamentary reform and played a major role in drafting the Scottish Reform Bill. He also wrote the notable *Life of Jeffrey* (1852).

Cockchafer, any of various large, scarabid beetles whose grubs live underground and feed on the roots of plants. European species are particularly harmful to trees. Family Melolonthidae.

Cockcroft, Sir John Douglas (1897-1967), British physicist whose research dealt with particle acceleration in an electric field. Working with Ernest Walton, he constructed a voltage multiplier capable of accelerating protons to higher energy levels. The Cockcroft-Walton generator was utilized in the disintegration of lithium atoms by bombarding them with protons. The 1951 Nobel prize in physics was awarded to both men for their use of particle accelerators to study atomic nuclei. Cockcroft also contributed to the development of nuclear reactors.

Cockerell, Charles Robert (1788-1863), British architect. In 1819 he succeeded his father as surveyor of St Paul's Cathedral and he later became architect to the Bank of England. His most famous buildings, displaying the influence of the CLASSICAL REVIVAL, include the Ashmolean Museum, Oxford and the Sun Fire Insurance Office, London.

Cockerell, Sir Christopher Sydney (1910-), British engineer, designer and inventor of the hovercraft. During WWII he worked on the development of radar and other radio aids. In 1948 he started a boat-building business and in the early 1950s began research into the development of air-cushion vehicles. By 1954 he had developed the hovercraft, he filed his first patent in 1955. In 1959 the first SRN1 hovercraft crossed the English Channel. See also pp.476-477.

Cocker spaniel, gun dog so-called because of its proficiency in flushing woodcock. It has a rounded head and a broad, square muzzle; the well-feathered ears are long and set at eye level. The coat can be black and white or a golden brown and the sturdy, compact body is set on straight, strongly boned legs, the tail is docked. Average size: 35.5-38cm (14-15in) high at the shoulder, weight about 10-13kg (22-29lb).

Cockfighting, sport, popular in Latin America and Asia, in which two gamecocks are pitted against each other in a fight. The cocks - bred for fighting - are placed in a small circular pit. To enhance the action, metal spurs are sometimes attached to the bird's natural spurs. The match goes on until one of the cocks refuses to fight or is killed.

Cockle, bivalve mollusc found in marine waters. Its varicoloured, heart-shaped

shell has 20-24 strong, radiating ribs. Of the 200 or so species that are recognized, many are edible. Average length, 4-8cm (1.5-3in). Class Bivalvia, family Cardidae; species include *Cardium aculeatum*. **Cocklebar**, popular name for a genus of coarse weeds, bearing prickly, clinging fruits that give the plants their name. Family Compositae, genus *Xanthium*.

Cockney, native of the City of London, traditionally one born within the sound of Bow bells, the bells of St Mary-le-Bow church, often extended to mean any Londoner. Cockneys have a reputation for chirpy toughness, a quality that was admirably displayed during the WWII Blitz on London. Cockney rhyming slang is often a feature of their distinctive dialect.

Cock-of-the-rock, fruit-eating, brightly coloured, parrot-like bird of tropical South America. It grows to a length of 30cm (12in) and has a large, erect crest which almost hides its bill. The birds build their mud nests among rocks or in caves, lining them with leaves and moss. The males perform communal and ritualistic courtship dances and, after mating, the females lay two eggs. Genus *Rupicola*.

Cockroach, or roach, or croton bug, insect with long antennae and a flat, soft body found worldwide, but mostly in the tropics. Its head is hidden under a shield (pronotum) and it may be winged or wingless. Some species are serious household pests. Length: 13-50mm (1/2-2in). Family Blattellidae. See also ORTHOPTERA.

Cocktail, American term that originated in the late eighteenth century to describe a drink, usually alcoholic, made up of a number of ingredients. Gin is often added to a fortified wine, and other ingredients such as bitters, sugar and ice are added.

Cocoa, drink obtained from the tropical American evergreen tree whose Latin name reflects the fact that cocoa and chocolate contain the ALKALOID theobromine. The seeds are beans contained in an elliptical pod, they do not have the flavour or colour of chocolate until they have undergone a long process of fermentation followed by roasting. The beans are then ground up to make chocolate powder. Bitter chocolate is a liquid separated from this powder, cocoa is the powder minus some fatty substances. To make milk chocolate, milk solids are added to the powder. Family Sterculiaceae, species *Theobroma cacao*. See also p.705.

Cocoa butter, yellowish solid fat with a taste of chocolate, obtained by pressing roasted cocoa beans. It is used in making soap, confectionary, cosmetics and medicines. Chocolate contains about 55% of cocoa butter. See also p.705.

Coco de mer, also called double coconut, palm and its fruit of the Seychelles Islands. The large fruit, which takes ten years to mature and may weigh 20kg (50lb), has a fleshy fibrous covering over a double-lobed, edible, coconut-like centre. The flowers are borne on a large fleshy spadix. Species *Lodoicea maldivica*.

Coconut oil, semi-solid fat with a characteristic odour, consisting principally of the glyceride of lauric acid, $\text{CH}_3(\text{CH}_2)_{10}\text{COOH}$. The oil is extracted from pressed boiled coconut "meat" and used to manufacture soaps, vegetable fats, candles and cosmetics.

Coconut palm, or copra plant, tall palm tree native to the shores of the Indo-Pacific region and the Pacific coast of South America; commercially the most important of all palms. Growing to 30.5m (100ft) tall, it has a leaning trunk and a crown of feather-shaped leaves. The dried kernel or "meat" of the coconut fruit, called copra, is the valuable source of coconut oil used in the manufacture of margarine, soap and cooking oil. Family Palmaeaceae, species *Cocos nucifera*. See also pp.690, 713.

Cocoon, case or wrapping produced by larval forms of animals (such as some moths, butterflies and wasps) for the resting or pupal stage in their life cycle. Some spiders spin a cocoon that protects their eggs. Most cocoons are made of silk, and those of the domestic silkworms provide most of the world's commercial silk. See also CHRYSALIS, MOTH, PUPA.

Cocos Islands, group of 28 small coral islands in the Indian Ocean, 1,200km (750 miles) sw of Java. They were discovered by William Keeling in 1609. They came under British control in 1857, but since 1955 have been a protectorate of Australia. Area 13sq km (5sq miles). Pop. (1975 est.) 1,000. See also p.2014.

Cocoteau, Jean (1889-1963), French writer and filmmaker, whose experimental work made him a leader of the French AVANT-GARDE in the 1920s. He was associated with many leading figures such as APOLLINAIRE, PICASSO, DIAZOVLEV and STRAVINSKY. His many successful works, filled with SURREALIST fantasy, include the novel *Les enfants terribles* (1929, filmed, 1950); the dramatic work *Orphée* (1928, filmed, 1949) and other films such as *Le sang d'un poète* (1933) and *La belle et la bête* (1946). Other works include ballets, monologues, frescoes and drawings.

Cod, bottom-dwelling, marine food fish found in cold to temperate waters of the Northern Hemisphere. It is grey, green, brown or red with darker speckled markings. Cod is one of the chief food fishes although its cost must often reflect that of reaching far-off fishing grounds. Length up to 1.8m (6ft). Family Gadidae. See also pp.63, 744, 744.

Coda, Italian word for "tail", used to describe the added final section of a musical work, especially in the sonatas of MOZART and BEETHOVEN, although its origin lies in the BAROQUE era, above all in the music of François COUPERIN.

Codaine, white crystalline ALKALOID extracted from OPIUM by the methylation of MORPHINE, and with the properties of weak morphine. It is used in medicine as an analgesic and in the treatment of coughs, sleeplessness, neuralgia and asthma. See also p.1091.

Code Napoleon (1804), still operative French legal code. It was intended to end the disunity of French law, and was based on Roman law. It was applied to all countries under Napoleon's control. It banned social inequality, permitted freedom of person and contract and upheld the right to own private property. See also p.1871.

Code of Hammurabi, collection of laws compiled by HAMMURABI the Great of BABYLONIA in the 18th century BC. The code was inscribed on a column found at Susa. See also pp.1164, 1165.

Codex, the earliest manuscripts, bound in book form, especially classical works or the scriptures. From the Latin word meaning tree-trunk, the most famous codices are Biblical manuscripts, such as the 4th-century CODEX ALEXANDRINUS and CODEX VATICANUS and the 5th-century CODEX ALEXANDRINUS. The term may also refer to a collection of laws.

Codex Sinaiticus, 4th-century manuscript of the Greek Bible found in two parts in 1849 and 1859. It contains all the New Testament and about a third of the Old Testament, and was bought by the British Museum in 1933.

Codicil, document that amends, alters, qualifies or revokes specific provisions in a will. It is supplementary to the main document and all laws that apply to a will apply also to its codicils.

Codling moth, small grey moth found wherever apples are grown. The larvae (caterpillars) are pale pink with brown head markings. They cause serious damage to crops by burrowing into the fruit to feed. Species *Carpocapsa pomonella*. See also pp.666-667.

Cod liver oil, oil rich in vitamins A and D obtained from the fresh livers of cod. It is used to prevent RICKETS in children and for other nutritional purposes. Although still an important nutrient, it has largely been replaced by man-made sources of the equivalent amounts of vitamins A and D.

Cody, Samuel Franklin (1862-1913), US-born pioneer aviator. In 1896 he went to England where he subsequently took out British citizenship. He experimented with man-lifting kites and helped to plan and build the first British dirigible or steerable airship. In 1908 he built his own aeroplane. He was killed in a flying accident.

Cody, William Frederick, ("Buffalo Bill") (1846-1917), US frontiersman, scout and showman. Ned Buntline made Cody famous in his semi-fictional novels about his exploits. In 1883 Cody organized the "Wild West" exhibition with Annie Oakley and Chief Sitting Bull, among his star performers.

Coeducation, teaching male and female students in the same classes. In ancient and medieval times, girls were taught separately, if at all. In Europe boys and girls began to attend the same elementary classes after the reformation. In the USA, Britain and Commonwealth countries coeducation is generally accepted, although many secondary schools are single-sex establishments.

Coefficient, term multiplying a specified unknown quantity in an algebraic expression. In $5x$, 5 is the coefficient of x . In physics, it is a ratio that yields a pure number or a quantity with dimensions. See also p.784.

Coefficient of expansion. See EXPANSION, COEFFICIENT OF.

Coefficient of friction. See FRICTION, COEFFICIENT OF.

Coelacanth, bony fish of the genus *Latimeria*. Thought to be extinct for more than 60 million years, it was found in deep waters off the African coast in 1938. It is grey-brown with lobed fins that have fleshy bases. The scales and bony plates are unlike those of modern fish. Length 1.5m (5ft). Order Coelacanthiformes; species *Latimeria chalumnae*. See also pp.56, 56.

Coelenterata, phylum of aquatic animals which include JELLYFISH, SEA ANEMONES, CORALS and HYDROIDS. Characterized by a digestive cavity that forms the main body cavity, they were the first animal group to reach the tissue level of organization. Coelenterates are radially symmetrical, jelly-like, and have a nerve net and one body opening. Reproduction is asexual and asexual, regeneration also occurs. There are about 9,000 species. See also pp.2, 12-13, 12-13.

Coelom, true body cavity, or space between an inner digestive tube and outer body wall, that provides room for additional organs. Indications of a coelom appear in roundworms but the first true coelom appears among earthworms and other segmented worms. See also pp.4-5.

Coelostat, mirror attachment for fixed astronomical telescopes which, driven by a motor so that it moves on an axis parallel to the Earth's axis of rotation, continuously reflects the same portion of sky into the telescope.

Coenzyme, a non-protein organic molecule, usually containing a vitamin and phosphorus. When combined with an apoenzyme, a protein molecule, it activates an ENZYME. A coenzyme always regains its original structure even though it may have been altered during a reaction. See also p.908.

Coffee, plant and the popular caffeine beverage produced from its seeds (coffee beans). The coffee plants of the genus *Coffea* are evergreen and have white flowers. More than 100 different kinds of coffee beans are marketed, some are used to produce "instant" coffee. Family Rubiaceae. See also pp.704-705.

Coffer dam, usually, but not always, temporary watertight enclosure from which water is pumped to permit construction or excavation of a main dam. Coffer dams are usually constructed of pile-driven steel sheeting and posts. See also p.541.

Coggan, Frederick Donald (1909-), Archbishop of Canterbury 1974-1980. He was Bishop of Bradford (1956-61) and Archbishop of York (1961-74). He is a New Testament scholar and was Professor of New Testament at Wycliffe College, Toronto (1937-44).

Coghill, Nevill Henry Kendall Ayher (1899-), British university professor and theatrical producer. He is noted for his dramatic productions which include *A Midsummer Night's Dream* (1945), *Pilgrim's Progress* (1951) and *Dr Faustus* (1966). He was professor of English literature at Oxford University (1957-66).

Cognac, town in w France, on the Charente River, 37km (23 miles) w of Angoulême, in Charente département. FRANCIS I was born there. In the 16th century it was a HUGUENOT stronghold. Cognac brandy was first made in the 18th century, and has been produced there ever since. Cognac distilling is the major industry. Casks and bottles are made locally. Pop. 22,000.

Cognitive development theory, in developmental psychology, a theory concerned with growth in the processes of perceiving, thinking and knowing. Swiss psychologist Jean PIAGET holds that cognitive processes develop through four stages from birth to adolescence. During the first stage the child is most concerned with objects around him. Not until the final stage can a person make full use of symbols and logic. See also p.1124.

Cognitive dissonance, social psychology theory developed by the psychologist Leon Festinger in the 1950s. Its basic idea is that a person strives for consistency between his beliefs, attitudes and behaviour. When conflicts or "dissonance" occur, he tries to reduce the resulting discomfort by altering his beliefs to fit his behaviour, or vice versa.

Cognitive psychology, broad area of psychology concerned with perceiving, thinking and knowing. It investigates such matters as the way in which people perceive information by sight or hearing, how they organize, store, remember and use information, and the use they make of language. See also COGNITIVE DEVELOPMENT THEORY.

Cohen, Harriet (1901-1967), British pianist. VAUGHAN WILLIAMS, FRICKER and ARNOLD BAX each wrote a concerto for her. She injured her right hand in 1948 and Bax wrote his *Concerto* for left hand, the first performance of which she gave in 1950.

Cohen, Leonard Norman (1934-), Canadian writer and singer. His poetry includes *The Spice-Box of Earth* (1961), *Flowers for Huler* (1964), and *Parasites of Heaven* (1966). He also was popular as a singer during the 1960s. He has written two novels: *The Favourite Game* (1963) and *Beautiful Losers* (1966).

Cohesion, the attraction of the atoms, ions or molecules of a substance for each other. Weak cohesive forces permit the fluidity of liquids, those of solids are much stronger. See also ADHESION.

Cohn, Ferdinand Julius (1828-98), German botanist, one of the founders of BACTERIOLOGY as a separate discipline. He began to study bacteria in 1868 and edited *Contributions to the Biology of Plants* in 1870. He conducted research into the bacterial causes of infectious disease.

Cohnheim, Julius Friedrich (1839-84), German pathologist known for his work in determining changes occurring in tissues of diseased animals. He also developed the now-standard technique of freezing tissue before slicing it for examination under a microscope.

Coimbatore, city in s India, in Tamil Nadu state, on the River Noyil, 451km (280 miles) sw of Madras. It occupies a strategic position at the entrance to Palghat Gap, a major break in the Western Ghats. It is the site of the ancient Hindu pagoda of Perur. Industries: textiles, tanning, food processing, manufacture of machinery. Pop. (1971) 356,368.

Coimbra, city in w central Portugal, 174km (108 miles) NNE of Lisbon, on the River Mondego, capital of Coimbra district. It is a market centre for the region. It has Roman and Moorish ruins, a 12th-century cathedral and a university (1290). Pop. 108,000.

Colm, small stamped metal discs of standard sizes used as tokens of money in commercial transactions. The earliest coins are of Lydian origin, and date to the 7th century BC. Coins of early date have also been found in China and India. Ancient coins usually contained a specific quantity of precious metal, normally gold or silver, they were stamped with the symbol of the issuing authority, monarch and die, in order to verify the quality and weight of the metal. Coins were the only objects

Cod, the valuable food fish that lives on or near the bottom of the colder northern seas

Coelacanth, thought extinct millions of years ago, turned up alive in 1938 and 1952

Coffer dams provide a water-free location for the excavation of the main dam foundations

Coimbra is a Portuguese university city in the province of Beira Litoral, NE of Lisbon

used regularly for trade in the ancient world, and the distribution of coins outside the area in which they were issued is often taken as an indication of the wealth and standing of that region. The use of coins for everyday transactions was greatly reduced after the fall of the Roman Empire with the growth of a manorial economy and the weak monarchies, but in England the Anglo-Saxons had a complex system of both gold and silver coins, produced on dies in many parts of the country under the strict supervision of the king. Monarchs throughout the Middle Ages regarded control of the coinage as an important privilege of kingship, and although they issued severe punishments to individuals "clipping" the coins or lessening the gold or silver content, such debasement of the coinage was occasionally used by the kings themselves, such as Henry VIII in the 1540s, to raise revenue. With the introduction of banknotes in the late 17th century, and the gradual decline of the quantity of precious metal in each coin to tiny amounts, the role of coins changed. They acquired only notional value, and became used merely for smaller money transactions. All coins in mainland Britain since the mid-19th century have been produced at the ROYAL MINT. See also pp 1839, 1860.

Cair, fibre made from the husks of coconuts. It is used in making cords, ropes, mats and baskets. See also pp 690, 712.

Coke, Sir Edward (1552-1634), English jurist. He became attorney-general in 1594, and chief justice of the Common Pleas in 1606. As chief justice of the King's Bench (1613), he championed the common law, and in Parliament after 1620 developed it to oppose the king's assumption of divine right. He helped to draft the PETITION OF RIGHT (1628). See also p 1770.

Coke, Thomas William, Earl of Leicester, "Coke of Holkham" (1752-1842), British agriculturist who introduced revolutionary new methods of arable farming and cattle breeding. He converted NW Norfolk from a rye-growing region into a wheat-growing district and introduced improved breeds of sheep, cattle and pigs. An advocate of parliamentary reform, he was Whig MP for Norfolk several times between the years 1776 and 1833. See also p 286.

Coke, solid fuel left behind as a residue in coking ovens after coal has been heated without air to drive off most of the volatile matter. It is used mainly in steelmaking for fuelling blast furnaces. Its high calorific value is due to the high carbon content - more than 90%. Coke is a stiff, porous, grey mass of carbon mixed with small amounts of minerals, sulphur and residual volatiles; the exact proportions of these depend on the type of coal used and the temperature to which it is heated. A temperature of 900-1,150°C (1,650-2,100°F) is required to produce coke for blast furnaces and for domestic heating, for foundry coke, 750-900°C (1,400-1,650°F). Petroleum coke is the solid residue from the fractional distillation, "cracking", of oil in refineries. See also pp 387, 395, 437, 437.

Col, low smooth depression in a mountain range, often forming a pass through it. It is generally caused by the action of two opposing glaciers, the heads of which are commonly separated by an ALPINE sharp-crested ridge between the two cirques (valleys) formed by the glaciers.

Colbert, Jean Baptiste (1619-83), French statesman, the principal exponent of MERCANTILISM in economic policy. He became controller-general to Louis XIV in 1665, and tried to reform the taxes. His major effort was to encourage the growth of French industry and trade, his tariffs led to economic conflict with the Netherlands. See also p 1448, 1449.

Colborne, Sir John, 1st Baron Seaton (1778-1863), Canadian soldier and administrator. His career began in the British army, and he served as lieutenant governor of Upper Canada (1828-36). He commanded the loyalist forces against the rebels in 1837 and was appointed

governor-in-chief of Canada in 1839.

Colchester, town in Essex, SE England, on the River Colne, 80km (50 miles) NE of London. It is a market centre for the surrounding agricultural and horticultural area. The first Roman colony in Britain was settled there in AD 43 and was attacked by BOADICAEA (Boudicca) in AD 61. It has a Roman wall and a fine Norman castle. Industries: food processing, agricultural engineering, footwear. Pop. 76,000. See also pp 1234, 1235.

Colchicum, genus of about 30 species of flowering plants, including *C. autumnale*, the autumn crocus or meadow saffron. Species grow throughout Eurasia, and have pink, white, blue or purple crocus-like flowers which appear in the autumn. The swollen underground stem contains the ALKALOID colchicine, used to treat rheumatism and gout. It is also employed in genetic and cellular research, as it inhibits mitosis (cell division). This property makes colchicine valuable in cancer research and as an IMMUNOSUPPRESSIVE DRUG. Family Liliaceae.

Colchis, ancient country in the Caucasus region on the S side of the Black Sea. In Greek legend it was the home of MEDUSA. It was dominated successively by Persia, Greece and Rome and in the 6th century AD was disputed between Byzantium and Persia. Today it is part of Georgia, USSR.

Cold, common, mild, contagious virus infection of the upper respiratory tract. Symptoms include obstruction and inflammation of the nose, headache, sore throat, a cough and hoarseness. A cold usually disappears within a few days. Fever-reducing and pain-relieving drugs, as well as decongestants, may relieve symptoms and bring comfort; rest is recommended for heavy colds. Antibiotics may be prescribed where a bacterial infection is also present.

Cold Comfort Farm (1932), novel by Stella Gibbons (1902-). Very popular when published, it is a hilarious parody on the over-serious treatment of rural life in English fiction of the day.

Cold cream, cosmetic especially used for removing make-up. It consists of a perfumed emulsion of mineral oil, or paraffin wax, and water; the cooling effect on the skin is produced when the water evaporates.

Cold sore, also called fever blister, a small sore, often found around the lips, sometimes on the cheeks, ears or genitals. It first appears as a tiny fluid-filled blister on a red skin patch, sometimes becomes pus-filled, and then dries up, leaving a yellowish or brownish crust for a week or two. Caused by a virus - *Herpes simplex* - it is often associated with a cold, sometimes with other febrile diseases, sunburn or pneumonia.

Coldstream, Sir William Menzies (1908-), British painter who exhibited with and became a member of the LONDON GROUP in 1934. In 1937 he founded, with Victor PASMORE, the EUSTON ROAD SCHOOL of Drawing and Painting. In 1943 he was appointed an Official War Artist. His work shows the strong influence of nature and has developed towards NATURALISM.

Coldstream, town in the Borders Region SE Scotland, on the English border. Gen MONCK's troops (later named the Coldstream Guards) marched from there into England in 1660. Pop. 1,300.

Coldstream Guards, royal regiment in the British Household Brigade. It was first raised at Coldstream, Scotland, c 1650 and played an important role in the restoration of CHARLES II.

Cold war, political, ideological and economic confrontation between the USA and USSR and their allies after 1945. Despite incidents such as the BERLIN blockade (1948-49) and the CUBAN MISSILE CRISIS, and many threats of retaliatory war by both sides, open warfare never occurred. Each side built up worldwide power blocs, which began to break up in the mid-1960s. See also pp 1716-1717, 1792-1793.

Cole, George Douglas Howard (1889-1959), British socialist, economist and historian. He was an exponent of guild socialism in the 1920s and was chairman of the Fabian Society (1939-46). He held

a professorship at Oxford (1944-57). His many works include *A Short History of the British Working-Class Movement* (1927) and *A History of Socialist Thought* (1953-70).

Cole, Nat King (1919-65), US singer and pianist, b. Nathaniel Adams Cole. He was a jazz pianist in the King Cole Trio from 1939 but in the 1950s achieved popularity as a singer of many hit songs. These included *Unforgettable*, *Mona Lisa* and *Nature Boy*.

Cole, Thomas (1801-48) US landscape painter, b. England. A founder of the HUDSON RIVER SCHOOL, he revelled in the grandeur of the Hudson River valley and the Catskill Mts, subjects of many of his Romantic landscapes.

Colechurch, Peter de, priest who was the architect of the first London Bridge. A multi-storey construction built on piers across the River Thames, it took thirty years to build and was completed in 1209. See also p 533.

Coleman, Ornette (1930-), US jazz alto saxophonist and composer. From the late 1950s he played in a controversial, original style with his own groups and occasionally with John COLTRANE and Eric DOLPHY. He was important in the development of jazz in the 1960s and 1970s.

Coleman, John William (1814-83), British Bishop of Natal from 1853 to 1869. His published denial of the literal truth of the Bible and his opposition to the doctrine of eternal punishment made a *cause célèbre*. He was deposed in 1869 but refused to leave his cathedral (to which he was entitled by law) even after excommunication by the Archbishop of Cape Town.

Coleoptera, largest order of the animal kingdom, the beetles. They are insects which have complete metamorphosis. Most possess two pairs of wings, the forward pair usually being hard covers which fold over the flying pair. More than 350,000 species are known, many of them pests called weevils. Beetles include some of the largest and many of the smallest of all insects. Their larvae are either maggot-like, or elongated with six legs. See pp 36, 37, 44.

Coleridge, Samuel Taylor (1772-1834), British Romantic poet and critic. His literary output was mainly criticism, political journalism and philosophy, but he is chiefly remembered for the poems *The Rime of the Ancient Mariner*, *Kubla Khan* and *Christabel*. In 1798 he and Wordsworth published *Lyrical Ballads*, a fundamental work of the English Romantic movement. His Shakespearean criticism, his work on critical theory, *Biographia Literaria* (1817), and his writings on German metaphysics were influential during the 19th century. See also p 1576.

Coleridge-Taylor, Samuel (1875-1912), British composer. He wrote concertos, chamber and choral music and earned world fame for his *Hiawatha* trilogy (1898-1900), which excited great interest for its infectious rhythm, strong melody and colourful orchestration.

Coles Colossus, lorry made to carry cranes, powered by a Rolls-Royce 300bhp turbo-charged diesel, extra parts can be added to turn it into a tower crane. The vehicle has hydro-pneumatic suspension. See also p 503.

Colet, John (c 1467-1519), English humanist and theologian. He was appointed Dean of ST PAUL'S in 1504. In 1509 he planned and endowed St Paul's School. With William Lily he wrote the Latin grammar that became known as the Eton grammar and was used in the teaching of Latin for generations. See also pp 1402, 1416.

Colette (1873-1954), French novelist, real name Sidonie Gabrielle. Her first works, including the first four *Claudine* novels (1900-03), were published under her first husband's pseudonym, Willy. Most of her novels contain strong autobiographical elements, and have a notably sensitive lyricism. Among her best known works are *Chén* (1920), *The Last of Chén* (1926) and *Gigi* (1944).

Coleus, genus of bushy house or garden plants of the mint family native to Africa and Indonesia, noted for their oval,

serrated leaves of reddish, green or yellow combinations. They are propagated by stem cuttings or by seeds. Height to 90cm (36in). Family Labiatae.

Colic, spasmodic, cramp-like pain in the abdomen usually becoming intense, subsiding and then recurring. It may be associated with the gall bladder (biliary colic), kidney or ureter (renal colic), intestines (intestinal colic) or other abdominal organs. See also p 1069.

Coligny, Gaspard de, Comte de Châtillon (1519-72), French Protestant leader. He served France in Italy and Spain in the 1540s and 1550s and became leader of the HUGUENOT faction in 1569. He became adviser to Charles IX in 1571, but was opposed by the king's mother Catherine de'Medici, who may have persuaded Charles to order the MASSACRE OF ST BARTHOLOMEW, in which Coligny was killed.

Colitis, inflammation of the lining of the colon, or large intestine, that produces bowel changes, usually diarrhoea and cramp-like pains. It may be acute and caused by infection, or chronic and often due to an emotional problem. In severe chronic ulcerative colitis, the colon lining ulcerates and bleeds. See also pp 1068-1069.

Collage, composition made up of various materials - cardboard, string, fabrics, etc - which are pasted on to a canvas or other background. It was developed (1912) by PICASSO and BRAQUE, perfected by JUAN GRIS, and much favoured by CUBISTS, DADAISTS and later artists. See also pp 1656-1657, 1684.

Collagen, protein substance that is the main constituent of bones, tendons, cartilage, connective tissue and skin. It is made up of inelastic fibres. See also p 147.

Collateral, the assets that are put up by a borrower to secure a loan. Most financial institutions will not provide loans without some form of collateral.

Collective bargaining, process through which wages and other conditions of employment are determined by workers who belong to a trade union. Representatives of the workers and their employer's management meet to negotiate terms for an agreement, which is usually to remain in force for a specified period. If negotiations break down the matter may be put before a body for ARBITRATION or, in the last resort, a strike or lockout may result.

Collective farms, large co-operative farms whose policy is determined by the state. The term usually refers to farms in the USSR, where enforced COLLECTIVIZATION of privately owned peasant holdings was begun by Joseph STALIN in 1929. Dissatisfaction led to modifications of the policy, so allowing members to own some livestock and a plot of land. By 1938 more than 90% of formerly private land had been collectivized in 235,000 units. By 1972 further amalgamation of collective farms had reduced the number to 32,000. The state owns the farm's land and equipment and pays guaranteed prices for produce, although farmers can keep part of the proceeds from their private plots. See also p 1678.

Collective security, method by which a group of nations pledge mutual support in the event of attack from an outside power. Originally collective security agreements were global in scope (eg, the League of Nations, the United Nations), although neither of these organizations has been able to operate on principle successfully. **Collectivism**, political and economic theory taken up by Socialist, Communist and Fascist states. Each member of the state is subordinated to a social collectivity such as a state or social class, an idea carried to its extreme in Communist systems with a minimum of private ownership and a totally planned economy.

Collectivization, agricultural policy initiated in the USSR in the 1920s and in China after the Communist takeover of 1949. With the object of modernizing agriculture and making it more efficient, small peasant holdings were combined and agriculture brought under state control.

College of Arms. See COLLEGE OF HERALDS. **College of Heraldry**, English heraldic body founded (1484) by Richard III and incor-

porating the heralds of the Royal Household. The college was reincorporated (1555) by Royal Charter, issued by Mary Tudor and Philip II. The college's three Kings of Arms, six Heralds and four Pursuivants specialize in heraldic and genealogical research. The college has the right to bear arms and the Kings of Arms grant arms by letters patent.

Collembola, small, wingless insects, commonly called springtails, which inhabit dark, moist places. See also p.36

Colletti, Charles (1863-1925), French painter and etcher. He is best known for his scenes of peasant and maritime life, such as *Au Pays de la Mer* (1898).

Collie, smooth-coated or long-haired working dog, originally bred in Scotland. It has a lean, wedge-shaped head with small triangular ears. The long body is set on strong straight legs and the tail is long and curved. The coat, usually black-and-white or tan, may be rough or smooth. Height to 66cm (26in) at the shoulder.

Collier, Arthur (1680-1732), English philosopher. In his principal work, *Clavis Universalis* (1713), Collier advocated a form of idealism similar to that held by George Berkeley.

Collimator, lens system used to produce a parallel or near parallel beam of light, sub-atomic particles or other radiation. Light passing through a fine slit at the focus of a convex lens will be rendered parallel by the lens. A collimated beam is essential for many optical purposes.

Colling, name of two British brothers who developed new breeds of cattle. From 1782 Charles (1751-1826) and later Robert (1749-1820) began work to improve the quality of cattle in the Tees River valley. They were the first to breed Shorthorn or Durham beef cattle.

Collingwood, Cuthbert, Lord (1748-1810), British naval commander. In 1797 he became a rear-admiral and was made vice-admiral in 1804. He took part in the Battle of the Glorious First of June off Brest in 1794 and off Cape St Vincent in 1797. In 1805 he was Nelson's second-in-command at Trafalgar, taking command after Nelson's death in battle.

Collingwood, Robin George (1889-1943), British philosopher and historian. He tried to integrate philosophy and history, which he saw as interdependent. He was also an expert on Roman history and archaeology. His works include *Speculum Mentis* (1924), *The Principles of Art* (1937) and *The Idea of History* (1946).

Collins, Lewis John, Canon (1905-), British clergyman. From 1948 he was Canon of St Paul's Cathedral, London. He caused some controversy by his involvement in nuclear disarmament and other political movements as chairman of the Campaign for Nuclear Disarmament (CND) (1958-64).

Collins, Lottie (1866-1910), British music-hall artist who was renowned for her presentation of the song *Ta-Ra-Ra-Boom-De-Ay*. She first performed the song and accompanying high-kick dance in the London pantomime *Dick Whittington* in 1891.

Collins, Michael (1890-1922), Irish revolutionary. He fought in the Easter Rising in 1916 and helped to establish the Irish Assembly (Dáil) in 1918. He became intelligence director for the Sinn Féin and helped to negotiate self-government for southern Ireland in 1921. He was killed in the ensuing civil war. See also p.1643

Collins, William (1721-59), British poet. His work foreshadowed Romanticism, and he wrote some fine lyrical verse notably his *Ode to Evening* and *How Sleep the Brave* (1746). He later became insane.

Collins, William Wilkie (1824-89), British novelist. He made important contributions to the development of the genre of the detective story in books such as *The Woman in White* (1860) and *The Moonstone* (1868) and *No Name* (1862). He collaborated with Charles Dickens in writing many stories, including *The Wreck of the Golden Mary*.

Colliodi, Carlo (1826-90), Italian journalist and newspaper editor, real name Carlo Lorenzini. The founder of two satirical journals, he is remembered as the author

of the classic children's story *PINOCCIO* (1881, English translation 1892), a tale of a marionette turned into a boy.

Colloid, substance composed of fine particles which can be readily dispersed in a continuous phase. A solid dispersed in a liquid is termed a sol, a solid or a liquid in a gas an aerosol, a liquid in a liquid an emulsion, and a gas in either a liquid or a solid a foam. Chemists identify three main types: reversible, irreversible, and association colloids. Reversible colloids - including cellulose, proteins, haemoglobin, nylon, polystyrene and vulcanized rubber - form true solutions spontaneously when a dry colloid and a dispersion medium are brought together. Sols (dilute suspensions), emulsions, aerosols, foams and pastes (concentrated suspensions) are irreversible colloidal suspensions. Soaps, detergents and some dyes are examples of association colloids.

Colloidal condensation, technique for preparing irreversible sols. A supersaturated solution may be condensed so that a large number of small particles are produced, rather than a crystallization into large agglomerates. Electrodialysis has been used to control the deposition.

Colloidal dispersion, technique for preparing a colloidal system such as an emulsion or a foam. Emulsions are stabilized by an emulsifying agent, such as proteins or clay, foams are stabilized by foaming agents. Oil-in-water emulsions are used in polishes, cosmetic preparations and foodstuffs such as margarine and mayonnaise. Meringue and fire-fighting preparations are examples of foams.

Colloidal particle, a solid or liquid droplet measuring between 10⁻⁶ and 10⁻³ m in diameter and composed of an aggregate of molecules or a single giant molecule. Such particles may be formed by breaking-down macroscopic particles by mechanical or chemical dissociation (known as peptizing) or by preparing a supersaturated solution which then aggregates.

Collotype, photo-mechanical printing process popular in Europe at the end of the 19th century. The only process which reproduces photographic documents without using a screen (resulting in minute dots on the printed impression), its use has been revived for high quality reproduction either in black or colour of posters, paintings and transparent illustrations.

Colman, George ("the Elder") (1732-94), British playwright and manager. His best-known plays were *The Jealous Wife* (1761) and *The Claudine Marriage* (1766), which he wrote with David Garrick. He managed Covent Garden (1767-74) and in 1776 took over the Haymarket theatre.

Colman, Ronald (1891-1958), British cinema actor. After making films in England he went to the USA in 1920, where he soon achieved success by appearing as the leading man opposite Lillian Gish in *White Sister* (1925). He gave typically suave performances in *A Tale of Two Cities* (1935) and *The Prisoner of Zenda* (1937).

Colobus, also called guereza, large monkey of equatorial Africa. It is a diurnal, tree-dweller that feeds on leaves and uses its hind legs for precise leaps between branches. The three species have been hunted almost to the point of extinction for their decorative fur. See also pp.102-103

Cologne (Köln), city in Nordrhein-Westfalen state, w central West Germany on the River Rhine (Rhein), 32km (20 miles) s of Düsseldorf. It is a commercial, industrial and transportation centre and a river port. The Romans established a fortress at Cologne in AD 50 and it remained in their control until the 5th century. The city was made an archbishopric by Charlemagne in 785. It declined towards the end of the Middle Ages and was ceded to Prussia in 1815. It has a cathedral (started in 1248, completed 1880), and the Gürzenich, a Renaissance patrician's house. Industries: oil refining, petrochemicals, chemicals, engineering, textiles, food processing. Pop. (1975 est.) 1,022,075.

Colombe, Jean Michel. See *très riches (III, RE)*

Colombia, republic in NW South America. It has high Andean peaks and lowland equatorial swamplands and a wide range of climate. Agriculture is the basis of the economy and Colombia ranks second only to Brazil in the production of coffee. Other major crops include beans, rice, maize, cotton, sugar cane and bananas. There are important mineral deposits, including gold, platinum and emeralds. Oil is becoming increasingly important. Industries include chemicals and food processing. The capital is Bogotá. The country's development has been hampered by internal violence. Area 1,138,914sq km (439,735sq miles). Pop. (1975 est.) 23,542,000. See p.2014

Columbo, capital and largest city of SRI LANKA, on the Indian Ocean at the mouth of the River Kelani. Previously ruled by the Portuguese and the Dutch, it became capital of the British Crown Colony of Ceylon in 1802. A major port, Colombo's industries also include gem cutting, chemicals, and ivory carving. Pop. (1974 est.) 592,000.

Colombo Plan, organization which seeks to foster the co-operative economic development of countries in S and SE Asia. It was started by the COMMONWEALTH in 1951, originally for six years, and now includes 24 nations, including the USA. It fosters bilateral agreements providing various kinds of aid, including educational, technical and financial.

Colón, port in central Panama at the Caribbean end of the Panama Canal, second largest city in Panama. It is an important commercial centre and was made a free trade zone in 1953. It was founded in 1850 as Aspinwall by Americans working on a trans-Panama railway. Its name was changed to Colón in 1890. Pop. (1970) 67,695.

Colon, the large intestine, that part of the digestive tract that extends from the small intestine to the rectum. It begins at a blind pouch, the caecum, passes upward (the ascending colon) along the right side of the abdomen, then across (the transverse colon) and downward (the descending colon). It then curves and opens into the rectum, where the contents are held until defecation. The colon absorbs water from digested food and allows bacterial action for the formation of faeces. See also *digestive system*, p.160

Colonialism, control by one country over a dependent area or people. Although it is associated with modern political history, the practice is ancient. In Western colonial history, economic, political, military, cultural and psychological factors have been involved in the desire to colonize. After WWI the term came to imply exploitation, and in the West numerous former colonies became independent nations. See also *imperialism*, pp.1492-1493, 1602-1603, 1730-1731

Colonial Office, defunct department of the British government. The first secretary of state for the American colonies was appointed in 1768, but from 1782 to 1812 his duties were discharged by the HOME OFFICE, and then combined with the WAR DEPARTMENT. In 1812 military and colonial affairs were separated, and in 1854 the Office became an independent department, until 1966, when it was joined to the Commonwealth Relations Office to form the COMMONWEALTH OFFICE. See also p.1610

Colonnade, series of columns placed at regular intervals. When in front of a building, a colonnade is called a portico. A colonnade surrounding a building or an open court within a building is called a peristyle, an extended roofed one, a stoa. **Colonne, Judas "Edouard"** (1838-1910), French musician. He was leading violin of the Paris Opéra until 1873, when he founded his own orchestra.

Colophon, method in early printed works by which a printer detailed his role in the creation of a book, usually in a paragraph at the end. It has since come to mean a short statement giving the printer's name, the typeface and paper used, generally on the reverse of the title page. The term also denotes any publisher's symbol.

Colorado, state in W USA, highest state in

Colchester was the site of the first Roman colony in England, settled in AD 43

Nat King Cole, the singer whose voice was once likened to "a cat walking on velvet"

Thomas Cole, a scene from *Last of the Mohicans* by the English-born US painter

Samuel Taylor Coleridge, whose continual concern was with the human creativity

Colorado potato beetle

Colorado, the Amphitheatre and Trappers Lake in the White River national forest

Colorado beetle prompted a ban on American potato imports in the 19th century

the nation, with an average elevation of 2,073m (6,800ft). In the w half of the state are the ranges of the Rocky Mts, and in the e the w part of the Great Plains. Major rivers are the Colorado, Rio Grande, Arkansas and South Platte. The most important agricultural activity is the raising of sheep and cattle on the Plains. Sugar-beet, maize and hay are grown using extensive irrigation. Industries include food processing, transport and electrical equipment, chemicals and timber. Tourism also plays a vital role in the state's economy. The major towns are Denver, the state capital, Colorado Springs and Pueblo.

The USA acquired the a part of the state from France in the Louisiana Purchase in 1803. The remainder was ceded by Mexico in 1848 after the Mexican War. The discovery of gold and silver promoted immigration from other states and Colorado became a territory in 1861. It joined the Union in 1876. The building of the railways after 1870 also led to an increase in the number of settlers. Area, 270,000sq km (104,247sq miles). Pop. (1975 est.) 2,534,000. See also pp.2161, 2162.

Colorado potato beetle, oval beetle that is a major pest of potatoes and other members of the potato family, including the tomato and aubergine. Adults are similar in shape to ladybirds but twice as long and are yellow with black stripes or spots. They are becoming established across Europe, despite the use of insecticides such as lead arsenate. Species, *Leptotarsus decemlineatus*. See also p.43.

Colorado River, major river in sw USA, rises in the Rocky Mts in n Colorado, flows generally sw into the Gulf of California, passing through the Grand Canyon. There are many national parks and irrigation and hydroelectric power schemes along the river's course. Length, 2,333km (1,450 miles). See also p.262.

Coloratura, term used to describe music of an elaborate, highly "coloured" kind, decorated with trills and runs. It is also used to refer to a soprano whose voice is of the technical ability required to sing music of this kind, especially of the Baroque and Classical periods.

Colosseum, amphitheatre in Rome built AD 72-81 by the Emperor Vespasian and his sons Titus and Domitian. Oval in shape, measuring 189 x 156m (620 x 513ft) by 45.7m (150ft) high, and seating 45,000, it was used for gladiatorial contests. The Colosseum is remarkable for its size and the way in which limestone and concrete were used in its architecture - only its ornamentation being of marble - and for its superimposed use of the architectural orders - Doric, Ionic and Corinthian - on the exterior. According to tradition Christians were used in the gladiatorial games there. See also p.1241.

Colossians, Epistle to the, one of the epistles in the NEW TESTAMENT written by the apostle PAUL and addressed to the Church at Colossae, a city in sw Phrygia (now central Turkey).

Colossus of Rhodes. See RHODES, COLOSSUS OF.

Colostrum, milk-like fluid produced by the female mammary glands immediately following the birth of offspring; it precedes true milk, which is produced after about three days. Colostrum is rich in protein, and the antibodies give the suckling some immunity from infection.

Colour, sensation experienced when light of sufficient brightness and of a particular wavelength strikes the retina of the eye. Normal daylight (white light) is composed of a spectrum of pure (primary) colours, each of which has a different wavelength. The primary colours can be placed in seven bands - red, orange, yellow, green, blue, indigo and violet - of decreasing wavelength. A pure spectral colour is called a hue. If the colour is not pure but contains some white it is "desaturated" and is called a tint. Saturation is the degree to which a colour departs from white and approaches a pure hue. A colour may also have luminosity, or brightness, which determines its shade. Any colour is perceived as a mixture of three primary colours: red, green and blue-violet, red and green light mix to produce yellow, red

and green paint (complementary colours) mix to produce brown. See also p.850.

Colour bar. See APARTHEID.

Colour blindness, general term for several disorders of colour vision. The most common involves red-green vision, a hereditary defect affecting males almost exclusively, in which the person cannot tell red from green. Total colour blindness is a very rare inherited disorder in which the person sees only black, white and grey. See also p.137.

Colour chemistry, in colourimetric analysis, estimation of the concentration of dissolved coloured substances by comparing the colours of their solutions with those of known strength. In spectrophotometric colourimetry, light passing through a solution of unknown strength is split into its primary optical colours, the amounts of which are then measured using photoelectric cells. See also pp.584-585.

Colour coding, in electronic and electrical engineering, system of marking components, especially resistors and capacitors, so that their values appear encoded in a series of colours. It is done partly for legibility, and partly for simplicity in manufacture. See also p.884.

Colour film, photographic film available either as positive film for projection or as negative film for making colour prints. It contains three layers of light-sensitive chemicals which respond, in turn, to the optical primary colours (roughly red, green and blue) present in the light passing through the lens of the camera. Polaroid colour film contains additionally a number of coloured dyes which are released by the light-sensitive chemicals as they react to the optical primaries, so developing a colour print directly. See also pp.585, 629, 640.

Colourimetry, scientific methods in which an unknown colour is compared with known colours. It is used in chemical analysis, and for checking the colour of products such as paints, dyes and pharmaceuticals. See also COLOUR CHEMISTRY.

Colourpoint, or Himalayan, breed of cat produced by crossing a Siamese with a long-haired cat and then selectively breeding the offspring. It is stocky, short-legged and round-headed. It has the light colour and dark points of the Siamese.

Colours, military, flags or standards traditionally carried by each army regiment in battle, bearing in Britain the Union Flag, the regimental crest and the name of the major battles in which the regiment had been involved. Colours originally served as a rallying point for the regiment in the confusion of battle.

Colour vision, ability of the eye to detect the different wavelengths (colours) of light. This is achieved by three types of cone cell in the retina, "red", "green" and "blue", which respond to light of those colours. The cone cells secrete one of three different pigments that break down and generate nerve impulses which the brain then interprets to give the range of colours we perceive. See also pp.136-137.

Colquhoun, Robert (1914-63), British painter. His work, which shows the influences of Jankel Adler and Pablo Picasso, includes *Woman with Leaping Cat* (1945) and *Woman with Sall Life* (1958).

Colt, Samuel (1814-62), US inventor of the Colt revolver. A single-barrelled firearm with a revolving set of chambers, brought successively into alignment with the barrel, the Colt was patented in Europe in 1835 and in the US in 1836. Colt also invented the submarine battery and utilized the first telegraph cable underwater. He established his own plant in Hartford in 1847 at the site of the present Colt plant where the first assembly-line procedure was developed. See also p.557.

Coltrane, John William (1926-67), US jazz saxophonist, one of the leading innovators of the 1950s and 1960s. He played with Dizzy Gillespie (1949-51) and Miles Davis (1955-57) and established a reputation as an outstanding musician, noted for his use of scales rather than chord notes.

Coltsfoot, weed of the family Compositae, native to Europe but now widespread. It has small yellow flowers, and leaves whose shape gave the plant its common name. Species *Tussilago farfara*. See p.311.

Colubrid, any of about 2,500 species of mostly non-poisonous snakes of the family Colubridae, which includes about more than threequarters of the world's species of snakes. Most colubrids have terrestrial, aquatic or arboreal habitats, although a few species live underground. All lack pelvic girdles and hind limbs, and have only one lung. The few that are venomous are relatively harmless to man. See also SNAKE, pp.68-69.

Colugo. See FLYING LEMUR.

Colum, Padraic (1881-1972), Irish author, an associate of James Joyce and a key figure of the IRISH LITERARY RENAISSANCE. One of Colum's many poems, *Shir Passed Through the Fair*, became a popular Irish song. He spent the latter part of his life in the USA, where he developed an interest in myth and folklore.

Columba, Saint (c.521-97), Irish missionary. He became a priest (c.551) and founded an important monastery at Iona (563). From his position as abbot of Iona, he strove to convert the Picts of northern Scotland to Christianity. See also pp.1268, 1274.

Columban, or Columbanus, Saint (543-615), Irish missionary. He left Ireland c.590 for Gaul, accompanied by 12 monks. They settled in the Vosges, where he founded the monasteries of Luxovium and Fontaines. His adherence to Celtic practices led to his expulsion from there in 610. In 612 he founded the monastery of Bobbio in Italy.

Columbia, US film company. Founded (1920) by Harry and Jack Cohn and Joseph Brandt, it had a run of successes in the 1930s directed by Frank Capra. From the 1950s it financed top independent film-makers (eg, Sam Spiegel, David Lean) and produced such films as *On the Waterfront* (1954), *Lawrence of Arabia* (1962) and *Easy Rider* (1969). Screen Gems, a subsidiary, makes TV shows.

Columbia Broadcasting System. See CBS.

Columbia River, river in sw Canada and nw USA. It flows from Columbia Lake in British Columbia, Canada, through Washington and Oregon, USA, and enters the Pacific Ocean N of Portland. It has one of the largest drainage basins on the continent, approx. 668,220sq km (258,000sq miles) in area. Length, 1,953km (1,214 miles).

Columbia, District of. See DISTRICT OF COLUMBIA.
